☐ IF NECESSARY, PLEASE INCREASE MY BIDS BY ☐1 ☐2 ☐3 INCREMENT(S)*Lots will be purchased as much below top bids as possible.*☐ I WANT TO LIMIT MY BIDDING TO A TOTAL OF \$

at the hammer amount for all lots listed on this bid sheet. I am aware that by utilizing the Budget Bidding feature, all bids on this sheet will be affected. If I intend to have regular bidding on other lots I will need to use a separate bid sheet.

Do you want to receive an email, text message, or fax confirming receipt of your bids?

☐ Email ☐ Cell Phone Text ☐ Fax

Payment by check may result in your property not being released until purchase funds clear our bank. Checks must be drawn on a U.S. bank. All bids are subject to the applicable Buyer's Premium. See HA.com for details.

I have read and agree to all of the Terms and Conditions of Auction: inclusive of paying interest at the lesser of 1.5% per month (18% per annum) or the maximum contract interest rate under applicable state law from the date of auction.

REFERENCES: New bidders who are unknown to us must furnish satisfactory industry references or a valid credit card in advance of the auction date.

(Signature required) Please make a copy of this bid sheet for your records.☐ I HAVE PREVIOUSLY BOUGHT FROM HERITAGE AUCTIONS☐ I HAVE A RESALE PERMIT – please contact 877-HERITAGE (437-4824)

Non-Internet bids (including but not limited to, podium, fax, phone and mail bids) may be submitted at any time and are treated similar to floor bids. These types of bids must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and will be considered your high bid.

Current Bid	Bid Increment

7 Easy Ways to Bid

1 Internet

Simply go to www.pearsoncmg.com

Simply go to www.HA.com, find the auction you are looking for and click "View Lots" or type your desired Lot # into the "Search" field. Every lot is listed with full descriptions and images. Enter your bid and click "Place Bid." Internet bids will be accepted until 10:00 PM CT the day before the live auction session takes place.

2 eMail

You can also

You can also email your bids to us at Bid@HA.com. List lot numbers and bids, and include your name, address, phone, and customer # (if known) as well as a statement of your acceptance of the Terms and Conditions of Sale. Email bids will be accepted up to 24 hours before the live auction.

3 Postal Mail

Simply complete the B

Simply complete the Bid Sheet on the reverse side of this page with your bids on the lots you want, sign it and mail it in. If yours is the high bid on any lot, we act as your representative at the auction and buy the lot as cheaply as competition permits.

4 In Person

Come to the auction and view the lots in person and bid live on the floor.

5 FAX
Follow t

Follow the instructions for completing your mail bid, but this time FAX it to (214) 409-1425. FAX bids will be accepted until 12:00 PM CT the day prior to the auction date.

6 Live By Phone

Call 877-HERITAGE (437-482)

Call 877-HERITAGE (437-4824) Ext. 1150 and ask for phone bidding assistance at least 24 hours prior to the auction.

7 Live using HERITAGE Live!®
Auctions designated as "Heritage Live Enabled" have

Auctions designated as "Heritage Live Enabled" have continuous bidding from the time the auction is posted on our site through the live event. When normal Internet bidding ends, visit HA.com/Live and continue to place Live Proxy bids. When the item hits the auction block, you can continue to bid live against the floor and other live bidders.

Because of the many avenues by which bids may be submitted, there is the real possibility of a tie for the high bid. In the event of a tie, Internet bidders, within their credit limit, will win by default.

Dear Bidder:

Welcome to Central States! Heritage's Official Auction of the Annual Convention is one of the most remarkable groupings we have put together in years. Last years' \$58 million CSNS auction was our largest ever and stands as a testament to the enduring relationship between Heritage and the Central States organization. Collectors like you are essential to this success and we have put together an incredible selection for 2014, including several first-ever auction appearances, numismatic rarities, and the largest number of exemplary type sets offered in recent memory.

This Official Auction has 10 Featured Collections. We invite you to read about them below.

The Charles G. Wright Family Collection

One of the most distinctive collections to appear at Heritage in recent memory, The Charles G. Wright Family Collection is a treasure trove of 19th century American gold and its reverence for U.S. history is evident in his selections.

Expertly assembled of exceptional proof and Cameo Proof specimens, the collection holds a marvelous group of Carson City double eagles and early California rarities, such as an 1852 Assay Office fifty dollar, MS64, PCGS, CAC, tied for finest-certified honors, and an 1856-S twenty dollar, MS63, PCGS, from the famed S.S. *Central America*.

Among the seldom-seen Type One twenties is an 1866-S No Motto, AU53, PCGS, missing the motto "In God We Trust" that was quickly added to coinage following the carnage of the U.S. Civil War. This rarely seen specimen appropriately represents the scarce coins waiting to be "rediscovered" in this collection.

Christopher Bently's Nob Hill Collection, Part II

Christopher Bently's Nob Hill Collection continues with Part II, focused on important early and rare half eagles. Among the major highlights are an 1821 five dollar graded AU55 by NGC, an 1875 five dollar graded AU55 by NGC and an 1827 five dollar graded MS63 by PCGS. The collection consists of over 220 half eagles dated from 1795 to 1908 and representing the Philadelphia, Charlotte, Dahlonega, New Orleans, San Francisco, Carson City and Denver mints.

The Dale Hopkins Collection

A familiar face on the show circuit, the late Dale Hopkins was a lifelong collector with a special place in his heart for coins of the Carolinas. They remained his pursuit for more than 35 years of his nearly 70-year collecting and selling career, according to his daughter, Helga.

The selection of cents holds an 1854 cent, Judd-161, AU50, ANACS, and a dazzling 1859 cent, Judd-228, MS65, PCGS. Additional highlights include a near-Gem 1870 half dollar Standard Silver, PR64 Brown, Judd-959, PCGS, and an 1875 twenty cent, PR63+, Judd-1407, PCGS, CAC, one of a dozen or so to exist in silver.

The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation

Christopher Bently has decided to sell the collection of Donald E. Bently to build a new legacy of creativity, sustainability, and animal rights in the Bay Area and Northern Nevada communities with Bently Foundation.

Donald E. Bently was founder, owner and Chief Executive Officer of Bently Nevada Corporation, and President of Bently Pressurized Bearing Corporation. He pioneered technology that created the foundation of a new discipline of Mechanical Engineering, the Diagnostics of Machinery Malfunctions.

Donald's tradition of innovation, sustainability, and community development are carried on by his son Christopher through the Bently Foundation. All proceeds will go to the Bently Foundation and help bring Christopher Bently's forward thinking vision — one of community and local sustainability — into reality.

Among the major highlights of the collection of Donald E. Bently is an 1883 double eagle, PR65 Deep Cameo, PCGS, which is among the few survivors and a landmark 1870-CC Liberty double eagle, AU50, the first and rarest twenty dollar gold piece from the fabled Carson City mint – and one of the most important coins in the entire auction.

The Jim O'Neal Collection of U.S. Type, Part One

Heritage is proud to offer more impressive coins from the collection of Jim O'Neal, retired President and CEO of Frito-Lay International. While Mr. O'Neal's collection is, of course, most famous for collecting gold, his eye for copper is also well known. Who could forget his 1793 Liberty Cap Cent offered during last year's CSNS convention auction?

This year we are pleased to present part one of his U.S. Type collection, including an 1807/6 large cent Large 7, MS65 Brown PCGS, CAC; the important 1859 Transitional dime, PR66, PCGS, CAC, Judd-233, formerly of the Eliasberg Collection and the ever-stunning 1854 Seated dime, PR65 Cameo, NGC. Two more can't-miss coins from the O'Neal Collection are the 1835 JR-4 dime, PR65 Cameo, PCGS, one of no more than 12 known to exist, and the 1840 No Drapery half dime, PR64, PCGS, CAC, one of just five or six proofs known in this issue – including one in the Smithsonian Institution.

The M L Moser Collection, #1 NGC Morgan Dollar Registry Set

Mark Moser's passion for coin collecting was born in the five-gallon oil cans his father would fill with spare change from the family gas station business. The cans, stored safely in the back of the closet, were intended to be used to fund summer vacations, but for Mark, the cans filled hours of learning. At first he sought out pre-1958 Wheat cents and silver quarters and dimes, and his interest turned to Morgan dollars which would become the focus of his collection and eventually earn the distinction of NGC's #1 Morgan Dollar Registry Set. "I always liked the weight and the size of the Morgan dollars, two features that make them the most collected coin in America," he said. "I continually kept upgrading and upgrading as I went along, always trying to obtain the finest of the 105-coin set regardless if it was a \$1,000 coin or a \$250,000 coin."

The magnificent ML Moser Collection holds true treasure in the 1893-S Morgan dollar, MS65, NGC, and the capstone to the set, and in a select uncirculated example of an 1892-S, MS63, NGC, seldom offered at auction ... until now.

Condition rarities define this collection, proof of which is seen in the 1881-S Morgan dollar, MS68+ ★, NGC, the single finest graded example of the 1881-S Morgan dollar at NGC and the only one to be awarded the special Plus and Star designations. The 1884 Morgan Dollar, MS68, NGC, is a superstar as well and one of just four known pristine examples certified by both services as MS68.

The Northern Lights Collection

An extensive grouping of scarce issues and interesting finds highlights The Northern Lights Collection 220 lots hand-selected with an emphasis on visual appeal. A group of full Red Lincoln cents is led by a 1924 1 Cent, MS66, Red, NGC, a lustrous Premium Gem specimen. Notable individual highlights include a stunning 1881 nickel, PR67, PCGS, Superb Gem proof seldom seen in such fine condition, and 1904-O one, MS66 Prooflike, CAC, which is the only Prooflike specimen from this year.

The Old New England Collection

The history of the United States is told through the colonial issues presented by The Old New England Collection. This collection stands alone in the quality and rarity of top early examples, especially British-made American shillings. Consider the 1615-16 Sommer Islands Shilling, Large Sail, Fine 12, NGC, the first English coinage created specifically for use in the Americas – a colony on the Bermuda Islands – or the 1659 Lord Baltimore Shilling, AU55, NGC, a rare and important colonial issue that resulted in the arrest of Cecil Calvert, the second Lord Baltimore, in 1659, for transporting silver for the coinage to the Colony of Maryland without authorization.

In early copper, the Broad Axe Higley Copper, VF20, NGC, still retains Samuel Higley's legend VALUE ME AS YOU PLEASE, added in direct response to complaints his initial threepence tokens contained less copper than British pieces. The post-Revolution threepence minted by Standish Barry (which may feature a likeness of George Washington or Barry himself!) survives as the only NGC-certified example known to exist. The Old New England Collection offers a crucial window into our country's evolution and we expect collectors will equally see The Old New England Collection as a vital opportunity during CSNS.

The Collection of Philip Poier

This collection is a choice group of brilliant two and a half dollar and five dollar coins, including an 1854-C MS63, PCGS, Variety 1, the finest known of this rarity and one of the most difficult Charlotte fives from this decade, and a 1847-C five dollar, AU58, NGC, Variety 1, a near-Mint specimen which is rare from the heavily-used Charlotte issue dies. Another standout: An 1860-C five dollar, AU58, NGC, Variety 1, a representative from the only die pair identified for the nearly 15,000 half eagles coined at Charlotte in 1860.

The Ray Levoi Collection

Time. Patience. Knowledge. Relationships. All of these meaningful factors came together under the thoughtful eye of Ray Levoi and his advisors. Mr. Levoi patiently devoted more than a decade to the pursuit of important, high-grade U.S. coins and each new specimen was put against a same stringent test for quality.

The collection's remarkable group of Buffalo nickels, contains two first-year coins: a 1913-S, Type One, MS67, PCGS, CAC, a shimmering Superb Gem and an exceptionally well-preserved example of the scarcest Type One, and a 1913 Type Two, MS67, PCGS, which is tied for the finest certified example known to exist. Scarce San Francisco mints from the 1920s consist of a 1926-S, MS64, PCGS, CAC, a rare near-Gem, and a 1920-S, MS64, PCGS Secure, an impressive near-Gem that PCGS has only seen in 19 other pieces. The collection also offers a 1908 five dollar, MS68, PCGS, a Superb Gem, which makes its auction debut at CSNS.

The Riverboat Collection

The Riverboat Collection offers advanced collectors of Territorial gold coinage a once-in-a-lifetime chance to acquire a newly discovered variety — the unique 1855 Wass, Molitor & Co. twenty dollar gold piece, AU53, NGC, known as the Large Head Obverse. Heritage founder Jim Halperin calls this American rarity "a unique example of one of the most elusive issues in the Territorial gold series." The Riverboat specimen was probably the first Wass, Molitor Large Head twenty dollar coin to appear at auction, in a Chapman sale in 1896. It was definitely the last example to be publicly offered when it appeared in Stack's Amon G. Carter, Jr. Family Collection in 1984, more than 30 years ago.

This piece is just the beginning of the stunning diversity of the Territorial gold coins found in this collection, many of which are fully worthy of being described as national treasure. From the American Frontier, an 1849 Mormon ten dollar, AU58, NGC, is the earliest and rarest Mormon gold coinage, with fewer than a dozen pieces known, and an 1855 Kellogg & Co. fifty dollar, PR64 Cameo, PCGS, stands as "the most beautiful of all Pioneer gold." An 1850 Dubosq & Co., ten dollar, MS60, NGC, offers collectors the opportunity to own an example of one of the most challenging issues in the Territorial gold series – for the first time in 27 years.

As always, Heritage offers you seven ways to win in this auction. Before the event, we are happy to accept your bid through our website, HA.com, as well as by mail, fax, and e-mail. During the auction, you can participate wherever you are in the world by telephone and through Heritage's award-winning proprietary online platform, HERITAGE Live!® Should you be able to join us in Chicago, of course, we would love to see you on the auction floor. Remember to visit our booth on the Bourse and say hello.

Good luck!

Sincerely,

Greg Rohan
President

Todd Imhof
Executive Vice-President

SESSION ONE

FLYING EAGLE CENTS

- 3001 1857 MS64 PCGS. CAC.** A coruscating rose-gold and lime-green near-Gem. The strike is crisp at the centers but less distinct near the eagle's head and upper wingtip, with the planchet surface still evident in those areas. Certified in a green label holder. *From The Northern Lights Collection. NGC ID# 2276, PCGS# 2016*

1857 Flying Eagle Cent
Lustrous, Olive-Gold Gem

- 3002 1857 MS65 PCGS.** Reddish-tan highlights visit the lustrous surfaces of this olive-gold cent, a fully struck Gem that seems only a whisper away from an even higher grade. The services are stingy with designations any finer than this coin — just 28 numerically higher grades have been assigned by PCGS and NGC combined (2/14). The eye appeal is exceptional, and this example would not be out of place in the finest collection of cents or type. NGC ID# 2276, PCGS# 2016

1857 Flying Eagle Cent, MS65
Full Strike on the Eagle

- 3003 1857 MS65 PCGS.** An attractive and boldly struck first-year example of this two-year type, with a sharply detailed eagle and bold elements on the reverse wreath. Tawny-orange highlights surround smooth tan surfaces, with soft-satin luster evident throughout both sides of the coin. A couple of tiny spots hug the E in CENT, but overall this Flying Eagle cent is a glowing and pristine Gem. Few are graded any finer. NGC ID# 2276, PCGS# 2016

1857 Flying Eagle Cent, MS65
Bold Strike, Sharp and Pleasing

- 3004 1857 MS65 NGC.** The distinctive eagle on the Flying Eagle cent was modeled after Christian Gobrecht's silver dollar of 1836, one of America's most memorable and beautiful renditions of the eagle in flight. Soft luster visits the copper-tan surfaces of this exceptionally bold example, with very few abrasions or marks of any kind to distract from the detailed devices. The eagle is particularly well-detailed, giving this Gem example exceptional eye appeal. NGC has certified just 14 examples in a higher numeric grade (3/14). NGC ID# 2276, PCGS# 2016

1857 Flying Eagle Cent, MS65
Scarce in High Grades

- 3005 1857 MS65 NGC.** Although often available in Select or near-Gem condition, this issue is scarce in full Gem Mint State and rare any finer. A bold strike complements attractive, khaki-gold surfaces of this Gem example. A pleasing, lustrous glow reveals excellent feather detail on the eagle. The wreath is well-brought up except at the lower left, where some striking weakness is seen on the high-point leaves. Just 28 pieces are certified in a higher numeric grade by PCGS and NGC combined (3/14). NGC ID# 2276, PCGS# 2016

- 3006 1857 Obverse Die Clash With Half Dollar MS64+ NGC. CAC. Snow-9, FS-402.** Small cents were first struck for circulation in 1857, perhaps the reason for three unusual clashed die varieties found on cents of that year. The S-7 obverse was clashed with a double eagle obverse, the S-8 reverse was clashed with a Seated quarter reverse, and the S-9 obverse was clashed with a Seated half obverse. The clash marks are faint near STATES and UNITED and strong across much of AMERICA. A well struck and exemplary peach-gold near-Gem. PCGS# 37375

1858/7 Flying Eagle Cent, AU58
Popular, Scarce Overdate Variety

3007 1858/7 AU58 PCGS. Snow-1, FS-301. A problem-free example of this popular overdate variety, only one of two overdate variants known (both from this date) from the brief Flying Eagle cent series. Well-struck with satiny luster and smooth, mark-free surfaces that display light tan coloration typical of this type. A relatively scarce variety, with fewer than 200 examples of this overdate variety certified by PCGS in all grades. Population: 14 in 58, 64 finer (3/14). NGC ID# 2TYC, PCGS# 2022

1858 Flying Eagle Cent, MS64+
Large Letters

3008 1858 Large Letters MS64+ PCGS. CAC. Slight weakness of strike is evident at the eagle's head and tail, as well as the upper leaves of the wreath. This pleasing Choice Mint State piece exhibits rich golden-brown toning with a high degree of eye appeal.
From The Northern Lights Collection. NGC ID# 2277, PCGS# 2019

1858 Large Letters Cent, MS65
Lovely Eye Appeal

3009 1858 Large Letters MS65 NGC. High Leaves, Closed E in ONE. Gorgeous lemon-gold color and lustrous surfaces combine to provide lovely eye appeal for this Gem specimen of a better variety. A swath of attractive orange color appears at the periphery at the right portion of the obverse. Several significant as-made strike-throughs are present at the upper right portion of the wreath along with a couple of tiny die chips. NGC ID# 2277, PCGS# 2019

1858 Large Letters Flying Eagle Cent, MS65
Low Leaves, Open E in ONE Variety

3010 1858 Large Letters MS65 PCGS. CAC. Low Leaves, Open E in ONE. Appealing wheat-gold color, with areas of orange on the obverse along with hints of blue, provide this lustrous Gem with a lovely appearance. This is an example of a better reverse subtype for this final Flying Eagle date. A few minor marks appear in the upper left obverse field. Only 28 pieces have achieved higher numeric grades from PCGS (3/14). NGC ID# 2277, PCGS# 2019

PROOF FLYING EAGLE CENT

1856 Flying Eagle Cent, PR61
Proof-Only Snow-9

3011 1856 PR61 PCGS. Snow-9. The most plentiful variety of proof 1856 Flying Eagle cents. Identification of this variety is accomplished through the observation of a short die line from the top right serif of the I in UNITED to the border, and a tiny center dot attached to the underside of the upper left serif of the N in CENT.

This pleasing proof shows a few contact marks and faint hairlines on its golden-brown surfaces with darker toning in places among the obverse letters. The reverse has intermingled golden-tan, chocolate-brown, and steel patina. NGC ID# 227A, PCGS# 2037

INDIAN CENTS

1859 Indian Cent, MS65
Rare Numerically Finer

3012 1859 MS65 PCGS. CAC. Despite a mintage of more than 36 million cents, this one-year type is elusive at the Gem grade level and rarely seen finer. Bronze-gold patina complements satiny luster on this well-struck representative. The surfaces are nearly free of imperfections, though a tiny tick in the left obverse keeps this piece from an even higher grade. Housed in an old green label holder. PCGS has seen 24 numerically finer examples (3/14). NGC ID# 227E, PCGS# 2052

1859 Indian Cent, MS66
Lovely Eye Appeal

3013 1859 MS66 PCGS. Strong luster and gorgeous honey-gold color provide this Premium Gem with wonderful eye appeal. Closer examination reveals tiny, scattered splashes of golden-orange throughout on the well-struck surfaces. A few minuscule spots are present, including a few as-made strike-throughs. PCGS has yet to assign a grade of MS67 or higher to a single example, while only one example has achieved the MS67 level with NGC, with none finer (3/14). NGC ID# 227E, PCGS# 2052

**1859 Indian Head Cent, MS66
Desirable One-Year Laurel Wreath Type**

- 3014 1859 MS66 PCGS. CAC.** The 1859 Indian Head cents are popular as the first year of the series, as well as a single-year design type, with a plain olive wreath or laurel wreath as it is known. The reverse design was changed to an oak wreath and shield the following year. A sharply struck Premium Gem specimen, this coin displays strong visual appeal, due in part to the gorgeous toning and pleasing luster. The obverse is particularly attractive, with shades of red, plum, and orange along much of the outer edges. The majority of the coin exhibits a rich honey-gold hue. The same colors appear on the reverse, but to a lesser degree. The surfaces are virtually pristine, almost completely devoid of any signs of contact and with only a few pinpoint flecks of carbon. Population: 24 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 227E, PCGS# 2052

- 3015 1860 Pointed Bust MS65 PCGS. FS-401.** A well-preserved Gem example of the rarer of the two 1860 cent varieties. Satiny tan-gold luster blankets both sides, with largely unblemished surfaces. The design elements are virtually all sharp, with just a touch of weakness noted at the tips of the feathers. Population: 31 in 65 (1 in 65+), 8 finer (3/14). PCGS# 2056

- 3016 1860 MS65 PCGS. CAC.** The Rounded Bust variety. This well-preserved Gem representative displays soft, bronze-gold luster and sharply struck design elements. The surfaces are largely free of blemishes with pleasing eye appeal. Housed in an old green label holder. NGC ID# 227F, PCGS# 2058

**1860 Indian Cent, MS66
Broad (Rounded) Bust Variety**

- 3017 1860 MS66 PCGS.** This beautiful Premium Gem is fully struck and bathed in luster. The obverse is honey-gold throughout with a touch of lilac, while the reverse has an apricot center and a green-gold margin with attractive, lilac highlights. A strong loupe is required to locate the infrequent and minuscule carbon. 1860 Indian Cents come in both the 1859-style Pointed Bust variety and the later Broad (Rounded) Bust type. The Type of 1859 appears to be seen much less often than the Broad Bust, although many collectors still do not distinguish between the two. Population: 40 in 66 (2 in 66+), 8 finer (2/14).
Ex: Tampa FUN Signature (Heritage, 1/2011), lot 4061; Pittsburgh Signature (Heritage, 10/2011), lot 3103. NGC ID# 227F, PCGS# 2058

**1861 Indian Cent, Lustrous MS66
Lowest Mintage of the Series**

- 3018 1861 MS66 PCGS.** The 1861 had the lowest mintage (10 million pieces) of the copper-nickel Indian Head series. Nearly the entire issue was withdrawn from circulation in the summer of 1862, resulting in the availability of high-grade examples due to this wartime hoarding. Copper-gold luster emanates from both sides of this Premium Gem. The design elements are sharply struck, including the four diamonds and all feather tips except the second one. No mentionable contact marks or spots are evident on this wonderful piece. Population: 61 in 66 (3 in 66+), 11 finer (3/14). NGC ID# 227G, PCGS# 2061

**1861 Indian Cent, MS66
Scarce Copper-Nickel Issue**

- 3019 1861 MS66 PCGS. CAC.** The copper-nickel composition was introduced in the 1850s with the Flying Eagle cents, and continued through 1864 when the small cent composition was changed to bronze. There are no rare dates among the copper-nickel Indian cents issued from 1859 to 1864, but the 1861 is sometimes considered a key issue. This Premium Gem is an outstanding piece with an above average strike and brilliant tan luster. Population: 61 in 66 (3 in 66+), 11 finer (3/14). NGC ID# 227G, PCGS# 2061

- 3020 1862 MS65 NGC. CAC.** Hints of lemon-gold, rose-red, and apple-green adorn this lustrous and sharply struck Gem. The upper loop of the 8 in the date is repunched, but the variety is unlisted in Snow or Cherrypickers'. Housed in a prior generation holder. From The Northern Lights Collection. NGC ID# 227H, PCGS# 2064

- 3021 1863 MS65 PCGS.** An ideal type representative, with a needle-sharp strike and beautifully preserved surfaces. Satiny lemon-gold luster covers both sides, with rich orange-red accents intermingled near the borders. NGC ID# 227J, PCGS# 2067

1863 Indian Head Cent, MS66
Lustrous, Impeccable Preservation

3022 1863 MS66 PCGS. Almond-tan and orange surfaces are complemented by glints of saffron and pale olive on this impeccably preserved Premium Gem copper-nickel cent, one of the finest survivors of this 150-year-old mintage. The strike is sharp save on the feather tips, and even under a loupe, no mentionable contact appears. Population: 42 in 66 (2 in 66+), 0 finer (2/14). NGC ID# 227J, PCGS# 2067

3023 1864 Copper-Nickel MS65 NGC. CAC. Peach and honey toning enriches this sharply struck and somewhat prooflike Gem. Occasional minute flecks are all that limit the grade. The obverse rim exhibits interesting die breaks between 10 and 4 o'clock. Housed in a prior generation holder. NGC ID# 227K, PCGS# 2070

1864 Indian Cent, MS66
Copper-Nickel Composition

3024 1864 Copper-Nickel MS66 PCGS. CAC. This Premium Gem has brilliant golden-tan luster with bold design motifs. There is no evidence of flyspecks or other imperfections on the pristine surfaces of this splendid, eye appealing example. Struck early in the transitional year that saw introduction of the new bronze composition cents. Population: 21 in 66, 1 finer (3/14). NGC ID# 227K, PCGS# 2070

3025 1864 Bronze No L MS66 Red PCGS. A lustrous, light gold-orange example displaying clashing on both sides, this attractive Premium Gem exhibits a sharp strike and a few small scattered splashes of rich toning. Minor carbon flecks are present, but are not distracting. Population: 35 in 66 Red, 1 finer (2/14).
Ex: Prosser Collection (Heritage, 1/2011), lot 4068. NGC ID# 227L, PCGS# 2078

3026 1866 MS66 Red and Brown NGC. This sharply struck 1866 Indian cent shows no carbon or other distractions on highly lustrous surfaces that intermingle medium almond and lighter tan color throughout both sides. A small dark brown spot appears at bottom of the R in AMERICA. The reverse offers a greater portion of light tan. The eye appeal is great on this piece, certified in an NGC "no-line fatty" holder. NGC ID# 227P, PCGS# 2086

1868 Cent, Lustrous MS65 Red
Conditionally Elusive

3027 1868 MS65 Red PCGS. One of the better dates from the difficult 1860s decade, the 1868 in Gem Red is a prize, PCGS having seen only 37 in this grade with but three Red coins finer (3/14). This example shows almond-gold coloration with intermingled medium-brown flecks that appear under a loupe on intensely lustrous surfaces. NGC ID# 227S, PCGS# 2093

3028 1869 MS65 Red and Brown PCGS. CAC. Scarcely seen with substantial mint Red and sought-after in all grades. This near-Gem 1869 Indian cent exhibits strong bronze-red luster beneath rich burgundy overtones. Sharply struck, with well-preserved surfaces and no signs of carbon spotting. PCGS has seen just four numerically finer Red and Brown representatives (3/14). NGC ID# 227T, PCGS# 2095

1870 Cent, MS65 Red
Shallow N Reverse, FS-901

3029 1870 MS65 Red PCGS. FS-901. Shallow N in ONE. The scarcer of the two design subtypes known for the date. Boldly struck and highly lustrous with undisturbed orange and rose surfaces. Outstanding for the designated grade. A semikey issue, and very scarce in the present quality. Population: 33 in 65 (1 in 65+) Red, 6 finer (3/14). NGC ID# 227U, PCGS# 2099

3030 1871 MS63 Red and Brown NGC. The bold N variety. An attractive example, with significant mint red remaining, intermixed with rich burgundy overtones. The strike is sharp and the surfaces are pleasing. Some faint, scattered carbon specks are noted on the reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 227V, PCGS# 2101

**1873 Open 3 Indian Cent, MS65 Red
No Finer CAC-Approved**

- 3031 1873 Open 3 MS65 Red PCGS. CAC.** A few flyspecks are noted on each side of this sharply defined and fully brilliant Gem, but they are trumped by the exceptional orange mint surfaces and great eye appeal. CAC obviously agrees with our opinion, and opportunities to acquire such coins are rare, indeed. CAC has approved of just five Red examples of the 1873 Indian cent, including two MS64 Red coins, and three MS65 Red examples. Population: 22 in 65 Red, 4 finer (3/14). NGC ID# 227Y, PCGS# 2108

**1873 Doubled LIBERTY Cent, XF40
FS-101, High-Interest Variety**

- 3032 1873 Doubled LIBERTY, Closed 3 XF40 PCGS. Snow-1, FS-101.** The broad doubling visible throughout LIBERTY makes the FS-101 among the most dramatic varieties in the entire Indian Head series, one that is eagerly contested among collectors. The issue earns *Cherrypickers'* highest ratings for both collector interest and liquidity. This is a nice midgrade chocolate-brown example with no problems. PCGS# 2115

**1873 Doubled LIBERTY Cent, XF45
Key Snow-1 Variety**

- 3033 1873 Doubled LIBERTY, Closed 3 XF45 PCGS. Snow-1.** Although this doubled-die variety was known in the 1950s, it didn't gain widespread popularity until after the famous 1955 doubled-die Lincoln cent was embraced by collectors, and the general populace as well. This medium-brown example displays a strongly doubled LIBERTY and few abrasions for the assigned grade. The date logotype is the Closed 3 variety, in itself scarce for the 1873 date. Somewhere between 150 and 300 examples exist of the doubled LIBERTY variety. Population: 16 in 45, 60 finer (3/14). PCGS# 2115

- 3034 1876 MS65 Red and Brown NGC.** This lustrous cent delivers excellent eye appeal with significantly more red than brown color seen over the softly frosted surfaces. Exceptional surface preservation and razor-sharp design elements only add to the appeal of this Centennial year Gem. NGC has certified only 13 numerically finer Red and Brown examples (3/14). NGC ID# 2283, PCGS# 2125

- 3035 1877 Fine 15 NGC.** Rich burgundy-brown patina complements smooth, problem-free surfaces on this mid-grade representative. Strong detail remains overall, though the obverse border shows some minor weakness from 12 to 3 o'clock. An attractive example of this key-date issue. NGC ID# 2284, PCGS# 2127

- 3036 1877 VF20 NGC.** Violet overtones visit the rich chocolate-brown surfaces of this midrange key-date Indian cent. The "faded" bottom right corner of the N in ONE points to this being a circulation strike and not a worn proof. NGC ID# 2284, PCGS# 2127

- 3037 1877 — Cleaning — PCGS Genuine. AU Details.** Lightly cleaned in the past, but with moderate mint luster remaining beneath rich burgundy toning. Virtually unworn, though some softness of strike is seen on the feather tips and the reverse bow. A pleasing example of this key date. NGC ID# 2284, PCGS# 2127

**1877 Small Cent, Unc Details
Low-Mintage Key Date**

- 3038 1877 — Altered Color — NGC Details. Unc.** On many want lists and with too few coins to go around, this 1877 cent will attract much attention despite the NGC designation of Altered Color. Perhaps the coin was once dipped and then recolored, since the mint luster is muted for a cent with no discernible wear and such a bold strike. Rich red, orange, and burgundy hues cover the surfaces. The intense toning is attractive but not altogether believable. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

- 3039 1884 MS65 Red PCGS.** Intermingled shades of red, orange, and yellow-green contribute to the eye appeal of this gleaming, well-struck Gem. Liberty exhibits a few tiny marks on the chin and a thin die crack extends through the lower portions of the date. A few minuscule flecks of carbon are present. UNITED STATES OF AMERICA displays light die doubling. Population: 36 in 65 Red, 17 finer (2/14). NGC ID# 228B, PCGS# 2150

- 3040 1885 MS65 Red PCGS.** Fire-gold luster bathes this exquisitely struck Gem. Thorough evaluation fails to locate even trivial marks, and only the infrequent carbon fleck decides the grade. Population: 62 in 65 Red, 12 finer (2/14). *Ex: Long Beach Signature (Heritage, 6/2006), lot 248; Houston Signature (Heritage, 12/2010), lot 3209.* NGC ID# 228C, PCGS# 2153

- 3041 1885 MS65 Red PCGS.** A Gem specimen, this coin displays blazing red surfaces. Full Red Gems are elusive, and only 14 coins have been certified in higher numeric grades with the Red designation by PCGS and NGC combined (2/14). The upper obverse reveals minor incompleteness. Only a few tiny handling marks are visible with a glass along with minuscule flecks of carbon, neither posing a distraction. *Ex: Milwaukee (Heritage, 8/2007), lot 7140; ANA Boston Signature (Heritage, 8/2010), lot 3900.* NGC ID# 228C, PCGS# 2153

**1885 Indian Cent, MS66 Red
None Finer at PCGS or NGC**

3042 1885 MS66 Red PCGS. Eagle Eye Photo Seal, card not included. Copious luster and rich copper-orange color are among the attributes this gorgeous Premium Gem, housed in a first generation holder, possesses. A few small splashes of orange appear on the reverse. The coin exhibits a sharp strike, adding to the appeal. The obverse displays only a few extremely minuscule marks, while the reverse is virtually pristine. Very few examples designated as Red are found at the upper grade levels, with PCGS having assigned the MS66 Red grade to 12 examples, with none finer and NGC having certified only two examples as MS66 Red, with none finer at that service either (2/14). NGC ID# 228C, PCGS# 2153

3043 1886 Type Two MS64 Red PCGS. CAC. Differentiated by the placement of the words OF AMERICA in relation to the headdress, the Type Two 1886 cent is the scarcer of the two varieties for this year. This near-Gem displays bronze-red peripheries around copper-red centers, with sharply struck design elements. The surfaces are well-preserved, though a single, small carbon speck is noted near the upper right wreath branch. Population: 29 in 64 Red, 11 finer (3/14). NGC ID# 228E, PCGS# 92156

**1887 Cent, Eye-Catching MS66 Red
Few Certified Finer**

3044 1887 MS66 Red PCGS. Generous luster shows a range of reds and oranges on this Premium Gem. This boldly struck coin shows no spots of any significance and would make an ideal choice for the high-end series enthusiast or a type collector willing to go slightly off the beaten path. Population: 18 in 66 (1 in 66+) Red, 2 finer (2/14). NGC ID# 228F, PCGS# 2159

**1887 Indian Cent, MS66 Red
Only Two Finer at PCGS**

3045 1887 MS66 Red PCGS. Richard Snow writes in his *Guide Book of Flying Eagle and Indian Head Cents* that: "Cents of 1887 circulated widely and are usually found in medium circulated grades. They are more readily available than dates with similar mintages in the earlier 1880s." This tends to be reflected in the population data. In full red, however, better Mint State coins become more challenging. PCGS and NGC have seen fewer than 75 Gems with this color designation, and less than 20 pieces finer.

The MS66 Red specimen offered here displays impeccably preserved copper-gold surfaces that emit pleasing luster. A powerful strike on the design elements results in crisp definition on all four diamonds and on the head feathers. Population: 18 in 66 (1 in 66+) Red, 2 finer (3/14). NGC ID# 228F, PCGS# 2159

3046 1889 MS65 Red PCGS. Despite a mintage in excess of 48 million coins, few Gem quality 1889 cents have survived with full red mint luster. This frosty Gem example displays original orange-red color, with sharp design elements. The surfaces are beautifully preserved, with no traces of carbon or other detractors. Population: 38 in 65 Red, 7 finer (3/14). Ex: FUN Signature (Heritage, 1/2005), lot 5106. NGC ID# 228H, PCGS# 2174

3047 1892 MS65 Red PCGS. CAC. Vibrant copper-red overtones accent frosty bronze-gold luster overall on this fully Red Gem. The strike is sharp, with notable definition seen on the feather tips and the lower wreath, while the surfaces fail to reveal any distracting abrasions. Population: 53 in 65 (1 in 65+) Red, 12 finer (3/14). NGC ID# 228L, PCGS# 2183

**1894 Cent, MS66 Red
Conditionally Elusive**

- 3048 1894 MS66 Red PCGS.** The 1894 Indian cent saw a large mintage exceeding 16 million pieces, but most either fail the Red test or have too many abrasions (or are outright circulated) to grade nearly as high as this Premium Gem Red example. This recently encapsulated piece shows uniformly brick-red surfaces with effulgent luster and a strike that is close to full, save for a couple of the forward feather tips. A few brown flecks near the rim are neither carbon nor distracting. A Registry Set prize. Population: 28 in 66 (2 in 66+) Red, 0 finer (2/14). NGC ID# 228N, PCGS# 2189

**1897 Indian Cent, MS66 Red
Few Certified Any Finer**

- 3049 1897 MS66 Red PCGS.** Ex: Ally Collection. Medium orange patina at the margins blends nicely with vibrant red coloration over the central design elements. The strike is sharp save for the often-seen softness on the tips of the feathers in the headdress. A few tiny carbon spots on either side do not distract. Population: 17 in 66 (1 in 66+) Red, 1 finer (2/14).
Ex: *Joshua and Ally Walsh Collection of United States Cents, FUN 2006 (Heritage, 1/2006), lot 829*; Ex: *The Prosser Collection, Tampa FUN Signature (Heritage, 1/2011), lot 4127*. NGC ID# 228S, PCGS# 2198

- 3050 1898 MS66 Red PCGS.** The top of a misplaced 9 can be seen in the dentils below the 9 in the date on this Premium Gem example of the most prominent misplaced date of the year. The surfaces display strong luster and intermingled shades of orange, red, and green. The strike is strong except on the uppermost feather on the headdress. Strong magnification reveals just the tiniest specks of carbon on the reverse. Population: 55 in 66 (2 in 66+) Red, 9 finer (2/14). NGC ID# 228T, PCGS# 2201

- 3051 1899 MS66 Red PCGS.** Frosty and bright with pale copper-peach surfaces provide this Premium Gem with exceptional eye appeal. The central definition is strong, particularly on the ribbon's four diamonds, though the feather tips show slight softness. Housed in a first-generation holder. Population: 91 in 66 (3 in 66+) Red, 12 finer (2/14).
Ex: *Long Beach Signature (Heritage, 9/2010), lot 3190*. NGC ID# 228U, PCGS# 2204

- 3052 1899 MS66 Red PCGS. CAC.** The base of the 1 and the loop of the second 9 exhibit minor repunching. This lustrous Premium Gem has an olive-gold obverse and an orange-red and lime-green reverse. A tiny as-made strike-through is present to the right of STATES and portions of the reverse exhibit an uneven granular texture due to die erosion. Population: 91 in 66 (3 in 66+) Red, 12 finer (2/14).
Ex: *Volunteer Collection (Heritage, 1/2011), lot 4129*. NGC ID# 228U, PCGS# 2204

- 3053 1900 MS66 Red NGC.** Despite a substantial mintage in excess of 66 million coins, the 1900 Indian cent is surprisingly scarce in Full Red Premium Gem condition. The present example is visually appealing, with deep copper-red luster on the obverse and bronze-gold over the reverse. Frosty and sharply struck, with the only notable imperfection being a small nick on the Indian's cheek. Census: 38 in 66 Red, 4 finer (3/14). NGC ID# 228V, PCGS# 2207

- 3054 1900 MS66 Red PCGS.** This sharply-detailed Premium Gem displays blazing Red mint luster over both sides. The frosty surfaces deliver excellent visual appeal and reveal only a couple faint disturbances on the cheek. PCGS has awarded full Red status to only eight numerically finer examples (3/14). NGC ID# 228V, PCGS# 2207

- 3055 1900 MS66 Red PCGS. CAC.** Fantastic fiery luster and rich autumnal shades of red and orange provide this piece with tremendous visual appeal. A few tiny flecks of carbon do not pose a distraction on this gorgeous Premium Gem specimen. PCGS has graded just eight finer Red representatives (2/14).
Ex: *Summer FUN Orlando (Heritage, 7/2011), lot 3088*. NGC ID# 228V, PCGS# 2207

- 3056 1901 MS66 Red PCGS.** Effusive luster dominates the eye appeal of this pumpkin-orange representative, a dusky but gorgeous turn-of-the-century Red Premium Gem Indian cent. A few of the upper feather tips show blurring, but the four diamonds on the ribbon are not only visible but also crisp. PCGS and NGC each have graded only two numerically finer Red examples (2/14).
Ex: *ANA Sacramento Signature (Heritage, 3/2011), lot 3079*. NGC ID# 228W, PCGS# 2210

- 3057 1901 MS66 Red PCGS.** Gold toning reveals splashes of crimson on this highly lustrous Premium Gem specimen displaying a sharp strike and an outstanding appearance. A few tiny marks on the obverse pose little distraction, if any, on this appealing piece. Housed in a green label holder. Population: 57 in 66 (3 in 66+) Red, 2 finer (2/14).
Ex: *FUN Fort Lauderdale Signature (Heritage, 1/2005), lot 5124*. NGC ID# 228W, PCGS# 2210

- 3058 1903 MS66 Red NGC.** This spectacular Premium Gem displays rich original red surfaces with no signs of carbon. Sharply detailed design elements and vibrant mint luster add to the outstanding eye appeal. Census: 52 in 66 Red, 7 finer (3/14).
From *The Northern Lights Collection*. NGC ID# 228Y, PCGS# 2216

- 3059 1903 MS66 Red PCGS. CAC.** Intermingled shades of yellow, green, red, and pink are present on both sides, with the hues being darker on the obverse. Rich luster further adds to the desirability of this wonderful example. Very few marks and carbon flecks are present, and they are negligible. Housed in a green label holder. PCGS has awarded higher numeric grades to only 5 examples (2/14). NGC ID# 228Y, PCGS# 2216

3060 1904 MS66 Red PCGS. Eagle Eye Photo Seal, card included. Both sides of this richly frosted example are alive with deep orange-red luster and sharply impressed devices. A few trivial carbon flecks are noted on both sides, none of which are conspicuous or out of context with the MS66 Red grade level. Population: 65 in 66 (1 in 66+) Red, 5 finer (3/14).

Ex: Santa Clara Signature (Heritage, 11/2001), lot 5204; FUN Signature (Heritage, 1/2011), lot 4135. NGC ID# 228Z, PCGS# 2219

3061 1905 MS66 Red NGC. A peach-red representative with hints of gunmetal-gray on the high points. A lustrous and nearly immaculate type coin. Certified in a former generation holder.

From The Northern Lights Collection. NGC ID# 2292, PCGS# 2222

3062 1905 MS66 Red PCGS. A wonderful Premium Gem, this 1905 Indian cent has brilliant orange and gold color with frosty mint luster. Both sides are boldly detailed. A few scattered specks of dark toning are entirely trivial. This beauty is equal to the finest that PCGS has certified. Population: 46 in 66 Red, 1 finer (2/14). NGC ID# 2292, PCGS# 2222

1906 Indian Cent, MS66 Red Only Two Finer at PCGS

3063 1906 MS66 Red PCGS. CAC. Vibrant luster and pumpkin-gold color provide this Premium Gem with an exceptional appearance. The reverse includes areas with a deeper shade of color. Very few signs of contact are present and they are minor. Minuscule carbon flecks appear on both sides, but pose little distraction. Population: 22 in 66 Red, 2 finer (3/14). NGC ID# 2293, PCGS# 2225

3064 1908-S MS65 Red PCGS. A Gem Red example of the always popular, first-year San Francisco Mint small cent, but the 1908-S is perhaps underrated due to the fervent demand for 1909-S cents of both Indian and Lincoln designs. This lovely example displays bright, blazing original orange-red surfaces with a few trivial carbon spots. NGC ID# 2296, PCGS# 2234

3065 1908-S MS65 Red PCGS. A lustrous honey-gold Gem of this low mintage and introductory branch mint issue. The strike is sharp and marks are absent, though the borders display glimpses of gray toning. Encapsulated in a first generation holder. NGC ID# 2296, PCGS# 2234

1908-S Cent, Sharply Struck MS65+ Red First S-Mint Cent Issue

3066 1908-S MS65+ Red PCGS. CAC. The first cent issue ever struck at the San Francisco Mint, the 1908-S is nonetheless usually overshadowed by the lower-mintage 1909-S Indian. This MS65+ Red example boasts orange-tan surfaces that show deep luster and an extremely sharp strike. Population: 3 in 65+ Red, 36 finer (3/14). NGC ID# 2296, PCGS# 2234

3067 1909 MS66 Red NGC. This final-year example is well-struck and impressively preserved, with blemish-free surfaces that display even red-orange toning and intense, shimmering mint luster. Census: 34 in 66 (1 in 66+) Red, 4 finer (3/14).

From The Northern Lights Collection. NGC ID# 2297, PCGS# 2237

3068 1909 MS66 Red PCGS. A satiny, final-year Premium Gem. Copper-orange in the margins with more umber centers; the reverse in particular takes on an almost mahogany tone. Some softness of strike is noted on the feather tips, but the diamonds are complete.

Ex: Houston Signature (Heritage, 12/2010), lot 3221. NGC ID# 2297, PCGS# 2237

3069 1909 MS66 Red PCGS. As the final-year issue, 1909 Indian cents were well-saved, resulting in many surviving full Red Gems, much to the delight of type collectors. This sharply struck Premium Gem displays vibrant orange-red luster over both sides, with no readily detectable signs of carbon spotting. PCGS has awarded full Red status to only four numerically finer specimens (3/14). NGC ID# 2297, PCGS# 2237

3070 1909-S MS64+ Red and Brown PCGS. Fiery apricot-gold luster emanates from beneath light auburn-brown overtones on this near-Gem key-date Indian cent. Sharply struck design elements complement excellent surface preservation, delivering a high degree of eye appeal. NGC ID# 2298, PCGS# 2239

**1909-S Indian Head Cent, MS65
Spot-Free, Lustrous Red and Brown**

- 3071 1909-S MS65 Red and Brown NGC.** An exceptionally well-balanced and attractive, Red and Brown example of the lowest-mintage Indian Head cent, with orange luster interspersed with rustic-umber accents over smooth, glowing surfaces. A full strike provides four sharp diamonds on the ribbon and bold detail on the headdress feathers. The reverse elements are bold, too, with the shield, wreath, and arrow fletchings complete. An appealing Gem example of this scarce San Francisco Indian cent — just 12 examples are numerically finer by both services combined (2/14). From *The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation*. NGC ID# 2298, PCGS# 2239

- 3072 1909-S MS64 Red NGC.** From a low mintage of only 309,000 coins, this well-struck near-Gem exhibits satiny bronze-gold luster overall, with faint burgundy accents on the obverse. Close examination fails to reveal any noteworthy surface imperfections. A pleasing example of this final-year San Francisco issue. NGC ID# 2298, PCGS# 2240

**1909-S Indian Cent, MS65 Red
An In-Demand Key Date**

- 3073 1909-S MS65 Red PCGS.** This is a wonderful representative of the lowest-mintage cent of the Indian Head series. Intermingled shades of pale gold and orange provide this Gem with a lovely appearance. The strike is sharp overall and the luster pleasing, adding to the attractiveness. Scattered minuscule flecks appear on both sides. PCGS has awarded higher numeric grades to only 20 examples (3/14). NGC ID# 2298, PCGS# 2240

**1909-S Indian Cent, MS65 Red
Lowest Mintage of the Series**

- 3074 1909-S MS65 Red PCGS.** The wheat-gold color is remarkably consistent throughout this highly lustrous high grade cent. Well struck aside from the upper feather tips. The 1909-S is the lowest mintage entry in the Indian series, due to a branch origin and the changeover in design that year.
Ex: Portland Signature (Heritage, 3/2004), lot 5111; Orlando FUN (Heritage, 1/2006), lot 869; Philadelphia Signature (Heritage, 8/2012) lot 3629, which realized \$4,288.75. NGC ID# 2298, PCGS# 2240

PROOF INDIAN CENTS

- 3075 1859 PR61 PCGS.** The single-year type is prevalent in business format, but proofs are scarce. The present specimen is well struck and exhibits sea-green and mahogany-red toning. Housed in an old green label holder.
Ex: New York Connoisseur's Collection (American Numismatic Rareities, 3/2006), lot 145, which realized \$805. NGC ID# 2299, PCGS# 2247

- 3076 1859 PR64 NGC.** A fully struck, near-Gem proof example of this one-year type. Vibrant bronze-gold luster blankets both sides, with rich violet-orange hues emanating from the mirrored fields. Upper-end for the grade, with beautifully preserved surfaces. NGC ID# 2299, PCGS# 2247

**1859 Cent, Sharply Struck PR65
A One-Year Design Type**

- 3077 1859 PR65 PCGS.** The 1859 proof Indian cent, from an estimated mintage of 800 pieces, is always in heavy demand as a one-year design type. Semiluminous copper-gold surfaces display hints of blue and crimson. The design elements are sharply struck, including crisp delineation on the feather tips and diamonds. Neither side reveals mentionable contacts or spots. Population: 58 in 65 (1 in 65+), 22 finer (3/14). NGC ID# 2299, PCGS# 2247

**1860 Cent, PR66
Seldom Seen Finer**

- 3078 1860 PR66 PCGS. CAC.** Broad Bust. The official mintage for the issue is 1,000 pieces, but approximately 450 pieces were melted as unsold, leaving a net mintage of just 550 pieces actually distributed. Current prices do not reflect the scarcity, although population reports clearly show it with less than 200 grading events for the issue. This appealing Premium Gem is fully struck on both sides, with mirrored fields and light frost on the devices. A bit of orange-gold toning appears on the reverse, but overall the coin shows a reflective, lilac-silver coloration. Population: 12 in 66, 0 finer (3/14). NGC ID# 229A, PCGS# 2253

**1862 Indian Cent, PR66 Cameo
High-End Type Coin**

- 3079 1862 PR66 Cameo NGC.** With a reported mintage of 550 coins, the proof 1862 Indian cent is the ideal copper-nickel type representative, as it is more easily obtainable than any of the other issues. Nevertheless, the date is scarcely encountered at the Premium Gem Cameo grade level, and is rare any finer. The present piece displays vibrant bronze-gold luster overall, with fiery-orange overtones in the deeply mirrored fields. Needle-sharp detail only adds to the appeal of this virtually perfect proof. Census: 21 in 66 Cameo (2 in 66 ★ Cameo), 7 finer (3/14). PCGS# 82259

**1864 No L Bronze Indian Cent
PR66 Red and Brown
Substantial Mint Red**

- 3080 1864 Bronze No L PR66 Red and Brown NGC. CAC.** The exact number of proof 1864 No L bronze cents distributed is uncertain, though most sources peg the number somewhere between 100 to 300 coins. The present piece displays significant copper-orange luster overall with rich violet and green-gold overtones. Moderate mirroring in the fields complements sharply struck devices on this beautifully preserved Premium Gem. A small, unobtrusive carbon speck is noted near the A in STATES. Housed in a prior generation holder. Census: 15 in 66 (1 in 66+ Red and Brown, 1 in 66 ★) NGC ID# 229F, PCGS# 2277

- 3081 1867 PR64 Red PCGS. CAC.** Though not rare as a date, the proof 1867 Indian cent is nonetheless scarcely offered with full Red mint luster. This piece displays moderate mirroring in the fields with boldly struck central devices. Rich bronze-red patina graces both sides and is void of any signs of carbon spotting. Population: 31 in 64 Red, 10 finer (3/14). NGC ID# 229K, PCGS# 2290

- 3082 1874 PR64 Red and Brown Cameo NGC.** A rarely encountered cameo representative of this early Indian Head cent proof. Significant mint red remains, with rich burgundy overtones in the mirrored fields. A beautifully preserved, sharply struck near-Gem. NGC ID# 229T, PCGS# 2310

- 3083 1875 PR65 Red and Brown PCGS.** From a mintage of only 700 proofs, this Gem exhibits medium bronze-amber patina with deep violet overtones. Sharply struck devices are set against moderately mirrored fields, providing this well-preserved proof with a high degree of eye appeal. Population: 26 in 65 (2 in 65+) Red and Brown, 10 finer (3/14). NGC ID# 229U, PCGS# 2313

**1875 Indian Cent, PR65 Red
Conditionally Challenging**

- 3084 1875 PR65 Red PCGS.** With just 700 pieces struck, the 1875 proof cent poses a significant challenge, particularly with fully Red surfaces. The lemon and orange shadings of this Gem create lively eye appeal, and the mirrors are deeply reflective. The strike is complete throughout, and only a single flyspeck is noted just left of 12 o'clock on the obverse rim. Population: 12 in 65 Red, 2 finer (2/14).
Ex: Long Beach Signature Sale (Heritage, 5/2009), lot 138.
Ex: Dallas U.S. Coins Signature Sale (Heritage, 10/2009), lot 134.
NGC ID# 229U, PCGS# 2314

**1877 Cent, PR64 Red and Brown
Famous Key Date**

- 3085 1877 PR64 Red and Brown PCGS. CAC.** *Ex: Teich Family Collection.* Yellow, gold, orange, red, and blue shades combine to provide this near-Gem from the rarest date in the series with a lovely appearance. A sharp strike and appealing luster add to the attractiveness. The economic depression that began four years prior was taking a significant toll on the country by the time this coin was issued. NGC ID# 229W, PCGS# 2319

1878 Cent, Wonderful PR66 Red Cameo

- 3086 1878 PR66 Cameo NGC.** Impressive red and orange patina covers both sides of this eye-catching Premium Gem. Deeply mirrored fields show sharp cameo contrast against the frosty devices. The strike is full, and the surfaces appear devoid of any marks to the unaided eye. The few carbon spots are all minor. This attractive specimen is one of just 2,350 proofs struck. Census: 1 in 66 Cameo, 1 finer (3/14). PCGS# 82323

- 3087 1880 PR65 Cameo PCGS. CAC.** From the Snow-1 dies, this piece has moderately reflective fields with slight but noticeable mint frost on the devices. Lighter in hue than one might imagine, the surfaces are distraction-free with lovely red-gold toning.
Ex: *Baltimore Signature (Heritage, 7/2003)*, lot 5469. PCGS# 82329

**1884 Indian Cent, PR67 Red
Exceptional Visual Appeal**

- 3088 1884 PR67 Red NGC. CAC.** The 1884 proof Indian Head cent had a high mintage of 3,942 pieces and can be located through PR65 Red without too much difficulty. Premium Gem Red examples are more challenging and finer coins are elusive. The luminous copper-gold surfaces of this red Superb Gem display splashes of orange joined by whispers of light blue on the reverse and reveal an exquisite strike. A few minuscule flecks appear on each side, but do not pose a distraction. Census: 4 in 67 (1 in 67 ★) Red, 0 finer (2/14).
Ex: *Houston Signature (Heritage, 12/2009)*, lot 92.
From *The Jim O'Neal Collection of U.S. Type, Part One*. NGC ID# 22A5, PCGS# 2341

- 3089 1885 PR66 Brown PCGS. CAC.** Eagle Eye Photo Seal, card included. Rich apple-green and mahogany-brown toning consumes this fully struck and flawless specimen. The eye appeal exceeds many examples certified as full Red.
Ex: *Dallas Signature (Heritage, 10/2008)*, lot 168. NGC ID# 22A6, PCGS# 2342

- 3090 1885 PR67 Brown NGC. CAC.** Deep intermingled coloration blankets each side, in hues of plum, steel-green, and navy-blue. Fully struck and pristine. A gorgeous Superb Gem proof, which will thrill the aficionado of original toning. Census: 12 in 67 (1 in 67 ★) Brown, 2 finer (3/14). NGC ID# 22A6, PCGS# 2342

- 3091 1886 Type One PR65 Red NGC.** This sharply struck Gem proof exhibits deep orange-gold patina overall, with rich cherry-red around the right obverse border. Moderately mirrored fields deliver a pleasing cartwheel effect when turned in-hand. A few deep olive specks are noted near the lower-reverse border. Housed in a prior generation holder. Census: 4 in 65 Red, 3 finer (3/14).
Ex: *Central States Signature (Heritage, 4/2009)*, lot 1215; *Long Beach Signature (Heritage, 6/2010)*, lot 91; *Boston Signature (Heritage, 8/2010)*, lot 3932. NGC ID# 22A7, PCGS# 2347

- 3092 1891 PR66 Red and Brown NGC.** Eagle Eye Photo Seal, card not included. A beautifully patinated Premium Gem with rich electric-blue, plum-red, and olive-green toning. The strike is precise and the surfaces are virtually flawless. Struck from boldly clashed dies. PCGS# 82361

- 3093 1892 PR66 Red PCGS.** A well struck and satiny specimen of the 1892 proof issue that will prove nearly impossible to surpass. Light pumpkin-gold surfaces have lavender and peach overtones. Population: 13 in 66 Red, 2 finer (2/14).
Ex: *Houston Signature (Heritage, 12/2010)*, lot 3233. NGC ID# 22AE, PCGS# 2365

**1897 Indian Head Cent, PR65 Red Cameo
Rich Color, Sharply Struck**

- 3094 1897 PR65 Red Cameo PCGS.** Bold reddish-orange colorations, sharp definition, and a pleasing cameo effect combine to provide this Gem with strong eye appeal. Minute carbon flecks appear on both sides, but are more pronounced on the reverse. Population: 3 in 65 Cameo, 5 finer (2/14).
Ex: *Long Beach Signature (Heritage, 9/2003)*, lot 5570. PCGS# 82380

- 3095 1902 PR66 Red PCGS. CAC.** Splashes of rich cherry-red accent bright golden-orange surfaces on this boldly struck Premium Gem. Beautifully preserved with exceptional eye appeal. Population: 28 in 66 Red, 9 finer (3/14).
Ex: *Baltimore Signature (Heritage, 7/2003)*, lot 5531; *Palm Beach Signature (Heritage, 11/2004)*, lot 5384. NGC ID# 22AR, PCGS# 2395

- 3096 1903 PR66 Red PCGS.** A deeply mirrored Superb Gem. Bright yellow tinted golden-red toning illuminate both sides of this fully struck representative. The surfaces are beautifully preserved with no noticeable imperfections. Population: 34 in 66 Red, 11 finer (3/14). NGC ID# 22AS, PCGS# 2398

- 3097 1907 PR66 Red PCGS.** Eagle Eye Photo Seal, card included. From light lemon to deep peach and all shades in between, this Premium Gem runs the gamut of Red without ever sliding away from the designation. Sharply struck and eye-appealing. Population: 15 in 66 Red, 1 finer (3/14). NGC ID# 22AW, PCGS# 2410

LINCOLN CENTS

- 3098 1909-S VDB MS62 Brown PCGS.** Remnants of bronze-gold luster complement glossy light brown patina overall. The surfaces reveal remarkably few abrasions for the grade, while the devices are well-defined and the eye appeal is excellent. NGC ID# 22B2, PCGS# 2426
- 3099 1909-S VDB MS63 Brown PCGS.** Glossy medium brown patina blankets both sides, with remnants of original bronze-gold mint luster in the protected regions. Sharply struck design elements complement minimally abraded surfaces on this attractive key-date cent. NGC ID# 22B2, PCGS# 2426
- 3100 1909-S VDB MS64+ Brown NGC.** Well-preserved with pleasing steel-green and amber toning over smooth surfaces. The design elements are typically well-struck, as usually seen on examples of this first-year key issue. NGC ID# 22B2, PCGS# 2426
- 3101 1909-S VDB MS63 Red and Brown NGC.** Satiny, bronze-gold luster blends with medium brown patina on this key-date Lincoln cent. The details are fully struck, with sharp definition in Lincoln's beard and the wheat ears. A minimally abraded example. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 22B2, PCGS# 2427
- 3102 1909-S VDB MS64 Red and Brown NGC.** A boldly struck representative of this classic key-date issue. Vibrant bronze-gold patina with subtle burgundy and olive overtones provide this near-Gem with eye appeal that is superior to many full Red examples. Exceptional surface preservation only adds to appeal of this piece. NGC ID# 22B2, PCGS# 2427
- 3103 1909-S VDB MS64 Red and Brown PCGS.** Substantial bronze-gold luster remains beneath rich magenta overtones on this sought-after key-date Lincoln cent, while sharp definition in the design elements complements the well-preserved surfaces. *Ex: Palm Beach Signature (Heritage, 3/2006), lot 170.* NGC ID# 22B2, PCGS# 2427
- 3104 1909-S VDB MS64 Red and Brown PCGS. CAC.** Highly lustrous with softly frosted surfaces. This boldly detailed near-Gem displays nearly full Red mint luster, with just a faint burgundy tint. Close examination reveals just a few insignificant abrasions, though none are readily detectable to the unaided eye. NGC ID# 22B2, PCGS# 2427

1909-S VDB Cent, MS65 Red and Brown In-Demand Issue

- 3105 1909-S VDB MS65 Red and Brown PCGS.** Despite a large mintage of 484,000 coins, the 1909-S VDB cent is a key issue due to strong demand from collectors. This Gem representative features attractive orange-gold color overall, with a streak of plum-brown on the reverse. The surfaces are virtually free of any contact marks, adding to the appeal. Only 32 Red and Brown examples have achieved higher numeric grades from PCGS (2/14). NGC ID# 22B2, PCGS# 2427

1909-S VDB Lincoln Cent, MS65 Red and Brown Highly Attractive Key-Date Example

- 3106 1909-S VDB MS65 Red and Brown PCGS. CAC.** The gleaming surfaces display an appealing blend of mint-green and reddish-tan coloration. Well-preserved and intensely lustrous, with typically bold strike definition, as usually seen on examples of this iconic key issue. Under a loupe, the surfaces are impressively clean and blemish-free. Housed in a green label holder. NGC ID# 22B2, PCGS# 2427

1909-S VDB Cent, MS65 Red and Brown

- 3107 1909-S VDB MS65 Red and Brown PCGS. CAC.** Although this Gem 1909-S VDB cent has a conservative Red and Brown designation, many would rate it full Red. The surfaces have a blend of gold and tan luster that is only mellowed a little. The eye appeal is exceptional, and the strike is bold. NGC ID# 22B2, PCGS# 2427
- 3108 1909-S VDB MS64 Red PCGS.** Tiny light-tan and orange-red areas alternate throughout both sides of the near-Gem Red 1909-S VDB, a coin showing the bold strike typical of the issue and no mentionable distractions. A nice coin without the expense of a Gem Red example. NGC ID# 22B2, PCGS# 2428
- 3109 1909-S VDB MS64 Red PCGS.** The most sought-after issue in the entire Lincoln cent series. This satiny example displays warm, bronze-red luster, with well-detailed devices. Scattered toning specks are noted on the reverse, but are not overly detracting. NGC ID# 22B2, PCGS# 2428

Red Gem 1909-S VDB Cent

- 3110 1909-S VDB MS65 Red PCGS.** This satiny Gem displays warm orange-red luster with rich burgundy accents on both sides. Close examination confirms no carbon specks are present. A sharply struck example of this key-date cent, housed in a green label holder. *Ex: Baltimore Signature (Heritage, 7/2003), lot 5581.* NGC ID# 22B2, PCGS# 2428

1909-S VDB Cent, MS65 Red
Lustrous and Appealing

- 3111 1909-S VDB MS65 Red PCGS. CAC.** Despite the modest mintage of 484,000 pieces, enough high-grade examples of the 1909-S VDB cent were put aside that few considered it a potential rarity until the 1930s, and then grudgingly so. This attractive, medium-orange example displays peach-orange highlights and a sharp strike. The surfaces are smooth and lustrous, with only a few clusters of tiny, deep-orange dots on the reverse — one group above the N in ONE, and a minimal grouping beneath the C in AMERICA. An attractive and original-looking Red coin, CAC-Approved. NGC ID# 22B2, PCGS# 2428

1909-S VDB Cent, MS66 Red
Perennially Popular

- 3112 1909-S VDB MS66 Red PCGS.** Greenish-tan and almond-gold colors in the center cede to brighter orange glints near the rims, all well within the Red context. This Premium Gem Red coin shows the usual bold strike for the 1909-S VDB, and all period and initials in the VDB are sharp as well. Many collectors of this perennially popular key coin would do well to purchase certified examples. Counterfeits abound. NGC ID# 22B2, PCGS# 2428

1909-S VDB Cent, MS66 Red
Great Color and Beautiful Preservation

- 3113 1909-S VDB MS66 Red PCGS Secure.** The wheat-gold surfaces of this lustrous Premium Gem reveal small, scattered splashes of rich toning in shades of red and plum. A sharp strike and virtually pristine surfaces further contribute to the appeal of this pleasing specimen. PCGS has awarded higher numeric grades to only 11 examples (2/14). NGC ID# 22B2, PCGS# 2428

1909-S Lincoln Cent, Lustrous MS66 Red

- 3114 1909-S MS66 Red PCGS.** The 1909-S Lincoln cent, from a relatively small mintage of 1.8 million pieces, can be located through MS65 Red with little difficulty, while Premium Gems with this color designation will take a little more searching. Higher-grade pieces are very rare; indeed, PCGS and NGC have graded only eight fully red coins finer (3/14). Bright yellow-red luster emanates from this sharply struck MS66 Red example. This well-cared for specimen is devoid of mentionable marks or spots. NGC ID# 22B4, PCGS# 2434

1909-S Lincoln Cent, MS66 Red
Popular S Over Horizontal S Repunched Mintmark

- 3115 1909-S S Over Horizontal S MS66 Red PCGS. CAC. FS-1502.** A gorgeous example displaying honey-gold color along with tiny splashes of golden-orange, this piece exhibits the popular repunched mintmark. A secondary S appears to the north of the primary S, but it displays a horizontal orientation. Only a couple of tiny carbon flecks are present. The reverse reveals a die crack near 4 o'clock. Population: 50 in 66 (2 in 66+) Red, 0 finer (3/14). PCGS# 92434

1910 Lincoln Cent, MS67 Red
Condition Rarity, Lustrous Appeal

- 3116 1910 MS67 Red PCGS.** Swirling luster rolls over the lightly textured, tangerine-orange surfaces of this Superb Gem cent. Although common as a date, this Philadelphia issue is decidedly rare in MS67 and likely unavailable any finer. The devices display a full strike including an exceptionally sharp portrait of Lincoln, with full facial features, beard, and hair as well as bold shoulder details. This appealing cent is just a fleck or two away from the possibility of an even higher grade. Population: 24 in 67 Red, 0 finer (2/14). NGC ID# 22B5, PCGS# 2437

- 3117 1910-S MS65 Red PCGS. CAC.** The wonderfully clean surfaces are lustrous and nearly carbon-free, with mattelike textures and outstanding preservation. This second-year issue was obviously not saved in large numbers, and examples at the Gem grade level or finer are scarce. NGC ID# 22B6, PCGS# 2440

**1911 Lincoln Cent, MS67 Red
Only One Numerically Finer Example**

- 3118 1911 MS67 Red PCGS.** Impressive mint luster along with splashes of cherry-red, lemon-yellow, and orange toning on the portrait provides this Superb Gem with exceptional visual appeal. The strike is sharp, further adding to the desirability of this specimen encapsulated in a green label holder. Superb Gem Red examples are challenging to locate, despite a mintage of 101,177,787 pieces, with PCGS having only assigned 10 examples the 67 grade (1 in 67+) Red, with 1 finer and NGC having awarded the MS67 Red grade to 2 examples, with none finer (2/14). NGC ID# 22B7, PCGS# 2443

**1911-D Cent, MS66 Red
Classic Burnt-Orange Coloration**

- 3119 1911-D MS66 Red PCGS. CAC.** This first D-mint cent is more elusive than generally thought in this high grade, where PCGS has seen only 21 submissions with one finer (3/14). The burnt-orange color on brightly lustrous surfaces is typical, and the obverse shows some die fatigue around the date and mintmark area. A few light flecks appear in the left obverse field; the reverse is trouble-free. NGC ID# 22B8, PCGS# 2446

- 3120 1912 MS66+ Red PCGS.** The brick-red, well-struck surfaces on this Premium Gem are lustrous and free of all but a couple of minute flecks visible only under a loupe, an extremely attractive example of this date. Population: 90 in 66 (2 in 66+) Red, 8 finer (3/14). *From The Northern Lights Collection.* NGC ID# 22BA, PCGS# 2452
- 3121 1912-D MS65 Red PCGS. CAC.** A lovely peach-gold example of this early and scarce Denver emission. Boldly struck and lustrous. Abrasions are absent, and the grade is solely defined by minute carbon near ONE CENT. Encapsulated in a green label holder. *Ex: Mike Sadler Collection (Heritage, 1/2004), lot 4599, which realized \$1,840.* NGC ID# 22BB, PCGS# 2455
- 3122 1912-S MS66 Red and Brown NGC.** A needle-sharp and carbon-free cent with a glossy, unperturbed appearance. Obverse rim die breaks from 9 o'clock to 10:30 may be of interest to the specialist. Translucent residue is noted on the lower reverse. Census: 3 in 66 Red and Brown, 0 finer (3/14). *Ex: Long Beach Signature (Heritage, 2/2008), lot 3156.* NGC ID# 22BC, PCGS# 2457
- 3123 1914-D XF45 ANACS.** Remarkably sharp detail and problem-free surfaces deliver exceptional visual appeal, with intermingled burgundy, lilac, and orange-gold hues beneath the medium brown patina on each side. This conservatively graded, key-date cent will earn a second look from a shrewd specialist. NGC ID# 22BH, PCGS# 2471
- 3124 1914-D — Scratch — PCGS Genuine. AU Details.** Rich violet overtones complement medium chocolate-brown color overall on this satiny key-date Lincoln cent. The strike is sharp, with good definition on Lincoln's hair and beard, and only a brush of wear is evident over the highest points. A light, curved scratch runs from Lincoln's chin to his hair, but is not readily noticeable. NGC ID# 22BH, PCGS# 2471
- 3125 1914-D MS62 Brown PCGS.** Attractive shades of violet and brown toning blanket the glossy surfaces of this impressive MS62 Lincoln cent. The design elements are sharply detailed and vibrant mint luster shines through the toning. NGC ID# 22BH, PCGS# 2471

**1914-D Lincoln Cent, MS64 Red and Brown
Conditionally Scarce and Attractive**

- 3126 1914-D MS64 Red and Brown PCGS.** In terms of scarcity, the 1914-D Lincoln cent has emerged as an important early date that is virtually unchallenged at every grade level. As an illustration, it is noteworthy to consider that the famous key date 1909-S VDB has seen more than 1,600 examples certified with Red and Brown color by PCGS in all grades. By comparison, only 185 1914-D Red and Browns have been graded by that same service. This example is well-struck, with clean, lustrous surfaces that show trace amounts of carbon. Housed in a PCGS holder with a green label. NGC ID# 22BH, PCGS# 2472

**1914-D Lincoln Cent, MS64 Red
Rare with Color**

- 3127 1914-D MS64 Red PCGS.** Other than the 1909-S VDB, no Lincoln cent has the same aura of importance as this early Denver issue. The 1914-D is rare with color, and this carrot-orange example has plenty, coupled with obvious originality. Multiple areas of carbon and russet-brown patina attest to the untouched state of this coin. Well-struck from a later die state, with a crack tracking the folds of Lincoln's coat from the border. Housed in a first-generation "rattler" holder. NGC ID# 22BH, PCGS# 2473

1914-D Cent, MS64 Red

- 3128 1914-D MS64 Red PCGS. CAC.** A lustrous and lovely orange-red Choice key date cent. No marks are apparent but scattered flecks are noted on the upper left obverse. Unlike the even lower mintage 1931-S, the 1914-D was little saved upon issue, since coin boards with mintmark varieties had yet to be distributed. Encapsulated in a green label holder. NGC ID# 22BH, PCGS# 2473

- 3129 1915-S MS64 Red and Brown NGC.** Conditionally scarce at such an elevated grade level, this is an attractive near-Gem with sharply struck design motifs and clean, mark-free surfaces that show a distinctly mattelike texture in the fields. The deep reddish-brown toning yields to occasional streaky accents of navy-blue and scarlet. Census: 56 in 64 Red and Brown, 33 finer (3/14). NGC ID# 22BM, PCGS# 2484

**1917 Doubled Die Obverse, AU58
A High Grade for this Scarce Variety**

- 3130 1917 Doubled Die Obverse AU58 PCGS. CAC. FS-101.** This popular *Guide Book* variety shows fairly subtle doubling on the date and TRUST. The chocolate-brown surfaces display strong accents of sky-blue, especially near the borders. A well-struck coin with signs of minor wear on Lincoln's face and beard. Neither side has any mentionable marks. Population: 2 in 58, 10 finer (3/14). PCGS# 92495

- 3131 1918-S MS64 Red PCGS.** Pale copper-golden luster blankets both sides of this near-Gem representative. A few faint toning specks are seen under close examination, but to not preclude the scarcely encountered full Red designation. The obverse is boldly struck, though the reverse exhibits some of the usual softness, associated with excessive die wear. Population: 65 in 64 (1 in 64+) Red, 15 finer (3/14). NGC ID# 22BX, PCGS# 2512

**1919 Cent, MS68 Red
Registry Set Candidate**

- 3132 1919 MS68 Red PCGS.** Swirling mint luster emanates from the centers of this radiant, immaculately smooth cent. Ever-changing coloration shifts and shimmers as the coin rotates, with vibrant, brassy margins merging into tangelo-red central devices. Full details are in evidence throughout the most intricate design elements. A remarkable Superb Gem, destined for the most advanced cent collection or Registry Set. Housed in a green label holder. Just one coin is certified numerically finer. Population: 15 in 68 Red, 1 finer (3/14). NGC ID# 22BY, PCGS# 2515

**1919-S Cent, MS65 Red
Outstanding Quality**

- 3133 1919-S MS65 Red PCGS. CAC.** A magnificent pumpkin-gold Gem of this scarce San Francisco emission. The strike is good but slightly incomplete on the O in ONE and the AM in AMERICA. Marks and carbon are virtually absent. Encapsulated in a green label holder. Population: 20 in 65 Red, 1 finer (3/14). NGC ID# 22C2, PCGS# 2521

- 3134 1924 MS66 Red NGC.** Not a rare date, the 1924 Lincoln cent is nonetheless a scarce issue with full Red coloration. To date, NGC has only granted the Red designation to 137 examples of this date. This lustrous Premium Gem exhibits lovely red-orange toning and clean, nearly pristine surfaces. Just one or two tiny specks are noted on each side. Census: 27 in 66 Red, 1 finer (3/14). *From The Northern Lights Collection.* NGC ID# 22CC, PCGS# 2551

- 3135 1926-S MS64 Red and Brown NGC.** With a moderately low mintage (little more than 4.5 million coins), the 1926-S cent is scarcely encountered with significant mint luster, and is truly rare in full Red. This crisply struck near-Gem displays rich burgundy patina over satiny luster, while the surfaces are free of any significant imperfections. NGC has awarded higher numeric grades to 29 Red and Brown examples (3/14). NGC ID# 22CL, PCGS# 2574

- 3136 1927-S MS64 Red PCGS. CAC.** Scarcely seen with full Red luster, this near-Gem 1927-S cent displays medium-intensity copper-red patina over satiny mint luster. Struck from mildly worn dies, as evidenced by minor softness on the high points of the design. PCGS has awarded the Red designation to only 16 numerically finer pieces (3/14). NGC ID# 22CP, PCGS# 2584

3137 1928 MS67 Red PCGS. The design elements of this spectacular Superb Gem display a sharp strike and the original copper-red fields show a few highlights of lilac. Considerable mint luster adds to the outstanding visual appeal. No signs of carbon are present. Population: 59 in 67 (2 in 67+) Red, 0 finer (2/14). NGC ID# 22CR, PCGS# 2587

3138 1929 MS67 Red PCGS. Vibrant bronze-gold luster blankets both sides of this sharply struck Superb Gem, with rich orange-red overtones on the reverse. Close examination fails to reveal any significant surface faults, while some faint toning marks on Lincoln's shoulder are well-hidden. None have graded numerically higher at PCGS (3/14). NGC ID# 22CU, PCGS# 2596

**1929 Lincoln Cent, MS67+ Red
Tied for the Finest at PCGS**

3139 1929 MS67+ Red PCGS. CAC. This sensational Superb Gem has brilliant and frosty orange luster with bold design motifs. Both sides are pristine and devoid of flyspecks or other imperfections. The Set Registry collector will not find a finer example. Population: 54 in 67 (2 in 67+) Red, 0 finer (3/14). NGC ID# 22CU, PCGS# 2596

**1929-D Cent, MS66 Red
Exceptional for the Issue**

3140 1929-D MS66 Red PCGS. The 1929-D is common in all grades through Mint State, and Uncirculated pieces are available in all three color designations. The strike quality for this issue, however, is subpar. David Lange writes: "Most ... show moderate to heavy die wear. Indistinct lettering and distorted peripheral elements (such as the wheat ears) are the rule." This Premium Gem deviates from this profile. The obverse letters are sharp, as are those on the reverse, save for the tops of UNUM that appear slightly drawn toward the rim. And most of Lincoln's hair is strong as are the wheat ears. Both sides are awash with copper-gold luster and neither reveals mentionable marks or spots. This is an exceptional 1929-D that is rarely found this nice. Population: 27 in 66 Red, 0 finer (3/14). NGC ID# 22CV, PCGS# 2599

3141 1930-S MS66+ Red PCGS. CAC. Peach-gold color and rich satin luster create strong eye appeal for this high-end Premium Gem representative from a Depression-era issue. The strike is sharp, adding to the attractiveness. A few tiny marks are present, including a faint graze near the I of IN. Population: 1 in 66+ Red, 4 finer (3/14). NGC ID# 22CZ, PCGS# 2611

3142 1931-S MS65 Red PCGS. Rich burgundy luster blankets both sides of this satiny Gem. The surfaces display a pleasing overall appearance and the design elements are well-detailed. A faint strip of carbon specks is noted within the crevices of the left wheat ear, but does not outwardly detract from the eye appeal.
Ex: Baltimore Signature (Heritage, 7/2008), lot 7515. NGC ID# 22D4, PCGS# 2620

**1934-D Lincoln Cent, MS67+ Red
The Finest at PCGS**

3143 1934-D MS67+ Red PCGS. CAC. For several series, 1934 marks the beginning of the "modern era" of coin collecting, as the nation was emerging from the Great Depression. This Superb Gem is an extraordinary example from the Denver Mint, displaying wisps of delicate blue toning over its brilliant orange luster. A satiny example that is the finest PCGS has examined. Population: 29 in 67 (1 in 67+) Red, 0 finer (3/14). NGC ID# 22DA, PCGS# 2638

**1936-S Lincoln Cent
Red, Superb Gem**

3144 1936-S MS67 Red PCGS. The buckskin-toned portrait of Lincoln is surrounded by coruscating orange fields, providing plenty of two-toned appeal for this MS67 Red example. A lustrous reverse displays hues ranging from peach to carrot-orange, while a bold strike delivers full details to the devices. A few minor flecks and marks are microscopic and do not detract from the appeal. Tied for the finest certified of this popular issue. Population: 44 in 67 Red, 0 finer (2/14). NGC ID# 22DG, PCGS# 2656

**1936-S Cent, MS67 Red
Visually Impressive**

3145 1936-S MS67 Red PCGS. Glowing, satin fields display olive, red, and lilac accents amid overall flame-orange coloration on this meticulously struck San Francisco cent. A few microscopic flecks do not disturb the radiant, lustrous appeal. Neither PCGS nor NGC have certified a numerically finer example of the issue. Population: 44 in 67 Red, 0 finer (2/14). NGC ID# 22DG, PCGS# 2656

3146 1936-S MS67 Red PCGS. Frosty, orange-red mint luster accents beautifully preserved surfaces on each side of this well-struck Superb Gem. An important offering for the Registry collector, as none have graded finer at PCGS (3/14). NGC ID# 22DG, PCGS# 2656

**1936-S Lincoln Cent, MS67 Red
Among the Finest Certified**

- 3147 1936-S MS67 Red PCGS.** Copper-red luster complements softly frosted surfaces on each side of this Superb Gem, with no signs of carbon spotting readily detectable. The strike is sharp, with notable definition on the 11 o'clock region of the reverse, which is often weak. The Registry collector will appreciate this offering, as none have graded higher at PCGS or NGC (3/14). NGC ID# 22DG, PCGS# 2656

**1936-S Lincoln, MS67 Red
Condition Rarity**

- 3148 1936-S MS67 Red PCGS. CAC.** Pleasing luster and golden-orange surfaces are among the attributes this cent possesses. A few tiny splashes of lavender are present on the reverse. Although a large number of coins from this issue were saved at the time, few coins have achieved the upper grade levels with the Red designation. PCGS has only assigned the MS67 Red grade to 44 examples, with neither PCGS nor NGC having assigned a higher numeric grade to a single example (2/14). NGC ID# 22DG, PCGS# 2656

- 3149 1937-S MS67+ Red PCGS. CAC.** This Plus-graded Premium Gem is less than half of a point finer than the example in the finest 1909-1958 Registry Set. Beautifully preserved with bright orange-red luster over both sides. The satiny surfaces reveal no traces of carbon toning and the eye appeal is exceptional. PCGS has awarded a Plus designation to only 13 MS67 examples, with none finer (3/14). NGC ID# 22DK, PCGS# 2665

- 3150 1937-S MS67+ Red PCGS. CAC.** This high-end Superb Gem exhibits well-preserved original red surfaces, with vibrant mint luster and no mentionable distractions. The design elements are sharply detailed throughout. PCGS has certified no coins in numerically finer grades (3/14). NGC ID# 22DK, PCGS# 2665

- 3151 1937-S MS67+ Red PCGS. CAC.** Satiny orange-red luster covers both sides of this sharply struck Superb Gem. Close examination fails to reveal any noticeable surface faults, with no signs of carbon spotting. An important offering for the Registry collector, as PCGS has awarded Plus designations to just 13 examples, with none finer (3/14). NGC ID# 22DK, PCGS# 2665

**1939-S Lincoln Cent, MS67+ Red
Tied for the Finest Certified at PCGS**

- 3152 1939-S MS67+ Red PCGS. CAC.** Vivid orange-red luster blankets both sides of this Plus-graded Superb Gem. The surface preservation is virtually perfect, and the devices are well-struck. A single, tiny carbon speck is noted in the crevice behind Lincoln's neck, but is nearly undetectable to the unaided eye. An important offering for the Registry collector, as PCGS has awarded a Plus designation to only seven full Red MS67 examples, with none finer (3/14). NGC ID# 22DS, PCGS# 2683

- 3153 1941-S MS67+ Red PCGS. CAC.** Small S. A beautiful pumpkin-gold Superb Gem that boasts booming luster and a sharp strike. Trivial carbon and contact fails to diminish the excellent eye appeal. Population: 209 in 67 (5 in 67+) Red, none finer (3/14). NGC ID# 22DY, PCGS# 2701

- 3154 1943-D/D MS65 PCGS. FS-501.** Nearly all of the secondary mintmark is visible, located widely southwest of the primary Denver mintmark. FS-501 is the best known steel cent die variety and has earned a *Guide Book* listing. The present well struck Gem is lustrous and displays light chestnut-gold toning. PCGS# 2715

- 3155 1943-S MS68 NGC.** Vivid ice-blue and pale golden hues blend across the virtually pristine surfaces of this high-end Superb Gem. An immaculate strike only adds to the immense visual appeal. NGC has certified just 13 examples in this lofty grade, with none finer (3/14). PCGS# 2717

**1943-S Cent, MS68
Among the Finest Certified**

- 3156 1943-S MS68 PCGS. CAC.** An exceptional specimen, this MS68 San Francisco steel cent reveals pale silver-white color, with a faint suggestion of blue. The beautifully preserved surfaces are virtually free of spotting, the sole tiny and faint exception appearing above the second S in STATES. Excellent detail for the one-year alloy. Population: 54 in 68, 0 finer (2/14).
From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 2717

**1947 Lincoln Cent, MS67 Red
Tied for Finest-Graded**

3157 1947 MS67 Red PCGS. This issue may have been unusually well-produced, or perhaps simply saved from circulation in large numbers. At any rate, we see high-grade examples of this Philadelphia date more often than others from the same decade.

Fully struck with blazing mint-red luster and impressively clean surfaces. Only 19 other examples can match the grade of this Superb cent, at PCGS, and none are graded any finer. Population: 20 in 67 Red, 0 finer (3/14). NGC ID# 22EN, PCGS# 2752

**1948 Cent, MS67 Red
Among the Finest Certified**

3158 1948 MS67 Red PCGS. Mercurial mint luster shifts and alters the visual palette of pink, orange, and ruby-red toning for this Superb Gem cent when viewed from different angles, or when rotated under light. A full strike is confirmed by the lofty grade. Just a few light freckles populate the reverse, but this coin is remarkably clean and smooth with undeniable eye appeal. Population: 14 in 67 Red, 0 finer (2/14). NGC ID# 22ES, PCGS# 2761

**1948 Cent, MS67 Red
Exceptional, Conditionally Rare Example**

3159 1948 MS67 Red PCGS. Any Lincoln cent collector will recognize the exceptional quality of this Superb Gem example. The marvelously clean surfaces are intensely lustrous and display lovely mint-red and pale orange toning. A sharply struck and conditionally rare example of this Philadelphia Mint issue. Population: 15 in 67 Red, 0 finer (3/14). NGC ID# 22ES, PCGS# 2761

**1948 Lincoln Cent, MS67 Red
One of the Finest Certified**

3160 1948 MS67 Red PCGS. Frosty, copper-red mint luster complements sharply struck design elements on this Premium Gem representative. The surfaces are nearly undisturbed, though a few faint carbon specks are noted in the field near the left obverse border. An important opportunity for the Registry collector, as PCGS has seen only 15 examples in this grade, with none finer (3/14). NGC ID# 22ES, PCGS# 2761

**1949 Cent, Magnificent MS67 Red
None Certified Finer**

3161 1949 MS67 Red PCGS. Blazing, flame-orange surfaces display considerable mint frost and remarkably few imperfections of any kind. Full details accompany the smooth fields. A couple of tiny luster grazes on the lower reverse do not detract from the exceptional eye appeal of this radiant cent. Population: 15 in 67 Red, 0 finer (2/14). NGC ID# 22EV, PCGS# 2770

**1949 Lincoln Cent, MS67
One of the Highest-Graded Examples**

3162 1949 MS67 Red PCGS. Fully struck and intensely lustrous, the beautifully preserved surfaces of this Superb Gem cent are bathed in lovely reddish-coral toning, with mint-green accents visible near the peripheries. Just 16 pieces are listed at this lofty grade level by PCGS, with none finer (3/14). NGC ID# 22EV, PCGS# 2770

3163 1949-D MS67 Red PCGS. CAC. A pleasing mixture of bright-peach and lilac-gray coloration adorns each side of this splendid Superb Gem cent. Only P and L in PLURIBUS are weakly struck, and the intensely lustrous surfaces are impeccably preserved. Population: 37 in 67 Red, 0 finer (3/14). NGC ID# 22EW, PCGS# 2773

3164 1950 MS67 Red PCGS. Among the finest-certified. This coppery-red Superb Gem displays a full strike and highly lustrous, well-preserved surfaces. A faint darker spot is noted adjacent to the left wheat ear on the reverse. Population: 29 in 67 Red, 0 finer (2/14). NGC ID# 22EY, PCGS# 2779

3165 1950 MS67 Red PCGS. Balanced orange-red and copper-gold hues blend over each side of this Registry-quality Superb Gem. The devices are sharply struck and close examination reveals only a few faint surface grazes. PCGS has graded 30 MS67 Red examples, with none finer (3/14). NGC ID# 22EY, PCGS# 2779

3166 1950 MS67 Red PCGS. After an eight-year hiatus, prompted by the second World War, proof coinage was reinstated at the U.S. Mint in 1950. This lovely piece is fully struck and displays intense proof luster across mint-red surfaces that are nearly pristine. Population: 29 in 67 Red, 0 finer (3/14). NGC ID# 22EY, PCGS# 2779

3167 1950 MS67 Red PCGS. Rich copper-orange color accents vibrant mint luster overall, while the central devices exhibit well-defined details. The surfaces are attractively free of carbon spotting and other noticeable imperfections. This Superb Gem will earn a second look from the Registry collector, as none have graded finer at PCGS (3/14). NGC ID# 22EY, PCGS# 2779

1950 Lincoln Cent, MS67 Red

3168 1950 MS67 Red PCGS. CAC. According to the current PCGS Population report, more than one thousand examples of this issue have been graded at MS65 Red and MS66 Red; around five hundred coins apiece at each grade level. At MS67 Red, however, the number drops precipitously, as a mere 30 pieces are rated at this level, with none finer (3/14).

A fully struck cent with lustrous surfaces and undiminished mint-red color. Near-pristine on both sides. NGC ID# 22EY, PCGS# 2779

3169 1950-S MS67 Red PCGS. CAC. Heavily frosted copper-red mint luster covers both sides of this high-end Superb Gem. The strike is slightly soft overall, likely due to worn dies, but the visual appeal remains outstanding. None have graded finer at PCGS (3/14). NGC ID# 22F2, PCGS# 2785

**1951 Lincoln Cent, MS67 Red
None Finer at PCGS or NGC**

3170 1951 MS67 Red PCGS. CAC. Buoyed by the purported rarity of the 1950-D nickel, collectors entered the hobby with renewed vigor in 1951, but apparently few Lincoln cents were reserved in Superb Gem condition during the nickel frenzy. This example displays brilliant-orange surfaces with typically full details for what is recognized as a well-struck issue. A few light freckles appear between the wheat ears. Population: 17 in 67 Red, 0 finer (2/14). NGC ID# 22F3, PCGS# 2788

**1951 Cent, MS67 Red
Conditionally Rare**

3171 1951 MS67 Red PCGS. CAC. Few examples of this early-1950s Philadelphia Lincoln cent have attained the PCGS MS67 Red grade of the present piece — precisely 16, in fact, turning on its head the conventional wisdom that the mintmarked Lincoln cents are conditionally rarer than their P-mint counterparts. Splendid luster runs over orange-red, problem-free surfaces. Population: 17 in 67 Red, 0 finer (3/14). NGC ID# 22F3, PCGS# 2788

**1952 Cent, MS67 Red
Supremely Lustrous and Bold**

3172 1952 MS67 Red PCGS. Full details confirm the bold strike on this attractive Lincoln cent, but it will be most remembered for its amazing toning and mint luster. Alternating shades of pink-rose and fiery-orange visit the smooth surfaces as the coin rotates under light. An incredible Superb Gem, unsurpassed for eye appeal in the Superb Gem category. Population: 13 in 67 Red, 0 finer (2/14). NGC ID# 22F6, PCGS# 2797

**1952 Lincoln Cent, MS67 Red
Among the Finest Certified**

- 3173 1952 MS67 Red PCGS. CAC.** Lovely honey-gold color adds to the visual appeal of this lustrous well-struck Superb Gem representative. Intermingled deeper shades of orange appear on the reverse. PCGS has assigned the MS67 Red grade to only 13 examples and neither PCGS nor NGC has awarded a higher numeric grade to a single example (2/14). NGC ID# 22F6, PCGS# 2797

- 3174 1952-D MS67 Red PCGS.** Sharply detailed with well-preserved surfaces. The luster is bright, coppery-red with pleasing eye appeal overall. A few tiny, scattered carbon specks are present on the obverse. Population: 75 in 67 (2 in 67+) Red, 0 finer (2/14). NGC ID# 22F7, PCGS# 2800

- 3175 1952-D MS67 Red PCGS.** A fully struck, bright red Superb Gem. The surfaces are nearly perfect, with largely uninterrupted mint luster. A curious die crack is noted at Lincoln's temple, while a few minuscule carbon specks are present near the right obverse rim. Population: 75 in 67 (2 in 67+) Red, 0 finer (2/14). NGC ID# 22F7, PCGS# 2800

- 3176 1953 MS66+ Red PCGS. CAC.** Full copper-red luster radiates from this Plus-graded Premium Gem. The surfaces are well-preserved and exhibit sharply struck devices. Some microscopic carbon specks are noted on the upper reverse, but are hardly noticeable without magnification. PCGS has awarded Plus designations to only 14 MS66 examples, with six finer (3/14). NGC ID# 22F9, PCGS# 2806

- 3177 1953 MS66+ Red PCGS. CAC.** Deep copper-red luster blankets both sides of this sharply struck Premium Gem. Close examination reveals scattered, faint toning specks, though they are hardly detectable to the unaided eye. Only seven examples have graded finer at PCGS (3/14). NGC ID# 22F9, PCGS# 2806

- 3178 1953 MS66+ Red PCGS. CAC.** Well-defined design elements and a complete lack of carbon spots are among this Premium Gem's pleasing attributes. The well-preserved surfaces display vibrant copper-red luster, only adding to the visual appeal. PCGS has seen just seven numerically finer pieces (3/14). NGC ID# 22F9, PCGS# 2806

**1953-D Lincoln Cent, MS67 Red
Registry Set Contender**

- 3179 1953-D MS67 Red PCGS.** With no examples certified numerically finer by either service, this Superb Gem cent stands up well when ranked for brilliant flash, quality of strike, and eye appeal. Dense, peach-orange color reverberates with booming mint luster. Population: 25 in 67 Red, 0 finer (2/14). NGC ID# 22FA, PCGS# 2809

**1953-D Lincoln Cent, MS67 Red
Among the Finest-Graded Examples**

- 3180 1953-D MS67 Red PCGS.** Superb Gem Lincoln cents with full Red color are surprisingly rare, regardless of date or mint. This is a fact well known to Registry Set specialists attempting to collect this ever-popular series at the MS67 Red grade level or finer. This is the finest example of this Denver issue that we have ever examined. Meticulous strike definition and magnificent luster are complemented by fiery cherry-red toning across the well-preserved surfaces. Population: 26 in 67 Red, 0 finer (3/14). NGC ID# 22FA, PCGS# 2809

**1955 Lincoln Cent, MS67 Red
None Certified Finer by PCGS**

- 3181 1955 MS67 Red PCGS.** Deep, carrot-orange color prevails over lustrous, smooth surfaces of this Superb Gem cent. Hasty and careless production of this date at the Mint was blamed on a severe shortage of cents during the summer of 1955, and the need for around-the-clock production to catch up. This pristine example shows no overt lack of quality with a bold strike and excellent appeal, although the portrait of Lincoln reveals several spidery signs of die fatigue with a loupe. Population: 20 in 67 Red, 0 finer (2/14). NGC ID# 22FE, PCGS# 2824

- 3182 1955 Doubled Die Obverse XF45 ANACS. FS-101.** One of the most sought-after doubled die errors in American numismatics, as the doubled elements are clearly visible with the unaided eye. This lightly circulated example displays even, deep brown patina. Good detail remains with no surface problems detectable. NGC ID# 22FG, PCGS# 2825

- 3183 1955 Doubled Die Obverse AU58 NGC. FS-101.** An attractive and glossy mahogany-brown near-Mint representative of the dramatic doubled die variety, which confounded the coin hobby in 1955. The field above LIBERTY exhibits a minor lamination, as made. NGC ID# 22FG, PCGS# 2825

- 3184 1955 Doubled Die Obverse MS62 Brown PCGS. FS-101.** The best known of all doubled die mint errors, the FS-101 1955 can be identified with the unaided eye. This chocolate-brown representative retains hints of the initial peach-gold in design crevices. Well struck and minimally abraded. NGC ID# 22FG, PCGS# 2825

**1955 Doubled Die Obverse, MS64 Red and Brown
Sharply Struck and Attractive**

- 3185 1955 Doubled Die Obverse MS63 Red and Brown PCGS.** Slightly subdued orange and copper shades prevail on this Select example of the popular Doubled Die obverse. The strike is solid, with the doubling clearly visible without the use of a loupe. A few minor marks appear, with the most significant of them present on the reverse above the E in ONE. Both sides reveal scattered carbon flecks, though they are primarily located on the lower reverse. NGC ID# 22FG, PCGS# 2826

**1955 Doubled Die Obverse Cent, MS63 Red and Brown
Outstanding Coin With Exceptional Eye Appeal**

- 3186 1955 Doubled Die Obverse MS63 Red and Brown PCGS.** The rich red-brown toning over both sides of this Select Mint State example combines with gleaming mint luster to provide exceptional eye appeal. A solidly struck piece with the famously dramatic doubling on the obverse still impressive to look at. Two or three trivial marks on Lincoln's portrait keep it from an even finer grade. NGC ID# 22FG, PCGS# 2826

**1955 Lincoln Cent, MS63 Red and Brown
Doubled Die Obverse**

- 3187 1955 Doubled Die Obverse MS63 Red and Brown PCGS.** FS-101. Among the most dramatic doubled die varieties in United States coinage, the 1955 doubled die obverse cent is highly sought-after in Mint State condition, especially with remaining mint red. This satiny example retains substantial copper-red luster beneath light olive-brown and burgundy overtones. Well-struck and free of any detracting abrasions. NGC ID# 22FG, PCGS# 2826

**1955 Doubled Die Cent, MS64 Red
Ex: Jack Lee**

- 3188 1955 Doubled Die Obverse MS64 Red PCGS. CAC. FS-101.** The 1955 Doubled Die Lincoln cent is easily the most famous hubbing error in the series. In *A Guide Book of Lincoln Cents*, Q. David Bowers reports approximately 24,000 specimens of this variety were released by the Mint during a single day in 1955. The Mint officials noticed the error, but production schedules prevented the destruction of the coins, which were mixed with normal cents by the time the error was noticed. Experts estimate perhaps 3,000-4,000 examples survive today and the issue is difficult to locate in Mint State with Red surfaces. The dramatic doubling is readily apparent on this attractive near-Gem example displaying pleasing intermingled shades along with a couple of splashes of red and light lime green at the lower reverse. Faint traces of a fingerprint on the reverse limit the grade.
Ex: *Long Beach Signature* (Heritage, 2/2009), lot 553, which realized \$8,838; *Summer FUN Orlando* (Heritage, 7/2011), lot 3184, which realized \$11,500.
From *The Jim O'Neal Collection of U.S. Type, Part One*. NGC ID# 22FG, PCGS# 2827

**1960 Large Date Cent, MS67 Red
Modern Condition Rarity**

- 3189 1960 Large Date MS67 Red PCGS.** Whether few Superb Gem Large Date cents were ever produced in 1960, or if the issue was simply ignored and cast aside during the search for its scarce Small Date brethren, Registry Set collectors are hard-pressed to locate high-grade examples of either variety in Red. This gleaming, salmon-orange example displays attractive red-orange highlights and pervasive mint luster. A tiny mark above the N in ONE is the only visible imperfection. Population: 7 in 67 Red, 0 finer (2/14). NGC ID# 22FW, PCGS# 2860
- 3190 1960-D Large Date MS67 Red PCGS.** Readily available in most any grade desired, the 1960-D Large Date cent suddenly becomes rare with full mint Red at the Superb Gem grade level. This piece displays rich coppery luster and well-struck devices. The surface preservation is excellent, though a few faint carbon specks are noted on the reverse. PCGS has awarded this lofty grade to just 14 examples, with none finer (3/14). NGC ID# 22FY, PCGS# 2866
- 3191 1960-D Large Date MS67 Red PCGS.** Several small, interesting die breaks are present on this beautifully preserved Superb Gem example exhibiting strong mint luster and vibrant copper-orange color. The die breaks are present across Lincoln's head, in the 9 of the date, and the B in LIBERTY. The fields reveal a number of die polish lines on this well struck piece. Population: 14 in 67 Red, 0 finer (3/14). NGC ID# 22FY, PCGS# 2866

**1961-D Lincoln Cent, MS67 Red
None Numerically Finer**

- 3192 1961-D MS67 Red PCGS.** More than 1.7 billion pieces were produced by the Denver Mint, but few have been certified in high grades and none finer than MS67 by either service. This salmon-orange representative is reflective and lustrous, with a mere blush of deeper orange at the margins. The motifs display full details and the surfaces are spot-free. Population: 5 in 67 Red, 0 finer (2/14). NGC ID# 22G2, PCGS# 2875

- 3193 1992-D Close AM — Damage — PCGS Genuine. Unc. Details. FS-901.** Proof 1992-S cents all feature a close AM in AMERICA. However, that subtype was not intended for business strikes of that year, which show a wide AM in AMERICA. Apparently, a single reverse die of the close AM subtype, intended for the 1993-D issue, was instead struck on 1992-D dies late that year. Examples went into circulation and, given their minimal face value, most were likely discarded over time. The present piece is nearly full Red but has moderate obverse marks and rim corrosion. PCGS# 83099

PROOF LINCOLN CENTS

**1910 Cent, PR66 Red and Brown
Largest Mintage of the Matte Proof Cent Series**

- 3194 1910 PR66 Red and Brown PCGS.** The 1910 had the largest mintage (4,118 pieces) of the 1909-1916 matte proof cent series. A fair number of Red and Brown examples are available through Gem condition, after which the issue becomes very elusive. Gold-brown patination adheres to both sides of this Premium Gem and the strike is full throughout, including Lincoln's hair and the lines and grains in the wheat stalks. A few light specks of carbon can be seen on each side. Population: 25 in 66 (1 in 66+) Red and Brown, 4 finer (3/14). NGC ID# 22KT, PCGS# 3307

- 3195 1911 PR66 Brown PCGS.** Proof cent production dropped to just 1,725 coins in 1911, likely due to collectors' disapproval of the matte finish employed by the mint. This Premium Gem example displays deep burgundy-blue patina overall, with fully defined motifs. Population: 15 in 66 Brown, 0 finer (3/14). NGC ID# 22KU, PCGS# 3309

- 3196 1912 PR65 Red and Brown NGC.** A well-preserved Gem matte proof with rich copper-brown patina. The motifs are boldly struck, delivering an excellent representation of the design. Only a few faint toning specks are seen upon close examination. Census: 31 in 65 Red and Brown, 9 finer (3/14). NGC ID# 22KV, PCGS# 3313

- 3197 1913 PR66 Red and Brown PCGS. CAC.** A boldly struck Premium Gem proof. Balanced hues of bronze-gold and rich auburn blend over each side, while the matte surfaces are practically void of even minor imperfections. Population: 18 in 66 (1 in 66+) Red and Brown, 4 finer (3/14). NGC ID# 22KW, PCGS# 3316

**1913 Cent, PR67 Red
Flawless Matte Proof**

- 3198 1913 PR67 Red NGC.** The large production of proof cents from this year, 2,983 pieces, was undoubtedly due to the interest and popularity of the Buffalo nickel. Both coins were sold in minor proof sets by the Mint. Since matte proofs were wrapped in tissue paper they rapidly turned from their original mint red. This is a magnificent, full Red example that has just a tinge of lime-green on the obverse. The surfaces are as close to flawless as we have seen on any matte proof in some time. Census: 5 in 67 Red, 0 finer (3/14). NGC ID# 22KW, PCGS# 3317

**1915 Lincoln Cent, PR67 Brown
Tied for the Finest Certified**

- 3199 1915 PR67 Brown PCGS. CAC.** As expected, every detail is crisp on this Superb Gem matte proof Lincoln cent. Satiny and fully lustrous with traces of orange mint color on the lovely brown surfaces, showing delicate blue overtones. PCGS has certified four examples as PR67 Brown and two others as PR67 Red, with none finer (3/14). NGC ID# 22KY, PCGS# 3321

**1936 Lincoln Cent, PR66+ Red
Type One, Satin Finish Proof**

- 3200 1936 Type One — Satin Finish PR66+ Red PCGS.** An immaculate proof example with the Type One satiny, partially mirrored surfaces. Subtle lime-green undertones visit the predominantly orange fields and devices, which display a full strike and virtually no distractions. The lightly reflective fields are smooth and appealing. Later proof examples for the year were fully mirrored and polished (identified as Type Two proofs). This is only Type One proof to earn the PCGS Plus designation for the PR66 grade. Population: 25 in 66 (1 in 66+) Red, 1 finer (2/14). NGC ID# 22L2, PCGS# 3332

- 3201 1936 Type Two — Brilliant Finish PR65 Red NGC.** Deep cherry-red toning over both sides fails to conceal the watery reflectivity in the fields. Fully struck with nearly flawless surfaces. Census: 68 in 65 (2 in 65 ★) Red, 20 finer (3/14). NGC ID# 22L3, PCGS# 3335

**1936 Type Two Cent, PR66 Red
Brilliant Mirrored Surfaces**

- 3202 1936 Type Two — Brilliant Finish PR66 Red PCGS. CAC.** The brilliant finish of the 1936 Type Two proof Lincoln cents exhibits fully mirrored fields and satiny, reflective devices. This Premium Gem has the expected full strike, with brilliant orange mint surfaces and exceptional eye appeal. Population: 37 in 66 (1 in 66+) Red, 2 finer (3/14). NGC ID# 22L3, PCGS# 3335

**1990 One Cent, PR65 Red Deep Cameo
Dramatic No S Error**

- 3203 1990 No S PR65 Red Deep Cameo PCGS. FS-101.** The rarity of this fantastic Mint error cannot be ignored. Rivalled by the even-rarer No S 1968 and 1975 Roosevelt dimes, the No S 1990 Lincoln cent proof is the only mintmarkless modern proof issue of the series and one wonders if such an error will ever be repeated, given the hoopla that surrounds it. Perhaps only 200 to 250 examples exist in any grade. This MS65 proof, although of excellent Gem quality, is certified at the low end of the proof scale due to some unevenness of color and one or two minor surface imperfections. Even so, this is a seldom-seen opportunity own the key to the cent proof series — one not to be missed. NGC ID# 274B, PCGS# 93506

SHIELD NICKELS

**1866 Rays Shield Nickel
An Exceptional MS66**

- 3204 1866 Rays MS66 PCGS. CAC.** This first year of the regular-issue Shield five cent piece was not a well-produced date. It is plagued by weak strikes, dull surfaces, dark streaking, carbon spotting, and die cracks. These factors account for the paucity of the 1866 in the better Mint State levels of preservation.

The present Premium Gem offering is a refreshing exception to the "typical" mint condition example. Its lustrous surfaces exhibit sharply struck design features, including the horizontal and vertical lines in the shield, the leaf ribbing, the star centrils, and all but one or two of the rays which show minor softness. A faint die crack on each side is hardly noticeable, and there are no carbon spots or dark streaks. This specimen is well-deserving of the CAC endorsement and will be a wonderful addition to a high-grade Shield nickel collection. Population: 36 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 22NX, PCGS# 3790

1867 Rays Nickel, Outstanding MS66

- 3205 1867 Rays MS66 PCGS.** The 1867 Rays five cent piece was not among the Mint's best-manufactured coins. It is characteristically softly struck with dull luster, and plagued by laminations, strike-throughs, die cracks, and spotting. This Premium Gem is a notable exception. Its nickel-gray surfaces yield pleasing luster and is sharply struck, especially on the horizontal shield lines, leaf veins, star centrils, and most of the rays, elements that are often weak. Neither side reveals mentionable planchet defects or marks, and the only noticeable die crack occurs to the right of the date. This is a great opportunity for the collector of Shield nickels as this date is rarely seen this nice. Population: 6 in 66, 1 finer (3/14). NGC ID# 22NY, PCGS# 3791

**1872 Shield Nickel, MS66
Doubled Obverse**

3206 1872 MS66 PCGS. CAC. Prominent peripheral die cracks characterize this Shield nickel. Both sides are brilliant and highly lustrous with delicate gold toning. Slight doubling is noted at the upper obverse, including a doubled annulet. Population: 17 in 66 (1 in 66+), 1 finer (3/14). NGC ID# 22P6, PCGS# 3799

3207 1873 Open 3 MS65+ PCGS. CAC. Softly frosted silver-gray luster blankets both sides of this Plus-graded Gem. The strike is sharp, with notable definition on the stars and central leaf veins. Close examination reveals only a few faint surface grazes, while the overall visual appeal is excellent. Population: 36 in 65 (3 in 65+), 9 finer (3/14). NGC ID# 276C, PCGS# 3800

**1874 Shield Nickel, MS66
Late-State Obverse Die Cracks**

3208 1874 MS66 PCGS. CAC. Business strike examples in high grade of this late-series strike are in short supply. This MS66 PCGS example is one of only seven such with none finer (3/14). Nickel-gray surfaces are well-struck despite the interlocking peripheral die cracks on the obverse, and the surface quality is near-unimpeachable, save for a small spot on the star below the first T in STATES. NGC ID# 22P9, PCGS# 3803

3209 1882 MS66+ PCGS. CAC. With more than 11 million produced and a good survival rate, the 1882 Shield nickel is ideal for type purposes. This Plus-graded Premium Gem exhibits softly frosted, silver-gray luster and sharply defined design elements. The surfaces are nearly pristine, delivering excellent eye appeal. Population: 67 in 66 (2 in 66+), 6 finer (3/14). NGC ID# 22PC, PCGS# 3812

3210 1883/2 MS61 NGC. FS-301. A boldly struck example of this popular overdate variety, one of five known from this issue. A light overlay of autumn-gold toning increases the visual appeal of this lustrous representative. Wispy hairlines and a couple of trivial nicks define the grade of this Mint State specimen. NGC ID# 22PD, PCGS# 3814

**1883 Shield Nickel, MS67
Tied for Highest Certified at PCGS**

3211 1883 MS67 PCGS. Struck from a shattered obverse die. Multiple die cracks criss-cross the obverse of this fully brilliant, silver-white nickel with a mere hint of gold toning at the rims. A Superb Gem in every sense of the words, this lustrous, final-year Shield nickel shows an advanced die crack on the reverse, too, that circumnavigates the legend. Despite the late state of the dies, the coin is fully struck. There are no significant marks or spots on this eye-catching example. Neither PCGS nor NGC have certified a numerically finer example. Population: 11 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 22PE, PCGS# 3813

PROOF SHIELD NICKELS

3212 1866 Rays PR64 NGC. CAC. A satiny, near-Gem example of this first-year proof nickel. Soft champagne and violet hues intermingle on both sides. The strike is sharp, with notable definition in the horizontal shield lines and the stars. A small strike-through is noted above the I in UNITED. NGC ID# 276G, PCGS# 3817

3213 1867 No Rays PR65 Cameo PCGS. The sharply detailed frosty design elements of this impressive Gem contrast boldly with the deeply reflective fields, creating stark cameo contrast. From a tiny proof mintage of 600 pieces. Population: 49 in 65 Cameo, 11 finer (3/14). PCGS# 83821

**1867 No Rays Shield Nickel, PR66 Cameo
Rarely Encountered in High Grades**

3214 1867 No Rays PR66 Cameo PCGS. CAC. The Cameo contrast is readily apparent on this appealing Premium Gem specimen. Faint champagne toning is present and the coin exhibits a sharp strike. The upper right reverse reveals minor planchet flaws, but they are not distracting. Population: 11 in 66 Cameo, 0 finer (3/14). PCGS# 83821

**1868 Shield Nickel, PR66 Cameo
Bright and Strongly Contrasted**

- 3215 1868 PR66 Cameo PCGS. CAC.** In spite of a mintage of only 600 proofs, at least two die pairings were used. The planchet quality of this proof is remarkably bright and problem-free, compared to earlier years and even compared to the business strikes from this year. Strong mint luster appears over the devices and sets up the cameo effect against the illimitable depth of reflectivity in the fields. Population: 14 in 66 (1 in 66+) Cameo, 0 finer (3/14). PCGS# 83822

**1871 Five Cent, PR66 Cameo
Sharply Struck and Appealing**

- 3216 1871 PR66 Cameo PCGS. CAC.** Proof nickels of 1871 are readily available, though those designated as Cameos are much more difficult to locate. Soft golden-tan patina imbued with wisps of bluish-violet adorns both sides of this well contrasted Premium Gem, and an exacting strike delivers crisp detail to the design features. Devoid of mentionable marks or flecks, with only a tiny as-made strike-through appearing near the U of UNITED. Population: 21 in 66 (4 in 66+) Cameo, 0 finer (3/14). Ex: *FUN Signature* (Heritage, 1/2010), lot 462. PCGS# 83825

- 3217 1872 PR66 Cameo PCGS. CAC.** While the 1872 is always available for a price as a business strike, the proofs are much scarcer. This is especially true in high grades and with cameo contrast. This is a splendid example that is brilliant throughout. The devices are noticeably frosted and sharply contrast against the deep mirrors seen in the fields. Population: 27 in 66 (2 in 66+) Cameo, 3 finer (3/14). Ex: *Long Beach Signature* (Heritage, 9/2010), lot 5154. PCGS# 83826

- 3218 1874 PR66 Cameo PCGS. CAC.** The 4 in the date is repunched north. Delicate chestnut-gold toning visits this gently shimmering and carbon-free Premium Gem. The strike is unimprovable. Population: 17 in 66 (1 in 66+) Cameo, 2 finer in PR67 Cameo (3/14). Ex: *Orlando FUN Signature* (Heritage, 1/2010), lot 463. PCGS# 83828

- 3219 1875 PR64+ Cameo PCGS. CAC.** A pleasing Plus-graded cameo proof nickel. The details are sharply brought-up, with moderate contrast between the devices and the fields. A blush of amber-rose accents the silver-gray luster of this CAC-approved example. Population: 10 in 64 (1 in 64+) Cameo, 27 finer (2/14). PCGS# 83829

**1877 Shield Nickel, PR66 Cameo
Series Key**

- 3220 1877 PR66 Cameo NGC.** A Premium Gem with strong eye appeal, due in part to the pronounced contrast between the fields and devices, this coin also displays a sharp strike. Tiny flecks of carbon are present, primarily on the obverse. Census: 84 in 66 Cameo (1 in 66+ Cameo, 4 in 66 ★ Cameo), 5 finer (3/14). PCGS# 83831

- 3221 1878 PR66 PCGS. CAC.** An iridescently toned proof-only Premium Gem. Lime-green, peach-gold, and plum-mauve shades drape satiny and razor-sharp surfaces. The second 8 in the date is repunched. Encapsulated in an old green label holder. Ex: *Long Beach Signature* (Heritage, 5/2012), lot 3327, which realized \$2,185. NGC ID# 276V, PCGS# 3832

- 3222 1878 PR67 PCGS.** Faint toning is present on this sharply struck Superb Gem representative, primarily on the reverse, with hints of gold, orange, and golden-tan appearing. The reverse exhibits several tiny as-made strike-throughs along with a few minuscule flecks of carbon. Population: 16 in 67, 0 finer (3/14). NGC ID# 276V, PCGS# 3832

- 3223 1879/8 PR67 PCGS. CAC. Breen-2514, "very scarce."** An absolutely exquisite example of this popular overdate variety, listed both in Breen and the *Guide Book*. Fully struck and virtually pristine, with untoned, impeccably preserved surfaces. Population: 26 in 67, 7 finer (3/14). Ex: *Denver Signature* (Heritage, 8/2006), lot 586, which realized \$1,955. NGC ID# 22PG, PCGS# 3834

**1880 Nickel, PR67 Cameo
An Excellent Choice for a Date Set**

- 3224 1880 PR67 Cameo PCGS. CAC.** There is considerable date pressure by collectors on the 1880 proof five cent because of the difficulty in locating a business-strike example that has a paltry mintage of 16,000 pieces. Moreover, the 1880 proof is difficult to locate in Cameo finish, especially in the lofty numerical grade of PR67. Both sides yield stunning white-on-black contrast, and each is sharply struck and impeccably preserved. The CAC sticker affirms the outstanding eye appeal of this coin. An excellent choice for the Shield nickel specialist. Population: 20 in 67 (1 in 67+) Cameo, 0 finer (3/14). PCGS# 83835

**1882 Shield Nickel, PR66 Deep Cameo
Among the Finest Known**

3225 1882 PR66 Deep Cameo PCGS. The mintage of 3,100 pieces suggests more high-grade proofs should exist, but PCGS and NGC each have seen just four coins in Premium Gem condition or finer. This excellent example is framed by a thin margin of almond-gold toning. Fully struck devices show strong contrast with the deep, mirrored-silver fields. There are no carbon flecks or other marks, although a glass reveals some tiny, cloudy freckles across the surfaces. Population: 2 in 66 Deep Cameo, 2 finer (3/14). PCGS# 93837

3226 1883 PR67+ PCGS. CAC. Popular among type specialists as one of three design variations for the 1883 nickel. This Superb Gem representative exhibits pale ice-blue and champagne hues blended over each side, with beautifully preserved surfaces and sharply impressed design elements. Population: 33 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 276Z, PCGS# 3838

LIBERTY NICKELS

3227 1883 With Cents MS66 PCGS. Gorgeous cartwheel luster graces both sides of this carefully preserved Premium Gem. Wafts of lemon color accent the light-gray patina, and the strike is sharp save for minimal weakness on a couple of stars and left ear of corn. Several pronounced die cracks are present around the perimeter of the obverse, with a particularly noteworthy one through the date. PCGS has awarded a higher numeric grade to a single example (2/14). *Ex: Long Beach Signature (Heritage, 9/2008), lot 649.* NGC ID# 22PH, PCGS# 3844

**1883 With Cents Liberty Nickel, MS66+
Impressive First-Year Type Coin**

3228 1883 With Cents MS66+ PCGS. CAC. Fully struck with radiant mint frost and lovely light blue-green and gold toning. Carefully preserved with smooth surfaces that are nearly flawless. A wispy die crack extends through most of the obverse stars. The high-end status of this impressive Premium Gem is confirmed by the bright-green CAC sticker on the holder. Population: 60 in 66 (4 in 66+), 1 finer (3/14). NGC ID# 22PH, PCGS# 3844

3229 1884 MS65 PCGS. CAC. A pleasing Gem representative with light amber-gold toning over both sides. The strike is sharp overall, with notable definition on the stars and lower wreath, problem areas on this issue. Well-preserved and satiny. PCGS has graded only 26 numerically finer examples (3/14). NGC ID# 22PJ, PCGS# 3845

3230 1884 MS65 PCGS. CAC. This delightful Gem is sharply detailed in most areas, with just a touch of softness on the lower left stars. The lustrous surfaces are unmarked and accented by shades of attractive gold toning. Population: 77 in 65 (3 in 65+), 26 finer (3/14). NGC ID# 22PJ, PCGS# 3845

3231 1885 AU58 PCGS. CAC. A lovely near-Mint example of this important key issue, well-struck with only traces of high-point wear detected. A pair of light russet-brown toning streaks are noted on the upper left quadrant of the obverse. The surfaces are smooth and mark-free on both sides. NGC ID# 2773, PCGS# 3846

3232 1885 MS61 NGC. A pleasing Mint State example of one of the most sought-after issues in the series. Light amber-gold toning warms both sides, while the surfaces exhibit only a few unobtrusive abrasions. A sharply detailed, satiny representative. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 2773, PCGS# 3846

**1885 Liberty Nickel, MS63
Elusive Key-Date Issue**

3233 1885 MS63 PCGS. Faint olive-green toning is present on this Select representative. The strike is sharp overall, with minor incompleteness of a few of the stars along with the left ear of corn on the wreath. Several wispy die cracks appear. The right ear of corn reveals a tiny spot. The few marks present do not pose a distraction. NGC ID# 2773, PCGS# 3846

3234 1886 MS63 PCGS. A boldly struck, lustrous coin showing typical weakness on the reverse left ear of corn and peripheral die cracks on each side. Free of surface marks and perhaps a conservatively graded example of this key date. NGC ID# 22PK, PCGS# 3847

**1886 Five Cent, MS64+
Key Issue in the Series**

3235 1886 MS64+ PCGS. CAC. A low production of nickels by the Mint in 1884 and 1885 was followed by another small mintage in 1886, when nickels were not needed until September of the year. Although production was 3.3 million pieces, it was "small change" compared to normal productions in the 10 to 30 million range. This example is nearly prooflike, with the fields deeply reflective on the obverse but a touch less so on the reverse. The devices display a sharp strike everywhere but a few of the obverse stars, with stars 7 through 9 a touch weak. Brilliant-silver surfaces are untuned on both sides of the coin, with few marks seen anywhere on the coin. This borderline Gem is near the top of its grade level, with PCGS granting just four Plus designations at this near-Gem level (3/14). NGC ID# 22PK, PCGS# 3847

1888 Liberty Nickel, MS66
One of the Finest Known Examples

- 3236 1888 MS66 PCGS.** This is a lovely, conditionally rare Premium Gem with solidly struck design motifs and beautifully clean, highly lustrous surfaces. A crescent of peach coloration accents the upper obverse, including Liberty's hair curls directly above the ear and face. None are graded higher than MS66 at either of the major services. Population: 16 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 2774, PCGS# 3849

1889 Nickel, Well-Defined MS66
Above-Average Eye Appeal

- 3237 1889 MS66 PCGS. CAC.** The relatively high production figure that approaches 16 million pieces makes the 1889 Liberty five cent piece fairly available in high grade, at least through Gem condition. Premium Gems become very challenging, however, as the two major certification services have graded slightly more than 60 specimens at this level and a mere two finer (3/14).

The moderately granular surfaces (a major characteristic of the 1889) display satiny luster and are color-free. The design features are somewhat better-defined than typically seen, especially Liberty's hair, which is often weak, and most of the star centers, save for the last three or four. The wreath elements are strong except for the usual softness in the corn ear left of the bow. Both sides are devoid of significant marks and carbon spotting, the latter being a major impairment on many pieces. We mention two or three minute marks on the left stand of the V denomination solely for identification purposes. The CAC sticker affirms the well-above-average eye appeal of this example. Population: 19 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 2775, PCGS# 3850

1890 Nickel, MS66
Tied for Numerically Finest at PCGS

- 3238 1890 MS66 PCGS.** Above-average detail is present on peripheral details such as the obverse stars and the ears of corn. This Premium Gem is smooth with a touch of satin to the luster, largely gleaming silver-nickel with hints of blue at the interiors and touches of greenish-gold and crimson close to the rims. Population: 15 in 66 (4 in 66+), 0 finer (2/14).
Ex: Houston Signature (Heritage, 11/2012), lot 3341, which realized \$3,818.75. NGC ID# 22PM, PCGS# 3851

- 3239 1895 MS65 PCGS.** Sharply struck and showing faint amounts of mottled patina, this is an impressively preserved Gem example with clean surfaces and gleaming satiny mint luster. Population: 64 in 65 (2 in 65+), 15 finer (3/14).

From The Northern Lights Collection. NGC ID# 277A, PCGS# 3856

- 3240 1895 MS65 PCGS.** A boldly struck Gem with vibrant luster and light olive-gold toning, intermingled with mottled hues of peach-gold and metallic-blue on the reverse. Well preserved and free of surface flaws. Population: 64 in 65 (2 in 65+), 15 finer (3/14). NGC ID# 277A, PCGS# 3856

- 3241 1895 MS65 PCGS. CAC.** An outstanding Gem, and rarely seen so fine, this example has satiny nickel-gray luster with bold details, including partial separation of the kernels in the left ear of corn. Population: 64 in 65 (2 in 65+), 15 finer (3/14). NGC ID# 277A, PCGS# 3856

- 3242 1896 MS65 PCGS.** A light gold and tan patina covers both sides of this Gem, with an appealing degree of luster remaining. The strike is sharp overall, with only minor incompleteness present at the left ear of corn. Population: 60 in 65 (2 in 65+), 13 finer (2/14). NGC ID# 277B, PCGS# 3857

- 3243 1898 MS66 PCGS.** Rarely found at the Premium Gem grade level, this well-preserved, lustrous representative delivers excellent visual appeal with sharply struck design elements and light golden toning overall. Population: 29 in 66, 1 finer (3/14). NGC ID# 22PP, PCGS# 3859

- 3244 1901 MS66 PCGS.** A beautifully preserved type representative with razor-sharp definition in all design elements. The heavily frosted silver-white surfaces are seemingly perfect, with close examination confirming virtually no disturbances in the luster. PCGS has certified only three numerically finer specimens (3/14). NGC ID# 277C, PCGS# 3862

**1901 Liberty Nickel, MS66+
Strong Eye Appeal**

3245 1901 MS66+ PCGS. CAC. Faintly toned, this high-end Premium Gem possesses a sharp strike overall and frosty luster, with the left ear of corn exhibiting a minor incompleteness of strike. This example displays the reverse with a low leaf above the left side of the V, with the AM in AMERICA not touching. A minuscule mark on Liberty's cheek poses minimal distraction, if any. Population: 49 in 66 (4 in 66+), 3 finer (3/14). NGC ID# 277C, PCGS# 3862

3246 1902 MS66+ PCGS. CAC. A light gold tint warms frosty cartwheel luster on both sides of this Plus-graded Premium Gem. Beautifully preserved, with sharp definition over most areas, though just a touch of softness noted on select stars and the lower-left portion of the wreath. Population: 55 in 66 (1 in 66+), 5 finer (3/14). NGC ID# 277D, PCGS# 3863

3247 1903 MS66 PCGS. A beautifully preserved Premium Gem, perfect for a high-end type collection. Light amber toning warms both sides, with frosty underlying mint luster. The strike is sharp overall, with notable strength in the stars, Liberty's hair, and the denticles. PCGS has graded only two numerically finer examples (3/14). NGC ID# 277E, PCGS# 3864

3248 1903 MS66 PCGS. A bold striking, save for softness in the leaves and corn ear to the left of the bow knot. The surfaces possess a uniform satiny luster that is exceptional for a heavily minted nickel issue. A few wisps of light brown toning are evident on the obverse. Liberty's cheek reveals a tiny as-made strike-through. PCGS and NGC combined have awarded higher numeric grades to only 5 examples (2/14).
Ex: ANA Atlanta (Heritage, 4/2006), lot 252. NGC ID# 277E, PCGS# 3864

3249 1904 MS66 PCGS. Well-defined in the centers with minimal patina, this strongly lustrous Premium Gem is tied for the finest certified by PCGS (2/14). A lovely piece with strong eye appeal.
Ex: Houston Signature (Heritage, 12/2008), lot 928. NGC ID# 277F, PCGS# 3865

3250 1905 MS66 PCGS. Cartwheel luster and ice-blue color provide this Premium Gem with strong visual appeal. Portions of the design reveal a minor incompleteness of strike. Aside from a mark on the obverse near 9 o'clock at the denticles, the abrasions present are minuscule. PCGS has yet to award a higher numeric grade to a single example (2/14). NGC ID# 277G, PCGS# 3866

3251 1909 MS66 PCGS. One of the finest-known examples from this late, high-mintage Liberty nickel issue. Fully struck with remarkably preserved surfaces that only reveal a couple of microscopic ticks, under magnification. A lovely, exceptional Premium Gem. Population: 26 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 277K, PCGS# 3870

3252 1912-D MS65 PCGS. Pleasing satiny luster glows through a film of nearly imperceptible gray-gold color. The strike on this example is typical for the issue, being relatively weak on some of the stars, and on portions of the hair and reverse wreath. Some small, scattered light-colored spots on the reverse do not detract from the overall quality of this D-mint issue.
Ex: Long Beach Signature (Heritage, 6/2004), lot 5582. NGC ID# 277P, PCGS# 3874

3253 1912-S MS64 NGC. A near-Gem example of this low-mintage San Francisco issue (only 238,000 produced). Pale amber toning overall complements sharply struck design elements, with well-preserved, satiny surfaces.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 277R, PCGS# 3875

3254 1912-S MS64 NGC. A well-preserved example of this sought-after, low-mintage issue. The strike is sharp with a pleasing, satiny appearance overall. A light amber hue coats both sides while a thin ribbon of ocean-blue is hidden in the denticles around the peripheries. NGC ID# 277R, PCGS# 3875

**1912-S Nickel, MS64
Boldly Struck Example**

3255 1912-S MS64 NGC. CAC. The well-known low-mintage S-mint key to the series, the 1912-S is always popular. This near-Gem example is untuned nickel-gray with a bit of charcoal and blue patina near the rims on each side. This piece is quite nicely struck, showing detail even on the usually weak left ear of corn and throughout each side. A couple of small obverse marks determine the grade but are undistracting. NGC ID# 277R, PCGS# 3875

**1912-S Liberty Nickel, Well-Struck MS65
A Perennially Popular Date**

3256 1912-S MS65 PCGS. The 1912-S Liberty nickel is perennially popular as the last date of the series, the only issue bearing the San Francisco mintmark, and its low mintage of 238,000 pieces. The lustrous surfaces of this Gem offering, while not fully struck, exhibit better design detail than ordinarily seen (which is usually "mushy"). In particular, the star centrils, and most of Liberty's hair and the reverse wreath are relatively well-defined. The slate-gray surfaces show a hint of russet and are devoid of mentionable marks. PCGS and NGC have graded only 21 finer (3/14). NGC ID# 277R, PCGS# 3875

**1912-S Liberty Nickel, MS65
Distinctive Fabric**

3257 1912-S MS65 NGC. The S-Mint Liberty nickels have a distinctive satiny “fabric” that is entirely unlike any Philadelphia Mint issue. This example clearly displays that characteristic look, with bold design motifs and splendid gold toning. NGC has only certified six finer examples (3/14). NGC ID# 277R, PCGS# 3875

**1912-S Liberty Nickel, Sharp MS65
Lovely Patina Throughout**

3258 1912-S MS65 PCGS. This is an excellent-looking example of this Gem key date, showing a strike that is close to full, even on normally weak areas, with good luster and no mentionable problems. The original surfaces show greenish-gold and pinkish-gold surfaces with a bit of aqua in the left obverse field. PCGS has seen only 14 numerically finer (3/14). NGC ID# 277R, PCGS# 3875

**1912-S Liberty Nickel, MS65
Low-Mintage of 238,000 Coins**

3259 1912-S MS65 PCGS. The 1912 San Francisco issue of Liberty nickels had a low mintage of only 238,000 coins. A Gem example of the final date of the series, this piece exhibits satin luster and light toning in shades of pale orange on the obverse and olive-green on the reverse. The 1912-S issue is known for an incomplete strike of the hair above Liberty's forehead, with areas of softness present elsewhere on this specimen. PCGS has awarded higher numeric grades to only 14 examples (3/14). NGC ID# 277R, PCGS# 3875

PROOF LIBERTY NICKELS

3260 1883 No Cents PR66 Cameo PCGS. A pleasing Premium Gem cameo. Lightly frosted devices visit moderate mirroring in the fields, with a light golden tint overall. The strike is needle-sharp and the surfaces are beautifully preserved. A tiny strike-through is noted on the obverse next to the twelfth star. PCGS# 83878

**1883 No Cents Nickel, PR66 Deep Cameo
Beautifully Contrasted**

3261 1883 No Cents PR66 Deep Cameo PCGS. Gorgeous, pronounced contrast exists between the deeply frosted devices and mirrored fields on this Premium Gem specimen. The strike is sharp, with only the left ear of corn exhibiting incompleteness. Tiny flecks of golden-tan toning are present. Population: 9 in 66 (1 in 66+) Deep Cameo, 1 finer (3/14). PCGS# 93878

1883 No Cents Nickel, PR66+ Deep Cameo

3262 1883 No Cents PR66+ Deep Cameo PCGS Secure. CAC. Faint champagne toning is present on this high-end Premium Gem Deep Cameo specimen displaying exceptional visual appeal. The coin exhibits a sharp strike overall, with minor incompleteness of the left ear of corn. The few tiny flyspecks present are largely confined to the lower obverse. A lovely piece surpassed by only one coin at PCGS. Population: 7 in 66 (1 in 66+) Deep Cameo, 1 finer (2/14). *From The Jim O'Neal Collection of U.S. Type, Part One.* PCGS# 93878

**1883 Liberty Nickel With Cents, PR67 Cameo
None Finer at PCGS**

- 3263 1883 With Cents PR67 Cameo PCGS.** The 2014 *Guide Book* lists the proof mintage of the 1883 Liberty Head nickel, With Cents as 6,783. However, as stated by Bowers in *A Guide Book of Shield and Liberty Head Nickels*, the estimated production figure is 2,783. Sharply struck, this lustrous piece possesses strong eye appeal and readily apparent Cameo contrast. A pinpoint toning spot appears on Liberty's neck. Population: 4 in 67 Cameo, 0 finer (3/14). PCGS# 83881

**1884 Liberty Nickel, PR66+ Cameo
Fully Struck**

- 3264 1884 PR66+ Cameo PCGS. CAC.** A total of 3,942 proof Liberty Head nickels were struck in 1884. Peters and Mohon (1995) citing Breen write that: "Hoarding was common years ago. A.C. Gies had 32 pieces, and Gies and Raymond had over 100 proof sets between them." The relatively high mintage and the hoarding likely account for the exceptionally high number of 1884 proof nickels graded by PCGS and NGC (nearly 1,700 pieces).

The strike is complete on each side of this high-end Premium Gem. Both sides display pleasing white-on-black contrast and each is devoid of mentionable contact marks. A number of tiny carbon flecks are visible on the obverse. Population: 53 in 66 (5 in 66+) Cameo, 5 finer (3/14). PCGS# 83882

- 3265 1885 PR66 Cameo PCGS.** This is a beautiful piece with full, unmistakable proof strike definition and remarkable contrast between lightly frosted devices and jet-black deep mirror fields. Relatively few are known at this lofty grade level, with the Cameo designation, at both grading services. Population: 45 in 66 (2 in 66+) Cameo, 9 finer (3/14). PCGS# 83883

- 3266 1885 PR66+ Cameo PCGS. CAC.** The proof variant of this classic low-mintage issue. Softly frosted devices complement deep mirroring in the fields on this Plus-graded Premium Gem. Faint pastel hues accent sharply struck design elements and virtually undisturbed surfaces. Population: 45 in 66 (2 in 66+) Cameo, 9 finer (3/14). PCGS# 83883

**1886 Liberty Nickel, PR67
Among the Finest Certified**

- 3267 1886 PR67 PCGS. CAC.** Faintly toned and lustrous, this Superb Gem possesses wonderful eye appeal. The toning includes hues of gold, peach, and subtle pastel shades of blue, yellow, and green. The strike is exacting, with even the left ear of corn exhibiting sharp detail. Population: 21 in 67, 0 finer (3/14). NGC ID# 277U, PCGS# 3884

- 3268 1886 PR66 Cameo PCGS.** Sharply struck with complete definition on Liberty's hair, the reverse wreath, and both ears of corn. The glassy, sparkling fields and lightly frosted motifs provide pleasing Cameo contrast on both sides of this untroubled, contact-free Premium Gem. Population: 18 in 66 (3 in 66+) Cameo, 2 finer (3/14). PCGS# 83884

**1887 Liberty Five Cent, PR67
Outstanding Quality and Appeal**

- 3269 1887 PR67 PCGS.** A considerable production of 2,960 proofs has yielded only nine Superb Gems from more than 1,800 grading events by PCGS and NGC combined, with no coins graded numerically finer than this exceptional example (3/14). Nearly flawless surfaces display bright iridescence, with rainbow shades visible when deep-mirrored fields are viewed at multiple angles. A full strike on the motifs completes the outstanding eye appeal. NGC ID# 277V, PCGS# 3885

- 3270 1887 PR66 Cameo PCGS.** Rich violet, champagne, and ice-blue hues melt into the moderately mirrored surfaces of this Premium Gem. Sharply struck, with notable definition in the stars and the wreath. Population: 9 in 66 (2 in 66+) Cameo, 1 finer (3/14). PCGS# 83885

**1890 Liberty Nickel, PR66 Cameo
Tied for the Finest PCGS Cameo Specimen**

- 3271 1890 PR66 Cameo PCGS.** Aside from minor incompleteness on the left ear of corn, the design elements exhibit a strong level of detail on this Premium Gem specimen displaying lovely Cameo contrast. The surfaces are faintly toned, with hues of gold and peach present. Population: 12 in 66 Cameo, 0 finer (3/14). PCGS# 83888

**1891 Nickel, PR66+ Cameo
Strong Eye Appeal**

- 3272 1891 PR66+ Cameo PCGS. CAC.** A high-end Premium Gem Cameo specimen, this piece exhibits strong eye appeal. The contrast between the fields and devices is pronounced and the strike is sharp overall, with minor incompleteness at the left ear of corn. A tiny hint of toning appears below the bust and an as-made lint mark is present to the right of the 9. The reverse reveals a minor planchet flaw below the R in AMERICA. Population: 27 in 66 (3 in 66+) Cameo, 1 finer (3/14). PCGS# 83889

**1891 Liberty Head Nickel, PR66 Ultra Cameo
Highly Contrasted and Attractive**

- 3273 1891 PR66 Ultra Cameo NGC.** Significant white-on-black contrast appears when this attractive Premium Gem nickel is viewed from above. Full details appear on all the devices, although the oft-seen lack of detail on the corn ear to the left of the bow is compounded by thick mint frost. Untoned and deeply reflective, this example ranks high among proof survivors of the issue with just three examples certified higher by NGC and none by PCGS. Census: 4 in 66 Ultra Cameo, 3 finer (3/14). PCGS# 93889

**1891 Nickel, PR66+ Deep Cameo
None Finer at PCGS**

- 3274 1891 PR66+ Deep Cameo PCGS. CAC.** An exceptional specimen, this high-end Premium Gem possesses Deep Cameo contrast providing the coin with strong visual appeal. This lustrous and sharply detailed piece displays areas of peach color. A tiny translucent spot appears to the left of Liberty's nose and a couple of minuscule as-made strike-throughs are present. Population: 7 in 66 (3 in 66+) Deep Cameo, 0 finer (3/14). PCGS# 93889

- 3275 1892 PR66+ Cameo PCGS Secure. CAC.** A fully struck piece with significant field-to-device contrast evident on both sides. A brilliant and impressively preserved specimen tied for finest-graded as a Cameo at PCGS. Population: 26 in 66 (3 in 66+) Cameo, 0 finer (3/14). PCGS# 83890

- 3276 1893 PR66 Ultra Cameo NGC.** Not surprisingly, given the Premium Gem grade and Ultra Cameo designation, this piece has fantastic eye appeal. The strike is exacting and the contrast between the fields and devices pronounced. The surfaces are virtually free of toning and only the reverse exhibits carbon, which is minuscule. Census: 3 in 66 Ultra Cameo, 1 finer (3/14). PCGS# 93891

- 3277 1894 PR66+ PCGS. CAC.** Despite a moderate proof mintage of 2,632 coins, high-end Premium Gem survivors are elusive. An immaculate strike and moderately mirrored fields provide this Plus-graded example with superior eye appeal. The virtually untuned surfaces are free of any significant faults, as a single, minuscule tick below Liberty's eye is all that precludes an even finer grade. Population: 14 in 66 (1 in 66+), 2 finer (3/14). NGC ID# 2784, PCGS# 3892

**1894 Nickel, Brilliant PR66 Cameo
Surprisingly Scarce With Contrast**

- 3278 1894 PR66 Cameo PCGS.** The highly reflective fields provide excellent contrast against the lightly frosted devices on this sharply struck Premium Gem representative. Silver, gold, and lavender shades are present, along with a few tiny spots of darker color, including pale orange and red-orange. Scattered as-made strike-throughs appear, the largest of them appearing near 9 o'clock on the obverse. Population: 17 in 66 (1 in 66+) Cameo, 6 finer (3/14). PCGS# 83892

**1894 Liberty Nickel, PR67+ Cameo
Finest at PCGS**

3279 1894 PR67+ Cameo PCGS. CAC. Many 1894 proof nickels have problems with surface laminations, planchet flakes, and lint marks, but this Superb Gem has no such distractions. Nor is Cameo contrast often seen for the issue, with no Deep Cameo or Ultra Cameo proofs certified to date. This nicely contrasted example, however, displays strong mint frost on the fully struck motifs. A tiny bit of gold toning at the rims does not venture onto the deeply reflective surfaces, and the coin is essentially brilliant and untoned.

Two obverse dies were used for the proof production, with Obverse II indicated by a repunched 4 in the date. The 4 is clearly recut on this coin, first punched too low, and then corrected to its proper position with remnants of the recutting visible beneath the crossmember.

This may indeed be the finest known 1894 nickel proof, with no examples certified higher than MS67 by either service, and just this one with the Plus designation from PCGS. Population: 6 in 67 (1 in 67+) Cameo, 0 finer (3/14). PCGS# 83892

**1895 Nickel, PR67
Numerically Finest at PCGS**

3280 1895 PR67 PCGS. Both sides of this Superb Gem exhibit bold design motifs, fully mirrored fields, and satin devices, all beneath lovely heather toning, with a rainbow crescent along the right side of the obverse and reverse. In addition to this piece, PCGS has certified three as PR67 Cameo, with none finer. Population: 1 in 67, 0 finer (3/14). NGC ID# 2785, PCGS# 3893

**1895 Liberty Nickel, PR66 Cameo
Sharply Struck and Highly Lustrous**

3281 1895 PR66 Cameo PCGS. Cartwheel luster and readily apparent Cameo contrast provide this piece with strong visual appeal. The strike is exacting, including the stars and the left ear of corn. The surfaces are silver-white, with only subtle hints of toning present. A few tiny planchet imperfections appear on Liberty, but do not pose a distraction. Population: 7 in 66 Cameo, 3 finer (3/14). PCGS# 83893

3282 1896 PR66 Cameo PCGS. Glassy sea-green fields and lightly frosted gold motifs are pleasingly contrasted on both sides. A slight degree of streaky tan patina is noted on the obverse. Population: 13 in 66 (1 in 66+) Cameo, 1 finer (3/14). PCGS# 83894

**1896 Nickel, PR66+ Cameo
Brightly Lustrous and Fully Struck**

3283 1896 PR66+ Cameo PCGS. CAC. This brightly lustrous Premium Gem proof 1896 is near the top end of the certified survivors of the issue. Untoned silver-white surfaces show thick mint frost and a full proof strike. A tiny indent between stars 3 and 4 is as made at the Philadelphia Mint. Population: 13 in 66 (1 in 66+) Cameo, 1 finer (3/14). PCGS# 83894

3284 1897 PR67 PCGS. CAC. Boldly defined design elements and moderately mirrored fields are among the pleasing attributes this Superb Gem has to offer. Faint sky-blue and pale golden toning accents the virtually flawless surfaces. Population: 24 in 67 (1 in 67+), 1 finer (3/14). NGC ID# 2787, PCGS# 3895

- 3285 1897 PR66+ Cameo PCGS. CAC.** Stark cameo contrast complements razor-sharp details of this high-end Premium Gem. The surfaces exhibit excellent preservation and are largely untoned, save for a faint golden tint around the rims. Population: 30 in 66 (6 in 66+) Cameo, 14 finer (3/14). PCGS# 83895

**1897 Liberty Nickel, PR67 Cameo
None Numerically Finer at PCGS**

- 3286 1897 PR67 Cameo PCGS.** Faint golden toning is present on both sides of this Superb Gem specimen exhibiting gorgeous contrast between the fields and devices. The luster is strong, further contributing to the eye appeal. The level of design definition is strong, with only a tiny degree of incompleteness at the left ear of corn. Population: 14 in 67 (2 in 67+) Cameo, 0 finer (3/14). PCGS# 83895

**1900 Liberty Nickel, PR67 Cameo
No Numerically Finer Examples at Either Service**

- 3287 1900 PR67 Cameo PCGS.** Pronounced contrast between the fields and devices along with an overall silver-white appearance provides this Superb Gem with strong eye appeal. Closer examination reveals a streak of gold color across part of LIBERTY and confirms a sharp strike. A few minor spots appear on the reverse, primarily at the lower portion. Population: 10 in 67 (1 in 67+) Cameo, 0 finer (3/14). PCGS# 83898

- 3288 1901 PR67 Cameo NGC.** An outstanding specimen with perfectly struck details and nearly perfect surfaces. The deeply mirrored fields beautifully frame frosted devices, delivering cameo contrast. The obverse exhibits a blush of golden toning, while the reverse displays a tint of light turquoise. Census: 8 in 67 Cameo (1 in 67 ★ Cameo), 0 finer (2/14). PCGS# 83899

- 3289 1902 PR66 Cameo PCGS.** This proof date is not typically seen with Cameo or Deep Cameo surfaces, making the present piece an exception to the rule. The motifs are sharply struck and lightly frosted, providing appreciable contrast with the glassy fields. A brilliant, well-preserved specimen. Population: 5 in 66 Cameo, 9 finer (3/14). PCGS# 83900

- 3290 1905 PR67 PCGS.** Blended pastel hues seemingly melt into the highly reflective fields of this Superb Gem proof. The strike is needle-sharp and the fields are virtually free of the wispy hairlines that usually limit the grade. Population: 14 in 67, 1 finer (3/14). NGC ID# 278E, PCGS# 3903

**1905 Liberty Nickel, PR66
Rare Cameo Example**

- 3291 1905 PR66 Cameo PCGS.** Shimmering surfaces and an intricate strike are among the attributes this Premium Gem exhibits in addition to pleasing Cameo contrast. A few minuscule as-made strike-throughs appear on the obverse, including one to the right of the date. Both sides reveal a few tiny spots. Population: 8 in 66 (1 in 66+) Cameo, 1 finer (3/14). PCGS# 83903

- 3292 1906 PR66+ Cameo PCGS. CAC.** Proof 1906 nickels were generally well-made, though the vast majority lack the field-motif contrast necessary for a Cameo designation. This Plus-graded Premium Gem exhibits deeply mirrored fields with fully struck, softly contrasted devices. The surfaces are nearly perfect, providing this piece with a high degree of eye appeal. Population: 26 in 66 (4 in 66+) Cameo, 18 finer (3/14). PCGS# 83904

**1906 Nickel, PR65+ Deep Cameo
Fully Struck, Deeply Contrasted**

- 3293 1906 PR65+ Deep Cameo PCGS. CAC.** The silver-grayish, thickly frosted devices contrast well against the deeply mirrored fields on this untuned Gem proof 1906 nickel. The full proof strike and lack of discernible patina make the contrast and eye appeal even more alluring. A loupe reveals a few flecks at the chin area, precluding an even finer grade. Population: 1 in 65 (1 in 65+) Deep Cameo, 0 finer (3/14). PCGS# 93904

**1907 Liberty Nickel, PR66
Elusive Cameo Example**

- 3294 1907 PR66 Cameo PCGS.** Highly reflective fields provide excellent contrast against the frosted devices of this Premium Gem. The coin reveals only subtle hints of gold toning and exhibits a sharp strike overall, with the left ear of corn revealing minor incompleteness. Tiny spots are present, primarily on the obverse. Population: 13 in 66 Cameo, 4 finer (3/14). PCGS# 83905

**1908 Liberty Nickel, PR67 Cameo
Tied for Finest Certified at PCGS and NGC**

- 3295 1908 PR67 Cameo PCGS.** An attractively toned piece, this Superb Gem exhibits lovely Cameo contrast. The toning includes pastel hues of yellow, red, pink, and green on both sides, with the reverse arguably being the more appealing side. The strike is sharp, with only minor softness at the left ear of corn. A tiny as-made lint mark appears in the field to the right of Liberty. Population: 4 in 67 Cameo, 0 finer (3/14). PCGS# 83906

**1909 Nickel, PR67 Cameo
Lovely Eye Appeal**

- 3296 1909 PR67 Cameo PCGS.** A specimen with wonderful visual appeal on both sides, this Superb Gem exhibits splendid toning in addition to pronounced Cameo contrast. The toning includes subtle hues of frosty pale blue and peach. Portions of the designs display incompleteness, including several of the stars and the left ear of corn. Population: 18 in 67 (2 in 67+) Cameo, 1 finer (3/14). PCGS# 83907

**1910 Liberty Nickel, PR67+
Exceptional Late-Series Proof**

- 3297 1910 PR67+ PCGS. CAC.** A high-end Superb Gem from a proof mintage of 2,405 pieces, this coin exhibits razor-sharp details on all the design elements. The hazily reflective fields display attractive shades of champagne-gold and lavender-gray patina. Although it is an available proof date, the issue is scarce this nice. CAC-Approved. Population: 30 in 67 (1 in 67+), 2 finer (3/14). NGC ID# 278L, PCGS# 3908

- 3298 1911 PR66+ Cameo PCGS.** This sharply struck Premium Gem Cameo boasts excellent contrast on well-struck surfaces that are lightly golden-toned with a blush of pale blue on Liberty's face. Population: 29 in 66 (3 in 66+) Cameo, 11 finer (3/14). From *The Northern Lights Collection*. PCGS# 83909

- 3299 1912 PR67 NGC. CAC.** Among the more obtainable and well-made proof Liberty nickels, popular among type specialists. The present example displays razor-sharp definition on all design elements, with moderate mirroring in the fields and just a blush of light golden toning overall. A virtually flawless Superb Gem. Census: 19 in 67 (1 in 67 ★), 5 finer (3/14). NGC ID# 278N, PCGS# 3910

**1912 Liberty Nickel, PR67 Cameo
Sharply Contrasted**

- 3300 1912 PR67 Cameo NGC.** The 1912 is the last Liberty nickel proof that is generally available to collectors, produced to the extent of 2,145 pieces. This piece is well but not fully struck, with contact-free surfaces and tiny scattered dark flecks. Census: 5 in 67 Cameo, 0 finer (3/14). Ex: *Long Beach Signature* (Heritage, 9/2003), lot 6108; *Slotkin Family Trust Collection* (Heritage, 4/2011), lot 3132. PCGS# 83910

BUFFALO NICKELS

**1913 Type One Buffalo Nickel, MS67+
A Popular Type Coin**

- 3301 1913 Type One MS67+ PCGS. CAC.** Soft reddish-brown and powder-blue coloration does not impede the attractive satiny luster common to this issue. The design elements are sharply struck, including the Indian's braid and the bison's horn, hair atop its head, and tail. No significant contact marks are apparent. The 1913 Type One Buffalo nickel is very popular due to it being the first and only year of the type and its outstanding eye appeal. This piece is an excellent choice for a high-grade type coin or Buffalo nickel date collection. NGC ID# 22PW, PCGS# 3915

- 3302 1913-D Type One MS66+ PCGS. CAC.** Rich satiny luster shines through faint pastel patina on this Plus-graded Premium Gem. The beautifully preserved surfaces complement the bold design elements, delivering exceptional visual appeal. NGC ID# 22PX, PCGS# 3916

1913-S Buffalo Nickel, MS67
Beautiful Iridescent Toning

- 3303 1913-S Type One MS67 PCGS. CAC.** A shimmering Superb Gem that conveys Fraser's dramatic vision through richly textured surfaces and fully defined design elements. A vivid crescent of green-gold toning graces the left obverse and reverse borders, while deep iridescent lavender and violet hues blanket the remainder of the surfaces. An exceptionally well-preserved example of the scarcest Type One Buffalo nickel. Population: 19 in 67 (1 in 67+), 1 finer (3/14).

Ex: Long Beach Signature (Heritage, 5/2007), lot 472.

From The Ray Levoi Collection. NGC ID# 22PY, PCGS# 3917

1913 Type Two Nickel, MS67
Tied for the Finest Certified

- 3304 1913 Type Two MS67 PCGS.** The quintessential first-year Buffalo, endowed with outstanding sharpness and luxuriant mint luster. Tinges of light gold, yellow-green, and violet patina separate this Superb Gem example from full brilliance. Impeccably preserved throughout. Population: 20 in 67 (1 in 67+), 0 finer (3/14).

From The Ray Levoi Collection. NGC ID# 22PZ, PCGS# 3921

- 3305 1913-D Type Two MS65 PCGS. CAC.** A sought-after semikey, much scarcer than its Type One counterpart. Sharply struck design elements and well-preserved surfaces provide this satiny Gem with excellent eye appeal. The obverse displays warm light golden toning, while the reverse exhibits the same, but with a faint violet hue in the center.

From The Ray Levoi Collection. NGC ID# 22R2, PCGS# 3922

1913-S Type Two Nickel, MS65
Popular Low-Mintage Issue

- 3306 1913-S Type Two MS65 PCGS.** A Gem specimen, this piece displays pale gold color along with light pastel green shades on the obverse, while the reverse also includes hues of orange-gold and rose. The strike is pleasing overall, including the peripheral details. Scattered minute flecks of carbon appear on both sides and laminations are present on the reverse. PCGS has awarded higher numeric grades to only 36 examples (2/14). NGC ID# 22R3, PCGS# 3923

1913-S Type Two Nickel, MS65
'First Key in the Series'

- 3307 1913-S Type Two MS65 PCGS.** The surfaces of this Gem reveal a pale champagne patina. Though the strike is pleasing overall, areas of weakness are present, including LIBERTY. Scattered flecks appear. Housed in a first generation holder. Only 36 examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 22R3, PCGS# 3923

1913-S Buffalo Nickel, MS65
Scarce Type Two Issue

- 3308 1913-S Type Two MS65 PCGS. Q.** David Bowers calls this issue a "foundational rarity" that is elusive in all grades, and more important than others of "conditional rarity." The 1913-S Type Two nickel was once considered the key-date of the entire Buffalo nickel series, although today, other issues are known to be rarer. This example has satiny luster beneath gold and iridescent toning with reflective fields. An exceptional representative, exceeded by just 36 PCGS submissions (3/14). NGC ID# 22R3, PCGS# 3923

**1913-S Buffalo Nickel, MS65
Scarce Type Two Design**

- 3309 1913-S Type Two MS65 PCGS. CAC.** The modified design with the bison standing on plain ground, as opposed to the mound of the Type One design. This lovely Gem exhibits brilliant luster beneath attractive gold toning with excellent eye appeal. PCGS has only certified 36 finer examples (3/14).
From The Ray Levoi Collection. NGC ID# 22R3, PCGS# 3923

**1914 Nickel, Conditionally Rare MS67
Pale Pastel Iridescence Around the Margins**

- 3310 1914 MS67 PCGS. CAC.** The 1914 Buffalo nickel, sporting a large mintage approaching 21 million pieces, is available in grades through Gem with little difficulty. Premium Gems are more challenging, MS67s are rare, and finer examples are unknown. The lustrous surfaces of this Superb Gem are nicely preserved and well-struck, though the hair on the bison's head is a touch soft. Population: 22 in 67, 0 finer (3/14). NGC ID# 22R4, PCGS# 3924

**1914 Buffalo Nickel, MS67
Among the Finest Certified at PCGS**

- 3311 1914 MS67 PCGS. CAC.** Readily available in most grades, the 1914 Buffalo nickel suddenly becomes rare at the Superb Gem grade level. PCGS has certified only 22 examples in this high grade, with none finer (3/14). This CAC-approved representative displays exceptionally vibrant, satiny luster, with warm golden toning on the obverse and iridescent lavender-gold over the reverse. A sharp strike only increases the visual appeal of this truly attractive coin.
From The Ray Levoi Collection. NGC ID# 22R4, PCGS# 3924

- 3312 1914-D MS65 PCGS. CAC.** The low mintage '14-D is seldom encountered with as sharp a strike as seen on the present lime-green and cherry-red Gem. Devoid of contact though a strong lens locates minuscule carbon. Encased in an old green label holder.
Ex: Baltimore ANA Signature (Heritage, 3/2009), lot 607, which realized \$1,150.
From The Ray Levoi Collection. NGC ID# 22R5, PCGS# 3925

**1914-D Buffalo Nickel, MS66
Only Seven Finer PCGS Coins**

- 3313 1914-D MS66 PCGS. CAC.** This is a lovely Gem that approaches the finest available quality for the date. Both sides have sharp design features, although it is not fully struck. The surfaces are frosty and lustrous with pale gold color and iridescent toning near the borders. Population: 45 in 66 (1 in 66+), 7 finer (3/14). NGC ID# 22R5, PCGS# 3925

**1914-S Buffalo Nickel, MS66
Only One Finer at PCGS**

- 3314 1914-S MS66 PCGS.** A stunning Premium Gem with pristine nickel-gray surfaces, this boldly struck Buffalo nickel has incredible eye appeal. Hints of gold toning visit the obverse and reverse surfaces with faint ice-blue overtones. Population: 34 in 66 (4 in 66+), 1 finer (3/14).
From The Northern Lights Collection. NGC ID# 22R6, PCGS# 3926

**1914-S Nickel, MS66
Conditionally Rare Above MS65**

- 3315 1914-S MS66 PCGS. CAC.** This lovely Premium Gem exhibits brilliant, frosty mint luster beneath delicate gold toning, with exceptional design definition. An important condition rarity in the series, the 1914-S is seldom seen at this or higher grade levels. Population: 34 in 66 (4 in 66+), 1 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22R6, PCGS# 3926

**1915-D Buffalo Nickel, MS66
Only Two Finer at PCGS**

- 3316 1915-D MS66 PCGS.** Remarkable detail with delightful luster on both the smooth reverse and the textured obverse. Minimally marked, even by the standards of the grade, with little patina and fascinating eye appeal. Essentially unavailable any finer, with only two such pieces certified by PCGS (3/14).

From The Ray Levoi Collection. NGC ID# 22R8, PCGS# 3928

1915-D Nickel, Exceptional MS66+

- 3317 1915-D MS66+ PCGS. CAC.** The 1915-D nickel saw a large production exceeding 7.5 million pieces. It can be located through near-Gem without too much difficulty. Gems become somewhat scarce and Premium Gems will require patience and searching to obtain. Finer specimens are extremely rare. The lustrous surfaces of this MS66+ piece display soft pastel color, and the design features exhibit an above-average strike, including the braid and the bison's horn and tail. The eye appeal is exceptional. Population: 33 in 66 (1 in 66+), 2 finer (3/14). NGC ID# 22R8, PCGS# 3928

**1915-S Nickel, MS65
Quicksilver Surfaces**

- 3318 1915-S MS65 PCGS.** The 1915-S Buffalo nickel in Gem condition is a median rarity within the series, not as rare as some of the 1920s issues but seldom seen finer than the present piece. The surfaces show a quicksilver appearance, brilliant silver that only under a loupe reveals light grayish flecks and a couple of small marks that determine the grade. The strike is quite sharp. PCGS has seen 32 numerically finer (3/14). NGC ID# 22R9, PCGS# 3929

1915-S Nickel, MS65

- 3319 1915-S MS65 NGC. CAC.** An important, low-mintage S-Mint nickel, surviving from a production of just 1.5 million pieces. Pastel gold and cream toning enriches this pristine and low mintage early branch mint Gem. Well struck for the issue except at the centers, which show minor blending of detail. NGC has only certified 25 finer examples (3/14). NGC ID# 22R9, PCGS# 3929

1915-S Nickel, Lustrous and Well-Struck MS66

- 3320 1915-S MS66 PCGS. CAC.** High quality 1915-S Buffalo nickels are easier to locate in mint condition than the relatively low mintage of 1.5 million pieces would suggest, especially through near-Gem. Gems will take more searching and the two major grading services have seen fewer than 60 examples finer. The lustrous, essentially untuned surfaces of this MS66 specimen exhibit well-struck design elements, a major attribute of this date. Neither side reveals mentionable abrasions. Population: 29 in 66, 3 finer (3/14). *From The Ray Levoi Collection. NGC ID# 22R9, PCGS# 3929*

- 3321 1916-S MS65 PCGS. CAC.** Sea-green, rose-red, and tan-gold encompasses this early branch mint Gem. Unabraded and lustrous with well struck borders and only minor inexactness at the centers. Housed in a green label holder. *From The Ray Levoi Collection. NGC ID# 22RC, PCGS# 3933*

**1916-S Five Cent, MS66
Condition Rarity, Brilliant and Reflective**

- 3322 1916-S MS66 PCGS. CAC.** Seldom seen this sharp, the issue is almost never available any finer. The surfaces of this brilliant example are reflective and smooth, almost prooflike. Silver-nickel coloration is imbued with a hint of lilac to confirm the natural state of this lustrous Premium Gem. Sharply struck, although not quite full, there is a bit of blending of the hair lines above the braid knot and some minor rounding on the bison's shoulder and foreleg. CAC-Approved for quality. Population: 31 in 66 (1 in 66+), 4 finer (3/14). NGC ID# 22RC, PCGS# 3933

- 3323** 1917-D 3 1/2 Leg AU58 PCGS. FS-901. A lustrous olive-brown and dove-gray near-Mint example of this scarce branch issue. The strike is fairly sharp, and no marks are evident. As of (3/14), PCGS has certified only 96 examples of FS-901. Population: 7 in 58, 4 finer (3/14). PCGS# 38441

**1917-S Buffalo Nickel, MS65+
A Boldly Struck Rarity**

- 3324** 1917-S MS65+ PCGS. Boldly struck 1917-S nickels, such as the present Gem, are rarely seen, representing only one-quarter of the surviving population. This piece has satiny nickel-gray luster with pale blue and amber toning, over a base of magenta. PCGS has only certified 24 finer examples (3/14).
From The Ray Levoi Collection. NGC ID# 22RF, PCGS# 3936

- 3325** 1918 MS65 PCGS. Scarcely seen finer. This softly frosted Gem representative displays light lavender-blue patina over both sides. Only a few faint grazes preclude an even finer grade, but are not detectable to the unaided eye. Minor softness of strike is seen at the centers, as is normal for this issue.
From The Ray Levoi Collection. NGC ID# 22RG, PCGS# 3937

**1918 Buffalo Nickel, MS66
Colorful Patina**

- 3326** 1918 MS66 PCGS. Ice-blue, lime-green, and straw-gold visit this coruscating and well struck World War Premium Gem. A loupe fails to locate any abrasions. Occasional minute flecks are of little import. Housed in a green label holder. The 1918 is plentiful in XF but surprisingly elusive in quality Mint State. Population: 50 in 66, 8 finer (3/14). NGC ID# 22RG, PCGS# 3937
- 3327** 1918/7-D — Cleaning — PCGS Genuine. VF Details. FS-101. A pleasing, lightly circulated representative of this popular overdate. PCGS notes old cleaning, though the surfaces have since retoned a pale battleship-gray. Some faint, bisecting planchet irregularity is seen diagonally across both sides, adding a degree of intrigue to this piece. The overdate feature is clearly visible. NGC ID# 22RJ, PCGS# 3939

**1918/7-D Buffalo Nickel, VF25
Pleasing Mid-Grade Example**

- 3328** 1918/7-D VF25 PCGS. FS-101. Light gray surfaces exhibit faint greenish-gold toning on the obverse and deeper olive-golden patina over the reverse. The surfaces display a natural, attractive appearance, with only a few minor handling marks seen under close examination. The overdate feature is clearly visible.
Ex: ANA Signature (Heritage, 3/2011), lot 3242. NGC ID# 22RJ, PCGS# 3939

**1918/7-D Buffalo Nickel, VF30
Important Overdate Variety**

- 3329** 1918/7-D VF30 NGC. FS-101. Along with the 1916/1916 overdate, the 1918/7-D variety is a primary target of Buffalo nickel collectors in any condition. Most are seen in lesser grades, but a solid VF30 fits comfortably into most circulated sets. This example presents a clear overdate and strong detail for the grade. Pewter-gray patina with some darker accents attest to the coin's original appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 22RJ, PCGS# 3939
- 3330** 1918/7-D — Cleaning — PCGS Genuine. XF Details. FS-101. The most sought-after variety in the Buffalo nickel series. The present example exhibits signs of past cleaning with slight roughness over the surfaces, but retains strong detail and a clearly visible underdigit. NGC ID# 22RJ, PCGS# 3939

1918-D Nickel, MS65
An Above-Average Strike

- 3331 1918-D MS65 PCGS. CAC.** The 1918-D Buffalo nickel comes with a characteristically weak strike; in fact, some show extensive flatness. This is not the case with the present Gem, while not fully delineated, is sharply struck in most areas, with just a touch of softness on the central portion of the Indian's hair. The braid, date digits, bison's horn and tail, and the lettering on both sides is quite strong. Soft, iridescent shades of gold and ice-blue patina enhance the impeccably preserved surfaces, with satiny mint luster underneath. This piece is fully deserving of the CAC endorsement. Population: 68 in 65 (1 in 65+), 24 finer (3/14).
Ex: Long Beach Signature (Heritage, 9/2010), lot 3498.
From The Ray Levoi Collection. NGC ID# 22RH, PCGS# 3938

1919 Buffalo Nickel, MS67
Only One Numerically Finer

- 3332 1919 MS67 NGC.** Surprisingly powerful detail for this post-World War I issue with uncommonly vibrant luster. The primarily nickel-white surfaces have an almost silvery appearance, and whispers of peach patina grace parts of the margins. A wonderful Superb Gem specimen. Census: 7 in 67 (1 in 67+), 1 finer (3/14). NGC ID# 22RL, PCGS# 3941

1919-D Nickel, MS65+
Brilliant and Sharp

- 3333 1919-D MS65+ PCGS. CAC.** An extraordinary Gem with brilliant luster, this lovely nickel-gray example displays delicate peripheral gold toning with exceptional design definition. Brilliant pieces are seen with some frequency, as are sharply struck examples, but those combining both traits such as this piece are rare. Population: 56 in 65 (3 in 65+), 19 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22RM, PCGS# 3942

1919-D Nickel, MS66
An Above-Average Strike

- 3334 1919-D MS66 PCGS.** The 1919-D saw a large fairly large mintage exceeding 8 million pieces. It can be located through near-Gem with relatively little trouble. Gems are scarce, and Premium Gems are the finest known; PCGS and NGC have graded 23 examples in MS66. This issue is very difficult to find decently struck.

Lustrous surfaces exhibit a light golden-lilac color and the design features are strongly impressed, including the Indian's braid and the bison's horn and tail. Two minute marks on the obverse rim above the R in LIBERTY will help pedigree the coin. Population: 19 in 66, 0 finer (3/14). NGC ID# 22RM, PCGS# 3942

- 3335 1920 MS66 PCGS.** Areas of gold toning add to the eye appeal of this lustrous Premium Gem representative. The surfaces are virtually pristine aside from minor marks at portions of the extreme rim, including laminations at the right rim on the reverse. PCGS has awarded higher numeric grades to only 9 examples (2/14). NGC ID# 22RE, PCGS# 3944

**1920-D Buffalo Nickel, MS65+
Brilliant Mint Luster**

- 3336 1920-D MS65+ PCGS. CAC.** This Gem exhibits a typical or average struck, but far finer than average luster. The obverse shows weakness over the hair braid, while the reverse is weak on the bison's head. Both sides exhibit brilliant greenish-gold toning over satiny luster, with excellent eye appeal. Population: 60 in 65 (2 in 65+), 3 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22RR, PCGS# 3945

- 3337 1920-S MS63 PCGS.** Better struck than most 1920-S nickels, an issue that is notorious for weakness of strike, this piece shows central strike weakness but the horn is full and good definition is seen on the bison's shoulder. Pleasing, lightly toned surfaces display light amber hues over satiny luster, with no significant abrasions. NGC ID# 22RS, PCGS# 3946

**1920-S Buffalo Nickel, MS64
Seldom Encountered Finer**

- 3338 1920-S MS64 PCGS.** Strong satin luster is among the attributes this near-Gem possesses. The top portion of LIBERTY exhibits softness and an eroded reverse die was used to strike this piece, as was often the case with this issue. Only 19 examples have been awarded higher numeric grades by PCGS (3/14). NGC ID# 22RS, PCGS# 3946

**1920-S Nickel, MS64
Iridescent Toning**

- 3339 1920-S MS64 PCGS Secure.** An impressive near-Gem, this S-Mint Buffalo nickel has satiny nickel-gray luster with delicate peripheral gold toning and wisps of bluish overtones. The reverse has additional green and lilac toning. The strike is typical for this issue. PCGS has only certified 19 finer pieces.
From The Ray Levoi Collection. NGC ID# 22RS, PCGS# 3946

- 3340 1921 MS66+ PCGS.** A gorgeous high-end Premium Gem representative, this coin exhibits the sharp strike this issue is known for. Faint toning adds to the attractiveness and includes hues of gold and orange. Minor clash marks are present and a tiny die crack appears near the R in LIBERTY. Population: 6 in 66+, 21 finer (3/14). NGC ID# 22RT, PCGS# 3947

- 3341 1921 MS66 PCGS. CAC.** A sharply struck example with complete definition on the knot of the Indian's hair braid, and on the bison's head and shoulder. Other than faint clash marks, both sides are essentially pristine. Excluding the 6 coins graded MS66+, only 21 coins are graded finer at PCGS (3/14).
From The Ray Levoi Collection. NGC ID# 22RT, PCGS# 3947

**1921-S Nickel, MS65
Vivid Pastel Toning**

- 3342 1921-S MS65 PCGS.** A low-mintage S-mint key in Gem grades to the Buffalo nickel series, the 1921-S is accompanied by (and sometimes overshadowed by) the other S-mint issues of the '20s, such as the 1926-S, but it is quite elusive in MS65. This PCGS example shows great eye appeal with vivid pastel violet, gold, and pinkish patina on each side, accompanied by a strike that is better than usually seen and no major marks. Interesting die cracks appear on each side. Population: 65 in 65, 8 finer (3/14). NGC ID# 22RU, PCGS# 3948

**1921-S Nickel, MS65, Sharply Struck MS65
Above-Average Surface Characteristics**

- 3343 1921-S MS65 PCGS. CAC.** Medium golden-brown and steel-gray envelop this lustrous and well-preserved Gem. The strike is uncommonly sharp for an S-mint issue from the 1920s. The fields display a partial orange peel texture characteristic of long-in-use dies, but the surfaces are free of laminations, dark streaks, and die cracks, all of which plague this issue. The CAC sticker affirms the coin's outstanding eye appeal. Encapsulated in a green label holder.
Ex: Dallas Signature (Heritage, 10/2008), lot 445; Long Beach Signature (Heritage, 5/2009), lot 321; Los Angeles Signature (Heritage, 8/2009), lot 207.
From The Ray Levoi Collection. NGC ID# 22RU, PCGS# 3948

- 3344 1923 MS66 PCGS.** Usually obtainable in lower grades, the 1923 Buffalo nickel becomes highly elusive at the Premium Gem level, and is rare finer. This beautifully preserved piece showcases vibrant, frosty mint luster and well-struck motifs. Light golden and ice-blue hues blend to deliver outstanding visual appeal. PCGS has certified only 14 numerically finer examples (3/14).
From The Ray Levoi Collection. NGC ID# 22RV, PCGS# 3949

- 3345 1923 MS66+ PCGS. CAC.** Rich satin luster and only faint signs of toning add to the strong eye appeal this high-end Premium Gem possesses. This is an outstanding example of the better-date 1923 Philadelphia issue. Population: 9 in 66+, 14 finer (3/14). NGC ID# 22RV, PCGS# 3949

1923-S Buffalo Nickel, MS65
Above Average Strike

- 3346 1923-S MS65 PCGS.** The strike of this S-Mint Buffalo nickel from the early years of the Roaring 20s is bold by standards of the time. This lovely Gem has brilliant, satiny nickel-gray luster with delicate gold and iridescent toning. Population: 44 in 65 (2 in 65+), 3 finer (3/14). NGC ID# 22RW, PCGS# 3950

1923-S Nickel, MS65
Rarely Seen Finer

- 3347 1923-S MS65 PCGS. CAC.** David Lange notes in *The Complete Guide to Buffalo Nickels* that despite its relatively small mintage (6.14 million pieces), the 1923-S nickel is available in all grades short of Gem. Population data supports this claim, as PCGS has certified only 44 coins in MS65, with just three numerically finer (3/14). This Gem specimen displays light golden-gray color over satiny surfaces. The design elements are better-struck than usually seen on this issue, though minor softness is seen in portions of the hair on the bison's head.

Ex: ANA Signature (Heritage, 8/2007), lot 418; FUN Signature (Heritage, 1/2009), lot 3646; FUN Signature (Heritage, 7/2009), lot 261. From The Ray Levoi Collection. NGC ID# 22RW, PCGS# 3950

1924-D Buffalo Nickel, MS65
Lightly Toned and Lustrous

- 3348 1924-D MS65 PCGS.** An attractive patina covers both sides of this Gem, with subtle hues of gold, orange, olive-green, and red present. Though not fully struck, the design elements reveal a pleasing level of design detail. A few tiny flecks of carbon appear. Only 3 examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 22RY, PCGS# 3952

1924-D Buffalo Nickel, MS65+
Excellent Strike

- 3349 1924-D MS65+ PCGS.** Although weakness appears on top of the bison's head and shoulder, the strike of this piece is far finer than usual, with LIBERTY separated from the border. Both sides exhibit satiny blue-gray luster with peripheral gold highlights. PCGS has only certified three finer examples. NGC ID# 22RY, PCGS# 3952

1924-D Nickel, An Exceptional MS65

- 3350 1924-D MS65 PCGS. CAC.** This year saw the first coinage of nickels in the Denver Mint since 1920. Sporting a mintage of 5.2 million pieces, the 1924-D was considered very rare in mint condition until the 1990s when a number were released by the Connecticut State Library, and dozens were auctioned by Heritage. Soft violet patina embraces the lustrous surfaces of the present Gem offering. The design elements exhibit a better strike than typically encountered. The Indian's braid, bison's horn and tail, and all letters are sharp. The hair above the bison's forehead is weak but not flat as typically occurs on this date. The above-average strike, pleasing luster, and impeccably preserved surfaces are appropriately recognized by CAC. PCGS has graded only three pieces finer and NGC one finer (3/14).

From The Ray Levoi Collection. NGC ID# 22RY, PCGS# 3952

**1924-S Buffalo Nickel, MS65
Boldly Defined**

- 3351 1924-S MS65 PCGS.** This Gem S-Mint Buffalo nickel has a sharp strike that borders on a full strike. Both sides are fully lustrous with satiny mint brilliance shining through the lovely gray, gold, and iridescent surfaces. Population: 40 in 65 (1 in 65+), 2 finer (3/14). From *The Ray Levoi Collection*. NGC ID# 22RZ, PCGS# 3953

**1925 Buffalo Nickel, MS67
Gorgeous Pastel Toning, Among the Finest Certified**

- 3352 1925 MS67 PCGS.** Appealing satin luster and gorgeous toning combine to provide this Superb Gem with exceptional eye appeal. The intermingled, largely pastel hues include golden-yellow, sky-blue, lavender, pale green, yellow, and pink. In addition, the coin exhibits a pleasing degree of design detail. Population: 12 in 67, 0 finer (3/14). NGC ID# 22S2, PCGS# 3954

1925-D Five Cent, Well-Struck MS65

- 3353 1925-D MS65 PCGS. CAC.** The 1925-D five cent is very challenging to find *decently* struck, let alone *fully* struck, examples of which are virtually unobtainable. The obverse of this Gem is better struck than the reverse, which reveals the usually seen softness on the hair on the bison's head. But we hasten to add that this area is not completely flat as seen on most specimens. And the horn is completely outlined, which it is not seen on many Mint State pieces. A melange of lavender and violet patina resides on the lustrous surfaces, all of which are very nicely preserved. Population: 94 in 65 (1 in 65+), 8 finer (3/14). Ex: *Cincinnati (CSNS) Signature (Heritage, 4-5, 2009) lot 1592*. From *The Ray Levoi Collection*. NGC ID# 22S3, PCGS# 3955

**1925-S Nickel, Lustrous MS64
Above-Average Eye Appeal**

- 3354 1925-S MS64 PCGS. CAC.** The 1925-S Buffalo nickel is known for its overall weakness, including the centers of both sides, the date numerals, the peripheries, and the bison's head; the mintmark is usually a blob. This near-Gem exhibits fairly strong design detail on the obverse except indistinctness on the upper parts of the letters in LIBERTY. The reverse lettering is strong, as is the horn, and the S mintmark is clear. The hair on the bison's head displays the usual weakness, however. Soft ice-blue and violet patination dominates the lustrous surfaces, accented with whispers of golden-tan. Neither side reveals mentionable marks. The CAC sticker affirms the above-average eye appeal for this usually blasé issue. PCGS has graded fewer than 30 pieces finer (3/14). From *The Ray Levoi Collection*. NGC ID# 22S4, PCGS# 3956

**1925-S FS-401 Nickel, MS64
Two Feathers**

- 3355 1925-S Two Feathers MS64 PCGS. CAC. FS-401.** The Two Feathers variety is appropriately named as the usual small third feather located behind the top of the neck is absent on this obverse, having been lapped away during resurfacing. This lovely piece has brilliant luster and a sharp strike with attractive gold toning. PCGS# 38455

**1926-D Nickel, Sharply Struck MS65
With Iridescent Patina**

- 3356 1926-D MS65 PCGS. CAC.** This Gem 1926-D is quite sharply struck, giving the lie to the issue's reputation as the most poorly impressed in the entire series. The reverse shows a full horn, and the tail is close to fully split. Other reverse details are quite sharp, and the obverse is close, although not quite as bold on the hair above the braid. Beautiful patina in iridescent shades with good luster finishes off this great-looking coin, certified in a green-label holder. PCGS has seen only 25 numerically finer (3/14). NGC ID# 22S6, PCGS# 3958

**1926-D Nickel, MS65+
Vividly Toned and Boldly Struck**

- 3357 1926-D MS65+ PCGS. CAC.** This is a remarkably nice example of this issue, despite its reputation for being poorly struck; not so here. The strike is sharp, especially on the reverse. Generous luster complements problem-free surfaces that offer beautiful jade, gold, and orange highlights. Population: 4 in 65, 25 finer (3/14). NGC ID# 22S6, PCGS# 3958

**1926-D Buffalo Nickel, MS66
Exceptional Strike**

- 3358 1926-D MS66 PCGS. CAC.** The 1926-D is notorious for poor strikes, and in some cases with the reverse almost completely flat. This example is far finer than those poorly struck pieces, and exhibits nearly a full strike. The satiny surfaces are brilliant and lustrous with light gold, blue, and iridescent toning. Population: 24 in 66 (1 in 66+), 1 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22S6, PCGS# 3958

**1926-S Nickel, AU58
Low-Mintage Series Key**

- 3359 1926-S AU58 NGC.** The low-mintage 1926-S Buffalo nickel was struck to the extent of only 970,000 pieces, and most of the survivors are in quite low circulated grades. This near-Mint State example shows frosty surfaces with muted orange-gray coloration throughout, complementing a touch of iridescence above the buffalo's flank. The strike on the reverse is a bit mushy from die fatigue, but this coin retains much eye appeal and collectibility. NGC ID# 22S7, PCGS# 3959

1927-D Buffalo Nickel, MS65

- 3360 1927-D MS65 PCGS. CAC.** A fully brilliant nickel-gray example, this satiny Gem has brilliant luster with traces of delicate champagne toning. Although shy of a full strike, this piece is finer than usual. Population: 64 in 65 (2 in 65+), 4 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22S9, PCGS# 3961

**1927-D Nickel, MS65
Bold Strike**

- 3361 1927-D MS65 PCGS. CAC.** the 1927-D is extremely rare with full or nearly full details, such as those found on the present piece. The bison's head and front leg are fully detailed, and the tail shows a trace of its split features. This Gem has satiny nickel-gray luster with a hint of gold toning. Population: 64 in 65 (2 in 65+), 4 finer (3/14). NGC ID# 22S9, PCGS# 3961

**1927-S Buffalo Nickel, MS64
Conditionally Rare in Higher Grades**

- 3362 1927-S MS64 PCGS.** Satin luster and appealing toning create lovely eye appeal for this near-Gem specimen. Shades of gold, orange, and red are present. Die wear is evident and though not fully struck, the level of design detail is pleasing. Housed in a first generation holder. The population drops dramatically above the MS64 level, with PCGS having awarded higher grades to only 25 examples (3/14). NGC ID# 22SA, PCGS# 3962

1928-D Buffalo Nickel, MS66
Remarkably Toned, Boldly Struck

- 3363 1928-D MS66 PCGS.** Accents of gold, lavender, and pink predominate on the obverse (with a reddish accent on the Indian's chin for added interest), while the reverse offers deep heather and violet hues, along with some reddish highlights on the bison. The strike is close to full, but the visual appeal is off the charts. One of the most eye-appealing Buffalo nickels of any date for collectors who love toning, yet especially enticing for a date seldom seen so well-struck. It will be difficult to find one better. Population: 45 in 66, 0 finer (2/14).
Ex: Long Beach Signature (Heritage, 6/2010), lot 425. NGC ID# 22SC, PCGS# 3964

1928-D Nickel, MS66
Only One Numerically Finer

- 3364 1928-D MS66 NGC.** While only a decade separates the 1928-D and the final issue in the series, the 1938-D, there is normally night-and-day difference in striking quality for these two D-mint Buffaloes. Taking that into consideration, the Premium Gem offered here is all the more remarkable. Both sides are very well struck and lustrous surfaces are further enhanced by splashes of golden color. The 28 and LIBERTY exhibit strike doubling. Census: 4 in 66, 1 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2005), lot 6009. NGC ID# 22SC, PCGS# 3964

1928-D Buffalo Nickel, MS66
Tied for the Finest Certified at PCGS

- 3365 1928-D MS66 PCGS. CAC.** Readily available in lower grades, the 1928-D nickel suddenly becomes rare in Premium Gem condition, and is virtually unknown finer. Glowing golden toning complements nearly undisturbed, satiny luster on this eye-appealing example. Above-average definition is seen overall, with only slight softness detectable on the Bison's shoulder and the top of the Indian's braid. Population: 45 in 66, 0 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22SC, PCGS# 3964

1928-S Buffalo Nickel, MS65
Above-Average Strike

- 3366 1928-S MS65 PCGS. CAC.** Easily obtainable in lower grades, the 1928-S Buffalo nickel becomes highly elusive in Gem condition, and is rarely encountered finer. Blended hues of green-gold and blue-violet complement well-preserved satiny surfaces on this CAC-approved Gem. The strike is above-average for the issue, with only slight softness noted on the Bison's shoulder. Population: 68 in 65, 8 finer (3/14).
From The Ray Levoi Collection. NGC ID# 22SD, PCGS# 3965

- 3367 1929-D MS66 PCGS.** This satiny Premium Gem displays light gold toning on both sides with above-average design definition. Slight central weakness on each side is typical of nearly every surviving example. The Set Registry collector will appreciate the importance of this offering. Population: 50 in 66 (2 in 66+), 1 finer (3/14).
Ex: Dallas Signature (Heritage, 11/2006), lot 391; Los Angeles Signature (Heritage, 8/2009), lot 324. NGC ID# 22SE, PCGS# 3967

- 3368 1934-D MS66 PCGS.** A lovely Premium Gem with strong satiny luster and boldly struck design motifs. The light golden-tan color turns to deeper gold-brown along the lower reverse border. Conditionally scarce at this lofty level. Population: 58 in 66 (2 in 66+), 0 finer (3/14). NGC ID# 22SM, PCGS# 3973

- 3369 1935 MS67 PCGS.** Appealing satin luster and a sharp strike are among the attributes this Superb Gem specimen exhibits. Faint toning and virtually pristine surfaces add to the desirability of this coin. Only one example has achieved a higher numeric grade from PCGS (2/14). NGC ID# 22SN, PCGS# 3974

- 3370 1935 MS67 PCGS.** Softly blended green-gold, violet, and ice-blue hues accent satiny luster on both sides of this virtually perfect Superb Gem. Sharply struck with excellent visual appeal. PCGS has only certified only one numerically finer example (3/14).
*Ex: Long Beach Signature (Heritage, 5/2007), lot 565; Long Beach Signature (Heritage, 9/2008), lot 7767; Central States Signature (Heritage, 4/2010), lot 1151.
 From The Ray Levoi Collection. NGC ID# 22SN, PCGS# 3974*

- 3371 1936 MS67+ PCGS Secure.** *Ex: Troy Wiseman Collection.* Magnificent rose-red, lemon-gold, and apple-green patina invigorates the peripheries of this satiny and high grade type coin. The silver-gray centers exhibit only minor imperfections. Population: 105 in 67 (5 in 67+), none finer (3/14).
From The Ray Levoi Collection. NGC ID# 22SS, PCGS# 3977

- 3372 1936 Doubled Die Reverse MS64 PCGS. FS-801.** The reverse legends are die doubled toward the rim, most clearly above UNITED and AMERICA, though FIVE CENTS and STATES OF also exhibit extreme thickness. *Cherry-pickers'* notes, "perhaps the strongest known Class VI DDR for the series." Lustrous with light golden-gray toning and one small spot on the bison's shoulder. PCGS# 38470

- 3373 1936-D 3 1/2 Legs VF35 PCGS. FS-901.** Stone-gray centers cede to olive-green margins. An unmarked and evenly circulated full horn example. Less famous than its 1937-D Three Legged successor, but unquestionably rarer. PCGS# 93978

3374 1936-S MS67 PCGS. Ex: A D M Collection. Caramel-gold fields complement gunmetal-gray devices. An immaculate Superb Gem that boasts an intricate strike except on the hair above the braid. Population: 71 in 67, none finer (3/14).
Ex: *Orlando FUN Signature (Heritage, 1/2009)*, lot 7865, which realized \$1,150.
From *The Ray Levoi Collection*. NGC ID# 22SU, PCGS# 3979

3375 1937-D Three-Legged MS62 NGC. FS-901. Numerous 3 1/2-Legged varieties are now recognized by the *Cherrypickers'* reference, but the present variety is the sole Three-Legged entry of the series. Rose-red and lime-green tints overlie shimmering stone-gray surfaces. Well defined with no distracting surface abrasions. NGC ID# 22SX, PCGS# 3982

3376 1937-D Three-Legged MS62 NGC. CAC. FS-901. Among the numerous hallmarks of genuine Three-Legged Buffalo nickels is the diminished size of E PLURIBUS UNUM with small letters that are clearly separated from the bison's back. This piece has frosty luster with pale gold and bluish-gray toning.
From *The Northern Lights Collection*. NGC ID# 22SX, PCGS# 3982

PROOF BUFFALO NICKELS

1913 Type One Buffalo Nickel, PR66 Impeccably Preserved and Highly Attractive

3377 1913 Type One PR66 PCGS. The Type One design elements are impressed with razor-sharp definition, as expected for a proof example of this first-year issue. Satiny with even gold-tan toning, both sides are flawlessly preserved and free of spots or any evidence of contact. An impressive Premium Gem proof that will please the specialist. NGC ID# 278R, PCGS# 3988

1913 Buffalo Nickel, PR66 Type One Matte Proof, Razor-Sharp

3378 1913 Type One PR66 PCGS. CAC. This first-year, Type One proof is always in demand as a one-year type coin. Although the Matte Proof format was disliked by collectors when first minted because of its similarity in appearance to well-produced business strikes, the high quality of the proofs and the nuances of the format appeal to today's specialists. This fully struck example is bold and attractive, with wonderful, silver-gray surfaces and a touch of aged, golden-olive toning at the margins. A magnificent Premium Gem. NGC ID# 278R, PCGS# 3988

1913 Type One Nickel, Appealing PR67 A Favorite Type Coin

3379 1913 Type One PR67 PCGS. CAC. The 1913 Type One nickel saw a mintage of 1,520 pieces, the largest of the early matte proof Buffalo nickel series. This is a well-produced issue with full design details and excellent eye appeal, making it a significant choice for type collectors. Light golden-tan patina is most pronounced at the margins of this Superb Gem. Sharply struck design elements and immaculately preserved surfaces round out the coin's outstanding eye appeal. Population: 52 in 67 (3 in 67+), 3 finer (3/14). NGC ID# 278R, PCGS# 3988

3380 1915 PR65 NGC. Sea-green and butter-gold enrich this lustrous and fully struck Gem. Contact is absent, and the conservative grade is due to a couple of tiny flecks on the right obverse field. Housed in a former generation holder. NGC ID# 278U, PCGS# 3992

3381 1915 PR66 PCGS. From a mintage of just 1,050 pieces, this beautifully preserved matte proof exhibits full design definition on both sides. Rich, silver-gray luster blankets the obverse, while the reverse displays a faint golden-gray hue. An eye-appealing example of this short-lived matte proof variant. NGC ID# 278U, PCGS# 3992

1916 Buffalo Nickel, PR65 Moderately Toned and Sharply Struck

3382 1916 PR65 PCGS. CAC. Waves of copper-tan patina contrast with lighter silver areas on the Indian's profile. The reverse shows a similar effect. The strike is sharp and the preservation excellent on this final-year Gem proof, creating excellent eye appeal despite a couple of tiny dark flecks below the chin. The CAC approval is a plus. NGC ID# 278V, PCGS# 3993

3383 1936 Type One — Satin Finish PR66 NGC. A fully original, Premium Gem example of the first variety of the 1936 proof nickel. The satiny surfaces are beautifully preserved with deep iridescent toning on both sides. Strong borders frame fully struck devices and shimmering luster on this high-end example. NGC ID# 278X, PCGS# 3994

3384 1936 Type Two — Brilliant Finish PR65 PCGS. CAC. A sharply struck Gem example of the second 1936 proof nickel type, with notable definition on the Bison's head and the Indian's hair braid. A faint golden tint warms the deeply reflective fields, while the surfaces are free of any noticeable imperfections. NGC ID# 278Y, PCGS# 3995

3385 1937 PR66 NGC. A fully struck Premium Gem proof with nearly flawless surfaces. The fields are bright and display nice mirroring when tilted under a light. Just a tint of light golden tone warms both sides of this high-end example. NGC ID# 278Z, PCGS# 3996

3386 1937 PR66 PCGS. CAC. Lovely jade-green and fire-red hues endow this undisturbed final-year proof. The centers show minor inexactness of strike. A loupe reveals only a trio of pinpoint reverse flecks. Certified in a green label holder.

Ex: Anaconda Rare Coins (Heritage, 6/2008), lot 492, which realized \$1,610.

From The Northern Lights Collection. NGC ID# 278Z, PCGS# 3996

3387 1937 PR67 PCGS. CAC. Strong design definition and fully brilliant, mirrored surfaces deliver exceptional visual appeal when tilted under a light. Close examination fails to reveal even minute surface faults, making this Superb Gem seem near the upper-end of its lofty grade. PCGS has certified just 18 numerically finer specimens (3/14). NGC ID# 278Z, PCGS# 3996

3388 1937 PR67 PCGS. CAC. Seemingly liquid mirroring in the fields accents bold devices on this CAC-approved Superb Gem. The surfaces are virtually free of even insignificant disturbances, and the overall visual appeal is exceptional. PCGS has certified only 18 numerically finer examples (3/14). NGC ID# 278Z, PCGS# 3996

1937 Buffalo Nickel, PR67+ Full Details, Golden Brilliance

3389 1937 PR67+ PCGS. CAC. There are almost limitless choices of high-end 1937 proof Buffalo nickels, most with excellent technical quality and widely varied coloration. This Superb Gem nickel is worthy of serious consideration, having received the Plus designation by PCGS as high-end for its grade, as well as the confirming CAC approval. A full strike delivers boldly brought-up motifs on reflective, mirrored fields — all evenly immersed in champagne-gold toning for outstanding eye appeal. Some scratches are visible in the photos of this nickel but they are on the holder, not the coin. A mere 4.4% of the MS67 proof nickels have received the Plus designation. NGC ID# 278Z, PCGS# 3996

1937 Buffalo Five Cent, PR68 Iridescent Brilliant Proof

3390 1937 PR68 NGC. Watery-deep, reflective fields surround the fully struck devices of this glossy, immaculate Superb Gem proof. The technical quality is enhanced by steely-blue base tones that are subtly iridescent, with rainbow overtones of yellow-gold, lime-green, and pink floating across the mirrored surfaces. PCGS reports a single MS69 example; apparently, this piece is one of several examples tied for second-finest. Census: 45 in 68 (4 in 68 ★), 0 finer (3/14). NGC ID# 278Z, PCGS# 3996

1937 Nickel, PR68 Stunning Second-Year Brilliant Proof Buffalo

3391 1937 PR68 NGC. A sensational proof, this piece is alive with glassy brilliance and displays a slight golden tint on both sides. The carbon-free surfaces are otherwise virtually as struck. This is a wonderful specimen of a second-year brilliant proof Buffalo nickel. Census: 45 in 68 (4 in 68 ★), 0 finer (3/14). NGC ID# 278Z, PCGS# 3996

JEFFERSON NICKELS

3392 1939 Reverse of 1938 MS67 Full Steps PCGS. Crisp satiny luster blankets both sides of Superb Gem with a faint ice-blue hue. Sharply struck and beautifully preserved, this piece is tied numerically with the example in the highest-rated Registry Set. Population: 13 in 67 (1 in 67+) Full Steps, 0 finer (3/14). NGC ID# 22T8, PCGS# 84003

3393 1939-S Reverse of 1938 MS66 Full Steps PCGS. Rare in Premium Gem condition with Full Steps. This well-preserved example displays sharp detail and bright mint luster. The surfaces are silver-gray, with pleasing eye appeal. Population: 19 in 66 (2 in 66+) Full Steps, 0 finer (2/14). NGC ID# 22TC, PCGS# 84006

3394 1942-P Type Two MS67 Full Steps PCGS. The wartime silver alloy. This fully struck Superb Gem delivers a high degree of eye appeal with frosty mint luster. Largely brilliant, this piece displays just a light tint of golden tone, primarily on the reverse. Population: 38 in 67 Full Steps, 0 finer (2/14). NGC ID# 22TM, PCGS# 84016

1942-S Nickel, MS67 Full Steps A Virtually Flawless Example

3395 1942-S MS67 Full Steps PCGS. This bright, brilliant example is radiantly lustrous and seems flawlessly preserved on both sides. The design elements are crisply rendered throughout, resulting in the elusive Full Steps designation. A series of interesting, raised die lines across Monticello should not be mistaken for post-strike imperfections. None are graded any finer than this at either of the major services. Population: 18 in 67 Full Steps, 0 finer (3/14). NGC ID# 22TN, PCGS# 84017

3396 1943-P MS67 Full Steps PCGS. This fully brilliant Superb Gem displays a bold strike and outstanding eye appeal. The surfaces are beautifully preserved with frosty, bright mint luster on both sides. Population: 55 in 67 (4 in 67+) Full Steps, 1 finer (2/14). NGC ID# 22TP, PCGS# 84018

**1943/2-P Nickel, MS66 Full Steps
In-Demand FS-101 Overdate**

3397 1943/2-P MS66 Full Steps PCGS. CAC. FS-101. The lower diagonal stroke of the 2 is bold underneath the 3 on this popular variety, and it is especially bold on this uniformly frosty Premium Gem Full Steps example, seemingly an early strike from fresh dies. Light golden patina further enhances the appearance, and the steps are no-questions full throughout. NGC ID# 22TR, PCGS# 84019

3398 1945-P MS67 PCGS. This Superb Gem 1945-P Jefferson nickel is among the finest survivors of the wartime silver alloy issue. Both sides are spectacularly toned in vivid shades of golden-brown and violet, with exceptionally vibrant mint luster under the patina. Population: 44 in 67 (3 in 67+), 0 finer (2/14).
From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 22TX, PCGS# 4025

3399 1945-P MS67+ PCGS. Vibrant forest-green, violet, orange, and deep golden hues intermingle over both sides of this sharply struck, frosty Superb Gem. Only a few faint ticks are seen beneath the patina, with overall exceptional visual appeal. Population: 44 in 67 (4 in 67+), 0 finer (3/14). NGC ID# 22TX, PCGS# 4025

**1945-P Jefferson Nickel, MS67 Full Steps
Tied for Finest-Graded at PCGS**

3400 1945-P MS67 Full Steps PCGS. The large P mintmark above Monticello indicates that this is a Wartime nickel, containing 35% silver and 56% copper. Nickel was needed for the war effort, and eliminated from the composition of Jefferson nickels from 1942 through 1945. This is a fully struck piece with carefully preserved, nearly mark-free surfaces. Creamy silver-gray toning is complemented by faint streaks of russet color on the obverse. Population: 8 in 67 (1 in 67+) Full Steps, 0 finer (3/14). NGC ID# 22TX, PCGS# 84025

**1945-P Wartime Nickel, MS67+ Five Full Steps
Sole Finest PCGS-Graded Example**

3401 1945-P MS67+ Full Steps PCGS. Rich satin luster provides this high-end Superb Gem example with immediate eye appeal. Areas of toning are present on both sides, primarily at the periphery on the obverse, accentuating the silver center. Among the colors appearing are gold, cherry, and lime-green. Importantly, this example exhibits the all-important Full Steps, further adding to the desirability of this gorgeous example. A few minuscule marks on the reverse do not pose a distraction. PCGS Registry Set collectors will be particularly interested in this piece, as it is the sole MS67+ Full Steps example, with none finer (2/14). NGC ID# 22TX, PCGS# 84025

**1945-P Wartime Nickel, MS67 ★
Five Full Steps, Fabulous Toning**

- 3402 1945-P MS67 ★ Full Steps NGC.** An important rarity in this lofty grade with the NGC Star designation and confirmed, sharply defined Five Full Steps on the reverse. A brilliantly lustrous and fabulously toned Superb Gem nickel, with vibrant lilac and orange toning and a meticulous strike. Housed “reverse forward” in the NGC holder to feature the outstanding toning and sharply visible Full Steps. Registry Set collectors take note: NGC has seen just this one example worthy of the Star in MS67 with none finer, and PCGS has not certified any numerically finer. Census: 4 in 67 (1 in 67 ★) Full Steps, 0 finer (2/14). NGC ID# 22TX, PCGS# 84025

**1945-D Jefferson Nickel, MS67+ Full Steps
Exceptional, Highly Attractive Example**

- 3403 1945-D MS67+ Full Steps PCGS.** This great Superb Gem nickel displays seemingly unimprovable strike definition, and intense mint luster that illuminates clean, attractively toned surfaces. A rainbow of pastel hues occurs in concentric circles on each side, in lovely shades of red, green, yellow-gold, and khaki-tan. An exceptional example of this final-year Wartime nickel type. Population: 75 in 67 (4 in 67+) Full Steps, 2 finer (3/14). NGC ID# 22TY, PCGS# 84026

**1945-S Nickel, MS67 Full Steps
None Numerically Finer at PCGS or NGC**

- 3404 1945-S MS67 Full Steps PCGS.** Areas of faint toning are present on this lustrous and appealing Superb Gem with the Full Steps designation. A couple of minuscule marks on the nose and a tiny area of as-made struck-in grease on Monticello are not distracting. Adding to the desirability of this example, PCGS and NGC have each only certified 5 examples at the MS67 level with Full Steps, with none numerically finer at either service (2/14). NGC ID# 22TZ, PCGS# 84027

- 3405 1946-D Over Horizontal D MS66+ Full Steps PCGS. FS-501.** A fully struck butter-gold Premium Gem of this popular mint blunder. The D over Horizontal D variety is much scarcer than the 1943/2 overdate, although it has not yet attained a listing in the *Guide Book*. PCGS# 894029

**1949-D Full Steps Jefferson Nickel
Sparkling Superb Gem**

- 3406 1949-D MS67 Full Steps PCGS.** A single glance at the population reports shows why this issue is so challenging in the highest grades. PCGS and NGC combined have certified just six examples in MS67 and none in a higher numeric grade (2/14). Prospective bidders will be competing with Registry Set enthusiasts for this immaculate, Full Steps representative. A whisper of golden translucence covers lustrous, satin-silver surfaces. There are no distractions. NGC ID# 22UC, PCGS# 84038

**1950 Jefferson Nickel, MS67
Full Details, Six Full Steps
Prooflike Registry Set Candidate**

- 3407 1950 MS67 Full Steps PCGS.** Comparisons are inevitable with the 1950-D nickel, the showcase of the series (although somewhat over-hyped), and as a result the Philadelphia issue for the year is often underrated. A rarity with full details in high grades, the present example is worth a serious look by advanced Jefferson nickel collectors. The surfaces are prooflike as sometimes (rarely) seen for the date, and six full steps are bold, which is very rare for the date. The Nagengast reference estimates even five full steps are seen in only 1 of 150 examples.

Iridescent and appealing, the reflective surfaces reveal multi-colored hues of pink, magenta, lime-green, and gold. Remarkably few marks exist on this Superb Gem, although one — tiny in the context of the overall coin size — exists on the steps above CE of MONTICELLO. Certainly, this is a candidate for the finest Full Steps 1950 nickel. Population: 4 in 67 Full Steps, 0 finer (3/14). NGC ID# 22UE, PCGS# 84041

- 3408 1950-D MS67 Full Steps PCGS.** From the lowest mintage of the series (just 2.6 million coins), this Superb Gem stands among the finest-certified at PCGS. Lustrous, well-preserved surfaces show above-average detail for the issue with full definition on the steps. The obverse is silver-gray, while the reverse displays just a blush of light golden toning. Population: 13 in 67 Full Steps, 0 finer (2/14). NGC ID# 22UF, PCGS# 84042

**1952-D Superb Gem Nickel, Full Steps
The Single Finest Certified Example**

- 3409 1952-D MS67 Full Steps PCGS.** A whisper of lilac toning enhances the obverse of this technically superior Jefferson nickel. The 1952 Denver issue is extremely difficult to find with a full strike due to incorrect die spacing at the Mint. To locate one with flawless aesthetics and lustrous appeal is almost unheard of, and it is sure to be in the crosshairs of Registry Set collectors. This is the single finest example at PCGS, and NGC has seen none of its equal (nor any finer). Population: 1 in 67 Full Steps, 0 finer (2/14). NGC ID# 22UL, PCGS# 84047

**1952-S Nickel, MS66+ Full Steps
Lustrous, Attractive Example
One of the Finest-Graded at PCGS**

- 3410 1952-S MS66+ Full Steps PCGS.** San Francisco issues tended to have lower mintages than their Denver and Philadelphia Mint counterparts in the late 1940s and early to mid-1950s, and the S-mint coins are harder to locate in high grades such as this one. This is a sharply struck Premium Gem nickel with vibrant luster and attractive golden-silver toning. Surface marks are minimal as expected. Population: 8 in 66 (1 in 66+) Full Steps, 0 finer (3/14). NGC ID# 22UM, PCGS# 84048

- 3411 1958-D MS67 Full Steps PCGS.** Fully struck with gleaming luster and light olive-gray and steel-blue toning. A great coin, essentially pristine on both sides. NGC ID# 22V5, PCGS# 84064

**1959-D Nickel, MS67 Five Full Steps
The Single Finest Certified**

- 3412 1959-D MS67 Full Steps NGC.** By 1959 nickel production at the Denver mint was exceeding 150 million coins annually, which lowered strike quality considerably. As a result, high-grade 1959-D nickels are remarkably scarce with Five Full Steps. This beautifully preserved Full Steps example exhibits unblemished silver-gray luster with strong visual appeal. This is the only Superb Gem awarded the Five Full Steps designation at NGC and PCGS combined, with none finer (3/14). NGC ID# 22V7, PCGS# 84066

PROOF JEFFERSON NICKELS

**1942-P Type Two Nickel, PR67 Cameo
The Finest at PCGS**

- 3413 1942-P Type Two PR67 Cameo PCGS. CAC.** Proof coins issued from 1936 to 1942 are extremely rare with Cameo contrast, and this Superb Gem is the finest Cameo proof that PCGS has certified. Both sides have faint champagne toning over fully mirrored fields and lustrous devices, with a sharp strike. An extremely important and highly appealing Type Two nickel. Population: 1 in 67 Cameo, 0 finer (3/14). PCGS# 84180

**1951 Jefferson Nickel, PR67 Deep Cameo
Essentially Flawless Superb Gem**

- 3414 1951 PR67 Deep Cameo PCGS.** The design elements of this incredible Superb Gem exhibit razor-sharp definition throughout, and close inspection with a loupe reveals no mentionable distractions. The richly frosted devices contrast profoundly with the deeply reflective fields to produce a startling black-on-white cameo effect when the coin is tilted in the light. Eye appeal is terrific. Population: 10 in 67 Deep Cameo, 0 finer (3/14). NGC ID# 22YD, PCGS# 94183

**1954 Nickel, PR68 Deep Cameo
Outstanding, Conditionally Rare Specimen**

- 3415 1954 PR68 Deep Cameo PCGS.** The quality of this piece is outstanding, resulting in tremendous visual appeal. The watery, highly reflective fields display a significant amount of contrast against the frosted devices. The surfaces appear pristine on both sides. Population: 7 in 68 Deep Cameo, 0 finer (3/14). NGC ID# 27A7, PCGS# 94186

MERCURY DIMES

- 3416 1916-D — Cleaning — PCGS Genuine. Fine Details.** Lightly cleaned long ago, this still-pleasing key-date dime has since retuned pale battleship-gray overall with rich green, gold, and violet toning in the margins. Evenly worn, with moderate detail remaining. NGC ID# 23GY, PCGS# 4906

1916-D Mercury Dime, VF35 Key to the Series, Pleasing Example

- 3417 1916-D VF35 PCGS.** After just 264,000 coins were produced, the Denver Mint halted production and switched to making more urgently needed quarters. As a result, many Mercury dime collections have an uncomfortable first-year hole in the set, with this Denver date the culprit. A long-celebrated rarity of the series, it is scarce in all conditions any better than fine, and highly desirable in the Choice VF grade demonstrated by this solid example. The smooth surfaces show only normal wear for the grade, with no major marks (in fact, very few marks at all). Some nice golden accents enhance this particularly nice example. This issue is ranked in the *100 Greatest U.S. Coins* (third edition). NGC ID# 23GY, PCGS# 4906

1916-D Mercury Dime, XF40 Problem-Free and Attractive

- 3418 1916-D XF40 PCGS. CAC.** A nice example of the Mercury dime key date, with a sharp mintmark and smooth surfaces with even light-gray toning. Well-struck and free of any distracting marks, this piece is a solid XF representative, as attested to by the CAC sticker. Housed in an old green holder.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 23GY, PCGS# 4906

1917 Mercury Dime, MS67 Conditionally Rare

- 3419 1917 MS67 Full Bands PCGS.** This second-year issue saw a high mintage in excess of 55 million pieces yet Superb Gems like the present coin are rare, and neither of the major services has rated any finer. This coin is fully struck with bright satiny mint luster and pristine surfaces that show a slight degree of streaky olive-green and reddish-tan patina on each side. Population: 22 in 67 (2 in 67+) Full Bands, 0 finer (2/14). NGC ID# 23H2, PCGS# 4911

- 3420 1917-S MS66 Full Bands PCGS. CAC.** Sharply struck with a slightly pebbled texture to the fields. Both sides are brightly lustrous. While the obverse is minimally toned, the reverse shows charcoal-gray patina. Population: 65 in 66 (1 in 66+) Full Bands, 10 finer (3/14).
From The Northern Lights Collection. NGC ID# 23H4, PCGS# 4915

1918-D Dime, MS64 Full Bands Green Label Holder

- 3421 1918-D MS64 Full Bands PCGS.** Variegated caramel-gold and steel-gray toning endows this highly lustrous and carefully preserved near-Gem. The strike is good and carbon is minimal. An interesting die crack traverses the T in LIBERTY. Housed in a green label holder. Population: 77 in 64 (2 in 64+) Full Bands, 28 finer (3/14). NGC ID# 23H6, PCGS# 4919

1918-S Mercury Dime, MS65 Full Bands
Notable Strike Rarity

- 3422 1918-S MS65 Full Bands PCGS.** Ex: Wm. Dominick Collection. A generous mintage of more than 19 million dimes was accomplished with a relatively small number of obverse and reverse dies, suggesting that in 1918 the San Francisco Mint minimized die stress and wear by allowing more space between the dies in. As a result, fully struck examples are rare and few coins have certified with full bands. This lucky exception is powerfully struck with full, bold bands. Creamy, silver-white surfaces are just a few tiny pinpricks from an even higher grade, since the luster is equally exceptional and enveloping. Population: 23 in 65 Full Bands, 18 finer (2/14). NGC ID# 23H7, PCGS# 4921

- 3423 1920-S MS64 Full Bands PCGS.** CAC. The 1920-S is among the more elusive issues in the Mercury dime series with Full Bands definition, and Gem examples are rarely encountered. This near-Gem boasts a needle-sharp strike, with notable strength seen on the bands, the date, and Liberty's cap. A light golden hue warms the obverse, while the reverse exhibits pleasing silver-gray patina. NGC ID# 23HD, PCGS# 4933

1920-S Dime, MS65 Full Bands
Frosty and Sharply Struck Throughout

- 3424 1920-S MS65 Full Bands PCGS.** The frosty silver surfaces show light accents of scattered charcoal-gray on both sides amid excellent eye appeal. The last digit in the date shows none of the fadeaway seen on some examples from this year, and the sharp strike encompasses the obverse as well as all fasces bands on the reverse. Population: 26 in 65 (1 in 65+) Full Bands, 11 finer (3/14). NGC ID# 23HD, PCGS# 4933

- 3425 1921 — Improperly Cleaned — NGC Details. Unc.** Unprecedented silver dollar coinage in 1921 caused the Mint to neglect other silver denominations. The dime has a Philadelphia mintage of 1.23 million pieces, among the lowest of the series. A fully defined and untoned example with moderately diminished luster due to a dip. NGC ID# 23HE, PCGS# 4934

1921-D Dime, MS64
Virtually Full Bands

- 3426 1921-D MS64 PCGS.** CAC. Silver dollar production at the Denver Mint resumed in May 1921. Prior to that time, the Colorado facility was busy striking dimes and half dollars, the only other denominations minted there during the year. Once massive silver dollar coinage began, production of the smaller denominations halted, creating key issues for collectors today. This Choice Mint State piece has an excellent strike with nearly full split bands, and frosty silver luster. Population: 36 in 64, 26 finer (3/14). NGC ID# 23HE, PCGS# 4936

- 3427 1923 MS67 Full Bands NGC.** Despite a mintage of more than 50 million coins, the 1923 Mercury dime becomes elusive in Superb Gem condition, and rare finer than MS67. This example displays a needle-sharp strike and nearly pristine surfaces. Brilliant, heavily frosted luster exhibits just a few small flakes of green-gold toning with tremendous overall eye appeal. Census: 29 in 67 Full Bands, 1 finer (2/14). NGC ID# 23HG, PCGS# 4939

- 3428 1924-S MS64 Full Bands PCGS.** Easily obtainable in most grades, the 1924-S Mercury dime becomes rare at the Gem Full Bands level. This near-Gem exhibits bold definition in all key areas, with frosty, gold-tinted mint luster overall. Only a couple faint grazes preclude an even finer grade. PCGS has awarded Full Bands designations to only 19 numerically finer specimens (3/14). NGC ID# 23HL, PCGS# 4947

1925-D Dime, MS66 Full Bands

- 3429 1925-D MS66 Full Bands PCGS.** CAC. Hints of champagne toning appear on the frosty and fully lustrous surfaces of this sharply struck, brilliant Premium Gem. The central bands on the reverse are fully split and rounded on this exceptional and elusive piece. Population: 29 in 66 (1 in 66+) Full Bands, 3 finer (3/14). NGC ID# 23HN, PCGS# 4951

1926 Dime, Immaculate MS67 Full Bands

- 3430 1926 MS67 Full Bands PCGS. CAC.** This pristine silver-white 1926-P dime would make a remarkably nice type coin for a high-grade set, showing completely untuned surfaces that boast a high quotient of eye appeal. The strike is sharp, and most areas show generous mint frost, with some mirrored "die burn" visible at the lower obverse. An immaculate coin. Population: 19 in 67 Full Bands, 0 finer (3/14). NGC ID# 23HR, PCGS# 4955

**1926-S Dime, MS64 Full Bands
Elusive West Coast Issue**

- 3431 1926-S MS64 Full Bands PCGS. CAC.** This scarce Mercury dime issue is elusive in fully struck near-Gem or finer condition, and the present piece is an exceptional example displaying brilliant, satin luster with lovely peripheral iridescence. Population: 42 in 64 Full Bands, 37 finer (3/14). NGC ID# 23HT, PCGS# 4959
- 3432 1929-S MS66 Full Bands PCGS.** Green, magenta, and russet patinas commingle over most of this Premium Gem piece. The coin also displays shimmering luster, sharply struck devices, and seemingly flawless surfaces. Only 41 examples have achieved higher numeric grades from PCGS (2/14).
Ex: Long Beach Signature (Heritage, 1/2004), lot 5672. NGC ID# 23J4, PCGS# 4977

**1929-S Ten Cent, MS67 Full Bands
None Certified Finer at PCGS or NGC**

- 3433 1929-S MS67 Full Bands PCGS.** The popularity of S-Mint Mercury dimes sometimes outpaces their actual rarity, but this always-available date becomes truly rare in Superb Gem condition with Full Bands such as this coin. Smooth, silver-white surfaces are brilliantly lustrous and untuned. Sharply struck on all the motifs, the fields and devices show only a couple of insignificant marks, while several interesting die breaks appear on both sides of the coin. Population: 41 in 67 Full Bands, 0 finer (3/14). NGC ID# 23J4, PCGS# 4977

**1931 Mercury Dime, MS67 Full Bands
Single Finest at NGC**

- 3434 1931 MS67 Full Bands NGC.** Full Band Mercury dimes of 1931 can be located with patience and searching. In the lofty grade of MS67, however, Full Band examples are difficult to obtain. Indeed, the present Superb Gem is the single finest Full Bands 1931 example seen at NGC (1/14). Thick mint luster emanates from speckled light gray and russet surfaces. Solidly struck on all the design features. Both sides are impeccably preserved.
Ex: Eric P. Newman Numismatic Education Society. NGC ID# 23J7, PCGS# 4983

- 3435 1931-D MS67 Full Bands PCGS.** With a mintage of little more than 1.2 million coins, the 1931-D Mercury dime is scarcely seen at the Superb Gem grade level with Full Band definition. This fully struck representative displays frosty mint luster with just a touch of golden toning around the upper reverse periphery. The surfaces are virtually free of abrasions, while the overall visual appeal is exceptional. Population: 52 in 67 (1 in 67+) Full Bands, 0 finer (3/14). NGC ID# 23J8, PCGS# 4985

- 3436 1934-D MS67 Full Bands PCGS. CAC.** A conditionally scarce issue, seldom encountered at the Superb Gem Full Bands grade level. This sharply struck example displays vibrant frost-white luster and is virtually free of surface imperfections. Population: 47 in 67 (4 in 67+) Full Bands, 0 finer (3/14). NGC ID# 23JB, PCGS# 4991

**1935 Mercury Dime, MS68 Full Bands
Tied for the Finest Certified at PCGS**

- 3437 1935 MS68 Full Bands PCGS.** With a mintage of more than 58 million coins, the 1935 dime can easily be obtained in any grade desired, with the sole exception of MS68 Full Bands. PCGS and NGC combined have awarded this lofty grade to just 13 examples, with none numerically finer (3/14). This piece showcases orange-gold, aquamarine, and cherry-red hues over the upper obverse and the corresponding periphery on the reverse. Razor-sharp details and frosty luster only add to the incredible eye appeal of this essentially perfect coin. NGC ID# 23JC, PCGS# 4993

**1937-D Mercury Dime, MS68 Full Bands
Tied for Finest Certified**

3438 1937-D MS68 Full Bands PCGS. Traces of orange, red, and blue patina dot the margins of this otherwise frost-white Superb Gem dime. While the surfaces show no marks whatsoever, the bold strike sets this coin apart from the few other coins graded this highly. Full details accompany every motif, with Liberty's portrait particularly bold and the Full Bands raised and completely sharp. PCGS has not seen a numerically superior 1937-D dime. Population: 14 in 68 (1 in 68+) Full Bands, 0 finer (3/14). NGC ID# 23JK, PCGS# 5007

3439 1937-S MS67+ Full Bands PCGS. CAC. Potent luster, a sharp strike, and splashes of toning, primarily golden, are among the attributes this high-end Superb Gem specimen possesses. PCGS has awarded a higher numeric grade to a sole Full Bands example, while NGC has yet to assign an MS68 grade or finer, with this one of only five MS67+ Full Bands examples from PCGS (3/14). NGC ID# 23JL, PCGS# 5009

**1939 Dime, Pristine MS68
Tied for Finest Graded**

3440 1939 MS68 Full Bands PCGS. Sandy-gold and pinkish hues compete for space with silvery areas on each side of this pristine Superb Gem 1939 dime, one of only eight in this top grade at PCGS (3/14). Even a loupe reveals no sign of contact, although we note a small dark fleck under the U in TRUST on the obverse. NGC ID# 23JR, PCGS# 5017

**1942/1 Dime, MS63
Pleasing Key Date Example**

3441 1942/1 MS63 ANACS. FS-101. This overdate variety, along with its counterpart from the mint in Denver, has become one of the key issues in the Mercury dime series. This example is well-struck, showing partial separation of the central reverse bands. The surfaces are minimally abraded, and both sides display a coating of deep green-gray toning, complemented by vibrant amber-gold peripheral accents. NGC ID# 23K4, PCGS# 5036

**1942/41-D Dime, MS60 Full Bands
Key Wartime Overdate**

3442 1942/41-D MS60 Full Bands NGC. FS-101. Light die doubling on IN GOD WE TRUST, and the base of the 4 in the date, is diagnostic for this key World War II overdate. The borders of the present coin display a hint of golden patina, but the satiny and smooth example is otherwise brilliant. The strike is intricate throughout. NGC ID# 23K6, PCGS# 5041

3443 1943-D MS68 Full Bands PCGS. The satiny untuned obverse contrasts nicely against the pinkish- and gold-toned reverse, and both sides show a sharp strike and impeccable preservation. Population: 27 in 68 Full Bands, 0 finer (3/14). NGC ID# 23K9, PCGS# 5047

3444 1943-D MS68 ★ Full Bands NGC. Semiprooflike fields coaxed the elusive Star designation from NGC. Both fields are striated from die polish, but pristine aside from a tiny spot behind Liberty's neck. Census: 15 in 68 (4 in 68 ★) Full Bands, none finer (3/14). *Ex: Orlando FUN Signature (Heritage, 1/2007), lot 2773, which realized \$1,092.50.*
From The Northern Lights Collection. NGC ID# 23K9, PCGS# 5047

PROOF MERCURY DIMES

- 3445 1941 PR68 PCGS.** Proof Mercury dimes were offered for sale to collectors from 1936 through 1942. The 1941 saw a mintage of 16,557 pieces, the sixth largest production figure in the short seven years of this series. Like the majority of dime proofs during this time, this PR68 specimen is brilliant and mirrorlike, though the reverse presents a hint of field-device contrast. This fully struck, immaculately preserved coin is beautiful to behold. Population: 20 in 68, none finer (3/14). NGC ID# 27DM, PCGS# 5076
- 3446 1941 PR68 NGC. CAC.** Toning is present on both sides of this PR68 example, with areas of green and pale gold appearing. Rotation under a light source reveals shades of red and orange, primarily in the left obverse field. Census: 57 in 68 (11 in 68 ★), 0 finer (3/14). NGC ID# 27DM, PCGS# 5076
- 3447 1942 PR68 NGC. CAC.** Pale pink-champagne patina graces each side of this immaculate and highly reflective Superb Gem proof, a beautiful and mark-free coin.
From The Northern Lights Collection. NGC ID# 27DN, PCGS# 5077

1942 Dime, PR67 Cameo Rare in This Format

- 3448 1942 PR67 Cameo NGC. CAC.** The final year of Mercury dime proofs saw a relatively generous mintage of 22,329 pieces. Cameos are extremely rare in the proof Mercury dime series. Of the thousands of 1942 proof Mercurys graded by NGC and PCGS, a mere nine have been designated Cameos. The lustrous devices of this Superb Gem stand out against the mirrored fields. Great overall eye appeal. Census: 4 in 67 Cameo (1 in 67 ★ Cameo), 0 finer (3/14). PCGS# 85077

ROOSEVELT DIMES

- 3449 1947-S/D 10C MS67 PCGS. FS-501.** The S over D mintmark is plain with low-power magnification. This frost-white Superb Gem exhibits sharp overall design definition, with beautifully preserved surfaces. This is the only example that PCGS has certified as MS67 with none finer (3/14). PCGS# 145359
- 3450 1949-D MS68 Full Bands PCGS.** Strong luster provides this sharply struck piece with immediate eye appeal. The obverse displays rich, attractive toning in shades of orange, red, green, plum, and blue while the reverse exhibits only a hint of color. Population: 8 in 68 Full Bands, 0 finer (3/14). NGC ID# 23KV, PCGS# 85092

1950 Dime, MS68 Full Bands Vividly Toned, One of Three at PCGS

- 3451 1950 MS68 Full Bands PCGS.** A conditional rarity in the Full Bands designation, the 1950 Philadelphia dime show only three submissions in this top grade at PCGS, making it an essential for Registry Set collectors. Silvery centers are larger on the obverse which cedes to cinnamon sprinkles near the rim; the reverse shows a broad swath of fiery orange-red. Both sides are free of even the smallest distraction, as expected. NGC ID# 23KX, PCGS# 85094
- 3452 1950-S MS68 PCGS.** The 1950-S is one of the condition and strike rarities in the Roosevelt series. This nearly perfect coin lacks just a bit of definition on the torch. The surfaces otherwise are nearly perfect and toned in magnificent shadings of blue and golden-rose. Population: 9 in 68, 0 finer (2/14).
From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 23KZ, PCGS# 5096
- 3453 1957 MS67 Full Bands PCGS.** A radiant snow-white example with full strike definition and flawlessly preserved surfaces. Conditionally rare at this advanced grade level. Population: 9 in 67 (1 in 67+) Full Bands, 0 finer (3/14). NGC ID# 23LK, PCGS# 85114
- 3454 1957 MS67 Full Bands PCGS.** A brilliant, intensely lustrous dime with full strike definition and seemingly pristine surfaces. Tied for finest-graded at both services. Population: 9 in 67 (1 in 67+) Full Bands, 0 finer (3/14). NGC ID# 23LK, PCGS# 85114
- 3455 1963-D MS67 Full Bands PCGS.** Pale silver with just a hint of gold near the rims. Better-defined than usually seen with smooth eye appeal. Population: 11 in 67 Cameo, 0 finer (3/14). NGC ID# 23LZ, PCGS# 85127

1963-D Dime, MS67 Full Bands All-Brilliant Surfaces

- 3456 1963-D MS67 Full Bands PCGS.** Curiously scarce for a coin with such a high mintage, the 1963-D is not only a condition rarity but a strike rarity as well. Only 10 other Full Bands pieces have been so graded by PCGS and none are finer at either service (1/14). This is a brightly lustrous, all-brilliant example. NGC ID# 23LZ, PCGS# 85127

PROOF ROOSEVELT DIMES

1950 Dime, PR68 Ultra Cameo One of the Finest-Known Examples

- 3457 1950 PR68 Ultra Cameo NGC.** As the first year of the newly restarted proofs, the 1950 is predictably a rare coin, especially with Ultra Cameo contrast. The PR68 designation makes it even more significant and makes this quite the purchase for a Registry Set collector. The field-device contrast could not be more profound. Each side is brilliant, the only exception being a faint streak of planchet granularity on the upper left of the reverse, a trait that identifies this as the plate coin on page 48 of Rick Tomaska's *Cameo and Brilliant Proof Coinage of the 1950 to 1970 Era* (1991). Census: 4 in 68 Ultra Cameo, 0 finer (3/14). PCGS# 95225

- 3458 1951 PR68 Ultra Cameo NGC.** Cameo proofs from the 1950s are seldom encountered in today's market. The present coin is a spectacular MS68 specimen, with jet-black mirrors and stark cameo contrast. The luster is completely brilliant, and all details are fully impressed. Census: 4 in 68 Ultra Cameo (1 in 68 ★ Ultra Cameo), 1 finer (3/14).

Ex: *Pittsburgh Signature* (Heritage, 8/2004), lot 5883; *FUN Signature* (Heritage, 1/2011), lot 4616. NGC ID# 27EK, PCGS# 95226

1954 Dime, PR68 Deep Cameo The Finest PCGS Certified

- 3459 1954 PR68 Deep Cameo PCGS.** An extraordinary Superb Gem Deep Cameo proof, this 1954 dime is fully brilliant with no toning on either side. The devices are frosty and highly lustrous, and they are framed by deeply mirrored fields, creating black-and-white contrast. Population: 1 in 68 Deep Cameo, 0 finer (3/14). NGC ID# 27EN, PCGS# 95229

STANDING LIBERTY QUARTERS

1916 Quarter, VF Sharpness

- 3460 1916 — Improperly Cleaned — NGC Details. VF.** Cream-gray, lime-green, and peach toning visits this nicely detailed key date quarter. Mildly glossy but devoid of noticeable hairlines or abrasions. Fingerprints are noted on the lower right obverse and opposite on the upper right reverse. Traces of luster remain in design crevices, though the legs and inner shield exhibit wear. NGC ID# 242Y, PCGS# 5704

1916 Standing Liberty Quarter, AU Details Low-Mintage, First-Year Key Issue

- 3461 1916 — Harshly Cleaned — NGC Details. AU.** This first-year key date had a meager production of 52,000 coins, a remarkably low mintage for a 20th century regular issue. Examples are always keenly-sought, in any condition. The abrasion-free surfaces of this harshly cleaned example reveal medium to charcoal-gray coloration accented by golden highlights.

From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 242Y, PCGS# 5704

1916 Standing Liberty Quarter Uncirculated Details

- 3462 1916 — Improperly Cleaned — NGC Details. Unc.** Medium golden-brown borders cede to cream-gray fields and devices. Lustrous and nicely struck with no visible marks. The surfaces have a matte texture from immersion in a solvent, and a few pinpoint aqua flecks are southeast of the shield. The key regular issue of the series, and also the most historic. NGC ID# 242Y, PCGS# 5704

- 3463 1917 Type One MS66 Full Head PCGS.** Shimmering luster accents the delightfully clean and well-struck surfaces of this Premium Gem. A slight degree of reddish-tan color is noted near the reverse peripheries, but the obverse is essentially untoned. From *The Northern Lights Collection*. NGC ID# 242Z, PCGS# 5707

**1917 Type One Standing Liberty Quarter, MS67 Full Head
Fully Struck, Lustrous Silver-White Surfaces**

- 3464** 1917 Type One MS67 Full Head PCGS. CAC. The lustrous untuned silver-white surfaces of this Superb Gem provide the coin with immediate and exceptional eye appeal. In addition to the desirable Full Head detail, all of the shield rivets are not only present, they each exhibit strong definition. The surfaces are virtually pristine, adding to the appeal. Population: 73 in 67 (4 in 67+) Full Head, 0 finer (3/14). NGC ID# 242Z, PCGS# 5707

**1917 Type One Quarter, MS67 Full Head
Popular Type Issue, Conditionally Scarce**

- 3465** 1917 Type One MS67 Full Head PCGS. CAC. The Type One design was only produced for two years (1916 and 1917), and this Philadelphia issue, with a mintage of 8.74 million coins, is by far and away the wisest choice for type collectors. This lovely example is sharply struck with shimmering satiny luster and touches of greenish-gold and russet color that complement the silver-gray surfaces. Both sides are pristine. Population: 72 in 67 (4 in 67+) Full Head, 0 finer (2/14). NGC ID# 242Z, PCGS# 5707

**1917-D Quarter, MS67 Full Head
None Numerically Finer at PCGS**

- 3466** 1917-D Type One MS67 Full Head PCGS. A coin with numerous attributes, this Superb Gem exhibits not only Full Head details, but also all of the shield rivets appear, with most being sharply defined. Toning is present on large portions of the obverse and the outer reverse, with the reverse center remaining brilliant. The hues include golden-brown, teal, plum, and several shades of green. The upper reverse reveals a few untuned spots. Population: 22 in 67 (1 in 67+) Full Head, 0 finer (3/14). NGC ID# 2432, PCGS# 5709

- 3467** 1917-S Type One MS65 Full Head PCGS. Scarcely encountered finer. This sharply struck Gem Full Head example displays a faint golden hue over lightly frosted luster on both sides. The surfaces are largely free of any detracting faults, providing this piece with outstanding visual appeal. NGC ID# 2433, PCGS# 5711

- 3468** 1917-S Type One MS65 Full Head PCGS. Though not rare, the 1917-S Type One quarter is the scarcest of the three 1917 Type One issues in Gem Full Head grades. This fully brilliant, frosty Gem exhibits the excellent strike associated with this type, delivering outstanding visual appeal. The surfaces are remarkably free of even trivial grazes, making this example seem rather conservatively graded. NGC ID# 2433, PCGS# 5711

- 3469** 1917 Type Two MS66 Full Head PCGS. Frosty cartwheel luster and splashes of deep amber-green and russet toning deliver excellent visual appeal on this Premium Gem. Razor-sharp detail is seen on Liberty's head, the shield lines and rivets, the stars, and the eagle's breast feathers. Clear date numerals and a lack of major abrasions further complement this outstanding Type Two quarter. PCGS has graded just nine numerically finer Full Head examples (3/14). NGC ID# 2434, PCGS# 5715

**1918 Quarter, MS66 Full Head
Sharply Struck and Frosty**

- 3470** 1918 MS66 Full Head PCGS. The 1918 is among the better-struck pre-1925 Standing Liberty quarters, and this piece is no exception. Sharp definition is seen on the date numerals, the stars, the inner shield, and the chainmail, though the leading edge of the eagle's right wing and shield rivets three and four show some of the usual softness. The head detail is pleasing, with Liberty's face boldly defined. The frosty surfaces are virtually free of contact abrasions, while a ring of light golden peripheral toning surrounds otherwise brilliant luster. Population: 39 in 66 (1 in 66+) Full Head, 12 finer (3/14). NGC ID# 2437, PCGS# 5721

**1918 Quarter, MS66 Full Head
Lustrous and Lightly Toned**

- 3471** 1918 MS66 Full Head PCGS. CAC. Small, scattered splashes of toning are present on both sides, primarily the obverse. The colors include dark gray, denim-blue, red, and red-brown. Attractive luster and the important Full Head details are additional attributes of this piece. Population: 39 in 66 (1 in 66+) Full Head, 12 finer (3/14). NGC ID# 2437, PCGS# 5721

3472 1918-D MS64+ Full Head NGC. A frosty, well-preserved near-Gem. Mostly brilliant mint bloom is complemented by a few small areas of amber on both sides. The date numerals are clear, with nice Full Head definition. Some softness is noted in the gown lines and eagle feathers, as is typical for the issue. Census: 61 in 64 (2 in 64+) Full Head, 45 finer (2/14). NGC ID# 2438, PCGS# 5723

3473 1918-S MS64 Full Head PCGS. A frosty near-Gem with a scarcely seen sharp Full Head. The strike is full in the borders, chainmail, vertical shield lines, and the date numerals, but softness is noted in Liberty's thigh and the leading edge of the eagle's right wing. A faint blush of light golden toning warms both sides of this well-preserved example. NGC ID# 2439, PCGS# 5725

1918/7-S Standing Liberty Quarter

3474 1918/7-S PCGS Genuine. FS-101. The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an AU specimen that has been cleaned. Delicate gold toning resides on the silver surfaces of this important quarter, showing faint hairlines as the only evidence of cleaning. NGC ID# 243A, PCGS# 5726

1918/7-S Quarter, VF25 Key Overdate Variety

3475 1918/7-S VF25 NGC. FS-101. Since its late discovery in 1937, this famous overdate variety has become one of the key issues in the Standing Liberty series, perhaps second only to the first-year 1916, with its tiny mintage of 52,000 pieces. This moderately worn VF example still shows clear evidence of the overdate feature, and the surfaces are smooth over and problem-free over both sides. The obverse displays normal beige-gray toning, while the reverse shows streaky champagne-violet patina. NGC ID# 243A, PCGS# 5726

3476 1919 MS66 NGC. Generally well-struck in the centers, with some fadeaway noted along the margins, including Liberty's head and the date. Lustrous and carefully preserved, with clean, bright surfaces. Census: 57 in 66 (3 in 66+), 19 finer (3/14). NGC ID# 243B, PCGS# 5728

3477 1919 MS66 PCGS. CAC. This Premium Gem has a lovely satiny appearance with well-preserved, mark-free surfaces and bold strike definition. Only the side of Liberty's head and a couple of the shield rivets show partial incompleteness. Population: 92 in 66 (7 in 66+), 19 finer (3/14).
From The Northern Lights Collection. NGC ID# 243B, PCGS# 5728

1919 Standing Liberty Quarter, MS66+ Full Head Attractively Toned and Lustrous

3478 1919 MS66+ Full Head PCGS. CAC. A high-end Premium Gem with the desirable Full Head details, this lustrous coin displays small splashes of color on both sides. The obverse exhibits hues of rich lavender, light olive-green, and orange-red, while deeper olive-green, red-orange, and merlot shades appear on the reverse. Population: 7 in 66+ Full Head, 17 finer (3/14). NGC ID# 243B, PCGS# 5729

3479 1919-S AU58 PCGS. CAC. Substantial mint luster remains beneath light golden patina on this near-Mint semikey. The strike is above-average for an S-mint, with notable definition noted on the shield rivets, the date numerals, and the chain mail. Close examination reveals fine die striations in the fields around the devices, probably from an attempt to remove clash marks. NGC ID# 243D, PCGS# 5732

1919-S Standing Quarter, MS65 Conditionally Challenging

3480 1919-S MS65 PCGS. The 1919-S is one of the most conditionally challenging issues in the entire series, at or above the MS65 grade level. This Gem displays flashy satin luster and silver-gray surfaces imbued with slight golden accents. The surfaces are near-pristine, and only the tiniest bit of flatness on the side of Liberty's head is noted. Population: 41 in 65 (1 in 65+), 12 finer (2/14). NGC ID# 243D, PCGS# 5732

3481 1920 MS66 PCGS. CAC. Bold maroon, navy, and orange-gold peripheral toning surrounds lighter rainbow hues in the margins, with frosty, brilliant centers. The design elements are sharply struck, with notable definition seen on the shield lines and rivets, the chain mail, the date numerals, and the eagle's feathers. Liberty's head is nearly full, with just a touch of weakness noted at the temple. A stunning Premium Gem representative. Population: 63 in 66 (5 in 66+), 6 finer (3/14). NGC ID# 243E, PCGS# 5734

3482 1920 MS65 Full Head PCGS. The 1920 is among the better-struck issues in the Standing Liberty quarter series, and this frosty representative does not disappoint. Bold definition on the shield lines and rivets, the chain mail, and the stars is complemented by an immaculate Full Head. Faint golden-gray toning encompasses the obverse and surrounds a brilliant center on the reverse. Close examination confirms this piece to be upper-end for the grade and a worthy addition to a high quality Full Head collection. NGC ID# 243E, PCGS# 5735

**1920-D Standing Liberty Quarter, MS64 Full Head
Well-Struck and Impressively Preserved**

3483 1920-D MS64 Full Head PCGS. CAC. The sparkling surfaces of this conditionally scarce near-Gem are untuned and nearly blemish-free. Bold strike definition brings up the design's subtler elements, such as the side of Liberty's head and most of the eagle's breast feathers. Just a couple of the shield rivets are less than complete. Population: 39 in 64 (2 in 64+) Full Head, 46 finer (3/14). NGC ID# 243F, PCGS# 5737

3484 1921 — Improperly Cleaned — NGC Details. Unc. Despite NGC's findings to the contrary, this key-date quarter does not have the typical look of a cleaned coin. Lustrous surfaces display a pleasing cartwheel effect with no hairlines visible under close examination. The coin is fully struck in every respect, except for the reed and bead from 11 o'clock to 3 o'clock, and the surfaces reveal only minimal abrasions.

**1921 Quarter, MS65
Light Patina and Rich Luster**

3485 1921 MS65 PCGS. The low-mintage 1921 Philadelphia quarter was struck to the extent of only 1.9 million pieces, and no branch mints struck quarters in 1921. No quarters would be struck again until 1923 in Philadelphia and San Francisco. The Philadelphia Mint die shop in 1921 and 1922 was busy making dies by the thousands for the outgoing Morgan and incoming Peace dollar series. This Gem 1921 quarter offers rich luster over frosty surfaces that are lightly patinated in golden-amber tones deepening at the rims, a great-looking coin. NGC ID# 243H, PCGS# 5740

**1921 Standing Quarter, MS65 Full Head
Impressive and Conditionally Rare**

3486 1921 MS65 Full Head PCGS. From the mintage of 1.9 million coins few have survived in Gem condition, and those with Full Head strike definition at the MS65 level are rare. This lovely coin displays a radiant sheen and brilliant ice-white surfaces that are splendidly preserved. A few tiny nicks are detected under low magnification, but these are far too minuscule to distract the unaided eye. A beautiful coin that will earn the admiration of any discerning numismatist. Population: 49 in 65 (1 in 65+) Full Head, 20 finer (3/14). NGC ID# 243H, PCGS# 5741

3487 1923-S AU58 PCGS. Wear is barely detectable on Liberty's chest and the crest of the front wing. A lustrous better date quarter with minimal marks and delicate peripheral tan toning. Encased in a green label holder. NGC ID# 243K, PCGS# 5744

3488 1923-S — Improperly Cleaned — NGC Details. Unc. Lightly cleaned in the past, this key-date quarter has since acquired a light golden patina over both sides, with considerable mint luster remaining. The strike is sharp, with essentially full shield lines, well-defined gown lines, and nearly Full Head detail. An attractive example that just missed a grade designation. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

**1923-S Quarter, MS65
Conditional and Absolute Rarity**

3489 1923-S MS65 PCGS. CAC. The low-mintage 1923-S is an absolute and conditional rarity within the Standing Liberty quarter series, struck to the extent of only 1.36 million pieces, most of which circulated far and wide. This Gem PCGS example is frosty and largely untuned, showing a good strike overall and about 80% of the detail required for a Full Head designation. A few flecks of graying toning appear near the rims. Population: 94 in 65 (2 in 65+), 33 finer (3/14). NGC ID# 243K, PCGS# 5744

**1923-S Quarter Dollar, MS66
Nearly Full Head**

- 3490 1923-S MS66 NGC.** Scarcely seen in Premium Gem condition and rare any finer, this beautifully preserved, key-date quarter barely misses Full Head status. The details are sharp in the shield, chainmail, and eagle feathers, with strong borders and well-defined date numerals. A few splashes of olive-gold toning nicely complement frosty mint luster on both sides. Census: 21 in 66, 4 finer (2/14). NGC ID# 243K, PCGS# 5744

**1923-S Standing Liberty Quarter, MS65 Full Head
Conditionally Scarce Semikey Example**

- 3491 1923-S MS65 Full Head PCGS.** The 1923-S has the second-lowest mintage for this type from San Francisco and the third-lowest mintage overall for the entire series, at 1.36 million pieces. A radiant satiny sheen illuminates the well-struck devices and clean fields of this conditionally scarce Gem example. Blushes of violet and cerulean-blue color complement the obverse surfaces, while even fainter bits of russet patina are detected on the reverse. Population: 53 in 65 (1 in 65+) Full Head, 43 finer (2/14). NGC ID# 243K, PCGS# 5745

**1924-S Quarter Dollar, MS66
Above-Average Strike**

- 3492 1924-S MS66 NGC.** Very scarce in Premium Gem condition, with or without Full Head detail. This lustrous, well-preserved example exhibits an above-average strike, with sharp vertical shield lines, strong borders, and 75% of the head detail present. Vibrant hues of ocean-blue, violet, and champagne surround light golden centers. A high-end example that will satisfy many collectors. Census: 17 in 66, 4 finer (2/14). NGC ID# 243N, PCGS# 5750

- 3493 1925 MS66 Full Head NGC.** Rarely encountered finer. This well-preserved, lustrous Premium Gem exhibits a bold Full Head and sharply detailed feathers on the eagle's breast and along the leading edge of the right wing. The reverse displays just a blush of golden toning, while the obverse showcases vivid rose, gold, and turquoise, primarily around the periphery. Census: 37 in 66 Full Head, 13 finer (2/14) NGC ID# 243P, PCGS# 5753

**1926-S Quarter, MS65 Full Head
Condition and Strike Rarity**

- 3494 1926-S MS65 Full Head NGC.** At both NGC and PCGS, only about one-tenth of the Mint State 1926-S Standing Liberty quarters also have the Full Head designation. The 1926-S and 1927-S issues are among the weakest-struck S-mints from the decade of the 1920s, and both may be considered conditional as well as strike rarities within the series. This Gem Full Head 1926-S graded by NGC meets the minimum requirements for such a designation, including a visible earhole and three sprigs in the olive branch. Elsewhere most of the shield rivets are present save for two or three, and the chain mail and most of the eagle feathers are well-detailed. The surfaces on this near-pristine piece are frosty silver-gold with scattered bits of iridescence, a beautiful coin. Census: 17 in 65 Full Head, 4 finer (3/14). NGC ID# 243T, PCGS# 5759

- 3495 1927-D MS65 Full Head PCGS.** Though not rare, the 1927-D is scarcer in Gem Full Head grades than generally believed. This piece exhibits above-average definition overall, with well-defined head detail. Bright, fully brilliant luster blankets both sides, delivering pleasing visual appeal. PCGS has graded only 14 numerically finer Full Head examples (3/14). NGC ID# 243V, PCGS# 5763

3496 1928-D MS64 Full Head NGC. The 1928-D quarter is readily available in most Mint State grades, but not with Full Head detail. This example displays strong definition on Liberty's head, the vertical shield lines, and the obverse stars, though some of the usual softness is seen in the shield rivets and the eagle's breast feathers. Just a blush of light golden toning warms softly frosted luster, with minimally abraded surfaces. Census: 19 in 64 Full Head, 34 finer (3/14).

Ex: Dallas Signature (Heritage, 11/2007), lot 655. NGC ID# 243Y, PCGS# 5769

3497 1928-S MS66 Full Head NGC. A high-end, nicely preserved Full Head Premium Gem. The strike is above-average with fully defined chainmail and vertical shield lines. Heavily frosted mint bloom blankets both sides in flashy brilliance. Rare any finer. NGC ID# 243Z, PCGS# 5771

3498 1928-S MS66 Full Head PCGS. Small S. This well struck high grade quarter is nearly brilliant, but hints of golden patina adorn both sides. The obverse appears pristine and the reverse exhibits only delicate grazes. NGC ID# 243Z, PCGS# 5771

3499 1929-S MS67 NGC. The frosty surfaces on this Superb Gem show a bit of golden-gray patina that deepens near the rims to charcoal and copper-pink hues. Few contact marks appear in this well-preserved piece, but the high points are somewhat softly struck. Census: 21 in 67, 0 finer (3/14).

From The Northern Lights Collection. NGC ID# 2444, PCGS# 5776

3500 1930 MS66 Full Head PCGS. CAC. The lustrous obverse has strong golden overtones, while on the reverse the same colors are a mere accent. Decidedly above-average detail for this final-year issue. *From The Northern Lights Collection. NGC ID# 2445, PCGS# 5779*

3501 1930 MS66 Full Head PCGS. CAC. This lightly frosted, Premium Gem Full Head quarter delivers outstanding visual appeal with blended lavender and light golden hues over each side. The head detail is sharp, and exceptional definition is also seen on the vertical shield lines and rivets, the stars, and the leading edge of the eagle's right wing. A truly remarkable coin that will please the most discerning of collectors. PCGS has awarded Full Head status to only 35 numerically finer examples (3/14). NGC ID# 2445, PCGS# 5779

3502 1930-S MS67+ PCGS. CAC. Rich amber and green-gold toning accent frosty mint luster on the obverse, while the reverse displays finely stippled russet toning over a faint golden hue. Well-struck, with nearly full head detail. The surface preservation is practically perfect and the visual appeal is exceptional. Population: 21 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 2446, PCGS# 5780

3503 1930-S MS66 Full Head PCGS. CAC. Despite relatively similar auction realizations, the 1930-S is less than half as available in Full Head as its Philadelphia-issued counterpart. This frosty, beautifully preserved example exhibits above-average definition on Liberty's head, the shield rivets, and the stars, while close examination fails to reveal any noticeable surface grazes. A light golden tint overall adds to the exceptional visual appeal of this Premium Gem. NGC ID# 2446, PCGS# 5781

WASHINGTON QUARTERS

1932 Washington Quarter, MS66+ Impressive First-Year Example

3504 1932 MS66+ PCGS. CAC. A high-end Premium Gem specimen from the first year of the Washington quarter series, this coin displays the palest blushes of jade and ice-blue, with the surfaces exhibiting a largely silver appearance. It is perhaps only the small luster graze in the right obverse field, away from the devices, that keeps this piece from a higher grade. Population: 208 in 66 (13 in 66+), 3 finer (3/14). NGC ID# 2447, PCGS# 5790

1932 Washington Quarter, MS66+ Only Three Finer at PCGS

3505 1932 MS66+ PCGS. CAC. Only three examples have surpassed the grade of this high-end Premium Gem at PCGS. Displaying lovely luster, this coin exhibits several shades of attractive toning. The obverse features areas of gold toning, with small splashes of light cherry and yellow at the date and upper left. Though largely gold as well, the reverse also includes faint pastel shades of yellow and rose, with areas of ice-silver. Population: 13 in 66+, 3 finer (2/14). NGC ID# 2447, PCGS# 5790

1932 Quarter, MS66+ Extraordinary Eye Appeal

3506 1932 MS66+ PCGS. CAC. A lovely first-year Washington quarter, this Premium Gem has extraordinary eye appeal with brilliant silver surfaces beneath champagne toning. The satin luster shines through splashes of deeper gold toning. PCGS has only certified three finer examples (3/14). NGC ID# 2447, PCGS# 5790

- 3507 1932-D MS64+ NGC.** Despite having a slightly higher mintage than the 1932-S, the 1932-D Washington quarter is actually scarcer in Choice Uncirculated grades. This lustrous, near-Gem example displays a blush of light golden toning overall, with a couple of splashes of coppery-gold along the obverse periphery. Well-preserved surfaces exhibit a sharp strike on this Plus-graded coin. NGC ID# 2448, PCGS# 5791

**1932-D Quarter, MS64+
Appealing Key-Date Example**

- 3508 1932-D MS64+ PCGS.** This key issue was not saved in high numbers, considering its first-year status, and examples are scarce at the current grade level and rare any finer. This is a well-struck specimen with vibrant satiny luster and clean, silver-gray surfaces showing faint golden undertones. There are only two to three tiny marks on each side that seemingly keep this high-end example from a Gem grade. NGC ID# 2448, PCGS# 5791

1932-D Quarter, Lustrous MS65

- 3509 1932-D MS65 NGC.** The vast majority of 1932-D quarters are in circulated grades, suggesting that most of the mintage was ignored by the collecting public and went into circulation. Freckles of grayish patina visit the upper obverse margin of this lustrous Gem. The design elements are generally well-struck and both sides are nicely preserved. Census: 24 in 65, 0 finer (3/14). NGC ID# 2448, PCGS# 5791

**1934 Light Motto Quarter, MS67
Pale Pastel Iridescence**

- 3510 1934 Light Motto MS67 PCGS. FS-401.** As is typical for this variety, the motto IN GOD WE TRUST is so light that the WE, in particular, is virtually indistinguishable. The 1 in the date is also weak. Pale pastel iridescence makes a stunning appearance on this unmarked, top-grade piece. A prize for variety and Registry Set collectors. Population: 20 in 67 (3 in 67+), 0 finer (3/14). NGC ID# 244A, PCGS# 5794

**1934 Washington Quarter, MS67
Light Motto Variety, FS-401**

- 3511 1934 Light Motto MS67 PCGS. CAC. FS-401.** A thin veil of lemon-yellow toning overlays lustrous silver surfaces of this smooth and attractive Superb Gem quarter. Sharp and unabraded, this is an excellent example of the Light Motto variety as identified by *Cherrypickers'* FS-401. The Motto is only lightly visible on the coin, which was corrected by a stronger Motto on later strikings. None are certified numerically finer by PCGS or NGC. Population: 20 in 67 (3 in 67+), 0 finer (3/14). NGC ID# 244A, PCGS# 5794

**1934 Heavy Motto Quarter, Outstanding MS67+
The Only Issue With the Three Motto Types**

- 3512 1934 Heavy Motto MS67+ PCGS. CAC. FS-403.** The 1934 Philadelphia-issue quarter dollar has the distinction of being the only coin minted with all three motto types: Light, Medium, and Heavy, and then was used exclusively from 1935 to 1964. The Heavy Motto appearing on the present high-end Superb Gem is most easily identified by the middle point of W in WE being higher than the outer strokes of the letter.

Violet and tan patina gravitates to the margins of the highly lustrous surfaces, and an impressive strike imparts sharp definition to the design elements. Immaculate preservation on both sides rounds out the coin's outstanding eye appeal that is appropriately recognized by CAC. Population: 10 in 67 (3 in 67+), 0 finer (3/14). PCGS# 85794

- 3513 1934-D Heavy Motto MS66 PCGS.** This sharply detailed Premium Gem represents the scarcer Heavy Motto type, with the middle peak of the W in IN GOD WE TRUST the same height as the two sides. The lustrous surfaces are attractively toned in shades of golden-brown and lavender. Population: 29 in 66 (1 in 66+), 4 finer (3/14). PCGS# 85796

1935-D Quarter, MS67
Among the Finest-Graded at PCGS

3514 1935-D MS67 PCGS. CAC. Despite production of 5.78 million quarters at the Denver Mint in 1935, high-grade examples are elusive from this scarce, semi-key issue. This Superb Gem is among the finest known, with PCGS having awarded the MS67 grade to only 19 examples, with none finer (3/14). Among the attributes this piece possesses are rich satin luster and silver-white surfaces overall, with some splashes of toning, primarily on the obverse. The hues include red-orange, golden-brown, and gray. A die break appears at the base of the portrait. NGC ID# 244E, PCGS# 5798

3515 1935-S MS67 PCGS. Faint ice-blue and light golden hues blend over the heavily frosted surfaces of this Superb Gem, with rich amber accents around the peripheries. No surface abrasions are seen with the unaided eye, giving this piece excellent visual appeal. None have graded higher at PCGS or NGC (3/14). NGC ID# 244F, PCGS# 5799

3516 1935-S MS67 PCGS. This essentially perfect Superb Gem delivers exceptional visual appeal with rich teal and violet-red peripheral toning around frost-white centers. None have graded finer at PCGS or NGC (3/14). NGC ID# 244F, PCGS# 5799

3517 1936-D MS66 PCGS. CAC. Scarcely encountered at the Premium Gem level and rare any finer. This well-struck representative exhibits frosty, nearly undisturbed surfaces and sharply struck motifs. A faint light golden tint accents each side, while a few russet speckles are seen around the rims and behind Washington's head. PCGS has seen only 13 numerically finer submissions (3/14). NGC ID# 244H, PCGS# 5801

3518 1936-S MS67 NGC. Warm amber-gold peripheral toning fades to light golden centers on this frosty Superb Gem. Close examination fails to reveal even minuscule surface imperfections, giving this well-struck piece exceptional eye appeal. The Registry collector will appreciate this offering, as none have graded numerically finer at NGC (3/14). NGC ID# 244J, PCGS# 5802

3519 1937-D MS67 PCGS. CAC. Rich frosty luster and virtually untuned surfaces provide this beautifully preserved Superb Gem with exceptional visual appeal. An important offering for the Registry collector, as none have graded numerically finer at PCGS (3/14). NGC ID# 244L, PCGS# 5804

1937-S Quarter, Sharp MS67

3520 1937-S MS67 PCGS. The 1937-S is one of the early semikey dates among Washington quarters, MS67 being the top grade. This frosty, nearly unmarked piece shows great luster, silver-white with gold rim accents on the obverse and a pinkish cast on the reverse. A nicely struck and attractive example. Population: 29 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 244M, PCGS# 5805

1937-S Washington Quarter, MS67
Early Low-Mintage Issue

3521 1937-S MS67 PCGS. An impressive example of this early Washington quarter issue, which boasts the third-lowest business strike mintage of the series (1.6 million). This is a beautiful, untuned Superb Gem with creamy luster. Sharply struck with smooth, near-flawless surfaces. Population: 29 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 244M, PCGS# 5805

3522 1939-S MS67 PCGS. Tiny splashes of russet, golden-tan, orange, yellow, and green toning appear on both sides of this Superb Gem example, primarily at the outer edges. Richly lustrous and appealing. Population: 53 in 67 Cameo, 0 finer (3/14). NGC ID# 244T, PCGS# 5810

3523 1939-S MS67 PCGS. CAC. Highly lustrous with a faint golden hue, this Superb Gem boasts a sharp strike and excellent surface preservation. Tied for the finest certified at PCGS (3/14), and worthy of a high quality Registry Set. NGC ID# 244T, PCGS# 5810

3524 1939-S MS67 PCGS. CAC. Small splashes of light golden and forest-green accent nearly brilliant luster on the obverse, while faint pastel-gray tints much of the reverse. Sharply struck with virtually undisturbed mint frost on both sides. None have graded numerically finer at PCGS (3/14). NGC ID# 244T, PCGS# 5810

1940 Quarter, Lustrous MS67+

3525 1940 MS67+ PCGS. CAC. The 1940 quarter dollar mintage (approaching 36 million pieces) continues its increasing production owing to the strengthening of America's economy resulting from it supplying the Allied nations. PCGS and NGC have graded more than 3,000 specimens, mostly in mint condition. The radiantly lustrous smooth surfaces of this high-end Superb Gem are essentially untuned and the design elements are well-impressed. NGC ID# 244U, PCGS# 5811

3526 1940-D MS67 PCGS. CAC. This sharply struck Superb Gem is tied numerically with the example in the highest-rated Registry Set. Pale lavender and champagne hues blend over the frosty, virtually undisturbed surfaces, delivering exceptional visual appeal. None have graded numerically finer at PCGS (3/14). NGC ID# 244V, PCGS# 5812

**1940-D Quarter, MS67+
Top-Notch Registry Set Contender**

- 3527 1940-D MS67+ PCGS. CAC.** The 1940-D Washington quarter issue is not commonly thought of among the series semikeys (usually the 1930s mintmarked issues pop to mind), but PCGS has seen fewer than three dozen in the MS67 grade. This MS67+ is one of only two such at that service, and none are finer (3/14). Thick satin luster occupies silver centers on each side, blending into emerald, gold, and amethyst at the rims. A top-notch Registry Set prize. NGC ID# 244V, PCGS# 5812

- 3528 1941 MS67+ PCGS. CAC.** A well-struck coin with beautiful creamy luster and attractive partial rings of golden-brown, red, and sky-blue peripheral patina. The fields and centers are untuned and impressively preserved. NGC ID# 244X, PCGS# 5814

**1941-D Quarter, Superlative MS67+
Satin Luster and Superb Eye Appeal**

- 3529 1941-D MS67+ PCGS. CAC.** The top grade of this piece is confirmed by the instantly perceived superlative eye appeal, the rich satin luster complementing virtually mark-free surfaces that host the palest pink and jade hues imaginable in the center obverse, pale gold and ice-blue on the reverse. An arc of sunset-orange and vivid gold provides a finishing touch. Population: 34 in 67 (8 in 67+), 1 finer (3/14). NGC ID# 244Y, PCGS# 5815

- 3530 1941-S MS67 PCGS. CAC.** A lovely, glistening Superb Gem with a brilliant reverse and attractive turquoise and gold-brown peripheral toning on the obverse. Fully struck with virtually flawless surfaces. Population: 51 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 244Z, PCGS# 5816

- 3531 1944-S MS67+ PCGS. CAC.** Large S. Both borders boast beautiful orange, lime-gold, and plum-red toning, while the centers exhibit frosty ice-blue patina. Sharply struck and lustrous, with virtually perfect surface preservation. PCGS has certified only three numerically finer examples (3/14).
Ex: Long Beach Signature (Heritage, 2/2011), lot 3655. NGC ID# 245A, PCGS# 5826

- 3532 1945-S MS67+ PCGS. CAC.** Knob S. An outstanding example, this high-end Superb Gem displays small areas of toning at the outer edges of the obverse and throughout the reverse. Among the colors present are fiery orange, cherry, lime-green, green-brown, and violet. Satin luster adds to the eye appeal. Population: 48 in 67 (5 in 67+), 0 finer (3/14). NGC ID# 245D, PCGS# 5829

**1946-S Quarter, MS68
Pristine Preservation and Vivid Patina**

- 3533 1946-S MS68 PCGS. CAC.** Rich cartwheel luster shows on each side, but the hallmark is the vivid toning that entirely covers the obverse and a portion of the reverse. The variegated color borrows from the purple-pink, green-gold, and blue-green palettes in splendid array. Pristine preservation puts this piece into a small class. Population: 5 in 68, 0 finer (3/14). NGC ID# 245G, PCGS# 5832

**1947 Quarter, MS67+
Registry Set Prize With Rich, Frosty Luster**

- 3534 1947 MS67+ PCGS.** A richly lustrous, frosty, and virtually unmarked example of this P-mint issue with scattered charcoal, gold, copper, and pinkish hues. Close to the next numeric grade level, and a Registry Set prize in the current grade. Population: 67 in 67 (4 in 67+), 0 finer (3/14). NGC ID# 245H, PCGS# 5833

- 3535 1948 MS67+ PCGS. CAC.** Dark forest-green, magenta, and gold toning covers the obverse; the reverse shows a more delicate arrangement of pastel green, rose, and gold-tan coloration in the fields and near the borders, leaving the eagle essentially untuned. A lovely Superb Gem example of this issue. Population: 86 in 67 (5 in 67+), 1 finer (3/14). NGC ID# 245L, PCGS# 5836

- 3536 1949-D MS67 PCGS. CAC.** Gold-orange shadings overall with hints of russet at parts of the rims and small breaks to silver-gray. An impressively preserved and attractive coin. Population: 48 in 67 (6 in 67+) Cameo, 2 finer (3/14). NGC ID# 245R, PCGS# 5840

1949-D Quarter, Satiny MS67+

- 3537** 1949-D MS67+ PCGS. CAC. Rich satin luster in the central areas of each side complements crescents of peripheral gold, copper, and emerald patina on this top-notch 1949-D quarter. The 1949 mintmarked silver coins are crucial members of the difficult 1949 Mint Set PCGS Registry Set, for those up to a long and difficult collecting challenge. Population: 48 in 67 (6 in 67+), 2 finer (3/14). NGC ID# 245R, PCGS# 5840

1949-D Quarter, Richly Toned MS67+

- 3538** 1949-D MS67+ PCGS. CAC. This 1949-D Washington quarter is surpassed by only two coins in MS68 at PCGS, and tied with a small handful in MS67+. Cartwheel luster enlivens each side, but the rich patina in hues of jade, gold, and cherry is the hallmark of this pristine price. Population: 48 in 67 (6 in 67+), 2 finer (3/14). NGC ID# 245R, PCGS# 5840

1952-D Quarter, Gold-Toned MS67

- 3539** 1952-D MS67 PCGS. CAC. Light gold toning appears over parts of the obverse with a broadly silver reverse. Aside from a tiny depression on Washington's nose, there are no flaws warranting individual mention, and the eye appeal is strong. Population: 11 in 67, 0 finer (3/14). NGC ID# 2462, PCGS# 5850

**1954-D Quarter, Gorgeous MS67
Conditionally Scarce Example**

- 3540** 1954-D MS67 PCGS. A gorgeous, intensely lustrous Superb Gem example from the Denver mint with silver-gray centers framed by sky-blue, gold, and red coloration in the fields and around the borders. Well-struck and impressively preserved, with near-pristine surfaces and tremendous eye appeal. Population: 11 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 2468, PCGS# 5856

**1955-D Quarter, MS66+
Near-Pristine Surfaces**

- 3541** 1955-D MS66+ PCGS. CAC. Untoned silver areas intermingle with a light wash of ochre-gold on the obverse of this lustrous Premium Gem 1955-D quarter. The reverse has a more consistent pinkish cast, and both sides are free of all but a couple of picayune contact marks removed from the focal points. Population: 5 in 66+, 1 finer (3/14). NGC ID# 246A, PCGS# 5859

**1956-D Washington Quarter, MS67
Richly Toned, None Finer at PCGS**

- 3542** 1956-D MS67 PCGS. CAC. Attractive toning adds to the visual appeal of this Superb Gem specimen. The colors include intermingled shades of golden-orange, red, jade green, lime-green, and violet on the obverse. The reverse is largely covered in an olive-green and golden brown patina. Scattered marks on the portrait pose little distraction. Population: 20 in 67, 0 finer (2/14). NGC ID# 246C, PCGS# 5861

1960 Washington Quarter, MS67
Among the Finest-Graded at PCGS

- 3543** 1960 MS67 PCGS. Lovely russet-orange and ice-blue patina adorns the obverse of this visually pleasing Superb Gem quarter. Vibrant luster shines through the obverse toning and radiates across the mostly brilliant reverse. A well-struck, impressively preserved coin that is tied for finest-graded at PCGS. Population: 12 in 67, 0 finer (3/14). NGC ID# 246K, PCGS# 5868

1960-D Quarter, MS67
None Certified Finer at PCGS

- 3544** 1960-D MS67 PCGS. This conditionally rare Superb Gem is well-struck and lustrous, with vivid orange-gold color over much of the obverse, while the reverse displays frosty ice-blue patina with a few amber-gold accents. The surfaces are virtually perfect, with no readily detectable imperfections. Tied numerically with the example in the highest-rated Registry Set. PCGS has awarded Superb Gem status to just eight examples, with none finer (3/14). Ex: *Central States Signature* (Heritage, 5/2004), lot 7289. NGC ID# 246L, PCGS# 5869

1961 Washington Quarter, MS67
Tied for the Finest Certified at PCGS

- 3545** 1961 MS67 PCGS. This Premium Gem is less than half of a point finer than the example in the highest-ranking Registry Set, with nearly flawless surfaces. Pale iridescent toning complements frosty luster, delivering exceptional visual appeal when tilted under a light. PCGS has certified a scant five examples in this lofty grade, with none finer (3/14). NGC ID# 246M, PCGS# 5870

1962-D Quarter, MS66+
Superior Visual Appeal

- 3546** 1962-D MS66+ PCGS. CAC. A coin with tremendous eye appeal, even at a quick glance, this high-end Premium Gem displays rich ice-white surfaces and copious luster. This is a gorgeous, beautifully preserved specimen. Despite a mintage exceeding 127 million coins, relatively few examples have achieved Gem grades or higher because of the reed marks, contact marks, and general roughness the coins experienced. Population: 9 in 66+, 4 finer (2/14). NGC ID# 246R, PCGS# 5873

1962-D Quarter, MS67
Vivid, Multihued Toning

- 3547** 1962-D MS67 NGC. CAC. A condition rarity of the series, this Superb Gem Washington quarter is common in lesser grades but distinctly rare in MS67. This example is radically toned on the obverse, with an intermingling of vivid colors. Brilliant vermilion-red and lemon-yellow hues display neon-green overtones. The reverse is more subtly iridescent, with lemon-yellow translucence combined with orange and red hues at the lower margin. A bold strike enhances the devices, and the surfaces are unabraded except for a three small digs by the eagle's tail. Census: 24 in 67 (2 in 67 ★), 0 finer (3/14). NGC ID# 246R, PCGS# 5873

1963 Washington Quarter, MS67
Brilliant, Well-Preserved Example

- 3548** 1963 MS67 PCGS. Brilliant and fully struck, with die striations on the obverse that render an attractive flashiness to that side, while the reverse displays a more satiny appearance. Both sides are well-preserved and free of distractions. This relatively recent issue has not seen a high number of certified Superb Gems to date. Population: 12 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 246S, PCGS# 5874

- 3549 1964-D MS67+ PCGS. CAC.** Deep iridescent shades of green, red, gold and violet decorate the intensely lustrous surfaces of this Superb Gem quarter. Sharply struck and impeccably preserved, a great example from the final year of 90% silver composition. Population: 43 in 67 (3 in 67+), 0 finer (3/14). NGC ID# 246V, PCGS# 5877

**1969-D Clad Quarter, MS68
Impeccable Surface Quality**

- 3550 1969-D MS68 PCGS.** Many collectors end their sets and collecting pursuits at the “end of silver” era in 1964 (1970 for Kennedy halves) — and many miss the boat on condition rarities such as the early clad D-mint Washington quarter keys, for example, which include all of the 1968-D through 1972-D issues. This MS68 1969-D is one of only six such at PCGS with none finer, showing simply impeccable surface quality over silver-gold surfaces (3/14). NGC ID# 2474, PCGS# 5884

- 3551 1973 MS67 PCGS.** An important opportunity for the Registry collector, as this is one of just 12 MS67 examples certified at PCGS, with none finer (3/14), and is tied numerically with the example in the highest-rate Registry Set. Untoned and beautifully preserved, with the copper ring around the edge retaining its original Red color. NGC ID# 247B, PCGS# 5891

PROOF WASHINGTON QUARTERS

- 3552 1952 Superbird PR67 Cameo PCGS. FS-901.** A tiny raised “S” centered on the eagle’s breast is the source of the nickname for this popular *Cherry-pickers’* variety. An essentially stone-white Superb Gem with glassy fields and icy motifs. PCGS# 144444

**1952 “Superbird” Quarter, FS-901, PR66 Deep Cameo
Second Finest-Known Example**

- 3553 1952 Superbird PR66 Deep Cameo PCGS. FS-901.** The so-called “Superbird” quarter has a tiny raised “S” on the center of the eagle’s breast. Fivaz-Stanton state the cause of the mark is unknown, although it seems to be a tiny lintmark on the hub, leaving a depression in the coinage die, leading to the raised mark on the finished coin. Fully brilliant with outstanding contrast. Population: 1 in 66, 1 finer (3/14).
Ex: Long Beach Signature (Heritage, 9/2008), lot 921. PCGS# 144445

- 3554 1954 PR68 Deep Cameo PCGS.** Heavily frosted devices and deeply mirrored fields deliver exceptional black-on-white contrast on this sharply struck, virtually perfect Superb Gem proof. None have graded numerically finer at PCGS (3/14). NGC ID# 27HY, PCGS# 95986

- 3555 1963 PR69 Cameo NGC.** The virtually perfect mirrored surfaces of this spectacular Washington quarter contrast boldly with the razor-sharp frosty design elements. Eye appeal is incredible. NGC has graded no coins in higher numeric grades (3/14). NGC ID# 27J6, PCGS# 85995

PROOF STATEHOOD QUARTERS

- 3556 1999-S Delaware Silver PR70 Ultra Cameo NGC.** The glassy fields are jet-black, and the frosted devices are silver-gray and flawlessly struck. A beautiful Superb Gem proof from the first year of the Statehood quarter series NGC ID# 27M8, PCGS# 96043
- 3557 1999-S Delaware Silver PR70 Ultra Cameo NGC.** A gorgeous Superb Gem quarter with meticulously detailed design motifs and immensely deep, watery fields. A wonderfully preserved, pristine specimen. NGC ID# 27M8, PCGS# 96043

WALKING LIBERTY HALF DOLLARS

- 3558 1916 MS65 PCGS.** A beautiful first-year example with pearl-white surfaces and shimmering, satiny mint frost. A small reeding mark on the eagle’s trailing leg is the only minor surface flaw on either side of this key date Gem from the first year of the series. NGC ID# 24PL, PCGS# 6566

- 3559 1916-S MS63 PCGS.** The scarcest of the three first-year issues. This San Francisco representative displays frosted, light golden luster and remarkably few surface faults, given the grade. The strike is nearly full, with a touch of softness noted in Liberty’s head and upper leg. Housed in a green label holder. NGC ID# 24PN, PCGS# 6568

**1916-S Half Dollar, MS64
Rich Original Toning**

- 3560 1916-S MS64 PCGS.** The first-year-of-issue 1916-S Walking Liberty half dollar is an important issue, having a mintage of only 508,000 coins. This survivor exhibits flashes of silver luster shining through its original golden-brown and iridescent toning, providing excellent eye appeal. NGC ID# 24PN, PCGS# 6568

- 3561 1917-D Obverse MS64 PCGS.** A blush of light golden toning warms both sides of this near-Gem representative, while the surfaces are largely free of noticeable abrasions. The strike is pleasing, though some softness is noted on the gown stripes and the central eagle feathers. Elusive any finer. NGC ID# 24PR, PCGS# 6570

- 3562 1917-D Obverse MS64 PCGS.** The scarcer of the two 1917-D half dollar varieties. Deep charcoal-navy toning surrounds both peripheries, but is more prominent on the reverse. Silver-gray patina coats both sides, with frosty underlying mint luster. Well-struck with no significant abrasions. NGC ID# 24PR, PCGS# 6570

1917-D Reverse Half Dollar, Lustrous MS64

- 3563 1917-D Reverse MS64 PCGS.** Although the 1917-D Reverse half dollar has as a substantially larger mintage than its Obverse D counterpart, fewer examples were saved at the time of issue. Near-Gems are very scarce and the date is rare any finer. Lustrous, untuned surfaces exhibit well-struck design elements, including the branch hand and the eagle's breast feathers. Liberty's head is a tad soft as typically seen. Minute obverse marks are within the confines of the designated grade. NGC ID# 24PS, PCGS# 6571

**1917-D Walking Liberty Half, MS65
Underrated Reverse Mintmark Issue**

- 3564 1917-D Reverse MS65 PCGS.** The 1917-D Walking Liberty half dollar with the mintmark on the reverse is an underrated issue, often overshadowed by its obverse mintmark counterpart. While the Obverse coin claims a much smaller mintage, fewer Reverse specimens were saved by contemporary collectors. As a result, the 1917-D Reverse is one of the most challenging issues of the early series in high grade.

The present coin offers vivid sky-blue and greenish-gray toning over well-detailed design elements and vibrant mint luster. The well-preserved surfaces show no mentionable distractions. Population: 43 in 65, 5 finer (3/14). NGC ID# 24PS, PCGS# 6571

**1917-S Obverse Walker, MS63
Boldly Struck and Well-Preserved**

- 3565 1917-S Obverse MS63 PCGS. CAC.** The impressive strike definition displayed by this Select Mint State example is perhaps its most noteworthy feature. Liberty's head and branch hand are boldly detailed. The satiny surfaces are nicely preserved and a single small abrasion is well concealed along the upper edge of the eagle's trailing leg. Encapsulated in a green label holder. NGC ID# 24PT, PCGS# 6572

**1917-S Reverse Half Dollar, MS64
Attractive Patina**

- 3566 1917-S Reverse MS64 PCGS. CAC.** The 1917-S Reverse half dollar is not particularly difficult to find in MS64, but it quickly becomes elusive in finer grades. Softly frosted luster and light pastel toning deliver excellent visual appeal on this near-Gem example. Slight softness of strike is seen on Liberty's head and thigh, though good thumb separation is present. A few grade-consistent grazes are noted over the high points, though none are readily noticeable. NGC ID# 24PU, PCGS# 6573

- 3567 1918-D AU58 NGC.** Close examination is needed to find any trace of high-point friction on this lustrous Walking Liberty half dollar. Light golden toning warms both sides, while the surfaces are largely free of any noticeable abrasions. The central devices are softly struck, as can be expected for this Denver issue.
Ex: Central States Signature (Heritage, 4/2006), lot 2918; FUN Signature (Heritage, 7/2007), lot 1014. NGC ID# 24PW, PCGS# 6575

**1918-D Half Dollar, MS64
Elusive in Finer Grades**

- 3568 1918-D MS64 PCGS.** Appealing luster provides this near-Gem with immediate eye appeal. Tiny areas of toning are present, primarily near the rim, in shades of red-brown. The centers reveal an incompleteness of strike. PCGS has awarded higher numeric grades to only 29 examples (3/14). NGC ID# 24PW, PCGS# 6575

- 3569 1918-S MS63 PCGS. CAC.** The 1918-S half dollar appears frequently in circulated grades but becomes elusive in the Mint State levels. This solidly graded Select example shows golden and pinkish-lilac patina on the obverse with just a hint of color on the reverse. Scattered small marks determine the grade, but the strike is pleasingly bold through the central obverse. NGC ID# 24PX, PCGS# 6576

**1918-S Half Dollar, MS64
Seldom Offered in Mint State**

- 3570 1918-S MS64 PCGS.** Despite a mintage of more than 10 million coins, the 1918-S half dollar is remarkably elusive in pleasing Mint State condition, and is rarely encountered at the Gem grade level. Dappled caramel-gold toning drapes lustrous and well preserved surfaces on this near-Gem example. Some typical softness of strike is noted at the centers, though the overall appearance is attractive. Housed in a green label holder. PCGS has seen 35 numerically finer submissions (3/14). NGC ID# 24PX, PCGS# 6576

- 3571 1919 — Cleaned — ANACS. AU55 Details.** Remnants of luster glimmer from the major devices, although this ivory-gray example is slightly subdued by mild cleaning. As was also the case in 1921, the Philadelphia Mint issue has the lowest mintage of the year, but was better saved in high grades.
Ex: Dallas Signature (Heritage, 7/2006), lot 2490. NGC ID# 24PY, PCGS# 6577

**1919-D Walking Liberty Half, AU55
Attractive, Choice AU Example**

- 3572 1919-D AU55 PCGS.** Mint State examples of this important semikey issue are rare and expensive, making Choice AU coins like this one a more reasonable and affordable alternative for the average collector. This untuned piece displays typical striking softness, as almost always seen on the obverse center and on the eagle's trailing leg feathers. High-point wear is not excessive for the grade, and the only marks are faint hairlines in the obverse fields. NGC ID# 24PZ, PCGS# 6578

**1919-D Half Dollar, Unc Details
Satinny and Appealing**

- 3573 1919-D — Cleaned — ANACS. MS60 Details.** It requires a good deal of perusal with a loupe to find the faint hairlines that indicate a cleaning, but a good deal of eye appeal remains. This satiny, unmarked example shows an apricot-gray obverse and a delicately gold-toned reverse. The high points are typically struck. NGC ID# 24PZ, PCGS# 6578

**1919-D Walking Liberty Half Dollar, MS62
Semikey Issue**

- 3574 1919-D MS62 NGC.** Aside from two tiny spots in the right obverse field, the surfaces of this MS62 example display silver-white surfaces and lovely luster. As one of the key-dates in the series, the 1919-D Walking Liberty half dollar is avidly sought by collectors, particularly in Mint State grades. NGC ID# 24PZ, PCGS# 6578

**1919-D Walking Liberty Half, MS63
Important Denver Issue**

- 3575 1919-D MS63 ANACS.** An important semikey issue, the 1919-D is the second-rarest Denver mint product of the series behind the 1921-D. This is a lovely example from the fourth year of the Walking Liberty half dollars. A vibrant satiny sheen encompasses the pleasingly clean surfaces, that only reveal a few tiny nicks under magnification. Softly struck with lavender-gray color on the obverse and coppery-gold toning across the reverse. NGC ID# 24PZ, PCGS# 6578

- 3576 1920 — Cleaned — ANACS. MS60 Details.** Lightly cleaned, this unworn representative retains substantial mint luster in the protected regions. The strike is sharp, with good thumb separation seen on Liberty's left hand.
Ex: Dallas Signature (Heritage, 3/2007), lot 8085. NGC ID# 24R3, PCGS# 6580

**1920 Half Dollar, MS65+
An Excellent Type Coin**

3577 1920 MS65+ PCGS. CAC. The 1920 half dollar, with a mintage exceeding 6 million pieces, is one of the easier early-date Walkers to locate in Mint State. This and the fact that it is one of the better produced issues, makes it a good candidate for a high-grade type set. Well-struck design elements and lustrous, well-preserved surfaces are complemented by soft reddish-tan and powder-blue color on the obverse, all of which add up to pleasing eye appeal. Population: 85 in 65 (3 in 65+), 18 finer (3/14). NGC ID# 24R3, PCGS# 6580

3578 1921 VF35 PCGS. A Choice VF example of this low-mintage key, with sharp skirt lines and a little wear on Liberty's right arm. The pleasing gray surfaces are lightly abraded for the grade. NGC ID# 24R6, PCGS# 6583

3579 1921 — Improperly Cleaned — NCS. AU Details. The 1921 Walking Liberty half dollar boasts the second lowest mintage of the series (only 246,000 pieces), and most survivors are in lower-circulated grades. This piece exhibits no readily detectable signs of wear and is sharply struck with full thumb separation. The lightly cleaned surfaces display pale silver-white patina and retain subtle remnants of mint luster. NGC ID# 24R6, PCGS# 6583

**1921 Half Dollar, Unc Details
Unworn Example of This Key Date**

3580 1921 — Cleaned — ANACS. MS60 Details. The surfaces are a bit too bright, indicative of an old cleaning, but they have mellowed down a bit, and much appeal remains. There is strictly no trace of wear, although a few light abrasions appear under a loupe. Some interesting raised die lines appear on the reverse, under the eagle's beak.
Ex: Edward Sacks Collection / Long Beach Signature (Heritage, 2/2007), lot 3976. NGC ID# 24R6, PCGS# 6583

**1921 Walking Liberty Half, MS63
Impressive Key Date Example**

3581 1921 MS63 PCGS. With a remarkably low mintage of 246,000 coins, second-smallest in the series, the 1921 Walker is a scarce key date seldom found in AU or Mint State grades. This example displays a vibrant satiny sheen and a variegated color scheme across each side that includes mottled reddish-brown, sky-blue, gold, and mist-green toning. The sharp strike impression leaves nearly full definition of Liberty's branch hand and thumb. Encased in an early-generation PCGS holder with a light green label. NGC ID# 24R6, PCGS# 6583

**1921-D Walking Liberty Half, AU58
Scarce Low-Mintage Issue**

3582 1921-D AU58 PCGS. A low mintage of 208,000 pieces ensures the perennial scarcity of this Denver issue at all grade levels. This near-Mint example, with satiny silver-gray surfaces that are nearly mark-free, is only kept from a Mint State grade by subtle hints of high-point friction. NGC ID# 24R7, PCGS# 6584

3583 1923-S MS62 PCGS. The 1923-S was the only half dollar business issue struck between 1922 and 1926, likely due to large-scale silver dollar coinage. Outstanding from a technical viewpoint, the present softly struck but unblemished example displays dappled tan-gold and ice-blue toning. Housed in a green label holder. NGC ID# 24R9, PCGS# 6586

3584 1923-S MS62 PCGS. Golden-brown and gunmetal-blue patina visits this lustrous better date half dollar. The centers are lightly brought up, usual for the issue. The right obverse field exhibits moderate contact. Certified in a green label holder. NGC ID# 24R9, PCGS# 6586

**1923-S Half Dollar, MS65
Rarely Seen Finer**

- 3585 1923-S MS65 PCGS.** The 1923-S Walking Liberty half dollar is a challenging issue for Registry Set collectors, as there are simply too few examples surviving above the Gem level to go around. PCGS has certified 43 examples in MS65, three in MS65+, and only nine finer(3/14). Encapsulated in a green-label holder, this Gem is silver-white with generous glints of gold and an excellent strike that shows some thumb separation and part of an ear on Liberty. The reverse is more brilliant and shows little detail on the eagle's right (facing) leg, likely due to die wear more so than strike. A beautiful example of the issue overall. NGC ID# 24R9, PCGS# 6586

**1927-S Walking Liberty Half, MS65+
Only Six Finer**

- 3587 1927-S MS65+ PCGS. CAC.** After a production hiatus of four years, Walking Liberty half dollars were again minted in 1927. However, they were only struck at the San Francisco Mint that year and in 1928. A beautifully preserved, high-end Gem example, this coin displays areas of toning, primarily at the upper obverse and lower reverse. The colors include shades of teal and golden brown. The centers include hues of gold and lavender. The strike is pleasing, with only minor incompleteness at the centers and the few scattered marks present are minuscule. Population: 3 in 65+, 6 finer (2/14). NGC ID# 24RA, PCGS# 6587

1927-S Walking Liberty Half, Frosty MS65

- 3586 1927-S MS65 NGC.** The Gem level is about as good as it gets for the 1927-S Walking Liberty half, save for a half-dozen at PCGS that have managed the MS66 grade. Rich, frosty luster on both sides accompanies scattered gold, pink, and bluish-gray accents on this coin, well-struck overall but showing some softness on the central high points. The frosty luster is a product of the extensive raised die polishing marks visible on each side. NGC ID# 24RA, PCGS# 6587

**1928-S Walking Liberty Half, MS65
Impressive High-Grade Example**

- 3588 1928-S MS65 PCGS.** The satiny surfaces of this beautiful Gem example are essentially brilliant. Liberty's head, feet, and outstretched hand are well-defined, as are the eagle's head and talons on the reverse. An impressively preserved half dollar that ranks high among all certified representatives of this San Francisco issue. Population: 55 in 65 (1 in 65+), 6 finer (3/14). NGC ID# 24RB, PCGS# 6588

**1928-S Fifty Cent, MS65
Silver-White and Frosty**

- 3589 1928-S MS65 PCGS.** The silver-white, frosty surfaces of this lovely Gem offer far more eye appeal than most survivors of this issue, even in this grade, as many have distracting toning that can hide signs of contact. This piece shows a decent strike on the eagle's breast and Liberty's head. A couple of die cracks run through the eagle's wings. Certified in a green-label holder. Population: 55 in 65 (1 in 65+), 6 finer (3/14). NGC ID# 24RB, PCGS# 6588

1929-D Half Dollar, Conditionally Scarce MS66

- 3590 1929-D MS66 PCGS. CAC.** The 1929-D half dollar is available through MS65. Premium Gems become scarce and the date is virtually unobtainable any finer. The essentially untoned surfaces display strong luster and well-struck design features. Both sides have been well cared for. These attributes result in great eye appeal, appropriately recognized by CAC. Population: 59 in 66, 1 finer (3/14). NGC ID# 24RC, PCGS# 6589

1929-S Half Dollar, Frosty MS65

- 3591 1929-S MS65 PCGS.** The prevailing frosty-white luster complements surfaces that show slight accents of tan, deepening on the reverse to cinnamon near the rims. Both the bold strike and the rich mint luster separate this Gem from typical examples of this Depression-era issue. PCGS has seen 43 numerically finer (3/14). NGC ID# 24RD, PCGS# 6590

**1933-S Half Dollar, Frosty MS65
Boldly Struck**

- 3592 1933-S MS65 PCGS.** The 1933-S Walking Liberty half dollar is a popular issue, a one-off as the first San Francisco series entry since the 1929-S, and the last before the "long short set" 1934-47-PDS coins. This frosty silver-white PCGS example boasts an exceedingly bold strike and top-notch eye appeal. NGC ID# 24RE, PCGS# 6591

- 3593 1934-D MS65 PCGS.** Full mint bloom blankets both sides of this frosty Gem representative. The strike is sharp overall, with Liberty's head displaying the only area of notable softness. A well-preserved example of this Denver issue. NGC ID# 24RG, PCGS# 6593

- 3594 1935-D MS65 PCGS.** Faint walnut-tan toning visits this lustrous and minimally abraded Gem. The design's high-points are incompletely brought up, as is customary for this lower mintage Great Depression issue.
Ex: Houston Money Show Signature (Heritage, 12/2009), lot 825. NGC ID# 24RK, PCGS# 6596

- 3595 1935-S MS65 PCGS.** Frosty mint luster blankets both sides of this Gem Walking Liberty half dollar. The devices are well-detailed, though some typical weakness is present on the hand and upper leg of Liberty. Very attractive with fully brilliant, well-preserved surfaces. NGC ID# 24RL, PCGS# 6597

- 3596 1936 MS67 PCGS.** An extraordinary example of this middle year date in the series. Boldly struck with a beautiful satiny sheen across each side and silver-white surfaces that show lovely faint accents of ice-green near the borders and pale gold near the center of the obverse.
From The Northern Lights Collection. NGC ID# 24RM, PCGS# 6598

**1936-D Half Dollar, Satiny MS67+
Sole Finest Certified at PCGS**

- 3597 1936-D MS67+ PCGS.** This completely untuned silver-white 1936-D half dollar is an ultimate coin for collectors who prefer their coins without mentionable patina, satiny, boldly struck, and free of even the most minuscule impairments. Note the sharp detail on Liberty's head, branch hand, and the trailing lower leg of the eagle. A great-looking coin for the issue and the type. *Note that this piece is currently the sole finest certified at PCGS.* Close to MS68 quality. Population: 27 in 67 (1 in 67+), 0 finer (12/13). NGC ID# 24RN, PCGS# 6599

**1937-D Half Dollar, MS67
Frosty Silver-White Example**

- 3598 1937-D MS67 PCGS.** The frosty surfaces are untuned silver-white and show a powerful strike, including a partial split thumb and some detail present on the eagle's trailing leg feathers. Generous luster is an added plus, although there are some tiny dark flecks near the obverse rim that are not overt. Population: 46 in 67, 0 finer (3/14). NGC ID# 24RS, PCGS# 6602

**1937-S Half Dollar, MS67
Condition Rarity**

- 3599 1937-S MS67 PCGS.** Vibrant luster and gorgeous silver-white surfaces combine to provide this Superb Gem with an exceptional appearance. The level of design detail present is pleasing, even at the centers. Very few marks appear and they are all minor. Neither PCGS nor NGC has awarded a higher numeric grade to a single example (3/14). NGC ID# 24RT, PCGS# 6603

**1937-S Half Dollar, Lustrous MS67
Better-Defined Than Usual**

- 3600 1937-S MS67 PCGS. CAC.** The 1937-S half dollar is typically weakly struck in the centers, especially Liberty's branch hand. The present Superb Gem, while not fully struck, is better-defined in this area than ordinarily seen. The lustrous surfaces are lightly toned and show a few darker flecks of color on the eagle's right (facing) wing. Nicely preserved throughout. Population: 32 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 24RT, PCGS# 6603

- 3601 1938-D MS65 Proof-Like PCGS.** This amazing Gem 1938-D Walking Liberty half dollar is housed in a PCGS Regency holder, and the label is marked Proof-Like, one of the few instances that PCGS gave that designation to a coin other than a Morgan dollar. This lovely half dollar has brilliant silver surfaces with mirrored fields under delicate gold toning. NGC ID# 24RV, PCGS# 6605

- 3602 1938-D MS66 PCGS. CAC.** A Premium Gem specimen, this piece displays strong luster and small, scattered areas of toning on both sides. The hues include gold, peach, and golden-brown. Minor marks are present, including one on Liberty's neck. PCGS has awarded higher numeric grades to only 38 examples (3/14). NGC ID# 24RV, PCGS# 6605

- 3603 1939 MS67 PCGS.** Generally available in any grade, the 1939 half dollar is an ideal pre-World War II type representative. This Superb Gem example exhibits vibrant mint frost beneath a light golden hue. The strike is full and the surfaces are virtually free of even minor grazes. PCGS has graded 24 numerically finer examples (3/14). NGC ID# 24RW, PCGS# 6606

- 3604 1939-S MS67 NGC.** Well struck with modest definition on Liberty's branch-holding thumb. Minimally toned with frosty luster most notable for its absence at a brilliant slot under the first A in AMERICA. Neither NGC nor PCGS has certified an MS68 example (3/14).
Ex: Beverly Hills Signature (Heritage, 11/2011), lot 3713. NGC ID# 24RY, PCGS# 6608

- 3605 1939-S MS67 PCGS. CAC.** A sharply struck, CAC-approved Superb Gem. Beautifully preserved with a sharp strike, a faint tint of light golden toning colors the otherwise brilliant, heavily frosted surfaces. None have graded numerically finer at PCGS or NGC (3/14). NGC ID# 24RY, PCGS# 6608

- 3606 1939-S MS67 PCGS. CAC.** This sharply detailed Superb Gem shows some separation between Liberty's thumb and finger on the wreath hand. The brilliant surfaces radiate vibrant mint luster and no mentionable distractions are evident. PCGS has graded no numerically finer examples (3/14). NGC ID# 24RY, PCGS# 6608

- 3607 1939-S MS67 PCGS. CAC.** A flashy Superb Gem with beautifully clean silver-white surfaces that are ever-so-close to pristine. This is the highest numeric grade level yet to be achieved by any example of this San Francisco issue. NGC ID# 24RY, PCGS# 6608

**1939-S Half Dollar, Vibrant MS67+
One of the Finest Known**

- 3608 1939-S MS67+ PCGS. CAC.** The 1939-S half dollar is readily obtainable through Premium Gem. The population declines precipitously at the Superb Gem level, and neither PCGS nor NGC has seen any finer (3/14). The former service has graded seven coins MS67+ and the latter service has certified a single MS67 Star. Vibrant luster radiates from both sides of this high-end Superb Gem, each of which is impeccably preserved and color-free. The design features are well-impressed. NGC ID# 24RY, PCGS# 6608

- 3609 1940 MS67 PCGS. CAC.** A marvelous Superb Gem Walker with a bright satiny glow over the brilliant surfaces. A single tiny nick is detected on the obverse field to the right of Liberty's branch hand; otherwise, both sides seem pristine. NGC ID# 24RZ, PCGS# 6609

- 3610 1940-S MS66 PCGS.** Although central weakness is noted on both sides, the strike is actually finer than usual for this poorly produced issue. Both sides have frosty silver luster with wispy champagne toning.
Ex: Beverly Hills Signature (Heritage, 11/2011), lot 3715. NGC ID# 24S2, PCGS# 6610

3611 1940-S MS66+ PCGS. CAC. The frosty, untuned silver-white surfaces display thick, rich mint luster on this MS66+ 1940-S with the CAC approval. Only a few tiny torso ticks on Liberty preclude an MS67 grade. A top-notch example. Population: 28 in 66+, 11 finer (3/14). NGC ID# 24S2, PCGS# 6610

3612 1940-S MS66+ PCGS. CAC. A gorgeous piece, this high-end Premium Gem displays strong luster and splendid, untuned silver-white surfaces. Though not fully struck, the level of design definition is pleasing, adding to the appeal. Population: 28 in 66+, 11 finer (3/14). NGC ID# 24S2, PCGS# 6610

3613 1941-S MS66 PCGS. A beautiful snow-white Premium Gem with vibrant, shimmering mint frost and well-preserved surfaces. A gorgeous example of this San Francisco issue. NGC ID# 24S5, PCGS# 6613

**1941-S Half Dollar, MS66+
Late-Date Key Issue**

3614 1941-S MS66+ PCGS. CAC. Aside from a few tiny splashes of golden-brown toning on the upper left portion of the reverse, this coin is virtually free of toning and exhibits a silver-white appearance. Attractive satin luster adds to the eye appeal. The strike is pleasing overall. Population: 41 in 66+, 8 finer (3/14). NGC ID# 24S5, PCGS# 6613

**1941-S Half Dollar, MS66+
Above Average Strike**

3615 1941-S MS66+ PCGS. CAC. Only slight central weakness is noted at Liberty's hand, with all other details boldly defined on this lovely Premium Gem. The surfaces are frosty and fully brilliant with no evidence of toning on either side. PCGS has only certified eight finer examples of this issue (3/14). NGC ID# 24S5, PCGS# 6613

3616 1942-S MS66 PCGS. CAC. Small S. Essentially stone-white, though a glimpse of caramel-gold visits the fields. Lustrous and splendidly smooth with above average definition for the issue on Liberty's head and skirt lines.
Ex: Schaumburg Central States Signature (Heritage, 4/2012), lot 4775, which realized \$1,063.75. NGC ID# 24S8, PCGS# 6617

3617 1942-S MS66+ PCGS. CAC. Small S, scarcer than the usual Trumpet tail S. A pristine San Francisco wartime Walker with pastel caramel-gold and ice-blue patina. The strike is full on Liberty's head but the branch hand and skirt lines show some softness. NGC ID# 24S8, PCGS# 6617

3618 1942-S MS66+ PCGS. CAC. Trumpet tail S. An outstanding example of this popular S-Mint issue, with only six finer PCGS certified examples graded since 1986 (3/14). This piece has dappled pale gold toning on its brilliant and fully lustrous silver surfaces. NGC ID# 24S8, PCGS# 6617

3619 1943-S MS66+ PCGS. CAC. FS-101. Trumpet tail S. Iridescent powder-blue and olive-green patina graces this lustrous and virtually immaculate wartime Walker. The strike is decidedly above average for the San Francisco issue. Hub doubling is noted on the rays and IN GOD WE TRUST, a feature present on many 1943-dated halves. NGC ID# 24SB, PCGS# 6620

**1943-S Half Dollar, MS67
Sharply Detailed and Lightly Toned**

3620 1943-S MS67 PCGS. CAC. Trumpet tail S. Hub doubling is noted on the rays and IN GOD WE TRUST, a feature present on many 1943-dated halves. This lustrous Superb Gem has an above-average strike with sharp definition on the skirt lines. The nearly pristine surfaces exhibit light to medium chestnut-gold and lilac toning. Population: 36 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 24SB, PCGS# 6620

**1945 Walking Liberty Half, MS67+
Phenomenal Type Coin**

3621 1945 MS67+ PCGS. Bright mint luster shines through the subtle yellow patina seen on each side. The 1945 is one of the more frequently seen issues from the 1940s, but coins of this quality and with the strength of strike seen here, are seldom encountered. As expected of an MS67+, the surfaces are remarkable clean and problem-free. None are certified numerically higher by either PCGS or NGC (3/14). NGC ID# 24SF, PCGS# 6624

3622 1945 MS67 NGC. CAC. Sharply defined with full luster, this untuned Superb Gem is tied for the finest that NGC or PCGS have certified (3/14). Pristine surfaces host only minuscule marks. This coin has tremendous eye appeal. NGC ID# 24SF, PCGS# 6624

1945-S Half Dollar, MS67
Conditionally Elusive

3623 1945-S MS67 PCGS. Knob S. Luster emerges beneath the patina on this Superb Gem example. The obverse includes splashes of toning, primarily at the outer edges. Among the colors present are dark purple, forest-green, and rich green-blue. The reverse exhibits champagne color overall, with splashes of gold, peach, and golden-orange also appearing. The design elements display nice detail. Population: 21 in 67, 0 finer (3/14). NGC ID# 24SH, PCGS# 6626

3624 1947 MS67 NGC. Golden-gray surfaces are nearly mark-free on this Superb Gem, an example that is well-struck even through the centers and tied for finest certified at either service. Census: 66 in 67 (3 in 67 ★, 1 in 67+★), 0 finer (3/14).
From The Northern Lights Collection. NGC ID# 24SM, PCGS# 6630

1947-D Walking Liberty Half Dollar, MS67
Vivid Obverse Toning

3625 1947-D MS67 PCGS. From a smallish mintage of 3.9 million pieces, the 1947-D Walking Liberty half dollar is one of the more challenging issues of the 1940s. The present coin is among the finest survivors, with well-detailed design elements and vibrant mint luster on both sides. The well-preserved surfaces show no mentionable flaws and the obverse is blanketed in vivid shades of golden-brown and pinkish toning. Population: 21 in 67, 0 finer (3/14). NGC ID# 24SN, PCGS# 6631

PROOF WALKING LIBERTY
HALF DOLLARS

3626 1936 PR64 NGC. A well-preserved, attractive near-Gem example of this first-year proof Walking Liberty half dollar. Fully struck with wire rims on both sides. The flashy fields are mainly brilliant with just a blush of golden around the peripheries. NGC ID# 27V4, PCGS# 6636

1936 Walking Liberty Half, PR65
Sharp First-Year Specimen

3627 1936 PR65 PCGS. This is a lovely Gem specimen from the first year of Walking Liberty proof coinage. The design motifs are sharply reproduced, and both sides of the piece are free of mentionable distractions. Slight golden peripheral toning improves the coin's overall visual quality. NGC ID# 27V4, PCGS# 6636

1936 Walking Liberty Half, PR66
Only 3,901 Pieces Struck

3628 1936 PR66 PCGS. The strike is strong overall on this lovely Premium Gem specimen. Small, scattered areas of toning are present on the obverse and include hues of red, apple-green, royal blue, fuchsia, and rich yellow. The reverse exhibits attractive yellow toning. PCGS has awarded higher numeric grades to only 34 examples (3/14). NGC ID# 27V4, PCGS# 6636

1936 Walking Liberty Half Dollar
Deeply Mirrored, Premium Gem Proof

3629 1936 PR66 PCGS. CAC. This is a highly reflective but low-contrast example of the 1936 Walking Liberty half, a typical appearance for this popular issue, with completely brilliant surfaces on each side. The Premium Gem grade is attested to by the sharp strike and lack of noticeable contact. Higher-grade pieces are quite elusive; PCGS has seen only 34 finer (2/14). NGC ID# 27V4, PCGS# 6636

- 3630 1937 PR66 NGC. CAC.** Deeply mirrored with reflective contours on the devices as well as the flats of the fields. Beautifully detailed with just a few small dots of milky toning on otherwise brilliant surfaces. An outstanding Premium Gem representative. NGC ID# 27V5, PCGS# 6637

1937 Half Dollar, Lightly Toned PR68

- 3631 1937 PR68 NGC.** This is an extremely nice, lightly gold-toned example of this second-year proof issue. Even though this piece falls well short of the “like hen’s teeth” Cameo designation, there is slightly more field-device contrast apparent than on many examples. The proof strike is razor-sharp, as desired. NGC ID# 27V5, PCGS# 6637

- 3632 1938 PR67 NGC.** A fully brilliant, deeply mirrored Superb Gem proof. The strike is nearly full, with just a touch of softness noted in Liberty’s lower hand. The surfaces are almost perfect, with very pleasing visual appeal. NGC ID# 27V6, PCGS# 6638

**1938 Half Dollar, PR68
Radiant and Untoned**

- 3633 1938 PR68 PCGS.** The radiant, highly reflective surfaces show no more than a subliminal touch of gold amid pristine preservation and the expected close-to-full proof strike, save for a bit of detail on the thumb and the trailing leg feathers on the reverse. Among the few finest at PCGS. Population: 12 in 68, 0 finer (3/14). NGC ID# 27V6, PCGS# 6638

- 3634 1942 PR68 NGC.** Due to the popularity of Weinman’s Walking Liberty design, proof 1942 half dollars were produced in ample numbers (more than 21,000 pieces), making the date highly popular among type specialists today. This spectacular Superb Gem exhibits softly frosted luster over the devices, with moderate mirroring in the fields. A faint tint of light golden toning accents the virtually perfect surfaces. NGC has seen just four numerically finer examples (3/14). NGC ID# 27V9, PCGS# 6642

FRANKLIN HALF DOLLARS

**1949-D Half Dollar, MS66 Full Bell Lines
Lustrous and Lightly Toned**

- 3635 1949-D MS66 Full Bell Lines PCGS.** A delightful Premium Gem, with sharply detailed design elements throughout and Full Bell Lines definition. The well-preserved surfaces are free of mentionable defects and both sides are enhanced by light shades of champagne-gold and lavender patina. Vibrant mint luster shines through the toning. Population: 40 in 66 (3 in 66+) Full Bell Lines, 0 finer (3/14). NGC ID# 24SU, PCGS# 86654

- 3636 1949-S MS66 Full Bell Lines PCGS.** Both sides are comprehensively patinated in blended peach-red and sea-green shades. Lustrous and well struck with immense eye appeal.
Ex: Baltimore Auction (Bowers & Merena, 11/2007), lot 2410. NGC ID# 24SV, PCGS# 86655

**1949-S Franklin Half Dollar, MS67 Full Bell Lines
One of the Finest-Known Examples**

- 3637 1949-S MS67 Full Bell Lines PCGS. CAC.** This issue was produced in the second year of the Franklin half dollar series, and had a relatively low mintage of 3.7 million pieces. Survivors are scarce at higher grade levels, and at the Superb Gem level with Full Bell Lines this example is one of just five coins seen at PCGS with none finer (3/14). This piece is highly lustrous and the clean surfaces display a wide range of variegated colors, including hues of rose, orange-gold, and mint-green, among others. NGC ID# 24SV, PCGS# 86655

**1950 Franklin Half, MS67 Full Bell Lines
None Finer at PCGS**

- 3638 1950 MS67 Full Bell Lines PCGS.** Mint sets were not issued in 1950, making the date especially elusive in high grade. The few high-quality coins on the market today also lack the characteristic toning seen on Mint set specimens of other years. This spectacular Superb Gem is among the finest survivors, with sharply detailed design elements that show fine detail in Franklin's hair and full definition on the bell lines. The well-preserved brilliant surfaces radiate vibrant mint luster on both sides, while the peripheries show a few hints of golden-brown and amber toning. Population: 8 in 67 Full Bell Lines, 0 finer (3/14). NGC ID# 24SW, PCGS# 86656

**1952 Franklin Half, MS67 Full Bell Lines
Among the Finest Certified Examples**

- 3639 1952 MS67 Full Bell Lines PCGS. CAC.** The 1952 Franklin half dollar is very rare in Superb Gem condition, with the Full Bell Lines designation. This well-detailed Superb Gem displays the characteristic sea-green and lavender-gray toning associated with Mint set specimens of the era. Vibrant mint luster adds to the outstanding eye appeal. Population: 13 in 67 Full Bell Lines, 0 finer (3/14). NGC ID# 24T3, PCGS# 86661

**1953-S Half Dollar, MS67
Prime Registry Set Candidate**

- 3640 1953-S MS67 PCGS.** The 1953-S Franklin half dollar is a low-mintage issue that is seldom encountered with full bell lines. This delightful Superb Gem offers well-detailed design elements and vibrant mint luster on both sides. The well-preserved surfaces display hints of magenta, golden-brown, and amber patina. Population: 10 in 67, 0 finer (3/14). NGC ID# 24T8, PCGS# 6666

**1953-S Franklin Half Dollar, MS67
Among the Finest Certified**

- 3641 1953-S MS67 PCGS. CAC.** A Superb Gem specimen from a very low-mintage issue consisting of only 4,148,000 coins, this coin displays rich satin luster. Areas of toning are present, with the obverse periphery exhibiting the most attractive toning, in shades of deep yellow, gold, fuchsia, jade green, and violet. The reverse is virtually free of toning aside from a small strip along the upper left edge. This issue is known for a soft strike, as is the case with this piece. PCGS and NGC combined have awarded the MS67 grade to only 18 examples, with none finer at either service (2/14). NGC ID# 24T8, PCGS# 6666

**1957-D Franklin Half, MS67 Full Bell Lines
Beautifully Toned, One of the Finest-Graded**

- 3642 1957-D MS67 Full Bell Lines PCGS.** This Denver issue had a high mintage of nearly 20 million coins, and examples are readily available, with Full Bell Lines definition, in grades up to and including Choice Mint State. Gems are considerably scarcer, and Premium Gems are very scarce for such a high-mintage modern issue.

This conditionally rare Superb Gem is fully struck and highly lustrous, with a pleasing banquet of intermingled colors over each side that includes hues of lime-green, red, yellow-gold, burnt-orange, and peach. Population: 11 in 67 Full Bell Lines, 0 finer (3/14). NGC ID# 24TF, PCGS# 86673

**1958-D Franklin, MS67 Full Bell Lines
Vibrant Multicolor Toning**

- 3643 1958-D MS67 Full Bell Lines PCGS. CAC.** This virtually perfect Superb Gem stands among the finest-certified examples at PCGS and NGC. Concentric crescents of iridescent green, amber-gold, and cherry-red blanket the entire obverse and surround ice-blue central patina on the reverse, with frosty mint luster shining through. A sharply struck, beautifully preserved representative. An important opportunity for the Registry collector. Population: 50 in 67 Full Bell Lines, 0 finer (3/14). NGC ID# 24TH, PCGS# 86675

- 3644 1958-D MS67 Full Bell Lines PCGS. CAC.** The lustrous surfaces of this Superb Gem display medium-intensity multicolored toning around the borders. Both sides have been well cared for and exhibit sharply struck devices. Population: 47 in 67 Full Bell Lines, 0 finer (1/14). NGC ID# 24TH, PCGS# 86675

- 3645 1960 MS66 Full Bell Lines PCGS.** This impressive Premium Gem Franklin half dollar exhibits sharply detailed design elements with Full Bell Lines and vibrant mint luster on both sides. The well-preserved surfaces are attractively toned in shades of greenish-gold and lavender. Population: 49 in 66 (2 in 66+) Full Bell Lines, 0 finer (3/14). NGC ID# 24TL, PCGS# 86678

- 3646 1962 MS65 Full Bell Lines PCGS.** The 1962 Franklin half issue in Gem Full Bell Lines grade as here shows only four numerically finer at PCGS (3/14). The frosty silver surfaces boast radiant luster and the expected bold strike, including and surpassing the bell lines. NGC ID# 24TR, PCGS# 86682

- 3647 1962 MS65 Full Bell Lines PCGS.** Rarely encountered finer, this frosty Gem boasts fully defined details on both sides, with only a few light grazes seen across the surfaces. Nearly brilliant, with a faint suggestion of a light golden hue overall. PCGS has awarded the Full Bell Lines designation to only five numerically finer examples (3/14). NGC ID# 24TR, PCGS# 86682

- 3648 1962 MS65 Full Bell Lines PCGS.** A Gem specimen with the desirable Full Bell Lines designation, this coin displays light patina on both sides. The colors include faint hues of teal, purple, and golden-brown. A number of die polish lines appear below the bust. Scattered minuscule marks are present, including a couple on the bell. Only 5 examples have surpassed the numeric grade of this piece, with Full Bell Lines, at PCGS (3/14). NGC ID# 24TR, PCGS# 86682

**1962 Franklin Half Dollar, MS65+
Elusive Issue With Full Bell Lines**

- 3649 1962 MS65+ Full Bell Lines PCGS.** For some unknown reason, most examples of this date issued in government Mint sets exhibit soft strikes, making specimens with Full Bell Lines, like the present coin, very elusive. This high-end Gem displays vibrant mint luster and well-preserved surfaces with a hint of pale gold toning. PCGS has graded five numerically finer examples (3/14). NGC ID# 24TR, PCGS# 86682

PROOF FRANKLIN HALF DOLLARS

- 3650 1950 PR67 PCGS.** This fully brilliant Superb Gem proof displays moderately frosted central devices set against lightly mirrored fields. The sharply impressed design elements only add to the visual appeal of the virtually undisturbed surfaces. Population: 40 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 27VA, PCGS# 6691

- 3651 1950 PR63 Cameo PCGS.** Glimpses of lemon toning preclude full brilliance. Fully struck and flashy with spot-free surfaces and noticeable white-on-black contrast.
Ex: Denver Signature (Heritage, 8/2006), lot 3594, which realized \$517.50. NGC ID# 27VA, PCGS# 86691

- 3652 1950 PR65 Cameo NGC.** This first-year proof Franklin displays virtually brilliant mint luster, although a few minuscule russet freckles are seen around the eye. Lightly frosted central devices complement deeply mirrored fields, delivering exceptional visual appeal when tilted under a light.
Ex: Dallas Signature (Heritage, 10/2007), lot 916. NGC ID# 27VA, PCGS# 86691

1950 Franklin Half, PR66 Cameo
Remarkable First-Year Specimen

3653 1950 PR66 Cameo NGC. CAC. Franklin half dollars were struck in proof format for the first time in 1950 and the date is the key to the proof Franklin series. This spectacular Premium Gem displays bold cameo contrast between the sharply detailed frosted design elements and the deeply mirrored fields. The completely brilliant surfaces are free of mentionable distractions. Census: 50 in 66 Cameo (1 in 66+ Cameo, 2 in 66 ★ Cameo), 12 finer (3/14). NGC ID# 27VA, PCGS# 86691

3654 1951 PR66+ Cameo NGC. CAC. Brilliant, nearly unblemished surfaces and razor-sharp detail are among the pleasing attributes this Premium Gem possesses. Heavily frosted devices set against moderately mirrored fields provide substantial cameo contrast. NGC ID# 27VB, PCGS# 86692

1951 Franklin Half, PR66 Ultra Cameo
Excellent, Appealing Example

3655 1951 PR66 Ultra Cameo NGC. Excellent all-around appearance for a second-year proof Franklin half dollar. While the mirrors are a trifle watery, the silver frost draping the central devices remains intense, granting the coin its Ultra Cameo contrast. A modestly toned and appealing Premium Gem. Census: 12 in 66 Ultra Cameo, 5 finer (3/14). NGC ID# 27VB, PCGS# 96692

3656 1952 PR67 Cameo PCGS. CAC. Softly frosted devices accent deep mirroring in the fields of this fully struck Superb Gem. Virtually perfect surface preservation only adds to the excellent eye appeal of this CAC-approved Cameo. Population: 34 in 67 (1 in 67+) Cameo, 1 finer (3/14). NGC ID# 27VC, PCGS# 86693

1952 Franklin Half, PR68 Cameo
Starkly Contrasted

3657 1952 PR68 Cameo NGC. CAC. This early proof Franklin half shows pristine preservation over untuned surfaces, silver-white on the high points and deeply reflective in the fields, creating the desirable silver-on-black effect as the coin is turned in the light. Cameo examples of this issue are few: NGC shows five submissions in this grade, PCGS but a single (3/14). NGC ID# 27VC, PCGS# 86693

1952 Franklin Half Dollar, PR66+ Deep Cameo
Only One Finer at PCGS

3658 1952 PR66+ Deep Cameo PCGS. CAC. An exceptional coin without a doubt, this beautifully preserved high-end Premium Gem earned the Deep Cameo designation. Indeed, the contrast between the frosted devices and the mirrored fields is pronounced. A tiny, faint toning spot appears in Franklin's hair below the B in LIBERTY. The 1952 proof mintage consisted of 81,980 coins. Examples from this key proof date are rarely encountered in Deep Cameo, with PCGS having assigned the MS66 grade to only 7 examples, this being the sole MS66 example receiving the Plus designation, with only one finer, a MS67 (2/14). NGC ID# 27VC, PCGS# 96693

3659 1955 PR69 ★ NGC. A brilliant and beautiful high grade specimen that boasts consequential obverse white-on-black contrast. The Liberty Bell is frost-free but its strike is exemplary. Pristine aside from a single fleck above the F in HALF. Census: 224 in 69 (17 in 69 ★), none finer (3/14). NGC ID# 27VF, PCGS# 6696

3660 1956 Type Two PR69 Ultra Cameo NGC. An essentially perfect Ultra Cameo proof. Incredibly deep mirroring in the fields provides strong contrast against the frosted relief elements. Fully brilliant and unblemished. None have graded finer at NGC or PCGS (3/14). NGC ID# 24TW, PCGS# 96697

3661 1957 PR69 ★ Cameo NGC. A pristine, snow-white specimen with impressive distinction between the frosty devices and the darkly reflective fields. 1957 proofs are plentiful if any specimen will do, but few are obtainable in the highest grades with evident contrast. Census: 27 in 69 Cameo (8 in 69 ★ Cameo), none finer (3/14). NGC ID# 24TX, PCGS# 86698

3662 1957 PR68 Deep Cameo PCGS. CAC. Seemingly infinite depth in the mirrored fields provides this virtually perfect Cameo with stark black-on-white contrast and exceptional visual appeal. The surfaces are mainly brilliant, though a faint ring of golden toning is seen around the rims. Population: 69 in 68 Deep Cameo, 2 finer (3/14). NGC ID# 24TX, PCGS# 96698

1961 Doubled Die Reverse Franklin Half, PR65, FS-801
Scarce and Attractive

3663 1961 Doubled Die Reverse PR65 ANACS. FS-801. The most dramatic and the most popular of three doubled-die varieties from this date. Deep layers of navy-blue, red-brown, and golden toning inhabit the fields and peripheries of this fully struck Gem proof. The watery fields show deep reflectivity and the surfaces are free of distractions. Some will consider this attractive piece to be undergraded. PCGS# 6689

1961 Half Dollar, PR66+
Doubled Die Reverse, FS-801

3664 1961 Doubled Die Reverse PR66+ PCGS. CAC. FS-801. Remarkably strong die doubling affects the reverse legends, particularly E PLURIBUS UNUM and UNITED. Brilliant with minimal spotting. The portrait exhibits noticeable cameo contrast but the Liberty Bell lacks frost. Population: 25 in 66 (2 in 66+), 11 finer (3/14). PCGS# 6689

End of Session One

SESSION TWO

COLONIALS

1652 Oak Tree Sixpence, XF Details
IN on Obverse, Noe-21
Double Struck

- 3665** 1652 Oak Tree Sixpence — Repaired — NGC Details. XF. Noe-21, W-400, Salmon 2a-B, R.5. 33.0 gn. IN on obverse. Noe-20 through Noe-22 pieces were struck from the same die pair, and are distinguished by the shape of the first S in MASATHVETS. A Boston Mint engraver modified the top of the S twice, creating a retrograde S on Noe-21 and a well-formed S on Noe-22. The present Noe-21 example has a well-struck tree, date, and denomination. The obverse is misaligned toward 1 o'clock with letters in that vicinity. Oval-shaped from mint clips, as made. Moderately wavy, as coined from a rocker press. Designated as repaired by NGC, but smoothing is minimal and limited to the field clockwise from the W in NEW. Double struck, although evidence of the first strike is primarily limited to a row of beads on the reverse near 11 o'clock and a nearby faint D (from ENGLAND). Listed on page 39 of the 2014 *Guide Book*.
From The Old New England Collection.

1652 Pine Tree Shilling, AU50
Noe-16, Partial Mint Luster

- 3666** 1652 Pine Tree Shilling, Small Planchet AU50 NGC. Noe-16, W-835, Salmon 2-B, R.2. 75.9 gn. Luster fills the legends of this lightly circulated Pine Tree shilling. Sea-green and caramel-gold grace the evenly struck and well-centered surfaces. A loupe reveals only a few hair-thin marks in the center of the reverse. Noe-16 is identified by a repunched first A in MASATHVSETS and large I's over Small I's within the denomination. This is the middle die state, showing breaks on the lower left branches and near the obverse ornament at 6 o'clock. Listed on page 39 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 24

St. Patrick Farthing, VF30
W-11500, Nothing Below King

- 3667** (1670-75) St. Patrick Farthing VF30 NGC. Breen-208, W-11500. Nothing below the king. A medium brown example with pleasing sharpness for this usually well-worn Early American import. This is a late die state with buckling evident in the right obverse field and a funnel-shaped die break above the head of St. Patrick. No marks are present aside from a few hair-thin lines beneath the crown. Moderately granular, as usual for the issue. The brass splasher is large and somewhat low, overlapping the top of the harp and the lower half of the crown. Listed on page 41 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 42

- 3668** (1670-75) St. Patrick Farthing VG8 NGC. Breen-211, W-11500. Rich chocolate-brown is the prevailing color on this nicely centered piece. A brass plug is present in a section of the crown in order to provide it with a golden appearance. Though a well-circulated example, portions of the vanquished serpents are visible, attributing the variety. The obverse exhibits a few scattered hair-thin marks, but they pose no significant distraction. Listed on page 41 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 42

American Plantations Token, MS61
N. 2-B, Struck in 1688

- 3669** (1688) American Plantations 1/24 Part Real MS61 NGC. Newman 2-B, W-1135, R.6. American Plantations tokens were restruck circa 1828, but specialists agree that Newman 2-B is one of the original varieties struck in 1688. This is an impressive example with luster emerging from areas untouched by oxidation. Fields and high points are toned gunmetal-gray and exhibit the pebbled surfaces invariably encountered on the tin alloy issue. Listed on page 41 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 49

**American Plantations Token, VF35
Very Rare Sideways 4 Variety
Newman 8-C**

- 3670** (1688) American Plantations 1/24 Part Real, Sidewise 4 VF35 NGC. N. 8-C, W-1175, R.7. The American Plantations tokens were struck in a white metal alloy consisting mostly of tin. The rare Sideways 4 blundered legend varieties (N. 3-C and N. 8-C) were among those regarded as originals struck in 1688. The more available circa-1828 restrikes are from different dies, N. 4-E and N. 5-D. Both the originals and restrikes are invariably granular due to oxidation of the tin surfaces. The present example is deep silver-gray with moderately deeper toning on the French shield. The high points display moderate wear but all the legends are distinct. Each side has a couple of small mint-made edge flaws. Listed on page 41 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 50

- 3671** 1722 Rosa Americana Penny, UTILE AU55 NGC. M. 2.42-D.10, W-1268, R.5. Pleasing golden-brown color, with occasional splashes of steel-gray, adds to the appeal. This Choice AU specimen exhibits strong design definition and only light wear on the high points. Both sides are well-centered, with only a slight shift toward 12 o'clock. A few hair-thin marks are present on the obverse. Listed on page 42 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 113

**1723 Rosa Americana Twopence
MS63 Brown, Martin 3.5-E.5**

- 3672** 1723 Rosa Americana Twopence MS63 Brown NGC. M. 3.5-E.5, W-1334, R.4. A boldly struck and moderately prooflike example. The predominantly deep brown surfaces lack any remotely mentionable contact marks. A loupe reveals occasional hints of granularity. Glimpses of the initial olive-gold color reside in some design crevices. Listed on page 43 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 128

**1723 Rosa Americana Twopence
MS63 Brown, Martin 3.6-E.8**

- 3673** 1723 Rosa Americana Twopence MS63 Brown NGC. M. 3.6-E.8, W-1334, R.5. A fully struck and satiny ebony-brown twopence with unblemished surfaces and impressive eye appeal. Close examination reveals light repunching on the 1 and 2 in the date. The obverse legend states George I was the king of France, an example of wishful thinking. Listed on page 43 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 128

- 3674** 1723 Rosa Americana Twopence VF25 NGC. M. 3.20-E.11, W-1334, R.6. Although the Rosa Americana coinage contract was granted by King George I, the three different denominations weighed approximately half as much as the equivalent denominations of British coins. This Choice VF twopence exhibits hues of brown, golden-brown, and red. The piece displays nice centering and exhibits no marks worthy of mention aside from a couple of hair-thin marks in the right obverse field. Listed on page 43 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 128

**1722 Hibernia Halfpenny, MS61 Brown
Harp Left, Martin 4.1-Bc.1**

- 3675** 1722 Hibernia Halfpenny, Type One, Harp Left MS61 Brown NGC. M. 4.1-Bc.1, W-12730, R.6. A rare die marriage distinguished by a crack through much of HIBERNIA and a die break above the harp ribbon. The glossy medium brown surfaces are well-defined. The upper reverse displays minor flan striations, as made. A small cluster of unobtrusive marks is noted near the harpist's elbow. Listed on page 44 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 167

**1723 Hibernia Farthing, MS63 Brown
DEI GRATIA, Martin 2.1-Bc.1**

- 3676** 1723 Hibernia Farthing, DEI GRATIA MS63 Brown NGC. M. 2.1-Bc.1, W-12350, R.5. Most of this well-struck farthing is medium brown. However, glimpses of mint red reside in selected design recesses, especially on the upper right obverse legend. Neither side exhibits any visible marks, although a minor lamination (as made) is noted near the 1 in the date. This late die state has a heavy crack through RNIA, a lesser crack from the base of the harp to the rim, and a crack along the bases of GRAT. Listed on page 44 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 176

- 3677** 1723 Hibernia Farthing, DEI GRATIA XF45 NGC. M. 3.3-Bc.3, W-12350. A Choice XF example displaying 11 harp strings, this coin is well-centered overall. Chocolate brown color and strongly defined design elements further add to the attractiveness of this piece. Close examination of the surfaces reveals hints of tan and red. The high points of the design exhibit light wear. Importantly, there are no marks worthy of mention on this lovely specimen. Listed on page 44 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 176

- 3678** 1723 Hibernia Farthing, DEI GRATIA AU58 NGC. M. 3.18-Ba.1, W-12255, R.5. A near-Mint example with wonderful eye appeal, this piece exhibits strong centering on both sides. The strike is uniformly sharp, with the high points of the designs showing only light wear. The slightly glossy surfaces are rich brown, with no mentionable marks present. Listed on page 44 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 176

- 3679** 1723/2 Hibernia Halfpenny XF40 NGC. M. 4.60-Da.1, W-12850, R.2. The overdate is clearly visible without magnification on this piece that circulated for a time before being set aside. Chocolate-brown surfaces and strong centering on both sides contribute to the eye appeal. In addition, the coin exhibits a pleasing degree of design definition. Light die clashing is present at DEI. A couple of hair-thin marks on the obverse pose little distraction, if any, on this pleasing example. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 183

**1723 Hibernia Halfpenny, MS64 Red
Unabraded Surfaces, Martin 4.68-Gb.9**

- 3680** 1723 Hibernia Halfpenny MS64 Red NGC. M. 4.68-Gb.9, W-13120, R.4. Orange-red luster illuminates this coruscating and crisply struck Choice Red halfpenny. Steel-gray is mostly confined to the high points and the 3 in the date. Perusal beneath a lens fails to locate any signs of contact. A middle die state with crumbling obvious on the upper reverse rim and several letters in the obverse legend. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 182

**1723 Hibernia Halfpenny, MS64 Red
Exceptional Preservation
Martin 4.74-Gb.11**

- 3681** 1723 Hibernia Halfpenny MS64 Red NGC. M. 4.74-Gb.11, W-13120, R.4. A splendid orange-gold, near-Gem that boasts a mark-free appearance and bold strike. The lustrous surfaces display minimal dove-gray toning, chiefly on the highest portions of the design. A fairly late die state with scattered evidence of light die rust and a noticeable die break on the obverse rim at 6 o'clock. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 182

**1723 Hibernia Halfpenny, MS64 Red
Martin 4.104-Gb.10**

- 3682** 1723 Hibernia Halfpenny MS64 Red NGC. M. 4.104-Gb.10, W-13120, R.5. Hibernia halfpennies are rarely encountered with full Red color. The present well-struck near-Gem displays generous fire-red color along with glimpses of gunmetal-blue over the high points and in the open fields. Abrasions are absent and carbon is minor. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 182

1724 Hibernia Halfpenny, MS64 Red
Only Red Example at NGC
Martin 4.51-K.4

- 3683** 1724 Hibernia Halfpenny MS64 Red NGC. M. 4.51-K.4, W-13690, R.2. Since the 1724 Hibernia halfpenny is 290 years old, it is little surprise that full Red examples are nearly unobtainable. As of (3/14), PCGS lists just two such pieces in all grades, and the present near-Gem is the first certified as Red by NGC. Peach-red dominates the fields. The device high points are steel-gray, and three dashes of gunmetal toning are noted along the right reverse margin. Nicely struck and devoid of abrasions. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 192

- 3684** 1760 Hibernia-Voce Populi Halfpenny XF45 NGC. N. 4, Z. 2-A, W-1382X, R.1. Brown and tan surfaces provide this Choice XF example with immediate eye appeal. The obverse retains a pleasing degree of detail. In addition to the effects of circulation, the devices on the reverse do not exhibit full definition, as is generally the case with this variety. Approximately half of the obverse exhibits at least partial dentils. A few tiny spots and areas of verdigris are present. Listed on page 49 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 262

1778-1779 Rhode Island Ship Token, AU50
Wreath Below Ship, Betts-563

- 3685** 1778-1779 Rhode Island Ship Token, Wreath Below, Copper AU50 NGC. Betts-563, W-1740, R.4. The Rhode Island ship token is a Revolutionary War propaganda medal issued by the British. The medal was an attempt to intimidate the Dutch to remain neutral in the conflict. Betts-563 is identified by a small wreath at the obverse exergue. The present example is toned deep gunmetal-gray and displays moderate wear on the motifs. The smooth surfaces are refreshingly free from abrasions. Listed on page 50 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 576

1773 Virginia Halfpenny
MS64 Red and Brown
With Period, N. 25-M

- 3686** 1773 Virginia Halfpenny, Period MS64 Red and Brown NGC. N. 25-M, W-1580, R.2. Seven harp strings. Both sides display ample peach-gold, although the cheek, shield, and obverse border are steel-blue. Nicely struck and devoid of visible marks. Newman 25-M is best attributed by the die lump near the harp on the vertical shield stripe. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 241

1787 Massachusetts Half Cent
MS63 Brown, Ryder 4-B
Better Die Variety

- 3687** 1787 Massachusetts Half Cent MS63 Brown NGC. Ryder 4-B, W-5930, R.5. An exquisite chocolate-brown commonwealth copper coin. Only incidental contact is present and both sides shimmer with luster. The strike is bold except near the Indian's waist and the eagle's shield, due to the high relief of the latter. Listed on page 59 of the 2014 *Guide Book*. Census: 6 in 63 Brown, 6 finer (3/14).
From The Old New England Collection. PCGS# 296

1787 Massachusetts Half Cent
MS62 Brown, Ryder 4-C
Well Struck

- 3688** 1787 Massachusetts Half Cent MS62 Brown NGC. Ryder 4-C, W-5940, R.2. The period touches an arrowhead, diagnostic for Ryder 4-C. The die scratch (as made) from the base of the Indian's bow identifies the obverse. This Massachusetts copper type coin has smooth and glossy medium brown surfaces. The strike is uncommonly sharp, although hints of the planchet surface remain beneath CENT. A minor curved clip at 3:30 is of mint origin. Struck slightly off center toward 1 o'clock. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 296

**1787 Massachusetts Half Cent
MS63 Brown, Ryder 4-C
Smooth Surfaces**

- 3689** 1787 Massachusetts Half Cent MS63 Brown NGC. Ryder 4-C, W-5940, R.2. An exceptional example that exhibits coruscating luster and undisturbed mahogany-brown surfaces. The strike is above average despite unimportant incompleteness at the central high points. Struck slightly off center toward 12:30, but only dentil width is affected. Listed on page 59 of the 2014 *Guide Book*. Census: 6 in 63 Brown, 6 finer (3/14).
From The Old New England Collection. PCGS# 296

**1787 Massachusetts Half Cent
Ryder 5-A, Rim Die Break
Uncirculated Details**

- 3690** 1787 Massachusetts Half Cent — Improperly Cleaned — NGC Details. Unc. Ryder 5-A, W-5960, R.3. This is the rare late die state with a large die break on the rim at 1 o'clock on the reverse. This lustrous and unmarked ebony-brown half cent displays moderate incompleteness of strike in the centers. The remainder of the coin is well-struck. The surfaces are minimally granular, though mildly bright from a wipe long ago. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection.

**1787 Massachusetts Cent, Choice AU
'Horned Eagle,' Ryder 2b-A
Guide Book Variety**

- 3691** 1787 Massachusetts Cent, Horned Eagle AU55 NGC. Ryder 2b-A, W-6040, R.3. The die break from the eagle's forehead explains the variety's nickname, the Massachusetts counterpart of the "Horned Bust" Miller 4-L 1787 Connecticut copper. The present better-grade example exhibits plentiful mint gloss, although the Indian's clothing and the eagle's shield display light wear. There are no planchet deficiencies or granularity. Marks are inconsequential except for minor obverse rim dings at 2:30 and 10 o'clock. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 305

**1787 Massachusetts Cent, MS61 Brown
'Horned Eagle,' Ryder 2b-A
Rare in Mint State**

- 3692** 1787 Massachusetts Cent, Horned Eagle MS61 Brown NGC. Ryder 2b-A, W-6040, R.3. The eponymous horn-shaped break atop the eagle's head also extends below the eye. Other small reverse breaks are present, especially on the lower border, suggesting the die was improperly annealed prior to use. This is a glossy deep brown example with exemplary surfaces. Mint State Massachusetts cents are rare. Listed on page 59 of the 2014 *Guide Book*. Census: 1 in 61 Brown, 1 finer (3/14).
From The Old New England Collection. PCGS# 305

**1787 Massachusetts Cent, Choice AU
Arrows Left, Ryder 3-G**

- 3693** 1787 Massachusetts Cent, Arrows in Left Talon AU55 NGC. Ryder 3-G, W-6090, R.3. A medium to deep brown cent with minimally abraded surfaces and partial satin luster. This example is devoid of planchet striations. Evidence of wear is mainly confined to the central high points. Ryder 3-G is attributed by the widely spaced date and the small die flaw above the Indian's raised arm. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 302

**1787 Massachusetts Cent, AU53
Arrows Left, Ryder 4-D**

- 3694** 1787 Massachusetts Cent, Arrows in Left Talon AU53 NGC. Ryder 4-D, W-6110, High R.3. The central reverse is tan-brown but the majority of this lightly circulated cent is medium brown. The strike is sharp at the borders, though the centers display incompleteness. The scarce Ryder 4-D is identified by a small break beneath the left (facing) foot and repunching at the base of the tail feathers. Marks are essentially absent aside from a slight rim nick on the obverse at 8:30. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 302

- 3695** 1788 Massachusetts Half Cent — Environmental Damage — NGC Details. VF. Ryder 1-A, W-6000, High R.4. A medium brown example with clear legends, this coin shows only a single noticeable mark: a shallow diagonal abrasion on the central reverse. The reverse is only lightly granular, but the obverse field is textured from exposure to the elements. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection.

**1788 Massachusetts Half Cent
MS64 Brown, Ryder 1-B
Outstanding Type Coin**

- 3696** 1788 Massachusetts Half Cent MS64 Brown NGC. Ryder 1-B, W-6010, R.2. Ryder 1-B is confirmed by the repunched T in WEALTH and a slender vertical break through the second 8 in the date. The present near-Gem boasts mark-free medium brown surfaces. The strike is excellent for the issue but nonetheless slightly incomplete in the centers. Struck a few degrees off center toward 12:30. Listed on page 59 of the 2014 *Guide Book*. Census: 4 in 64 Brown, 1 finer (3/14).
From The Old New England Collection. PCGS# 308

**1788 Massachusetts Cent, Near-Mint
With Period, Ryder 3-A**

- 3697** 1788 Massachusetts Cent, Period AU58 NGC. Ryder 3-A, W-6210, Low R.4. A lovely chocolate-brown cent with unmarked and minimally granular surfaces. Planchet flaws are confined to the obverse rim near 3 o'clock. Slightly off center toward 12 o'clock, but the date is complete, as are the feathers atop the Indian's head. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 311

- 3698** 1788 Massachusetts Cent, Period XF45 NGC. Ryder 4-G, W-6230, High R.4. This appealing medium brown commonwealth copper coin is evenly struck and unabraded with only minor surface granularity. Although slightly off center toward 8:30, no legends are affected. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 311

**1788 Massachusetts Cent, Choice AU
Ryder 10-L, With Period**

- 3699** 1788 Massachusetts Cent, Period AU55 NGC. Ryder 10-L, W-6280, High R.2. Mahogany-brown fields contrast with medium brown high points. This briefly circulated Massachusetts type coin is nearly free from contact, and the centering is ideal. The centers show incompleteness of impression customary for the issue. Minor mint-made striations pass through the eagle's head and tail, the W in WEALTH, and the E and first T in MASSACHUSETTS. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 311

- 3700** 1788 Massachusetts Cent, Period AU53 NGC. Ryder 12-M, W-6350, Low R.4. The centering is ideal on this smooth dark-chocolate example. There are no remotely consequential marks or planchet deficiencies. Moderate wear is seen on the high points. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 311

- 3701** 1785 Connecticut Copper, Bust Right XF45 NGC. M. 6.2-E.1, W-2395, R.3. The "Goatee" variety, named after the vertical die break that descends from the nose across the mouth and beneath the chin. A richly detailed dark lavender-brown example. Abrasions are absent though the well-centered surfaces are intermittently granular. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 316

- 3702** 1785 Connecticut Copper, Bust Right XF45 NGC. M. 6.4-I, W-2420, R.2. The medium brown surfaces are smooth except for as-struck planchet flaws on the neck of the obverse portrait and the chest of the seated Liberty. The centers are typically struck. The die state is late with bold cracks connecting TLIB. Both sides are well centered. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 316

**1786 Connecticut Copper, Choice VF
Mailed Bust Left, M. 5.4-N
Rare Die Marriage**

- 3703** 1786 Connecticut Copper, Mailed Bust Left VF35 NGC. M. 5.4-N, W-2585, High R.6. This medium to deep brown example of the rare Miller die marriage is unblemished. Nicely centered, it has a full, sharp date. This is a late die state with the reverse die sinking near Liberty's right (facing) shoulder, causing indistinct definition in the vicinity and opposite on the back of the neck of the portrait. On the obverse, the rim is crumbling above OR in AUCTORI, and die chips and a crack impact the first N in CONNEC. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 331

- 3704** 1786 Connecticut Copper, Mailed Bust Left VF30 NGC. M. 5.6-M, W-2600, R.6. It appears that the reverse die failed prematurely, and is the reason for the rarity of Miller 5.6-M. The present coin is from an earlier die state than most examples, since the eye and upper profile are visible. In addition to the prominent buckling near the I in INDE, a radial crack extends to the right bust corner. The left reverse has a few moderate marks. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 331

- 3705** 1786 Connecticut Copper, Mailed Bust Left VF30 NGC. M. 5.8-O.2, W-2630, High R.5 This pleasing golden-brown copper is smooth except for a hair-thin line near the profile. A lens reveals a couple of inconsequential roundish planchet flaws. As usual for the very scarce variety, the upper reverse is buckled, causing softness of strike on the bust truncation directly opposite. The bottom of the date is absent but the legends are otherwise complete. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 331

**1786 Connecticut Copper, Good 4
Scarce Miller 5.9-Q**

- 3706** 1786 Connecticut Copper, Mailed Bust Left Good 4 NGC. M. 5.9-Q, W-2645, R.5. This medium brown state copper coin displays a bold date and branch, a combination that makes attribution relatively easy. The remainder of the legends are well-worn although the CO and DE are evident, as is the colon after the B in LIB. Minimally granular, marks are unobtrusive aside from a small dig on the reverse near 11 o'clock. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 331

**1786 Connecticut Copper, Fine 15
Mailed Bust Left
'Sword Hilt and Guard' Reverse
Extremely Rare M. 5.15-S**

- 3707** 1786 Connecticut Copper, Mailed Bust Left Fine 15 NGC. M. 5.15-S, W-2675, R.7. According to the *Whitman Colonial Encyclopedia*, this Miller marriage is so rare that for many years it was "delisted as none could be found." However, in 2007, an example emerged in the Richard August collection. That example has a large die bulge at 5:30 on the obverse and advanced buckling in the left obverse field, undoubtedly the cause of the obverse die's early retirement and the rarity of the marriage. The present coin is from an earlier die state with better definition on the obverse border between 10 and 3 o'clock, although the die state is nonetheless very late with substantial buckling and an identical bulge beneath the shoulder. Miller 5.15-S is a "Sword Hilt and Guard" variety, named after additions to the seated Liberty beneath her right (facing) elbow. Among all Connecticut reverse dies, only the 1786 S has these adornments. The sword handle is inconspicuous on the present coin due to a typical strike. The medium brown surfaces are only lightly abraded. Planchet flaws are noted on the portrait profile, the legs of the seated Liberty, and the obverse margin at 9 o'clock. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 331

**1787 Connecticut Copper, VF30
ETLIB INDE, Small Head Right
Miller 1.1-A**

- 3708** 1787 ETLIB INDE Small Head Right Connecticut Copper VF30 NGC. M. 1.1-A, W-2700, R.3. The popular *Guide Book* variety with ETLIB on the left reverse border and INDE on the right reverse border, opposite their usual configuration. The present example has walnut-brown fields and gunmetal-gray motifs. All legends are bold and fully present. The centers have minor softness of strike customary for the issue. A few faded marks are noted near NDE. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 346

- 3709** 1787 Small Head Right, ETLIB INDE Connecticut Copper — Damaged — NGC Details. Fine. M. 1.1-VV, W-2710, R.7. Double struck, but the anvil (reverse) die remained stationary while the hammer (obverse) die rotated between strikes. The portrait and left obverse legend are jumbled, although the remainder of the coin does not show a double image. The double strike created an unusually wide and somewhat oval-shaped coin. The medium brown surfaces are nearly free from verdigris, but the centers are wavy from two large, dull reverse abrasions. Listed on page 61 of the 2014 *Guide Book*.
From *The Old New England Collection*.

3710 1787 Connecticut Copper, Horned Bust — Improperly Cleaned — NGC Details. XF. M. 4-L, W-2810, R.1. The olive-green and almond-gold toning is due to a cleaning, but no hairlines or other abrasions are evident. This is the late die state with a large wedge-shaped “horn” attached to the obverse bust below the chin. Clashed near the R in AUCTORI. The obverse is slightly misaligned toward 10 o’clock. The reverse is well centered though the bottom portion of the date is absent. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.

3711 1787 Connecticut Copper, Mailed Bust Left IN DE Fine 12 NGC. M. 5-P, W-2815, R.6. The legend INDE is widely separated by Liberty’s muscular arm. The Liberty punch was entered too far to the right into the reverse die, crowding the left-side legend. The present example has tan-brown centers and gray borders. The surfaces are moderately granular and essentially unabraded. Struck several degrees off center toward 5 o’clock, with uneven wear in areas without a protective rim. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 349

3712 1787 Connecticut Copper, Laughing Head — Environmental Damage — NGC Details. XF. M. 6.1-M, W-2820, R.1. The popular Laughing Head variety is named after the expression on the obverse portrait. The present example is dark gray with lighter high points. The surfaces are moderately granular and streaky. A few inconspicuous aqua spots are seen on the reverse. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.

3713 1787 Connecticut Copper, Mailed Bust Left XF40 NGC. M. 9-D, W-2850, High R.5. Mint gloss emerges from the legends and motifs of this deep walnut-brown state copper. A couple of hair-thin marks are concealed within the hair of the obverse portrait. The obverse is moderately misaligned toward 10 o’clock, though most of AUCTORI is present. The reverse is well-centered. The obverse die is failing beneath the chin, and the base of the portrait is partly lapped away. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 349

**1787 Connecticut Copper, AU53
Miller 11.1-E, Mailed Bust Left
Rotated Double Struck**

3714 1787 Connecticut Copper, Mailed Bust Left — Double Struck — AU53 NGC. M. 11.1-E, W-2870, R.2. Double struck with slight counterclockwise rotation of the coin between strikes. The peripheral legends exhibit the most prominent doubling, though the extremities of the devices also display secondary images. An attractive medium brown example that boasts substantial mint gloss and an absence of visible abrasions. The centering is good with only the tops of ET off the flan. A pair of moderate planchet imperfections are noted above the C in CONNEC. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.

**1787 Connecticut Copper, AU50
Mailed Bust Left, M. 13-D
Very Late Die State**

3715 1787 Connecticut Copper, Mailed Bust Left AU50 NGC. M. 13-D, W-2890, R.2. Substantial mint gloss and an absence of abrasions confirm the About Uncirculated grade. Traces of faded red reside in the recesses of the design, but this Connecticut copper is predominantly chestnut-brown. A very late die state with an irregular break at the left bust tip and a cluster of slender cracks in the field near NNE in CONNEC. The reverse exhibits many raised flow lines, an indication of being struck from a heavily worn die. The obverse displays distributed small planchet flaws, as coined. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 349

**1787 Connecticut Copper, AU53
Mailed Bust Left, CONNECT
Miller 15-F**

3716 1787 CONNECT Mailed Bust Left Connecticut Copper AU53 NGC. M. 15-F, W-2900, R.3. The 1787 Miller 15 is the only obverse die of the Connecticut series with the state abbreviated as CONNECT. Although that obverse die was paired with three different reverse dies, M. 15-F is the only marriage for the *Guide Book* CONNECT, INDE listing, since M. 15-S has an INDL reverse and M. 15-R is the blundered date 1787 over 1788. The present M. 15-F example is a well-defined, medium brown state copper coin with pleasing and generally glossy surfaces. The centers show incompleteness, expected for the series, and a slender horizontal planchet flaw is noted near the ear of the portrait. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 367

3717 1787 Connecticut Copper, Draped Bust Left — Obverse Scratched — NGC Details. VF. M. 16.2-NN.1, W-3005, R.5. Though designated as VF Details, the sharpness approaches XF and glimpses of luster emerge from design recesses. The centers are lightly brought up, as usual for the issue. Several approximately parallel pin scratches are noted on the obverse portrait but none affect the face. The dies are widely rotated. Both sides are moderately misaligned, the obverse toward 10 o’clock and the reverse toward 5:30. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

**1787 Connecticut Copper, VF25
Draped Bust Left, M. 16.6-NN.2**

3718 1787 Connecticut Copper, Draped Bust Left VF25 NGC. M. 16.6-NN.2, W-3035, R.6. A pleasing chocolate-brown example of this rare die marriage. The centering is excellent and there are no detrimental marks. The lower portion of the seated Liberty is lightly brought up, as usual for the type, and a single small spot is noted near the bust tip. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

3719 1787 Connecticut Copper, Draped Bust Left — Improperly Cleaned — NGC Details. VF M. 20-a.2, W-3055, R.5. Orange-gold coloration at the obverse margin and throughout much of the reverse is inconsistent with high-point wear on the motifs. Nonetheless, this coin is attractive due to an absence of flan detractors or marks, aside from a small dig between the IN in INDE. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*.

3720 1787 Connecticut Copper, Draped Bust Left XF40 NGC. M. 21-DD, W-3060, R.5. This scarcer variety, chocolate-brown Connecticut copper coin is devoid of abrasions and has only moderate wear. A fairly deep planchet flaw is noted within the hair of the obverse portrait, and the upper obverse displays lesser planchet flaws. This is an ideally centered example. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

3721 1787 Connecticut Copper, Draped Bust Left XF40 NGC. M. 22-g.2, W-3065, Low R.6. A medium brown example of this scarce Connecticut variety. The straight, slender die break on the lower right obverse is well-advanced. Two thin planchet flaws are noted, one inside the upper obverse rim and the other on Liberty's legs. A horizontal hair-thin mark extends from the reverse rim at 2:30 to Liberty's branch. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

**1787 Connecticut Copper, VF25
Draped Bust Left
Rare Miller 29.2-N**

3722 1787 Connecticut Copper, Draped Bust Left VF25 NGC. M. 29.2-N, W-3160, R.6. The rare Miller 29.2-N variety is distinctive for its lightly entered E in CONNEC and a repunched E in INDE. Although the present walnut-brown example is graded VF25 by NGC, portions of the coin exhibit XF sharpness. The dies were axially misaligned during the strike, causing soft definition on the upper left obverse and the lower reverse. As a result, the date and ORI are indistinct, but the other legends are bold. We note a faint and slender vertical mark on the cheek and a curved abrasion on the first C in CONNEC. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

**1787 Connecticut Copper, VF Details
Draped Bust Left, M. 30-hh.1, Double Struck**

3723 1787 Connecticut Copper, ETLIR — Improperly Cleaned — NGC Details. VF M. 30-hh.1, W-3175, R.2. The first strike was normal, but the coin was struck a second time, approximately 50% off center toward 4:30. The second strike was between the obverse die and a planchet, which indented the upper-right reverse. The usual die state with a radial crack at 4:30 on the reverse. This unabraded and moderately glossy example has olive-brown high points and gunmetal-gray fields. A slender planchet flaw is noted through the second 7 in the date. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*.

**1787 Connecticut Copper, AU53
ETLIR Error, Draped Bust Left
Miller 31.1-gg.1**

3724 1787 Connecticut Copper, ETLIR AU53 NGC. M. 31.1-gg.1, W-3205, R.3. A chocolate-brown example with plentiful mint gloss and no evident abrasions. Due to a die misalignment, the strike is precise on the lower obverse and upper reverse, while the top of the portrait and the lower portion of the seated Liberty are lightly brought up. A mint-made lamination affects the date, and a small obverse planchet flaw is noted at 7 o'clock. A late die state with buckling in the reverse field near the branch stem and the 1 o'clock cinquefoil. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 391

3725 1787 Connecticut Copper, Draped Bust Left VF30 NGC. M. 32.2-X.1, W-3220, R.3. A charming midgrade Connecticut type coin with glossy deep brown fields and lighter tan high points. This example is free from remotely relevant planchet flaws or abrasions. Several spindly die cracks traverse the upper obverse and extend from the bust truncation. Struck a few degrees off center toward 1 o'clock, with the bottom of the date off the flan. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

3726 1787 Connecticut Copper, Draped Bust Left — Struck 10% Off Center — VG8 NGC. M. 33.2-Z.5, W-3340, R.1. The horizontal die crack across Liberty's waist, and the straight die crack through the base of the A in AUCTORI, combine to attribute this collectible Connecticut marriage. Struck clearly off center toward 5 o'clock, although a majority of the letters (and all of the date) are intact. The chocolate-brown surfaces are problem-free for the grade. Listed on page 62 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 370

**1787 Connecticut Copper, MS62 Brown
Draped Bust Left, M. 33.3-W.1
Important Condition Rarity**

- 3727** 1787 Connecticut Copper, Draped Bust Left MS62 Brown NGC. M. 33.3-W.1, W-3400, R.4. Mint State Connecticut copper coins are rarities, due to the lack of Early American numismatists prior to the 1850s. Miller 33.3-W.1 is a scarcer marriage noteworthy for its prominently repunched first N in CONNEC. This high-grade example has satiny luster and smooth tan-brown surfaces. The die state is late, and features various minor peripheral cracks and clashes along with breaks near Liberty's branch and the E in ET LIB. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3728** 1787 Connecticut Copper, Draped Bust Left XF40 NGC. M. 33.5-T.2, W-3420, R.5. The "Skeleton Hand" reverse, named after the crudely die-engraved hand supporting the Liberty pole. This is a charming golden-brown example with generally smooth and unmarked surfaces. Scattered tiny to small planchet flaws emerge beneath a loupe. The reverse is rotated triple struck, evident on the peripheral legends. The obverse does not show evidence of a multiple strike. A die crack extends across the tops of AUCT. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3729** 1787 Connecticut Copper, Draped Bust Left VG10 NGC. M. 33.7-r.2, W-3440, R.1. Well defined for the VG10 grade. The medium brown surfaces are moderately granular and surprisingly free from abrasions. All legends are complete, and clear except for the first 7 in the date. The reverse die is swelling at the cinquefoil near the pole. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3730** 1787 Connecticut Copper, Draped Bust Left AU50 NGC. M. 33.7-r.2, W-3440, R.1. A pleasing chocolate-brown state copper that exhibits glimmers of luster and is free from evident abrasions. The strike is somewhat soft on portions of the motifs, as usual for the series. A minor retained lamination is noted near AU in AUCTORI. Although struck several degrees off center toward 3 o'clock, all legends are complete. Clashed at the E in ET LIB, and the reverse die is sinking near 1 o'clock. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3731** 1787 Connecticut Copper, Draped Bust Left — Mirror Brockage On Reverse, Environmental Damage — NGC Details. Fine. M. 33.8. This brockage was struck between the obverse die and the obverse of a previously struck coin. The obverse has a normal appearance, while the reverse displays the incused and reversed impression of the obverse from the prior strike. On the brockage side, the legends are clear, though most of the portrait is faint. The dark brown surfaces are moderately granular, and the obverse center has a pair of faded pinscratches. A small U-shaped edge flaw is at 7:30. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3732** 1787 Connecticut Copper, Draped Bust Left XF45 NGC. M. 33.8-Z.13, W-3470, R.5. This mahogany-brown example possesses ample luster within the legends and drapery. The centering is ideal, and no detrimental marks are noted. The strike is typical and retains glimpses of the planchet surface. A fairly late obverse die state with a bulged left field and small breaks evident at the A and I in AUCTORI. A die crack passes through the E in CONNEC. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

**1787 Connecticut Copper, VF Details
Draped Bust Left
Very Rare Miller 33.10-W.6**

- 3733** 1787 Connecticut Copper, Draped Bust Left — Environmental Damage — NGC Details. VF. M. 33.10-W.6, W-3500, Low R.7. The W.6 reverse die was only used to strike this very rare die marriage. A radial die crack at 4:30 provides an attribution identifier. This ebony-brown example is evenly granular. Portions of the coin are sharp for the VF designation, though out-of-parallel dies resulted in a soft impression on the lower obverse and upper reverse. A slender vertical test mark is noted in the right obverse field. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3734** 1787 Connecticut Copper, Draped Bust Left VF20 NGC. M. 33.10-Z.7, W-3505, R.6. The smooth surfaces display dusky powder-blue and walnut-brown toning. Detractions are absent aside from a subtle spot at the nose of the obverse portrait. Slightly off center toward 12 o'clock with the bottom of the date off the flan. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3735** 1787 Connecticut Copper, ETLIR VG8 NGC. M. 33.11-gg.1, W-3520, High R.6. The rarity of this die variety is likely due to the large breaks near the A and TO in AUCTORI. The reverse has lesser cracks and breaks along the left-side border, and the reverse die is failing between the head and Liberty pole. Although the devices are worn, the legends are sharp, and the tan-brown surfaces are pleasing despite occasional thin marks. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 391

- 3736** 1787 Connecticut Copper, Draped Bust Left — Obverse Scratched — NGC Details. VF. M. 33.13-Z.6, W-3555, R.5. A dark lavender-brown example featuring bold, complete legends. The surfaces are evenly and moderately granular. A few thin marks near the obverse profile correspond to the NGC notation, and a dull abrasion is noted beneath Liberty's branch stem. A small die break connects the TO in AUCTORI, and a radial die crack passes through the second C in CONNEC. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3737** 1787 Connecticut Copper, Draped Bust Left XF45 NGC. M. 33.17-r.1, W-3625, R.1. A lovely golden-brown state copper. There are no remotely mentionable marks, and planchet detractions are also absent. The motifs display slight incompleteness of strike. One minor spot is seen above the first 7 in the date. Struck moderately off center toward 7 o'clock. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

**1787 Connecticut Copper, VF Details
Draped Bust Left, ETLIR
Double Struck, M. 33.17-gg.2**

- 3738** 1787 Connecticut Copper, ETLIR — Double Struck Off Center, Edge Damage — NGC Details. VF. M. 33.17-gg.2, W-3635, R.5. The first strike was normal but the coin was struck again, approximately 90% off center, at 7:30 relative to the first strike. The second strike is possibly from a different pair of dies, and is essentially featureless on both sides except for an arc of lengthy dentils. The medium brown surfaces are moderately granular and lack remotely mentionable marks. A die crack extends from the reverse rim at 3 o'clock to the right base of the seated Liberty. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

**1787 Connecticut Copper, Choice AU
Draped Bust Left, ETLIR Blunder
Scarce Miller 33.17-gg.2**

- 3739** 1787 Connecticut Copper, ETLIR AU55 NGC. M. 33.17-gg.2, W-3635, R.5. Mahogany-brown fields accompany steel-gray motifs. The glossy surfaces are free from apparent abrasions. Struck a few degrees off center toward 2 o'clock with complete legends except for the base of the date. The dies were out of alignment, causing a sharp strike on the lower obverse and upper reverse, but a soft impression on the upper obverse and lower reverse. Lengthy, spindly die cracks are noted near the head of the seated Liberty, and from 3:30 to 5:30 along the reverse rim. Two cracks intersect beneath the bust truncation. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 391

- 3740** 1787 Connecticut Copper, Draped Bust Left — Bent — NGC Details. XF. M. 33.21-Z.13, W-3675, R.7. Toned dark brown with lighter tan high points. Evenly and moderately granular surfaces are minimally abraded, aside from a minor edge bump at 11 o'clock on the reverse. Struck from widely rotated dies, but both sides are well-centered. This very rare variety pairs the plentiful Z.13 reverse with the highly elusive 33.21 obverse. Minor die cracks are noted atop the RI in AUCTORI and the EC in CONNEC. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3741** 1787 Connecticut Copper, Draped Bust Left Fine 12 NGC. M. 33.25-Z.24, W-3735, R.6. A chocolate-brown example of this rare Miller variety. A small depression is seen near 12 o'clock on the reverse. Moderate, slender mint-made planchet flaws are noted near CONNEC and the left border of the seated Liberty. The reverse die is failing at the first 7 in the date. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

**1787 Connecticut Copper, Fine 15
Double Struck, Off Center
Miller 33.32-Z.13**

- 3742** 1787 Connecticut Copper, Draped Bust Left — Double Struck, Second Strike Off Center — Fine 15 NGC. M. 33.32-Z.13, W-3830, R.1. The first strike of this Connecticut copper was nicely centered. The coin was then struck again, approximately 15% off center toward 1 o'clock. Portions of AUCTORI, CONNEC, and INDE are evident from both strikes, as is Liberty's extended arm. The chocolate-brown surfaces are free from relevant marks or spots. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3743** 1787 Connecticut Copper, Draped Bust Left — Reverse Scratched — NGC Details. Fine. M. 33.33-Z.11, W-3840, Low R.6. Chocolate-brown devices contrast with deep gray fields. The present coin is a well-centered and nicely detailed example of this rare Miller die marriage. On the reverse, a few thin and closely spaced straight pinscratches extend between 11 and 6 o'clock. The edge has a narrow crimp at 12 o'clock. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3744** 1787 Connecticut Copper, Draped Bust Left XF40 NGC. M. 33.37-Z.9, W-3915, R.5. A sharp example of this better Miller variety. The chocolate-brown surfaces are smooth aside from a lamination on the lower portion of the seated Liberty. A green spot is noted beneath the waist. On this late die state piece, the reverse field is buckling east of the branch, a crack extends across the right reverse border, and a radial crack is seen near the final 7 in the date. Clashed and cracked near the O in CONNEC. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

- 3745** 1787 Connecticut Copper, Draped Bust Left — Reverse Damage — NGC Details. Fine. M. 33.42-Z.2, W-4000, R.7. A very rare die pairing. The obverse die presumably failed promptly, although no breaks are evident on survivors. This moderately granular example has dark gray fields and tan-brown high points. A small curved clip at 12 o'clock affects the date. A few thin diagonal scratches are noted on the lower half of the seated Liberty. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3746** 1787 Connecticut Copper, ETLIR XF45 NGC. M. 37.1-cc.1, W-4100, R.4. This attractive chocolate-brown example is one of several blundered legend varieties within the Connecticut series. It was struck slightly off center toward 4 o'clock, although only the tops of ET L are off the flan. However, the surfaces are essentially problem-free. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 391

- 3747** 1787 Connecticut Copper, Draped Bust Left VF30 NGC. M. 37.6-k.4, W-4135, High R.5. This deep walnut-brown and charcoal-gray example is unmarked and only minimally granular. Each side has a couple of slender planchet striations, as coined. The reverse border is buckled near 11 o'clock, as made from a failing die, and probably the reason for the rarity of the Miller marriage. The reverse is slightly misaligned toward 3 o'clock but the legends are intact. Struck from widely rotated dies. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 370

3748 1787 Connecticut Copper, Draped Bust Left — Burnished — NGC Details. XF. M. 37.8-k.2, W-4155, R.5. A deep steel-gray state copper with full legends and sharp detail on the drapery. The centers show incompleteness of strike usual for the type. The surfaces are evenly but moderately granular. A vertical lamination on the upper portion of the portrait is accompanied by faint abrasions. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*.

3749 1787 Connecticut Copper, Draped Bust Left — Struck 20% Off Center, Environmental Damage — NGC Details. VF. M. 44-W.4, W-4260, R.4. This example is widely off center toward 5:30. Nonetheless, most of the legends are present, including the date. No marks are evident, but the ebony-brown surfaces are evenly granular. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*.

3750 1787 Connecticut Copper, Draped Bust Left — Environmental Damage — NGC Details. VF. M. 48-g.5, W-4315, R.5. This deep russet-brown copper coin is attractive to the unaided eye. A loupe reveals reverse granularity. The obverse is only lightly pitted but displays faint hair-thin marks from verdigris removal. Well centered with bold, full legends and substantial portrait definition. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*.

3751 1787 Connecticut Copper, CONNLC VG10 NGC. M. 50-F, W-4330, R.6. Miller 50-F is the sole die marriage of the rare CONNLC variety. Apparently, an E letter punch was not readily available when the obverse die was engraved, and an L punch was used instead. This lavender-brown example shows planchet flaws on the lower reverse that obscure the date. Wispy marks are noted on the upper neck of the portrait and the legs of the seated Liberty. Die breaks near the R in AUCTORI and the second N in CONNEC are usual for the variety. The reverse is misaligned toward 8 o'clock. A small inked attribution is seen on the field near the profile. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 385

**1787 Connecticut Copper, AU53
Draped Bust Left, M. 53-FF**

3752 1787 Connecticut Copper, Draped Bust Left AU53 NGC. M. 53-FF, W-4335, R.5. An elusive die marriage, distinctive for its combination of fleurons, colons, clubs, and dashes within the peripheral legends. This chocolate-brown example has minimal wear and shows complete legends. The centers display moderate weakness, typical for the Connecticut series, and the reverse is slightly misaligned toward 10:30. Smooth except for a faded thin diagonal mark on the cheek. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 370

3753 1788 Connecticut Copper, Mailed Bust Right Fine 15 NGC. M. 2-D, W-4405, R.1. A late die state with a large break at the left bust tip, a smaller break near the right bust tip, and a third break from the bust to the C in CONNEC. The first N in CONNEC is filled; die breaks affect the L and I in LIB, and a die break extends above the E in ET. This medium to dark brown example shows even wear and moderate peripheral granularity. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 397

**1788 Connecticut Copper, AU50
Mailed Bust Right, Miller 2-D**

3754 1788 Connecticut Copper, Mailed Bust Right AU50 NGC. M. 2-D, W-4405, R.1. Luster emerges from protected areas of this briefly circulated final-year Connecticut copper. The fields are medium brown and the high points are olive-brown. Devoid of abrasions, although the left borders display irregular planchet flaws and a narrow horizontal lamination crosses the obverse between 3 and 9 o'clock. A fairly early die state without the often-seen break at the shoulder of the portrait. The dies are lightly clashed and a break is present at the I in LIB. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 397

**1788 Connecticut Copper, AU53
Draped Bust Left, M. 16.1-H**

3755 1788 Connecticut Copper, Draped Bust Left AU53 NGC. M. 16.1-H, W-4600, R.4. Substantial mint gloss glimmers from this unabraded, medium brown Connecticut copper. The dies were slightly out of parallel during the strike, resulting in slight softness on the upper portion of the portrait and the base of the seated Liberty. The obverse is misaligned a few degrees toward 10 o'clock, and the reverse is moderately off center toward 7 o'clock with the bottom of the date off the flan. A late die state with multiple slender die cracks and a lapped profile on the portrait. The obverse die is failing near the left bust tip. Listed on page 62 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 409

**1788 Connecticut Copper, VF Details
Draped Bust Left
Very Rare Miller 16.4-A.2
Double Struck, Clipped**

- 3756** 1788 Connecticut Copper, Draped Bust Left — Double Struck, Environmental Damage — NGC Details. VF. M. 16.4-A.2, W-4615, R.7. This rare variety Connecticut copper displays two different mint errors. It is double struck, and has a small curved planchet clip at 9 o'clock. The first strike was off center several degrees toward 1 o'clock, while the second was 55% off center toward 7 o'clock relative to the first strike. The second strike was between the obverse die and a planchet, which indents the upper half of the reverse. Most of the date is off the flan, but the layout of the legends allows attribution. The medium brown surfaces are lightly granular. This coin will generate interest among the dedicated collectors of this challenging Early American series. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.

**1786 New Jersey Copper, Choice Fine
Date Under Plow, No Coulter
Scarce Maris 12-G**

- 3757** 1786 New Jersey Copper, Date Under Plow, No Coulter Fine 15 NGC. Maris 12-G, W-4790, R.4. This first-year New Jersey variety lacks a coulter, the horizontal bar on the plow that helps break open sod. A circulated but attractive and well-centered chocolate-brown example. Marks are minimal, though a few minor planchet striations have toned deep gray. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 494

**1786 New Jersey Copper, AU Details
Straight Plow Beam, Maris 14-J**

- 3758** 1786 New Jersey Copper, Narrow Shield, Straight Plow Beam — Improperly Cleaned — NGC Details. AU. M. 14-J, W-4810, R.1 A well-defined New Jersey type coin. The smooth and crisply struck surfaces are recolored and display peach and rose-red tints. The centers are olive-green. Slightly off center toward 4 o'clock but all the legends are fully visible. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection.

**1786 New Jersey Copper, AU53
Straight Plow Beam, Maris 14-J**

- 3759** 1786 New Jersey Copper, Narrow Shield, Straight Plow Beam AU53 NGC. Maris 14-J, W-4810, R.1. An unabraded chestnut-gold example of this available New Jersey variety. The centers exhibit minor inexactness of strike, and a lens reveals a couple of small spots and minor mint-made planchet striations. Struck moderately off center toward 5:30, although only the base of the date is off the flan. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 45423

**1786 New Jersey Copper, AU50
Bridle Variety, Maris 18-M**

- 3760** 1786 New Jersey Copper, Bridle, AU50 NGC. M. 18-M, W-4890, R.2. The vertical die break beneath the snout is the source of the "Bridle" nickname. Maris 18-M is also a Wide Shield variety. This is a golden-brown example with ample mint gloss and minimally abraded surfaces. The centers show slight incompleteness of strike, characteristic of the series. This is the usually seen die state with a clash at the BUS in PLURIBUS and small breaks within the horizontal shield stripes. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 498

- 3761** 1787 New Jersey Copper, No Sprig Above Plow, VF35 NGC. M. 32-T, W-5100, R.2. A lovely chocolate-brown example, this coin shows smooth, unblemished surfaces and a consistent strike. The horse has low relief due to a sinking obverse die. Struck slightly off center toward 2 o'clock. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 506

1787 New Jersey Copper, AU50
No Sprig Above Plow, Maris 39-a

- 3762** 1787 New Jersey Copper, No Sprig Above Plow, AU50 NGC. M. 39-a, W-5195, R.2. A charming, chocolate-brown example. This is the usual die state with a couple of small breaks within the shield. Struck a few degrees off center toward 11 o'clock, but all the legends are complete. The strike is even aside from minor softness on the upper reverse margin. Minor laminations, as made, are noted on both sides. Abrasions are absent except for a single pinscratch from the upper shield tip to the rim at 8:30. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 506

- 3763** 1787 New Jersey Copper, No Sprig Above Plow, XF45 NGC. M. 43-d, W-5225, R.1. A medium to dark brown state copper piece with unabraded surfaces. Both sides display minor planchet striations, as struck, but the strike is even and the coin is well-centered. The usual die state is seen here, with a dull, slender, and curved clash inside the shield. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 506

- 3764** 1787 New Jersey Copper, No Sprig Above Plow NGC Details. AU. M. 43-d, W-5225, R.1. This coin was recolored at one time, although the fields have retoned golden-brown and the high points are steel-gray. The surfaces are attractive due to a near-absence of abrasions and planchet issues. The central obverse is lightly clashed from the shield, and the reverse has a faint curved clash within the shield. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

1787 New Jersey Copper, AU55
Maris 43-d, No Sprig Above Plow

- 3765** 1787 New Jersey Copper, No Sprig Above Plow, AU55 NGC. Maris 43-d, W-5225, R.1. A glossy, well-centered, chocolate-brown example. Crisply impressed and devoid of planchet deficiencies. Double struck with the second strike 95% off center, at 9 o'clock relative to the first strike. Only dentils are visible from the second strike. The obverse is lightly strike doubled, apparent on the peripheral legends. This is the usual die state with a dull, curved clash within the shield. Marks are confined to a single thin line near the N in NOVA. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 506

1787 New Jersey Copper, AU50
Maris 48-g, No Sprig Above Plow

- 3766** 1787 New Jersey Copper, No Sprig Above Plow, AU50 NGC. M. 48-g, W-5275, R.1. A pleasing, chocolate-brown state copper. Evenly struck and satiny with scattered minor mint-made planchet striations and a few delicate hair-thin marks. Struck slightly off center toward 9 o'clock. The die state is later than usually seen, with advanced diagonal cracks across the shield and through the M in UNUM. Listed on page 70 of the 2014 *Guide Book*. Census: 6 in 50, 22 finer (3/14).
From The Old New England Collection. PCGS# 506

- 3767** 1787 New Jersey Copper, Camel Head XF40 NGC. M. 56-n, W-5310, R.1. This well-defined dark brown example is without any mentionable marks or planchet detractors. Die cracks are noted near the E and first U of the reverse legends. Many "Camel Head" coppers are overstruck, as is the present coin. Most of GEORGIUS is readable on the right reverse border, suggesting the undertype is an evasion British halfpenny, perhaps from Machin's Mill. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 515

- 3768** 1788 New Jersey Copper, Head Left — Obverse Tooled — NGC Details. VG. M. 51-g, W-5480, High R.5. The Head Left is a distinctive and scarce New Jersey type. Most examples are Maris 50-f. Maris 51-g is the rarest of three Head Left die pairs, and can be attributed by the greater distance from the snout to the O in NOVA. This example is mostly lavender-brown. The surfaces are granular, and portions of the legends are indistinct. The obverse exergue exhibits faint pinscratches from an attempt to reveal the date. Listed on page 71 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3769** 1788 New Jersey Copper, Running Fox Before Legend, Fine 12 NGC. M. 78-dd, W-5535, R.2. The late die state of Maris 77-dd with a heavy diagonal break on the obverse behind the horse. Because of its dramatic appearance, Dr. Maris assigned this die state a separate variety number, similar to Cohen's designation of the 1804 C-5 "Spiked Chin" half cent. The reverse break is equally impressive, as it affects a majority of the shield. Nonetheless, the "Running Fox" at 8 o'clock on the reverse is the focus of collector interest, since it is a scarce *Guide Book* type. The present well-centered, tan-brown example has clear legends and minimally abraded surfaces. Listed on page 71 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 524

**1785 Immune Columbia, George III Copper
Vlack 15-85NY, Good Details**

- 3770** 1785 Immune Columbia Piece, George III Obverse — Damaged — NGC Details. Good. Vlack 15-85NY, W-1995, High R.6. A very rare variety associated with the private Machin's Mills mint in Newburgh, New York. The *Whitman Colonial Encyclopedia* comments, "Die deeply cut, so that central detail on struck coins is virtually absent. ... Most are found in low grade and / or have defective planchets." The reverse die was also muled with a Vermont die (RR-1). As expected, the present deep brown example has indistinct centers. The planchet is out of round due to border flaws at 2 and 8 o'clock, and a pair of straight clips, likely as issued, near 12 o'clock. The central reverse displays a few wispy pinscratches, and the head of the portrait has a slender diagonal planchet striation. Listed on page 55 of the 2014 *Guide Book*.
From *The Old New England Collection*.

**1785 Vermont / Immune Columbia Mule
Double Struck, Obverse Indent
Fine 12, RR-1**

- 3771** 1785 Vermont / Immune Columbia Copper — Double Struck With Obverse Indent — Fine 12 NGC. RR-1, Bressett 26-Z, W-2250, R.6. RR-1 is a curious mule, credited to Machin's Mills by the *Whitman Colonial Encyclopedia*. The obverse die is a standard Vermont Mailed Bust Right from 1787 or 1788, but the legends are amateurishly spaced. The reverse die, a better engraved Immune Columbia type, was also used to strike W-1960 and W-1980, where it was muled with Nova Constellatio obverses. RR-1 ranks among the three keys to a Vermont type set, along with the 1787 Bust Left RR-15 and the 1788 Backward C RR-30. The present example is double struck. The first strike was comparatively normal. The second strike, occurring between a planchet and the reverse die, was approximately 50% off center toward 4:30. The obverse was indented by the planchet during the second strike. Despite its unusual appearance, this piece remained in Early American commerce for likely a number of years. The deep lavender-brown surfaces are evenly granular and are free from mentionable marks. Listed on page 72 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 536

**1785 Vermont Copper, VF Details
VERMONT'S Landscape, RR-2**

- 3772** 1785 Vermont Copper, VERMONT'S — Damaged — NGC Details. VF. RR-2, Bressett 1-A, W-2005, R.2. A walnut-brown example of the introductory Vermont type. Although designated as damaged by NGC, marks are relatively minor, limited to a few tiny digs and scratches near each end of the landscape. The surfaces are moderately granular and display freckles of gray verdigris within the reverse recesses. As often seen on RR-2, a tornado-shaped die break extends from the 8 in the date through the plow. Listed on page 72 of the 2014 *Guide Book*.
From *The Old New England Collection*.

- 3773** 1785 Vermont Copper, VERMONT'S — Scratches — NGC Details. Fine. RR-3, Bressett 2-B, W-2010, R.5. The central devices are clear on this Landscape copper piece, as are about half of the peripheral legends. The date is sharp, and the steel-gray surfaces are moderately granular. Portions of the obverse exhibit faded pinscratches. Listed on page 72 of the 2014 *Guide Book*.
From *The Old New England Collection*.

**1786 Vermont Copper, XF40
VERMONTENSIMUM Landscape, RR-6**

- 3774** 1786 Vermont Copper, VERMONTENSIMUM XF40 NGC. RR-6, Bressett 4-D, W-2020, R.2. This is a richly detailed medium brown example of the popular Landscape type. Evenly struck and minimally abraded with moderately granular surfaces. The reverse is well-centered, while the obverse is misaligned several degrees toward 5 o'clock with the base of the date off the flan. Listed on page 72 of the 2014 *Guide Book*.
From *The Old New England Collection*. PCGS# 545

- 3775** 1786 Vermont Copper, VERMONTENSIMUM — Environmental Damage — NGC Details. VF. RR-7, Bressett 5-E, W-2025, R.3. This nicely defined example is predominantly olive-gold with areas of gunmetal-gray present. The surfaces are bright and only moderately granular. Landscape copper coins are a distinctive and collectible subset of the Vermont series. Listed on page 72 of the 2014 *Guide Book*.
From *The Old New England Collection*.

1786 Vermont Copper, AU
VERMONTENSIVM Landscape, RR-8

- 3776** 1786 Vermont Copper, VERMONTENSIVM AU50 NGC. RR-8, Bressett 6-E, W-2030, R.4. The double-punched 1 in the date attributes this scarce Landscape variety. This medium to deep brown example has pleasing sharpness and noticeable mint gloss. No marks are apparent and granularity is minimal. Although the obverse is slightly misaligned toward 7:30, the centering is good as all the legends are complete. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 545

- 3777** 1786 Vermont Copper, Baby Head — Obverse Counterstamped — NGC Details. Fine. RR-9, Bressett 7-F, W-2040, R.3. The counterstamp H. SHERMAN is entered vertically across the Baby Head. Dark steel-gray fields cede to walnut-brown high points. The surfaces are granular and the obverse exhibits a few thin marks. The date is full and INDE and VERMON are clear, although ETLIB and AUCTORI are very faint. A popular type. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3778** 1786 Vermont Copper, Baby Head — Scratches — NGC Details. Fine. RR-9, Bressett 7-F, W-2040, R.3. This piece is well-centered with a full date. Dark brown fields contrast with gray high points. The surfaces are glossy and free from granularity, although each side displays faded pinscratches and a few minor to noticeable planchet flaws. The dies are widely rotated. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

1786 Vermont Copper, VF Details
Popular 'Baby Head,' RR-9

- 3779** 1786 Vermont Copper, Baby Head — Bent — NGC Details. VF. RR-9, Bressett 7-F, W-2040, R.3. The Baby Head ranks among the best known Vermont types and is limited to the RR-9 die variety. The obverse of this medium to deep brown example is slightly misaligned toward 9:30, while the reverse is several degrees off center toward 7 o'clock, with the date off the flan. The lower obverse and upper reverse are wavy, and small to moderate marks are scattered. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3780** 1786 Vermont Copper, Bust Left — Rim Damage — NGC Details. Fine. RR-10, Bressett 8-G, W-2045, R.4. An example of one of the three Vermont varieties with dies attributed to Abel Buell, who was involved in the production of Connecticut coppers. This variety is known for the planchet generally being dark, as is the case with this specimen. The tiny planchet flaws in the centers of both sides reveal red hues. Areas of damage appear along the rims of this piece, most notably on the upper right obverse. A number of marks are present on the left portion of the portrait and the left obverse field exhibits a mark as well. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

1786 Vermont Copper, VF25
Mailed Bust Left, RR-11

- 3781** 1786 Vermont Copper, Bust Left VF25 NGC. RR-11, Bressett 9-H, W-2050, R.4. In 1786, Vermont Republic coinage abandoned the distinctive Landscape type in favor of the Bust and Seated Liberty motifs more familiar to the Early American public. This allowed the coppers to pass more readily in commerce. RR-11 is typically encountered in low grades, and the present example is sharper than most survivors. The steel-gray and charcoal surfaces are lightly abraded and moderately granular. The obverse is well-centered while the reverse is misaligned toward 2:30 with most of ET LIB off the coin. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 551

1787 Vermont Copper, Choice XF
BRITANNIA Mule, RR-13

- 3782** 1787 Vermont Copper, BRITANNIA XF45 NGC. RR-13, Bressett 17-V, W-2255, R.1. A popular mule variety that pairs a standard Vermont obverse with a British evasion halfpenny reverse. The reverse die was lapped early in its life, weakening the peripheral legends, especially the date. Examples are graded by the obverse sharpness, and the present piece displays bold hair detail on the portrait. The dark brown surfaces are well-centered, mildly granular, and essentially unabraded. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 554

- 3783** 1787 Vermont Copper, Bust Right VF20 NGC. RR-14, Bressett 10-K, W-2105, R.3. Hues of tan and brown add to the appeal of this nicely centered example. The legends and date remain clearly legible, further contributing to the desirability. Both sides reveal planchet flaws, with the diagonal flaw on the reverse being the more noticeable. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 560

3784 1788 Vermont Copper, ET LIB INDE — Tooled — NGC Details. Fine. RR-18, Bressett 19-X, W-2135, R.5. This piece, displaying rich chocolate-brown color, was struck upon what appears to be a George III halfpenny. Remnants of the host coin are visible at the upper right obverse. This variety represents the sole use of the obverse die. Hair-thin marks are present on this example, with one slightly deeper mark on each side. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

3785 1788 Vermont Copper, Bust Right VG10 NGC. RR-19, Bressett 13-L, W-2185, R.5. The deep brown fields provide lovely contrast against the tan devices on this well-circulated example. The obverse exhibits the rim cud that is generally present on this variety, extending clockwise from the R in AUCTORI. Several planchet flaws, including one at the upper reverse, appear along with scattered hair-thin marks. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 563

3786 1788 Vermont Copper, Bust Right — Burnished — NGC Details. VF. RR-22, Bressett 10-Q, W-2165, R.5. The surfaces of this piece reveal hues of tan, brown, and gold. Among the diagnostics for this variety is that the 7 in the date is lower than the other digits. Also, the reverse die was used nowhere else. Several planchet flaws are present, but they are minimally distracting, if at all. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

3787 1788 Vermont Copper, Bust Right Fine 12 NGC. RR-25, Bressett 16-U, W-2195, R.3. Rich chocolate-brown color is present on this circulated piece. This variety includes crosses following the text in the legends along with a small rectangular section at the location where the neck meets the mail in the portrait, due to a piece missing from the die. A planchet striation appears on the upper reverse. Scattered hair-thin marks are present, but are generally faint and undistracting. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 563

3788 1788 Vermont Copper, Bust Right — Corrosion — NGC Details. VF. RR-27, Bressett 18-W, W-2205, R.2. Brown and steel-gray colors appear on this example which exhibits uniform corrosion on both sides. Nonetheless, the coin retains a strong level of design detail, which, along with the pleasing centering on both sides, adds to the appeal. This obverse design appears solely on this variety and includes unique punctuation. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

**1788 Vermont Copper, Fine 12
Rare RR-28 Variety**

3789 1788 Vermont Copper, Bust Right Fine 12 NGC. RR-28, Bressett 21-U, W-2215, R.6. Two obverse stars, one after VERMON and the other before AUCTORI, attribute this elusive Vermont variety. The reason for the rarity of RR-28 is undoubtedly because of the heavy horizontal die break between 4 and 8 o'clock. This deep brown example is well centered and minimally granular. The central reverse is typically struck and displays a few inconsequential thin marks. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 563

**1788 Vermont Copper, VF Details
Bust Right, RR-28**

3790 1788 Vermont Copper, Bust Right — Environmental Damage — NGC Details. VF. RR-28, Bressett 21-U, W-2215, R.6. A tan-brown example of the rare RR-28, distinguished by two stars that bookend the top of the portrait. The evenly granular surfaces display occasional faded thin marks. A straight clip is noted near 12 o'clock, though the date is complete aside from the base of the 88. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

3791 1788 Vermont Copper, Bust Right — Corrosion— NGC Details. VG. RR-29, Bressett 22-U, W-2220, R.5. One of the characteristics of this variety is the die crack present above the head, extending along the forehead and nose to the R of AUCTORI. The use of the obverse die appears solely on this variety. The surfaces display copper and pink tints on both sides of this piece, with the centers revealing a number of hair-thin marks. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection.

3792 1788 Vermont Copper, GEORGIUS III REX — Damaged — NGC Details. Fine. RR-31, Bressett 24-U, Miller 100-I, W-2260, High R.4. Designed to pass in circulation, the variety known as Ryder-31 is a mule, pairing an evasion British halfpenny obverse with a Vermont reverse. These are sometimes referred to as a Vlack Machin's Mills halfpenny. The outer reverse of this specimen retains a strong level of detail, with the central device displaying a number of small, irregular planchet flaws. Several indentations and marks are present on the reverse. Listed on page 73 of the 2014 *Guide Book*.
From The Old New England Collection.

3793 1781 North American Token VF30 NGC. The reverse, featuring a sailing ship and the word COMMERCE, is evocative of Canadian tokens issued around the same period. Breen believed the North American tokens were struck in Ireland. This circulated example displays strong centering and chocolate-brown color. The obverse shows a few hair-thin marks, while the reverse exhibits a scattered tiny rim nicks. Listed on page 73 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 589

1787 Auctori Plebis Token, W-8770, AU53

- 3794 1787 Auctori Plebis Token AU53 NGC. Breen-1147, W-8770, R.3** The obverse of the Auctori Plebis token bears an uncanny resemblance to Connecticut Draped Bust Left copper pieces also struck in 1787. However, the presence of a crowned lion on the reverse indicates a British origin. The low relief motifs were deliberately intended to imply high point wear, even on Uncirculated examples, to facilitate acceptance in commerce. The present copper has minimal wear though the novice might grade it VF. The glossy, dark brown surfaces display a few unimportant thin marks. Listed on page 72 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 601

- 3795 1787 Auctori Plebis Token VF30 NGC.** The Auctori Plebis pieces are British Conder tokens and did not circulate in America. However, they have long been considered by many as American Colonial coinage, perhaps because the obverse design is similar to that found on Connecticut coppers. This example has a uniface obverse with the AUTORI PLEBIS legend, but the bust differs and is facing right. This piece displays slightly glossy chocolate-brown surfaces. A small mark in the central obverse poses minimal distraction, if any. Listed on page 74 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 601

**1787 Fugio Cent, XF Details
Club Rays, Rounded Ends
15% Off Center, N. 4-E**

- 3796 1787 Fugio Cent, Club Rays, Rounded Ends — Struck 15% Off Center, Holed — NGC Details. XF. N. 4-E, W-6685, R.3.** The scarce Club Rays subtype. Struck off center toward 3 o'clock. The date and right-side cinquefoils are absent. Planchet imperfections are minor and relegated to the left sundial border and the ring located at 5 o'clock. The struck surface is unabraded but the unstruck planchet is holed at 9 o'clock. Listed on page 88 of the 2014 *Guide Book*.
From The Old New England Collection.

- 3797 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays VF35 NGC. N. 8-X, W-6750, R.3.** The cone-shaped die break on the lower obverse is diagnostic for late die states of this collectible Newman variety. This is a pleasing chocolate-brown Fugio type coin. No planchet flaws are evident, and marks are unimportant relative to the grade. Listed on page 87 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 883

- 3798 1787 Fugio Cent, STATES UNITED, 1/Horizontal 1 VG8 NGC. N. 10-T, W-6705, R.5.** The obverse with a blundered 1 in the date was paired with both STATES UNITED and UNITED STATES reverses, with the former slightly scarcer than the latter. This medium brown Fugio copper has readable legends and lacks any mentionable abrasions. The crevices on the reverse show granularity. Listed on page 87 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 886

**1787 Fugio Cent, MS64 Brown
STATES UNITED, 4 Cinquefoils
N. 11-X, Pointed Rays**

- 3799 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS64 Brown NGC. N. 11-X, W-6790, R.4.** Mint red clings to protected areas, but most of this satiny and mark-free near-Gem is gunmetal-gray. Only a single planchet striation is evident, located above the reverse inner ring. The dies were misaligned, causing an intricate strike on the centers, the upper obverse, and lower reverse. The lower obverse and upper reverse show incompleteness of strike. The vertical crack at 6 o'clock on the reverse is characteristic of examples from the Bank of New York holdings. Listed on page 87 of the 2014 *Guide Book*.
From The Old New England Collection. PCGS# 883

**1787 Fugio Cent, Double Struck
Second Strike 80% Off Center
VF Details, N. 12-M**

- 3800 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays — Double Struck 80% Off Center, Environmental Damage — NGC Details. VF. N. 12-M, W-6800, R.3.** The first strike was normal. The second strike is widely off center toward 1:30, at 2 o'clock relative to the first strike. The obverse is Newman 12, and the reverse is confirmed by clash marks within the rings. The walnut-brown surfaces are unmarked but moderately granular and display traces of verdigris. Listed on page 87 of the 2014 *Guide Book*.
From The Old New England Collection.

**1787 Fugio Copper, VF25
STATES UNITED, Pointed Rays
Rare Newman 12-KK**

- 3801** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays VF25 NGC. N. 12-KK, W-6835, R.6. The rare Newman 12-KK variety is noteworthy for its heavy die crack along the lower reverse margin. The present example is nicely defined, and displays lavender-brown fields and chocolate-brown high points. The surfaces are lightly to moderately granular and display a few thin and unimportant marks. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**1787 Fugio Cent, MS62 Brown
Double Struck, N. 13-X**

- 3802** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays — Double Struck — MS62 Brown NGC. N. 13-X, W-6855, R.2. The first strike was proper, but the coin was struck a second time, approximately 15% off center toward 10 o'clock. The second strike, at 10:30 relative to the first strike, occurred between the obverse die and a planchet. Dates from both strikes are bold, and the sundial has unusual sharpness. The medium brown surfaces appear unabraded, although several small planchet flaws are scattered. The Bank of New York hoard contained many Uncirculated 'X' reverse Fugio coppers, but few were double struck. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**1787 Fugio Cent, MS63 Brown
Pointed Rays, Cinquefoils
STATES UNITED, N. 13-X**

- 3803** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS63 Brown NGC. N. 13-X, W-6855, R.2. Glimpses of mint red are plentiful, although the open fields and motifs are brown. No marks are visible on this satiny example. The grade is determined by a darkly toned mint-made lamination beneath the E in ONE and moderate incompleteness of strike along the left borders. The remainder of the coin is sharp. The left and right obverse fields are prominently clashed, characteristic of Bank of New York N. 13-X Fugio copper pieces. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**1787 Fugio Cent, MS64 Brown
Pointed Rays, STATES UNITED
Cinquefoils, N. 13-X**

- 3804** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS64 Brown NGC. N. 13-X, W-6855, R.2. Traces of the initial fire-red color linger near peripheral elements, although the fields and high points are medium brown. The glossy surfaces are unabraded, but we note two small roundish strike-throughs, one each on the sundial blade and the left cheek of the sun. At least two sets of clash marks from the rings accompany the date and FUGIO. The strike is crisp except for softness on the lower left obverse border. The slender vertical die crack at 6 o'clock on the reverse, along with the high grade, makes it likely that the present piece was once part of the Bank of New York holdings. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**1787 Fugio Cent, Choice Fine
Double Struck, Pointed Rays
Scarce Newman 16-N**

- 3805** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays — Double Struck, Second Strike 35% Off Center — Fine 15 NGC. N. 16-N, W-6925, R.3. The first strike was well-centered, but this Fugio copper coin was struck a second time, widely off center toward 1:30. The second strike is at 11:30 relative to the first impression. Unlike other double struck Fugio cents from the Old New England Collection, there was no intervening planchet involved for the second strike. MIND YOUR BUSINESS is sharp and WE ARE ONE is readable, allowing prompt attribution. The date is present from the first strike, although the 1 is faint. The charcoal-gray and walnut-brown surfaces are moderately granular. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**1787 Fugio Cent, Good 6
Reverse Mirror Brockage
Newman Reverse M**

- 3806** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays — Mirror Brockage on Reverse — Good 6 NGC. Newman Reverse M. This Fugio brockage was struck between the reverse die and the reverse of a previously struck example. Despite its curious appearance, the coin must have remained in Early American commerce for many years. No lettering is evident, but identification of the reverse is nonetheless possible due to a linear clash through two rings. This clash is evident near 3 o'clock relative to the reverse of the holder. The clash is similar to that seen on N. 22-M and later die states of N. 12-M. The predominantly chocolate-brown surfaces are mildly granular and display steel-gray toning in protected areas. A loupe reveals minor contact and a few mint-made planchet flaws. Listed on page 87 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 883

**'1787 New Haven Restrike' Fugio Cent
MS66 Red and Brown, N. 104-FF**

- 3807** 1787 Fugio Cent, New Haven Restrike, Copper MS66 Red and Brown NGC. N. 104-FF, W-17560. Walter Breen referred to the New Haven Restrike as the Guinea Pig of American numismatics. The latter is neither a pig, nor from Guinea, and the former is from Waterbury and was struck from copy dies. Current belief is that they were made circa-1859 at the behest of Horatio N. Rust, by the Scovill private mint. They are readily identified by their narrow rings and a prominent chin on the sun, and have been adopted as part of the Fugio series by most collectors. A majority of copper examples are brown, but the present piece is principally orange-gold. The centers have mellowed to rose and tan. Surfaces are pristine aside from inconsequential carbon. A later die state with bold cracks along the left obverse border. Listed on page 88 of the 2014 *Guide Book*. From *The Old New England Collection*. PCGS# 917

**Wyatt Copy Pine Tree Sixpence, MS63
Noe L, W-14072**

- 3808** (circa-1850) "1652" Pine Tree Sixpence, Wyatt Copy MS63 NGC. Noe-L, W-14072, R.6. Thomas Wyatt of New York City made denomination set copies of Massachusetts silver coinage, including the New England, Oak Tree, and Pine Tree series. Wyatt struck examples in silver, then sold the dies to Edwin Bishop, who struck additional pieces in both silver and copper. Wyatt was also the maker of the Good Samaritan shilling, the subject of a famous reference by numismatist Eric P. Newman. The present Pine Tree sixpence Wyatt copy is evenly struck and satiny. The olive-gray surfaces are unabraded and appear much nicer than the designated MS63 grade. From *The Old New England Collection*. PCGS# 919

- 3809** (circa 1863) 1785 Inimica Tyrannis / Confederatio, Small Circle, Bolen Copy XF40 NGC. K-3, M. JAB-8, W-14250, R.5. John Bolen's copy of the very rare W-5635 original. Both sides display several slender, dull raised die flaws. An unblemished deep brown example of this rare Bolen copy. From *The Old New England Collection*.

- 3810** (circa 1863) 1785 Inimica Tyrannis / Confederatio, Small Circle, Bolen Copy AU58 NGC. K-3, M. JAB-8, W-14250, R.5. This is an example of John Bolen's well-made imitation of the very rare W-5635 original. The present chocolate-brown example displays minor wear from light non-numismatic handling but has no mentionable detractors. From *The Old New England Collection*.

**John Bolen Copy of the
Eagle and Indian Excelsior Copper
MS66 Red and Brown, W-14370**

- 3811** (circa 1869) Eagle and Indian Excelsior Copper, Bolen Copy, MS66 Red and Brown NGC. K-7, M. JAB-36, W-14370, R.6. John Bolen's copy of the extremely rare W-5800 Excelsior copper. The *Whitman Colonial Encyclopedia* states, "always lightly struck at the center of both dies." However, that comment is incorrect, since the present piece is well struck throughout. The fields retain substantial orange-gold, particularly at the borders. The devices are medium brown. Unabraded, and limited in grade only by very minor carbon.
From The Old New England Collection. PCGS# 919

- 3812** (circa 1869) 1787 George Clinton / Excelsior Copper, Bolen Copy MS62 Brown NGC. K-8, M. JAB-37, W-14390, R.6. A golden-brown example of this well-made Bolen copy, which imitates the very rare W-5790 Clinton-Excelsior copper. This coin was struck moderately off center toward 1 o'clock, with portions of the peripheral legends off the flan. The protected areas display minor build-up, but the surfaces are devoid of marks.
From The Old New England Collection.

**George Clinton, Eagle on Globe Copper
Bolen Copy Dies, MS66 Red and Brown
W-14390, Rarity-7**

- 3813** (circa 1869) George Clinton / Eagle on Globe Copper, Bolen Copy, MS66 Red and Brown NGC. K-12, M. JAB.M-13, W-14390, R.7. John Bolen made copy dies for several very rare New York State Early American varieties, including W-5790 and W-5800. The former's obverse features soldier and legislator George Clinton, and the latter's reverse depicts an eagle on a globe. These two copy dies were muled to strike the present extremely rare variety. This is an essentially pristine example that boasts a full strike and undisturbed surfaces. The borders are peach-red, while the centers are toned medium brown.
From The Old New England Collection. PCGS# 919

**Bolen Muling of George Clinton
And Indian Copy Dies, W-14570
MS66 Red and Brown**

- 3814** (circa 1869) George Clinton / Indian Copper, Bolen Copy MS66 Red and Brown NGC. M. JAB.M-14, W-14570, R.8. This is an example of the John Bolen muling of copy dies for the W-5790 and W-5795 obverses. According to the *Whitman Colonial Encyclopedia*, only five pieces were struck from this die pair. Mint red lingers in the recesses of the design, while the open fields and high points are steel-gray. The surfaces are devoid of contact, and only microscopic carbon denies perfection.
From The Old New England Collection.

- 3815** (circa 1863) 1778 Non Dependens Copper, Robinson Copy, MS62 Brown NGC. K-6, W-15250, R.5. The exact status of Alfred S. Robinson's copy of the unique W-14800 original as an Early American variety has been contested since its 1858 discovery. The Robinson copy is well-engraved and provides a fine substitute. The present sharply struck example has an ebony-brown obverse with faded red lingering in protected areas. The reverse is mahogany-brown and tan.
From The Old New England Collection.

**Idler Copy of the Maryland Denarium, MS67
White Metal, W-15675**

- 3816** (circa 1860) Maryland Denarium, Idler Copy, White Metal MS67 NGC. K-2, W-15675, R.6. William K. Idler was a Philadelphia coin dealer, best known today for the previously unknown proof 1884 and 1885 Trade dollars that emerged from his estate. Just prior to the Civil War, Idler struck several die varieties of store cards in various metals, including the present copy of the extremely rare Maryland Denarium or Penny (W-1000). This sharply struck white metal example is lightly toned olive-gold and displays satiny luster. Pristine, aside from a faint mark near the N in DENARIUM.
From The Old New England Collection. PCGS# 919

St. Patrick Halfpenny
W-11540, An Attractive VF Example

- 3817 (1670-75) St. Patrick Halfpenny VF20 PCGS. CAC. W-11540.** Listed on page 41 of the *Guide Book*, the St. Patrick Halfpenny is an interesting Pre-Federal issue usually associated with Mark Newby, who came to America from Dublin, Ireland in 1681 with a supply of St. Patrick coppers (farthings and halfpennies). The coinage was made legal tender by the General Assembly of New Jersey in May, 1862, although St. Patrick coppers circulated throughout the colonies.

This example is the larger diameter halfpenny — less commonly found than the smaller farthings — and features a distinctive brass “splasher” on the crown. An anti-counterfeiting device, the brass insert also added a golden accent to the crown, perhaps in reference to the FLOREAT REX legend (“May the King Prosper”). This VF20 example is a smooth, chestnut brown with a prominent splasher — superior to most seen, which are often found dark, corroded, or missing the brass insert. PCGS# 46

Thick Planchet London Elephant Token, MS64 Brown
Beautifully Preserved With Traces of Original Red

- 3818 (1694) London Elephant Token, Thick Planchet MS64 Brown PCGS. CAC. Hodder 2-B, W-12040, R.2.** A near-Gem example of the usually seen variety. Traces of original red color remain visible in some of the lower areas of the token amidst a general dark chocolate hue, and the surfaces are expectedly clear of post-striking marks. Soft luster is visible throughout. A couple of planchet flakes can be seen on the shield. Listed on page 47 of the 2014 *Guide Book*.

Ex: ANA Baltimore (Heritage, 7/2008), lot 882, which realized \$9,775. PCGS# 55

- 3819 1723 Rosa Americana Twopence AU58 PCGS. CAC. Martin 3-D, W-1334, R.2.** Generally toned deep brown, although lighter chestnut-tan resides within the legends. Crisply impressed and minimally abraded. Listed on page 43 of the 2012 *Guide Book*. PCGS# 128

- 3820 1723 Hibernia Halfpenny MS64 Red and Brown PCGS. CAC. M. 4.14-Fb.1, W-13470, R.3.** The base of the second I in HIBERNIA is repunched. An unabraded near-Gem with good luster and a hint of mint-made planchet granularity on the high relief portrait. Examples that retain substantial mint red are very scarce. Listed on page 45 of the 2014 *Guide Book*. Ex: Boston ANA (Heritage, 8/2010), lot 3756. PCGS# 181

- 3821 1723 Hibernia Halfpenny MS65 Red and Brown PCGS. CAC. M. 4.73-Gb.9, W-13120, R.6.** An exceptional, high-end representative of William Wood's Hibernia Halfpenny. Glossy burgundy-brown patina graces both sides, with tinges of copper-red in the protected regions. Excellent surface preservation and boldly struck design elements only add to the outstanding visual appeal of this CAC-approved Gem. Listed on page 45 of the 2014 *Guide Book*. Population: 7 in 65 Red and Brown, 2 finer (3/14). PCGS# 181

1723 Hibernia Halfpenny, MS64 Red
Gorgeous M. 4.74-Gb.11 Specimen

- 3822 1723 Hibernia Halfpenny MS64 Red PCGS. M. 4.74-Gb.11, W-13120, R.4.** Brilliant red surfaces with full satin luster on both sides, showing slight mellowing on the highpoints. Preserved with its full red mint luster for nearly 300 years, the survival of such a splendid specimen is nothing less than a numismatic miracle. The coins were produced by William Wood for circulation in Ireland, but controversy ensued, causing Wood to relinquish his patent. Some examples did circulate in America, though not due to distribution of the coins, but solely through informal means. Listed on page 45 of the 2014 *Guide Book*.

Ex: Long Beach Signature (May 2008), lot 2104, which realized \$5,750. PCGS# 182

- 3823 1724 Hibernia Farthing AU50 PCGS. M. 3.22-E.2, W-12610, R.4.** A pleasing example with medium brown and tan surfaces, showing only a few trivial marks, including faint reverse hairlines. Listed on page 45 of the 2014 *Guide Book*. PCGS# 187

- 3824 1760 Hibernia-Voce Populi Halfpenny AU53 PCGS. CAC. N-9, Z. 6-C, W-1382X, R.1.** A pleasing, nicely centered example, although struck on an undersized flan, with the date and legend partially cropped on the reverse. Listed on page 49 of the 2014 *Guide Book*. PCGS# 262

1767-A French Colonies Sou, MS63 Brown
Desirable No RF Counterstamp Example

- 3825 1767-A French Colonies Copper Sou MS63 Brown PCGS Secure. CAC. Breen-700.** No RF Counterstamp. The 1767-dated coins were struck in Paris and intended for use in the West Indies. This Select example displays nice centering and chocolate-brown surfaces. The obverse exhibits strong design details while the reverse was struck with a late state die and lacks definition. The surfaces reveal minor planchet flaws. A lovely, well-preserved example. Listed on page 53 of the 2014 *Guide Book*. PCGS# 158651

Rhode Island Ship Token, MS60 Brown
Wreath Below Ship, W-1740

- 3826** 1778-1779 Rhode Island Ship Token, Wreath Below, Copper MS60 Brown PCGS. Betts-563, W-1740, R.4. A magnificently detailed Mint State example that has ebony-brown toning and generally smooth surfaces. A small edge flaw at 4 o'clock is of mint origin. The wreath below the ship was added to the die to replace the VLUGTENDE legend, which unintentionally implied that brave Admiral Howe's flagship fled the scene. Listed on page 50 of the 2014 *Guide Book*.
Ex: Orlando FUN Signature (Heritage, 1/2009), lot 89; Los Angeles Signature (Heritage, 8/2009), lot 18. PCGS# 576

(1778-1779) Rhode Island Ship Token, MS62 Brown
Betts-563, Wonderful Eye Appeal

- 3827** 1778-1779 Rhode Island Ship Token, Wreath Below, Copper MS62 Brown PCGS. CAC. Betts-563, W-1740, R.4. The history of the Rhode Island ship medals is not known, including which country they were struck in and their intended message, with some believing they were one of many political and satirical medals struck by the Dutch. In any event, surviving examples are extremely popular and this is a particularly appealing specimen. Hues of brown and gold are present on this piece exhibiting a pleasing strike. The few marks present are minor in nature. Listed on page 50 of the 2014 *Guide Book*. PCGS# 576

Rhode Island Ship Token, MS60
Wreath Below, Pewter, W-1745

- 3828** 1778-1779 Rhode Island Ship Token, Wreath Below, Pewter MS60 PCGS. Betts-563, W-1745, High R.6. Though scholars debate whether the Rhode Island Ship medals or tokens were pro-American or pro-British, there is little doubt that the audience for them was Dutch, both from the inscriptions and from historical evidence. John Kleeberg, in correspondence published with Q. David Bowers in the *Whitman Encyclopedia of Colonial and Early American Coins*, wrote: "We know that at least one piece did pass through Dutch hands, because the first publication took place in a Japanese book ... and at that period only the Dutch were permitted to trade with Japan (via Deshima)."

Further information on that book can be found in *The Shogun's Painted Culture*, a wide-ranging scholarly work by Timon Screech reflecting on the shogunate in Japan. He notes briefly, "Kutsuki Masatsuna, daimyo of Fukuchiyama, was ... one of the chief Westernists of his day. He was also an energetic numismatist and in 1787 published a large book called *Western Coinage* (Seiy Senpu) which displayed, in a series of plates ordered by country, examples of tender from most European states and their colonies ..."

The nature of the *Seiy Senpu* makes it impossible to tell what metal was used to make the Rhode Island Ship piece depicted, but it was almost assuredly copper or brass, as the pewter pieces, such as the example offered here, are far rarer today. Though it shows no trace of wear, certain areas of the pewter, including spots on the margins and the bow of the ship, show effects from the passage of time. Still, this is a generally bright representative with excellent eye appeal and great historical worth. Listed on page 50 of the 2014 *Guide Book*. Population: 1 in 60, 4 finer (3/14).

Ex: Los Angeles Signature (Heritage, 7/2009), lot 1010. PCGS# 585

**Rhode Island Ship Token, MS64 PCGS
Wreath Below Ship, Betts-563**

- 3829 1778-1779 Rhode Island Ship Token, Wreath Below, Brass MS64 PCGS. Betts-563, W-1740, R.4.** The Rhode Island ship medal was struck in England circa 1779-1780, while the Revolutionary War was still in progress. The peripheral legends imply a Dutch audience for the medal, and refer to a British naval victory. This well struck piece is free from visible contact or carbon. Mellowed orange-red and yellow-gold color graces this original near-Gem. Listed on page 50 of the 2014 *Guide Book*. Population: 2 in 64, 0 finer (3/14). From our FUN Signature Sale (1/2004), lot 4046. PCGS# 587

**1773 Virginia Halfpenny, MS64 Red
With Period, Newman 26-Y**

- 3830 1773 Virginia Halfpenny, Period MS64 Red PCGS. N. 26-Y, W-1680, R.2.** Eight harp strings. Peach-gold luster dominates this nicely struck and unabraded Choice Virginia halfpenny. The king's cheek and neck have mellowed slightly, and the shield has a faint fingerprint fragment within the French quadrant, but the overall quality is exceptional. Listed on page 45 of the 2014 *Guide Book*. Ex: Long Beach Signature (Heritage, 5/2008), lot 2126, which realized \$2,990. PCGS# 242

- 3831 1773 Virginia Halfpenny, No Period MS62 Red and Brown PCGS. N. 27-J, W-1585, R.2.** The obverse has a small die dot off the lower lip, and the reverse has a repunched A in VIRGINIA. A frequently seen variety, here with olive devices, and splashes of blue patina over brilliant mint color on both sides. Listed on page 45 of the 2014 *Guide Book*. PCGS# 244

- 3832 1787 Massachusetts Half Cent AU53 NGC. Ryder 2-A, R.3.** Period after MASSACHUSETTS. A problem-free chocolate-brown example with moderate rub on the centers. Both sides show some weakness on the denticles. A large die lump (as struck) resides between E and T along the right reverse rim. Abrasions are almost nonexistent. Listed on page 59 of the 2014 *Guide Book*. PCGS# 296

- 3833 1788 Massachusetts Cent, Period AU53 NGC. Ryder 1-D, W-6190, R.3.** Massachusetts coppers are among the most well-made of all the state-issued copper coinages, generally produced on high-quality planchets. The present piece displays a bold strike and virtually complete detail. Medium chocolate-brown patina blankets the smooth surfaces, offering pleasing eye appeal. A few small, scattered spots of oxidation are noted, but are not overly detracting. Census: 13 in 53, 30 finer (3/14). PCGS# 311

**1788 Massachusetts Cent, MS63 Brown
Ryder 1-D, Sharply Struck**

- 3834 1788 Massachusetts Cent, Period MS63 Brown PCGS. Ryder 1-D, W-6190, R.1.** Ryder 1-D, R.1. The 78 in date is low. A well struck chestnut-brown Cent with unmarked surfaces and only minor flan imperfections. Infrequently found in Uncirculated grades. Listed on page 59 of the 2014 *Guide Book*. Population: 11 in 63 Brown, 4 finer as Brown, 1 finer as 63 Red and Brown (3/14). Ex: Milwaukee Central States (Heritage, 5/2004), lot 5022; St. Louis Central States (Heritage, 5/2005), lot 5015, which realized \$4,887.50. PCGS# 311

- 3835 1787 Connecticut Copper, Draped Bust Left AU50 PCGS. M. 33.2-Z.5, W-3340, R.1.** Rich auburn-brown patina blankets mainly glossy surfaces on this visually appealing Connecticut copper. Struck from damaged dies, as are all representatives of this variety; minor die rust is seen on the obverse around CONNEC, but is hardly detracting. Boldly struck in the margins, though some typical weakness is noted on the central devices. A very pleasing early American copper. Population: 17 in 50, 27 finer (3/14). PCGS# 370

- 3836 1788 Connecticut Copper, Mailed Bust Right XF45 PCGS. M. 2-D, W-4405, R.1.** An exceptional early die state example without the triangular die break that is frequently seen on the obverse. The reverse has a delicate die crack from the B to the shield. PCGS# 397

- 3837 1787 Nova Eborac Copper, Seated Left VF30 NGC. Breen-986, W-5755, R.3.** The obverse of this piece depicts a medium bust facing right with the inscription NOVA EBORAC at the left and right; the reverse portrays a seated figure facing left with VERT. ET LIB at the borders. Some minor granularity is noted, though the overall appearance is smooth with a dark brown patina. Strong central detail is present with clear legends. The date numerals are weak, as is common for this issue. Census: 5 in 30, 10 finer (3/14). PCGS# 478

- 3838** 1786 New Jersey Copper, Narrow Shield AU53 NGC. Maris 14-J, W-4810, R.1. One of the more obtainable New Jersey copper varieties. The present example displays exceptionally smooth auburn-brown surfaces with tiny hints of mint red remaining in the crevices. The strike is boldly impressed around the borders and on the reverse shield, though some minor weakness is noted on the central obverse. A beautifully preserved early copper. Census: 3 in 53, 16 finer (3/14). PCGS# 45423

**1787 New Jersey Copper, MS61 Brown
Maris 43-d, No Sprig Above Plow**

- 3839** 1787 New Jersey Copper, No Sprig Above Plow MS61 Brown NGC. Maris 43-d, W-5225, R.1. A familiar variety with a curved die line (as made) on the shield. This gently shimmering medium brown state copper has an impressively unabraded appearance. Double struck with a slight shift between strikes, affecting mostly peripheral elements. The major devices are bold. Listed on page 70 of the 2014 *Guide Book*.
Ex: Liberty Collection of U.S. Colonial Coinage (Heritage, 1/2008), lot 69, which realized \$2,530. PCGS# 506

**1787 New Jersey Copper, MS63 Brown
Exceptional Maris 46-e Example**

- 3840** 1787 New Jersey Copper, No Sprig Above Plow MS63 Brown PCGS. Maris 46-e, W-5245, R.1. Ex: Troy Wiseman Collection. Struck from an advanced state of the dies as evidenced by the lack of detail on the inner curve of the horse's neck and the pronounced bulging of the die in the date area (which still shows full digits). The center of the reverse is weak, from die damage rather than wear, as always seen on this variety. Remarkably well centered, this piece shows full sawtooth denticles on both sides and the brown patina is glossy with minor planchet porosity. Heavily die clashed with strong evidence of the outline of the shield in the right obverse field. A 1% curved clip at 5:30 is mint-made. One of the finest certified Maris-46e examples. Listed on page 69 of the 2014 *Guide Book*.
Ex: FUN Signature (Heritage, 1/2006), lot 3005; Troy Wiseman Collection, Part Two (Heritage, 1/2007), lot 737; FUN Signature (Heritage, 1/2009), lot 3553, which realized \$6,325. PCGS# 506
- 3841** 1787 New Jersey Copper, Sprig Above Plow XF45 PCGS. CAC. Maris 63-s, W-5375, R.2. Smooth auburn-brown patina covers both sides of this beautifully preserved New Jersey copper. The strike is bold, with notable definition on the shield lines, the horse's head, the legends, and the reverse border. An exceptional example that will satisfy the most discerning specialist. Listed on page 70 of the 2014 *Guide Book*. Population: 1 in 45, 0 finer (3/14). PCGS# 521277

**1785 Vermont / Immune Columbia Mule, VG8
Rare, One of the Finest Known, W-2250**

- 3842** 1785 Vermont Copper / Immune Columbia Muling VG8 NGC. CAC. RR-1, Bressett 26-Z, W-2250, Low R.6. The *Whitman Encyclopedia of Colonial and Early American Coins* describes this rare issue as: "Always seen on a small planchet that did not permit the border inscriptions to be completely struck. ... Despite their peculiar nature, this and other Machin's Mills mulings are 'official,' as that mint was an authorized producer of Vermont issues."
It should also be noted that only around 30 examples of this type are known to survive. The current piece is typically crude in its production quality, and struck on a small, flawed planchet. The mahogany toning across each side is even and clearly original, and the well-worn surfaces of the coin are essentially free of post-strike scratches or abrasions. Listed on page 72 in the 2014 *Guide Book*. Census: 1 in 8, 0 finer (2/14). PCGS# 536

- 3843** 1788 Vermont Copper, Bust Right VG10 NGC. RR-24, Bressett 16-S, W-2200, R.3. The obverse shows the bust facing right with VERMON AUCTORI at the borders, while the reverse depicts the seated figure facing left with the inscription INDE ET LIB encircling. Dark chocolate-brown patina covers both sides, with lighter brown accents. The surfaces are largely smooth, despite the low grade. The borders are strong, with all legends clearly visible. Census: 13 in 10, 65 finer (3/14). PCGS# 563

- 3844** 1783 Nova Constellatio Copper, Pointed Rays, Small US AU50 PCGS. CAC. Crosby 2-B, W-1865, R.2. This walnut-brown copper has light, even wear and has no relevant planchet imperfections. Smooth aside from a pair of faded, thin, brief marks on the upper reverse field. Listed on page 54 of the 2014 *Guide Book*. PCGS# 801

- 3845** 1787 Fugio Cent, STATES UNITED, Raised Rims VF20 NGC. N. 19-Z, W-6975, R.5. Pointed Rays. One of the rarer varieties of the popular Fugio copper, characterized by the raised rims on the reverse label. This piece displays smooth surfaces with glossy red-brown patina overall. Most design elements are bold, though some minor weakness is noted around the legend MIND YOUR BUSINESS. A couple small planchet laminations are seen near the border on the sun. A pleasing mid-grade example of this sought-after variety. Listed on page 88 of the 2014 *Guide Book*. Census: 1 in 20, 1 finer (3/14). PCGS# 877

- 3846** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays VF25 NGC. N. 17-S, W-6935, R.3. Pleasing copper-brown patina blankets both sides of this lightly circulated Fugio cent. The surfaces are largely smooth, with few of the minor imperfections common to this type. Evenly struck with strong definition throughout. Listed on page 87 of the 2014 *Guide Book*. PCGS# 883

- 3847** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays AU53 NGC. N. 7-T, W-6735, R.4. A scarce variety, here with a die crack from the border at 12:30, crossing the sun rays. This example has splendid tan and chocolate-brown surfaces with a few dark toning spots. An important Fugio cent. Listed on page 87 of the 2014 *Guide Book*. PCGS# 883

- 3848** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays AU55 PCGS. N.13-X, W-6855, R.2. Well-represented in the Bank of New York hoard, this variety is easily attributed by a vertical die crack at 6 o'clock on the reverse. This Choice About Uncirculated example displays rich burgundy patina over both sides, with attractive, problem-free surfaces. The strike is sharp in most regions, though some minor weakness is noted on BUSINESS. Clash marks are seen in the obverse fields, further adding to the character of this beautifully preserved example. Listed on page 87 of the 2014 *Guide Book*. PCGS# 883

**1787 Fugio Cent, MS63 Brown
N. 13-X, Pointed Rays, STATES UNITED**

- 3849** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS63 Brown NGC. N. 13-X, W-6855, R.2. Walnut-brown dominates though hints of mint red linger near relief transitions. Essentially unabraded, and carbon is minimal. Minor flan imperfections include a toned lamination near WE. A familiar die pairing and likely once part of the Bank of New York holdings. Listed on page 87 of the 2014 *Guide Book*. PCGS# 883

**1787 Fugio Cent, MS64 Brown
STATES UNITED, N. 12-X, W-6820, R.3.
Exceptional Surfaces, Sharp Strike**

- 3850** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS64 Brown NGC. N. 12-X, W-6820, R.3. Struck under contract with the American Congress and thus regarded as the first widely circulating federal coinage issue, Fugio coppers (or cents) were produced in quantity from many sets of hand-prepared dies. As such, minor varieties abound in this issue. The Newman 12-X variety, here represented, was among those present in the Bank of New York hoard, and as such is one of the more available varieties in Mint State.

The present example displays glossy, burgundy-brown patina with incredibly few of the typical planchet flaws common to Fugio cents. Uncharacteristically sharp striking adds to the visual appeal of this piece, with the only notable weakness present in the SS of BUSINESS. A variety-determining die crack is noted to the right of the sun, and another at 6 o'clock on the reverse. An exceptional piece of early American numismatics. Census: 32 in 64 Brown, 18 finer (3/14). PCGS# 883

**1787 Fugio Cent, MS64 Brown
N. 12-X, STATES UNITED**

- 3851** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays — Defective Planchet — MS64 Brown NGC. N. 12-X, W-6790, R.3. A popular Bank of New York variety. The glossy olive-brown surfaces are unabraded. The strike is even except on portions of the obverse margin. A planchet flaw affects the D in MIND and the SI in BUSINESS. It is also evident on the reverse inside the 12 o'clock ring. The reverse border also has minor planchet striations, most evident near 5 o'clock. Outstanding from a technical perspective. Listed on page 87 of the 2014 *Guide Book*. PCGS# 883

**1787 Fugio Cent, MS64 Red and Brown
Pointed Rays, STATES UNITED**

- 3852** 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS64 Red and Brown PCGS. N. 13-X, W-6855, R.2. A beautiful example that presumably originated in the famous Bank of New York hoard. Most such pieces have toned brown, but the present near-Gem has ample brick-red. The open areas are light brown. A sharply struck and problem-free piece with bold, overlapping obverse clashmarks from the reverse rings. Certified in a green label holder. Listed on page 87 of the 2014 *Guide Book*. Ex: Charlotte ANA Signature (Heritage, 3/2007), lot 11, which realized \$9,200. PCGS# 884

- 3853** 1787 Fugio Cent, UNITED STATES, Cinquefoils XF45 PCGS. N. 8-B, W-6740, R.3. Woodgrained olive and tan surfaces exhibit splashes of steel-blue on this pleasing Fugio cent. Minor planchet laminations are evident, with clash marks on the reverse. Traces of verdigris appear on both sides. Listed on page 87 of the 2014 *Guide Book*. PCGS# 889

- 3854** 1787 Fugio Cent, New Haven Restrike, Copper MS64 Brown PCGS. CAC. The "guinea pig" of American numismatics, Newman 104-FF is not from New Haven and is not a restrike, as it was struck from copy dies. However, it has been avidly collected since the 1860s. Sharply struck and satiny with chocolate-brown centers and generous amounts of the initial orange-red near the rims. Listed on page 88 of the 2014 *Guide Book*. PCGS# 916

- 3855** 1787 Fugio Cent, New Haven Restrike, Copper MS65 Red and Brown PCGS. N. 104-FF, W-17560. Original mint orange-gold illuminates the borders and obverse design recesses of this otherwise chocolate-brown Gem. An essentially pristine example of this widely collected mid-19th century copy. Encapsulated in a green label holder. Listed on page 88 of the 2014 *Guide Book*. Population: 14 in 65 Red and Brown, 5 finer (3/14). Ex: San Jose Collection of Colonial Coinage (Heritage, 1/2009), lot 88, which realized \$2,760. PCGS# 917

- 3856 1789 Mott Token, Thin Planchet, Plain Edge AU50 NGC. Breen-1021.** Struck in copper. A grandfather clock (called a regulator) is in the central obverse, while the reverse depicts an eagle at the center with the date above. Advertising inscriptions surround both peripheries. Significant die deterioration is present, as is normal for this issue; die rust can be seen among the legends around the borders and an extensive die break is present at the upper left corner of the obverse clock. The central surfaces are smooth, though some characteristic striking softness is noted in the devices. All inscriptions are clear, which is exceptional for this issue. Census: 1 in 50, 4 finer (3/14). PCGS# 604

**Kentucky Token, MS65 Red
Scarce LANCASTER Edge, W-8810**

- 3857 (1792-94) Kentucky Token, LANCASTER Edge MS65 Red PCGS. Breen-1156, W-8810, R.5.** A Gem Red example of the scarce lettered edge PAYABLE AT LANCASTER variety, this piece exhibits a strong degree of design definition aside from small portions at the centers as is often the case. Bold shades of copper, orange, and red along with appealing luster provide this specimen with exceptional eye appeal. A thin die break extends from the E in STRENGTH to the hand. Listed on page 75 of the 2014 *Guide Book*. PCGS# 625

**1795 Talbot, Allum & Lee Cent, MS64 Red and Brown
Fuld-1, Particularly Attractive Reverse**

- 3858 1795 Talbot, Allum & Lee Cent MS64 Red and Brown PCGS. Fuld-1, W-8620, R.1.** This charming Talbot, Allum & Lee storecard has substantial mint red across the central reverse, and the legends also offer ample orange-red. The obverse field has mellowed somewhat, and olive toning visits the obverse devices and portions of the reverse periphery. Well struck and carefully preserved. Listed on page 76 of the 2014 *Guide Book*.
Ex: Long Beach Signature (Heritage, 5/2008), lot 2198, which realized \$2,530. PCGS# 641

- 3859 1783 Georgivs Triumpho Token XF40 NGC. Baker-7, W-10100, R.3.** An attractive medium-brown example with hints of olive on the high points. Pleasing surfaces show a few trivial imperfections on this example that is listed on page 79 of the 2014 *Guide Book*. PCGS# 664

**1783 Washington & Independence Cent, PR64 Red
Draped Bust, No Button, Copper Restrike, Baker-3**

- 3860 1783 Washington & Independence Cent, Draped Bust, No Button, Copper Restrike, Engrailed Edge PR64 Red PCGS. Baker-3, W-10370, R.5.** *Ex: Troy Wiseman Collection.* A boldly struck brick-red near-Gem. Free from contact, and only a tiny toning fleck or two precludes a finer grade. A restrike made in the mid-19th century by English entrepreneur W.S. Lincoln. Listed on page 80 of the 2014 *Guide Book*.

Ex: New York Signature (Heritage, 6/2005), lot 5016; Troy Wiseman Collection, Part Two (Heritage, 1/2007), lot 249; The San Jose Collection of Colonial Coinage (Heritage, 1/2009), lot 113, which realized \$2,530. PCGS# 687

- 3861 1783 Washington & Independence Cent, Draped Bust, No Button, Silver Restrike PR63 NGC. CAC. Baker-3A, W-10380, R.6.** Engrailed edge. The W.S. Lincoln proof restrike is identified by a Large 3 in the date. The well-executed dies principally struck copper specimens, although a number of high quality silver proofs are known. The present fully struck piece has a few delicate hairlines on the reverse field, but is attractively toned autumn-gold and lime-green. Listed on page 80 of the 2014 *Guide Book*. Census: 2 in 63, 1 finer (3/14). PCGS# 688

**1791 Washington Liverpool Halfpenny
AU50, Baker-17**

- 3862 1791 Washington Liverpool Halfpenny, Copper AU50 PCGS. Baker-17, W-10650, R.6.** A rare Washington variety. The Baker-15 obverse is muled with a Liverpool halfpenny reverse, implying our first President also ruled over portions of Britannia. A well defined deep brown example without any relevant marks. Struck slightly off center toward 3 o'clock, favoring the left-side legends. PRESIDENT and HALFPENNY are partially off the flan. Listed on page 81 of the 2014 *Guide Book*. PCGS# 698

**1791 Washington Cent, MS64 Brown
Baker-16, Small Eagle**

- 3863** 1791 Washington Small Eagle Cent MS64 Brown PCGS. CAC. Baker-16, W-10630, R.3. Teenaged English engraver John Gregory Hancock is credited with the dies of this well-made Washington variety, struck in hopes of securing a coinage contract with the Federal government. The present smooth and prooflike near-Gem is lavender-brown aside from glimpses of mint red near the obverse letters. Listed on page 81 of the 2014 *Guide Book*. PCGS# 705

**1791 Washington Cent, MS64 Brown
Small Eagle, Baker-16**

- 3864** 1791 Washington Small Eagle Cent MS64 Brown NGC. CAC. Baker-16, W-10630, R.3. This Choice representative is predominantly deep brown, but powder-blue fills the legends when the piece is rotated beneath the light. Crisply struck and satiny with no mentionable marks. A desirable near-Gem. Listed on page 81 of the 2014 *Guide Book*. Census: 5 in 64 Brown, 2 finer (3/14). Ex: Orlando FUN Signature (Heritage, 1/2010), lot 38, which realized \$4,485. PCGS# 705

- 3865** 1795 Washington Grate Halfpenny, Large Buttons, Lettered Edge AU58 PCGS. Baker-29, W-10990, R.6. The rare Lettered Edge variant of the Large Buttons Grate token, here with substantial golden-tan, faded from original red. Both sides have blue-steel toning over reflective surfaces. Population: 4 in 58, 11 finer (3/14). Listed on page 83 of the 2014 *Guide Book*. PCGS# 743

**Liberty and Security Penny, MS63 Brown
Washington Bust Left, Baker-30**

- 3866** Undated Washington Liberty & Security Penny MS63 Brown PCGS. Baker-30, W-11050, R.2. The Washington portrait is based upon the 1791 large and small eagle cents, while the reverse is derived from the 1795 Liberty and Security token. A well struck chocolate-brown example with mahogany and sea-green undertones. The fields display minor hairlines but there are no contact marks. Listed on page 84 of the 2014 *Guide Book*. PCGS# 767

**Washington Liberty & Security Penny, MS64 Brown
Lustrous Baker-30 Plain Rims Example**

- 3867** Undated Washington Liberty & Security Penny MS64 Brown PCGS. CAC. Baker-30, W-11050, R.2. Plain Rims. A nice, lustrous near-Gem Brown example of this available Washington issue, far finer than typically seen. Medium chocolate-brown surfaces show few signs of contact. Population: 22 in 64 (1 in 64+) Brown, 5 finer (3/14). Listed on page 84 of the 2014 *Guide Book*. PCGS# 767

- 3868** Undated Washington Liberty & Security Penny Uncertified. Baker-30D. Fire-gilt copper. This rare Washington token is listed in the catalog *Medallic Portraits of Washington*, second edition, by Russ Rulau and George Fuld; about nine pieces are known. Described in the reference catalog:

"Uniformed bust left GEORGE WASHINGTON. around Rv: Spade-shaped shield, divided per pale, seven pales in gules (red) in dexter, 15 mullets (stars) in sinister. The crest is a scrawny eagle displayed, clutching olive branch and three arrows. Around: LIBERTY AND SECURITY. Edge Lettered: AN ASYLUM FOR THE OPPRESS'D OF ALL NATIONS."

There is a small planchet lamination at the 1 o'clock position that takes some of the luster away from this American rarity. A personal inspection of this important and historical piece is suggested. Ex: Long Beach Signature (Heritage, 9/2006), lot 6406.

- 3869** Undated Washington Success Medal, Large Size, Plain Edge AU53 NGC. Baker-265A, W-10905, R.5. Undated, but probably produced circa 1793. Struck in brass. The obverse portrays a uniformed bust of Washington facing right with GEORGE WASHINGTON at the borders; the reverse depicts an eye with diverging rays at the center and SUCCESS TO THE UNITED STATES around the margins. A characteristic die break runs from 11 to 3 o'clock on the obverse. Rich olive patina covers both sides, with small remnants of brass-yellow in the obverse crevices. Census: 1 in 53, 10 finer (3/14). PCGS# 779

**1792 Getz Washington Cent
Copper, Plain Edge, Baker-25
XF Details**

3870 1792 Washington Getz Pattern Cent, Small Eagle — Tooled — PCGS Genuine. XF Details. Baker-25, W-10775, R.6. Struck in copper with a plain edge. Peter Getz of Lancaster, Pennsylvania engraved the dies based on Baker-16, in anticipation of a contract for privately made Federal coinage. Washington, however, considered the designs unduly monarchical, and preferred a public mint, established later that year in Philadelphia. This well defined ebony-brown example is moderately granular. The obverse field is smoothed, as is Washington's coat and the field near the wings. Nonetheless a rare and bold example of the Getz effort. Listed on page 82 of the 2014 *Guide Book*. PCGS# 921

3871 (1863) Bar Copper, Bolen Copy AU50 PCGS. Musante JAB-2, W-14200, R.5. Bolen dies 1-A. A scarce facsimile of the rare (circa 1785) Bar coppers, and the first colonial copy produced by John Bolen, circa 1863. Differentiated from the original by the S of USA overlapping the A, the opposite of the earlier pieces. Rich olive toning blankets both sides of this well-preserved example, with no signs of environmental impairments. All Bolen facsimiles are scarce and highly collectable pieces of numismatic history. PCGS# 524067

HALF CENTS

3872 1793 — Surface Damage — PCGS Genuine. C-2, B-2, R.3. The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of a Good specimen that has been Damaged and Cleaned. An unnatural, pale burgundy patina covers much of both sides, though remnants of chocolate-brown remain in the protected regions. The surface damage is mainly limited to a few old scratches on the reverse and an old dig in the left obverse field. A pleasing example, given the low-grade condition. Our EAC grade AG3. NGC ID# 2222, PCGS# 1000

1793 C-2 Half Cent, Fine 12

3873 1793 Fine 12 PCGS. C-2, B-3, R.3. The obverse die is shared with the initial variety, C-1, and the reverse die later coined C-3. A medium to dark brown representative of the first year and single year Liberty Cap, Bust Left type. Evenly defined and only moderately abraded with slight field granularity usual for the grade. Our EAC grade VG10. NGC ID# 2222, PCGS# 1000

1793 C-3 Half Cent, VF Details

3874 1793 — Environmental Damage — PCGS Genuine. VF Details. C-3, B-3, R.3. This first-year half cent has considerable design definition. All legends are bold. The dark lavender-brown surfaces are granular, and the high points of the portrait exhibit parallel hair-thin marks. The only date of the very scarce Liberty Cap, Bust Left type. Our EAC grade VG8. NGC ID# 2222, PCGS# 1000

**1793 C-4 Half Cent, VF Details
Single-Year, First-Year Type**

3875 1793 — Environmental Damage — PCGS Genuine. VF Details. C-4, B-4, Low R.3. Manley Die State 2.0. Generally golden-brown, although hints of sea-green are also extant. The sharpness approaches XF, but the surfaces are moderately and evenly granular. Free from evident abrasions. The final die marriage of the Bust Left, Liberty Cap type. Our EAC grade VG10. NGC ID# 2222, PCGS# 1000

**1793 C-4, B-4 Half Cent, XF Details
First Year of Philadelphia Mint Coinage**

3876 1793 — Corrosion — NGC Details. XF. C-4, B-4, Low R.3. This dark brown first year half cent has excellent detail, with corroded surfaces, pit marks, and minor planchet flaws, including lamination at the upper right part of the reverse. The devices are slightly lighter brown, and overall, this piece is still attractive. Our EAC grade Fine 12. NGC ID# 2222, PCGS# 1000

3877 1794 Fine 12 PCGS. C-2a, B-2b, High R.2. Medium chocolate-brown patina covers both sides of this pleasing mid-grade representative. The surfaces show a few minor imperfections, but are free of environmental roughness and granularity. Strong detail for the grade is seen on the obverse, while some minor weakness is noted around the reverse border. Our EAC grade Good 6. NGC ID# 2223, PCGS# 1003

**1794 Half Cent, Fine 12
C-3a, Better Die Marriage**

3878 1794 Fine 12 PCGS. C-3a, B-5b, R.5. Manley Die State I. The Small Letters Edge is presumed. A mahogany-brown representative of this better Cohen variety. All legends are clear, and the moderately abraded surfaces are minimally granular. Minor edge nicks are noted on the obverse at 3 and 5 o'clock, and on the reverse at 9:30. Our EAC grade VG8. NGC ID# 2223, PCGS# 1003

3879 1794 Fine 15 PCGS. C-4a, B-6b, R.3. Manley Die State 2.0. The Small Letters Edge subvariety is presumed, as the old green label holder precludes examination of the edge. A walnut-brown representative with ample detail and only mildly granular surfaces. A slender vertical mark is left of the 9 in the date. Our EAC grade VG10. NGC ID# 2223, PCGS# 1003

**1794 Half Cent, AU55
Impressive High-Grade Example**

3880 1794 AU55 PCGS. C-4a, B-6b, R.3. Manley Die State 2.0. The 9 in the date is low, and the E in UNITED is entered high. The Small Edge Letters subvariety is assumed, since the Large Edge Letters is extremely rare. An intricately detailed mahogany-brown early half cent with generally smooth surfaces. A faint die crack (as made) wanders across STATES OF. Struck from clashed dies. Our EAC grade XF40.

Ex: Fred Miller Collection (Heritage, 3/2004), lot 5013, which realized \$6,727.50.

From The Philip Poier Collection. NGC ID# 2223, PCGS# 1003

**1795 Liberty Cap Half Cent, AU Details
C-1, B-1, Lettered Edge With Pole**

3881 1795 Lettered Edge — Rim Damage — NGC Details. AU. C-1, B-1, R.2. Manley Die State 1. Several small indentations appear at intervals on the rims, as if the coin was lightly squeezed in a vise or gripped by some other tool. A separate area of damage is seen on the reverse, where it appears the coin was struck through wire or steel rule. Otherwise, this early half cent is pleasing and unmarked with strong details and little wear on smooth, glossy surfaces. Our EAC grade Fine 15.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1803 Half Cent, MS62 Brown
C-3, Late Die State**

3882 1803 MS62 Brown PCGS. CAC. C-3, B-3, R.1. Manley Die State 5.0. This wonderful half cent has chestnut-brown surfaces with strong cartwheel luster and a few splashes of steel toning on the obverse devices. The strike is weak at Liberty's shoulder, and at the upper left part of the wreath, typical of the variety. Our EAC grade AU55. Population: 3 in 62 Brown, 5 finer (3/14).

Ex: Orlando FUN Signature (Heritage, 1/2012), lot 4041, which realized \$4,456.25. NGC ID# 222E, PCGS# 1060

**1804 Half Cent, MS64 Brown
No Stems, Plain 4, C-13**

- 3883** 1804 Plain 4, No Stems MS64 Brown NGC. C-13, B-10, R.1. Manley Die State 3.0 with a rim break above the MER in AMERICA. A satiny and nicely struck Draped Bust type coin. Primarily medium brown, although hints of faded red are evident at the borders. A few faded lines on the left obverse field are all that limit the grade. Our EAC grade MS60.
Ex: Pre-Long Beach Auction (Ira & Larry Goldberg, 5/2009), lot 89, which realized \$4,370. NGC ID# 222F, PCGS# 1063

- 3884** 1805 Medium 5, No Stems AU53 NGC. C-1, B-1, R.1. Manley Die State 2.0. Rich burgundy patina covers the glossy surfaces of this Almost Uncirculated representative. Well-centered, with complete denticles on both sides, the central devices display bold detail and give this problem-free piece a high degree of eye appeal. Our EAC grade VF30. NGC ID# 222H, PCGS# 1081

**1805 Half Cent, MS62 Brown
No Stems, Cohen-1**

- 3885** 1805 No Stems MS62 Brown PCGS. CAC. C-1, B-1, R.1. Manley Die State 2.0. Stemless half cents are known dated each year between 1804 and 1806. All three varieties are collectible, although very scarce in Mint State. The present satiny and unworn type representative is mostly toned deep walnut-brown. Nicely struck and unabraded with minor strike-throughs (as made) near CENT. Our EAC grade AU58. NGC ID# 222H, PCGS# 1081

**1805 Half Cent, C-1, B-1, MS64 Brown
Rare Any Finer**

- 3886** 1805 Medium 5, No Stems MS64 Brown NGC. C-1, B-1, R.1. Manley Die State 1.0. Variety C-1 is the most often encountered die marriage for this issue, especially in higher grades. This near-Gem example displays pleasing auburn-brown patina with subtle remnants of bronze-red in the protected regions. The central devices are sharply struck, though the denticles exhibit some of the usual weakness. The smooth surfaces are free of any noticeable abrasions. Our EAC grade AU55. Census: 2 in 64 Brown, 0 finer (3/14). NGC ID# 222H, PCGS# 1081

- 3887** 1809/6 9 Over Inverted 9 AU55 NGC. C-5, B-5, R.1. Manley Die State 1.0. Though not attributed by NGC, this 1809 half cent is of the 1809/6 variety, as the inverted 9 is clearly visible beneath the correct 9 in the date. Deep chocolate-brown patina complements the smooth surfaces. Only slight friction is seen over the high points of the design, though some usual weakness of strike is noted on the left obverse stars. A Choice example of this popular variety. Our EAC grade XF40. NGC ID# 222N, PCGS# 1126

**1809/6 Half Cent, C-5, B-5, MS64 Brown
Red-Tinged Classic Head Example**

- 3888** 1809/6 9 Over Inverted 9 MS64 Brown NGC. C-5, B-5, R.1. The inverted digit is clear to the unaided eye. This red-tinged medium brown piece is an unusually fine example of a Classic Head half cent. Most Classic half cents and cents are dark, and only rarely are lighter hues found. Our EAC grade MS60. Census: 4 in 64 Brown, 1 finer (5/13).
Ex: Dallas Signature (Heritage, 10/2006), lot 52. NGC ID# 222N, PCGS# 1126

1810 C-1, B-1 Half Cent, MS63 Brown

- 3889 1810 MS63 Brown PCGS. C-1, B-1, R.2.** This lustrous chestnut and walnut-brown half cent has excellent luster with pleasing surfaces that show traces of golden-tan, faded from original mint red. Such original color is rarely seen on the early Classic Head half cents dated 1809 through 1811. Our EAC grade MS60. NGC ID# 222R, PCGS# 1132

- 3890 1811 Fine 15 NGC. C-2, B-2, Low R.3.** Manley Die State 1.0. Good detail for the grade remains, with even chocolate-brown color overall. The rims are strong, except for the left quadrant of the reverse which is always soft on this variety. The surfaces are smooth, with the only disturbance being a small, well-hidden old scratch near star seven. Our EAC grade VG8. NGC ID# 222S, PCGS# 1135

**1811 C-2 Half Cent, VF30
Challenging Date**

- 3891 1811 VF30 PCGS. C-2, B-2, Low R.3.** Manley Die State 3.0 with a faint die crack near OF. A midgrade medium brown example of this better half cent date. The dies were slightly out of parallel, causing a sharper strike on the right borders than on the left margins. A lens reveals occasional faded thin marks and a subtle depression on the cheek. Our EAC grade VF20. NGC ID# 222S, PCGS# 1135

**1828 Half Cent, MS65 Red and Brown
C-3, 13 Stars, Old Holder**

- 3892 1828 13 Stars MS65 Red and Brown PCGS. C-3, B-2, R.1.** Manley Die State 2.0. The right obverse border exhibits mint red, and glimpses of slightly faded red, intermingled with sea-green, are present across portions of the reverse. A minimally abraded Gem with vibrant luster. Crisply struck save for the left-side stars. Encased in an old green label holder. Our EAC grade AU55. Ex: Long Beach Signature (Heritage, 6/2001), lot 7475; Baltimore ANA Signature (Heritage, 7/2008), lot 984, which realized \$3,220. NGC ID# 222V, PCGS# 1148

- 3893 1835 MS64 Red PCGS. C-2, B-2, R.1.** Manley Die State 3.0, "Scarce." A slender mint-made die crack wanders across the upper reverse from 10 o'clock to 1 o'clock, and confirms this later die stage. A lovely orange-gold near-Gem with an exquisite strike. The reverse is well preserved, while the obverse has a slender mark on the chin. Our EAC grade MS64. Ex: Gary G. Walker Collection (Heritage, 7/2003), lot 5129; Orlando FUN Signature (Heritage, 1/2004), lot 4109, which realized \$3,220. NGC ID# 2233, PCGS# 1170

- 3894 1855 MS66 Brown PCGS. CAC. B-1, C-1, R.1.** Small tinges of copper-red luster remain in the crevices of this auburn-brown Premium Gem. The central devices are sharply struck, though the denticles and select stars exhibit some of the typical weakness. A beautifully preserved type representative. Our EAC grade MS62. Population: 4 in 66 Brown, 0 finer (3/14). NGC ID# 26YZ, PCGS# 1233

**1855 C-1 Half Cent, MS65 Red
Outstanding Color**

- 3895 1855 MS65 Red PCGS. C-1, B-1, R.1.** Splendid peach-red color is uniform throughout this lustrous high grade type coin. A loupe reveals only incidental carbon. The strike is bold on the major devices, though the dentils are softly brought up, as are a few of the stars. Our EAC grade MS64. Population: 28 in 65 Red, none finer (3/14). Ex: Long Beach Signature (Heritage, 9/2002), lot 5096. NGC ID# 26YZ, PCGS# 1235

1856 C-1 Half Cent, MS64 Red

- 3896 1856 MS64 Red PCGS. C-1, B-2a, R.1.** A well struck near-Gem with moderately dusky fire-red surfaces. A few pinpoint flecks and minor grazes deny an even finer grade. Only 40,430 pieces were struck, and full Red survivors are rare. Certified in an old green label holder. Our EAC grade MS64. Population: 10 in 64 Red, 2 finer (3/14). NGC ID# 262Z, PCGS# 1238

PROOF BRAIDED HAIR HALF CENT

1849 Half Cent, PR64 Red and Brown
B-1 Original, Small Date

- 3897** 1849 Small Date PR64 Red and Brown PCGS. B-1, R.6. The Small Date is a proof-only variety, since the C-1 business strike has a large date. The large berries on the wreath indicate an original proof striking, since Small Date proof restrikes (B-2) have small berries. This is a fully struck and flashy Choice proof with minimal carbon. The peach-gold color is consistent aside from a blush of gunmetal-gray near the CA in AMERICA. Lacquer residue (readily removable) causes iridescent rose and aqua shades across the open fields. As of (3/14), PCGS has certified eight B-1 proofs, including 1 in 62 Brown, 2 in 64 Brown, 2 in 65 Brown, 1 in 63 Red and Brown, and 1 in 64 Red. Our EAC grade PR60. PCGS# 1303

LARGE CENTS

1793 AMERICA Chain Cent, Fair Details
S-2, B-2 Variety

- 3898** 1793 Chain AMERICA — Corrosion — NGC Details. Fair. S-2, B-2, High R.4. The Chain cent was our nation's first coinage design, struck only during March 1793. The present example is from scarcer Sheldon-2 dies. All letters in LIBERTY are readable, as is UNITED STATES OF AMERICA. The denomination is bold. The date cannot be discerned. The medium brown surfaces are granular, especially on the obverse. Minor field marks are noted near the ES in STATES. Our EAC grade Poor 1.

1793 Wreath Cent, VF Details
Vine and Bars Edge, S-9, B-12

- 3899** 1793 Wreath, Vine and Bars Edge — Environmental Damage — NGC Details. VF. S-9, B-12, R.2. A sharp example with bold legends and consistent deep walnut-brown toning. The fields are moderately granular, usual for the type, but only a few minor marks are evident. The Wreath cent type was struck only for a few months, very early in the history of the U.S. Mint. Our EAC grade VG10.
- 3900** 1793 Wreath, Vine and Bars Edge — Corrosion — NGC Details. VF. S-8, B-13, R.3. Public criticism of the Chain design, perceived as a representation of slavery rather than the intended symbol of unity and strength, brought the introduction of the Wreath type cent partway through 1793. This lightly circulated example displays bold central devices and complete borders. NGC notes mild surface granularity, but it is uniform and hardly detracting to the unaided eye. Deep auburn-brown patina covers both sides, giving this piece a pleasing degree of visual appeal. Our EAC grade Fine 12.

**1793 S-14 Liberty Cap Cent
VG10 Details**

- 3901** 1793 Liberty Cap — Hair Re-Engraved, Burnished — ANACS. VG10 Details. S-14, B-17, Low R.5. The heavy bisecting obverse die crack attributes the elusive S-14 variety. Liberty's hair has been extensively re-engraved by a careful hand. The lavender-brown surfaces are evenly microgranular and slightly glossy from a cleaning. All legends are readable, including the date. Among 1793 cents, the Liberty Cap type is considerably rarer than its Chain and Wreath predecessors. Our EAC grade Good 4. NGC ID# 223L, PCGS# 1359

**1794 Liberty Cap Cent, Fine 15
Head of 1793, S-19, B-3**

- 3902** 1794 Head of 1793 Fine 15 PCGS. S-19, B-3, R.4. The design elements are well-detailed except for the letters in AMERICA, which were weakly impressed and are no longer legible. The surfaces are a dark olive color and show considerable corrosion on both sides. No other problems are evident and the overall appearance is still quite pleasing for this scarce and important variety. This coin closely resembles the example in lot 1251 of the William F. Gable Collection (S.H. Chapman, 5/1914), but a conclusive match is not possible at this time. Housed in a green label holder with the edge hidden, making a complete attribution impossible. Our EAC grade VG8. NGC ID# 223N, PCGS# 1362

- 3903** 1794 Head of 1794 — Corroded, Rim Damage — ANACS. VF30 Details. S-60, B-52, R.3 Breen Die State II. S-60 is unique in that the letter A's on the reverse are narrower than on any other cents of this type. Well-centered with strong detail, this representative displays dark, even color. The surfaces exhibit mild, well-balanced corrosion, with an overall granular texture, but the noted rim damage is not readily obvious. Struck from mildly rotated dies. Our EAC grade Fine 12. NGC ID# 223P, PCGS# 901374

**1794 Head of 1794 Cent, XF40
'Shielded Hair' S-65**

- 3904** 1794 Head of 1794 XF40 NGC. S-65, B-51, R.1. A charming example of the "Shielded Hair" variety. This well defined walnut-brown and gunmetal-gray Liberty Cap cent is essentially unabraded, though the surfaces are microgranular. Despite out-of-parallel dies, the strike is sharp except on the RTY in LIBERTY and opposite on the CA in AMERICA. Our EAC grade VF20. NGC ID# 223P, PCGS# 901374

- 3905** 1796 Liberty Cap VG10 NGC. S-89, B-10, R.3. Hints of green patina visit the steel-brown surfaces of this faintly granular Liberty Cap cent. The S-89 is a relatively plentiful variety, one of the five 1796 Liberty Cap cents rated R.3. Our EAC grade VG8. NGC ID# 223V, PCGS# 1392

- 3906** 1796 Liberty Cap VF20 PCGS. S-87, B-8, R.3. Medium chocolate-brown patina blankets smooth surfaces on this pleasing mid-grade example. The strike is evenly impressed, with nearly complete denticles on each side and bold central devices. A glass reveals faint scratches on the obverse portrait. Our EAC grade VG8. Population: 18 in 20, 67 finer (3/14). NGC ID# 223V, PCGS# 1392

**1797 Large Cent, S-130, XF45
Reverse of 1797, Stems**

- 3907** 1797 Reverse of 1797, Stems XF45 PCGS. CAC. S-130, B-25, R.2. Breen Die State III. The S-130 variety is one of the more available varieties of the 1797 Plain Edge cent, but is of importance to variety specialists as the only die marriage with Breen Reverse Q, which exhibits a wide break in the left ribbon tail on the reverse, caused by an excessively ground die. This Choice XF example displays smooth, chocolate-brown surfaces, with no pitting or environmental impairments. Bold detail is seen among the design elements, with only slight wear over the high points. Two small, variety-determining die cracks are noted on the left obverse border. Weak definition on some of the smaller wreath leaves is characteristic of this die marriage. Our EAC grade VF35. NGC ID# 2242, PCGS# 1422

**1798 S-161, B-22 Cent, XF40
Late Die State**

3908 1798 First Hair Style XF40 PCGS. S-161, B-22, R.1. Breen Die State IX, with a rim break on TE, extending along the border over the adjacent letters, A and S. Other extensive die cracks appear on both sides. A single thin scratch in the right obverse field has the appearance of a crack at first glance. Otherwise, both sides exhibit pleasing olive surfaces. Our EAC grade VF25. NGC ID# 2244, PCGS# 1431

3909 1798 Second Hair Style XF45 NGC. S-181, B-42, R.3. Breen Die State III, with the obverse die shattered, but without the terminal state rim break right of the 8. This obverse first appeared on the S-180 rarity, and continued with S-181. A pleasing example, this cent has intermingled golden-tan and steel-brown patina with splashes of maroon, and with minor greenish verdigris on the reverse. Our EAC grade VF25. NGC ID# 2244, PCGS# 1434

**1798 S-176, B-24 Cent, AU50
Third Finest Known**

3910 1798 Second Hair Style AU50 PCGS. S-176, B-24, R.4. Ex: Husak Collection. Breen Die State II. Traces of the obverse die crack are evident in the lower right field. Sharpness is much finer than the net grade by Bland and Noyes. Mottled olive and light brown surfaces with several minor rim bruises on each side. A few other tiny surface marks are evident, including a shallow depression on Liberty's cheek. Noyes grades this piece as VF30 and the third finest known. Bland grades it the same, and records its position as tied for third finest. Our EAC grade VF30.
Ex: *Spink And Son, Ltd.; New Netherlands Coin Co. (3/1973), lot 43; Denis W. Loring (1974); C. Douglas Smith; Dr. Robert A. Schuman (Superior, 5/2003), lot 474; Walter J. Husak (Heritage, 2/2008), lot 2179; Baltimore ANA bourse (8/2008).* NGC ID# 2244, PCGS# 1434

3911 1799 — Environmental Damage — NGC Details. Fair. S-189, B-3, R.2. Of the three die marriages for the 1799 large cent, S-189 is the most frequently encountered, and is the only non-overdate variety for this issue. This well-circulated survivor exhibits a boldly outlined bust and a clear date, with much of the reverse elements remaining faintly visible. Fine granularity is seen over both sides, though the overall visual appeal is pleasing for the grade level. Our EAC grade Poor 1.

3912 1800 VF25 NGC. S-197, B-12, R.1. Breen Die State III. This example has moderate handling marks on its olive and tan surfaces with a rim bruise over ES of STATES. Our EAC grade Fine 12. NGC ID# 2248, PCGS# 1449

3913 1802 XF45 NGC. S-236, B-16, R.1. Breen Die State VI, with several reverse die cracks but prior to the appearance of rim breaks at ST. Both sides of this pleasing piece display olive, chestnut-brown, and walnut toning, with the usual minor handling marks. Our EAC grade VF30. NGC ID# 224E, PCGS# 1470

3914 1803 Small Date, Small Fraction AU50 NGC. S-255, B-14, R.1. Both sides of this nicely detailed 1803 cent have intermingled olive, steel, and tan, with scattered marks that are mostly limited to the obverse. Our EAC grade VF35. NGC ID# 224G, PCGS# 1482

3915 1803 100/000 VF35 PCGS. S-249, B-7, R.2. Breen Die State II, with a minuscule die bulge right of the drapery, but no die cracks noted on either side. This piece has a number of marks of varying sizes on its olive and reddish-tan surfaces. Our EAC grade Fine 15. NGC ID# 224G, PCGS# 911501

**1804 Large Cent, Good 6
S-266b, Intermediate Die State**

3916 1804 Good 6 NGC. S-266b, B-1, R.2. The intermediate die state has a rim break on RTY of LIBERTY, but no reverse rim break. This piece shows considerable wear, although retains all design elements, including the date and lettering. Steel-blue field toning accompanies lighter brown devices with pleasing surfaces showing only microscopic roughness and scattered marks. Our EAC grade Good 6. NGC ID# 224H, PCGS# 1504

1805 Cent, S-267, MS62 Brown

3917 1805 MS62 Brown PCGS. CAC. S-267, B-1, R.1. Deep brown centers cede to golden-brown margins. A glossy example, well struck aside from minor softness on the lower obverse and upper reverse. The reverse is pristine, and the obverse has only a couple of minor faded marks on the cheek and left obverse field. Struck from clashed dies. Our EAC grade AU50. Population: 8 in 62 Brown, 4 finer (3/14). NGC ID# 224K, PCGS# 1510

3918 1808 VF35 PCGS. S-279, B-3, R.1. The first year of John Reich's Classic Head design. The obverse exhibits golden-brown fields and olive devices, while the reverse blends tan, olive, and reddish-steel patina. Our EAC grade VF20. NGC ID# 224P, PCGS# 1543

1808 Cent, S-278, AU55
Impressive High-Grade Example

- 3919** 1808 AU55 NGC. S-278, B-2, R.3. This variety is somewhat scarcer than the other two for this date. This is an impressive example with sharp strike definition and pleasingly blended charcoal-brown and apricot-brown coloration. Slightly worn over the high points and nearly blemish-free, save for a couple of faint nicks on each side. Our EAC grade XF40. NGC ID# 224P, PCGS# 1543

1808 S-278, B-2 Cent, MS63 Brown
Pleasing First-Year Classic Head Cent

- 3920** 1808 MS63 Brown NGC. S-278, B-2, R.3. The diagnostics for this variety include a wide date, 1 high, and a sliver on the neck along with a high leaf below right edge of S. This is the rarest of the three varieties for this date. A lovely Select example, this specimen displays brown and tan surfaces and a sharp strike aside from portions of the dentils, which are generally smooth due to long-in-use dies. The few marks present are minuscule and are not distracting. This is a pleasing coin from the debut issue of the Classic Head cent, designed by John Reich, assistant engraver. The short-lived series ended in 1814. Our EAC grade AU55. Census: 4 in 63 Brown, 5 finer (3/14). NGC ID# 224P, PCGS# 1543

1814 S-295 Cent, AU58

- 3921** 1814 Plain 4 AU58 PCGS. CAC. S-295, B-2, R.1. Housed in a first-generation PCGS holder, this lovely Classic Head cent has exceptional surfaces for the grade, with some loose impediments inside the back of the holder. This lovely cent is an early die state showing the beginning die cracks on the obverse. Pleasing olive surfaces show traces of tan, faded from mint red. Our EAC grade AU50. NGC ID# 224Y, PCGS# 1576

1816 N-2 Cent, MS65 Brown
Smooth Fields, Booming Luster

- 3922** 1816 MS65 Brown PCGS. CAC. N-2, R.1. All examples of N-2 have a rim break between stars 8 to 10, but the present Gem is a later die state with a second rim break at 4 o'clock. The N in ONE is recut. Lustrous and minimally marked with ample mint red outlining design elements. Olive-green and lavender are also prevalent. A few left-side stars are incompletely impressed. Higher quality than most Randall Hoard representatives. Our EAC grade MS60. NGC ID# 224Z, PCGS# 1591

- 3923** 1818 MS64 Red and Brown NGC. CAC. N-10, R.1. The most commonly seen variety with a heavy radial die crack through the date and all of the obverse stars. On the reverse, the feet of NIT step down; the T in CENT is low and bold. An attractive Choice Mint State example with a great deal of luster and moderate carbon noted on both sides. Surface marks are not seen, except for a small abrasion between obverse stars 5 and 6. Our EAC grade AU55. *From The Northern Lights Collection.* NGC ID# 2253, PCGS# 1601

- 3924** 1819 Small Date MS63 Brown PCGS. N-8, R.1. This boldly defined Select Mint State cent represents the early die state with bold border dentils. The golden-brown and bluish-olive surfaces are reflective, representing an early strike. Our EAC grade MS60. NGC ID# 2254, PCGS# 1606

- 3925** 1819 Small Date MS64 Brown NGC. N-9, R.1. Small die chips between the L and I of LIBERTY immediately identify this variety. An attractive example, the reddish-brown surfaces exhibit full cartwheel luster with hints of orange mint luster along the profile. Delicate blue overtones enhance the eye appeal. Our EAC grade MS62. NGC ID# 2254, PCGS# 1606

- 3926** 1820 Large Date MS65 Brown PCGS. CAC. N-13, R.1. Die State B, with a prominent circular die crack through the date and stars. Though certified as Brown, this piece exhibits substantial copper-red accents across the lustrous, auburn surfaces, delivering exceptional visual appeal. Boldly struck, with sharp central devices, complete denticles on both sides, and above-average definition on the stars. A highly attractive Gem that will please the most discerning specialist. Our EAC grade MS62. NGC ID# 2256, PCGS# 1615

**1820 Cent, MS66+ Brown
N-13 Large Date**

3927 1820 Large Date MS66+ Brown PCGS. N-13, R.1. Over the years, PCGS has certified a quantity of N-13 1820 cents, courtesy of the Randall Hoard. However, among those coins, only the present piece has attained the lofty grade of MS66+. The surfaces are remarkably unabraded, and the ocean-blue patina is highly attractive. Plentiful mint red clings to the stars and letters. Our EAC grade MS63. Population: 17 in 66 (1 in 66+) Brown, 0 finer (3/14). NGC ID# 2256, PCGS# 1615

3928 1822 Good 4 NGC. N-13, R.5. The N-13 is one of the rarer varieties for this issue, popular among specialists. This chocolate-brown example displays smooth, problem-free surfaces, with well-defined legends and bold central devices. The obverse is evenly worn, though the reverse rim is slightly weak from 6 to 11 o'clock. An exceptional coin for the grade. Our EAC grade Good 4. NGC ID# 2259, PCGS# 1624

**1823/2 N-1 Cent, XF40
Better Matron Head Date**

3929 1823/2 XF40 PCGS. N-1, R.2. Only two die marriages are known for the better 1823, the N-1 overdate and N-2 normal date. N-3 is an out-of-mint "restrike." The present walnut brown N-1 example is smooth except for a single thin vertical mark near the profile. An early die state without a rim break beneath the 8 in the date. Our EAC grade VF30. Population: 10 in 40, 14 finer (3/14). NGC ID# 225B, PCGS# 1630

3930 1826 MS63 Brown NGC. N-6, R.2. A repunched first A in AMERICA attributes this undisturbed mahogany-brown and blue-green representative. No marks or spots are remotely consequential. Only the uppermost stars exhibit any incompleteness of strike. Our EAC grade AU50. NGC ID# 225G, PCGS# 1645

**1837 N-13 Cent, MS66 Brown
Plain Cords, Medium Letters**

3931 1837 Plain Cords, Medium Letters MS66 Brown PCGS. N-13, R.2. A die scratch through the Y in LIBERTY, a double cut N in UNITED, and a series of die cracks across the reverse periphery combine to confirm the Newcomb marriage. This satiny Premium Gem is unabraded. The obverse is primarily medium brown, but faded red is evident on both sides, especially the reverse. Population: 4 in 66 Brown, 1 finer (3/14). Our EAC grade MS63. Ex: West Palm Beach FUN Signature (Heritage, 6/2008), lot 62, which realized \$2,760. PCGS# 1735

3932 1837 Head of 1838 MS64 Red and Brown PCGS. N-9, R.1. Die State F. Significant copper-red complements rich burgundy patina in the recessed regions on this near-Gem example. The strike is bold with razor-sharp definition in all relief elements except star one, which is typically weak. An excellent late die state example with strong visual appeal. Our EAC grade MS62. Population: 20 in 64 Red and Brown, 19 finer (3/14). NGC ID# 225U, PCGS# 1730

**1847 Cent, N-19, MS66 Red and Brown
Substantial Mint Red**

3933 1847 MS66 Red and Brown NGC. N-19, R.1. With a mintage in excess of 6 million coins, the 1847 cent is easily obtainable in most grades. In Premium Gem condition, however, the date suddenly becomes rare, with specimens retaining substantial mint red in the distinct minority. This beautifully preserved piece exhibits significant copper-red luster overall, with rich burgundy overtones intermixed. The central devices are sharply struck, though some minor weakness is noted on star two. An eye-appealing, high-end representative. Our EAC grade MS63. NGC ID# 226D, PCGS# 1878

1848 N-35 Cent, MS65 Red and Brown

- 3934 1848 MS65 Red and Brown PCGS. CAC. N-35, R.1. Grellman Die State a, the earliest die state with prominent obverse and reverse points confirming the attribution. This amazing Gem has mostly brilliant orange mint color that has mellowed to bluish-brown in the fields and on the devices. Our EAC grade MS64. Population: 13 in 65 Red and Brown, 1 finer (3/14), for all 1848 varieties. NGC ID# 226E, PCGS# 1884

1850 Large Cent, MS65 Red
Late Die State N-10

- 3935 1850 MS65 Red PCGS. N-10, R.2. The late die state, with rim cuds at TES and F-A. Golden-orange luster adorns both sides of this dusky brick-red Gem. The strike is crisp save for minor softness on STATES OF. Housed in a first generation PCGS holder. Our EAC grade MS65. Population: 16 in 65 Red, 0 finer (3/14). From The Northern Lights Collection. NGC ID# 226G, PCGS# 1891

1852 N-9 Cent, MS65 Red
Late Die State

- 3936 1852 MS65 Red PCGS. N-9, R.1. Grellman State d with a crack across the C in CENT. A virtually mark-free Gem with scattered minute carbon. Orange-red is prevalent though moderately mellowed, particularly on the high points. The strike is fairly sharp but the definition is soft near the borders due to long-in-use dies. Certified in a green label holder. Population: 17 in 65 (1 in 65+) Red, 2 finer (3/14). Our EAC grade MS64. Ex: Baltimore ANA Signature (Heritage, 7/2008), lot 1076, which realized \$5,462.50. NGC ID# 226J, PCGS# 1900

- 3937 1853 MS66 Brown PCGS. CAC. N-10, R.1. Grellman Die State b. A Superb Gem survivor of this late-date large cent. Satiny, well-preserved surfaces display a warm chestnut hue overall, with a few tiny remnants of mint red hidden in the crevices. The strike is razor-sharp, save for the obverse stars which exhibit some usual softness. CAC-approved with outstanding eye appeal. Our EAC grade MS62. Population: 14 in 66 Brown, 2 finer (2/14). NGC ID# 226K, PCGS# 1901

1853 N-25 Cent, MS65 Red

- 3938 1853 MS65 Red NGC. N-25, R.1. An outstanding Gem with brilliant orange mint luster, this example represents Grellman Die State b, the middle die state that is frequently found in Choice and Gem Mint State grades. Our EAC grade MS65. Census: 44 in 65 Red, 12 finer (3/14), for all 1853 varieties. From The Northern Lights Collection. NGC ID# 226K, PCGS# 1903

1853 Large Cent, MS65+ Red
N-25, Vivid Eye Appeal

- 3939 1853 MS65+ Red PCGS. Die State b, dully repunched under the 1 in the date, a relatively common "hoard state" that is the source for many high-end examples. This coin's fiery orange and rose luster qualifies it as fully Red in the eyes of PCGS, and aside from minor carbon visible at 9 o'clock on the obverse rim and in the date area, this coin has few significant flaws. Our EAC grade MS65. NGC ID# 226K, PCGS# 1903

1853 N-25 Cent, MS66 Red
Old Green Label Holder

- 3940 1853 MS66 Red PCGS. N-25, R.1. Grellman Die State b. N-25 is familiar to specialists, and attributed by the "strong horizontal bar to right from dentils left of star 2," per Grellman. A lustrous orange-red Premium Gem with glimpses of olive-gold on the high points. A lens reveals only tiny marks. Encapsulated in an old green label holder. Our EAC grade MS64. Population: 13 in 66 Red, 1 finer (3/14). NGC ID# 226K, PCGS# 1903

**1855 N-4 Cent, MS65 Red
Full Mint Brilliance**

- 3941** 1855 Upright 5s MS65 Red PCGS. N-4, R.1. The plentiful N-4 cent of 1855 has two die lumps on Liberty's jaw, connected by die lines. Since this variety is typically found in Mint State, examples are easy to attribute. This Gem has frosty orange mint color with excellent eye appeal. Our EAC grade MS65. Population: 77 in 65 Red, 16 finer (3/14), for all 1855 varieties. From *The Northern Lights Collection*. NGC ID# 226M, PCGS# 1909

**1855 Upright 5s N-4 Cent
Radiant MS65 Red**

- 3942** 1855 Upright 5s MS65 Red PCGS. N-4, R.1. Grellman Die State a. Cherry-red and salmon-pink shades dominate this lustrous and nearly unabraded Gem. Minor carbon, including a spot beneath the E in STATES, is all that limits the grade. A few of the upper stars are soft, but the major devices are boldly brought up. Our EAC grade MS60. Ex: *Dallas Signature* (Heritage, 11/2006), lot 90; *Philadelphia Signature* (Heritage, 8/2012), lot 3089, which realized \$3,628.00. NGC ID# 226M, PCGS# 1909

**1855 Upright 5s N-4 Cent, MS65 Red
Pleasing, Conditionally Scarce Example**

- 3943** 1855 Upright 5s MS65 Red NGC. N-4, R.1. Grellman Die State a. A lovely Gem with vibrant luster and well-preserved surfaces. The strike is sharp except on the obverse stars and dentils. Scattered flyspecks fail to limit the grade or the visual appeal of this outstanding example. A popular variety with numerous examples known, but conditionally scarce at this lofty grade level. Our EAC grade MS64. NGC ID# 226M, PCGS# 1909

**1855 N-4 Cent, MS66 Red
Upright 5s, Exceptional Eye Appeal**

- 3944** 1855 Upright 5s MS66 Red PCGS. N-4, R.1. Grellman Die State a. An unabraded pumpkin-gold Premium Gem that boasts sweeping luster and a crisp strike. Only star 5 lacks precise central definition. Only inconsequential carbon on the upper left obverse field precludes a higher grade. Housed in a green label holder. Our EAC grade MS65. Population: 16 in 66 (3 in 66+) Red, 0 finer (3/14). Ex: *James Mossman Collection* (Heritage, 1/2009), lot 291, which realized \$8,337.50. NGC ID# 226M, PCGS# 1909

- 3945** 1855 Knob on Ear MS65+ Brown NGC. CAC. N-9, R.1. Grellman Die State e, with the knob below the T, and cracks in the hair below the Y. This satiny example has full cartwheel luster over its light brown surfaces with traces of delicate blue toning. An attractive example. Our EAC grade MS60. NGC ID# 226M, PCGS# 1913

- 3946** 1857 Large Date MS65 Brown PCGS. CAC. N-1, R.1. Die State b. Glossy auburn patina graces both sides of this CAC-approved Gem, with tinges of copper-red seen in the protected regions of the obverse. Bold central detail further adds to the visual appeal of this piece. Our EAC grade MS60. Population: 8 in 65 Brown, 0 finer (3/14). NGC ID# 226P, PCGS# 1928

**1857 Cent, MS64 Red and Brown
N-4, Small Date**

- 3947** 1857 Small Date MS64 Red and Brown PCGS. CAC. N-4, R.1. Grellman Die State c. Predominantly orange-gold with mellowing to brown on the cheek and open fields. Evident marks are confined to an obverse rim nick at 1 o'clock. Unobtrusive strike-throughs, as coined, are located on Liberty's jaw and inside the wreath near the C in CENT and the E in ONE. Our EAC grade MS63. PCGS# 1932

TWO CENT PIECES

1864 Small Motto Two Cent, FS-401 MS65 Red and Brown

- 3948 1864 Small Motto MS65 Red and Brown PCGS. CAC. FS-401.** The 1864 two cent piece with the Small Motto is much more elusive than its Large Motto successor. The well-preserved surfaces of this impressive Gem show a mix of original red and light brown patina. The design elements are well-detailed and strong mint luster is evident on both sides. NGC ID# 22N8, PCGS# 3580

- 3949 1864 Large Motto MS65 Red PCGS.** Peach and copper-orange hues are dusky on the obverse, lighter on the reverse, and never in Brown territory. An important Gem odd-denomination type coin with minimal carbon. A few faint, wispy die cracks are present. NGC ID# 22N9, PCGS# 3578

- 3950 1864 Large Motto MS65+ Red PCGS.** Fully struck with clean, mark-free surfaces, this attractive proof specimen would be an excellent choice for a Gem-level type set. The flashy, reflective surfaces show lovely golden-tan color and minimal flyspecks. NGC ID# 22N9, PCGS# 3578

- 3951 1865 MS64 Red and Brown NGC.** Plain 5. Orange-gold, sea-green, and lilac alternate. No marks are evident, although the central reverse has a few unobtrusive spots. The strike is crisp aside from blending on the right-side margins.
Ex: Dallas Signature (Heritage, 3/2007), lot 7209. NGC ID# 22NA, PCGS# 3583

- 3952 1867 MS65 Red and Brown PCGS.** This Gem example has a bright, vibrant appearance and lovely coppery-orange toning imbued with subtle greenish accents. Fully struck and free of even the smallest distraction. Population: 70 in 65 Red and Brown, 6 finer (3/14). NGC ID# 22NB, PCGS# 3592

- 3953 1867 MS64 Red PCGS.** An impressive example of this issue that saw a mintage of fewer than three million coins. Near-Gem survivors with full Red color, like this one, are conditionally scarce at both of the major grading services. Well-struck and highly lustrous, this piece is free of all but two or three tiny nicks on the reverse. NGC ID# 22NB, PCGS# 3593

1867 Two Cent, MS66 Red Finest Certified by PCGS

- 3954 1867 MS66 Red PCGS.** In its short eight-year history, more than 45 million two cent pieces were coined. Yet today PCGS and NGC have certified fewer than 220 pieces in MS66 Red or finer, or less than 1% of all grading events for the series. The present example is boldly struck on both sides, with pumpkin-orange surfaces peppered with burgundy-red overtones.

Not only is this the single highest-graded 1867 two cent piece in Red by PCGS, it is one of just three Premium Gem Red examples of the date graded by PCGS and NGC combined, with none numerically finer (3/14). Precious few, when considering the many type and date collectors working on Registry Sets and other high-grade collections. A rare opportunity for the advanced two cent series specialist. NGC ID# 22NB, PCGS# 3593

- 3955 1867 Doubled Die Obverse — Cleaned — ANACS. MS60 Details. FS-101.** Die 1. IN GOD WE TRUST is widely die doubled on this popular *Guide Book* variety. Lightly cleaned, this lustrous example is retoned a pleasing orange-red. A shallow planchet lamination is seen east of the date and extends partway into the shield, and the final letters in AMERICA are softly struck, likely due to a partly clogged die.
Ex: FUN Signature (Heritage, 7/2007), lot 230. PCGS# 3594

- 3956 1867 Doubled Die Obverse MS63 Brown PCGS. FS-101.** IN GOD WE TRUST and the two arrows are widely die doubled. An important variety that merits its *Guide Book* listing. Peach and lime-green toning alternate across this satiny and crisply struck Select Mint State example. Population: 4 in 63 Brown, 3 finer (2/14).
Ex: Long Beach Signature (Heritage, 2/2009), lot 606. PCGS# 3594

**1869 Two Cent, MS66 Red and Brown
More Red Than Brown**

- 3957 1869 MS66 Red and Brown PCGS. CAC.** Extremely lustrous, frosted surfaces display a sharp strike, with essentially full-red appeal in a Red and Brown holder. Bright orange coloration covers the surfaces, with amber overtones appearing as the coin rotates in light. Excellent mint luster glows throughout all of the elements. Neither service reports a numerically finer example in Red and Brown. Population: 3 in 66 Red and Brown, 0 finer (3/14). NGC ID# 22ND, PCGS# 3604

**1872 Two Cent, MS64 Red and Brown
Final Circulation Issue**

- 3958 1872 MS64 Red and Brown PCGS.** Deep reddish-orange and brick hues supply the Red, while dusky violet and blue overtones are the "Brown" on this Choice example from the last circulating two cent issue. This piece, from a business strike issue consisting of 65,000 coins, exhibits strong preservation and eye appeal. Population: 34 in 64 (1 in 64+) Red and Brown, 13 finer (3/14). NGC ID# 22NG, PCGS# 3613

PROOF TWO CENT PIECES

- 3959 1868 PR66 Red and Brown PCGS.** A visually outstanding Premium Gem. Deeply mirrored fields showcase rich teal, violet, and green-gold hues on the obverse, with vibrant blue, violet, and pink on the reverse. Beautifully preserved with a needle-sharp strike. Population: 11 in 66 Red and Brown, 1 finer (2/14). NGC ID# 274X, PCGS# 3637
- 3960 1868 PR66 Red and Brown NGC. CAC.** Colorful cherry-red, olive-green, lemon, and sky-blue endow this flashy Premium Gem. Intricately struck and devoid of detractions. Just 600 proofs were produced. In a prior generation holder. Census: 22 in 66 (1 in 66+) Red and Brown, 3 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2009), lot 611. NGC ID# 274X, PCGS# 3637
- 3961 1869 PR66 Brown PCGS. CAC.** Vivid blue, violet, and green-gold hues emanate from beneath light burgundy patina on this highly reflective Premium Gem. The surfaces are virtually undisturbed and showcase razor-sharp design elements. Population: 3 in 66 Brown, 0 finer (3/14). NGC ID# 274Y, PCGS# 3639

**1869 Two Cent, PR66 Red and Brown
Nicely Mirrored**

- 3962 1869 PR66 Red and Brown PCGS. CAC.** Fire-red fields and devices display a freckling of auburn-bronze toning over the surfaces, especially on the high points of the sharply-struck devices. A small mintage of about 600 proofs (the exact number is not certain) yields few examples of this quality. PCGS has seen just two finer. Population: 16 in 66 Red and Brown, 2 finer (3/14). NGC ID# 274Y, PCGS# 3640

**1869 Two Cent, PR65 Red
Great Color and Eye Appeal**

- 3963 1869 PR65 Red PCGS.** Lustrous golden-wheat color provides this Gem with lovely eye appeal. In addition, the surfaces are virtually devoid of any signs of contact. A few distributed carbon spots are present. The 1869 proof two cent production consisted of 600 or so coins. Population: 41 in 65 Red, 11 finer (3/14). NGC ID# 274Y, PCGS# 3641

- 3964 1871 PR66 Brown PCGS.** Despite a moderate mintage of 960 coins, the proof 1871 two cent piece is scarcely seen in any grade, and becomes truly rare at the Premium Gem grade level. Light burgundy color complements moderately reflective fields on both sides of this sharply struck Premium Gem. Prominent die doubling is seen on IN GOD WE TRUST, though this is normal for the issue. Population: 2 in 66 Brown, 0 finer (3/14). NGC ID# 22NH, PCGS# 3645

- 3965 1872 PR65 Red and Brown PCGS.** This is a gorgeous Gem proof specimen with rich reddish-golden toning that is evenly distributed over both sides. The motifs are fully detailed, and the contact-free surfaces exhibit only one tiny carbon speck, just above I in UNITED near the reverse border. NGC ID# 2752, PCGS# 3649

- 3966 1872 PR65 Red and Brown PCGS.** This Gem proof is much more red than brown, the latter color chiefly confined to the reverse high points. A sharply struck coin revealing scattered carbon under a loupe, far from overt. The meager proof mintage was 950 pieces, and PCGS has seen only 19 Red and Brown examples numerically finer (3/14). NGC ID# 2752, PCGS# 3649

- 3967 1872 PR65 Red and Brown PCGS.** Deep amber-gold and subtle coppery hues accent well-preserved surfaces on this Gem proof two cent piece. A few minuscule toning specks are noted near the obverse borders. With the scarcity of high-grade business strikes of this year, this lustrous proof offers an excellent alternative for the date collector. Certified in a green label holder. NGC ID# 2752, PCGS# 3649

**1872 Two Cent Piece, PR66 Red and Brown
Conditionally Scarce, Rare Finer**

3968 1872 PR66 Red and Brown NGC. CAC. The year 1872 saw the end of the business strike two cent piece, yet the proof coinage for that year, as in the low-mintage years of 1870 and 1871, was near the series peak. This well-preserved specimen, which boasts considerable copper-orange in addition to blue-brown, is solidly defined and immensely appealing. Just five coins have been rated even finer, with the Red and Brown color designation, at NGC (2/14).

Ex: Long Beach Signature Sale (Heritage 2/2010), lot 206. NGC ID# 2752, PCGS# 3649

3969 1872 PR64 Red PCGS. CAC. Appealing sunset-orange color graces each side of this near-Gem proof 1872 two cent proof. This well-struck piece shows a few scattered flecks under a loupe but offers excellent eye appeal for the grade. NGC ID# 2752, PCGS# 3650

**1873 Closed 3 Two Cent, PR66 Red and Brown
Impressive and Conditionally Rare**

3970 1873 Closed 3 PR66 Red and Brown PCGS. An impressive and conditionally rare specimen of this scarce proof-only variety. Identified by a diagonal die line through TRUST. Fully struck with deep red-brown coloration and clean, well-preserved surfaces. The fields are glassy and highly reflective. Few examples of this type have survived in such a high state of preservation. Population: 27 in 66 Red and Brown, 0 finer (3/14). NGC ID# 2753, PCGS# 3652

**1873 Two Cent Piece, PR66 Red and Brown
Scarce Closed 3 Variety**

3971 1873 Closed 3 PR66 Red and Brown PCGS. CAC. Only proofs were struck in the final-year production of the short-lived two cent piece. Two varieties exist: the Open 3 variant, and the scarcer Closed 3 style. This pumpkin-orange example of the Closed 3 variety displays ample red and olive-brown accents over the reflective proof surfaces. An impressive Premium Gem, the fields and devices are fully brought up, unmarked, and attractive. None are certified finer by PCGS. Population: 27 in 66 Red and Brown, 0 finer (3/14). NGC ID# 2753, PCGS# 3652

THREE CENT SILVER

**1851-O Three Cent Silver, MS66
None Numerically Finer at PCGS**

3972 1851-O MS66 PCGS. CAC. The 1851-O three cent silver had a mintage of only 720,000 pieces as opposed to Philadelphia's production of 5,447,400 three cent pieces that year. This was the first three cent piece produced in New Orleans or in any other branch mint and was the sole branch mint produced Type I trime. Strong luster and faintly toned surfaces provide this Premium Gem with lovely visual appeal. As is often the case, the shield and other details lack full definition. Population: 20 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 22YY, PCGS# 3665

3973 1852 MS66 PCGS. CAC. Fully original ivory color and frosty mint luster provide excellent eye appeal on this Premium Gem Type One silver three cent piece. A boldly struck example, with sharp clash marks on the central reverse, as is common for this type. PCGS has certified just 14 numerically finer examples (3/14).

From The Northern Lights Collection.

Ex: Long Beach Signature (Heritage, 2/2008), lot 3291. NGC ID# 22YZ, PCGS# 3666

1853 Three Cent Silver, MS67
None Numerically Finer at Either Service

- 3974 1853 MS67 PCGS. CAC.** Booming luster swirls about this originally toned russet-gold, forest-green, ruby-red, and stone-gray Superb Gem. Both sides appear unabraded. The strike is precise save for a few typically impressed stars. Certified in a green label holder. The Population has scarcely changed since we offered this piece in 2009, with the addition of only one MS67 example, the number now stands at 6 in 67 (1 in 67+), 0 finer (2/14).

Ex: Central States Signature (Heritage, 4/2009), lot 1325, which realized \$5,750.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2222, PCGS# 3667

- 3975 1854 MS65 PCGS.** Several shades of toning are present on this Gem representative displaying hues of gold overall, with small splashes of deeper color present, primarily on the obverse. The shades include blue-gray, steel-gray, and orange. Faint roller marks appear on both sides. Population: 49 in 65 (1 in 65+), 9 finer (3/14). NGC ID# 2223, PCGS# 3670

- 3976 1855 MS63 PCGS.** A sought-after, low-mintage issue (only 139,000 pieces produced), and elusive in pleasing Mint State condition. This satiny example displays sharply detailed design elements, with light lavender and champagne hues on each side. Bold die clashing can be seen on the reverse with the unaided eye, a common occurrence on three cent silver pieces. NGC ID# 2224, PCGS# 3671

- 3977 1856 MS64 PCGS. CAC.** The Type Two three cent silver series presents a challenge for type collectors, though the 1856 is one of the more available issues for the period. The surfaces of this well-struck near-Gem shine beneath attractive rose and sky-blue toning. PCGS has certified 26 numerically finer examples (3/14).

Ex: Long Beach Signature (Heritage, 9/2007), lot 452. NGC ID# 2225, PCGS# 3672

- 3978 1858 MS65 PCGS.** An intensely lustrous Gem example of this trime issue, which had a relatively high mintage for the type of 1.6 million pieces. Deep layers of sky-blue, rose, and amber toning adorn both sides of this well-preserved example. Struck from a moderately clashed obverse die. NGC ID# 2227, PCGS# 3674

1866 Three Cent Silver, Well-Preserved MS65

- 3979 1866 MS65 PCGS. CAC.** The 1866 three cent silver piece saw a relatively small circulation-strike mintage of 22,000 pieces. The lustrous silver-white surfaces of this magnificent Gem exhibit razor-sharp design detail and are impeccably well-preserved. Clash marks are visible on the obverse, which also displays significant field-motif contrast. Population: 9 in 65, 20 finer (3/14). NGC ID# 222G, PCGS# 3686

1869 Three Cent Silver, MS64
Low-Mintage Business Strike Survivor

- 3980 1869 MS64 PCGS.** The mintage of the 1869 three cent silver coinage consisted of only 4,500 business strikes. Toning is present on large portions of this near-Gem example. The intermingled hues include tan, steel-gray, olive-green, and hints of gold. A few tiny aqua flecks appear on both sides. Population: 15 in 64, 9 finer (3/14). NGC ID# 222K, PCGS# 3689

1870 Trime, MS65
Just 3,000 Pieces Produced

- 3981 1870 MS65 PCGS. CAC.** The 1870 silver three cent piece is one of the low-mintage later issues, with just 3,000 pieces minted, some of which were melted in 1873. Examples in Gem condition are very rare in today's market. The present coin is a lustrous, spectacular Gem, with variegated blue, lavender and gold toning over sharply defined devices. Population: 8 in 65, 8 finer (3/14).

Ex: Stamford Coinfest Signature (Heritage, 10/2010), lot 3939, where it realized \$4,427.50. NGC ID# 222L, PCGS# 3691

1870 Three Cent Silver, MS66
Just One Finer at PCGS

- 3982 1870 MS66 PCGS Secure.** *Ex: Simpson.* An astounding business strike Premium Gem, with prooflike surfaces on both sides and a surpassingly bold strike. It will be nearly impossible to find a finer example, because this jewel-like coin is near the top of the Condition Census for the issue. Golden tones mingle with blue and orange accents over the reflective fields, with light mint frost on the motifs. A single MS67 example is certified higher than the present MS66 coin at PCGS, with none graded finer than MS66 at NGC. Population: 7 in 66, 1 finer (3/14). NGC ID# 222L, PCGS# 3691

PROOF THREE CENT SILVER

1857 Three Cent Silver, PR64 Low Mintage and Low Survival Rate

3983 1857 PR64 PCGS. Colorfully toned, this near-Gem exhibits hues of sea-green, sky blue, golden-orange, plum, pale gold, and red. A sharp strike further enhances the appeal. A number of die striations are visible on the obverse and an unusual as-made strike-through is present near the date. Population: 22 in 64, 11 finer (3/14). NGC ID# 27C4, PCGS# 3704

3984 1862 PR65 PCGS. Rich blue and rose toning is dappled over most of each side, though areas of rich silver-gray still gleam away from the devices. An attractive Civil War-era Gem proof. Population: 16 in 65, 14 finer (3/14).
Ex: *Boston A.N.A. Signature (Heritage, 8/2010), lot 4028.* NGC ID# 27C9, PCGS# 3711

1863/2 Three Cent Silver, PR63 Boldly Struck

3985 1863/2 PR63 PCGS. This *Guide Book* variety is unlisted in the *Cherrypickers'* reference. Low-power magnification reveals remnants of a 2 beneath the 3 in the date. PCGS has certified just 31 examples in all grades (3/14), though NGC does not currently attribute the variety. This sharply struck representative exhibits deeply mirrored fields and softly frosted devices. Light lavender-blue and green-gold hues color the surfaces, with only a few faint hairlines defining the grade. NGC ID# 22ZP, PCGS# 3713

1863/2 Three Cent Silver, PR65 Cameo Great-Looking and Well-Contrasted

3986 1863/2 PR65 Cameo PCGS. CAC. This proof curiosity is listed in the 2014 *Guide Book* as a "so-called 3 over 2," but there is no doubt *something* connecting the lower portion of the 3 with the midsection; *Cherrypickers'* curiously omits this coin. Given the tiny proof mintage of 1,000 pieces and the low survival at this high grade at both services, we expect this piece will be equally treasured for its good aesthetics as well as its varietal characteristics. The silver-white surfaces show good contrast throughout both sides, the devices well-layered with mint frost. A great-looking example on all counts. Population: 1 in 65 Cameo, 3 finer (3/14). PCGS# 83713

3987 1863 PR63 PCGS. Attractively mirrored fields showcase sharply detailed devices on this well-preserved proof three cent piece. Light golden tinting warms both sides, while a few tiny toning specks are noted on the obverse. In an old, green-labeled holder. NGC ID# 22ZP, PCGS# 3712

**1863 Three Cent Silver, PR66
None Finer at PCGS**

- 3988 1863 PR66 PCGS.** Sharply struck and beautifully toned, this Premium Gem exhibits a lovely appearance. Among the colors present are teal, cerulean blue, copper, plum, and gold, with reflectivity emerging beneath the patina. A few tiny as-made strike-throughs are present on the reverse. Only 460 silver three cent proofs were struck in 1863, with few survivors at the upper grade levels. Population: 11 in 66, 0 finer (3/14). NGC ID# 22ZP, PCGS# 3712

**1864 Three Cent Silver, PR66 Cameo
Rare Contrasted Proof**

- 3989 1864 PR66 Cameo PCGS.** Few Cameo or Deep Cameo proofs exist for three cent silver pieces of any date or in any grade, making this Premium Gem an exceptional example. Cerulean-blue margins surround an inner ring of red-gold, with the silver centers thickly frosted on the devices. Mirror-smooth proof fields are deep and reflective. Although not all examples of the tiny issue are well-produced, this glittering coin is sharp and appealing. Population: 7 in 66 Cameo, 1 finer (3/14). PCGS# 83714

- 3990 1865 PR65 PCGS. CAC.** Under a light the deep patina resolves into pinkish, blue, and charcoal hues. This piece is well-struck with some reflective silver areas remaining in the centers of each side. Population: 28 in 65 (1 in 65+), 18 finer (3/14). NGC ID# 27CB, PCGS# 3715

**1865 Three Cent Silver, PR65 Cameo
Only Six Finer at PCGS**

- 3991 1865 PR65 Cameo PCGS. CAC.** Both sides of this Gem Cameo reveal toning, with the obverse primarily gold in color. The reverse is arguably the more attractive side, displaying hues of red-orange, violet, sky blue, tan, and soft green. This piece, exhibiting a sharp strike, is one of only 500 proofs produced during the final year of the Civil War. Population: 4 in 65 Cameo, 6 finer (3/14). PCGS# 83715

- 3992 1867 PR66 NGC.** Lightly but beautifully toned on the obverse, pinkish-gold in the centers, jade and aqua at the rims. The reverse is virtually a Cameo, sparkling silver-white contrast with a light ring of copper. A few light flecks on the reverse show only under a loupe. Census: 25 in 66, 10 finer (3/14). NGC ID# 27CD, PCGS# 3717

- 3993 1867 PR65 Cameo NGC.** The 1867 Type Three three cent circulation strikes are seldom seen in high grade, struck to the extent of only 4,000 pieces. This is a well-mirrored survivor of the proof complement of 550 coins, pinkish-gold with scattered tiny flecks and good device frost. Census: 9 in 65 Cameo, 14 finer (3/14). PCGS# 83717

**1867 Three Cent Silver, PR66 Cameo
Beautifully Toned and Strongly Contrasted**

- 3994 1867 PR66 Cameo NGC.** Readily apparent Cameo contrast along with rich toning on both sides provides this Premium Gem with outstanding eye appeal. The centers reveal lustrous gold surfaces, with hues of orange, plum, teal, and pale yellow at the outer edges. Though not all of the design elements exhibit full definition, the strike is sharp overall. A tiny as-made lint mark appears below the right side of the shield. Census: 10 in 66 Cameo (1 in 66 ★ Cameo), 4 finer (3/14). PCGS# 83717

**1867 Three Cent Silver, Toned PR66 Cameo
Infrequently Seen in Cameo**

- 3995 1867 PR66 Cameo PCGS. CAC.** The minuscule production of 4,000 three cent silver business strikes in 1867, most of which were melted in July 1873, puts increased demand among date collectors for the proofs (as this cataloger is well aware while completing a set of three cent silver pieces). Moreover, relatively few Cameos are available from the more than 600 proofs of 1867 graded by PCGS and NGC (fewer than 15 percent are designated Cameo).

Soft russet patina clinging to the borders of this Premium Gem Cameo frames steel-blue in the centers, the color palette assuming slightly deeper hues on the reverse. Razor-sharp detail shows on the design elements, including the leaf ribbing and arrow feathers. Both sides have been well cared for and each displays pleasing field-device contrast. Population: 11 in 66 Cameo, 5 finer (3/14). PCGS# 83717

- 3996 1868 PR65 Cameo PCGS.** Well struck with reflective fields and smooth surfaces. Lightly dusky gold patina. Just 600 proofs were struck, and few among the survivors can match the eye appeal of the present Gem.
Ex: Santa Clara Signature (Heritage, 11/2002), lot 5668; Eric A. Kreuter Collection (Heritage, 5/2004), lot 5941, which realized \$1,207.50. PCGS# 83718

1870 Three Cent Silver, PR67 Cameo
An In-Demand Alternative to Business Strikes

- 3997 1870 PR67 Cameo NGC.** Well-contrasted, especially on the border-toned obverse, though the reverse retains a clear cameo effect through deep olive, sea-green, and blue patina. The relatively simple three cent silver design offers few opportunities to display striking precision, but features such as the shield within the obverse star and the olive leaves are crisper than usual, as are the reverse border-stars. Most non-proof three cent silver pieces from 1863 on were melted in July 1873, making coins like this among the few available representatives of their issues and in high demand among date collectors. Census: 3 in 67 Cameo, 1 finer (3/14). PCGS# 83721

1872 Three Cent Silver, PR66 Deep Cameo
One of the Three Finest Known

- 3998 1872 PR66 Deep Cameo PCGS. CAC.** Like most all of the later dates of the silver three cent silver series, the majority of the 1872 circulation strikes, already from a paltry mintage of 1,000 pieces, were melted in July 1873. This puts tremendous date pressure on the 950 proofs, a number of which were also melted. The current Premium Gem offering is one of the three finest Deep/Ultra Cameos graded by PCGS and NGC. Stunning field-motif contrast yields a white-on-black appearance, especially on the obverse. The design elements are bold and mentionable contact marks are absent. The CAC sticker affirms the outstanding eye appeal of this coin. Population: 1 in 66 Deep Cameo, 0 finer (3/14). PCGS# 93723

- 3999 1873 PR62 PCGS.** A final-year, proof-only issue, essential for a complete date set. Graded PR62 by PCGS, but with the eye appeal of a higher grade, this example displays light amber-gold peripheries, with silver-gray centers. Sharply detailed with some minor die rust seen around the reverse periphery. NGC ID# 27CJ, PCGS# 3724

- 4000 1873 PR63 PCGS.** This proof-only three cent silver dated 1873 could be a fitting memento of the "Crime of '73," which legislated it, among other denominations, out of existence. The copper-gold surfaces show a bold strike and good eye appeal, despite a few light field hairlines. NGC ID# 27CJ, PCGS# 3724

- 4001 1873 PR64 PCGS.** Silver-gray central devices show considerable contrast against reflective fields, the whole blending into peripheral copper and medium blue tones. A nice, sharply struck example of this last proof (only) three cent silver issue, despite a few light field hairlines. NGC ID# 27CJ, PCGS# 3724

THREE CENT NICKELS

- 4002 1865 MS66 PCGS.** A pleasing light champagne patina covers both sides of this Premium Gem, providing the coin with lovely eye appeal. Clash marks appear on both sides, but are more pronounced on the reverse. Several die cracks are also present. Population: 38 in 66 (1 in 66+), 2 finer (2/14). NGC ID# 22NJ, PCGS# 3731

- 4003 1866 MS66 PCGS. CAC.** Multiple die clashes with slight die rotations between them make this Premium Gem 1866 three cent nickel a particularly interesting piece (and a companion to an 1868 in the same grade and with the same effect) in the present sale. Lustrous, untuned nickel-gray surfaces show much eye appeal. Population: 28 in 66 (2 in 66+), 2 finer (3/14). NGC ID# 22NK, PCGS# 3732

- 4004 1868 MS66 PCGS. CAC.** This attractive Premium Gem shows bold luster over surfaces with light gold accents. Each side is multiply die-clashed with slight rotations between clashes that offset the clash marks, a fascinating effect. The repeated clash marks on the reverse have led to a die crack above the wreath ends, the die's surface no longer quite coplanar at that point. Population: 33 in 66, 1 finer (3/14). NGC ID# 2756, PCGS# 3734

1873 Three Cent Nickel, MS65
Scarce Open 3 Variety

- 4005 1873 Open 3 MS65 PCGS. CAC.** Comprising about two thirds of the total 1873 three cent nickel production, the Open 3 variety is actually significantly rarer in Gem condition. This piece exhibits pale lavender and ice-blue hues blended over softly frosted luster on each side. The surfaces are free of any detracting abrasions, while the devices are sharply impressed. Population: 22 in 65, 1 finer (3/14). PCGS# 3740

1874 Three Cent Nickel, MS66
Highly Lustrous and Sharply Struck

- 4006 1874 MS66 PCGS. CAC.** The smooth, nickel-gray surfaces of this three cent nickel radiate strong luster and exhibit sharply struck design elements, including Liberty's hair, the beads on the crown, and the lines in the III denomination. Neither side reveals significant abrasions, though a small streak of grease (as struck) is visible in the hair to the right of the ear. Elusive in the Premium Gem grade and virtually unobtainable any finer. Population: 12 in 66, 1 finer (3/14). NGC ID# 2759, PCGS# 3742

4007 1881 MS66 PCGS. A boldly struck Premium Gem with even, satiny surfaces and no abrasions or spots of note. Lustrous and untoned, save a single golden patch at 7:00 on the obverse. Population: 43 in 66, 8 finer (3/14).
From The Northern Lights Collection.
Ex: ANA Signature (Heritage, 3/2003), lot 5301. NGC ID# 22NT, PCGS# 3749

4008 1881 MS66 PCGS. The 8s in the date are strongly recut within the loops. This Premium Gem is extremely well-struck with even, satiny surfaces and one tiny carbon fleck on the reverse, at the lower left side. Lustrous, with dapples of light golden-gray. Population: 43 in 66, 8 finer (3/14).
Ex: Chicago Signature (Heritage, 8/2011), lot 3302; Long Beach Signature (Heritage 2/2006), lot 416. NGC ID# 22NT, PCGS# 3749

4009 1883 MS62 NGC. With a scant mintage of only 4,000 coins, the 1883 three cent nickel is many times rarer in business strike format, than in proof. The present survivor exhibits sharp detail and surprisingly few surface faults, given the grade. Essentially untuned, with just a tint of light golden over silver-gray luster. Census: 4 in 62, 19 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 275E, PCGS# 3751

4010 1888 MS67 PCGS. CAC. Satin luster and lightly toned surfaces provide this Superb Gem specimen with lovely eye appeal. Faint, intermingled shades of champagne, blue, and green are present. The reverse reveals a number of die cracks. Population: 38 in 67, 1 finer (3/14). NGC ID# 275H, PCGS# 3757

PROOF THREE CENT NICKELS

1866 Three Cent Nickel, PR66 ★ Ultra Cameo Exceptional Eye Appeal

4011 1866 PR66 ★ Ultra Cameo NGC. CAC. Untoned surfaces exhibit outstanding Cameo contrast, and a powerful strike imparts bold definition to the design elements, including full delineation in the lines of the III. Impeccably preserved, with just a few unobtrusive flecks in the left obverse field. Census: 6 in 66 Ultra Cameo (2 in 66 ★ Ultra Cameo), 6 finer (2/14).
Ex: Long Beach Signature (Heritage, 5/2008), lot 1171, which realized \$8,625.
From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 93762

4012 1869 PR65 PCGS. Milky tan and powder-blue patina enriches this well struck Gem. Well preserved and attractive. An early, low mintage proof date. Encased in an old green label holder.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 257, which realized \$805. NGC ID# 275P, PCGS# 3765

4013 1869 PR65 Deep Cameo PCGS. The cameo contrast is both undeniable and profound. This untuned specimen is sharply struck and expectantly distraction-free for the Gem level of preservation. Population: 19 in 65 Deep Cameo, 9 finer (3/14).
Ex: Santa Clara Signature (Heritage, 11/2002), lot 5677. PCGS# 93765

1869 Three Cent Nickel, PR66 Deep Cameo Fantastic Visual Appeal

4014 1869 PR66 Deep Cameo PCGS. Pronounced contrast between the highly reflective fields and richly frosted devices provides this Premium Gem with exceptional visual appeal. The surfaces remain virtually untuned, with the obverse exhibiting scattered die lines. A few tiny as-made strike-throughs and spots are present, but do not pose a distraction. Population: 9 in 66 Deep Cameo, 0 finer (3/14). PCGS# 93765

1871 Three Cent Nickel, PR67 Cameo Tied for Finest Certified

4015 1871 PR67 Cameo NGC. The surfaces approach technical perfection on this completely snow-white, untuned proof. The fields are exceptionally deep in their mirrored reflectivity and the devices are nicely frosted, yielding a pronounced cameo effect overall. Census: 4 in 67 Cameo (2 in 67 ★ Cameo), 0 finer (3/14).
Ex: Pittsburgh Signature (Heritage, 8/2004), lot 5433, which realized \$7,125; Long Beach Signature (Heritage, 6/2011), lot 3183, realizing \$8,912.50. PCGS# 83767

4016 1872 PR65 PCGS. A luminous lime-gold and sky-blue Gem that has a bold strike and pleasing preservation. Two short lintmarks on the reverse at 1 o'clock are as made. In an old green label holder.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 261, which realized \$690. NGC ID# 275T, PCGS# 3768

4017 1873 Closed 3 PR66 Cameo PCGS. CAC. Approximately 1,100 proof 1873 three cent nickels were struck, all of which feature the Closed 3 in the date. A brilliant, untuned example, this piece displays pleasing cameo contrast and is well struck save for the upper portion of the last Roman numeral. Population: 16 in 66 (1 in 66+) Cameo, 1 finer (2/14). PCGS# 83769

4018 1874 PR66 Cameo PCGS. CAC. A crisply struck and flashy Premium Gem that has a brilliant reverse and only a trace of chestnut toning on the upper obverse. Population: 18 in 66 (1 in 66+) Cameo, 0 finer (3/14).
Ex: Baltimore Signature (Heritage, 3/2009), lot 464, which realized \$1,265. PCGS# 83770

1875 Three Cent Nickel, PR66 Cameo
Rarely Seen in Cameo Format

- 4019 1875 PR66 Cameo PCGS.** The 1875 three cent nickel is only infrequently seen with a cameo finish. Indeed, of the 358 proof three cent pieces graded by PCGS only 26, or seven percent, were assigned a Cameo designation. Both sides of this Premium Gem feature a modest white-on-black contrast, more pronounced on the obverse. The design elements are sharply struck, including the lines in the III denomination and the leaf ribbing on the wreath. A few tiny flyspecks do not disturb the coin's highly attractive surfaces. Population: 5 in 66 Cameo, 0 finer (3/14). PCGS# 83771

1877 Three Cent Nickel, PR64
Proof-Only Necessity for Date Collectors

- 4020 1877 PR64 NGC.** Mass hoarding of silver coins came to an abrupt end in 1876, when small change returned into circulation — the beginning of the end for redundant coinage such as the three cent piece. Circulation strikes ceased in 1877 and 1878 for the three cent nickel, with only minor mintages thereafter except in 1881 when a last-gasp production of a million pieces was achieved. Proofs, however, were made for collectors. Just 900 proofs were produced in 1877. This attractive example shows frosted, pearl-gray devices set against satiny, lilac fields with little reflectivity (typical of later proofs in the series). The near-Gem surfaces are remarkably free of marks or spots for excellent appeal. Since no business strikes were produced, this proof-only issue is a necessity to complete the date set.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 275X, PCGS# 3773

1877 Three Cent Nickel, PR64
A Key Proof-Only Date

- 4021 1877 PR64 PCGS. CAC.** A near-Gem example of this popular, low-mintage, proof-only date which is the key to the proof three cent nickel series, along with the 1865. Only 900 examples were struck. This specimen displays faint toning with splashes of pale golden-orange color. A few tiny flyspecks are present along with a couple of tiny as-made lint marks on the reverse. NGC ID# 275X, PCGS# 3773

1877 Three Cent Nickel, PR66 Cameo
Desirable Specimen of the Key to the Series

- 4022 1877 PR66 Cameo PCGS.** Frosty luster and a sharp strike are among the attributes this Premium Gem representative possesses. The obverse retains a silver-white appearance overall, with only a few scattered flecks of golden toning present, while the reverse exhibits a larger concentration of the faint color. Adding to the appeal, the surfaces are virtually pristine. Population: 39 in 66 (1 in 66+) Cameo, 9 finer (3/14). PCGS# 83773

- 4023 1878 PR65+ Cameo NGC.** Lightly mirrored fields visit frosted devices on this Plus-graded, Gem cameo proof. The design elements are sharply struck, though heavy die polishing has partially worn off some of the recessed details. A few scattered toning specks are noted on the reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 83774

- 4024 1878 PR66 Cameo PCGS. CAC.** In 1878, only proofs were struck with a mintage of just 2,350 pieces. This is an essentially untoned coin, with good frosting on the devices and deeply mirrored fields. It is the second scarcest date in the series. Population: 80 in 66 (6 in 66+) Cameo, 24 finer (3/14).
Ex: New York Signature (Heritage, 7/2002), lot 6334; Orlando FUN Signature (Heritage, 1/2003), lot 5939. PCGS# 83774

- 4025 1881 PR67 PCGS.** This stunning Superb Gem proof from the mintage of 3,575 coins is a well-contrasted (if unacknowledged) example that shows no mentionable contact marks and glints of barely perceptible color. The date is repunched, 881 appearing twice and extra outlines on OF AM, the Breen *Proof Encyclopedia* "third die." Seldom seen finer. Population: 59 in 67, 3 finer (3/14).
From The Northern Lights Collection. NGC ID# 2763, PCGS# 3777

- 4026 1882 PR65 PCGS.** A slight tinge of gold appears on each side, and there is more than a touch of cameo contrast visible. The lower two loops on the 8s, and both halves of the 2, are frosted rather than polished, apparently Breen's die 3. Nicely struck and problem-free, save for a small fleck on the lower-right reverse. NGC ID# 2764, PCGS# 3778

- 4027 1882 PR66 PCGS.** All but unsurpassable in terms of eye appeal, the surfaces reveal moderately glassy features and delicate champagne iridescence. There is not a single contact mark of note. Certified in a green label holder.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 275, which realized \$690. NGC ID# 2764, PCGS# 3778
- 4028 1882 PR67+ PCGS. CAC.** The obverse is softly gold-toned, the reverse largely untuned silver-white, but both sides are pristine and virtually distraction-free, a great-looking example of this late-date proof issue. NGC ID# 2764, PCGS# 3778
- 4029 1883 PR66 PCGS.** Pastel shades of powder-blue, rose, and golden-yellow bathe well preserved proof surfaces. Crisply struck and undisturbed.
Ex: Long Beach Signature (Heritage, 9/2005), lot 1480, which realized \$862.50. NGC ID# 2765, PCGS# 3779
- 4030 1884 PR66 PCGS.** Original pale golden-brown toning endows this intricately struck and satiny Premium Gem. A beautiful proof type coin. Proofs and business strikes combined for only 5,642 pieces.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 280, which realized \$632.50. NGC ID# 2766, PCGS# 3780
- 4031 1886 PR66 PCGS.** Blended chestnut and cream-gray hues embrace this meticulously struck and undisturbed Premium Gem. The last of three proof-only issues in the series. Liberty's profile is lightly clashed inside the left border of the wreath.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 283, which realized \$690. NGC ID# 2768, PCGS# 3782

**1887/6 Three Cent Nickel
PR67 Cameo, FS-302**

- 4032 1887/6 PR67 Cameo PCGS. CAC. FS-302.** Designated "Strong Overdate" by PCGS. The 8s are clearly repunched, and generous portions of the 6 are apparent. Although this proof overdate variety is not a rarity, most specimens exhibit minimal contrast. The present Superb Gem, however, displays a frosty portrait and wreath. Brilliant, glassy fields further ensure the eye appeal. Population: 5 in 67 Cameo, none finer (3/14). PCGS# 83784
- 4033 1888 PR67 PCGS. CAC.** Expanding interest in coin collecting had reached a peak by 1888, reflected in the high production total of proof three cent nickels of this year (4,582 pieces). The issue remains one of the more available of this series in high grade, ideal for type purposes. Frosty ice-blue toning appears on this Superb Gem example, with well-struck devices. A low-power loupe fails to reveal any readily detectable surface imperfections. Population: 23 in 67 (2 in 67+), 1 finer (3/14). NGC ID# 276B, PCGS# 3785
- 4034 1889 PR65 PCGS.** This well struck and satiny Gem is lightly toned in chestnut hues. A tiny spot left of the center of the third pillar is the sole imperfection.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 292, which realized \$460. NGC ID# 22NW, PCGS# 3786

EARLY HALF DIMES

**1794 V-3, LM-3 Half Dime, XF40
Sharply Defined Early Type Coin**

- 4035 1794 XF40 PCGS. V-3, LM-3, R.4.** Deep gunmetal-gray toning blankets this well defined first-year Flowing Hair type coin. Both sides are smooth aside from a few faded thin marks on the field near the profile and a small area of granularity near the eagle's right (facing) shoulder. The familiar V-3 die state with three heavy cracks on the lower reverse and one faint crack on the upper left obverse. NGC ID# 22ZT, PCGS# 4250

**1794 Half Dime, AU Details
Scarcer V-3, LM-3 Variety**

- 4036 1794 —Cleaned— ANACS. AU50 Details. V-3, LM-3, R.4.** This variety appears at auction less frequently than the V-4, but is more available than either V-1 or V-2. Lovely silver-gray and lavender hues are blended across the two sides of this pleasing half dime. The design motifs are well-produced, and surface marks are lacking, save for wispy hairlines that attest to an old, light cleaning.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 22ZT, PCGS# 4250

**1795 Half Dime, MS63
V-5, LM-8, Pleasing Surfaces**

- 4037 1795 MS63 PCGS. V-5, LM-8, R.3.** One of the more available 1795 varieties and occasionally available in mint condition. This is an important variety and it is also known in copper with a reeded edge. The high quality these coins are sometimes found in has made it possible for the unscrupulous to make high quality spark erosion counterfeits—which are identifiable by a telltale pit at the top of the 7. The number of high quality V-5 half dimes is attributable to a hoard of these and two other varieties that was dispersed by William Elliot Woodward around 1880, known as the Wadsworth-Rea hoard.

This piece shows thick, satiny mint luster over the surfaces that is unbroken in the fields or over the highpoints. The devices are softly struck on both obverse and reverse. Both sides are also evenly toned with light golden-brown color. Other than a well concealed thin mark near the bust truncation, the only other surface interruption is a rim-to-rim die crack from below the 7 through the head of Liberty to the rim above the Y in LIBERTY.

Ex: Long Beach Signature (Heritage, 2/2008), lot 4, which realized \$20,700.

From The Southwest Collection. NGC ID# 22ZV, PCGS# 4251

**1797 15 Stars Half Dime, VF25
V-2, LM-1, Minimally Abraded**

- 4038 1797 15 Stars VF25 PCGS. CAC. V-2, LM-1, R.3.** The only 15 Stars die marriage of this very scarce Small Eagle date. Dusky gunmetal-gray, sea-green, and lilac-red toning encompasses the moderately clashed surfaces. Abrasions are minimal aside from a slender mark near star 4. Liberty's hair has surprising definition, although the eagle's breast is worn smooth. Housed in old green label holder. NGC ID# 22ZZ, PCGS# 4258

**1797 Draped Bust Half Dime, XF40
V-2, LM-1 Variety**

- 4039 1797 15 Stars XF40 NGC. V-2, LM-1, R.3.** The 1797 Draped Bust half dime claims a mintage of 44,527 pieces, with four die varieties known for the date. This coin represents the LM-1 variety, with 15 stars and the outer berry between N and I in UNITED. This lightly worn example retains much original design detail in the hairlines. The lightly abraded surfaces display shades of pale gold and lavender-gray toning. NGC ID# 22ZZ, PCGS# 4258

- 4040 1797 13 Stars — Scratches — NGC Details. VF. V-1, LM-4, R.5.** Both sides of this pewter-gray example are scratched. However, hints of luster are evident in the protected areas, and the details appear to be strong VF or perhaps XF. A coin worthy of careful consideration. NGC ID# 22ZZ, PCGS# 4260

**1800 Half Dime, VF20, V-1, LM-1
Attractive Patina**

- 4041 1800 VF20 PCGS. CAC. V-1, LM-1, R.3.** Early Die State. Of the four known die marriages for 1800 half dimes, LM-1 is one of the more frequently encountered. This mid-grade representative displays original bluish-gray patina with lighter gray accents on the high points of the design. The coin is evenly struck with strong detail remaining on the central devices and around most of the borders, though some minor softness is seen near 1 o'clock on the reverse. Some faint adjustment marks are noted on the obverse portrait, but are hardly detectable to the unaided eye. A very pleasing example of this early Bust half dime type, encapsulated in an old green label holder. NGC ID# 2326, PCGS# 4264

**1800 V-1, LM-1 Half Dime, XF40
Moderately Toned**

- 4042** 1800 XF40 ANACS. V-1, LM-1, R.3. A sharply struck example of this scarce type, with wear confined to the design's highest points. Silver-gray and medium-gray toning betray slight olive accents near the borders. Other than a faint mark in the left obverse field, and another near the lower reverse periphery at 6:30, the surfaces are smooth and free of distractions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2326, PCGS# 4264

**1800 LIBEKTY Half Dime, VF30
V-2, LM-3, Popular Variety**

- 4043** 1800 LIBEKTY VF30 PCGS. CAC. V-2, LM-3, R.4. The V-2, LM-3 variety shows a leaf touching the left diagonal of the last A in AMERICA. More importantly, the top of R in LIBERTY is broken, causing that letter to resemble a K. The devices exhibit typical wear for the grade, while the smooth surfaces are free of distracting marks. Light touches of salmon and steel-blue coloration complement the primary light-gray toning across each side. NGC ID# 2326, PCGS# 4265

**1800 Half Dime, AU50
V-2, LM-3, LIBEKTY**

- 4044** 1800 LIBEKTY AU50 NGC. V-2, LM-3, R.4. The top of the R punch broke off prior to its Mint use to create the obverse die, hence the LIBEKTY name. The peripheral obverse die break at 7 o'clock, and the large break at the left shield corner, are also characteristic of V-2. This is a pleasing mark-free example with lovely lavender and stone-gray toning. Struck a few degrees off center toward 9 o'clock.
Ex: Long Beach Signature (Heritage, 5/2012), lot 3428, which realized \$6,900. NGC ID# 2326, PCGS# 4265

- 4045** 1803 Large 8 — Corroded, Cleaned, Scratched — ANACS. XF45 Details. V-2, LM-3, R.3. The eye appeal of this 1803 half dime is much stronger than the grade designation implies. The cleaning is old and the surfaces have long-since retuned deep olive-gray. Minor corrosion is noted, but is mainly restricted to the recesses around the borders, and the few small scratches present are old and nearly absorbed by the rich patina. A well-detailed example of this early half dime.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2329, PCGS# 4269

BUST HALF DIMES

**1829 V-2, LM-3 Half Dime, MS67
Flawless Surfaces**

- 4046** 1829 MS67 NGC. V-2, LM-3, R.2. A virtually brilliant Superb Gem that boasts booming luster and pristine preservation. A crisp strike aside from minor incompleteness on portions of Liberty's curls. The obverse has a raised rim while the reverse has a beaded rim. A pristine representative of the introductory Capped Bust half dime date. NGC ID# 232B, PCGS# 4276

**1830 Half Dime, MS65
V-7, LM-7, R.2**

- 4047** 1830 MS65 PCGS. CAC. V-7, LM-7, R.2 From one of the more plentiful die pairs from 1830, this exceptional half dime will be attractive to the serious type collector. Its encapsulation in a first-generation PCGS holder should provide further interest.

This remarkable Gem has all of the eye appeal that one could possibly ask for from an example of this variety. Sumptuous mint luster and gorgeous peripheral coloration complement the clean, splendidly preserved surfaces. None of the design details seem any less than completely struck. Population: 33 in 65, 27 finer (3/14). NGC ID# 232C, PCGS# 4277

- 4048** 1831 MS64 NGC. V-7, LM-2, R.3. The frosted surfaces are a bit pebbly from die rust and are fairly well-struck. Late-state dies show a small die crack from star 2-3 on the obverse and lapping on the lower reverse. Some dark buildup appears in the date and some of the letter interiors and a small color accent at the lower obverse. Attractive and lustrous. NGC ID# 232D, PCGS# 4278

1831 V-6, LM-1 Half Dime, MS65
Undisturbed by Contact

4049 1831 MS65 PCGS. CAC. V-6, LM-1, R.1. Cream-gray centers are bounded by deep sea-green margins. A satiny and unabraded Gem with only slight incompleteness of strike at the centers. A fairly late die state with breaks inside the upper loops of each S in STATES. Population: 42 in 65, 54 finer (3/14). NGC ID# 232D, PCGS# 4278

1831 Capped Bust Half Dime, MS67
V-5, LM-1 Variety

4050 1831 MS67 NGC. V-5, LM-5, R.1. A substantial mintage of 1.2 million Capped Bust half dimes was accomplished in 1831, with seven die varieties known for the date. This coin represents the available LM-5 variety, with star 2 repunched and the right edge of the E in STATES positioned above the center of S in PLURIBUS. This delightful Superb Gem is sharply detailed throughout, and the well-preserved prooflike surfaces show traces of pale gold toning. Census: 19 in 67 (2 in 67+, 2 in 67 ★), 2 finer (3/14). NGC ID# 232D, PCGS# 4278

1833 V-7, LM-1 Half Dime, MS65
Rare So Fine

4051 1833 MS65 PCGS. V-7, LM-1, R.3. The tiny and distant period after 5 C attributes Valentine-7. Logan and McCloskey call this die marriage scarce, noting that examples above XF are difficult to locate. This beautiful, silvery Gem should certainly fill the bill, with no visible distractions and much pleasing contrast between the fields and devices on each side.
Ex: Long Beach Signature (Heritage, 2/2009), lot 834, which realized \$2,530. NGC ID# 232F, PCGS# 4280

1835 V-4, LM-7 Half Dime, MS66
Large Date, Large 5C

4052 1835 Large Date, Large 5C MS66 NGC. V-4, LM-7, R.3. This outstanding silver type coin displays exquisite golden-brown, jade-green, ocean-blue, and fire-red toning. A satiny and smooth Premium Gem. The strike is precise except near the left border of the shield. LM-7 is scarcer than LM-3, the usually encountered Large Date, Large 5C die pairing. NGC ID# 232H, PCGS# 4282

1835 Half Dime, MS66+
Small Date, Small 5C
V-7, LM-10

4053 1835 Small Date, Small 5C MS66+ PCGS. CAC. V-7, LM-10, R.1. Light to medium caramel-gold toning adorns the peripheries of this lustrous and fully struck Premium Gem. The reverse appears immaculate and the obverse displays only trivial grazes. A magnificent Capped Bust type coin. Population: 5 in 66 (2 in 66+), 6 finer (3/14). PCGS# 4285

4054 1837 Small 5C MS62 PCGS. V-2, LM-4, R.3. The 3 is low, the 7 under a curl. An attractive, untuned silver-white example with good eye appeal despite a smattering of small contact marks that determine the grade. NGC ID# 232K, PCGS# 4290

SEATED HALF DIMES

1837 No Stars, Large Date Half Dime, MS66 Untoned and Lustrous

- 4055** 1837 No Stars, Large Date (Curl Top 1) MS66 NGC. Beautifully preserved, this Premium Gem exhibits lustrous silver-white surfaces. The strike is sharp overall, with blending of the border details present on portions of both sides. A die crack extends from the rim through the O in OF to the wreath. A few faint hair thin marks are observed when viewed closely, but they are not distracting. NGC has awarded higher numeric grades to 20 examples (3/14). NGC ID# 232M, PCGS# 4311

1837 Seated Half Dime, MS66 No Stars, Small Date Variety

- 4056** 1837 No Stars, Small Date (Flat Top 1) MS66 PCGS. CAC. The 1837 Small Date, No Stars Seated Liberty half dime is slightly more difficult to locate than its Large Date counterpart. This impressive Premium Gem is sharply detailed in most areas, but the A in HALF shows a touch of softness. The lustrous surfaces are blanketed in shades of gold and gray toning. Population: 9 in 66 (1 in 66+), 5 finer (2/14).
Ex: Schaumburg, IL CSNS Signature (Heritage, 4/2012), lot 3716, which brought \$4,312.50.
From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 232M, PCGS# 4312
- 4057** 1838 Large Stars, No Drapery MS65 NGC. A lovely Gem, this lustrous Large Stars half dime has peripheral iridescent toning on both sides, with brilliant silver centers. The strike is excellent, showing only slight weakness on a few of the leaves. NGC ID# 2TXX, PCGS# 4317
- 4058** 1838 Large Stars, No Drapery MS66 NGC. Though moderately available in Mint State, high-end examples of this issue are highly sought-after by both type and date collectors. This frost-white Premium Gem exhibits virtually perfect surfaces and exceptional visual appeal. The strike is bold in most regions, though some minor softness is noted on the upper-left portion of the wreath. A beautifully preserved example of this No Drapery type. Census: 50 in 66 (1 in 66+, 1 in 66 ★), 29 finer (3/14). NGC ID# 2TXX, PCGS# 4317
- 4059** 1840 No Drapery MS65+ NGC. A gorgeous piece, the reasons for the Plus designation are readily apparent. The coin displays rich luster beneath an attractive patina, with the obverse consisting of hues including gold, orange, cherry, sky blue, and lavender. The reverse is largely pale gold and tan. The design elements display a strong degree of detail. Census: 24 in 65 (1 in 65+), 23 finer (2/14). NGC ID# 232U, PCGS# 4321

1846 Half Dime, XF40 Important Key Issue

- 4060** 1846 XF40 ANACS. This key issue had an astonishingly low mintage of 27,000 coins, easily the lowest number produced for the Stars Obverse type. This represents a well-struck specimen with smooth, unmarked surfaces that are evenly worn and show a variegated mixture of olive and steel-gray colors.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2338, PCGS# 4336
- 4061** 1851 MS66+ PCGS. V-1a. High date, pendant centered above 5, die polishing lines at 10 o'clock on the reverse, diagonal die crack from rim through U. This top-notch Premium Gem shows only trivial signs of post-Mint contact on well-contrasted surfaces lightly tinged with gold. Small patches of field roughness appear in the right portion of each side, as made, while otherwise die-polishing striations are prevalent. A nice example for the issue and grade. Surprisingly available for the issue and mintage. NGC ID# 233H, PCGS# 4347
- 4062** 1853 Arrows MS66 NGC. With a mintage in excess of 13 million coins, the 1853 With Arrows half dime is usually readily available, but not at the Premium Gem grade level. This sharply struck example displays satiny mint luster beneath light golden toning overall. Close examination reveals light clash marks on both sides of this beautifully preserved With Arrows type representative. Census: 48 in 66 (1 in 66+, 2 in 66 ★), 23 finer (3/14). NGC ID# 233Y, PCGS# 4356
- 4063** 1856 MS66+ PCGS. CAC. This high-end Premium Gem offers sharply detailed design elements and vibrant mint luster with outstanding eye appeal. Population: 11 in 66 (3 in 66+), 0 finer (3/14). NGC ID# 233P, PCGS# 4363
- 4064** 1857 MS66 NGC. Perceptible clash marks appear on each side of this untuned Premium Gem, a frosty, high-end coin with no mentionable post-Mint contact marks. The strike is a tad soft on Liberty's head and opposite on the wreath bow, and a curious transverse die crack crosses the upper reverse from TA to OF. Census: 52 in 66 (1 in 66+), 8 finer (3/14).
From The Northern Lights Collection. NGC ID# 233S, PCGS# 4365
- 4065** 1857 MS66 PCGS. Though both sides of this Premium Gem specimen reveal toning, the obverse is arguably the more attractive side, with intermingled hues of crimson, fiery orange, forest green, and plum. Outer portions of the design, including the upper obverse, reveal an incompleteness of strike. Population: 30 in 66 (5 in 66+), 3 finer (2/14). NGC ID# 233S, PCGS# 4365
- 4066** 1857 MS66 PCGS. CAC. Areas of colorful toning add to the eye appeal of this Premium Gem example. Shades of pale blue, lavender, and gold appear on the obverse, while the central reverse reveals areas of rich yellow-gold, orange, and red. Light clash marks are present on this piece exhibiting blending at large portions of the dentils as is typical. Population: 30 in 66 (5 in 66+), 3 finer (2/14). NGC ID# 233S, PCGS# 4365

1857 Liberty Seated Half Dime, MS67
Only One Finer

- 4067 1857 MS67 NGC.** Conditionally scarce, this Superb Gem is one of only seven to have reached this level at NGC, with only one finer, while PCGS has only certified three at this level, with none finer (3/14). The lustrous surfaces reveal attractive toning, particularly the obverse, which displays hues of sea-green, golden-orange, and yellow. Faint roller marks appear on both sides. NGC ID# 233S, PCGS# 4365

1857-O Half Dime, MS67
Among the Finest Certified at NGC

- 4068 1857-O MS67 NGC.** An exceptional Superb Gem, with frosty, silver-white luster, virtually pristine surfaces, and uncharacteristically sharp design motifs. New Orleans-issued coins from the mid-1800s are seldom seen in such remarkable condition. This is one of only three Superb Gem 1857-O half dimes we have handled, the other two including one PCGS coin and one NGC specimen. Census: 4 in 67, 0 finer (3/14).
From The Northern Lights Collection.
Ex: Houston Signature (Heritage, 12/2009), lot 344. NGC ID# 233T, PCGS# 4366

- 4069 1858 MS65 PCGS.** Even when viewed from a distance, the gorgeous toning and strong luster provide this Gem with an exceptional appearance. Closer examination reveals intermingled hues of teal, plum, apple-green, pink, bright golden-yellow, violet, purple, and red along the obverse periphery. Many of the same colors appear on the reverse, although they are not as concentrated or rich, and clash marks are present. A few scattered marks appear at the central reverse. NGC ID# 233U, PCGS# 4367

- 4070 1858 MS66 PCGS. CAC.** This CAC-approved Premium Gem delivers outstanding eye appeal, with lavender, olive, gold, and royal-blue hues covering both sides. Satiny, well-preserved surfaces complement the sharply struck devices of this high-end With Stars type coin. Population: 54 in 66 (3 in 66+), 13 finer (2/14). NGC ID# 233U, PCGS# 4367

- 4071 1861 MS66 PCGS Secure. CAC.** Matte luster and faint champagne toning provide this Premium Gem with an attractive appearance. Further adding to the appeal, the design elements exhibit a pleasing degree of detail. Population: 25 in 66 (1 in 66+), 2 finer (2/14). NGC ID# 2349, PCGS# 4379

- 4072 1862 MS66 PCGS.** A sharply struck Civil War-era Premium Gem, with satiny, silver-gold luster overall. Light clash marks on each side add a degree of intrigue to this beautifully preserved half dime.
From The Northern Lights Collection.
Ex: Houston Signature (Heritage, 12/2008), lot 1055; Long Beach Signature (Heritage, 2/2011), lot 3357. NGC ID# 234B, PCGS# 4381

1862 Half Dime, MS67
High-End Type Coin

- 4073 1862 MS67 PCGS.** Heavily hoarded following suspension of specie payments by banks and the Treasury, 1862 half dimes survive in quantity and are usually available in pleasing Mint State condition. In Superb Gem grades, however, the date is nevertheless elusive.
The present piece displays virtually perfect surfaces with frosty, vibrant mint luster. Largely untuned, with light tinges of amber-gold seen around the peripheries. The strike is sharp overall, with notable definition on the lower shield and the upper-left portion of the wreath, areas that are typically weak on this issue. An essentially perfect type representative. Population: 39 in 67 (3 in 67+), 3 finer (3/14). NGC ID# 234B, PCGS# 4381

- 4074 1872-S Mintmark Above Bow MS66 PCGS. CAC.** A delightful Premium Gem representative of this late-date issue. Solidly struck with mellow rose-gray patina and a sloping die crack that runs from Liberty's head to the rim. Bold clash marks appear on the obverse above the date. Population: 18 in 66 (1 in 66+), 5 finer (3/14).
From The Northern Lights Collection. NGC ID# 234Z, PCGS# 4402

1873-S Half Dime, MS67
Tied With One Other as Finest Certified

- 4075 1873-S MS67 PCGS.** An impressive Superb Gem survivor from the final issue of the Liberty Seated half dime series, this piece exhibits lustrous surfaces, with small scattered splashes of colorful toning appearing on both sides. The hues include deep red, orange, forest-green, apple-green, plum, electric-blue, and yellow-gold. A sharp strike is an additional attribute. A few die breaks are present, including one on the lower obverse. PCGS and NGC have each only assigned the MS67 grade to a single example, with none finer at either service (3/14). NGC ID# 2354, PCGS# 4405

PROOF SEATED HALF DIMES

- 4076 1858 PR64 PCGS.** Deep cobalt-blue rim patina encircles pinkish devices in the centers of each side. This piece is fairly lustrous beneath the deep color. A trivial contact mark appears in the right obverse field. Population: 20 in 64, 13 finer (3/14). NGC ID# 235N, PCGS# 4437
- 4077 1859 PR64 PCGS. CAC. V-1,** recutting shows on 1 59 of date. A new obverse hub debuted in 1859, showing an upright shield, larger, sharp-pointed stars with hollow centers, and thinner arms on Liberty. This is a beautifully toned near-Gem proof of this date, scarcer than the bloated population data suggest. Medium-intensity toning in pale blue and sunset-orange fails to diminish the strong luster emanating from beneath. NGC ID# 235P, PCGS# 4438
- 4078 1859 PR63 Cameo PCGS. V-1,** repunched 1 59 in date. Deeply reflective fields and standout devices define this diminutive half dime. Lightly gold-toned overall with splashes of orange and blue-green. Population: 2 in 63 Cameo, 13 finer (3/14).
Ex: Charlotte Signature (Heritage, 3/2007), lot 430. PCGS# 84438

1860 Seated Half Dime, PR66 Cameo First Year of the Legend Obverse

- 4079 1860 PR66 Cameo PCGS.** The legend replaced the 13 stars on the obverse and the wreath was redesigned as well in 1860. This spectacular Premium Gem proof displays sharply detailed frosty design elements that contrast boldly with the well-preserved mirrored fields. A few hints of pale gold toning enhance the considerable eye appeal. Population: 5 in 66 (1 in 66+) Cameo, 2 finer (3/14). PCGS# 84443

1861 Half Dime, Eye-Appealing PR66

- 4080 1861 PR66 NGC.** Though 1,000 proof half dimes were minted in 1861, fewer than 400 were sold and most of the remainder were melted. NGC and PCGS have graded nearly 200 examples, making this issue fairly available to collectors. The silver-gray surfaces of this Premium Gem yield modest field-motif contrast, somewhat more so on the reverse. The design features exhibit a uniformly crisp strike and both sides are nicely preserved. This piece yields strong eye appeal and is thus worthy of a generous bid. Census: 13 in 66 (1 in 66 ★), 4 finer (3/14). NGC ID# 235W, PCGS# 4444

1864 Seated Half Dime, PR67 Concentrically Toned

- 4081 1864 PR67 NGC.** Demand for 1864 proof half dimes is increased by the scarcity of their business strike counterparts. Gem survivors are in the distinct minority and become progressively rarer in higher numeric grades. This deeply mirrored example exhibits vivid rings of greenish-silver, navy, and violet around amber-rose centers. Close examination reveals a sharp strike and virtually perfect surfaces. Census: 4 in 67, 1 finer (3/14). NGC ID# 235Z, PCGS# 4447

1865 Half Dime, PR66 Cameo Low-Mintage Issue Consisting of 500 Coins

- 4082 1865 PR66 Cameo PCGS. CAC.** Intermingled toning, including shades of copper, gold, teal, plum, and forest-green, is present on both sides of this Premium Gem. Cameo contrast adds to the eye appeal of this piece. Areas of reflectivity emerge beneath the patina. Population: 11 in 66 Cameo, 2 finer (3/14). PCGS# 84448

1866 Half Dime, Patinated PR66 Cameo Infrequently Found With This Finish

- 4083 1866 PR66 Cameo PCGS.** The 1866 proof half dime is infrequently found with a cameo finish. In fact, PCGS has graded just 12 percent of 1866 proofs in this format. Gunmetal-blue and lavender toning do not unduly impede the field-device contrast on this Premium Gem. Sharply struck throughout, save for just the slightest softness in the hair atop Liberty's head. Population: 4 in 66 (2 in 66+) Cameo, 0 finer (3/14). PCGS# 84449

**1867 Half Dime, PR66 Cameo
Beautifully Toned**

- 4084 1867 PR66 Cameo PCGS. CAC.** Richly toned on both sides, this Premium Gem Cameo displays shades of gold, copper, orange, red, and sea-green on the obverse, while the reverse includes hues of copper, teal, and violet. A vertical toning streak appears on the reverse. A sharp strike adds to the appeal. A tiny mark and edge nick are present near 6 o'clock on the obverse. Population: 10 in 66 (2 in 66+) Cameo, 1 finer (3/14). PCGS# 84450

- 4085 1868 PR65 Cameo PCGS.** A well-contrasted and beautifully toned Gem Cameo proof, silver and gold in the centers with lavender and blue near the rims, sharply struck and distraction-free. Population: 5 in 65 Cameo, 10 finer (3/14). PCGS# 84451

**1868 Seated Half Dime, PR67+ Ultra Cameo
Single-Finest Certified Example**

- 4086 1868 PR67+ Ultra Cameo NGC.** Only 600 proof Seated Liberty half dimes were struck in 1868 and this coin is the single-finest certified survivor with Ultra Cameo surfaces (3/14). The design elements are sharply detailed and display a frosty texture that contrasts profoundly with the deeply mirrored fields. Census: 1 in 67 Ultra Cameo (1 in 67+ Ultra Cameo), 0 finer (3/14). PCGS# 94451

- 4087 1870 PR66 PCGS.** Vivid concentric rings of royal-blue and violet surround light rose-gold centers on this highly lustrous Premium Gem proof. The design elements are sharply struck, with notable strength on Liberty's head and the upper wreath. A high-end example with deeply mirrored fields and tremendous eye appeal. Population: 14 in 66, 3 finer (3/14). NGC ID# 2367, PCGS# 4453

- 4088 1870 PR66 NGC.** Jade-green, red-brown, plum, champagne, and electric-blue are among the colors found on this Premium Gem half dime. A number of as-made vertical die-polishing striations appear on the obverse. Abundant reflectivity remains on each side underneath the moderate patina. Census: 24 in 66, 9 finer (3/14). NGC ID# 2367, PCGS# 4453

EARLY DIMES

**1796 Draped Bust Dime, JR-2, VF25
Highly Sought First-Year Issue**

- 4089 1796 VF25 NGC. JR-2, R.4.** Seven die marriages are known for the 1796 dime, the last one discovered after the JR book was published. The varieties range from scarce to rare, with the JR-2 variety among the most often-seen.

The present example exhibits a high degree of detail for the grade, with notable definition among Liberty's hair locks and the reverse borders. The obverse displays pale pinkish-gray patina overall, while the reverse offers a steel-gray center with darker gray margins. Close inspection reveals some faint, old pinscratches on the obverse, primarily hidden in Liberty's hair locks, and some mint-made adjustment marks on the reverse above the eagle's head, but these are hardly noticeable to the unaided eye. A pleasing representative of this first type. NGC ID# 236B, PCGS# 4461

**1797 16 Stars Dime, JR-1, VF20
Attractive Surfaces**

- 4090 1797 16 Stars VF20 PCGS. JR-1, R.4.** The Mint began this year by striking the 16 stars variety seen here, but reverted to the 13 stars type later in 1797. This example shows clean surfaces with light-gray color on the high points and slightly deeper dove-gray patina in the fields. A well-produced example with strong details for the grade. Population: 7 in 20, 46 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 236C, PCGS# 4462

- 4091 1797 13 Stars — NGC Details. VG8. JR-2, R.4.** This remains a nice, attractive example of this second-year dime variety, despite a few thin pinscratches through the central obverse portrait and the left field. The silver-gray surfaces show all major elements clearly, and good eye appeal remains.

- 4092 1798/7 16 Stars on Reverse — Environmental Damage — NCS. AU Details. JR-1, R.3.** A boldly detailed example of this obvious overdate. Microscopic granularity in the fields suggests mild environmental impairment, though the overall appearance remains pleasing. Pewter-gray fields complement lighter gray devices, delivering a natural patina. NGC ID# 236F, PCGS# 4468

1798 JR-4, Large 8 Dime, Evenly Struck VF25

- 4093 1798 Large 8 VF25 PCGS. CAC. JR-4, R.3.** Of the two non-overdate 1798 dime varieties, the Large 8 variant is the most often encountered die marriage. The present example displays substantial detail for the grade, with notable definition on the shield, the eagle's feathers, and Liberty's hair locks. Original steel-gray patina graces the surfaces, with amber overtones seen over the high points. Typical for the JR-4 variety, a die crack is noted running from the rim to Liberty's nose, and another is present at the chin. A pleasing mid-grade example of this early Bust dime type, encapsulated in an old green label holder. Population: 8 in 25, 44 finer (3/14). NGC ID# 236E, PCGS# 4466

- 4094 1801 VG10 NGC. CAC. JR-2, R.5.** The small A in STATES on the reverse and LIB closer than ERTY on the obverse attribute this rare variety, seldom seen in high grades and in any case far less often than the 1801 JR-1, rated R.4. The surfaces are deep gray on each side. Only the central devices on the obverse are clear, while the peripheral stars are a bit faint, the denticulation essentially invisible. The reverse offers a pleasing amount of detail for the grade and is far better-struck. NGC ID# 236J, PCGS# 4471

**1805 4 Berries JR-2 Dime
Well Struck, Partly Lustrous**

- 4095 1805 4 Berries PCGS Genuine. JR-2, R.2.** The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an AU specimen that has been damaged and cleaned. The well struck caramel-gold and stone-gray surfaces display substantial luster and are only mildly cleaned. Abrasions are noted on Liberty's neck, the field near her chin, the reverse exergue, and on the field near the left (facing) wingtip. NGC ID# 236S, PCGS# 4477

- 4096 1805 4 Berries VF30 PCGS. CAC. JR-2, R.2.** A visually spectacular mid-grade representative, with original blue-gray patina in the recessed areas and lighter contrast over the relief elements. Evenly struck with complementary even wear, this CAC-approved type representative showcases problem-free surfaces and exceptional eye appeal. NGC ID# 236S, PCGS# 4477

- 4097 1807 VF25 PCGS. JR-1, R.2.** Only one variety is known for the 1807 dime. The present example displays an even strike and exceptional detail for the grade, with nearly all of Liberty's hair curls well-defined. A pale amber-gray patina covers both sides, with splashes of darker gray intermixed. The surfaces exhibit only a few minuscule imperfections, with overall pleasing visual appeal. NGC ID# 236T, PCGS# 4480

- 4098 1807 VF25 NGC. CAC. JR-1, R.2.** The sole die variety dated between 1806 and 1808. JR-1 is also the final Draped Bust die pair. The cream-gray surfaces are well defined for the VF25 level, though faded marks are noted on Liberty's jaw and across the eagle's neck. As usual for the marriage, clash marks on the right obverse field have a sunken (but mint-made) appearance. NGC ID# 236T, PCGS# 4480

BUST DIMES

**1827 Dime, Near-Gem
Scarce JR-8 Variety**

- 4099 1827 MS64 PCGS. JR-8, R.4.** Obverse dentil die breaks near 2 o'clock and a point from a leaf tip at 7:30 identify this fairly scarce marriage. Portions of the present near-Gem are nearly brilliant, though jade-green, navy-blue, and autumn-brown occupy a majority of the coin. A loupe fails to locate any abrasions. NGC ID# 2375, PCGS# 4504

**1834 Bust Dime, Near-Gem
JR-1, Large 4, Rich Patina**

- 4100 1834 Large 4 MS64 PCGS. JR-1, R.1.** Steel-gray and russet-brown embrace the fields and motifs of this sharply struck Capped Bust type coin. The borders exhibit deep forest-green toning. The satiny surfaces are devoid of evident marks, although a loupe reveals trivial hairlines near the bust tip. Population: 20 in 64 (1 in 64+), 13 finer (3/14). PCGS# 4526

**1834 Bust Dime, MS65
JR-5, Large 4, Well Struck**

- 4101 1834 Large 4 MS65 NGC. JR-5, R.1.** The Large 4 in the date has its crossbar broken to the right of the upright. Lavender, pearl-white, and forest-green blanket this well struck Gem. The coruscating surfaces are unabraded aside from a single thin vertical line on Liberty's neck and jaw. An important example of this collectible Bust date. PCGS# 4526

PROOF BUST DIME

1830/29 Dime, JR-4, PR63
Possibly Only Two Known

- 4102** 1830/29 PR63 NGC. JR-4, R.8 as a proof. The JR-4 variety is common as a business strike, but the proof strikes are a different matter entirely. Only once before have we offered an example of the 1830 proof dime since we began our Permanent Auction Archives in 1993, and that example was a JR-6 (Long Beach Signature, Heritage, 9/2001, lot 3333). A couple of other proof examples that we know of are also the JR-6, including the PR65 PCGS example depicted on the CoinFacts website.

The JR-4 is the 1830/29 overdate obverse, here showing plain recutting on the right-lower loop of the 3, the inside-right of the 8, and over the 0. Star 13 is recut, and the 0 is positioned entirely under the lowest curl. On the reverse, the second A is recut, TA is close, and the last T is low. This untuned, sparkling little jewel shows clear proof surface throughout both sides, despite a few light contact marks and a few tiny dark flecks that appear only under a loupe. The “dime book” authors mention only the PR65 example from Stack’s 1976 ANA Sale, lot 796. It is possible that one or two more examples survive in proof format, but we would call it a long shot. From The Charles G. Wright Family Collection.

SEATED DIMES

- 4103** 1837 No Stars, Large Date AU58 PCGS. CAC. Fortin 101-b. A transitional die state between Fortin 101a and 101b, without the second obverse die crack from 7 o’clock. This is a boldly struck example with pleasing light earth tones distributed across each side. Free of significant distractions. NGC ID# 237R, PCGS# 4561

- 4104** 1838-O No Stars AU58 NGC. CAC. Fortin-102. A splendid near-Mint example struck from the worn Fortin-102 dies; the same reverse would be used in the following year to strike the 1839-O Huge O (Fortin-108). The surfaces have nearly full frosty mint luster beneath steel-blue, lilac, and iridescent toning. This is an elusive issue, representing the only New Orleans coinage with the No Stars obverse design.
Ex: Long Beach Signature (Heritage, 2/2006), lot 731. NGC ID# 237T, PCGS# 4564

1838 Large Stars Dime, MS66
Fortin-111a, Obverse and Reverse Die Cracks

- 4105** 1838 Large Stars MS66 PCGS. CAC. Fortin-111a. The year 1838 saw the first use of the obverse stars design on the Seated Liberty dime. The present coin is a representative of the Large Stars variety, more specifically Fortin-111a, with a die crack bisecting the obverse from below Liberty’s foot to star 7, but missing the shield, and a repunching of star 13. In addition, the reverse exhibits a die crack that extends from the rim through the AT in STATES and down to the wreath. This spectacular Premium Gem displays a sharp strike, with ample mint luster and light gold toning. Housed in a green label holder. Population: 16 in 66, 2 finer (2/14).
Ex: Houston Signature (Heritage, 12/2010), lot 3423.
From The Jim O’Neal Collection of U.S. Type, Part One. NGC ID# 237U, PCGS# 4568

1841-O Large O Dime, VF30
Transitional Closed Bud Reverse
FS-902, Fortin-101, Top 100

- 4106** 1841-O Transitional Reverse, Large O VF30 PCGS. CAC. Fortin-101, FS-902. Gerry Fortin states, “I consider both the Large and Small O Transitional Closed Bud dimes to be key entries in the Top 100 Liberty Seated Dime Variety set.” The present midgrade example has lavender-gray devices and deep olive-brown fields. Marks are minor overall, though we note a small reverse rim nick at 4:30. PCGS# 145487

1842 Seated Dime, MS65
Seldom Encountered in Gem or Finer

- 4107 1842 MS65 PCGS.** Pale champagne-gold toning and strong luster provide this Gem with exceptional visual appeal. Aside from a couple of minuscule marks on the obverse, the surfaces are essentially pristine. Although the 1842 dime issue consisted of almost 1.9 million coins, only 13 examples have achieved the Gem grade, with only 8 pieces surpassing that level at PCGS and NGC combined (2/14).

Ex: Long Beach Signature (Heritage, 2/2000), lot 5462, which realized \$2,760; Long Beach Signature (Heritage, 6/2006), lot 1038, realizing \$4,312.50. NGC ID# 2386, PCGS# 4581

- 4108 1845 MS65 NGC. Fortin-105.** *Ex: Lovejoy.* All four date digits nearly touch the rock, and a faint diagonal die crack passes through the E in STATES, with another at ED of UNITED. Deep sea-green and plum-red toning drapes this colorful and virtually mark-free Gem. Well-struck aside from the center of star 7.

Ex: Allen F. Lovejoy Collection (Stack's, 10/1990), lot 232; Houston Signature (Heritage, 11/2007), lot 60315. Allen Lovejoy was one of the coauthors of Early United States Dimes 1796-1837.

From The Northern Lights Collection. NGC ID# 238B, PCGS# 4586

- 4109 1849-O AU58 PCGS.** Scarce in all grades. This nearly Mint State example displays vivid orange-gold peripheral toning around pale reddish-gray centers, with hints of mint luster remaining in the protected regions. The details are well-defined, with no significant abrasions present on the surfaces. Population: 7 in 58, 10 finer (3/14).

Ex: Dallas Signature (Heritage, 11/2005), lot 875. NGC ID# 238H, PCGS# 4592

1852 Seated Liberty Dime, MS66
Conditionally Scarce

- 4110 1852 MS66 PCGS.** The 1852 Seated Liberty dime was produced in large quantities, but Brian Greer believes many examples were melted shortly thereafter because of their high bullion value. Examples in Premium Gem condition are very rare today. The present coin is a sharply detailed specimen, with frosty mint luster, and wisps of light golden toning. A small area of khaki-green and orange toning appears near the 2 in the date. A number of wispy die cracks are present, primarily on the reverse and the obverse exhibits scattered die chips. Population: 4 in 66 (1 in 66+), 2 finer (3/14).

Ex: Houston Signature (Heritage, 12/2010), lot 3427. NGC ID# 238N, PCGS# 4597

1852-O Seated Dime, MS63
Ex: Pittman Collection
Beautiful Peripheral Toning

- 4111 1852-O MS63 NGC.** *Ex: Pittman.* Despite a mintage of 430,000 pieces, the 1852-O Seated Liberty dime is surprisingly rare in pleasing Mint State condition. This beautifully toned example displays vivid amber, gold, and aquamarine peripheral toning around light champagne centers. Some typical lightness of strike is seen on the upper wreath and the central figure of Liberty, but is well-balanced by semiprooflike mirroring in the fields around the borders. A beautiful coin from a historic collection. Census: 6 in 63, 11 finer (3/14).

Ex: Numismatic Gallery (5/1948), sold as part of lot 291; John Jay Pittman Collection, Part I (Akers, 10/1997), lot 613. NGC ID# 238P, PCGS# 4598

1854-O Arrows Dime, MS65
Only One Finer at PCGS

- 4112 1854-O Arrows MS65 PCGS.** Breen-3285. Large mintmark variety. The 54 in the date do not touch. A splendid Gem Seated dime that is mostly brilliant with just a hint of color, frosty surfaces, and no visible abrasions. The strike is razor sharp, and the overall appearance is fantastic. An interesting die crack extends from the dentils through the second A in AMERICA to the wreath. Arrows were added to the dates of all silver coins (except Trimes) in 1853 to signify a change in the weight of silver contained in each. These arrows only lasted through 1855, and thus this short-lived type is always popular. This piece will thrill both dime specialists and type collectors alike. Population: 8 in 65, 1 finer (2/14).

Ex: FUN Ft. Lauderdale Signature (Heritage, 1/2005), lot 6119, which realized \$5,462.50. NGC ID# 239B, PCGS# 4606

**1856 Seated Liberty Dime, MS67
Popular Small Date Variant**

4113 1856 Small Date MS67 PCGS. CAC. From a substantial mintage of nearly 5.8 million pieces, this 1856 Seated Liberty dime represents the popular Small Date variety, which is somewhat more available than its Large Date counterpart. The design elements of this spectacular Superb Gem are sharply detailed throughout, and the well-preserved surfaces display attractive shades of golden-brown and violet toning. Vibrant satiny mint luster shines through the patina and this coin possesses terrific eye appeal. PCGS has certified only two coins, including the present example, in MS67, with none finer, while NGC has graded a single specimen at the Superb Gem level, also with none finer (3/14). NGC ID# 238S, PCGS# 4609

4114 1857 MS65 PCGS. A brilliant, fully white example with a sharp strike and lustrous surfaces. No mentionable abrasions are present, and the eye appeal is substantial. Perfect for inclusion in a carefully assembled Gem type set. Population: 19 in 65, 4 finer (3/14).
Ex: FUN Signature (Heritage, 1/2005), lot 6121. NGC ID# 238X, PCGS# 4614

**1859 Seated Liberty Dime, MS67
Only One Numerically Finer Coin at PCGS**

4115 1859 MS67 PCGS. CAC. The 1859 Seated Liberty dime claims a nominal mintage of 429,200 pieces. Examples in Superb Gem condition are quite rare and finer coins are virtually unobtainable. This magnificent Superb Gem displays sharp detail, with satiny mint luster and surfaces that show just a hint of pink toning. Scattered tiny as-made die lumps are present, primarily near the left obverse rim and a tiny spot appears to the left of Liberty's head. Population: 15 in 67 (1 in 67+), 1 finer (2/14).
From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2394, PCGS# 4619

**1860-S Dime, MS61
Rare in Mint State**

4116 1860-S MS61 PCGS. The 1860-S dime holds an interesting place in the history of Seated dime coinage. When the new Legend Obverse design was adopted, the distance between Philadelphia and San Francisco took so long to cover, it was not possible for the Western mint to receive the new dies during calendar year 1860. As a result, the San Francisco Mint used obverse dies left over from late 1859 and reverses from 1858. Limited numbers of high-grade examples survive of this issue. This example is lustrous and lightly toned, with some wispy die polish lines (as struck) evident in the obverse and reverse fields. Population: 1 in 61, 12 finer (2/14).
Ex: Long Beach Signature (Heritage, 9/2005), lot 2352, which realized \$2,645. NGC ID# 2397, PCGS# 4622

**1862 Dime, Toned MS66
Elusive in This Grade**

4117 1862 MS66 PCGS. CAC. Seated dimes of 1862, from a mintage exceeding 800,000 pieces, are a common date through MS62. Even Select through Gem examples can be located with diligent searching. Premium Gems such as the present offering are elusive, with only 30 coins seen by PCGS and NGC. The two services have seen a mere three pieces in higher grade. Light gray patina runs over the lustrous surfaces that have been well cared for, and the design elements are well-struck. Population: 15 in 66 (2 in 66+), 2 finer (3/14). NGC ID# 239H, PCGS# 4635

**1865 Seated Liberty Dime, MS64
Fortin Variety 101a**

- 4118** 1865 MS64 PCGS. Variety 101a. Lustrous surfaces and a sharp strike are among the attributes this near-Gem representative possesses. Areas of faint toning are present, primarily on the reverse. Though the variety is not listed on the holder, this piece exhibits the high level date and the initial upper loop of a 6 between the 8 and 6. The obverse reveals a few tiny die cracks. Population: 8 in 64, 10 finer (2/14). NGC ID# 239P, PCGS# 4641

**1865 Fortin-101a Dime, MS66
Low Mintage Date**

- 4119** 1865 MS66 PCGS. CAC. Fortin-101a. Due to Gresham's Law and unbacked fractional currency, just 10,000 Dimes were struck in 1865, the final year of the Civil War. Peach-red patina endows the borders of this semiprooflike and undisturbed Premium Gem. The strike is precise aside from blending on the lower left portion of the wreath. In an old green label holder. Population: 4 in 66, 4 finer (3/14). Ex: Bay Area Collection (Heritage, 3/2003), lot 5533, which realized \$5,290. NGC ID# 239P, PCGS# 4641

**1872-CC Seated Dime, AU Details
F-101, Rare Carson City Issue**

- 4120** 1872-CC — Stained — NGC Details. AU. F-101, R.5. Many examples of this rare Carson City date are impaired in one way or another. The issue is exceedingly rare in AU condition or finer, and although the present example has problems, it is well-detailed with the sharpness of an About Uncirculated coin. Staining appears on both sides — perhaps to hide hairlines that are visible with a glass — and, as a result, the surfaces display dark shades of lusterless steel gray. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 23A8, PCGS# 4657

- 4121** 1872-CC — Environmental Damage — NGC Details. AU. A rare Carson City date with a low mintage and a poor survival rate. Examples at any grade level are prized by collectors. This example shows plenty of design detail, but environmental damage leaves the coin painted over each side in a variety of colors. NGC ID# 23A8, PCGS# 4657

**1873 Seated Liberty Dime, MS65+
Important Two-Year Design Type**

- 4122** 1873 Arrows MS65+ PCGS Secure. CAC. Fortin-104, R.4. Ex: Simpson. The Fortin marriage is interesting for minor repunching above the base of the 1 in the date and a weakly hubbed IM in DIME. Delicate almond-gold toning enriches this lustrous and precisely struck dime. The left reverse has a few minute struck-in flecks, but post-strike contact is limited to faint grazes on the obverse field. Population: 12 in 65 (1 in 65+), 4 finer (2/14). Ex: Bob Simpson Collection of Seated Dimes (Heritage, 9/2010), lot 3686. From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 23BG, PCGS# 4665

**1873-S Arrows Dime, Near-Gem
Small Thin S, Repunched Date**

- 4123** 1873-S Arrows MS64 PCGS. CAC. Fortin-101. Small Thin S. The base of the 1 in the date is repunched. Well struck and highly lustrous with medium wheat-gold patina. Smooth aside from a thin mark near the left ribbon end. A conditionally scarce entry in a San Francisco type set. Certified in a green label holder. Population: 12 in 64, 2 finer (3/14). NGC ID# 23BJ, PCGS# 4667

**1874-S Arrows Dime, MS64
Attractively Toned**

- 4124 1874-S Arrows MS64 PCGS. CAC.** The 1874-S With Arrows dime, from a mintage of 240,000 pieces, is scarce in all grades. The bright semiprooflike fields flash brightly through the scattered, hazy gray-russet toning. The design elements are fully struck, except for the usual softness on Liberty's head. No mentionable abrasions are noted. Population: 14 in 64, 6 finer (2/14).
Ex: FUN Orlando Signature (Heritage, 1/2006), lot 1741; Central States Milwaukee (Heritage, 4/2010), lot 546. NGC ID# 23BM, PCGS# 4670

- 4125 1875 MS66 PCGS.** Frosty silver-white surfaces provide this specimen with lovely eye appeal. Faint golden toning appears at left on the reverse. The strike is sharp overall, with minor softness at the upper left portion of the reverse. Population: 25 in 66, 5 finer (2/14). NGC ID# 23AC, PCGS# 4672

**1875-CC Seated Dime, MS66
Mintmark Above Bow**

- 4126 1875-CC Mintmark Above Bow MS66 NGC.** Fortin's Obverse 9 with a button-like die defect on the waist, paired with his reverse A; an unlisted die marriage on his Seated dime online reference. A lustrous, nearly brilliant Premium Gem example with a faint golden tint around the periphery. Sharply struck devices add to the appeal of this beautifully preserved Carson City Seated dime. Census: 11 in 66, 4 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2006), lot 748. NGC ID# 23AE, PCGS# 4673

**1876-S Seated Dime, MS66
None Finer at PCGS**

- 4127 1876-S MS66 PCGS. CAC.** Type One Reverse. A sharply struck piece with only minor incompleteness at the upper left portion of the wreath, this Premium Gem exhibits only a few tiny areas of light toning, primarily on the reverse. Rich luster further enhances the eye appeal of this wonderful specimen. Population: 9 in 66, 0 finer (2/14). NGC ID# 23AK, PCGS# 4681

**1877-CC Dime, MS66
Popular CC-Mint Type Coin**

- 4128 1877-CC MS66 PCGS. CAC.** Type Two Reverse. A lovely example of this popular Carson City dime. The surfaces reveal underlying luster and are overlaid with deep cobalt-blue, silver-gray, russet, and golden-brown patina. A couple of trivial marks are present on the reverse. This sharply struck piece would be an ideal candidate for a type set. Population: 37 in 66 (4 in 66+), 5 finer (3/14).
Ex: FUN Signature (Heritage, 1/2005), lot 6150. NGC ID# 23AM, PCGS# 4683

**1877-CC Seated Liberty Dime, MS67
Lustrous and Beautifully Toned**

- 4129 1877-CC MS67 NGC.** Type Two Reverse with E in ONE further from the wreath. Both sides of this lustrous Superb Gem specimen exhibit tremendous visual appeal. The obverse features primarily aqua toning at the center, with areas of golden-brown and dark salmon also present. The central reverse displays lighter toning at the center, in hues of gold and orange, encircled by areas of dark cherry and teal. The reverse reveals clash marks. Census: 11 in 67, 3 finer (2/14). NGC ID# 23AM, PCGS# 4683

- 4130 1878-CC MS63 PCGS.** The rare Type One reverse with the E in ONE nearly touching the wreath. Significant contrast between the prooflike fields and sharply struck devices delivers exceptional visual appeal. Highly lustrous, with a light golden tint overall. A truly remarkable example of this scarcely seen issue. Population: 10 in 63, 21 finer (3/14). NGC ID# 23AR, PCGS# 4686

4131 1880 MS67 NGC. Due to heavy silver dollar production under the terms of the Bland-Allison Act of 1878, regular dime production fell to just 36,000 coins in 1880, making high-end survivors scarce. This frosty, silver-white Superb Gem displays sharp design elements and strong visual appeal. A lack of any noticeable surface faults ranks this piece near the upper-end of its lofty grade. Census: 12 in 67 (1 in 67 ★), 4 finer (3/14).
Ex: *Boston Signature* (Heritage, 8/2010), lot 4427. NGC ID# 23AT, PCGS# 4688

4132 1881 MS66 NGC. From a low mintage of only 24,000 pieces, the 1881 dime is scarce in any condition and rare in Gem grades. Outstanding frost-white mint bloom radiates from this suitably struck Premium Gem example. The surfaces are nearly undisturbed, with the luster largely uninterrupted. Census: 6 in 66, 4 finer (3/14).
Ex: *Baltimore Signature* (Heritage, 3/2009), lot 850; *Long Beach Signature* (Heritage, 9/2009), lot 443. NGC ID# 23AU, PCGS# 4689

4133 1886 MS66 PCGS. A patina consisting of golden-brown, aquamarine, steel gray, and cherry shades provides this Premium Gem representative with lovely eye appeal, particularly on the reverse. A pleasing strike and exceptional preservation are additional attributes. Housed in a green label holder. Population: 32 in 66, 8 finer (2/14).
Ex: *Palm Beach Signature* (Heritage, 11/2004), lot 6228; *Long Beach* (Heritage, 9/2007), lot 978. NGC ID# 23B3, PCGS# 4696

4134 1889 MS66 PCGS. CAC. This lovely Premium Gem has frosty silver mint luster with splashes of delicate gold and iridescent toning on each side. While the head details and upper left portion of the wreath are a trifle weak, the remaining design elements are nicely detailed. Population: 26 in 66 (1 in 66+), 5 finer (2/14). NGC ID# 23B9, PCGS# 4702

1889-S Seated Liberty Dime, MS66 None Finer at NGC

4135 1889-S MS66 NGC. The 1889-S Seated Liberty dime claims a mintage of 972,678 pieces and the issue is Extremely rare in Premium Gem condition. This coin represents the scarcer Medium S variety, with a larger mintmark positioned below the ribbon knot. The design elements are well-detailed and the surfaces radiate vibrant mint luster under vivid shades of violet toning. Census: 3 in 66, 0 finer (3/14). NGC ID# 23BA, PCGS# 4703

4136 1891 MS66 PCGS. A well-detailed Premium Gem from the final year of the Seated Liberty design, this coin displays lustrous, nearly perfect surfaces, with intermingled shades of silver-blue and champagne-gold toning. Population: 60 in 66 (2 in 66+), 10 finer (3/14). NGC ID# 23BD, PCGS# 4706

4137 1891-O MS65 NGC. CAC. This is a visually pleasing example with strong, flashy mint luster and lovely variegated toning on both sides in pastel shades of russet, gold, and green. Well-preserved and entirely free of surface marks. Census: 26 in 65, 15 finer (3/14). NGC ID# 23BE, PCGS# 4707

4138 1891-S MS66 NGC. This well-struck and frosty Premium Gem shows an untuned silver-white reverse with cherry-red and gold patina on the obverse, all complemented by rich luster. NGC ID# 23BF, PCGS# 4708

PROOF SEATED DIMES

4139 1859 PR64 PCGS. A beautifully toned near-Gem proof, the obverse displays pale lavender while the reverse exhibits a blend of golden and violet hues. Moderate mirroring in the fields delivers near cameo contrast with lightly frosted central devices. The strike is sharp overall and the surfaces are free of any outwardly detracting blemishes. A faint, thread-like strike-through is noted in the right obverse field. NGC ID# 23CD, PCGS# 4748

1859 Dime, PR65 Cameo Peripherally Toned

4140 1859 PR65 Cameo PCGS. Pleasing field-motif contrast stands out on this 1859 Gem proof, especially on the obverse. Soft brownish patination gravitates to the margins, being slightly more extensive on the reverse. The design elements are sharply struck, enhancing even more the coin's eye appeal. A faint, post-strike linear mark on Liberty's jaw will help to identify the coin. Breen (1988) contends that many of the 800 proofs minted in this year were either melted as unsold or spent. PCGS# 84748

4141 1863 PR66 NGC. CAC. This sharply struck Premium Gem showcases aqua-blue, violet, and canary-gold over the obverse, while the reverse displays consistent dusky walnut-brown patina. The surfaces are void of contact marks, although a faint milky spot appears between Liberty's head and cap. A mere 460 proofs were issued of this Civil War date. Census: 24 in 66, 8 finer (3/14). NGC ID# 23BS, PCGS# 4756

1863 Dime, Patinated PR66+ Cameo Rare in This Numerical Grade and Finish

4142 1863 PR66+ Cameo PCGS. CAC. This date had a proof mintage limited to only 460 pieces. Ironically, examples are more available than the business strikes from a mintage of 14,000 pieces, survivors of which are very rare in all grades. One might surmise then that added pressure is put on the proofs by date collectors. This high-end Premium Gem displays remarkable field-device contrast, especially on the obverse. Reddish-gold and powder-blue patination concentrates at the margins and is slightly more extensive on the reverse. The beauty of this coin is aptly affirmed by CAC. Population: 4 in 66 (1 in 66+) Cameo, 1 finer (3/14). PCGS# 84756

1863 Seated Dime, PR66 Deep Cameo
Tied With One Other for Finest at PCGS

- 4143 1863 PR66 Deep Cameo PCGS. CAC.** A splendid Premium Gem, this piece certainly earned the Deep Cameo designation, displaying abundant contrast between the deeply frosted devices and reflective fields. A sharp strike further enhances the appeal. Several tiny as-made strike-throughs appear on the obverse. Population: 2 in 66 Deep Cameo, 0 finer (3/14). PCGS# 94756

1870 Seated Liberty Dime, PR66 Cameo
None Finer at PCGS

- 4144 1870 PR66 Cameo PCGS.** Sharply detailed in most areas, the first S in STATES shows incomplete detail due to excessive die polishing. The fields are brightly reflective with hints of pale gold toning. No mentionable distractions are evident and the frosty devices contrast boldly with the mirrored fields. Population: 3 in 66 Cameo, 0 finer (3/14). PCGS# 84763

- 4145 1871 PR65 PCGS.** Toning appears on both sides of this Gem in shades of copper, teal, plum, pink, peach, and yellow. Several planchet depressions are present on Liberty's face and nearby areas, but they pose limited distraction due to the toning. Housed in a green label holder. Population: 17 in 65, 12 finer (2/14). NGC ID# 23CV, PCGS# 4764

- 4146 1875 PR66 PCGS.** This great-looking Premium Gem proof shows pinkish-amber central patina complementing medium ocean-blue near the rims on each side. This is a sharply struck, high-end survivor from the proof mintage of 700 coins. Population: 6 in 66, 1 finer (3/14). NGC ID# 23CY, PCGS# 4772

- 4147 1879 PR66 Cameo NGC. CAC.** Gleaming mirrored fields and frost-white central devices deliver pleasing cameo contrast. Only a tint of golden around the peripheries interrupts the flashy brilliance of this well-preserved Premium Gem. Census: 5 in 66 Cameo, 14 finer (2/14). PCGS# 84776

1880 Seated Liberty Dime, PR68
Finest Certified at PCGS

- 4148 1880 PR68 PCGS.** A generous mintage of 1,355 proof Seated Liberty dimes was delivered in 1880, to accompany a low business-strike mintage of just 36,000 examples. Date collectors often opt to buy a nice proof, rather than searching for an extremely elusive high-grade business-strike specimen. Fortunately, few oldtime dealers, notably A.M. Smith, saved multiple examples this date for posterity.

The present coin is a magnificent PR68 specimen, the finest certified at PCGS. The design elements are sharply detailed and the flawless fields are deeply mirrored on both sides. Spectacular shades of iridescent pale gold and cerulean-blue toning blanket the surfaces. Eye appeal is terrific. This coin is a "must-have" example for Registry Set enthusiasts. Population: 1 in 68, 0 finer (3/14). NGC ID# 23D5, PCGS# 4777

**1881 Seated Liberty Dime, PR67
Vibrant Rainbow Toning**

- 4149 1881 PR67 NGC. CAC.** Demand for proof 1881 Seated Liberty dimes is increased by a low production of business strikes for that year (only 24,000 coins), especially in rarely encountered Superb Gem grades. This CAC-approved example displays vivid rainbow peripheral toning surrounding softer lavender hues in the centers, with deep mirroring in the fields. A sharply struck, beautifully preserved Superb Gem. Census: 15 in 67, 1 finer (3/14). NGC ID# 23D6, PCGS# 4778

**1881 Seated Dime, PR68 ★ Cameo
None Finer at NGC**

- 4150 1881 PR68 ★ Cameo NGC.** This magnificent Seated Liberty dime displays razor-sharp definition on all design elements and the richly frosted devices contrast boldly with the deeply mirrored fields. Hints of pale gold and violet toning enhance the outstanding eye appeal. Census: 5 in 68 Cameo (3 in 68 ★ Cameo), 0 finer (3/14). PCGS# 84778

**1882 Seated Liberty Dime, PR67
Deeply Mirrored and Lightly Toned**

- 4151 1882 PR67 NGC.** A fairly generous proof mintage of 1,100 Seated Liberty dimes was accomplished in 1882, but survivors in Superb Gem condition are quite elusive today. This delightful PR67 example is sharply detailed throughout, with deeply mirrored fields under shades of pale gold and light blue toning. Census: 17 in 67 (1 in 67 ★), 5 finer (3/14). NGC ID# 23D7, PCGS# 4779

**1882 Seated Liberty Dime, PR67
Exceptional Proof Quality**

- 4152 1882 PR67 PCGS. CAC.** A ring of fiery-orange toning surrounds an icy, blue-aqua center of this exquisitely patinated proof dime. The reverse is a bit more subtle than the obverse but, when viewed at the proper angle, it also displays rich aqua and blue coloration, but with golden margins. The fields of this Superb Gem proof are deeply liquid and reflective. The devices show thick mint frost for bold cameo contrast, although the holder does not indicate so. Population: 10 in 67, 1 finer (2/14). NGC ID# 23D7, PCGS# 4779

- 4153 1883 PR66 PCGS. Breen-2,** date slanting down, filled first A in AMERICA. A solidly struck and nicely toned Premium Gem proof in shades of blue-gray, pink, and saffron-gold, quite attractive. Population: 28 in 66 (1 in 66+), 11 finer (3/14). NGC ID# 23D8, PCGS# 4780

**1884 Seated Dime, PR67
Seldom Encountered Finer**

- 4154 1884 PR67 PCGS. CAC.** Beautifully toned, this Superb Gem also exhibits a sharp strike, with minor incompleteness of Liberty's hair. The toning on the obverse features champagne-gold at the center, encircled by orange, plum, and electric-blue at the outer edges. The upper reverse displays champagne-gold hues while the lower portion is a pale blue-green, with a number of tiny spots present. A toning streak extends from the inner right side of the wreath above NE in ONE. Population: 12 in 67 (1 in 67+), 3 finer (3/14). NGC ID# 23D9, PCGS# 4781

**1885 Seated Dime, PR67 Cameo
Extraordinary Quality and Eye Appeal**

- 4155 1885 PR67 Cameo NGC.** Extraordinary contrast meets the eye on this impressive Superb Gem Cameo proof, with gorgeous silver surfaces that show hints of peripheral champagne toning. Deeply mirrored fields provide a wonderful back drop for the intensely frosted devices. Census: 21 in 67 Cameo (1 in 67 ★ Cameo), 7 finer (3/14). PCGS# 84782

- 4156 1886 PR66 PCGS. CAC.** Vibrant multicolor toning blankets both sides of this high-end Premium Gem with blended hues of blue, violet, and green-gold. Crisply detailed except for the top of Liberty's head, with beautifully preserved surfaces. Significant mirroring remains in the fields, despite the deep patina. Population: 21 in 66 (1 in 66+), 6 finer (3/14).
Ex: Central States Signature (Heritage, 4/2006), lot 1279. NGC ID# 23DB, PCGS# 4783

**1886 Seated Dime, PR68 Cameo
Bold Contrast and Attractive Toning**

- 4157 1886 PR68 Cameo NGC.** For the date collector, a proof 1886 dime is much more challenging than a business strike. More than 6.3 million coins were produced for circulation, but a mere 886 proofs were minted. This PR68 Cameo is at the pinnacle of preservation. This coin is remarkable, primarily for its clean surfaces, but it also displays remarkable contrast between the fields and devices on each side. The centers are nearly brilliant and surrounded by russet and deep blue toning. Census: 3 in 68 Cameo (1 in 68 ★ Cameo), 0 finer (3/14). PCGS# 84783

- 4158 1888 PR66 NGC.** From a total production of 832 pieces, this Premium Gem proof 1888 Seated dime displays sharply struck, lightly frosted central devices set against moderately mirrored fields. Essentially untoned, the beautifully preserved surfaces deliver a high degree of eye appeal. Census: 30 in 66 (2 in 66 ★), 8 finer (3/14). NGC ID# 23DD, PCGS# 4785

**1891 Seated Dime, PR66 Ultra Cameo
Starkly Contrasted**

- 4159 1891 PR66 Ultra Cameo NGC.** From the final year in the Seated Liberty series, many proof 1891 dimes survive in high grades, providing an excellent opportunity for the type specialist. This Premium Gem Cameo representative exhibits fully mirrored fields and heavily frosted central devices. The virtually undisturbed surfaces display sharply struck design elements and offer outstanding eye appeal. The luster is mainly silvery-white, with some faint, scattered toning specks seen upon close examination. A high-end example of this final-year proof. Census: 4 in 66 Ultra Cameo, 1 finer (3/14). PCGS# 94788

BARBER DIMES

**1892-S Barber Dime, MS65
Only Three Finer Coins at PCGS**

- 4160 1892-S MS65 PCGS.** An impressive Gem representative from the first year of the Barber design, this coin displays well-detailed design elements and frosty mint luster, under shades of bluish-gray and pale gold patina. No mentionable distractions are evident. Population: 14 in 65, 3 finer (3/14). NGC ID# 23DM, PCGS# 4798

**1893 Barber Dime, MS67
Among the Finest Certified**

- 4161 1893 MS67 NGC.** Though readily obtainable in lower Mint State grades, the 1893 dime is scarce at the Gem level and is truly rare in Superb Gem condition, as NGC and PCGS combined have certified only eight examples in this lofty grade (3/14). This fully frosted representative displays a light golden hue around the peripheries, with a few faint amber accents on the cheek. A needle-sharp strike further adds to the visual appeal of this high-end Premium Gem.
Ex: Central States Signature (Heritage, 4/2001), lot 319. NGC ID# 23DN, PCGS# 4800

- 4162 1895-O — Harshly Cleaned — NGC Details. XF.** A sought-after key date. Largely steel-gray surfaces visit darker gray recessed regions on this well-detailed example. Cleaning-induced hairlines can be seen with low-power magnification, but the overall appearance remains attractive.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1895-O Barber Dime, XF40
Attractive Multicolor Toning**

- 4163 1895-O XF40 PCGS.** From a low mintage of 440,000 pieces, the 1895-O Barber dime is an elusive issue in high grade. All letters in LIBERTY are distinct on this lightly worn XF specimen, and the surfaces retain traces of original mint luster under shades of cerulean-blue and greenish-gold toning. Population: 21 in 40, 85 finer (3/14). NGC ID# 23DW, PCGS# 4807

**1900-O Dime, MS66
Elusive O-Mint Rarity**

4164 1900-O MS66 PCGS. The 1900-O Barber dime issue is an underrated rarity in the series. In Mint State it is more elusive than such noteworthy dates as 1904-S and 1896-S. This Premium Gem is one of only seven submissions in this top grade at PCGS, and there are none finer; NGC claims one example in MS67 (3/14). NGC ID# 23ED, PCGS# 4822

4165 1901-O MS64 NGC. David Lawrence considers the 1901-O an underrated date in the Barber dime series, as examples in Choice condition are quite elusive. This attractive, virtually untoned piece is lustrous and well-detailed, with just a touch of softness seen on the ribbon bow. Census: 20 in 64, 14 finer (3/14). NGC ID# 23EG, PCGS# 4825

**1904-S Barber Dime, MS64
Vivid Multicolor Toning**

4166 1904-S MS64 NGC. Deep orange to purple and blue patina graces each side of this near-Gem 1904-S dime, an issue produced to the extent of only 800,000 pieces and a conditional rarity today. Generous luster is present, but a few slide marks on Liberty's cheek preclude a Gem grade. Census: 16 in 64, 6 finer (3/14). NGC ID# 23ES, PCGS# 4834

**1905-O Barber Dime, MS61
Popular Micro-O Guide Book Variety**

4167 1905-O Micro O MS61 PCGS. This attractive Mint State Barber dime represents the sought-after *Guide Book* Micro-O variety. The mintmark was probably struck from a set of punches intended for use on the quarter. This coin is sharply detailed and lustrous, with some prooflike reflectivity in sheltered areas. Population: 1 in 61, 6 finer (3/14). PCGS# 94836

4168 1906 MS66 PCGS. FS-301, RPD. Rarely encountered at the Premium Gem level, this high-end example provides an important opportunity for the specialist. Repunching of the date numerals is clearly visible with low-power magnification, most prominent in the 6. Pale rose-gold covers both sides, with deeper amber-red around the peripheries. Sharply struck and frosty. Population: 10 in 66, 5 finer (3/14). NGC ID# 23EX, PCGS# 4838

4169 1906-D MS66 PCGS. CAC. Rich toning, in shades of golden-yellow, rich peach, sea green, russet, plum, teal, and violet, provides this lustrous piece with strong visual appeal. Minor incompleteness of strike is evident at portions of the top of the wreath. Population: 14 in 66 (1 in 66+), 3 finer (2/14). NGC ID# 23EY, PCGS# 4839

4170 1907 MS66 PCGS. Tiny splashes of toning are present on this piece displaying silver-white surfaces and matte luster. Among the colors appearing are golden-brown, khaki-green, and golden-yellow. The design elements exhibit a strong degree of detail overall on this piece, a conditional rarity in MS66 and above. Population: 16 in 66 (3 in 66+), 1 finer (2/14).
Ex: Denver Signature (Heritage, 8/2006), lot 945. NGC ID# 23F3, PCGS# 4842

4171 1907-O MS66 PCGS. CAC. Both sides of this Premium Gem display lustrous surfaces and lovely toning. The intermingled shades include gold, olive-green, red, orange, and jade-green. The strike is sharp overall, adding to the appeal. Population: 14 in 66 (1 in 66+), 1 finer (3/14). NGC ID# 23F5, PCGS# 4844

4172 1908-O MS66 PCGS. This coin boasts an extremely sharp strike for an O-mint Barber dime, including nearly full definition on the hairline and virtually full strike details on the reverse. Part of the inner-right corn leaf on the reverse is missing due to die lapping. Frosty silver interiors cede to copper-gold and aqua-jade near the rims. The obverse is lightly clashed. Population: 12 in 66 (2 in 66+), 4 finer (3/14). NGC ID# 23F9, PCGS# 4848

**1908-O Barber Dime, MS66
Blazing Patina and Satin Luster**

4173 1908-O MS66 NGC. CAC. *Ex: Eric P. Newman Collection.* Blazing red, orange, yellow, and light lime-green hues along with rich satin luster provide this Premium Gem with a tremendous degree of visual appeal. A few small marks, including one on Liberty's nose, pose little distraction, if any. This New Orleans issue is scarce at the upper grade levels. Census: 13 in 66 (1 in 66 ★), 4 finer (3/14). NGC ID# 23F9, PCGS# 4848

4174 1909 MS66 NGC. One of the few finest survivors of this high-mintage issue, struck in the amount of more than 10 million coins. Light pearl-gray surfaces show scattered glints of deeper charcoal patina under a loupe. Census: 10 in 66, 0 finer (3/14).
From The Northern Lights Collection. NGC ID# 23FB, PCGS# 4850

4175 1909 MS66 PCGS. A sharply struck example, this Premium Gem displays variegated olive, brown, and dove-gray toning. The surfaces reveal strong preservation, with only a few minuscule marks found after close examination. A wonderful specimen. Population: 9 in 66, 3 finer (2/14).
Ex: FUN Orlando Signature (Heritage, 1/2010), lot 761. NGC ID# 23FB, PCGS# 4850

4176 1910-D MS65 PCGS. Scattered tiny splashes of light patina appear on this lustrous Gem example. The strike is sharp overall, with minor incompleteness present at the upper right obverse. Population: 14 in 65, 8 finer (2/14). NGC ID# 23FG, PCGS# 4855

**1911-D Barber Dime, MS67
Stunning, Conditionally Unsurpassed**

4177 1911-D MS67 PCGS. CAC. With a mintage of more than 11 million pieces, the 1911-D Barber dime is an available date and a popular type coin. The issue does become rare at the Superb Gem level, as PCGS and NGC combined have only certified 16 pieces in this exalted grade, and none are finer (3/14). The present coin is a well-preserved example that shows no noticeable abrasions, with shades of delicate green and lilac toning on both sides. Striking details are sharp and overall visual appeal is outstanding. Ex: Milwaukee Central States Signature (Heritage, April-May/2010), lot 586. From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 23FK, PCGS# 4858

4178 1911-S MS66 PCGS. The frosty surfaces are well-struck with light, scattered cinnamon accents. The 1911-S Barber dime issue is not on the short list of elusive dates, but the present Premium Gem is not a coin that will be easily improved upon: PCGS shows only eight submissions numerically finer (3/14). From The Northern Lights Collection. NGC ID# 23FL, PCGS# 4859

4179 1912 MS66 NGC. This frosty, sparkling silver-white Premium Gem shows no mentionable contact and excellent eye appeal throughout both sides. A wispy die crack on reverse runs from the D in DIME to the left rim. Census: 34 in 66 (2 in 66+, 1 in 66 ★), 9 finer (3/14). From The Northern Lights Collection. NGC ID# 23FM, PCGS# 4860

4180 1914 MS66 PCGS. A faint champagne patina appears on the obverse of this Premium Gem, while shades of khaki-green, light golden brown, and champagne are present on the reverse. Rich luster and a sharp strike add to the eye appeal of this lovely piece. Population: 55 in 66, 5 finer (2/14). NGC ID# 23FT, PCGS# 4865

4181 1916 MS66 PCGS. CAC. Generous satiny luster enhances the eye appeal of this final-year Barber dime. Green-gold border toning and silver-blue interiors make up for the slight weakness on the central devices. Population: 52 in 66 (4 in 66+), 6 finer (3/14). NGC ID# 23FY, PCGS# 4870

PROOF BARBER DIMES

**1893 Dime, PR67 Deep Cameo
Starkly Contrasted**

4182 1893 PR67 Deep Cameo PCGS. CAC. Ex: Bruce Scher. The proof 1893 dime production of 792 pieces is substantially smaller than the proof mintage of the previous year, presumably due to reduced collector enthusiasm for the second year of the Barber type. This fully struck Superb Gem delivers incredible eye appeal with heavily frosted devices, deeply mirrored fields, and just a trace of light golden patina. Population: 2 in 67 Deep Cameo, 0 finer (3/14). Ex: Long Beach Signature (2/2005), lot 4055; Joseph C. Thomas Collection, Central States Signature (Heritage, 4/2009), lot 245; Boston Signature (Heritage, 8/2010), lot 5634. PCGS# 94877

4183 1894 PR66 PCGS. This Premium Gem proof dime from the mintage of 972 pieces show largely pinkish centers bounded by daubs of delightful iridescence along the rims on each side. A sharp and distraction-free coin for a type or date set. Population: 36 in 66 (1 in 66+), 22 finer (3/14). NGC ID# 23G6, PCGS# 4878

4184 1894 PR66 PCGS. A richly toned Premium Gem example, this coin displays hues of teal, plum, orange, and fuchsia. The deeper shades appear primarily at the outer portions of both sides. Areas of reflectivity emerge beneath the patina. Population: 36 in 66 (1 in 66+), 22 finer (3/14). NGC ID# 23G6, PCGS# 4878

4185 1898 PR64 NGC. A sharply detailed specimen with brilliant centers and deep electric-blue and violet peripheral and field toning on the obverse. The reverse shows a slighter degree of electric-green and golden-brown peripheral patina. Both sides are well-preserved and free of handling marks. NGC ID# 23GB, PCGS# 4882

**1898 Barber Dime, PR68 Cameo
Brilliant and Boldly Contrasted**

4186 1898 PR68 Cameo NGC. The first 8 shows repunching within the upper loop. A desirable representative of this low-mintage (735 pieces) proof date. The strike is razor-sharp, even on the upper grains of the cereal wreath. The obverse is fully brilliant, and the reverse has only traces of silver-gray toning. The motifs and legends are deeply frosted and provide outstanding contrast with the flashy fields. Immaculate save for trivial hairlines beneath the IM in DIME. An important addition to a matched Cameo Superb Gem set of this underappreciated proof series. Census: 9 in 68 Cameo, 4 finer as Ultra Cameo (3/14). Ex: Chicago Signature (Heritage, 8/2011), lot 7084, which brought \$6,612.50. PCGS# 84882

4187 1902 PR66 PCGS. Ex: Bruce Scher. This 1902 Premium Gem proof dime is fully struck and contact-free, displaying glassy mirroring in the light golden fields. The reverse shows a possible faint fingerprint fragment, though the surfaces are otherwise virtually perfect. Population: 17 in 66, 6 finer (3/14).
Ex: *Long Beach Signature* (Heritage, 2/2005), lot 4062; *Rosemont Signature* (Heritage, 8/2013), lot 3554. NGC ID# 23GF, PCGS# 4886

4188 1907 PR65 Cameo PCGS. CAC. Splendid reflectivity in the silver centers of each side blend into pink-champagne and medium blue patina at the rims. There is no mentionable contact, although a couple of small lint marks appear in the reverse at the denomination. Population: 10 in 65 Cameo, 4 finer (3/14). PCGS# 84891

TWENTY CENT PIECES

4189 1875-CC MS61 NGC. The 1875-CC twenty cent is in demand as the only obtainable issue from Carson City; the 1876-CC is a great rarity. This pearl-gray Mint State example shows good eye appeal and a sharp strike save for the upper-left wing. A few contact marks determine the grade but are undistracting. NGC ID# 23R6, PCGS# 5297

4190 1875-S MS64 PCGS. Rich satiny luster shines through soft golden-gray toning on the obverse of this well-preserved near-Gem, while pale lavender-gray blankets the reverse. The strike is bold in the centers, though some weakness is noted on select stars. A pleasing type representative. NGC ID# 23R7, PCGS# 5298

4191 1875-S MS64 NGC. This is a nicely struck greenish-gold example of this highest-mintage issue within the short-lived twenty cent series. Few signs of contact appear, although a small planchet lamination appears at Liberty's elbow, and strike softness is limited to the right-side obverse stars and the upper-left eagle's wing. NGC ID# 23R7, PCGS# 5298

1875-S Twenty Cent, MS65 Misplaced Date, FS-301

4192 1875-S Misplaced Date MS65 PCGS. FS-301. The top of a misplaced date is obvious beneath the 8 in the date. Several MPD varieties are known for the '75-S, some of which are unlisted in *Cherry-pickers*'. Medium to deep walnut-brown and russet toning blankets this coruscating and beautifully preserved Gem type coin. A good strike, though several right-side stars are soft. NGC ID# 23R7, PCGS# 5298

1875-S Twenty Cent Piece, MS65 Lustrous and Well Preserved

4193 1875-S MS65 PCGS. CAC. A gorgeous Gem example of this popular type issue, showing slight mottled accents of violet, olive, and cobalt-blue patina that complement the primary gold-tan coloration. Highly lustrous with nicely preserved surfaces. Only the stars, Liberty's head, and the right facing hand on the obverse, and the eagle's right facing claw on the reverse, display slight incompleteness of strike. NGC ID# 23R7, PCGS# 5298

1875-S Twenty Cent, MS65 FS-302, 'Dollar Sign' Variety

4194 1875-S MS65 PCGS. CAC. FS-302. The so-called "Dollar Sign" variety with clearly repunched serifs on the mintmark. Also, the top of a date digit, probably a 5, is obvious within the dentils beneath the 7 in the date. The *Cherry-pickers*' variety is undesignated on the holder. A lustrous, smooth, and nicely struck Gem with dappled forest-green, chestnut-gold, plum-mauve, and stone-gray toning. NGC ID# 23R7, PCGS# 5298

4195 1876 MS64 NGC. Soft, flowing luster appears on this attractive near-Gem 1876 twenty cent, seen far less often than the ubiquitous 1875-S. Gold and sunset-orange hues complement daubs of blue and silver in the center reverse. A small scrape appears on the obverse below star 12. NGC ID# 23R8, PCGS# 5299

**1876 Twenty Cent, Sharply Struck MS64
Mild Field-Motif Contrast**

4196 1876 MS64 PCGS. CAC. The 1876 Philadelphia twenty cent piece claims a mintage of 14,640 business strikes. There is speculation among some numismatists that a number of these may have met the same fate as the famed 1876-CC issue that succumbed to the melting pot by order of Mint Director Linderman. This theory, however, probably has little credence as the two major grading services have certified a little more than 1,000 examples from well-worn through the better levels of Mint State.

The essentially untoned surfaces of this near-Gem offering yields frosty central devices that presents mild contrast with the cream-like, smooth fields. Moreover, the design features are sharply struck enhancing even more the coin's pleasing eye appeal. Neither side reveals mentionable contact marks. Population: 74 in 64 (1 in 64+), 47 finer (3/14). NGC ID# 23R8, PCGS# 5299

PROOF TWENTY CENT PIECES

**1875 Twenty Cent, PR65
Beautifully Toned**

4197 1875 PR65 NGC. Despite having the highest proof mintage of this short series (2,790 coins), the 1875 proof twenty cent piece is arguably the scarcest of the four proof issues in Gem grades. Deep hues of blue, violet, and lime-green deliver an outstanding visual display on this beautifully preserved Gem example, with moderate mirroring in the underlying fields. The central devices are sharply struck, though some minor softness is seen on select stars. Census: 15 in 65 (1 in 65+), 19 finer (3/14). NGC ID# 27GZ, PCGS# 5303

**1878 Twenty Cent, Choice Proof
Just 600 Pieces Struck**

4198 1878 PR64 NGC. Lemon-gold, navy-blue, and plum-red endow the obverse. On the reverse, lavender and forest-green compete for territory. Sharply struck and devoid of hairlines. The final date of the short-lived twenty cent denomination, limited to a proof-only production of 600 pieces. Encased in a prior generation holder. NGC ID# 27H5, PCGS# 5306

EARLY QUARTERS

**1804 B-1 Quarter, VG10
Famously Rare Date**

4199 1804 VG10 NGC. B-1, R.3. Tompkins Die State 2/2. The die scratch between obverse stars 8 and 9 is diagnostic for the variety. The 1804 is nearly as rare as the 1796, but trades for less since the latter is a single-year type coin. The present example has bold obverse legends. On the reverse, a few letters are faint, but the shield lines are fully separated. No marks merit singular mention. Cream-gray devices rise above deeper gunmetal fields. NGC ID# 23RB, PCGS# 5312

4200 1805 Fine 12 NGC. B-3, R.1. The defective right-bottom and left-bottom serifs of the I and T in UNITED, respectively, along with the defective left bottom of the 1 in the date, attribute the obverse. The reverse shows the C in the denomination nearly touching the eagle's tail. This is a nice grayish-white "circulated cameo" coin, solid for the grade. A trio of reeding marks appears near star 4. NGC ID# 23RC, PCGS# 5313

4201 1806 Fine 15 NGC. B-3, R.1. Tompkins Die State I, clash marks behind Liberty's head. The feet of 1, I, and T are missing on the obverse, and the 5 on the reverse touches nothing. This Choice Fine example shows muted luster remaining on powder-gray surfaces with terrific eye appeal. NGC ID# 23RD, PCGS# 5314

1806 B-9 Quarter, XF45

4202 1806 XF45 NGC. CAC. B-9, R.1. This early die state shows no evidence of the usual bisecting die crack through the 1 in the date. An exceptional, richly toned quarter with strong detail for the grade, showing delicate tan on the high-points, with violet-gray, sea-green, and gold toning. A few trivial handling marks are noted, with insignificant reverse rim bumps. NGC ID# 23RD, PCGS# 5314

4203 1807 VF30 PCGS. B-2, R.3. Natural amber-gray patina warms both sides, with good detail remaining on the devices. Close examination reveals minor circulation marks, though the surfaces retain a smooth overall appearance. Good detail is present for the grade. A pleasing example of this early type. NGC ID# 23RF, PCGS# 5316

BUST QUARTERS

4204 1815 VF35 PCGS. CAC. B-1, R.1. Struck from dramatically clashed dies. This VF example shows a deep layer of olive-gray coloration over most of the surface areas, leaving the high points in lighter shades of silver-gray. An evenly worn quarter, free of abrasions or pin scratches. NGC ID# 23RG, PCGS# 5321

4205 1818/5VF30 PCGS. B-1, R.2. Copper-gray coloration covers some muted luster remaining on this attractive, midgrade example. Die clashing appears above the date. A few light marks are confined to the reverse field. NGC ID# 23RH, PCGS# 5323

4206 1818 XF40 NGC. B-2, R.1. This is the most readily available die marriage for this Capped Bust quarter date. The date is low and star 13 has been repunched. The fields and centers are light-gray, while deeper olive-gray coloration appears at the margins. An evenly worn example, free of distracting marks. NGC ID# 23RH, PCGS# 5322

4207 1824/2 Fine 12 PCGS. B-1, R.3. Cream-gray surfaces on this attractive Fine example show a nice "circulated cameo" appearance with lighter silver high points. Nice for the grade. NGC ID# 23RR, PCGS# 5335

4208 1825/4 — Reverse Corroded, Cleaned — ANACS. MS60 Details. B-2, R.2. Previously certified as 1825/3 and later 1825/4, all 1825 Capped Bust quarters are now believed by many specialists to be 1825/4/2, which could explain the earlier confusion. This unworn example displays original amber-golden mint luster on the obverse, while the reverse is lightly cleaned in an effort to remove faint oxidation spots. A pleasing example of this widely debated overdate. NGC ID# 23RU, PCGS# 5336

1825/4 B-2 Quarter, MS63 Popular Capped Bust Type Coin

4209 1825/4 MS63 PCGS. B-2, R.2. Designated as 1825/4/(2) on the PCGS holder. The *Guide Book* lists the same variety as 1825/4. Either way, not to be confused with the very scarce Browning-1 1825/2. Light almond-gold toning graces this lightly marked and well struck example. The open fields are bright and moderately prooflike, especially on the reverse. NGC ID# 23RU, PCGS# 5336

1828 B-3 Quarter, Choice XF Blundered Denomination, 25 Over 50C

4210 1828 25/50C XF40 PCGS. B-3, R.5. After a six-year repose in the Mint die workshop, the blundered denomination reverse was retrieved to strike the present rare *Guide Book* variety. This well defined example provides delicate wheat-gold and slate toning. Glimpses of luster emerge from design recesses, and the glossy surfaces are only lightly abraded. NGC ID# 23RV, PCGS# 5343

1831 B-4 Quarter, MS64 Small Letters, Thin Arrowheads

4211 1831 Small Letters MS64 PCGS. CAC. B-4, R.1. A radial die crack through the C in 25 C helps attribute this collectible Browning marriage. The present well struck and impressively unabraded near-Gem displays powder-blue, wheat-gold, and lime-green toning. The reverse is rich ocean-blue aside from a blush of sun-gold near the left margin. NGC ID# 23RW, PCGS# 5348

4212 1832 AU58 NGC. CAC. B-2, R.2. Splashes of violet, champagne, and aquamarine encompass most of each side, with significant mint luster beneath the patina. The design elements are boldly struck, with only slight friction over the high points. A visually appealing, CAC-approved type representative. NGC ID# 23RX, PCGS# 5351

**1835 Capped Bust Quarter, MS63
B-7 Variety, Richly Toned**

- 4213 1835 MS63 PCGS. B-7, R.2.** The Browning-7 variety is easily identified by the lack of a period following 25 C, the only reverse die for the issue without the period. Richly toned surfaces display copper-red centers surrounded by vivid, turquoise margins. Just a few delicate abrasions are seen beneath the toning. Boldly struck and attractive. Population: 21 in 63, 18 finer (3/14). NGC ID# 23S2, PCGS# 5354

- 4214 1838 MS61 NGC. B-1, R.1.** Untoned silver-white surfaces display generous luster remaining with a few scattered ticks and marks, none severe, that determine the grade. A bit of die grease appears at lower reverse. NGC ID# 23S5, PCGS# 5357

SEATED QUARTERS

- 4215 1840-O No Drapery AU55 PCGS.** A satiny example with light ivory-beige toning and clean surfaces. The early type of the Liberty Seated design, struck during a transitional year when the new Drapery version was also produced. Population: 9 in 55, 33 finer (3/14). NGC ID# 23SG, PCGS# 5393

**1840-O Quarter, MS64
With Drapery**

- 4216 1840-O Drapery MS64 NGC.** A fully defined, satiny example with a moderate overlay of gray-russet toning on both sides. This low mintage New Orleans issue is very scarce in any Uncirculated grade and is almost impossible to locate any finer than the present specimen. Census: 6 in 64, 0 finer (3/14). NGC ID# 23SJ, PCGS# 5398

- 4217 1843-O Large O VF20 PCGS. CAC. FS-501.** This variety could very well be called Huge O, as the mintmark is quite prominent, likely intended for an 1843-O half dollar instead. Cream-gray and charcoal-gray surfaces on this piece show good eye appeal and no singular marks. Population: 2 in 20, 9 finer (3/14). PCGS# 395927

**1843-O Large O Seated Quarter, XF40
Rare Mintmark Variety**

- 4218 1843-O Large O XF40 PCGS. FS-501.** Described as "rare" by Breen, in his *Encyclopedia*, PCGS has only graded 15 examples of this mintmark variety (including any possible resubmissions). NGC has certified even fewer: just six coins to date. This example is sharply defined save for typical softness on the top of Liberty's head and several of the right-side obverse stars. Population: 1 in 40, 3 finer (3/14). PCGS# 395927

**1850 Seated Liberty Quarter, MS64
Briggs 1-A, Condition Rarity**

- 4219 1850 MS64 PCGS Secure. Briggs 1-A.** While the mintage of 190,800 seems sufficient for many survivors, the scarcity in high grades may be explained by what Larry Briggs suggests is "probably due to the large silver melt of 1853. This coin is available in all grades except UNC. — where it is extremely rare." This near-Gem example shows the diagnostics of the Briggs 1-A die pair, with the most noticeable characteristic being the base of a misplaced 1 in the denticles below the date. Gold toning at the rims frames brilliant-white, silver centers. Die polish lines suggest lapping of the dies, possibly to remove die rust mentioned by Briggs but not evident on this coin. A few minor abrasions and some weakness on Liberty's hair curls and breast explain the grade, with few examples known any finer. Population: 3 in 64, 1 finer (3/14). NGC ID# 23T4, PCGS# 5415

**1850-O Seated Liberty Quarter, MS62
Very Rare in Finer Grades**

- 4220 1850-O MS62 PCGS.** Attractive shades of cerulean-blue, greenish-gold, and violet toning blanket the surfaces of this pleasing MS62 example. The design elements are sharply detailed, aside from a little flatness on some star centers. Bright mint luster shines through the patina and only minor signs of contact are evident. From a mintage of 412,000 pieces. Population: 4 in 62, 8 finer (3/14). NGC ID# 23T5, PCGS# 5416

**1854 Seated Liberty Quarter, MS65
Short-Lived Arrows Type**

- 4221 1854 Arrows MS65 CAC.** From a large mintage of more than 12 million pieces, the 1854 Seated Liberty quarter is an available date and a popular choice of type collectors. The issue is especially attractive because it represents the short-lived Arrows design. Arrows were placed on either side of the date in 1853 to signify a weight change made necessary by the rising cost of silver versus gold in worldwide markets at the time. The 1853 issue also had a glory of rays above the eagle on the reverse, but this was discontinued in 1854, due to striking problems. The arrows were also discontinued after 1855.

The present coin is an attractive Gem, with sharply detailed design elements and satiny mint luster, under shades of golden-brown, lavender-blue and amber toning. The well-preserved surfaces show few signs of contact. Population: 13 in 65 (1 in 65+), 12 finer (3/14). NGC ID# 23U6, PCGS# 5432

- 4222 1854-O Huge O Fine 12 PCGS. Briggs 1-A, FS-501.** A visually appealing example of this highly elusive variety, with original gunmetal-gray fields and lighter gray relief elements. Strong detail remains for the grade, with largely problem-free surfaces. Population: 10 in 12, 39 finer (3/14). NGC ID# 23U7, PCGS# 5434

**1855 Arrows Quarter, MS65
Sharply Struck and Attractive**

- 4223 1855 Arrows MS65 NGC.** Medium blue rims on the obverse frame a golden center, while the reverse is scarcely toned silver-gold. A few scattered marks appear under a loupe, mostly confined to the obverse. This piece is quite sharply struck and lustrous, an attractive representative of the second-year Arrows, No Rays issue. Census: 7 in 65, 7 finer (3/14). NGC ID# 23U8, PCGS# 5435

- 4224 1855-S Arrows AU53 PCGS.** The 1855-S quarters are popular as the only S-mint Arrows issue, struck to the extent of 396,000 coins. Most circulated extensively in early San Francisco. This AU53 PCGS example offers much luster remaining on silver-gray surfaces that show a few scattered marks. Population: 5 in 53, 14 finer (3/14). NGC ID# 23UA, PCGS# 5437

**1857 Seated Liberty Quarter, MS66
Attractive Toning and Luster**

- 4225 1857 MS66 PCGS.** Vivid traces of cobalt-blue and champagne-gold toning highlight the lustrous surfaces of this remarkable Premium Gem. The design elements are well-detailed, with just a touch of softness on the star centers. No mentionable distractions are evident and eye appeal is outstanding. Population: 35 in 66 (3 in 66+), 8 finer (3/14). NGC ID# 23TE, PCGS# 5442

**1861 Seated Liberty Quarter, MS66
Well-Preserved Lustrous Surfaces**

- 4226 1861 MS66 PCGS.** Sharply detailed in most areas, this impressive Premium Gem shows a touch of flatness on the stars. The lightly marked surfaces display shades of greenish-gold and gray toning over vibrant cartwheel mint luster. The well-preserved surfaces are free of mentionable distractions. Population: 9 in 66 (1 in 66+), 6 finer (3/14). NGC ID# 23TT, PCGS# 5454

**1861 Seated Liberty Quarter, MS66
Only Two Finer at NGC**

- 4227 1861 MS66 NGC.** Type Two Obverse and Reverse. A magnificent Premium Gem from the first year of the Civil War. This coin displays vibrant luster and razor-sharp definition on all design elements. The surfaces are mostly brilliant, with just a touch of champagne-gold toning near the rims. Only trivial field grazes deny numismatic perfection. Census: 10 in 66, 2 finer (3/14). NGC ID# 23TT, PCGS# 5454

**1865 Seated Quarter, MS64
Underrated Issue**

- 4228 1865 MS64 NGC.** An underrated, low-mintage (58,800 coins) date, especially in grades finer than MS63. This Choice Uncirculated representative exhibits only a few minuscule surface grazes, with boldly struck devices. Just a blush of light golden toning warms the softly frosted luster of this attractive near-Gem. Census: 4 in 64, 4 finer (3/14). NGC ID# 23U2, PCGS# 5461

**1870-CC Quarter, Fine Details
First-Year, Key-Date Issue**

- 4229 1870-CC — Repaired, Whizzed— NCS Genuine. Fine Details.** The low mintage of 8,340 coins from Carson City, in that mint's first year of coinage production, ensures the key date status of this important issue. This dove-gray example shows the faintly granular surface textures associated with "smoothing", or "whizzing". The remaining design detail seems more than adequate, for a Fine Details designation, and all of the letters in LIBERTY are evident and virtually complete.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 23UL, PCGS# 5477

**1873 Closed 3 Quarter, AU58
Only Two Finer Coins at PCGS**

- 4230 1873 Closed 3 AU58 PCGS.** The Closed 3 in the date was replaced later in the year because Chief Coiner A. Loudon Snowden complained that it looked too much like an 8. This attractive near-Mint specimen shows just a trace of wear on the design elements and the lightly abraded surfaces display shades of dusky gray and jade toning. From a low mintage of just 40, 000 pieces. Population: 2 in 58, 2 finer (3/14). NGC ID# 23UU, PCGS# 5484

- 4231 1875 MS65 PCGS. CAC.** The frosty, untuned surfaces on this Gem-CAC 1875 quarter show abundant eye appeal and a sharp strike, despite the presence of a couple of fingerprint fragments on the obverse that reveal themselves under a loupe. Population: 37 in 65, 24 finer (3/14). NGC ID# 23UX, PCGS# 5498

- 4232 1876 MS66 PCGS Secure.** With a mintage in excess of 17.8 million pieces and a proportionately high survival rate, the 1876 Seated quarter is ideal for type purposes. This Premium Gem example displays frosty, well-preserved surfaces, with just a blush of light golden toning overall. Some minor softness is seen on Liberty's figure, though the strike is otherwise sharp. Population: 23 in 66 (2 in 66+), 8 finer (3/14).
From The Northern Lights Collection. NGC ID# 23V2, PCGS# 5501

**1876-CC Seated Liberty Quarter, MS65
Popular Branch Mint Issue**

- 4233 1876-CC MS65 PCGS.** Type One Reverse. Small CC. Always in demand because of the charismatic CC mintmark, this attractive Gem displays well-detailed design elements, with just a touch of flatness on some of the stars. The lustrous surfaces are free of mentionable distractions and eye appeal is quite strong. Population: 14 in 65 (1 in 65+), 7 finer (3/14). NGC ID# 23V3, PCGS# 5502

**1876-CC Seated Quarter, MS66
Popular Carson City Issue**

4234 1876-CC MS66 NGC. Briggs Die Pair 2-A, exhibiting fine, even die rust over much of the obverse. Scarce Type One Reverse. Generally considered to be among the more plentiful Carson City issues in lower grades, the 1876-CC quarter becomes elusive at the Gem level and is truly rare in Premium Gem condition. This well-struck piece delivers excellent visual appeal with semiprooflike obverse fields and rich reddish-champagne toning overall. The luster is nearly void of disturbances and exhibits a softly frosted texture. Census: 11 in 66, 2 finer (3/14). NGC ID# 23V3, PCGS# 5502

4235 1877-CC MS65 PCGS. One of the more available Carson City quarters, ideal for collectors seeking a single type representative from this mint. This well-struck Gem example displays softly frosted luster beneath blended pastel-blue and light amber-gold hues overall. Population: 38 in 65, 24 finer (3/14). *From The Northern Lights Collection.* NGC ID# 23V6, PCGS# 5505

**1877-CC Seated Dime, MS66
Lustrous and Attractively Toned**

4236 1877-CC MS66 PCGS. A high-mintage issue (4.1 million pieces) from Carson City and one that is readily available in lower grades. At the current Premium Gem level or finer this issue becomes scarce to rare. This sharply struck example displays bright satiny luster and variegated patina in shades of electric-turquoise, red, and burnt-orange. An attractive, carefully preserved coin, free from surface distractions. Population: 18 in 66 (3 in 66+), 6 finer (3/14). NGC ID# 23V6, PCGS# 5505

**1877-CC Seated Liberty Quarter, MS66
Intense Toning and Luster**

4237 1877-CC MS66 NGC. Vibrant frosty mint luster shines through attractive shades of electric-blue and golden-brown toning on the well-preserved surfaces of this spectacular Premium Gem. The design elements are well-detailed and eye appeal is outstanding. Census: 11 in 66 (1 in 66+), 5 finer (3/14). NGC ID# 23V6, PCGS# 5505

**1878-CC Seated Liberty Quarter, MS65
Sharply Detailed and Lustrous**

4238 1878-CC MS65 PCGS. This attractive Gem offers sharply detailed design elements and vibrant cartwheel mint luster, under shades of greenish-gold, amber, and cerulean-blue toning. The well-preserved surfaces show no mentionable distractions and eye appeal is outstanding. Population: 22 in 65, 10 finer (3/14). NGC ID# 23V9, PCGS# 5509

**1878-CC Quarter, MS65
Final CC Quarter Dollar**

4239 1878-CC MS65 PCGS. CAC. A Gem example from the final quarter dollar issue of the Carson City Mint, this lovely piece displays frosty luster along with a few splashes of toning, primarily gold. The obverse exhibits light clash marks and several fine die cracks, while the reverse has few die defects. Population: 22 in 65, 10 finer (3/14). NGC ID# 23V9, PCGS# 5509

4240 1880 MS65 PCGS. CAC. This Gem 1880 quarter, certified in a green-label PCGS holder with CAC "green bean," shows generous prooflike reflectivity on untuned silver-white surfaces, a high-end coin by any measure — technical or aesthetic. Population: 42 in 65, 48 finer (3/14). NGC ID# 23VC, PCGS# 5512

**1882 Liberty Seated Quarter
Lustrous, Silver-White Premium Gem**

4241 1882 MS66 PCGS. This high-grade specimen matches the Variety 1-A business strike die pair described by Larry Briggs in his encyclopedia, including the elusive minor doubling of the date at the 18, first described by Frank Van Valen in 1989. Lesser-grade examples often lose this detail. Just 15,200 pieces were produced of this low-mintage date, which is scarce above XF and rare in this lofty grade. Brilliant, frost-white surfaces are attractively lustrous without a lick of toning. The strike is uniformly bold except at the centers of a few stars. Population: 21 in 66 (2 in 66+), 16 finer (2/14). NGC ID# 23VE, PCGS# 5514

4242 1887 MS65 PCGS. An admirable, frosty, untoned Gem example of this low-mintage circulation strike of 10,000 pieces. The strike is full on the reverse, sharp in the obverse center, and a bit soft on the obverse stars at the periphery — but this is quibbling on this well-preserved coin. A curving lint mark appears below star 7. NGC ID# 23VK, PCGS# 5519

4243 1888 MS65 PCGS. CAC. In 1888, the San Francisco Mint struck quarters for the first time since in ten years. More than 1.2 such pieces were released, but the Philadelphia business issue was limited to just 10,000 pieces. A lustrous and smooth autumn-gold and stone-gray Gem. The strike is crisp except on the stars. Encapsulated in a green label holder. NGC ID# 23VL, PCGS# 5520

4244 1888-S MS64 NGC. Despite a mintage in excess of 1.2 million coins, the 1888-S Seated quarter is rare finer than MS64. This well-preserved near-Gem example displays satiny luster with sharp overall detail. Light golden toning warms both sides, with tinges of navy, teal, and violet on the obverse. Census: 35 in 64, 20 finer (2/14). NGC ID# 23VN, PCGS# 5521

**1890 Seated Quarter, MS66
Untoned and Appealing**

4245 1890 MS66 PCGS. This is a high-grade survivor from this low-mintage issue of 80,000 pieces, the last of a string of such issues from the Philadelphia Mint before annual production totals finally began to increase. This untuned silver-white example shows good eye appeal amid few marks. Light die clashing appears on each side. A couple of curious shiny areas on the eagle's right wing occur, seeming Mint-caused defects.
From The Northern Lights Collection. NGC ID# 23VP, PCGS# 5523

1890 Quarter, Toned MS67

4246 1890 MS67 PCGS. The 1890 Seated quarter, from a mintage of 80,000 pieces, is available in all grades through Gem with patience. Higher-grade examples are elusive. The two major grading services have seen only 40 Superb Gems, the condition of the present example, and a mere five pieces are finer. Ice-blue and orange-gold patination is more extensive and deeper on the reverse of this well-struck coin. No mentionable marks take away from the pleasing overall eye appeal. Population: 21 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 23VP, PCGS# 5523

1890 Quarter Dollar, Vibrant MS67+

4247 1890 MS67+ PCGS. CAC. The 1890 Seated Liberty quarter typically shows areas of weakness, especially Liberty's head and the star centers. While minor softness is evident on the hair atop Liberty's head, the remaining design elements are sharply rendered, including the star centers. The well-preserved surfaces are completely brilliant, with vibrant mint luster on both sides. This piece is well deserving of the CAC endorsement as well as the PCGS Plus designation. Population: 21 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 23VP, PCGS# 5523

4248 1891 MS66 PCGS. Rich luster emerges from the light patina appearing on portions of this pleasing Premium Gem specimen exhibiting strong design detail. Intermingled shades of pale gold, teal, and plum are present. Both sides reveal clash marks. Population: 27 in 66 (1 in 66+), 4 finer (2/14). NGC ID# 23VR, PCGS# 5524

PROOF SEATED QUARTERS

1854 Seated Quarter, PR64
Rich Multicolor Toning

4249 1854 Arrows PR64 PCGS Secure. CAC. Debuting in 1854, the With Arrows Seated Liberty Quarter was only produced for two years, making it a popular type among collectors. While the business strike variant is readily available, proof 1854 Seated quarters are great rarities and are seldom offered at auction in any grade. Struck in an era when the Mint did not keep accurate records of proof coinage, it is impossible to know the exactly number struck, but Breen suggests in his *Encyclopedia* that possibly 10 examples survive in all grades.

This near-Gem representative exhibits rich blue, violet-gold, and aquamarine hues beneath light lavender-gray patina. Moderately mirrored fields deliver exceptional visual appeal when turned in-hand, and the motifs are sharply impressed. An important offering for the advanced Seated Liberty specialist. Population: 11 in 64, 1 finer (3/14). NGC ID# 23WV, PCGS# 5550

1856 Seated Quarter
Toned Premium Gem Proof
None Certified Finer by PCGS or NGC

4250 1856 PR66 NGC. A rare proof striking, made two years before the U.S. Mint broke decades-old traditions and finally started marketing proof coins to the collecting public at large. The mintage of the 1856 Seated quarter business strike is a generous 7.26 million coins, a sign that the Mint wanted to continue the inroads it had made in circulating coinage in 1854-55 with the silver content weight reduction and the Arrows and Rays designs. Larry Briggs estimates that 25 proofs of this year were made, while the *Guide Book* provides no figure and the Breen *Proof Encyclopedia* comments, "probably slightly rarer than the dime, less than 30 surviving."

The proof die shows a die bulge under the base of the first A in AMERICA down through the right wing area to the L in DOL. That attribute is perceptible on this piece, although far from obvious. More interesting are a couple of raised die lines on the obverse shield, under the R of LIBERTY. Iridescent gold and violet toning dominates both sides of this sharply detailed piece. Frosty luster appears on the devices, but toning in the fields somewhat mellows the reflectivity. Census: 3 in 66, 0 finer (3/14). NGC ID# 23WH, PCGS# 5552

**1857 Seated Quarter, PR64+ Cameo
Deeply Mirrored Fields**

- 4251 1857 PR64+ Cameo PCGS. CAC.** Ex: Teich Family Collection. Prior to 1858 the Mint did not keep accurate records of its proof coinage, therefore the exact mintage of proof 1857 Seated quarters is unknown. Survival estimates range from 15 to 40 examples in all grades, with Cameo representatives prohibitively rare. This Plus-graded near-Gem exhibits deep mirroring in the fields with light frost over the central devices. Blue, violet, and champagne hues color the fields, and the design elements are razor-sharp. Population: 2 in 64 (1 in 64+) Cameo, 1 finer (3/14). Ex: Crosby, Mayfield, MacMurray (*Stack's*, 1/1958), lot 1338. PCGS# 85553

- 4252 1859 PR63 NGC.** Needle-sharp detail and vibrant multicolor toning give this piece outstanding eye appeal, with concentric rings of blue and violet surrounding champagne centers. Moderate mirroring in the fields delivers a colorful visual display when the coin is tilted under a light, giving the overall impression of a higher grade. NGC ID# 23WL, PCGS# 5555

**1859 Quarter, PR65
Second Year of Public Proof Sales**

- 4253 1859 PR65 NGC.** This is a genuinely rare coin from the Mint's second year of proof set sales to the public. The commonly accepted figure is 800 proofs produced, but this gives no accounting of how many sets were actually sold, as the rest were likely melted or put into circulation (a normal Mint practice of the time). This well-struck Gem proof shows considerable field-device contrast under a loupe, along with patina in shades of aqua, amber, and jade on both sides with generous luster and high reflectivity. Census: 21 in 65, 30 finer (2/14). Ex: *Pittsburgh Signature* (*Heritage*, 10/2011), lot 3603. NGC ID# 23WL, PCGS# 5555

**1864 Quarter Dollar, PR66 Cameo
Infrequently Seen as a Cameo**

- 4254 1864 PR66 Cameo NGC.** White-on-black contrast is somewhat more evident on the reverse of this 1864 Premium Gem Cameo. All the design elements are well-defined, thereby enhancing even more the coin's eye appeal. Both sides have been well cared for. Cameo specimens of this date are infrequently encountered. Census: 4 in 66 Cameo, 2 finer (3/14). PCGS# 85560

**1865 Seated Quarter, PR65 Cameo
Only 500 Examples Minted**

- 4255 1865 PR65 Cameo PCGS.** Only 500 Seated Liberty quarters were struck in 1865, the last year of the Civil War. This delightful Gem exhibits sharply detailed frosty design elements that contrast boldly with the deeply mirrored brilliant fields to create an attractive cameo effect. Population: 7 in 65 Cameo, 5 finer (3/14). PCGS# 85561

**1870 Quarter, PR66 Cameo
Attractively Toned and Lustrous**

- 4256 1870 PR66 Cameo PCGS.** Richly toned on both sides, this Premium Gem Cameo exhibits a pleasing degree of contrast. The toning includes appealing shades of golden-orange and peach at the centers, with fuchsia and electric-blue at the outer obverse and rose-pink and teal at the outer reverse. Scattered as-made strike-throughs are present on the obverse of this intricately struck piece. Population: 2 in 66 Cameo, 0 finer (3/14). PCGS# 85569

**1871 Quarter Dollar, PR67 Cameo
None Certified Finer by PCGS or NGC**

- 4257 1871 PR67 Cameo PCGS. CAC.** A full strike displays a well-contrasted portrait and eagle on this virtually flawless proof quarter, but the extraordinary toning sets it apart from all others. Extreme reflectivity in the obverse fields reveals deeply mirrored rings of ruby, electric blue, and a peach gold center. The reverse is even more spectacular (if possible) with lemon-gold rims framing alternating shades of vivid aqua, purple, azure-blue, and lavender around a burgundy-gold eagle. A fantastic quarter, likely from an old-time proof set that was at one time broken up for individual sale. Population: 2 in 67 Cameo, 0 finer (2/14). PCGS# 85570

- 4258 1872 PR65 NGC. CAC.** Rich multicolor toning and sharply struck devices offer substantial visual appeal, with complementary hues of teal, violet, and champagne over both sides. Moderate mirroring in the fields, coupled with lightly frosted devices provide a near-cameo appearance when tilted beneath a light. Census: 29 in 65, 12 finer (3/14). NGC ID# 23X5, PCGS# 5571

**1873 No Arrows Quarter, PR66 Cameo
Excellent Contrast**

- 4259 1873 No Arrows PR66 Cameo PCGS.** As 1873 Closed 3 No Arrows business-strike quarters are extremely rare, date collectors often opt for the proof version, which are fairly available despite many having entered circulation. This Premium Gem, one of the few Cameos known, displays excellent field-device contrast over both sides. This is a sharply struck, impeccably preserved specimen with pleasing eye appeal. Population: 4 in 66 (1 in 66+) Cameo, 2 finer (3/14). PCGS# 85572

**1874 Seated Liberty Quarter, PR64
Deeply Mirrored and Lightly Toned**

- 4260 1874 Arrows PR64 PCGS.** From a proof mintage of just 700 pieces, this attractive Choice Seated Liberty quarter represents the popular Arrows design type. The design elements display razor-sharp definition and the mirrored fields show just a few minor hairlines and contact marks. Shades of blue and greenish-gold toning add to the considerable eye appeal. Population: 72 in 64 (1 in 64+), 45 finer (3/14). NGC ID# 23XS, PCGS# 5575

- 4261 1874 Arrows PR63 Cameo PCGS.** Of the 700 proof quarters produced in 1874, few survive with cameo contrast. Deep mirroring in the fields complements softly frosted devices on this sharply struck representative. Blue, violet, and amber peripheral hues surround light golden centers, delivering excellent visual appeal. Population: 7 in 63 Cameo, 36 finer (3/14). PCGS# 85575

**1876 Quarter, PR66 Deep Cameo
Rare With Exceptional Contrast**

- 4262 1876 PR66 Deep Cameo PCGS.** Type Two Reverse. PCGS has certified only six 1876 quarters as Deep Cameo. The present high grade specimen unquestionably merits the designation, since the devices are thickly frosted and the untuned fields are prominently mirrored. In addition, the strike is unassailable. Population: 4 in 66, 0 finer (3/14). PCGS# 95577

- 4263 1877 PR63 Cameo NGC.** Deeply mirrored fields and frosty devices deliver strong black-on-white contrast. A faint tint of violet-blue in the fields with hints of amber around the rims complements the full strike. Census: 1 in 63 Cameo, 20 finer (2/14). PCGS# 85578

- 4264 1878 PR64 NGC.** A pleasing near-Gem proof. Mirrored fields display deep hues of green-gold, royal-blue, and pale lavender, blended around sharply struck central devices. The surfaces are well-preserved, with only minimal imperfections detectable beneath the patina. Census: 62 in 64, 28 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 23XA, PCGS# 5579

- 4265 1880 PR65 PCGS.** Deep blue to blue-gray and pinkish tones prevail on both sides of this sharply struck Gem proof 1880 quarter, with perceptible luster radiating from beneath. A tiny, undistracting carbon fleck on the obverse appears only under a loupe. Population: 45 in 65, 45 finer (3/14). NGC ID# 23XC, PCGS# 5581

- 4266 1880 PR66 NGC.** Peripheral ribbons of blue, violet, and amber fade to light golden centers on this beautifully preserved Premium Gem. Heavily frosted devices complement moderately mirrored fields, delivering subtle cameo contrast when tilted under a light. Census: 28 in 66 (2 in 66 ★), 20 finer (3/14). NGC ID# 23XC, PCGS# 5581

**1882 Quarter, PR67+★
Strong Visual Appeal**

- 4267 1882 PR67+★ NGC.** Beautifully preserved, this high-end Superb Gem specimen exhibits rich toning on the obverse in shades of golden-orange, teal, plum, pale yellow, and violet, with a few translucent spots present. The reverse is largely champagne-gold, with a pale splash of teal along portions of the left margin. The coin exhibits an intricate strike and lustrous surfaces. Census: 16 in 67 (1 in 67 ★, 2 in 67+★), 4 finer (3/14). NGC ID# 23XE, PCGS# 5583

**1882 Seated Quarter, PR67
Beautifully Toned and Impressive**

- 4268 1882 PR67 PCGS. CAC.** Only 1,100 proofs were struck in this later date in the series. The deep, beautiful toning patterns on each side of this Superb Gem example include shades of electric-blue, rose, and gold. Fully struck and seemingly pristine, the fields are watery and immensely reflective. Population: 11 in 67, 0 finer (3/14). NGC ID# 23XE, PCGS# 5583

**1882 Quarter, PR66 Cameo
Deeply Mirrored Fields**

- 4269 1882 PR66 Cameo PCGS. CAC.** Only 1,100 proofs and 15,200 business strikes were struck of this low-mintage date. This essentially brilliant, sharply struck proof example exhibits deeply mirrored fields on each side and moderately frosted devices that provide pleasing cameo contrast. Two tiny contact marks near star 11 are the only mentionable surface disturbances on this exceptional Premium Gem. Population: 16 in 66 (6 in 66+) Cameo, 3 finer (3/14). *From The Northern Lights Collection.*
Ex: Long Beach Signature (Heritage, 9/2010), lot 3976. PCGS# 85583

- 4270 1883 PR65 PCGS.** A lovely, lightly toned Gem proof of this low-mintage issue, struck to the extent of 1,039 proofs and 14,400 circulation strikes. Electric-blue at the rims on each side blends into pinkish-gold and silver interiors with blatant eye appeal. Population: 39 in 65, 33 finer (3/14). NGC ID# 23XF, PCGS# 5584

- 4271 1885 PR65 Cameo NGC.** Beautifully frosted, untuned, silver-white devices seem suspended over glassy fields. This lovely Gem Cameo proof is well-preserved and free of surface distractions. The low mintage of proofs for this year was a meager 930 pieces. Census: 16 in 65 Cameo (2 in 65 ★ Cameo), 25 finer (3/14). PCGS# 85586

**1885 Seated Quarter, PR67 Cameo
Deep-Mirrored, Strong Contrast
None Finer by PCGS**

- 4272 1885 PR67 Cameo PCGS. CAC.** A Superb Gem proof, with watery-deep mirrors and a wonderful balance of peripheral toning with silver centers. Rings of cerulean-blue, magenta, and russet-red surround the fully struck, heavily frosted motifs. The only real distractions are on the holder, not on this lovely proof coin. Population: 8 in 67 Cameo, 0 finer (3/14). PCGS# 85586

**1888 Quarter, Stunning PR66 Cameo
Sharp Contrast and Lovely Toning**

- 4273 1888 PR66 Cameo PCGS. CAC.** This lovely 1888 Seated quarter in PR66 Cameo offers the best of both worlds, sharp contrast and peripheral rim toning in shades of copper-gold and sunset-orange with untuned silver-white centers, the whole with stunning eye appeal. The strike is sharp save for the obverse stars. A tiny dark fleck below US on the reverse is only a fleeting distraction. Population: 6 in 66 Cameo, 1 finer (3/14). *From The Northern Lights Collection.* PCGS# 85589

**1888 Seated Quarter, PR67 Cameo
Concentrically Toned**

4274 1888 PR67 Cameo PCGS. CAC. Surviving Superb Gem proof 1888 Seated Liberty quarters are rare on the market, and prohibitively rare with full cameo contrast. Concentric rings of sea-green, blue, and violet surround light golden centers on this beautifully preserved representative. Deeply mirrored fields complement softly frosted devices, delivering outstanding visual appeal. A sharply struck, virtually perfect example. Population: 1 in 67 Cameo, 0 finer (3/14). PCGS# 85589

4275 1889 PR64 Cameo NGC. Deeply mirrored fields frame frosted design elements on this attractive cameo proof. The strike is sharp and the surfaces are well-preserved. Mainly brilliant, with a tint of light golden peripheral toning. Census: 12 in 64, 27 finer (2/14). PCGS# 85590

4276 1890 PR65 Cameo NGC. Deeply mirrored fields frame frosty devices on this Gem proof quarter, delivering beautiful cameo contrast. The surfaces are void of any noticeable marks, with needle-sharp detail in the design elements. Mainly brilliant, with just a tint of golden toning around the peripheries. Census: 7 in 65 Cameo, 29 finer (2/14). PCGS# 85591

**1890 Quarter, PR66+ Ultra Cameo
Stunning Field-Motif Contrast**

4277 1890 PR66+ Ultra Cameo NGC. CAC. Many 1890 proof quarter dollars were apparently saved by the collecting public as a good part of the 590-piece mintage has been certified. Specifically, NGC and PCGS have graded nearly 475 specimens, a goodly number in the near-Gem and finer categories. Cameos and Ultra/Deep Cameos are well represented in the population.

The deeply mirrored fields of this high-end Premium Gem highlight the frosted design elements, yielding stunning contrast. Sharply struck devices further enhance the coin's outstanding eye appeal. Only the stars near Liberty's head display softness in the centers. Both sides have been very well cared for. A couple of marks in the upper-right obverse field might help to pedigree the coin. Census: 9 in 66 Ultra Cameo (2 in 66+ Ultra Cameo), 16 finer (3/14). PCGS# 95591

BARBER QUARTERS

4278 1892 MS66 PCGS. CAC. Type One Reverse. Fully struck and well-preserved, this Premium Gem from the first year of the series adds light golden-silver toning and radiant mint luster to its excellent appearance. Plenty of examples exist, but relatively few of them are known at this lofty level of preservation. NGC ID# 23XT, PCGS# 5601

**1892 Quarter, Toned MS67+
Elusive at This Level**

4279 1892 MS67+ PCGS. CAC. Type Two Reverse, the eagle's wing covering most of the E in UNITED. The 1892 was widely saved as the first-year-of-issue. That said, this date is available through Premium Gem, but higher-grade coins are elusive. A melange of sky-blue, orange-gold, and crimson patina cascades over the highly lustrous surfaces of this high-end Superb Gem. The design elements are sharply impressed, including the upper-right shield corner, the arrow feathers, and talons. Both sides are immaculately preserved. Population: 29 in 67 (2 in 67+), 3 finer (3/14). NGC ID# 23XT, PCGS# 5601

**1892-O Barber Quarter, MS66
First-Year Branch Mint Issue**

4280 1892-O MS66 PCGS. Type One Reverse. The Barber design made its debut in 1892, and the 1892-O Barber quarter is a favorite issue with mintmark type collectors. This attractive Premium Gem displays sharply detailed design elements and vibrant mint luster, under shades of champagne-gold and bluish-gray toning. Population: 17 in 66 (3 in 66+), 3 finer (3/14). NGC ID# 23XU, PCGS# 5602

4281 1893-O MS65 PCGS. Radiant cartwheel luster complements surfaces that are largely untoned, save for a thin ring of champagne-pink around the peripheries of each side. This attractive coin is quite sharply struck and shows no singular marks. NGC ID# 23XX, PCGS# 5605

**1896-S Quarter Dollar, VF35
Low-Mintage, Key-Date Issue**

- 4282 1896-S VF35 PCGS.** The 1896-S Barber quarter, with a low mintage of 188,039 coins, is one of three key dates in the series along with the 1901-S and the 1913-S. This example reveals a coating of gray patina over the obverse with olive accents at the margins, while the reverse shows silver-gray color on the design's high points and mostly forest-green toning in the fields and at the borders. Several shallow marks are noted on the obverse, and a couple more are present on the reverse. NGC ID# 23Y9, PCGS# 5615

**1896-S Quarter, AU Details
Scarce Key Date**

- 4283 1896-S — Scratch — PCGS Secure Genuine. AU Details.** One of the three key dates of the series, the 1896-S Barber quarter is scarcely encountered finer than the VF grade level, and is highly sought-after in any condition. This nearly Uncirculated piece displays light golden-gray patina overall, with tinges of amber and pale blue in the margins. Just a brush of wear is seen over the high points of this design, with remnants of mint luster in the recesses. A single scratch is noted on the reverse beneath the eagle's left wing, but it is not overly detracting.

**1897 Barber Quarter, MS67
Tied With Two Others for Finest at PCGS**

- 4284 1897 MS67 PCGS.** Beautifully toned and lustrous, this Superb Gem possesses strong visual appeal. The obverse toning includes hues of teal, mint-green, copper, golden yellow, and rich pink. The richer shades of toning on the reverse are concentrated at the periphery, with lighter shades, primarily gold, appearing at the center. The left obverse field includes an interesting mark with the appearance of a 5 when viewed from 9 o'clock and the cheek reveals a few small marks when examined closely. The 1897 production of Barber quarters at the Philadelphia Mint consisted of 2,480,000 pieces, but few survivors have been certified at the upper grade levels. Population: 3 in 67, 0 finer (3/14). NGC ID# 23YA, PCGS# 5616

- 4285 1899 MS65 NGC.** Pastel pink, lavender, and blue-gray patina appears on each side of this appealing Gem 1899 quarter, a sharply struck example of this high-mintage date but seldom found with such excellent preservation.
From The Northern Lights Collection. NGC ID# 23YG, PCGS# 5622

- 4286 1899 MS66 PCGS.** This Premium Gem displays a medley of medium-gray, orange, yellow-gold, and olive-green patina over swirling luster. Sharply struck and carefully preserved. Population: 14 in 66, 2 finer (2/14).
Ex: FUN Signature (Heritage, 1/2009), lot 2480, which realized \$1,638.75. NGC ID# 23YG, PCGS# 5622

**1900-S Quarter, Lustrous MS66
A 'Philippine Hoard' Issue**

4287 1900-S MS66 PCGS. CAC. The 1900-S quarter is one of the "Philippine hoard" dates, along with the 1898-S and 1899-S. Most of this coinage went to the Philippines and few survived in the better Mint State grades. The PCGS population report shows only 25 pieces in MS65 or finer, a number of which are likely resubmissions. The lustrous surfaces of this Premium Gem example display soft violet color over both sides, each of which exhibits sharply struck design elements. Nicely preserved throughout. Population: 12 in 66 (4 in 66+), 3 finer (3/14). NGC ID# 23YM, PCGS# 5627

4288 1901-O AU55 NGC. A moderately scarce date in lower-circulated grades, the 1901-O quarter suddenly becomes rare in Mint State condition. This Choice Almost Uncirculated example retains substantial original mint luster beneath pale silver-gray patina. Just a brush of friction is seen over the high points of the design, while the overall visual appeal is excellent. Census: 4 in 55, 20 finer (3/14). NGC ID# 23YP, PCGS# 5629

4289 1901-S AG3 NGC. This medium-gray 1901-S quarter shows more detail on the obverse than on the reverse, as expected for the type and issue. The date and mintmark are bold, although some scrapes appear in the center reverse, and that side is well worn down at the peripheries. Still a coin that will no doubt see spirited bidding as a problem-free example of this series key. NGC ID# 23YR, PCGS# 5630

**1901-S Barber Quarter, VG8
Attractive Key-Date Example**

4290 1901-S VG8 NGC. As a comparison of the Big Three key issues in the Barber quarter series, it is instructive to note that, at NGC, just 295 examples of the 1901-S have been seen in all grades, while the same company reports more than 400 submissions apiece for the 1896-S and the 1913-S.

This VG8 coin shows smooth surfaces that are free of large or distracting marks or abrasions. There is plenty of design detail remaining for the grade, and light-gray color over the high points changes to medium and charcoal-gray hues in the fields and near the peripheries. NGC ID# 23YR, PCGS# 5630

4291 1903 MS65 PCGS. Strong luster is among the attributes this Gem possesses. Areas of faint toning are present at the outer edges, primarily on the obverse, serving to accentuate the silver centers. In addition, the strike is sharp and the surfaces minimally abraded. Population: 13 in 65 (1 in 65+), 5 finer (3/14). NGC ID# 23YV, PCGS# 5634

4292 1906 MS66 PCGS. Freckles of barely discernible light tan with gleaming semi-prooflike fields and pinpoint sharpness in nearly all areas. A few microscopic marks are noted on Liberty's portrait, while the balance of the coin is virtually flawless. Population: 21 in 66, 2 finer (2/14).

Ex: FUN Ft. Lauderdale Signature (Heritage, 1/2005), lot 4141; Joseph C. Thomas Collection (Heritage, 4/2009), lot 477. NGC ID# 23Z5, PCGS# 5642

4293 1906 MS66 PCGS. Vibrant mint luster brightens this unmarked and precisely struck Premium Gem. Medium sun-gold toning enriches both sides. The quality is outstanding, and those in search of an exemplary Barber type coin need look no further. Population: 22 in 66, 2 finer (3/14).

Ex: James Mossman Collection / FUN Signature (Heritage, 1/2009), lot 2518. NGC ID# 23Z5, PCGS# 5642

4294 1906 MS66 PCGS. CAC. Rarely encountered in this level of preservation, this heavily frosted Premium Gem displays blended hues of ice-blue and light golden toning over each side. The details are sharply struck, with only a few insignificant grazes detectable on the surfaces. Housed in an old green label holder. Population: 21 in 66, 2 finer (3/14). NGC ID# 23Z5, PCGS# 5642

4295 1906-O MS65 PCGS. CAC. Satiny, champagne luster adorns both sides of this CAC-approved Gem quarter. The surfaces are well-preserved, with sharp definition in most details, though some typical softness is noted in the olive leaves around Liberty's head and a couple of the obverse stars. Population: 31 in 65, 29 finer (3/14). NGC ID# 23Z7, PCGS# 5644

4296 1907 MS65 PCGS. Faint champagne toning enhances the eye appeal of this sharply detailed Gem Barber quarter. A few tiny dark spots are present, including one on Liberty's cheek. Considered a common date but rarely seen in MS65 or finer grades. Population: 40 in 65, 18 finer (2/14). NGC ID# 23Z8, PCGS# 5645

4297 1908-D MS65 PCGS. CAC. Gold, cinnamon, and pale ochre tints prevail on this nicely struck 1908-D Gem quarter, a coin with bold eye appeal and certified in a green-label holder with the added CAC approval. Population: 22 in 65 (1 in 65+), 14 finer (3/14). NGC ID# 23ZD, PCGS# 5650

**1909-O Barber Half Dollar, AU58
Low-Mintage, Branch Mint Issue**

4298 1909-O AU58 PCGS. The 1909-O Barber quarter claims a small mintage of 712,000 pieces, and few examples were saved by contemporary collectors, making the issue quite elusive in high grade. This lustrous near-Mint example shows just a trace of wear on the well-detailed design elements and the lightly toned surfaces are free of mentionable flaws. Population: 3 in 58, 48 finer (3/14). NGC ID# 23ZJ, PCGS# 5655

**1911-S Quarter, Conditionally Rare MS67
Lustrous and Impeccably Preserved**

- 4299 1911-S MS67 PCGS.** The 1911-S quarter dollar saw a relatively low mintage of 998,000 pieces. It is very scarce in circulated grades but can be located with a bit of effort through Premium Gem, resulting from a few rolls that were saved in mint condition at the time of issue. Superb Gems such as the present offering are another matter. The two major grading services have certified just 15 examples in MS67 and a solitary coin finer (an NGC MS68.).

Intense luster embraces both sides, each of which is impeccably well preserved. Sharp design detail shows on the devices, including the upper-right corner of the shield that is often weakly struck. Only the right (facing) claw is a touch soft. A couple of minute marks on Liberty's cheek and the lower chin are mentioned only for identification purposes. Population: 7 in 67, 0 finer (3/14). NGC ID# 23ZT, PCGS# 5661

- 4300 1912-S MS65 PCGS.** Lustrous surfaces display faint hints of tan-gold color. A multi-color toning spot is present near 2 o'clock on the obverse. This Gem exhibits a sharp strike aside for softness in the lower right obverse stars and the upper right corner of the shield. A few as-made strike-throughs appear in the right obverse field. Population: 19 in 65, 13 finer (2/14).

Ex: Central States Rosemont (Heritage, 4/2011), lot 3506. NGC ID# 23ZT, PCGS# 5666

- 4301 1913-S Good 6 PCGS.** A well-circulated example of this low-mintage key date, the current example shows silver-gray toning on the high points and deeper dusky-gray toning in some of the protected areas and near the peripheries. Most abrasions have been worn away, leaving a smooth appearance on both sides. NGC ID# 23ZW, PCGS# 5666

- 4302 1914 MS66 PCGS.** The obverse of this Premium Gem is particularly attractive, with large splashes of copper-gold, red-orange, violet, plum, and turquoise-blue colors. The reverse is largely almond-gold. Both sides exhibit rich frosty luster as well, further enhancing the eye appeal of this piece displaying a sharp strike overall. Population: 23 in 66, 2 finer (2/14). NGC ID# 23ZX, PCGS# 5667

- 4303 1915-D MS65 NGC.** Dazzling mint bloom is the hallmark of this well-preserved Gem. The fantastic, brilliant luster showcases sharp details, giving this piece a high degree of eye appeal. An outstanding type coin, and scarcely seen finer. Census: 65 in 65 (2 in 65+, 2 in 65 ★), 32 finer (2/14). NGC ID# 2423, PCGS# 5671

- 4304 1915-D MS66 PCGS.** Delicate tan-gold and steel-blue toning embraces this lustrous Barber type coin. The reverse is splendidly preserved, and the obverse has only scattered wispy marks. A good strike despite typical indistinctness near the right (facing) claw. Population: 36 in 66 (1 in 66+), 3 finer (2/14).

Ex: Dallas Signature (Heritage, 7/2006), lot 2271; Long Beach Signature (Heritage, 2/2007), lot 3231; Scott Rudolph Collection (Heritage, 1/2009), lot 2575. NGC ID# 2423, PCGS# 5671

- 4305 1916 MS66 PCGS.** This Premium Gem shows frosty silver-gold surfaces with scattered brownish-gold accents. Vertical die polishing lines are visible on each side, contributing to the frosty luster. A great-looking and well-struck example of this last-year-of-type Barber quarter. Population: 30 in 66, 3 finer (3/14). NGC ID# 2425, PCGS# 5673

- 4306 1916-D MS66 PCGS.** Rich satin luster and lightly toned surfaces provide this Premium Gem with a lovely appearance. The toning is primarily present at the outer edges and includes shades of olive-green, golden-brown, rich yellow, and red. The strike is sharp overall, with minor incompleteness at a few of the stars and the eagle's talons. Only 7 examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 2426, PCGS# 5674

PROOF BARBER QUARTERS

- 4307 1892 PR63 Cameo NGC.** Type Two Reverse. A pleasing cameo, with deep mirroring in the fields and softly frosted devices. A light golden hue blankets both sides, with tinges of deep amber and russet on the obverse. No outwardly distracting marks are present. PCGS# 85678

- 4308 1893 PR65 Cameo NGC.** Bright, mirrored fields and frost-white devices create a pleasing cameo effect on this upper-end Gem proof. The surfaces are mainly brilliant, with just a hint of light golden toning around the peripheries. Census: 14 in 65 Cameo, 31 finer (2/14). PCGS# 85679

**1893 Quarter, PR66 Cameo
Starkly Contrasted**

- 4309 1893 PR66 Cameo PCGS. CAC.** With a total production of 792 pieces, proof 1893 Barber quarters are seldom encountered in Premium Gem condition, and then only scarcely with full cameo contrast. This sharply struck representative displays a faint golden tint over otherwise brilliant surfaces. Deep mirroring in the fields complements softly frosted devices, delivering outstanding visual appeal on this beautifully preserved proof. Population: 13 in 66 (1 in 66+) Cameo, 18 finer (3/14). PCGS# 85679

4310 1894 PR64 PCGS. A beautifully preserved proof quarter with a needle-sharp strike. The obverse displays pleasing cameo contrast, while the reverse only lacks the necessary frost on the eagle. The surfaces are mainly brilliant, with just a tint of light golden around the rims. NGC ID# 2429, PCGS# 5680

4311 1894 PR64 Cameo NGC. Deep mirroring in the fields and heavily frosted devices provide pleasing contrast on this near-Gem proof. A blush of amber-gold toning warms both sides, while fully struck details deliver profound eye appeal. Census: 18 in 64 Cameo, 41 finer (2/14). PCGS# 85680

**1898 Quarter, PR67 Deep Cameo
Exceptionally Attractive**

4312 1898 PR67 Deep Cameo PCGS. The Philadelphia Mint had perfected the manufacturing techniques of proof coinage by the late 1890s. Proof coins from this era can hold their own with the best examples produced today, as evidenced by the magnificent coin offered here. The frosty devices of this Superb Gem proof appear to float over the deep watery fields, and whispers of light gold and violet appear at the borders under magnification. Fully struck over all the design elements. The surfaces of both sides are impeccably preserved. The original proof mintage of just 735 pieces has been drastically reduced over the years by improper cleaning, and many examples were spent by noncollecting heirs during the hard days of the Depression. Population: 11 in 67 (1 in 67+) Deep Cameo, 9 finer (3/14).

Ex: Central States Milwaukee (Heritage, 4/2010), lot 736, which realized \$5,462.50. PCGS# 95684

**1900 Quarter, PR66 Cameo
Lovely Eye Appeal**

4313 1900 PR66 Cameo PCGS. CAC. One of 912 proofs struck, this quarter is nearly flawless with assertive silver surfaces showing a wisp of clearest gold. All design features are razor-sharp, including the motto scroll, which doubles back and identifies the Type 2 reverse. A tiny spot appears below the O in OF on the reverse. Few survivors of this proof issue can compete with this coin's overwhelming quality. Population: 18 in 66 Cameo, 13 finer (3/14). PCGS# 85686

**1905 Barber Quarter, PR67
Only Two Finer Coins at PCGS**

4314 1905 PR67 PCGS. Vivid shades of lilac, cerulean-blue, and champagne-gold toning enhance the pristine surfaces of this delightful Superb Gem. The design elements are sharply detailed and the deeply reflective fields shine through the patina. Eye appeal is outstanding. Population: 11 in 67, 2 finer (3/14). NGC ID# 242L, PCGS# 5691

4315 1906 PR66 PCGS. Variegated patina on each side of this Premium Gem proof includes jade, copper-gold, russet, and blue-gray with some silver areas remaining. The strike is sharp save for the upper-right shield corner. Population: 35 in 66 (1 in 66+), 23 finer (3/14). NGC ID# 242M, PCGS# 5692

**1906 Barber Quarter, PR68
Only 675 Pieces Struck**

4316 1906 PR68 NGC. A small proof mintage of 675 Barber quarters was achieved in 1906. This magnificent PR68 specimen is one of the finest survivors. The fully struck design elements have a frosty texture that provides modest contrast with the pristine mirrored fields. The mostly brilliant surfaces are free of visible flaws and show a few hints of pale gold toning. Eye appeal is tremendous. Census: 12 in 68 (1 in 68+, 2 in 68 ★), 0 finer (3/14). NGC ID# 242M, PCGS# 5692

4317 1909 PR65 PCGS. Beautifully preserved surfaces and razor-sharp details are the strong suit of this Gem proof quarter. Vivid splashes of gold, violet, green, and royal-blue melt into both sides, while the fields display heavy mirroring when tilted under a light. Visually appealing and high-end for the grade. NGC ID# 242R, PCGS# 5695

**1911 Quarter, PR66 Cameo
Fully Struck Proof, Impeccable Preservation**

- 4318 1911 PR66 Cameo PCGS. CAC.** Splendid cameo contrast appears on the untoned silver-white surfaces throughout each side, the product of reflective fields and nicely frosted devices. This is a fully struck Premium Gem proof with impeccable preservation and over-the-top eye appeal. Population: 13 in 66 (1 in 66+) Cameo, 11 finer (3/14).
From The Northern Lights Collection. PCGS# 85697

- 4319 1913 PR66 NGC.** Deeply mirrored fields and sharply struck design elements are among the pleasing attributes this Premium Gem has to offer. The fields are virtually free of unsightly hairlines or marks, and the luster is essentially brilliant, with just a tint of light golden around the rims. Census: 41 in 66, 21 finer (3/14). NGC ID# 242V, PCGS# 5699

- 4320 1914 PR66 PCGS.** The 1914 has the lowest mintage of any proof issue in the Barber quarter series with only 380 pieces produced. The present snow-white specimen is boldly struck and displays moderate (albeit undesignated) cameo contrast. A single tiny luster graze is noted on Liberty's upper cheek.
Ex: Long Beach Signature (Heritage, 6/2006), lot 1434, which realized \$2,300. NGC ID# 242W, PCGS# 5700

EARLY HALF DOLLARS

- 4321 1795 2 Leaves VG8 PCGS. O-105a, R.4.** Battleship-gray centers display a faint pinkish-gray hue, with darker margins. The borders are strong, with nearly complete denticles on the obverse. Even overall wear, with good detail for the grade and all major design elements clearly defined. The surfaces are smooth with no detracting imperfections. A pleasing example of this first type. PCGS# 6052

- 4322 1795 2 Leaves VG10 PCGS. O-116, R.4.** Deep greenish-gray patina covers each side, along with scattered copper-russet accents. An evenly but extensively worn example with a die lump beneath star 1, a die crack from Y to stars 9 and 10, and planchet adjustment marks visible on the lower half of the reverse. A very scarce variety. PCGS# 6052

**1797 O-102 Half Dollar, VF Details
Rare Early Silver Type Coin**

- 4323 1797 — Repaired — NGC Details. VF. O-102, Low R.6. Amato-521a.** The present offering may not be especially pretty, but it is a Draped Bust Small Eagle half dollar, and a 1797 O-102 at that, the scarcest of the four Overton varieties. Even low-grade 1796-1797 halves, including those with impairments, are realizing five-figure prices in the present market.

This VF Details specimen displays light gray centers that transition to slightly darker gray patina imbued with hints of brown at the borders. Liberty's hair shows relatively good detail, though some of it may have been strengthened. What little feather detail there is on the wings may also represent some strengthening, which is quite possibly the case on the right (facing) claw as well. Small pock marks are visible on each side, somewhat more on the obverse central motif, and some smoothing has occurred at the centers.

Our ongoing research on the 1796-1797 half dollar series finds that impairments such as those indicated are not uncommon. Indeed, fully one-third of the specimens we have cataloged or whose images we have examined from other sources reveal one or more problems. Consequently, any Small Eagle half, being the key to an advanced type or early half dollar date/variety collection, will continue to find a home, regardless of grade or impairments.

Ex: Charles Gregory Collection (S.H. Chapman, 6/1916), lot 2526; Long Beach Signature (Heritage, 5/2012), lot 3757.

**1802 Half Dollar, Choice VF
O-101, Only Die Pair**

4324 1802 VF35 PCGS. CAC. O-101, R.3. The sole die marriage for the date. Fewer than 30,000 pieces were struck, which makes the 1802 much scarcer than later dates of the Heraldic Eagle type. The surfaces are predominantly slate-gray but display olive-green and lilac undertones. Marks are absent except for a small dig on the eagle's neck. Liberty's lower hair curls are well defined. NGC ID# 24EE, PCGS# 6065

4325 1805 VF35 PCGS. O-104, R.5. This rare die marriage shows stars 7 and 8 close to the bases of L and Y, respectively. On the four-berried reverse, three have long stems, one none, and a leaf nearly touches I right of its center. Bright silver interiors on this piece contrast against russet- and charcoal-gray patina around the device outlines. Die cracks and clashing appear on each side. NGC ID# 24EG, PCGS# 6069

**1805 O-111 Half Dollar, Choice XF
Unlisted Early Die State**

4326 1805 XF45 PCGS. O-111, R.2. This evenly struck and problem-free Draped Bust half dollar is richly patinated electric-blue, lavender, and autumn-brown. Though Overton and Herrman omit the distinction, the present Choice XF half dollar lacks the horizontal die crack between the AM in AMERICA usually encountered on O-111. The right obverse field is prominently clashed, but the clash marks are much different than those seen on, for example, the later die state MS63+ Green-Newman example. NGC ID# 24EG, PCGS# 6069

4327 1806 Pointed 6, No Stem VF30 PCGS. CAC. O-109, R.1. This is a popular *Guide Book* variety that is readily available in all circulated grades. This example shows attractive natural coloration and normal, honest wear from moderate circulation. PCGS# 6073

4328 1806 Pointed 6, No Stem XF40 PCGS. O-109, R.1. The only dies of the Pointed 6, No Stem *Guide Book* subtype. Powder-gray and charcoal-gray surfaces are accented in copper-russet rim tones with muted luster remaining under the moderate patina. PCGS# 6073

**1806 O-109 Half Dollar, AU50
Pointed 6, No Stem**

4329 1806 Pointed 6, No Stem AU50 PCGS. O-109, R.1. Apparently distracted, the engraver left off the stem extending through the eagle's claw on this reverse die. Considerable luster remains on both sides of this pleasing AU specimen showing pale gray and gold toning with splashes of iridescence on each side. PCGS# 6073

4330 1806 Pointed 6, Stem XF40 PCGS. O-118a, R.3. A late die state, with several prominent reverse die cracks. Original silver-gray patina blankets both sides of this attractive XF type representative, with faint remnants of luster in the recesses. The strike is bold, with notable definition on the shield, the stars, and the denticles, while the overall visual appeal is excellent. NGC ID# 24EJ, PCGS# 6071

**1806 Half Dollar, XF40
O-114a, Cracked Reverse Die**

4331 1806 XF40 PCGS. CAC. O-114a, R.4. A heavy die crack nearly bisects the reverse between 3:30 and 10 o'clock. The TY in LIBERTY is sharply repunched. Deep cobalt-blue toning dominates though golden-brown occasionally emerges. Free from any consequential abrasions. O-114a is much scarcer than the No Stem O-109. NGC ID# 24EJ, PCGS# 6071

4332 1806 Pointed 6, Stem XF45 PCGS. O-120, R.3. Prime reverse die state, lacking the cud on the upper shield. Small die cracks attribute the obverse. Silver and charcoal-gray alternate on this Choice XF example, which shows some scattered, small marks consistent with the grade, none of them overt. NGC ID# 24EJ, PCGS# 6071

1807 Draped Bust Half Dollar, AU58
Lovely Toned Example

- 4333** 1807 Draped Bust AU58 PCGS. CAC. O-102, R.2. A lustrous and nicely toned near-Mint example, from the final year of the Draped Bust type. Softly struck on Liberty's hair and shoulder, as is typical for this variety. Lightly worn and free of any mentionable surface marks or problems. The eye appeal of this piece is extraordinary, by virtue of the blended iridescent patina over both sides. NGC ID# 24EM, PCGS# 6079

BUST HALF DOLLARS

- 4334** 1807 Capped, Large Stars, 50/20 XF45 NGC. O-112, R.1. The upper curve of the erroneous 2 is clearly seen beneath the 5 of 50 C. on the reverse. A lightly circulated example of this popular variety, with significant mint luster remaining beneath pale golden-gray patina overall. Strong detail remains, with distinct radial line separation among the stars. NGC ID# 24EN, PCGS# 6086

1807 Large Stars, 50 Over 20, O-112, AU50
A Remarkably Attractive Example

- 4335** 1807 Large Stars, 50 Over 20 AU50 PCGS. CAC. O-112, R.1. This popular blundered denomination variety rates its own listing in the *Guide Book*, appearing on page 194 of the 2014 edition. This example seems quite lustrous for the grade, with substantial remnants of original mint luster evident especially near the peripheral design motifs. Both sides seem free of post-strike abrasions, also unusual for a coin graded at AU50. NGC ID# 24EN, PCGS# 6086

1807 Capped Bust Half, AU53
O-113a, Small Stars

- 4336** 1807 Small Stars AU53 NGC. O-113a, R.2. This early Capped Bust die variety is significantly scarcer than O-112. It also receives separate *Guide Book* listing as the only Small Stars die pair. The present example is softly brought up at the centers but the borders are well defined and display luster. No marks are consequential across the rich gunmetal-gray, caramel-gold, and aquamarine surfaces. NGC ID# 24EN, PCGS# 6087

1807 O-114 Half Dollar, AU53
Large Stars Obverse

- 4337** 1807 Large Stars AU53 PCGS. O-114, R.3. The 1807 Large Stars half dollar is a distinct *Guide Book* variety that enjoys exceptional demand in all grades. This pleasing example has exceptional surfaces with pewter-gray toning and splashes of dark patina on the high-points. Delicate peripheral gold toning enhances the eye appeal. NGC ID# 24EN, PCGS# 6088

- 4338** 1810 AU55 PCGS. O-103, R.2. The extra tinge of metal on star 12 and the small extra lump of metal on the reverse between 50 and C attribute this available variety. The obverse is boldly clashed below the date through stars 12-13 on the right and 1-2 on the left. Powder-gray and charcoal-gray patina complements the perceptible remaining luster. NGC ID# 24ET, PCGS# 6095

1810 O-103 Half, Near-Mint

- 4339** 1810 AU58 PCGS. O-103, R.2. Deep gunmetal-gray and golden-brown toning envelops this satiny and well struck near-Mint Bust half. Boldly struck and exceptionally free from contact. A late die state with stars drawn to the rims. Certified in an old green label holder.
Ex: West Palm Beach FUN Signature (Heritage, 7/2007), lot 862, which realized \$1,610. NGC ID# 24ET, PCGS# 6095

- 4340** 1811 Small 8 AU58 NGC. O-111, R.1. Incorrectly designated as O-108 by NGC. Dappled golden-brown and dove-gray embrace this satiny Borderline Uncirculated example. Original and lightly abraded with imposing eye appeal.
Ex: Summer FUN Signature (Heritage, 7/2007), lot 863. PCGS# 6097

1811 Small 8 Half, MS64
O-111a, Fully Patinated

- 4341** 1811 Small 8 MS64 NGC. O-111a, R.1. Deep cobalt-blue, plum-mauve, and sea-green patina embraces this satiny and unabraded Choice Capped Bust half. Well struck aside from minor blending of detail near the shoulder clasp. From late-in-life dies with lengthy peripheral cracks on the reverse. PCGS# 6097

1811 Half Dollar, MS64+
Small 8, O-108a

- 4342** 1811 Small 8 MS64+ PCGS. CAC. O-108a, R.2. The rising crack through UNITED confirms the later Overton die state. A lustrous dove-gray and almond-gold Choice representative. Abrasions appear absent though clash marks are prominent on the field near the eagle's head. The strike is bold at the centers, but selected stars are incompletely brought up. PCGS# 6097

1815/2 Capped Bust Half Dollar, XF Details
O-101, Scarce Overdate

- 4343** 1815/2 — Improperly Cleaned — NGC Details. XF O-101, R.2. The Mint burned on January 11, 1816, one day after 47,150 pieces of the 1815/2 half dollar were delivered. As a result, no half dollars were minted in 1816. This scarce overdate is a prized issue for bust half collectors and always in short supply. The current example is reasonably attractive with peripheral mint luster despite Improper Cleaning, resulting in the expected hairlines and a rather strange, brassy-gold patination.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24F5, PCGS# 6108

- 4344** 1817 AU58 PCGS. O-105a, R.4. Light green-gold peripheral toning surrounds champagne centers on this highly lustrous near-Mint example. Close examination reveals just a brush of friction over the high points of the design elements, with overall bold definition. A prominent, forked die crack runs from the rim near star nine into Liberty's cap and hair curls. NGC ID# 24F6, PCGS# 6109

1819 O-112 Half Dollar, MS64
Gold CAC Seal

- 4345** 1819 MS64 PCGS. Gold CAC. O-112, R.3. A mint-made die scratch connects the tops of the TE in STATES, characteristic of the conditionally rare Overton-112. Apple-green and chestnut-gold overlies lustrous pearl-gray surfaces. The strike is bold, and marks are confined to grazes on the left obverse. Certified in a green label holder. Population: 17 in 64 (2 in 64+), 3 finer (3/14). NGC ID# 24FB, PCGS# 6117

1820/19 Curl Base 2 Half, AU58
O-102, Extensive Luster

- 4346** 1820/19 Curl Base 2 AU58 PCGS. O-102, R.1. Golden-brown, jade-green, and steel-gray toning encompass this lustrous and momentarily circulated half dollar. The base of the eagle and the left-side stars display minor inexactness of impression. Free from relevant marks except for a small cluster of field grazes beneath the right scroll end. PCGS# 6126

1820/19 Curl Base 2 O-102 Half
Borderline Uncirculated

- 4347** 1820/19 Curl Base 2 AU58 PCGS. O-102, R.1. Rich sea-green toning is prevalent on the obverse, though the central reverse is mostly tan-gray aside from several small spots. The margins offer slender bands of orange-red. The left obverse displays a couple of moderate grazes but the remainder of the coin is both smooth and partly lustrous. The strike is bold except on the left-side borders. PCGS# 6126

1820/19 Half Dollar, Near-Mint
Curl Base 2, O-102

- 4348** 1820/19 Curl Base 2 AU58 PCGS. O-102, R.1. Overton-102 commands its own Guide Book listing, as the sole 1820/19 Curl Base 2 die marriage. The overdate is obvious and can be seen with the unaided eye. The present satiny example displays dusky autumn-brown and stone-gray toning. Smooth aside from unobtrusive field marks near the eagle's head. Population: 11 in 58, 16 finer (3/14). PCGS# 6126

1821 O-101a Half Dollar, MS65
Intricate Strike, Vibrant Luster

- 4349** 1821 MS65 NGC. O-101a, R.1. The stone-gray devices and autumn-brown fields are framed by powder-blue patina. This lustrous Gem is essentially full struck, unusual for the series, and the surfaces are splendidly void of contact. Hardly a rare die marriage, but nonetheless among the finest known for the die pairing.
Ex: Orlando FUN Signature (Heritage, 4/2012), lot 3481.
From The Northern Lights Collection. NGC ID# 24FF, PCGS# 6128

1822 O-106a Half Dollar, MS63
Lustrous and Smooth

- 4350** 1822 MS63 PCGS. O-106a, R.3. Apple-green, peach-gold, and steel-gray enrich this lustrous and boldly struck Select half dollar. Lengthy left-side die cracks confirm the late state Overton variety. The strike is crisp throughout. A small spot west of the eagle's neck provides an identifier. Only unimportant field grazes limit the third party grade. NGC ID# 24FG, PCGS# 6129

1822 O-105 Half Dollar, MS64
Splendidly Smooth

- 4351** 1822 MS64 PCGS. O-105, R.3. Die rust on the field near the eagle's neck is diagnostic for the scarce Overton-105. The obverse also exhibits die rust, as made. This almond-gold and stone-gray near-Gem has a semiprooflike obverse and a satiny reverse. Refreshingly devoid of contact, and the strike is bold throughout. NGC ID# 24FG, PCGS# 6129

1822 O-105 Half Dollar, MS64+
Lustrous and Lightly Toned

- 4352** 1822 MS64+ PCGS. O-105, R.3. Several lengthy reverse die cracks aid the attribution. This coin approaches the final die state for the reverse, with additional cracks (not listed in Overton or Parsley) making a rather spectacular display. The coin shows an early state of the obverse die, however, since the crack through the right-side stars is absent, and the die appears perfect with all stars sharp. A nearly brilliant, Choice half dollar that boasts potent luster and minimal evidence of contact. The stars and major devices display an intricate strike. Struck from rusted dies. This is a borderline Gem bust half, as indicated by the PCGS Plus designation. Population: 47 in 64 (5 in 64+), 13 finer (3/14). NGC ID# 24FG, PCGS# 6129

**1823 O-112 Half Dollar, MS63
Booming Luster, Border Toning**

4353 1823 MS63 PCGS. O-112, R.1. Apple-green and canary-gold toning illuminates portions of this lustrous Select half dollar. The strike is bold except on the final three stars. The fields are generally smooth, although we note a thin line on Liberty's neck and a few faint slide marks on the cheek. O-112 is attributed by its extension into the horizontal shield lines of line 3 in vertical stripe 6. NGC ID# 24FJ, PCGS# 6131

4354 1824 AU58 NGC. O-104, R.2. Only light friction is seen over the high points of this sharply struck example. Amber-gold toning blankets satiny luster on both sides, while the surfaces are free of detracting abrasions.
Ex: FUN Signature (Heritage, 7/2007), lot 7917. NGC ID# 24FK, PCGS# 6137

4355 1824 AU58 NGC. O-105, R.2. Satiny silver-gray luster covers both sides of this nearly Uncirculated type representative. Close scrutiny reveals only a brush of rub on the crests of the eagle's wings, while the surfaces are void of any noticeable imperfections. The central strike is razor-sharp, though the stars show usual weakness.
Ex: FUN Signature (Heritage, 7/2007), lot 7918. NGC ID# 24FK, PCGS# 6137

4356 1824 MS62 ANACS. O-105, R.2. This satiny representative displays light golden on the reverse, while the obverse exhibits a silver-gray center with tinges of blue, violet, and amber in the margins. The strike is sharp, except for localized weakness on the stars. Incredibly well-preserved for the grade, with no major surface imperfections. NGC ID# 24FK, PCGS# 6137

**1824 Bust Half, MS64+
O-115, Sharp and Attractive**

4357 1824 MS64+ PCGS. O-115, R.2. A fairly common Overton variety for the date, identified by equidistant stars 7, 8, and 13 from the cap and curls on the obverse, and a die chip at the right edge of the scroll, a high N in UNITED, and a few other easily seen diagnostics on the reverse. This near-Gem example shows weakness at URIB of the scroll (often seen on this variety), yet a sharp strike on the obverse — particularly on Liberty's gown folds, which are opposite the scroll weakness. Lovely pearlescent, silver-gray toning covers the surfaces, with a few rose accents at the margins. Excellent eye appeal makes this Bust half a nice, high-grade addition to any set. NGC ID# 24FK, PCGS# 6137

4358 1825 AU58 PCGS. O-101, R.1. Original, silver-white mint luster blankets both sides of this near-Mint type representative, with pale gray overtones on the high points of the design. Strong detail and clean surfaces add to the visual appeal.
Ex: FUN Signature (Heritage, 7/2007), lot 7919. NGC ID# 24FL, PCGS# 6142

4359 1825 MS62 PCGS. O-112, R.3. The 2 in the date is triple cut on this obverse die, instantly identifying the variety. The present example has a wide triple profile, adding interest for specialists. A lovely Mint State piece with lustrous surfaces beneath dappled gold, rose, and blue toning. NGC ID# 24FL, PCGS# 6142

**1825 Half Dollar, MS64, O-115
Lustrous and Well-Preserved**

4360 1825 MS64 PCGS. O-115, R.3. This variety features a small bar near the right base of 1 in the date. On the reverse, the third line of the fourth stripe in the eagle's shield extends to the second crossbar. Strong, shimmering luster illuminates the clean, well-preserved surfaces of this near-Gem. Natural silver-gray toning in the fields and centers yields to pleasing gold-tan and golden-brown accents on each side, primarily near the borders. NGC ID# 24FL, PCGS# 6142

**1825 O-116 Half Dollar, MS64
Superior Eye Appeal**

4361 1825 MS64 PCGS. O-116, R.3. A small spur from the left end of the scroll identifies the moderately scarce Overton-116. The present near-Gem provides powder-blue borders. The fields and devices exhibit blended olive-gold and lilac-gray. Lustrous and well preserved with a crisp strike and imposing eye appeal. NGC ID# 24FL, PCGS# 6142

**1826 O-110 Half Dollar, MS65
Unabraded Surfaces**

4362 1826 MS65 PCGS. O-110, R.2. Butter-gold toning visits lustrous and essentially mark-free surfaces. This pleasing Gem has a good strike, though a few stars are soft, as is the base of the eagle. The curls near the ear also show slight blending. Among the finest examples of this available Overton marriage. NGC ID# 24FM, PCGS# 6143

4363 1827 Square Base 2 MS62 PCGS. CAC. O-105, R.3. The obverse star positions and the recut 5 on the reverse, tilting slightly into the adjacent 0, aid in attributing this scarce variety. Generous luster appears on each side of this piece, which shows intermingled blue, pink, and gray tinges with pale copper and jade rim toning. A beautiful coin with scattered contact marks that determine the grade. NGC ID# 24FN, PCGS# 6144

4364 1827 Square Base 2 MS63 PCGS. CAC. O-106, R.2. An attractive Select Mint State example of this plentiful variety, displaying satin luster beneath pleasing heather, gold, and blue toning intermingled across both the obverse and reverse. NGC ID# 24FN, PCGS# 6144

4365 1828 Square Base 2, Small 8, Large Letters AU53 PCGS. O-116, R.2. This lightly circulated and well struck almond-gold and slate-gray Bust half dollar has ample luster and an absence of individually detrimental abrasions.
Ex: Premium Collection of Capped Bust Half Dollars (Bowers and Merena, 11/2007), lot 2240. PCGS# 6151

**1828 Large Letters Half, MS65
O-115, Square Base 2, Small 8**

4366 1828 Square Base 2, Small 8, Large Letters MS65 NGC. O-115, R.2. Field die lines below the left scroll end attribute this collectible Overton marriage. Ocean-blue borders encompass apricot-gold interiors. This satiny Gem is devoid of marks and is sharply struck with the exception of a few star centers.
From The Northern Lights Collection. PCGS# 6151

**1828 Half Dollar, O-119, MS65 PCGS
Square Base 2, Small 8, Small Letters
Ex: Green-Newman**

4367 1828 Square Base 2, Small 8, Small Letters MS65 PCGS. CAC. O-119, R.3. Ex: "Col." E.H.R. Green-Newman. Only this sole die pairing for 1828 shows the two attributes of Small 8 and Small Letters, much less the third Square Base 2 style, all of which are noted on the holder of this marvelous Gem coin that was offered last November in the Eric P. Newman Collection, Part II. Further identification of the O-119 die variety is provided by the reverse, which shows recutting on STATE, here visible without a loupe on the S, A (particularly), and E. Beautiful pink-champagne and ice-blue peripheral tinges complete for the viewer's attention with strong mint luster, a coin with maximal eye appeal. This coin was in the NGC holder as MS65 with CAC endorsement, and now has been crossed to MS65 PCGS with another CAC green bean.
Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$4.00; Eric P. Newman Numismatic Education Society; Newman Part II (Heritage, 11/2013), lot 33457, which brought \$21,150. PCGS# 6152

1829 Capped Bust Half, MS66
Popular O-115 Variety
Spectacular Multicolor Toning

- 4368 1829 MS66 NGC. O-115, R.1.** The aquamarine centers are bounded by fire-red and canary-gold margins. Both sides are remarkably devoid of contact. The fields and devices are satiny, while the borders display intense cartwheel sheen. The strike is essentially full. Superior quality for the widely collected Capped Bust half type. Census: 12 in 66 (1 in 66+, 1 in 66 ★), 0 finer (3/14). NGC ID# 24FS, PCGS# 6154

- 4369 1830 Small O AU58 NGC. O-103, R.1.** Ex: S. M. Damon Collection. Samuel Mills Damon was a 19th century Honolulu businessman. His collection was auctioned by Doyle of New York in 2006. This near-Mint Capped Bust half dollar exhibits pale gunmetal-blue peripheral toning around muted violet-gray centers. The central devices are sharply struck, though the right obverse stars show the usual weakness. NGC ID# 24FU, PCGS# 6156

- 4370 1830 Large O AU58 PCGS. CAC. O-123, R.1.** A gorgeously toned coin showing variegated layers of sea-green, ruby, gold, and olive patina. Sharply struck with considerable luster and slight amounts of wear on some of the high points. PCGS# 6157

- 4371 1831 AU58 NGC. O-110, R.2.** A lightly frosted type representative with strong luster and well-struck motifs. Only light friction is seen over the high points of the design, while the surfaces are virtually free of abrasions.
 Ex: FUN Signature (*Heritage*, 7/2007), lot 7925. NGC ID# 24FV, PCGS# 6159

- 4372 1831 MS62 NGC. O-110, R.2.** Softly frosted mint luster blankets both sides of this well-struck type representative. Blue and orange-gold peripheral toning surrounds light golden centers, while the surfaces are remarkably free of detracting abrasions, given the grade. Weakness on LURI in PLURIBUS is normal for this variety. NGC ID# 24FV, PCGS# 6159

- 4373 1832 Large Letters AU58 PCGS. O-101, R.2.** An early die state without the usually encountered crack along the lower left reverse border. The prominent break from the left (facing) wing is present, as always. The sole Large Letters die marriage for the date. Toned charcoal-gray and forest-green. Population: 28 in 58, 19 finer (3/14).
 Ex: *Premium Collection of Capped Bust Half Dollars* (Bowers and Merena, 11/2007), lot 2256. PCGS# 6161

1832 Bust Half Dollar, MS65
O-103, Small Letters Reverse

- 4374 1832 Small Letters MS65 NGC. O-103, R.1.** The stand of the 5 in 50 C is repunched, characteristic of this collectible Overton die pairing. The lustrous and unabraded surfaces of the present example display comprehensive sea-green, chestnut-gold, and dove-gray patination.

From *The Northern Lights Collection*. NGC ID# 24FW, PCGS# 6160

- 4375 1832 Small Letters, O-118, R.1, MS63 NGC.** The so-called "laced lips" variety, for the tiny die lines that run through the lower lip of Liberty. The reverse shows doubling at the upper-left shield corner. This frosty Select example is untuned and offers excellent eye appeal. Some old die clashes appear in the obverse left field from the eagle's wing on reverse. A great-looking example. PCGS# 39877

1834 O-101 Half Dollar, Near-Gem
Large Date, Large Letters

- 4376 1834 Large Date, Large Letters MS64 NGC. O-101, R.1.** The 5 in 50 C is repunched, the pick-up point for Overton-101. A beautiful near-Gem with attractively dappled forest-green and lime-gold surfaces. The reverse adds glimpses of peach and cherry toning. Lustrous and minimally abraded. The strike is good overall but the left-side stars and central motifs show occasional softness. NGC ID# 24FY, PCGS# 6164

1835 O-102 Half Dollar, MS65+
Richly Toned, Upper-End Gem

- 4377 1835 MS65+ NGC. O-102, R.3.** Dusky peach-gold toning endows most of this coruscating Choice half, though the margins offer narrow bands of cobalt-blue and ruby-red. The strike is precise except for soft radials on stars 7 through 10. Nearly unabraded aside from a few faint marks on the cheek. O-101 and O-102 are similar but can be distinguished by the 5 in the date. Relative to O-101, O-102 has a flat top 5 placed further from the 3. NGC ID# 24FZ, PCGS# 6168

**1836 O-101a Half Dollar, MS64
Lettered Edge, Late Die State**

- 4378** 1836 Lettered Edge MS64 PCGS. O-101a, R.1. The late die state for this variety is defined by a curving die crack from the rim to the left (facing) wing tip, across the olive leaves, to the eagle's tail feathers. Light tan color visits the centers of this lustrous and lightly toned near-Gem. Intricately struck on the stars and legends, the details of the shield and the hair beneath the ear are not completely delivered by the dies. Refreshingly undisturbed by contact, this Choice Bust half would be worthy of an advanced silver type set. *Ex: Long Beach Signature (Heritage, 9/2005), lot 3199; New York Signature (Heritage, 12/2011), lot 3600. NGC ID# 24G2, PCGS# 6169*

REEDED EDGE HALF DOLLARS

**1836 Reeded Edge Half, AU53
GR-1, The Only Die Pair**

- 4379** 1836 Reeded Edge AU53 NGC. GR-1, R.2. The first-year, Reeded Edge subtype unfailingly attracts a wide spectrum of half dollar and type enthusiasts, with its low reported mintage (1,200+ pieces) and its status as a symbol of the Mint's emergence into the modern, steam-powered press era. Other collectors bemoan the transition from a more traditional, less automated method of "classic" coinage, represented by the Capped Bust halves and their larger planchets, quirky varieties, and treasured lettered edges. This well-detailed example is a silver-gray representative, lightly hairlined but with some remaining mint luster at the margins and around the devices. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2U28, PCGS# 6175*
- 4380** 1837 — Reverse Rim Filed — NCS. Unc. Details. *Ex: Jules Reiver Collection.* An early die state example of this two-year Reeded Edge type, with bold borders and no evidence of clashing. The strike is sharp, and the surfaces exhibit even silver-gray color overall. NCS notes reverse rim filing, but it is minor and virtually undetectable to the unaided eye. NGC ID# 24G4, PCGS# 6176
- 4381** 1837 — Improperly Cleaned — NCS. Unc. Details. GR-22, R.2. *Ex: Jules Reiver Collection.* The more available issue of this two-year Capped Bust type with 50 CENTS on the reverse. Some weakness around the borders is characteristic of this variety, though the central devices are bold. The surfaces show signs of old cleaning, but now exhibit pleasing gunmetal-gray patina. NGC ID# 24G4, PCGS# 6176

- 4382** 1837 MS62 NGC. GR-22, R.2. Deep olive and green-gold undertones accent darker gray-gold patina overall, with considerable underlying mint luster. The central details are sharp, though some typical weakness is noted in the top of Liberty's cap and in CEN of CENTS. The surfaces exhibit no outwardly detracting abrasions, and offer an overall pleasing appearance. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24G4, PCGS# 6176*

- 4383** 1838 AU58 PCGS. Minor surface marks are evident on both sides of this attractive Reeded Edge half dollar, with considerable luster and attractive toning in gold, violet, and blue. NGC ID# 24G5, PCGS# 6177

**1838 Reeded Edge Half, MS64+
GR-9 Variety, Condition Census Example**

- 4384** 1838 MS64+ PCGS. GR-9, R.3. From a substantial mintage of 3.5 million pieces, there are 16 die varieties known for the 1838 Reeded Edge half dollar. This coin represents the GR-9 variety and this coin should be near the top of the Condition Census for the variety. The design elements are sharply detailed and the well-preserved surfaces show a few hints of pale gold toning, with outstanding eye appeal. Population: 50 in 64 (3 in 64+), 9 finer (3/14). NGC ID# 24G5, PCGS# 6177

**1838 Reeded Edge Half Dollar, MS64
GR-13, Low Condition Census Example**

- 4385** 1838 MS64 PCGS. CAC. JR-6, GR-13, R.1. This attractive Reeded Edge half dollar represents the GR-13 variety of 1838, with the reverse die crack through much of the legend, eagle's wing, leaves, and HAL. The design elements are sharply rendered and the lustrous surfaces show attractive hints of champagne-gold and lavender toning. This piece should be in the lower reaches of the Condition Census for the variety. Population: 50 in 64 (3 in 64+), 9 finer (3/14). NGC ID# 24G5, PCGS# 6177
- 4386** 1839 — Graffiti — ANACS. Fine 12 Details. A large, crude A+ has been engraved on reverse, with some faint engraving also seen above the date, the latter showing an attempt at removal and some unusual field colors. The obverse high points are bright silver. NGC ID# 24G6, PCGS# 6179

1839 GR-7 Bust Half, MS64
Two-Year Subtype

- 4387** 1839 MS64 PCGS. GR-7, R.1. Die lines on the forehead and from the cleavage identify the Graham variety. Faint gold patina visits lustrous and predominantly smooth surfaces. Well struck except on the first S in STATES and the D in DOL. One spot noted between star 2 and the neck. A conditionally scarce and underappreciated two-year design subtype. Population: 35 in 64, 6 finer (3/14). NGC ID# 24G6, PCGS# 6179

SEATED HALF DOLLARS

1841-O Half Dollar, MS63
WB-101, Die Pair 1.

- 4388** 1841-O MS63 PCGS Secure. WB-101. Large O. An interesting diagonal die crack traverses the reverse between 3 o'clock and 10:30. A well struck albeit subdued early New Orleans half dollar with honey toning and a few moderate marks on the right obverse field. Population: 8 in 63, 7 finer (3/14). NGC ID# 24GS, PCGS# 6237

1842-O Small Date, Small Letters Half Dollar, VF25
WB-101, Die Pair WB-2, R.5

- 4389** 1842-O Small Date, Small Letters VF25 PCGS. WB-101, Die Pair WB-2, R.5. Many times scarcer than the 1842-O Medium Date variety. Golden-brown and dove-gray colors. The E in LIBERTY is faint, with all other letters bold. The eagle possesses ample plumage detail.
Ex: November Signature (Heritage, 11/2003), lot 6646, which realized \$2,300. NGC ID# 24GV, PCGS# 6238

1842-O Liberty Seated Half, XF45
WB-101, Small Date, Small Letters
Reverse of 1839

- 4390** 1842-O Small Date, Small Letters XF45 PCGS. WB-101, Die Pair WB-2, R.5. A scarce and important *Guide Book* variety, this issue is always in demand by Seated half collectors. The major services have seen just one example in Mint State (an MS62 coin by PCGS), leaving collectors to compete for the few circulated examples of the issue that survive. This Choice XF example displays attractive, well-detailed silver-gray surfaces with all the devices sharp despite light circulation. A bit of mint luster remains. There are no marks or other distractions of significance for the assigned grade. Population: 6 in 45, 8 finer (3/14). NGC ID# 24GV, PCGS# 6238

1842-O Seated Half, MS64
WB-102, Medium Date
Rare This Fine

- 4391** 1842-O Medium Date, Rev 1842 MS64 NGC. WB-102, Die Pair WB-4, R.4. Although more common than the Small Date, Small Letters New Orleans variety, this Medium Date example is rare in near-Gem Mint State, with just two pieces graded numerically higher by both services combined. The strike is close to full on this example, with sharp centrils on all of the stars as well as Liberty's hair, face, and upper torso. The eagle is equally bold on the reverse. Attractive, auburn-gold toning with rose highlights and a touch of forest-green on the rims completes the appeal. There are no mentionable marks on this lustrous, fully Choice Seated half. The eye appeal is outstanding. Census: 3 in 64, 2 finer (3/14). NGC ID# 24GW, PCGS# 6242

**1844-O Doubled Date, XF40
WB-103, FS-301
An Appealing Example**

- 4392 1844-O Doubled Date XF40 PCGS. WB-103, FS-301.** A dramatic doubled date variety, with the date first punched in far above the correct position, and partly into the rock. This is an appealing XF example with lovely green-gray toning and vibrant golden luster remnants that cling to some of the peripheral design elements on the obverse. The surfaces are smooth and mark-free. Population: 8 in 40, 20 finer (3/14). NGC ID# 24H2, PCGS# 6247

**1846-O Medium Date Half Dollar, Die Pair 21, MS62
Toned, Lustrous, Attractive Example**

- 4393 1846-O Medium Date MS62 NGC. CAC. WB-101, Die Pair WB-21, Low R.5.** A gorgeously toned example with blended layers of electric-blue, gold, and violet across smooth, nicely preserved surfaces. Highly lustrous with bold strike definition and no weakness observed on Liberty's head, hands, or shield; or on any of the obverse stars. A highly attractive example of this conditionally scarce New Orleans issue. Census: 7 in 62, 5 finer (3/14). NGC ID# 27SW, PCGS# 6255

- 4394 1846-O Tall Date XF40 PCGS. WB-106.** A rare variety, much favored by half dollar specialists. The Tall Date type shows an "open" 6 in the date, and space between the crossbar and lower serif of the 4. This example has a pleasingly original appearance with light-gray surfaces and small amounts of dark olive patina near some of the devices. Both sides are smooth and abrasion-free. Population: 8 in 40, 13 finer (3/14). NGC ID# 24H9, PCGS# 6256

**1849 Seated Half Dollar, WB-101, MS64
A Pleasingly Original Example
Conditionally Rare at This Grade Level**

- 4395 1849 MS64 PCGS. WB-101.** The following comments from Wiley and Bugert (1993) are applicable to this piece: "Most marriages are categorized under this variety. Some of these marriages are seen with bounce die doubling on the digits in the date, and they are often confused with the following recut date die varieties." The bounce doubling or strike doubling alluded to by the authors is readily apparent on this example. A lovely near-Gem with a highly attractive original appearance and varying degrees of toning over each side. It is well-struck with satiny mint luster and just a couple of small marks on the lower reverse that are concealed by the deep patina. Population: 13 in 64, 1 finer (3/14). NGC ID# 24HE, PCGS# 6262

- 4396 1850 AU58 NGC. WB-101.** With a low-mintage of only 227,000 coins, the 1850 half dollar is scarcely encountered in any grade, and rare at the Mint State level. This near-Mint representative displays rich blue-green and amber-golden toning beneath medium gunmetal-gray patina overall. Close scrutiny is required to detect any signs of wear on the sharply struck design elements. Census: 20 in 58, 32 finer (3/14). NGC ID# 24HG, PCGS# 6264

- 4397 1851 — Improperly Cleaned — NGC Details. AU.** The 1851 Seated half dollar is among the overall scarcest issues in the series. This representative displays a light golden hue over both sides, with nearly complete detail. Old cleaning slightly subdues the luster, but leaves this piece with pleasing visual appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1851 Seated Liberty Half, AU53
Underrated Issue, Vividly Toned**

- 4398 1851 AU53 NGC. WB-101.** From a mintage of 200,750 pieces, the 1851 Seated Liberty half dollar is a scarce and underrated date in the series. This lightly circulated example shows just a touch of wear on the well-detailed design elements and the lustrous surfaces are enhanced by vivid shades of pale gold and cerulean-blue toning. Census: 2 in 53, 40 finer (3/14). NGC ID# 24HJ, PCGS# 6266

**1851 Seated Half Dollar, MS61
Conditionally Scarce**

- 4399 1851 MS61 PCGS.** This issue is surprisingly scarce in Mint State, from a moderate mintage of 200,750 coins. PCGS and NGC have supposedly graded 50 pieces finer than MS61, but that number is surely inflated by resubmissions. This attractive coin displays satiny luster across beige-silver surfaces that are free of all but the most superficial marks. Population: 2 in 61, 25 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24HJ, PCGS# 6266

- 4400 1851-O MS63 NGC. WB-101, Die Pair WB-1, R.4.** Richly toned, this sharply struck Select survivor displays hues of copper, gold, teal, and deep red. Areas of flashy luster emerge beneath the patina, particularly on the reverse. Scattered marks were a grade-limiting factor for this piece. Census: 5 in 63, 14 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24HK, PCGS# 6267

- 4401 1851-O MS63 PCGS. CAC. WB-101, Die Pair WB-4, R.3.** Sharply struck throughout, with shimmering mint luster and variegated hues of mint-green, pearl-gray, and reddish-tan patina blended together across both sides. The nicely preserved surfaces are free of distractions. NGC ID# 24HK, PCGS# 6267

- 4402 1852 AU58 NGC. WB-101.** Satiny luster and an absence of any readily detectable wear give this near-Mint 1852 half dollar the visual appeal of a mid-grade Uncirculated example. Deep champagne and ice-blue hues blend over each side, while the devices are sharply struck overall. A scarce date in any grade, with a total production of only 77,130 coins. Census: 10 in 58, 39 finer (3/14). NGC ID# 24HL, PCGS# 6268

- 4403 1853 Arrows and Rays AU58 PCGS.** A pleasing near-Mint State example of this one-year, Arrows and Rays type. Blended hues of teal, gold, and amber-rose provide a rich patina with significant underlying mint luster. Just a brush of rub is detectable on the highest points of the design.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24JJ, PCGS# 6275

**1853-O Arrows and Rays Half Dollar, AU58
Popular One-Year Type Issue**

- 4404 1853-O Arrows and Rays AU58 PCGS. WB-101.** A popular one-year type, reasonably available in lower grades, but scarce in AU grades and rare in Mint State. This is a well-struck example with pleasing golden-brown and gold-gray toning and smooth, unmarked surfaces. An interesting die crack emerges from the rim between obverse stars 11 and 12. Population: 14 in 58, 30 finer (3/14). NGC ID# 24JK, PCGS# 6276

1855/54 Arrows Half Dollar, MS64

- 4405 1855/54 Arrows MS64 PCGS. CAC. WB-102, FS-301. Ex:** Dick Osburn Collection. Fivaz and Stanton comment, "This is certainly one of the top three varieties of the series." Doubling on the 8 and first 5 is evident in addition to the remnants of a thin crossbar of the underlying 4. A lustrous near-Gem with medium honey-gold and ice-blue patina. The fields display at least three sets of overlapping clash marks. Dick Osburn's Seated half dollar collection was auctioned at the 2013 ANA by Stack's-Bowers. Population: 4 in 64, 2 finer (3/14). NGC ID# 24JN, PCGS# 6282

1855-O Arrows Half Dollar, Elusive MS65

- 4406 1855-O Arrows MS65 NGC. WB-101, Die Pair WB-15, R.3.** Early Die State. The 1855-O half dollar is most often seen in Very Fine through About Uncirculated. Mint State examples can be located through near-Gem with diligent searching. Gems are elusive and finer specimens are very rare. Lustrous surfaces display hints of light tan on the obverse and exhibit well-struck design features. A light toning spot is visible just off the lower right (facing) wing. Census: 20 in 65, 5 finer (3/14). NGC ID# 24JP, PCGS# 6283

- 4407 1856-O MS63+ PCGS. CAC.** Mottled layers of deep green, coppery-orange, and electric-blue toning adorn both sides of this well-preserved example. Highly lustrous and free of distractions. Population: 32 in 63 (2 in 63+), 53 finer (3/14). NGC ID# 24HP, PCGS# 6288

- 4408 1856-S AU50 PCGS.** Scarce in all grades and rare in Mint State. This Almost Uncirculated example displays blended hues of blue, violet, and amber beneath a light olive patina. Brief circulation has left sharp overall details and pleasing eye appeal. Population: 8 in 50, 23 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24HR, PCGS# 6289

- 4409 1857-S XF45 PCGS.** With a mintage of only 158,000 pieces, few survivors remain of this early San Francisco issue. The present piece displays dappled silver-blue and amber-gold toning over lightly worn surfaces. A minimally marked Choice XF example. Population: 13 in 45, 20 finer (2/14).
Ex: Long Beach Signature (Heritage, 9/2008), lot 2199.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24HU, PCGS# 6292

- 4410 1858 MS63 NGC. WB-101.** Type One Reverse. Sharply struck with a pleasing satiny sheen and intermingled shades of deep plum-gray and cobalt-green patina. Wispy field marks are noted which seem minimal for the Select Mint State grade level. NGC ID# 24HV, PCGS# 6293

4411 1861-O MS63 NGC. Generally well-struck, but the top of Liberty's head and the upper obverse stars are flat. Shimmering mint luster highlights the blue-green, rose, and other variegated colors on each side. The surfaces are smooth and clean, save for a spidery luster graze in the right obverse field that restricts the grade. Census: 36 in 63, 43 finer (3/14). NGC ID# 24J8, PCGS# 6303

4412 1862-S MS62 PCGS. Despite a production in excess of 1.3 million coins, the 1862-S half dollar is surprisingly scarce in Mint State condition. The present example displays original, lightly frosted luster, with pale amber and golden toning overall. The strike is sharp over all areas, with notable definition on Liberty's head and surrounding stars, a problem area on this issue. Population: 12 in 62, 21 finer (3/14). NGC ID# 24JA, PCGS# 6308

**1863 Seated Liberty Half, MS65
Brilliant, Frosted Example**

4413 1863 MS65 NGC. From a smallish mintage of 503,200 pieces, the 1863 Seated Liberty half dollar is seldom encountered in Gem condition even though the date was hoarded during the Civil War. This stunning Gem exhibits sharply detailed design elements throughout, with vibrant satiny mint luster and traces of light lavender toning. Eye appeal is extraordinary. Census: 18 in 65, 4 finer (3/14). NGC ID# 24JB, PCGS# 6309

4414 1869 MS63 PCGS. Usually available in lower grades, the 1869 half dollar becomes increasingly scarce in higher grades of preservation, and is rare in Choice Mint State condition. The present representative displays original, softly frosted luster and sharply struck devices. Faint, scattered grazes define the grade. Population: 14 in 63, 17 finer (3/14). NGC ID# 24JX, PCGS# 6325

**1869-S Half Dollar, MS65
Conditionally Scarce**

4415 1869-S MS65 NGC. An essentially brilliant Gem with dazzling cartwheel luster and a well preserved reverse. Minor contact is noted on the obverse field and Liberty's limbs, but this does not deny the obvious eye appeal. The strike is bold in the centers, although some peripheral elements exhibit moderate incompleteness. Not a low mintage issue, but rare in any Uncirculated grade. Census: 5 in 65, 4 finer (3/14).
Ex: FUN Signature (Heritage, 1/2006), lot 2730, which realized \$4,312.50. NGC ID# 24JY, PCGS# 6326

**1870-CC Seated Half Dollar, VG10
Attractive Key-Date Example**

4416 1870-CC VG10 NGC. WB-101, Die Pair 2, R.6. The number of coins from this issue that still exist is small, from the already low-mintage of 54,617 pieces, making it an important key date from the first year of coinage production at the Carson City Mint. Many surviving pieces from this issue are impaired, or exist in very low grades. This problem-free example is more attractive and desirable than most. The smooth dove-gray surfaces display evenly worn motifs and a couple of small marks: one in the lower right obverse field and the other on the lower reverse, at the tip of the lowest arrowhead. A pleasing specimen from this scarce key issue. NGC ID# 24K2, PCGS# 6328

**1870-CC Seated Half Dollar, XF Details
WB-101, Die Pair WB-2, R.6**

4417 1870-CC — Improperly Cleaned — NGC Details. XF. WB-101, Die Pair WB-2, R.6 Wiley and Bugert call this issue: "Extremely scarce overall. Rare in XF and above." This improperly cleaned example displays abrasion-free surfaces that exhibit variegated hues of green, olive, lilac and gold over both sides. Evenly worn across the high points.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

4418 1871-CC VF30 NGC. An important early Carson City silver issue, here in an affordable middle-circulated grade. This light silver-gray example has splashes of pale gold toning, with trivial, grade-consistent handling marks. NGC ID# 24K5, PCGS# 6331

**1872 Seated Half, MS64
Conditionally Rare, Few Finer**

4419 1872 MS64 PCGS. Tan and gold toning is present on both sides of this near-Gem example. The coin exhibits a strong level of design detail overall, with minor incompleteness of Liberty's hair and the eagle's claws. Distributed marks held this piece from a higher grade, though none are worthy of individual mention. Population: 15 in 64 (1 in 64+), 8 finer (3/14). NGC ID# 24K7, PCGS# 6333

4420 1872-CC — Scratched — ANACS. AU50 Details. Nearly complete detail remains on this lightly circulated Carson City half dollar. The surfaces display light golden patina overall with remnants of mint luster in the protected regions. Some light, thin scratches are present on the obverse, but are not overly distracting. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24K8, PCGS# 6334

4421 1872-CC — Obverse Tooled — NGC Details. AU. A pleasing example of this sought-after Carson City issue. Expert tooling in the obverse fields has smoothed minor surface faults, and is also evident in the reverse fields. Muted amber-gray toning effectively masks the tooling to the unaided eye and leaves the surfaces with an overall pleasing appearance.

4422 1873-CC No Arrows VF35 NGC. WB-101. The Small CC reverse appears on No Arrows (WB-101) and With Arrows (WB-102) half dollars. This pleasing example has hints of blue and gold toning over its medium gray surfaces. NGC ID# 24KC, PCGS# 6338

4423 1873 Arrows MS63 NGC. Highly lustrous, this sharply detailed With Arrows Seated Liberty half dollar displays a faint golden tint over essentially brilliant, lightly frosted surfaces. A few scattered abrasions define the grade, but leave this example with a high degree of eye appeal. Census: 24 in 63, 26 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24L7, PCGS# 6343

4424 1873-CC Arrows XF40 ANACS. WB-102, Die Pair WB-3, R.4. Ex: Berlinghof. Small CC. Pale golden-gray patina blankets light amber and lilac hues on this lightly circulated representative. Some of the usual softness of strike is seen on the central obverse, though good detail remains for the grade. A pleasing example of this sought-after Carson City issue. NGC ID# 24L8, PCGS# 6344

**1873-CC Arrows Half Dollar, XF45
Pale Gold and Lavender Obverse Toning**

4425 1873-CC Arrows XF45 PCGS. WB-103, Die Pair WB-6, R.4. Large CC. Pale gold and lavender toning, primarily on the obverse, add to the eye appeal of this Choice XF example. The coin exhibits a sharp strike, with the high points revealing wear. As expected at this grade level, scattered marks are present, though none pose a significant distraction on this pleasing piece. Population: 23 in 45, 56 finer (3/14). *Ex: Long Beach Signature (Heritage, 9/2005), lot 3243, which realized \$3,450.* NGC ID# 24L8, PCGS# 6344

**1874-CC Arrows Seated Half, XF40
Important Low-Mintage Issue**

4426 1874-CC Arrows XF40 NGC. WB-101, Die Pair 3, R.4. An important low-mintage issue with a low survival rate among the 59,000 pieces produced. This example shows smoky medium-gray toning and darker charcoal-gray color near the borders on the obverse. On the reverse, mottled olive-gray patina clings to some of the devices, concealing the die line through S in STATES and the cowlick above the eagle's head. Well-struck and free of any large or distracting marks. NGC ID# 24LB, PCGS# 6347

**1874-CC Seated Half Dollar, AU53
WB-101, Die Pair 1, Low R.6.**

4427 1874-CC Arrows AU53 PCGS. WB-101, Die Pair 1, Low R.6. This die marriage shows the date left, with the left edge of the base of 1 in the date above the right side of the dentil below. There is no cowlick on the top of the eagle's head, on the reverse. The 1874-CC is a low-mintage issue of 59,000 pieces with a low rate of survivorship, and is scarce at every level of preservation. This is a well-struck coin showing modest wear on the high points and a few minor marks. There are some wispy hairlines noted in the fields, and each side displays some splotches of brownish-gray color. Population: 2 in 53, 28 finer (3/14). NGC ID# 24LB, PCGS# 6347

**1875-S Seated Half, MS65
Pale Iridescent Rim Toning**

- 4428 1875-S MS65 PCGS. CAC.** Silver-gray and pearl-gray compete for territory on this delightfully frosty Gem 1875-S Seated half, one of the nicest survivors from the mintage of 3.2 million coins. The sharp strike adds to the appeal, and wispy die cracks and pale iridescence appear near the rims on each side. A top-notch example. Population: 56 in 65 (1 in 65+), 17 finer (3/14). NGC ID# 24KE, PCGS# 6351

- 4429 1876-CC — Cleaned — ANACS. Fine 12 Details.** The high points are glossy silver with the fields deep blackish-purple with slight accents of deep blue and iridescence on the reverse rims. NGC ID# 24KH, PCGS# 6353

**1876-CC Half Dollar, MS64+
Repunched Medium CC Mintmark**

- 4430 1876-CC MS64+ PCGS. CAC. WB-102, Die Pair 15.** The Medium CC mintmark is clearly repunched. Booming luster and a bold strike combine with smooth surfaces to confirm exemplary eye appeal. A desirable Carson City type coin from the halcyon days of the legendary Western facility. Population: 17 in 64 (1 in 64+), 18 finer (3/14). NGC ID# 24KH, PCGS# 6353

- 4431 1876-S MS64 NGC.** A boldly struck, untuned piece with a lovely satiny sheen over well-preserved surfaces. A couple of wispy nicks, near Liberty's right (facing) elbow and hand, seem minor for the grade. Census: 28 in 64, 13 finer (3/14). NGC ID# 24KJ, PCGS# 6354

- 4432 1877-CC MS62 NGC.** A highly lustrous Carson City half dollar. The details are razor-sharp, with the stars and the eagle's talons fully defined. The luster is mainly brilliant, with a light golden tint around the peripheries. Scattered abrasions contribute to the grade, but they are minor.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24KL, PCGS# 6356

**1877-CC Seated Half Dollar, MS63
Remarkably Preserved, In an Old Green Holder**

- 4433 1877-CC MS63 PCGS. CAC. WB-102, Die Pair WB-4, R.4.** A pleasing satiny sheen embraces the pearl-gray surfaces of this sharply struck example. The surfaces are well-preserved and remarkably free of even the smallest distraction. This piece shows dramatic doubling on all four letters in HALF, with die clashing also apparent on both sides. Housed in a green label holder. NGC ID# 24KL, PCGS# 6356

- 4434 1878-CC — Rim Filed, Scratched, Cleaned — ANACS. XF Details. WB-1, R.4.** With a low mintage of only 62,000 coins, the 1878-CC is among the rarer half dollars from this mint. This piece exhibits bright, silver-white surfaces, with faint golden accents on both sides. ANACS notes light rim filing from 3 to 5 o'clock, though it is not readily noticeable, and a long circular scratch is well-hidden at the base of UNITED STATES OF AMERICA. A still-pleasing example, with a razor-sharp strike and virtually complete details overall. NGC ID# 24KP, PCGS# 6359

**1879 Half Dollar, MS66
Low Mintage of 4,800 Coins**

- 4435 1879 MS66 PCGS. CAC. Type Two Reverse.** An example of the more common reverse, this Premium Gem displays areas of toning, more prominently on the reverse. The hues include orange, golden-brown, and russet. Lustrous surfaces and a sharp strike add to the appeal. A few tiny scattered marks are present, primarily on the obverse. Population: 50 in 66 (2 in 66+), 17 finer (3/14). NGC ID# 24KS, PCGS# 6361

1887 Half Dollar, Toned and Sharply Struck MS66

- 4436 1887 MS66 PCGS.** Despite the low mintage of 5,000 business strikes the 1887 half dollar is available for a price. A number were saved at or near the time of issue by collectors because of the anticipation of continued low mintages that took place through most of the 1880s. Medium-intensity electric-blue, violet, and lavender toning cascades over the lustrous surfaces of this lovely Premium Gem. The design elements are sharply struck save for the usually seen softness in the hair atop Liberty's head and the adjacent stars. Both sides have been well cared for. Population: 11 in 66, 5 finer (3/14). NGC ID# 24L2, PCGS# 6369

**1888 Half Dollar, MS67+
Among the Finest Certified
Beautiful Toning**

4437 1888 MS67+ NGC. WB-101. With vast amounts of silver bullion funneled into silver dollar production under the terms of the Bland-Allison Act of 1878, half dollar mintages dwindled during the period from 1879 to 1890. The 1888 half dollar's production totaled just 12,000 pieces, making the issue highly sought-after in high grades.

This Superb Gem representative stands as one of the finest certified, and is the only Plus-graded MS67 example at NGC or PCGS (3/14). Vivid blue, violet, turquoise, and champagne hues blanket each side, with vibrant underlying mint luster. The frosty surfaces are nearly undisturbed and deliver exceptional visual appeal when turned in-hand. A rare opportunity for the advanced Seated Liberty specialist. NGC ID# 24L3, PCGS# 6370

**1891 Seated Liberty Half, MS66
Mirrored Fields**

4438 1891 MS66 PCGS. CAC. Although not designated as such, this Premium Gem example from the last issue of Liberty Seated half dollars exhibits prooflike surfaces due to strongly mirrored fields. Faint toning is present in hues of tan and gray. The strike is sharp overall, with minor incompleteness at the upper obverse and the lower portion of the eagle. Population: 12 in 66 (3 in 66+), 2 finer (3/14). NGC ID# 24L6, PCGS# 6373

PROOF SEATED HALF DOLLARS

1859 Half Dollar, Toned PR65

4439 1859 PR65 NGC. Many of the proof half dollars of 1859 were melted as unsold. Gunmetal-blue, golden-orange, and lavender patination at the obverse periphery frames the mostly lavender center, while the reverse displays a medley of this color palette throughout. The design elements are fully struck and both sides are devoid of mentionable marks. These attributes add up to giving this coin very pleasing eye appeal. Census: 20 in 65, 9 finer (3/14). NGC ID# 27TJ, PCGS# 6413

**1860 Half Dollar, Toned and Fully Struck PR65
One-Half of the Original Mintage Probably Melted**

4440 1860 PR65 NGC. The 1993 Wiley and Bugert reference and the 2014 *Guide Book* list 1,000 proof half dollars struck in 1860, but Breen (1988) writes that 475 of the original 1,000 were melted. At any rate, NGC and PCGS have certified 302 specimens. Central silver areas are surrounded by charcoal-gray and brown patina on this fully struck Gem. The surfaces show only minimal marks consistent with the grade. Census: 14 in 65, 27 finer (3/14). NGC ID# 27TK, PCGS# 6414

4441 1861 PR63 NGC. Intermingled blue, violet, and olive-gold melt into deeply mirrored fields, providing this piece with a beautiful visual display when tilted under a light. Glossy gunmetal overtone nearly erases the few wispy hairlines that define the grade. A beautiful Civil War-era proof with a needle-sharp strike. Census: 24 in 63, 49 finer (3/14). NGC ID# 27TL, PCGS# 6415

4442 1861 PR65 PCGS. A high-quality representative from the proof No Motto Seated half series, this richly toned example is layered in lavender and aquamarine hues. Direct angles reveal pleasing golden-blue undertones, with no outwardly distracting hairlines or contact marks discernable. Crisply impressed throughout with a few swirls of deeper color in the upper left reverse field. Population: 13 in 65 (1 in 65+), 2 finer (2/14).
Ex: Long Beach Signature (Heritage, 2/2003), lot 7835. NGC ID# 27TL, PCGS# 6415

**1861 Seated Half, PR65
Low-Survival Issue**

4443 1861 PR65 PCGS. CAC. Reflectivity emerges beneath the colorful toning on this Gem example. The shades include pale yellow, sea-green, red-pink, electric blue, and copper. The strike is sharp, adding to the appeal. The obverse reveals light hairlines. Although the 1861 proof mintage was 1,000 pieces, a large percentage of the coins were melted after remaining unsold at year's end. There are few certified examples at the upper grade levels. Population: 13 in 65 (1 in 65+), 2 finer (3/14). NGC ID# 27TL, PCGS# 6415

**1862 Seated Half, PR64 Cameo
Intricately Detailed**

4444 1862 PR64 Cameo PCGS. Cameo contrast adds to the appeal of this near-Gem representative struck during the Civil War. The strike is intricate, adding to the attractiveness. The obverse reveals a number of tiny as-made strike-throughs, including a lint mark to the left of the cap. Areas of faint toning are present along with a couple of toning spots. Population: 13 in 64 Cameo, 6 finer (3/14). PCGS# 86416

**1867 Seated Half, PR65 Cameo
Splendid Color and Contrast**

4445 1867 PR65 Cameo PCGS. A needle-sharp full strike is only one of many attractions on this well-contrasted Gem proof With Motto 1867 Seated half. The reverse shows rich fire-red and orange-gold with a contrasting silvery central device. The obverse shows similar color accented with a thin rim of electric-blue and violet. A top-notch example from this issue of 625 proof coins. Population: 9 in 65 Cameo, 6 finer (2/14). PCGS# 86425

**1872 Seated Half Dollar, PR66 Deep Cameo
Finest PCGS-Graded Example**

4446 1872 PR66 Deep Cameo PCGS. Of the 950 proof 1872 Seated halves struck, this example is the sole piece with the Deep Cameo designation at the Premium Gem level at PCGS, with none finer (3/14). The coin exhibits exceptional contrast, a sharp strike, and areas of light golden toning. An as-made strike-through appears on Liberty's chest, but is not distracting. PCGS# 96430

1874 Arrows Half Dollar, Appealing PR64 Cameo

4447 1874 Arrows PR64 Cameo PCGS. CAC. Moderate field-motif contrast shows through the layer of electric-blue, violet, and lavender toning, and the strike is strong throughout. This nicely preserved near-Gem yields great eye appeal, identified by the CAC designation. Population: 23 in 64 (1 in 64+) Cameo, 5 finer (3/14). PCGS# 86435

1876 Seated Liberty Half, PR65 Cameo
Mirrorlike Fields, Bold Contrast

- 4448 1876 PR65 Cameo NGC.** Type One Reverse. Essentially brilliant at the centers with rose-gold margins and hints of forest-green near the rims. Radiant devices contrast with the darkly mirrorlike fields. A sharp strike despite minor incompleteness on the eagle's left (facing) claw. Census: 13 in 65 Cameo, 8 finer (3/14).
Ex: Long Beach Signature (Heritage, 9/2010), lot 4163, which realized \$3,220. PCGS# 86437

1880 Seated Half, PR65
Sharply Struck With Great Eye Appeal

- 4449 1880 PR65 PCGS.** The 1880 Seated half issue saw 1,355 proof coins complementing 8,400 circulation strikes; the latter were likely made only to keep the proof coins from being any rarer. This Gem PCGS-certified proof boasts stunning eye appeal, the mirrored surfaces showing perceptible contrast, largely untuned but with light gold accents. A sharply struck proof with great eye appeal. Population: 30 in 65, 20 finer (3/14).
From The Northern Lights Collection. NGC ID# 27UF, PCGS# 6441

- 4450 1881 PR63 NGC.** From an era of low half dollar production. Splashes of pale amber-rose highlight light golden overall patina on this sharply struck proof. Ample mirroring in the fields sets off the devices with a pleasing degree of eye appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 27UG, PCGS# 6442

- 4451 1882 PR62 Cameo NGC. CAC.** Lightly frosted devices and mildly prooflike fields provide pleasing field-to-device contrast on both sides of this nicely preserved specimen. A faint toning streak extends from the lower reverse rim at 6 o'clock to the lower edge of the eagle's left (facing) wing. All design elements are sharply rendered, and only a few wispy hairlines in the obverse fields deny a finer grade designation. PCGS# 86443

1882 Half Dollar, PR67 Cameo
Impeccably Preserved Example

- 4452 1882 PR67 Cameo PCGS.** This 1882 Seated half dollar proof in PR67 Cameo is tied for the numerically finest certified PCGS example, regardless of contrast level. The deeply contrasted surfaces are untuned in the interiors and show just a whisper of pink-champagne patina around the rims on each side. A loupe reveals only the most insignificant signs of contact. The strike is full, save for a shade of softness at the top of the head. A great-looking example of the proof emission of 1,100 pieces, and tied for the finest Cameo at PCGS. Population: 3 in 67 Cameo, 0 finer (3/14). PCGS# 86443

1884 Half Dollar, PR66 Cameo
Only One Finer at PCGS

- 4453 1884 PR66 Cameo PCGS.** A splendid specimen, this sharply struck Premium Gem Cameo exhibits virtually untuned surfaces and readily evident Cameo contrast. The mirrored fields are flashy. A few light hairlines are present, but are not distracting. Population: 9 in 66 (1 in 66+) Cameo, 1 finer (3/14). PCGS# 86445

**1887 Half Dollar, PR66
Iridescent Original Toning**

- 4454 1887 PR66 PCGS.** Iridescent orange, plum-red, and emerald-green patina dominates this nicely struck Premium Gem. All of the subsidiary silver denominations experienced limited mintages during the 1880s as the mints concentrated on the production of Morgan dollars. In 1887, only 5,000 business strikes were produced, one of the lowest mintages of the decade. As a result, considerable demand has been placed on surviving high grade proofs. Only 710 such coins were originally minted in 1887. Housed in an old green label holder.
Ex: New York Signature (Heritage, 6/2005), lot 5743, which realized \$3,881.25. NGC ID# 27UN, PCGS# 6448

- 4455 1890 PR61 Cameo NGC.** Moderately frosted devices stand out from deeply mirrored fields, delivering substantial cameo contrast. The surfaces reveal some faint, grade-defining hairlines in the fields, but the overall eye appeal remains significant. A blush of light golden toning warms both sides. Census: 1 in 61 Cameo, 42 finer (3/14). PCGS# 86451

BARBER HALF DOLLARS

- 4456 1892 MS63 PCGS.** This attractive example was produced in the first year of the Barber half dollar series. It is sharply struck and lustrous, with light coppery toning and clean surfaces that are nearly mark-free. NGC ID# 24LF, PCGS# 6461

- 4457 1892 MS63 NGC.** A rich satiny sheen enlivens the untuned silver-gray surfaces of this sharply struck example. Faint lines on Liberty's cheek and neck limit the grade. NGC ID# 24LF, PCGS# 6461

**1892 Barber Half Dollar, MS66
Popular First-Year Type Coin**

- 4458 1892 MS66 PCGS. CAC.** As a first-year issue, 1892 halves are always of interest to type collectors. This is certainly a handsome piece with deep multicolored patina, gorgeous satiny luster, and a bold strike. A couple of tiny contact marks are all but obscured by the toning on the obverse. A notable coin for the connoisseur of originality, and a solid premium quality Gem in all respects. Population: 41 in 66 (3 in 66+), 12 finer (3/14).
Ex: (Bowers and Merena, 6/2002), lot 1088; Baltimore Signature (Heritage, 7/2003), lot 7706. NGC ID# 24LF, PCGS# 6461

- 4459 1893 MS64 NGC.** Lustrous and essentially brilliant. The surfaces are virtually free of detracting faults, though a few strike-throughs are noted on the cheek, nose tip, and reverse field. A sharply struck near-Gem. Census: 27 in 64 (1 in 64+), 16 finer (3/14). NGC ID# 24LK, PCGS# 6465

- 4460 1893-S XF45 PCGS. CAC.** The 1893-S is one of the S-mint keys to the first decade of Barber half coinage, along with the 1892-S, 1896-S, and 1897-S. This Choice XF example with CAC approval boasts superior eye appeal on surfaces that show moderate high-point wear yet still retain evidence of the original sharp strike. NGC ID# 24LM, PCGS# 6467

- 4461 1893-S AU58 PCGS.** A trace of high-point wear prevents a full Mint State grade assessment to this impressive Barber half dollar. Both sides are brilliant with faintly reflective fields and bold details. Population: 18 in 58, 52 finer (3/14). NGC ID# 24LM, PCGS# 6467

- 4462 1894 MS63 PCGS.** A boldly struck, lustrous example with a few wispy marks detected near the center of the obverse. A high-end Select Mint State coin with excellent eye appeal. NGC ID# 24LN, PCGS# 6468

- 4463 1894 MS64 PCGS. CAC.** Lustrous and carefully preserved, this early date example shows pleasing original toning, mainly in shades of olive-brown and amber, except over the silver-gray centers. Boldly struck and free of distracting marks, this is an attractive and conditionally scarce near-Gem half dollar. Population: 29 in 64 (1 in 64+), 35 finer (3/14). NGC ID# 24LN, PCGS# 6468

- 4464 1894-S MS63 PCGS.** A few faint lines appear on the cheek of this Select Mint State piece, with frosty silver luster and exceptional eye appeal. The strike is slightly weak at the junction of the right shield border and the wing. Hints of peripheral gold toning add to the eye appeal of this important half dollar. Population: 25 in 63, 53 finer (3/14). NGC ID# 24LR, PCGS# 6470

**1895-S Barber Half, MS65
Well-Preserved Brilliant Surfaces**

- 4465 1895-S MS65 NGC.** The 1895-S Barber half dollar claims a mintage of 1.1 million pieces. Unfortunately, the issue was overlooked by contemporary collectors and few examples were saved for future generations. This attractive Gem exhibits sharply detailed design elements and brilliant lustrous surfaces with no mentionable distractions. Census: 12 in 65 (1 in 65+), 6 finer (3/14). NGC ID# 24LU, PCGS# 6473

- 4466 1896-O AU53 PCGS.** Light silver-gray surfaces retain considerable luster on this pleasing and important half dollar. Wisps of cinnamon toning are hidden in certain of the design elements. NGC ID# 24LW, PCGS# 6475

1897 Half Dollar, Lustrous MS65

4467 1897 MS65 NGC. CAC. The 1897 half dollar can be located through near-Gem, but MS65s are more difficult to acquire, and finer pieces are very rare. The lustrous, lightly toned surfaces of this MS65 offering exhibit well-struck design elements, except for the typically seen softness in the upper-right shield corner. Census: 22 in 65, 7 finer (3/14). NGC ID# 24LY, PCGS# 6477

4468 1898-S MS61 NGC. Scarcely encountered finer. Lightly frosted mint luster shines through pale olive-golden patina on both sides of this sharply struck representative. The surfaces are largely free of noticeable abrasions, delivering a pleasing degree of eye appeal. Census: 8 in 61, 27 finer (3/14). NGC ID# 24M5, PCGS# 6482

**1898-S Barber Half, MS64
Impressive High-Grade Example**

4469 1898-S MS64 PCGS. CAC. The 1898-S is a scarcer issue than its relatively high mintage of 2.3 million coins would suggest. This is a pleasing example with sharp strike definition and smoky silver-gray toning over the obverse, complemented by slight gold-tan and olive peripheral accents. The reverse displays slightly deeper golden-gray coloration. Both sides are lustrous and well-preserved. Housed in a first-generation PCGS holder with a green label. Population: 11 in 64, 13 finer (3/14). NGC ID# 24M5, PCGS# 6482

**1898-S Half, MS65
Conditionally Scarce**

4470 1898-S MS65 PCGS. Both sides of this lustrous Gem display toning, with shades of teal, olive-green, and merlot present on the obverse. The reverse exhibits golden hues overall, with areas of plum and teal at the extreme outer edges. Wispy die cracks are present at the upper portions of both sides. Minor marks appear on the portrait, including vertical roller marks. Population: 7 in 65, 6 finer (3/14). NGC ID# 24M5, PCGS# 6482

**1902 Barber Half, MS65
Lustrous and Well-Preserved**

4471 1902 MS65 PCGS. CAC. Few of the 4.9 million examples of this Barber half dollar issue were saved from circulation, and survivors are few in Gem condition. The untuned surfaces are highly lustrous and reveal sharply struck design motifs. Both sides of the coin are clean and free of distractions. Population: 16 in 65, 6 finer (3/14). NGC ID# 24MF, PCGS# 6492

4472 1903-S AU58 PCGS. Silver-white color complements frosty surfaces that show just a hint of high-point rub and scattered minor marks consistent with the grade. Well-struck save for the right side of the eagle on the reverse. NGC ID# 24ML, PCGS# 6497

**1905 Barber Half, MS64
Elusive Low-Mintage Issue**

4473 1905 MS64 PCGS. An impressive Choice Barber half dollar with sharply detailed design elements and well-preserved lustrous surfaces. Dappled shades of golden-brown, dark gray, and silver-white patina cover the surfaces of both sides. From a small mintage of 662,000 pieces. Population: 32 in 64 (1 in 64+), 23 finer (3/14). NGC ID# 24MR, PCGS# 6501

4474 1905-O MS62 PCGS. CAC. This lower-mintage issue of 505,000 pieces is difficult to locate in high grades; especially in Uncirculated condition. This intensely lustrous example displays variegated layers of green, red, and gold toning on both sides. Surface marks are minimal for the grade. Housed in a first-generation PCGS holder. Population: 14 in 62, 91 finer (3/14). NGC ID# 24MS, PCGS# 6502

1905-O Half Dollar, MS66
Lustrous and Appealing, Few Finer

4475 1905-O MS66 PCGS. The 1905 Barber half dollar production in New Orleans consisted of 505,000 pieces. High-grade examples are seldom encountered. This Premium Gem is tied with five others at this grade level at PCGS, with one an MS66+, with only four finer (3/14). Strong satin luster provides this piece with a lovely appearance. Scattered toning covers large portions of the obverse, while the reverse exhibits minimal toning. The hues include teal, rich gold, and plum. NGC ID# 24MS, PCGS# 6502

1906-O Barber Half, MS66
High Luster, Nice Toning

4476 1906-O MS66 PCGS. As often seen on this New Orleans date, the eagle is a tiny bit soft on the right wing shoulder and legs, although the strike is otherwise sharp. Strong underlying luster enhances the attractive, golden-rose and blue toning on the obverse, paired with rich, amber-gold toning across the smoothly reflective reverse. There are no distracting marks or imperfections. Extremely attractive with great eye appeal. Population: 6 in 66, 3 finer (3/14). NGC ID# 24MW, PCGS# 6506

1906-S Half Dollar, MS65
Satin-Smooth and Sharply Lustrous

4477 1906-S MS65 PCGS. Of the mintmarked 1906 issues, the San Francisco date is the scarcest in Gem Mint State, although only slightly more scarce than the New Orleans issue — to be expected, since the San Francisco mintage is more than 700,000 pieces less. This example displays pearled-silver, satin-smooth surfaces with a uniformly sharp strike. Strong mint luster glows beneath the silver fields and devices, tinged with champagne-gold overtones. Conditionally rare and desirable. Population: 18 in 65 (2 in 65+), 8 finer (3/14). NGC ID# 24MX, PCGS# 6507

1907 Half Dollar, Conditionally Rare MS66

4478 1907 MS66 NGC. This is a beautifully frosted Gem with sharp obverse striking definition; the reverse displays the commonly seen softness in the upper right (facing) corner of the shield and adjacent wing feathers, along with the right (facing) leg and claw. Light contact marks are noted on Liberty's cheek and neck. Occasional whispers of delicate golden iridescence are more or less visible at most angles. A conditionally rare representative of this otherwise easily obtainable P-mint issue. Census: 3 in 66, 0 finer (3/14). *Santa Clara Signature* (Heritage, 11/2001), lot 5957; *Atlanta (ANA) Signature* (Heritage, 4/2006), lot 738. NGC ID# 24MY, PCGS# 6508

4479 1908-D MS65 PCGS. An attractive Gem example with satiny surfaces that are well-preserved and distraction-free. Mottled olive patina decorates the peripheries and clings to some of the central devices. Population: 26 in 65 (1 in 65+), 12 finer (3/14). NGC ID# 24N5, PCGS# 6513

1908-O Barber Half Dollar, MS66
Vivid Toning and Vibrant Luster

4480 1908-O MS66 NGC. The well-preserved surfaces of this attractive Premium Gem are patinated in shades of gray, golden-brown, and cerulean-blue, creating a dazzling play of colors. The design elements are well-detailed and the surfaces radiate satiny mint luster. Census: 7 in 66, 8 finer (3/14). NGC ID# 24N6, PCGS# 6514

4481 1909 MS64 PCGS. Lustrous and essentially untoned, this is an attractive near-Gem from this conditionally scarce issue. A couple of stray marks are noted in the obverse fields, but the reverse is blemish-free. NGC ID# 24N8, PCGS# 6516

4482 1909-O MS62 PCGS. Rich gold and iridescent toning appears over satiny silver luster on both sides of this Mint State Barber half dollar. Struck during the final year of New Orleans Mint operations. NGC ID# 24N9, PCGS# 6517

1910-S Half Dollar, MS66
Only Six Finer at NGC and PCGS Combined

4483 1910-S MS66 NGC. Luster emerges beneath the patina on this Premium Gem example. The toning includes shades of muted teal and gold. The strike is sharp overall, with minor incompleteness present at the lower portion of the eagle. Aside from a couple of minor marks at Liberty's lower jaw, the surfaces are virtually free of any signs of contact. Census: 6 in 66, 2 finer (3/14). NGC ID# 24NC, PCGS# 6520

4484 1911 MS64 NGC. Light almond-gold patina adorns this lustrous and sharply struck Barber type coin. Devoid of consequential contact. Ex: *Long Beach Signature* (Heritage, 2/2005), lot 7166; *St. Louis (Scotsman, 10/2007)*, lot 632. NGC ID# 24ND, PCGS# 6521

4485 1911 MS64+ PCGS. The obverse of this sharply struck near-Gem half dollar has dusky gold and iridescent toning, with traces of peripheral champagne toning on the ivory reverse. An important opportunity for the advanced collector to acquire this scarce P-Mint issue. NGC ID# 24ND, PCGS# 6521

4486 1911-S MS62 PCGS. CAC. An attractive coin with light golden-silver toning and well-struck design elements. A slight degree of speckled russet and olive patina is seen on the obverse. Both sides are abrasion-free. Housed in a green label PCGS holder. Population: 7 in 62, 51 finer (3/14). NGC ID# 24NF, PCGS# 6523

4487 1912 MS63 NGC. Hints of chestnut color grace this lustrous and firmly struck Select Barber half. The reverse is splendidly preserved, while the portrait and obverse field possess only faint luster grazes. Ex: *Palm Beach, Florida Bullet Sale* (Heritage, 3/2005), lot 593. NGC ID# 24NG, PCGS# 6524

4488 1912-D MS64 PCGS. CAC. Golden-brown, cream-gray, and russet colors enliven this lustrous and attractively preserved near-Gem. The strike is bold, if not absolutely complete on the upper right shield corner. Ex: *FUN Signature* (Heritage, 1/2006), lot 2833; *Central States Signature* (Heritage, 4/2007), lot 966. NGC ID# 24NH, PCGS# 6525

1912-D Barber Half Dollar, MS65
Ideal Mintmark Type Coin

4489 1912-D MS65 PCGS. This attractive Gem exhibits well-detailed design elements, with just a touch of softness at the juncture of the shield and eagle's wing. The well-preserved surfaces show no mentionable distractions, with satiny mint luster shining through shades of pale gold and lavender-gray toning. Population: 58 in 65, 16 finer (3/14). NGC ID# 24NH, PCGS# 6525

4490 1913 MS61 NGC. A well-detailed example with mildly prooflike fields and slight golden peripheral toning noted on both sides. A few wispy slide marks across Liberty's face and neck restrict the grade of this overall pleasing Mint State example. Census: 5 in 61, 45 finer (3/14). NGC ID# 24NK, PCGS# 6527

4491 1913-D MS61 NGC. Despite a low mintage of 534,000 coins, the 1913-D half dollar does not become truly rare until the Gem level, though the population of Mint State pieces is still far less than those of higher-mintage issues. This well-struck example exhibits light golden luster overall, with russet accents in the obverse crevices. No outwardly detracting abrasions are seen on the surfaces. NGC ID# 24NL, PCGS# 6528

4492 1914 AU55 PCGS. CAC. A popular semikey issue, the 1914 half dollar is usually available in the lower circulated grades, but becomes increasingly scarce in finer conditions. This Choice About Uncirculated example displays a sharp strike and substantial mint luster, with a faint tint of light golden toning. Just a brush of wear is present on the highest points. NGC ID# 24NN, PCGS# 6530

1914-S Barber Half, MS66
Tied for Finest Certified

4493 1914-S MS66 PCGS. Although overshadowed by the low-mintage Philadelphia issue of the year, the 1914-S Barber half is rare in its own right when found in the glittering Premium Gem condition of this lustrous, reflective coin. Destined for the finest half dollar or Registry Set collection, this example displays amazing luster from its virtually untuned, stunning silver surfaces. The slightest amount of almond-gold accents the fully struck motifs, but for all purposes this coin is brilliant silver-white and pristine. A single tiny field mark near star 9 will pedigree this coin, and a small mark on the eagle's tail are the only mentionable abrasions of any kind. Population: 8 in 66, 0 finer (3/14). NGC ID# 24NP, PCGS# 6531

4494 1915-D MS64 PCGS. Elusive any finer. This near-Gem Barber half dollar exhibits heavy amber and russet toning, primarily on the obverse. The surfaces are free of any noticeable faults, with mint luster showing through the patina. A sharply struck example of the final date in the series. NGC ID# 24NS, PCGS# 6533

4495 1915-D MS64 PCGS. This popular final-year issue is scarce any finer than MS64. This example is well-struck with pleasing satiny luster and an untuned, mark-free obverse. The reverse is likewise distraction-free and shows attractive light toning near the lower peripheries. NGC ID# 24NS, PCGS# 6533

4496 1915-S MS63 PCGS. A carefully preserved piece showing speckled olive toning over champagne-gray and silver surfaces. Sharply struck with bold luster and unmarked, distraction-free surfaces. NGC ID# 24NT, PCGS# 6534

PROOF BARBER HALF DOLLARS

1892 Barber Half, PR67 Cameo First Year of Design

4497 1892 PR67 Cameo NGC. This delightful Superb Gem exhibits sharply detailed design elements throughout. The devices have a frosty texture that contrasts boldly with the deeply reflective fields, creating an intense cameo effect. A few hints of pale gold toning add to the terrific eye appeal. From a first-year mintage of 1,245 pieces. Census: 23 in 67 Cameo (2 in 67 ★ Cameo), 3 finer (3/14). PCGS# 86539

1893 Half Dollar, Attractively Toned PR67

4498 1893 PR67 NGC. The Barber half dollar saw 792 proofs struck in 1893. The population data indicate that surviving specimens are mostly in the PR62 to PR65 range. An attractive melange of cobalt-blue, orange-gold, violet, lavender, and yellow-gold toning adorns this Superb Gem. With the exception of the typically seen softness in the upper-right shield corner the design features are sharply struck. The surfaces of this coin have been very well cared for. Census: 19 in 67, 3 finer (3/14). NGC ID# 24NV, PCGS# 6540

4499 1893 PR64 Cameo NGC. The devices are frosty, despite the original and attractive ocean-blue and lilac toning. The strike is crisp, with incompleteness only apparent on the right shield tip. Census: 28 in 64 Cameo (1 in 64+ Cameo), 44 finer (3/14). Ex: St. Louis Central States Signature (Heritage, 5/2004), lot 863. PCGS# 86540

1896 Half Dollar, PR67 Mild Field-Motif Contrast

4500 1896 PR67 PCGS. CAC. Proof half dollars of 1896 possess added desirability from the relatively small mintage of fewer than 1 million circulation strikes that are scarce in all grades. Soft cobalt-blue and reddish-violet toning is slightly deeper and more extensive on the obverse of this Superb Gem. Frosty devices are highlighted by the fields, more so on the reverse. NGC ID# 24NY, PCGS# 6543

4501 1898 PR62 Cameo PCGS Secure. Delicate gold and iridescent toning diverts the eye from the faint grade-limiting hairlines of this impressive Cameo proof. Both sides exhibit bold design motifs. PCGS# 86545

1903 Half Dollar, PR67 Exemplary Preservation

4502 1903 PR67 PCGS. Ex: Larry Shapiro. Fiery bands of orange-crimson appear on each side of the obverse, separated by a bluish-green midsection, an unusual but engaging toning pattern. The reverse shows bands of iridescence on the left side complementing a large untuned area on the right. The preservation is exemplary. Population: 4 in 67, 4 finer (3/14). NGC ID# 24P7, PCGS# 6550

1905 Barber Half Dollar, PR66 Vivid Multicolor Toning

4503 1905 PR66 PCGS. Spectacular shades of golden-brown and violet toning blanket the well-preserved surfaces of this delightful Premium Gem. Razor-sharp definition is evident on all design elements and deeply reflective fields shine beneath the patina. Only 727 proof Barber half dollars were struck in 1905. Population: 24 in 66 (1 in 66+), 14 finer (3/14). NGC ID# 24P9, PCGS# 6552

4504 1907 PR64 PCGS. This near-Gem proof exhibits splashes of lavender, champagne, and royal-blue toning over most of both sides, with undisturbed, heavy mirroring in the fields. The surfaces are free of any detracting marks and showcase boldly struck design elements. NGC ID# 24PB, PCGS# 6554

1907 Half Dollar, Patinated PR67

4505 1907 PR67 PCGS. CAC. Ex: E.H.R. Green/Newman. The 1907 shows one of the smaller mintage of the Barber half dollar proof series (575 pieces). Nevertheless, PCGS and NGC have graded more than 400 examples, a goodly number in the Select through Gem range. A medley of reddish-gold, bluish-gray, olive, reddish-tan, and powder-blue graces both sides of this PR67, each of which exhibits sharply struck design elements except for the usually seen softness on the upper-right shield corner. Impeccably preserved surfaces enhance even more the coin's pleasing eye appeal. Population: 7 in 67 (1 in 67+), 1 finer (3/14). NGC ID# 24PB, PCGS# 6554

**1910 Barber Half Dollar, PR65
Deeply Mirrored Fields**

4506 1910 PR65 PCGS. As business strike 1910 Barber half dollars are elusive in high grades, many date collectors choose the proof variant instead. The obverse of this Gem proof displays amber-gold and blue toning with splashes of silver-white still visible, while the reverse exhibits vibrant lemon-yellow and iridescent patina. A sharply struck, well-preserved example. Population: 14 in 65, 24 finer (3/14). NGC ID# 24PE, PCGS# 6557

**1911 Barber Half Dollar, PR67+
Outstanding Eye Appeal**

4507 1911 PR67+ NGC. From a minuscule proof mintage of 543 pieces, this high-end Superb Gem displays sharply detailed design elements and deeply mirrored fields, under spectacular shades of violet, blue, and champagne-gold toning. Eye appeal is terrific. Census: 11 in 67 (1 in 67+, 1 in 67 ★), 8 finer (3/14). NGC ID# 24PF, PCGS# 6558

4508 1912 PR64 PCGS. The proof strike is close to full on both sides, with the sole exception of the pesky upper-right shield corner on the reverse, more a flaw in the design than of the strike. Untoned silver-white surfaces show minor flecks under a loupe. Population: 65 in 64, 40 finer (3/14).

From The Northern Lights Collection. NGC ID# 24PG, PCGS# 6559

**1913 Barber Half Dollar, PR66
Only 613 Pieces Struck**

4509 1913 PR66 PCGS. Only 613 proof Barber half dollars were struck in 1913, and the Philadelphia Mint produced a small business-strike mintage as well. This coin is a spectacular Premium Gem, with sharply detailed design elements and deeply reflective fields under shades of greenish-gold and cerulean-blue toning. Population: 16 in 66 (1 in 66+), 14 finer (3/14). NGC ID# 24PH, PCGS# 6560

4510 1914 PR62 PCGS. A fully struck proof from a tiny mintage of 380 coins. The fields display pleasing if mild reflectivity. A patch of horizontal lines on Liberty's cheek appear to be as struck. NGC ID# 24PJ, PCGS# 6561

**1914 Barber Half Dollar, PR65
Lightly Toned Gem**

4511 1914 PR65 NGC. Highly sought-after as a business strike, the 1914 Barber half dollar also boasts the lowest proof mintage of the entire series (only 380 coins). This beautifully preserved Gem example delivers excellent visual appeal with deeply mirrored fields and fully struck design elements. Lightly toned, with amber-rose peripheries around light golden centers. NGC ID# 24PJ, PCGS# 6561

**1915 Barber Half Dollar, PR65
Deep, Iridescent Toning**

- 4512** 1915 PR65 NGC. With only 450 proof half dollars produced in 1915, few survive in Gem condition. This moderately mirrored example displays blended hues of blue, amber, and aquamarine beneath muted lavender-gray patina overall. The strike is razor-sharp, while any grade-defining hairlines are well-concealed under the toning. A pleasing example of this final-year proof. Census: 25 in 65, 42 finer (3/14). NGC ID# 24PK, PCGS# 6562

EARLY DOLLARS

**1795 Flowing Hair Dollar, VG10
Three Leaves, B-5, BB-27**

- 4513** 1795 Flowing Hair, Three Leaves VG10 PCGS. B-5, BB-27, R.1. Bowers Die State IV with a faint clashmark near Liberty's chin. Specialists look for the narrow die line behind the highest neck curl to identify Bolender-5. The present wheat-gold and cream-gray type representative is lightly abraded overall aside from an obverse rim nick at 11:30 and reverse nicks at 2, 9, 10, and 11 o'clock. Minor adjustment marks, as coined, are noted at the central reverse. Housed in an old green label holder. NGC ID# 24WZ, PCGS# 6852

**1795 Flowing Hair Dollar, XF40
B-5, BB-27, Three Leaves**

- 4514** 1795 Flowing Hair, Three Leaves XF40 NGC. B-5, BB-27, R.1. Bowers Die State III. Rich sea-green and steel-gray toning blankets this nicely defined Flowing Hair type coin. Luster emerges from design recesses. Marks are inconsequential aside from a thin diagonal line behind Liberty's eye and a couple of slight rim nicks. The reverse die is misaligned a few degrees toward 1 o'clock but the legends are complete. NGC ID# 24WZ, PCGS# 6852

**1795 Flowing Hair Dollar, XF40
B-5, BB-27, Three Leaves**

- 4515** 1795 Flowing Hair, Three Leaves XF40 NGC. B-5, BB-27, R.1. Specialists can attribute B-5 at a glance due to the die line or "bar" on the left obverse field behind the upper neck curl. The present example displays noticeable glimpses of luster that peer through the richly blended golden-brown and sea-green toning. Devoid of adjustment marks or other flan imperfections, although close evaluation locates unobtrusive pinscratches near the shoulder curl and chin. NGC ID# 24WZ, PCGS# 6852

**1795 Flowing Hair Dollar, XF Details
Three Leaves, B-5, BB-27
Glimmers of Mint Luster**

- 4516** 1795 Flowing Hair, Three Leaves — Improperly Cleaned — NGC Details. XF. B-5, BB-27, R.1. Caramel-gold and steel-gray alternate across this refreshingly unabraded Flowing Hair type coin. Adjustment marks are absent and the cleaning is mild. Luster outlines design elements such as stars, letters, and leaves. In terms of eye appeal, the present coin is superior to most examples of the variety. NGC ID# 24WZ, PCGS# 6852

**1795 Silver Plug Flowing Hair Dollar
B-1, BB-21, Two Leaves, VG Details**

- 4517** 1795 Flowing Hair, Silver Plug — Improperly Cleaned — NGC Details. VG. B-1, BB-21, R.2. Rarity-2 for the BB-21 variety, but much rarer with the visible Silver Plug at the center. This example is best displayed reverse-up, where the misshapen circle-outline from a silver plug is readily seen, inserted by the Mint prior to striking, most likely as a means to correct an underweight planchet. This well-worn example is bright from a past cleaning. The margins display remnants of cerulean-blue and tan toning on the obverse and pale gold-gray on the reverse. Despite the old cleaning, this is a wonderful opportunity for any collector seeking a silver-plug Flowing Hair dollar.

1795 Flowing Hair Dollar, VF30
Two Leaves, B-1, BB-21

- 4518** 1795 Flowing Hair, Two Leaves VF30 ANACS. B-1, BB-21, R.2. Steel-blue patina bathes this attractively detailed Flowing Hair dollar. The central reverse field is slightly glossy. The rims have an occasional trivial nick, but marks are unimportant for the VF30 level. An enormously popular early silver type.
Ex: Orlando FUN Signature (Heritage, 1/2008), lot 1740, which realized \$5,462.50. NGC ID# 24WZ, PCGS# 6853

1795 Flowing Hair Dollar, XF40
Two Leaves, B-4, BB-14

- 4519** 1795 Flowing Hair, Two Leaves XF40 NGC. B-4, BB-14, R.3. Caramel-gold and ice-blue toning enrich this better variety Flowing Hair dollar. Marks are surprisingly few and inconsequential. The high points display moderate wear, but ample plumage detail is present, and luster peers from the legends, stars, and wreath. A minor edge imperfection, as made, is at 6 o'clock on the obverse and opposite at 12:30 on the reverse. A majority of the type is either B-5 or B-1, yet B-4 can often be acquired at only a modest premium. It is regarded as one of the first silver dollar die varieties coined in 1795, since it exhibits the Head of 1794 subtype, is known with a silver plug, and an example is known struck over a 1794 dollar. NGC ID# 24WZ, PCGS# 6853

1795 Flowing Hair Dollar, Two Leaves, XF45
B-4, BB-14
'Hidden Star' Below Bust

- 4520** 1795 Flowing Hair, Two Leaves XF45 NGC. B-4, BB-14, R.3. Star 15 is closer to the date than on any other variety from this date and type; it is located entirely under the bust, where Liberty cannot "see it;" the only 1795 obverse die with this characteristic. 9 and 5 in the date are lightly repunched. There are 17 berries on the reverse: 9 to the left and eight to the right.
Nicely detailed with deeper shades of olive-gray and charcoal-gray dominating, leaving the high points of the design to show light-gray color. The surfaces are essentially smooth and free of individually noteworthy marks, save for a shallow flaw directly below Liberty's ear. NGC ID# 24WZ, PCGS# 6853

**1795 2 Leaves Flowing Hair Dollar, AU50 Details
B-1, BB-21, R.2**

- 4521** 1795 Flowing Hair, Two Leaves — Mounts Removed, Corroded, Altered Surfaces — ANACS. AU50 Details. B-1, BB-21, R.2. On this variety the innermost point of star 1 just touches the outside of the lowest hair curl. There is a berry located directly below the right serif of the first A in AMERICA. Despite the several impairments noted by ANACS, this is an attractive example of the type, showing creamy olive-beige toning that darkens slightly near the peripheries. The removed mounts have left minimal visible remnants, and faint corrosion is noted primarily in the lower right reverse quadrant. NGC ID# 24WZ, PCGS# 6853

- 4522** 1795 Draped Bust, Centered VG8 ANACS. B-15, BB-52, R.2. Die State III. A pleasing circulation cameo with original gunmetal-gray fields framing lighter gray design elements. Good detail remains on the eagle's wing feathers and the hair curls behind Liberty's shoulder. The rims are full with all legends clear. The surfaces are void of any nicks or scratches, despite the low grade. NGC ID# 24X2, PCGS# 6858

**1795 Draped Bust Dollar, VF30
Off Center Bust, B-14, BB-51**

- 4523** 1795 Draped Bust, Off Center VF30 PCGS. B-14, BB-51, R.2. Rich sea-green, lavender, and tan-gray toning encompasses this midgrade first-year Draped Bust dollar. Traces of luster cling to the letters and stars. A lens reveals faded thin marks, mostly near Liberty's chin and the eagle, and a small reverse rim ding at 5:30. Certified in a green label holder. PCGS# 96858

**1795 Draped Bust Dollar, AU Details
Off Center Bust, B-14, BB-51**

- 4524** 1795 Draped Bust, Off Center — Repaired, Cleaned — NGC Details. AU. B-14, BB-51, R.2. Bowers Die State II. A briefly circulated example of the first Draped Bust die variety. Though the bust device was entered too far left, the obverse legends were nonetheless entered properly. The right obverse field is smoothed, and the surfaces are mildly glossy from a cleaning. Retoned olive-gray aside from arcs of deep powder-blue on the left borders. PCGS# 96858

- 4525** 1796 Large Date, Small Letters — Obverse Graffiti — NCS. VF Details. B-5, BB-65, R.2. Bowers Die State IV, with the reverse die lump at IC merged with both letters, and nearly reaching the border dentils. The graffiti is located in the upper right obverse field of this otherwise pleasing pewter-gray dollar, with peripheral blue toning on the obverse. PCGS# 6861

**1797 10x6 Stars Dollar, Choice VF
Large Letters, B-3, BB-71**

- 4526** 1797 10x6 Stars, Large Letters VF35 NGC. B-3, BB-71, R.2. Bowers Die State III. Butter-gold and ice-blue shades visit otherwise pearl-white surfaces. Traces of luster glint from design elements despite 25 points of wear. No marks merit individual description. Only three 1797 die varieties are known, and each receives a separate Guide Book listing. NGC ID# 24X4, PCGS# 6865

**1797 B-3, BB-71 Silver Dollar, XF40
10x6 Stars, Large Letters**

- 4527** 1797 10x6 Stars, Large Letters XF40 PCGS. B-3, BB-71, R.2. Die State III. A die crack extends from the reverse rim at 1 o'clock across the tops of OF and continues above the M in AMERICA. Clash marks are prominent from the wreath on the field near the profile. None of these die state characteristics are noted in the Bowers Early Dollar Encyclopedia. Dusky chestnut-gold and ice-blue toning drapes this attractively detailed and unblemished example. NGC ID# 24X4, PCGS# 6865

**1798 Small Eagle Silver Dollar, VF30
15 Stars, B-2, BB-81**

- 4528** 1798 Small Eagle, 15 Stars VF30 NGC. B-2, BB-81, R.3. BB-81 is likely the first of the 33 die varieties struck dated 1798. Apparently, an unhardened 15 stars die pair made circa 1796, finished except for the date, was dated, hardened, and put into use. 1797 dollars have 16 stars. The present BB-81 example displays various shades of charcoal-gray toning. The central obverse displays minor adjustment marks, as made, but visible marks are essentially absent. A loupe reveals microgranular surfaces. NGC ID# 24X5, PCGS# 6868

- 4529** 1798 Large Eagle, Pointed 9 VF30 ANACS. B-29, BB-119, R.4. Bowers Die State II. Struck slightly off-center with virtually no rim on the left and unusually wide dentils on the right. Faint teal accents in the fields complement natural pewter-gray patina overall. Substantial detail remains, for the grade, with most of Liberty's hair curls well-defined and good detail in the eagle's feathers. A few minor ticks are noted on the reverse and at the rim, while some typical softness of strike is present in the reverse stars. NGC ID# 24X6, PCGS# 6873

- 4530** 1798 Large Eagle, Pointed 9 — Cleaned, Rim Repaired — ANACS. XF40 Details. B-27, BB-113, R.2. Die State II. Rim damage at 7 o'clock on the obverse has been carefully repaired. Lightly cleaned long ago, the surfaces have long since retuned a pleasing pinkish-gray patina, with darker gray in the protected regions. The coin is evenly struck, with sharp details overall. NGC ID# 24X6, PCGS# 6873

**1798 B-8, BB-125 Large Eagle Dollar, XF45
Pointed 9, Four Berries**

A Pleasing Example of This Popular Variety

- 4531** 1798 Large Eagle, Pointed 9, Four Berries, XF45 PCGS. B-8, BB-125, R.2. Bowers Die State III. Sometimes referred to as the "Misoriented Stars" variety. The only variety of this date with four berries on the reverse. This well-detailed example displays lightly marked surfaces that show at least three different shades of gray ranging from light-gray to charcoal-gray. Olive-gold accents cling to some of the reverse devices. A pleasing Choice XF example of this popular *Guide Book* variety. From *The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation*. NGC ID# 24X6, PCGS# 6873

**1798 B-25, BB-123 Dollar, AU53
Blundered Stars Reverse**

- 4532** 1798 Large Eagle, Pointed 9, Close Date AU53 PCGS Secure. B-25, BB-123, R.4. This late die state piece has a shattered obverse die. The reverse stars appear in a line pattern with the top stars overlapping the clouds, called the "Blundered Stars" reverse in Q. David Bowers' *Encyclopedia of United States Silver Dollar 1794-1804*. Considerable luster remains on the attractive pewter-gray surfaces with delicate gold highlights. Trivial handling marks are consistent with the grade of this lovely dollar. NGC ID# 24X6, PCGS# 6873

**1798 Large Eagle, Pointed 9 Dollar, AU55
Sharp B-27, BB-113 Example**

- 4533** 1798 Large Eagle, Pointed 9 AU55 NGC. B-27, BB-113, R.2. Bowers Die State II. Pale blue and straw-gold alternate across this partly lustrous and minimally abraded half dollar. The strike is sharp, although momentary circulation causes light wear on the breast feathers. The typical 1798 dollar grades VF, and the present piece is significantly finer. Ex: *Beverly Hills Signature (Heritage, 11/2011)*, lot 3476. From *The Northern Lights Collection*. NGC ID# 24X6, PCGS# 6873

**1798 Large Eagle Dollar, AU55
Close Date, B-27, BB-113
Partly Lustrous Early Type Coin**

- 4534** 1798 Large Eagle, Pointed 9, Close Date AU55 PCGS. B-27, BB-113, R.2. Bowers Die State II. Chestnut-gold luster cedes to steel-gray on the high points and open fields. A lightly circulated representative with exemplary surfaces and impressive eye appeal. B-27 is the first usage for the obverse die, which went on to coin six other varieties, developing lengthy cracks not seen here. NGC ID# 24X6, PCGS# 6873

**1798 Large Eagle Silver Dollar, XF40
Better B-21, BB-107 Variety
Pointed 9, 10 Arrows**

- 4535** 1798 Large Eagle, Pointed 9, 10 Arrows XF40 NGC. B-21, BB-107, R.5. A much better die variety, interesting for its arrows miscount and a tadpole-shaped die break. The present well defined representative is primarily cream-gray but displays deeper russet toning in protected areas. Abrasions are absent aside from a couple of small reverse rim nicks near 4 o'clock. PCGS# 6876

**1798 Large Eagle Dollar, Choice AU
B-23, BB-105, Wide Date**

- 4536** 1798 Large Eagle, Pointed 9, Wide Date AU55 NGC. B-23, BB-105, R.3. Bowers Die State III, the curl near star 1 is lapped. Substantial shimmering luster graces this straw-gold and powder-blue representative. The eagle's breast and Liberty's shoulder display light wear but both sides exhibit only incidental contact. Bolender-23 is collectible in VF to XF grades, but Choice AU examples are rare. PCGS# 6877

**1799/8 Silver Dollar, Choice XF
15 Stars Reverse, B-3, BB-141
Distinctive Guide Book Variety**

- 4537** 1799/8 15 Stars Reverse XF45 NGC. B-3, BB-141, R.3. Bowers Die State IV. Rich cobalt-blue fills the obverse periphery. The portrait has gunmetal high points and the accompanying field is walnut-brown. The reverse is predominantly ocean-blue with tan and olive at the margins. Minor obverse field marks are of little import. A scarce *Guide Book* variety. The blundered stars reverse is paired with an overdated obverse. NGC ID# 24X8, PCGS# 6883

- 4538** 1799 Irregular Date, 13 Stars Reverse VG10 NGC. B-13, BB-151, R.5. Bowers Die State II, the die state usually, or perhaps always, seen, with die rust in the E of STATES. This richly toned example displays golden-brown toning with excellent surfaces for the grade. PCGS# 6880

- 4539** 1799 7x6 Stars Fine 15 ANACS. B-11, BB-161, R.3. Bowers Die State III with a heavy die crack right of the D in UNITED, and another through UNIT. This is one of the two No Berries varieties, with brownish-tan patina and faint blue overtones. Excellent surfaces for the grade. NGC ID# 24X7, PCGS# 6878

- 4540** 1799 7x6 Stars VF25 ANACS. B-11, Bb-161, R.3. Bowers Die State III, a late die state of this No Berries reverse. The die was used for B-16 (BB-158) and B-23 (BB-159). Then it was lapped, removing the berries, and used for B-12 (BB-160), and finally for B-11 (BB-161). In this final use, a heavy die crack connects the rim to the fourth feather, tangent to the right curve of the D. This example has light gray-brown surfaces with minor marks that include a rim bruise over the B in LIBERTY. NGC ID# 24X7, PCGS# 6878

**1799 Silver Dollar, Choice XF
7x6 Stars, B-12, BB-160**

- 4541** 1799 7x6 Stars XF45 PCGS. B-12, BB-160, R.3. Bowers Die State IV. The final die state with myriad slender peripheral obverse die cracks. Golden-brown, sea-green, rose-red, powder-blue, and cream-gray embrace this well defined and partly lustrous representative. The eye appeal is exceptional for the grade. No marks are remotely consequential except for a small reverse rim ding at 4:30. NGC ID# 24X7, PCGS# 6878

**1799 7x6 Stars Dollar, Lustrous AU50
Scarce B-14, BB-167 Die Marriage**

- 4542** 1799 7x6 Stars AU50 NGC. CAC. B-14, BB-167, R.3. Bowers-Borckardt Die State II. This is a beautiful example of the 7x6 Stars B-14, BB-167 die marriage, identified on the obverse by two tiny "tear" die flaws in the right obverse field before Liberty's eye. The reverse shows small, irregular die defect lumps in the field below AM. Abundant luster appears on the surfaces underneath a moderate layer of blue-gray and pinkish patina. NGC ID# 24X7, PCGS# 6878

**1799 Draped Bust Dollar, AU55
B-10, BB-163, Silver-White Example**

- 4543** 1799 7x6 Stars, AU55 PCGS. B-10, BB-163, R.2. Bowers Die State III. A few areas of purple-gray toning visit primarily brilliant, silver-white surfaces of this sharply detailed early dollar. The coin displays a large amount of remaining mint luster — both at the margins, but also across the central details of Liberty's hair strands and over the entire reverse. Minute hairlines are visible with a glass, no doubt the reason for the largely untuned surfaces, but the generous luster was enough to satisfy PCGS and makes this a truly appealing example. Population: 2 in 55, 4 finer (2/14). NGC ID# 24X7, PCGS# 6878

- 4544** 1800 Good 4 NGC. B-12, BB-184, R.3. The well-worn state of this piece does not allow for a determination of the die state. Both sides combine brown and gray toning over the ivory surfaces with the center of the reverse lacking visible details. The surfaces are lightly marked, but acceptable for the grade. NGC ID# 24X9, PCGS# 6887

**1800 B-12, BB-184 Dollar, AU53
Partly Lustrous**

- 4545** 1800 AU53 PCGS. B-12, BB-184, R.3. Bowers Die State II. Lemon-gold toning adorns the margins, and portions of the fields are lavender, but much of this delightful Bust dollar is minimally toned. No abrasions are remotely consequential, and luster accompanies design elements. An important example of a moderately scarce Bolender marriage. NGC ID# 24X9, PCGS# 6887

**1800 B-13, BB-193 Dollar, Choice AU
Attractive Mint Luster Remains**

- 4546** 1800 AU55 ANACS. B-13, BB-193, R.4. Bowers Die State II. A richly detailed steel-gray and autumn-brown Choice AU representative. Luster glimmers beneath the toning in protected areas. Surprisingly free from marks except for a trio of faded marks on Liberty's cheek and jaw. Wear is minimal and chiefly confined to the shoulder, forehead, and eagle's breast. NGC ID# 24X9, PCGS# 6887

**1800 Dotted Date, B-14, BB-194, XF45
Popular Guide Book Variety**

- 4547** 1800 Dotted Date XF45 NGC. B-14, BB-194, R.3. Dusky plum-gray toning deepens slightly toward the rims. This is a well-defined example of this collectible *Guide Book* marriage, named for the curious series of die dots near the first 0 in the date. Refreshingly unmarked for the grade despite a couple of small hits near the right shield corner, and minor obverse rim dings at 11 and 12 o'clock. Ex: *Denver A.N.A. Signature and Platinum Night Sale* (Heritage, 8/2006), lot 3693; *Long Beach Signature Sale* (Heritage, 2/2010), lot 1276; *Tampa F.U.N. Signature and Platinum Night Sale* (Heritage, 1/2011), lot 3959. PCGS# 6889

- 4548** 1802 Narrow Date VF30 PCGS. B-6, BB-241, R.1. Deep golden-brown and lilac patina, with lighter color where the devices have rub. Hints of the original luster survive within the hair tresses and olive branches. E PLURIBUS UNUM is fully legible, and the shield lines are fully separated. A problem free example of this frequently seen variety. Ex: *Heritage* (8/2000), lot 6167; *New York Signature Sale* (Heritage, 7/2002), lot 8450. NGC ID# 24XB, PCGS# 6895

1802 Draped Bust Dollar, B-6, BB-241, XF45

- 4549** 1802 Narrow Date XF45 PCGS. B-6, BB-241, R.1. Bowers Die State I. The B-6 variety is the most available of 1802 Draped Bust dollars, but it is seldom seen in Die State I. The present piece displays warm golden-gray patina over both sides with deeper amber-gray over the upper reverse. The surfaces are free of any noticeable imperfections and the motifs are boldly struck, with significant detail remaining around the border denticles, Liberty's hair curls, and the entire eagle. A Choice type representative. NGC ID# 24XB, PCGS# 6895

1802 Dollar, Choice XF
Narrow Date, B-6, BB-241

- 4550** 1802 Narrow Date XF45 PCGS. B-6, BB-241, R.1. Light golden-brown toning graces the peripheries of this well defined and unblemished Heraldic Eagle dollar. Luster accompanies design recesses. The lower left obverse margin exhibits minor adjustment marks, as coined. A problem-free example ideal for a quality collection of early silver type. NGC ID# 24XB, PCGS# 6895

1802 Narrow Date Dollar, AU50
B-6, BB-241

- 4551** 1802 Narrow Date AU50 NGC. B-6, BB-241, R.1. Bowers Die State III. A charming dove-gray Heraldic Eagle type coin. Plumage and hair definition is extensive, and the only abrasions of any notice are unobtrusive field marks near the chin and a thin line between the shoulder curl and star 1. Luster peers through the rich toning from all design crevices. Although B-6 is traditionally known as the Narrow Date variety, and the date is narrow relative to the other 1802 non-overdate variety (B-5), the date is nonetheless wider than the 1802/1 B-1 or B-4. NGC ID# 24XB, PCGS# 6895

- 4552** 1803 Large 3 Fine 15 ANACS. B-6, BB-255, R.2. Die State I. Boldly struck from slightly rotated dies, this piece displays strong borders and good central definition. Bright golden-gray patina covers both sides, with tinges of rainbow at the peripheries. The surfaces are largely free of nicks, scratches, or other faults. NGC ID# 24XD, PCGS# 6900

SEATED DOLLARS

1840 Silver Dollar, AU58 Prooflike
Ex: Jules Reiver Collection
Rare With Reflective Fields

- 4553** 1840 AU58 Prooflike NGC. A minimally worn representative, and scarce as such despite the novelty of its first year status. Chestnut-gold, sea-green, and lilac toning visits the borders, but the majority of the coin is pearl-gray. The fields are uncommonly reflective for the Seated dollar type, and in fact the present piece is the sole 1840 certified as prooflike by NGC. A lens reveals scattered small marks.

Ex: Jules Reiver Collection (Heritage, 1/2006), lot 21525, which realized \$4,312.50. NGC ID# 24YA, PCGS# 6926

1841 Seated Liberty Dollar, MS63
Underrated Rarity, Seldom Seen So Nice

- 4554** 1841 MS63 PCGS. An overall skin of translucent, light-gold toning covers reflective, nearly prooflike surfaces of this appealing Seated Dollar. Only random, small marks are distributed across the surfaces, with few in any way distracting or bothersome for this Select Uncirculated grade. The 1841 date is mysteriously rare in Uncirculated grades given its mintage of 140,750 pieces. Possibly some were stored and then melted, either domestically or overseas. This sharply-struck survivor is one of the condition rarities of the series, and it is a much more challenging date than reflected by recent pricing. An opportunity. Population: 16 in 63 (1 in 63+), 5 finer (3/14). NGC ID# 24YB, PCGS# 6927

- 4555** 1843 AU58 NGC. Brightly lustrous and lightly circulated, this attractive early Seated dollar example is untuned save for a light tinge of gold on each side. Scattered contact marks are minor, and the strike is sharp save for the upper-left wing edge and (O)NE. NGC ID# 24YD, PCGS# 6929

- 4556** 1845 AU55 NGC. Splashes of teal, violet, and olive-gold accent light amber centers on this Choice About Uncirculated Seated Liberty dollar, delivering substantial eye appeal when tilted under a light. The details are nearly complete, and the surfaces are free of any noticeable imperfections. Census: 37 in 55 (1 in 55 ★), 46 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24YF, PCGS# 6931

4557 1846 AU58 NGC. This nearly Mint State dollar displays a blanket of deep blue, violet, and champagne toning on both sides with original mint luster beneath. The surfaces are void of any noticeable abrasions and there is just the barest touch of wear on the high points. A truly magnificent coin in a condition not easily found in the early Seated Liberty dollar series. NGC ID# 24YG, PCGS# 6932

4558 1846 AU58 PCGS. RPD-001. Listed as a repunched date in Kevin Flynn's reference book on the series, low-power magnification reveals light repunching on the 1 and the 8 of the date. Pale gold and lilac-gray patina conceals virtually all signs of high-point friction on this near-Mint Seated dollar. Boldly detailed, with notable sharpness on Liberty's head, which is often weak. Significant original luster remains in the slightly reflective fields. Scarce in all grades despite a comparatively high mintage. *Ex: Santa Clara Signature (Heritage, 11/2002), lot 6372.* NGC ID# 24YG, PCGS# 6932

4559 1846-O XF40 NGC. Rotated Dies. Struck from significantly rotated dies, this early O-mint Seated Liberty dollar displays strong detail for the grade, with bright steel-gray surfaces overall. A couple small ticks in the left reverse field are the only notable abrasions. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24YH, PCGS# 6933

1847 Seated Dollar, MS63 Brilliant and Untoned

4560 1847 MS63 NGC. A large mintage of 140,750 pieces and apparently high-survivorship makes this issue one of the more available Seated Liberty dollars in both circulated and Uncirculated conditions. This example is brilliant, silver-white and is devoid of any toning. Luster is frosty and rich on the obverse, although a bit subdued on the reverse. Only a few minor abrasions appear on the coin, with the obverse particularly free of any marks. Wide, bold rims surround a sharp strike over all the devices. An appealing, Select Uncirculated dollar for those who prefer white coins. Census: 21 in 63, 10 finer (3/14). NGC ID# 24YJ, PCGS# 6934

4561 1849 AU50 NGC. Despite a mintage of 62,600 coins, very few 1849 Liberty Seated dollars survive in Mint State condition, adding to the appeal of lightly circulated pieces. This AU50 example displays even wear and a few hints of toning. Though marks are present, as expected at this grade level, none are worthy of individual mention. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24YL, PCGS# 6936

1850 Seated Liberty Dollar, MS63 Deeply Reflective Prooflike Fields

4562 1850 MS63 PCGS. Only 7,500 business-strike Seated Liberty dollars were struck at the Philadelphia Mint in 1850, making the date scarce-to-rare in all grades. The effects of the 1849 Gold Rush began to be felt in worldwide markets in 1850, as the price of silver began to rise noticeably compared to gold. Hoarding of silver coins ensued and the silver dollar was seldom encountered in circulation in this country. Many coins were shipped overseas and melted.

The present coin is a remarkable Select example, with sharply detailed design elements and deeply reflective prooflike fields. The pleasing surfaces are blanketed in attractive shades of greenish-gold and cerulean-blue toning. Only minor signs of contact are evident and eye appeal is extraordinary. Population: 6 in 63, 2 finer (3/14). NGC ID# 24YM, PCGS# 6937

4563 1853 AU58 PCGS. A beautiful example of this midseries Seated dollar issue, struck in the meager amount of 46,110 circulation strikes. Nearly full mint luster remains on reflective silver surfaces accented with copper-russet near the rims. A couple of small scrapes below the date are unbothersome. NGC ID# 24YS, PCGS# 6941

**1854 Seated Liberty Dollar, AU50
Scarce, Better Date**

4564 1854 AU50 PCGS. The 1854 Liberty Seated dollars were struck only at the Philadelphia Mint, with a mintage of 33,140 pieces. A lightly circulated survivor, this piece exhibits a sharp strike with light wear on the high points. Areas of faint toning are present and include shades of pale gold, with a few tiny splashes of lavender. Population: 16 in 50, 56 finer (3/14). NGC ID# 24YT, PCGS# 6942

4565 1855 PCGS Genuine. The PCGS number ending in .94 suggests Altered Surfaces as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an XF specimen with altered surfaces. Strong remaining detail shows the remnants of a sharp strike, with notable definition on Liberty's head and the stars. Even amber-gray color blankets both sides, giving this piece a pleasing level of eye appeal. A scarce, low-mintage issue, with only 26,000 coins produced. NGC ID# 24YU, PCGS# 6943

4566 1859-O AU50 PCGS. A pleasing example with even dove-gray toning and smooth, lightly marked surfaces. This boldly struck piece shows modest high-point wear primarily on the obverse. NGC ID# 24YY, PCGS# 6947

4567 1860-O MS60 PCGS. This piece is well-defined on the central devices and shows no trace of wear. Gold-kissed fields display considerable reflectivity but also a number of light to moderate abrasions. Great eye appeal for this antebellum O-mint issue, certified in a green-label holder.
Ex: Long Beach Signature (Heritage, 5/2009), lot 953. NGC ID# 24Z3, PCGS# 6950

4568 1869 — Artificial Toning — NCS. Proof. Streaks of hazel patina intermingle with silver-gray toning across the surfaces of this highly reflective representative. Although NCS has only called this specimen "Proof," the details are boldly struck and there are few detracting marks. Only 600 proofs were issued.
Ex: Long Beach Signature (Heritage, 9/2008), lot 2493. NGC ID# 24ZC, PCGS# 6962

**1870 Seated Silver Dollar, MS62
Surprisingly Scarce in Mint State**

4569 1870 MS62 PCGS. The early years of the 1870s are noted for some larger production of silver dollars, particularly in 1871 and 1872. However, the 1870 issue is not as common as expected, despite a generous mintage of 415,000 pieces. Many dollars were exported, and the rest of the mintage circulated widely. Apparently, few were saved in Mint State as reflected in the grading service populations.

This sharply struck Seated dollar has a few minor field marks, and the reverse features vibrant luster, although the obverse luster is subdued. Dusky silver-gray toning evenly blankets the obverse, while the reverse is fully white and brilliant. Population: 22 in 62, 43 finer (3/14). NGC ID# 24ZD, PCGS# 6963

1871 Seated Dollar, Untoned MS64

4570 1871 MS64 NGC. The 1871 Seated dollar production was one of the few truly high-mintage issues in the series at 1.07 million pieces, and only it and the 1872, at 1.1 million coins, exceeded the million-coin mark. Most examples of the 1871 nonetheless circulated extensively. This is an untoned example with only scattered minor marks that determine the grade. The eye appeal is quite high. Census: 38 in 64 (1 in 64+), 6 finer (3/14).
From The Northern Lights Collection. NGC ID# 24ZG, PCGS# 6966

4571 1871-CC — Plugged, Repaired — NGC Details. Fine. With a scant mintage of just 1,376 coins, the 1871-CC Seated Liberty dollar is a highly sought-after rarity. The present survivor displays old-silver color and good remaining detail. An old, carefully plugged hole is noted at Liberty's head, with the surfaces lightly buffed to erase the signs.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

4572 1872 AU53 NGC. One of the more available issues in pleasing condition, ideal for type collections. This lightly circulated example retains much sharpness in the devices, with remnants of mint luster in the protected regions. A light golden patina warms both sides, though scattered abrasions are present.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZJ, PCGS# 6968

**1872-CC Seated Dollar, VG10
Rare Key Issue**

4573 1872-CC VG10 PCGS. All four of the Carson City Seated dollar issues are low-mintage and scarce, making this an extremely challenging type for collectors. This reddish-gray example is well-detailed and offers an attractive overall appearance. On the scroll across the shield, the R is partially visible and TY is nearly complete. Several moderate marks appear on the lower obverse, and one of them impacts the upper border of the 2 in the date.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZK, PCGS# 6969

1872-CC Seated Dollar, VF20
Attractive Key Date Example

- 4574 1872-CC VF20 PCGS.** The small mintage of 3,150 pieces was not the lowest one recorded for Seated dollars at the new mint facility in Carson City, between 1870 and 1873. That honor belongs to the 1871-CC issue, which boasts a minuscule production of 1,376 coins. This well-struck specimen shows full definition on the eagle's talons and arrow fletchings. Much detail remains evident on the obverse as well, including bold letters on LIBERTY. Free of any severe surface marks or distractions, with a smooth and appealing appearance. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24ZK, PCGS# 6969

1872-CC Liberty Seated Dollar, XF40
Elusive Carson City Issue

- 4575 1872-CC XF40 PCGS.** Just 3,150 pieces were minted at a time when the intrinsic value of silver in a silver dollar was greater than the face value. For that reason, many believe the 1872-CC dollar didn't circulate until after the price of silver dropped in 1873 or 1874. This moderately abraded and lightly worn example saw its share of circulation, but retains a pleasant, old-silver color and a bit of luster on the reverse. The coin is well-detailed despite 20 points of wear. Population: 23 in 40, 65 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24ZK, PCGS# 6969

- 4576 1872-S VF30 PCGS.** With a low mintage of only 9,000 pieces, the 1872-S is scarcely seen in any grade; still, it is the most available With Motto Seated Liberty dollar from this mint. This lightly circulated example displays original olive-gray patina over both sides, with strong detail remaining on the devices. A pleasing example of this elusive San Francisco issue. NGC ID# 24ZL, PCGS# 6970

- 4577 1872-S — Harshly Cleaned — NGC Details. AU.** The 1872-S stands as the only moderately obtainable San Francisco-issued Seated Liberty dollar. The present example displays nearly complete details and pleasing overall visual appeal. Faint, crisscrossing hairlines confirm old cleaning, but are partially masked by light golden patina. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

- 4578 1872-S AU50 NCS.** The San Francisco Mint only produced four Seated dollar issues, and only two are considered collectible. The 1859-S is the only No Motto Seated dollar produced on the West coast, while the extremely rare 1870-S, the elusive 1872-S, and the unknown 1873-S were the With Motto issues. Although lightly cleaned with subdued, pewter-gray patina, this sharp piece has smooth surfaces with hints of underlying luster. *Ex: FUN Signature (Heritage, 1/2009), lot 4364.* NGC ID# 24ZL, PCGS# 6970

1873-CC Silver Dollar, Fine Details
Rarest Carson City Silver Dollar

- 4579 1873-CC — Damage — Genuine PCGS. Fine Details.** Although 2,300 pieces were minted, few pieces actually reached channels of circulation. Seated dollar production ceased in 1873, replaced by the Trade dollar, which had a higher silver content. Possibly many 1873-CC Seated dollars were quickly redeemed for Trade dollars. Some simply were melted. This Genuine example is lightly abraded with a crude dig at the center of the portrait. Still, the issue is extremely rare with fewer than 100 pieces recorded in all grades. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 24ZN, PCGS# 6972

PROOF SEATED DOLLARS

1862 Seated Dollar, PR62
Low-Mintage Date

- 4580 1862 PR62 PCGS.** Displaying a pronounced degree of design detail, this PR62 example has strong eye appeal. Areas of faint toning are present, including teal along the outer edges on both sides. The centers display pale champagne color. A few toning spots and as-made strike-throughs appear along with a planchet flaw on the reverse near 3 o'clock. This coin exhibits moderate hairlines. NGC ID# 252G, PCGS# 7005

- 4581 1863 PCGS Genuine.** The PCGS number ending in .91 suggests Questionable Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin is a proof specimen that has been cleaned and artificially recolored. Both sides exhibit splashes of gold, violet, and blue toning over mirrored fields. NGC ID# 252H, PCGS# 7006

**1863 Seated Liberty Dollar, PR65+
Wonderful Originality and Quality**

4582 1863 PR65+ NGC. Silver specie of all forms was in high demand during the years 1862 to 1865, with even collector proofs subject to the fervor. The weakness of the greenback and bank drafts during those years required higher pricing for Mint-issued proof sets if not purchased in coin, making the whole process cumbersome. Still, 460 sets were purchased, primarily by collectors from the Union States since many buyers in Confederate territory were inactive, somewhat suppressing the number of proofs made.

This colorful proof dollar displays an overriding appeal of originality, with sky-blue and violet shades merging with rose-gold and olive-gold centers. More dramatically mirrored at the margins, the centers are frosted over the bold devices and appear a bit cloudy in the fields when not viewed at the precise angle to fully appreciate their depth of quality. NGC awarded the Plus designation to this Gem proof for its overall quality and attractiveness, the only coin in its grade so-honored. Census: 15 in 65 (1 in 65+), 11 finer (3/14). NGC ID# 252H, PCGS# 7006

**1864 Seated Dollar, PR64 Cameo
Struck During the Last Full Year of the Civil War**

4583 1864 PR64 Cameo PCGS. The reflective fields and frosty devices provide this near-Gem with a pleasing degree of contrast. A sharp strike adds to the attractiveness. Areas of faint champagne toning appear on both sides. The Civil War was raging during its last full year when this piece was struck, one of only 470 proofs minted that year. Population: 17 in 64 (2 in 64+) Cameo, 3 finer (3/14). PCGS# 87007

**1866 Motto Seated Dollar, PR64
Strong Field-Motif Contrast**

4584 1866 Motto PR64 PCGS. As a date, the proof 1866 Motto Seated dollar is not truly rare, but it is sought-after as the first-year proof dollar bearing the motto IN GOD WE TRUST. This near-Gem example displays splashes of steel-blue and amber toning beneath silver-gray patina overall. Moderate mirroring in the fields frames softly frosted design elements, while boldly struck motifs only add to the visual appeal of this piece. Population: 62 in 64, 10 finer (3/14). NGC ID# 252M, PCGS# 7014

**1866 Seated Dollar, PR61 Cameo
First-Year, With Motto Issue**

4585 1866 Motto PR61 Cameo NGC. Type collectors increase demand for this issue, since it is the first year of the series with the Motto added. The deeply mirrored fields of this brilliant-white example are minimized by chatter in the obverse fields and some hairlining at the lower left reverse. The motifs are fully struck and deeply frosted for a Cameo effect. Census: 4 in 61 Cameo, 66 finer (3/14). PCGS# 87014

**1866 Motto Seated Dollar, PR62 Cameo
Deeply Mirrored Fields**

- 4586 1866 Motto PR62 Cameo NGC.** Issued the year in which IN GOD WE TRUST was added to the reverse, proof 1866 Seated Liberty dollars are highly sought-after by collectors, especially with full cameo contrast. This sharply struck example displays remarkably deep mirroring in the fields with softly frosted design elements. Deep lavender and green-gold hues melt into the fields beneath pleasing golden-gray patina overall. A small patch of surface marks in the right obverse field limits the grade, but hardly detracts from the overall visual appeal. PCGS# 87014

**1867 Silver Dollar, PR64 Deep Cameo
Only Three Numerically Finer at PCGS**

- 4587 1867 PR64 Deep Cameo PCGS.** A total of 625 Seated Liberty dollars were struck in proof format in 1867. The essentially untoned surfaces of the near-Gem Deep Cameo presented in this lot exhibit strong contrast between heavily frosted design elements and deep mirror fields. A well-executed strike prevails throughout, rendering the field-motif contrast even more outstanding. Magnification reveals some fine hairlines in the fields and an area of dusky toning after AMERICA. Population: 8 in 64 (2 in 64+) Deep Cameo, 3 finer (3/14).
Ex: ANA Milwaukee Signature (Heritage, 8/2007), lot 1730. PCGS# 97015

**1868 Seated Liberty Dollar, PR62
Nice Eye Appeal**

- 4588 1868 PR62 PCGS.** Only 600 Seated dollar proofs were struck in 1868, with all of them displaying a repunching of the 1 in the date. This PR62 example also exhibits doubling of some of the stars at left. The obverse reveals few hints of toning while faint champagne color appears on the reverse. Scattered marks held this piece from a higher grade. NGC ID# 252P, PCGS# 7016

**1868 Seated Liberty Dollar, PR64
Only 600 Pieces Struck**

- 4589 1868 PR64 PCGS.** Although hues of gray patina cover both sides of this near-Gem, a large degree of reflectivity remains visible. Closer examination reveals splashes of color in a number of shades, among them teal, electric-blue, plum, and copper-gold. Scattered marks are present, including a few in the left obverse field, but they are not distracting. Population: 81 in 64, 18 finer (3/14). NGC ID# 252P, PCGS# 7016

**1870 Seated Dollar, PR64
Underrated Proof Issue**

- 4590 1870 PR64 PCGS.** Although the 1870 proof mintage of Liberty Seated dollars was 1,000, many of the coins remained unsold at the end of the year and were melted. A PR64 example, this coin exhibits light gold toning at the centers along with tiny splashes of golden-brown. Deeper toning appears at portions of the outer edges, including hues of golden-brown, teal, pink, and plum. The surfaces exhibit a pleasing degree of reflectivity. A few small as-made strike-throughs along with moderate hairlines appear. Population: 54 in 64, 21 finer (3/14). NGC ID# 252S, PCGS# 7018

- 4591 1872 — Improperly Cleaned — NGC Details. Proof.** Light cleaning has slightly subdued the mirroring in the fields, though the details remain needle-sharp. Retoned with hues of dark olive, green-gold, and charcoal-blue.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

- 4592 1872 PR60 ANACS.** A pleasing lower-grade example of this proof Seated Liberty dollar. Mottled golden-gray toning blankets both sides, slightly diminishing the mirroring in the fields, but masking most of the minor surface marks that define the grade. The strike is bold, with notable definition on Liberty's head and the surrounding stars. NGC ID# 252U, PCGS# 7020

1872 Seated Dollar, PR65
Ex: Starr Collection
Beautiful Iridescent Toning

4593 1872 PR65 NGC. Ex: Starr. As a date, the 1872 is among the more easily obtainable issues in the proof Seated Liberty dollar series, but it is rarely encountered in Gem grades. The present piece displays deeply mirrored fields with lightly frosted central devices, while iridescent blue and lavender hues emanate from beneath muted amber-gray patina overall. The surfaces are beautifully preserved and exhibit sharply struck design elements. An eye-appealing Gem representative of this sought-after proof variant. Census: 15 in 65, 8 finer (3/14).

Ex: Henry Chapman; Floyd T. Starr; Floyd T. Starr Collection (Stack's, 10/1992), lot 603. NGC ID# 252U, PCGS# 7020

1872 Seated Liberty Dollar, PR65
Sharply Detailed and Richly Toned

4594 1872 PR65 PCGS Secure. A rich mixture of colors covers each side of this Gem proof, with the hues centered on two points in the spectrum, amber and blue-green, and branching out into variations of each. Both sides have strong mirrors through the patina, and where the toning is lightest over the devices, frostiness is evident, hinting at what must have been considerable contrast once. Pleasingly detailed and marvelously appealing for this issue of 950 proofs, the second-to-last in the Seated dollar series before it was abolished in the general coinage reform that would later be known as the "Crime of '73." Population: 20 in 65 (1 in 65+), 1 finer (3/14). From *The Northern Lights Collection*. NGC ID# 252U, PCGS# 7020

1872 Liberty Seated Dollar, PR64
Deep Cameo Designation by PCGS

4595 1872 PR64 Deep Cameo PCGS. Brilliant, untuned fields are deeply mirrored and surround frost-white elements for outstanding Cameo contrast. The presence of random, delicate obverse hairlines limits the grade of this impressive proof to near-Gem status. Otherwise, the powerful strike and liquid fields provide the eye appeal suggestive of a considerably higher grade. A hint of purple-gold at the rims adds to the overall charisma. Population: 4 in 64 Deep Cameo, 2 finer (2/14). PCGS# 97020

TRADE DOLLARS

1874-CC Trade Dollar, MS61
Pleasing Multicolor Toning

4596 1874-CC MS61 NGC. Tall CC, Period after FINE. This attractive Mint State Trade dollar exhibits sharply detailed design elements and lustrous surfaces that show a scattering of minor contact marks on both sides, none too large or distracting. A series of roller marks after the date is mentioned for completeness. Traces of sky-blue and champagne-gold toning enhance the considerable eye appeal. Census: 44 in 61 (1 in 61+), 90 finer (3/14). NGC ID# 2532, PCGS# 7035

1874-CC Trade Dollar, MS63
Scarce in Mint State

4597 1874-CC MS63 PCGS. Micro CC. Period After FINE. Most of the 1.3 million coins from this issue were exported to China, and Mint State survivors are scarce. The brilliant luster and frosty silver surfaces of this piece suggest a higher grade, although considerable peripheral weakness is noted on both sides. The dies are both well used, with peripheral die cracks through the stars and legend. Population: 41 in 63 (2 in 63+), 21 finer (3/14). Ex: *Houston Signature* (Heritage, 11/2007), lot 60764. NGC ID# 2532, PCGS# 7035

1874-S Trade Dollar, MS64
Rare Any Finer

- 4598 1874-S MS64 PCGS.** Large S. Period after FINE. Both sides of this near-Gem are lightly toned, with the colors including shades of golden-brown, faint sea-green, and orange-red. This specimen displays a pleasing strike overall, with areas of incompleteness at Liberty's hair, a few of the stars, and the eagle's left claw. A few scattered minuscule marks are present, largely on the lower reverse. Population: 28 in 64 (1 in 64+), 2 finer (3/14). NGC ID# 2533, PCGS# 7036

1875 Trade Dollar, MS64
Seldom Encountered in Higher Grades

- 4599 1875 MS64 PCGS.** Type Two Reverse. The 1875 Trade dollar claims a smallish mintage of 218,200 pieces, and few high-quality specimens were saved by contemporary collectors. Attractive specimens in MS64 condition, like the present coin, are seldom encountered in today's market. The lustrous creamy surfaces of this impressive Choice example show only minor signs of contact and the design elements are sharply detailed throughout. Population: 20 in 64 (1 in 64+), 3 finer (3/14). NGC ID# 2534, PCGS# 7037

- 4600 1876 MS64 NGC.** Type One Obverse and Reverse. A frosty, appealing, and well-struck example of this Centennial issue, largely silver-white with marginal accents of amber-gold. A couple of scuffs in the right reverse field determine the grade without dampening the appeal.
From The Northern Lights Collection. NGC ID# 2539, PCGS# 7041

1876 Trade Dollar, MS64+
Attractively Toned

- 4601 1876 MS64+ PCGS. CAC.** Type One Obverse and Reverse. No period after FINE. The 1876 Trade dollar is one of the more easily obtainable issues in lower Mint State grades, but it quickly becomes rare at the Gem grade level. This MS64+ example displays complementary hues of blue, turquoise, and amber beneath soft champagne toning overall, with semiprooflike underlying fields. A lustrous, sharply struck type representative. NGC ID# 2539, PCGS# 7041

1876-CC Trade Dollar, MS61
A Flashy, Conditionally Scarce Example

- 4602 1876-CC MS61 ANACS.** Type One Obverse, Type Two Reverse, Tall CC. The flashy surfaces of this conditionally scarce Carson City Trade dollar reveal semiprooflike fields and slight amounts of golden-brown and russet patina in the outer field areas and near the peripheries. A well-struck example with scattered wispy marks that seem minimal for the grade. NGC ID# 253A, PCGS# 7042

- 4603 1876-S MS62 NGC.** Type One Obverse and Reverse. Large S. A lovely coin with a radiant frosty sheen across each side, and untuned silver-gray surfaces that show trace amounts of deeper charcoal-gray patina on the right side of the reverse. A conditionally scarce issue in Mint State, as so many of these Trade dollars were exported to China and lost in the channels of commerce. NGC ID# 253B, PCGS# 7043

- 4604 1877 AU58 PCGS.** Significant mint luster shines through a light golden patina on this nearly Mint State Trade dollar. The satiny surfaces reveal no detracting abrasions, and exhibit just a touch of wear on the highest points. Well-struck, with just a bit of softness evident on the head of Liberty and surrounding stars, as always. NGC ID# 253C, PCGS# 7044

- 4605 1877-S MS63 NGC.** Large S. A few trivial marks appear on each side of this satiny and fully lustrous silver Trade dollar has faint gold toning near the borders. An excellent type candidate. NGC ID# 253E, PCGS# 7046

**1877-S Trade Dollar, MS64+
Lightly Toned Lustrous Example**

- 4606 1877-S MS64+ PCGS.** Large S. The 1877-S Trade dollar claims a large mintage of 9.5 million pieces, but high-grade specimens are more difficult to locate in today's market than that figure would suggest. This high-end Choice example displays sharply detailed design elements and vibrant mint luster throughout. The lightly marked surfaces show hints of golden-brown and amber toning. NGC ID# 253E, PCGS# 7046

**1877-S Trade Dollar, MS65
Scarce Any Finer**

- 4607 1877-S MS65 NGC.** Large S. A lustrous and lightly toned Gem, this coin exhibits areas of toning, primarily at the outer edges. The colors include hues of orange, merlot, plum, and pale sky-blue. A strong degree of design detail and minimal marks are additional attributes of this specimen. Census: 29 in 65 (1 in 65+), 6 finer (3/14). *From The Northern Lights Collection.* NGC ID# 253E, PCGS# 7046

- 4608 1878-CC — Improperly Cleaned — NGC Details. AU.** The 1878-CC Trade dollar boasts the lowest business strike mintage of the entire series (only 97,000 coins struck), and is elusive in all conditions. The present example exhibits bright, silver-gray surfaces that reveal faint, crisscrossing hairlines due to cleaning, but the details are bold and only slight rub is seen over the high points. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 253F, PCGS# 7047

- 4609 1878-CC — Improperly Cleaned — NGC Details. AU.** A well-detailed example of this popular Carson City issue. Old cleaning has slightly subdued the luster, resulting in silver-gray patina overall. Only slight friction is evident over the high points of the devices. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 253F, PCGS# 7047

PROOF TRADE DOLLARS

**1874 Trade Dollar, PR63 Cameo
Attractive Second-Year Proof**

- 4610 1874 PR63 Cameo PCGS.** Of the 700 proof Trade dollars struck in 1874, few remain with full cameo contrast. This example displays deeply mirrored fields around softly frosted central devices delivering the sought-after black-on-white appearance. The strike is razor-sharp, with notable definition on the stars and Liberty's head. Virtually untoned, with just a tint of light golden on the upper obverse rim. Population: 15 in 63 Cameo, 20 finer (3/14). PCGS# 87054

**1875 Trade Dollar, PR64 Cameo
Deeply Mirrored**

- 4611 1875 PR64 Cameo PCGS.** Type One Reverse. Mirrored fields display seemingly infinite depth on this near-Gem proof, with softly frosted devices on each side delivering strong cameo contrast. Nearly brilliant, with just a faint tint of light golden toning overall. Only a few faint, wispy hairlines in the fields preclude full Gem status. A sharply struck representative. Population: 21 in 64 (2 in 64+) Cameo, 7 finer (3/14). *Ex: FUN Signature (Heritage, 1/2005), lot 8376; FUN Signature (Heritage, 1/2006), lot 4500.* PCGS# 87055

**1875 Trade Dollar, PR64 Cameo
Strongly Contrasted**

- 4612 1875 PR64 Cameo PCGS. CAC.** Type Two Reverse. The general consensus is that 700 proof Trade dollars were produced in 1875, however it is possible that the actual total was as high as 900. Whatever the case, proof Trade dollars of 1875 were better-received by collectors than earlier issues, resulting in slightly larger quantities of survivors.

The present example delivers strong cameo contrast with deeply mirrored fields and heavily frosted devices. The strike is razor-sharp in virtually all areas, though a touch of minor weakness is noted on the top of Liberty's head, as is seen on most representatives. The luster is mainly brilliant, with a tint of golden toning on the upper obverse rim. Only a few faint, wispy hairlines in the fields preclude full Gem status. Population: 21 in 64 (2 in 64+) Cameo, 7 finer (3/14). PCGS# 87055

- 4613 1876 PR62 PCGS. CAC.** Type One Obverse, Type Two Reverse. An attractive example of this proof strike, golden-gray and reflective with glints of pale blue near the rims. A few scattered contact marks determine the grade on this sharply struck piece. NGC ID# 27YM, PCGS# 7056

**1878 Trade Dollar, PR65 Cameo
Champagne-Gold and Attractive
Proof-Only Issue**

- 4614 1878 PR65 Cameo NGC.** The Philadelphia Mint ceased trade dollar production for circulation and export in 1878, minting only 900 proofs for sale to collectors and dealers. The low, proof-only mintages would continue through 1883, not counting the surreptitious proofs that surfaced later dated 1884 and 1885. This excellent Gem example displays deeply mirrored champagne-gold surfaces, with the devices thickly frosted for bold Cameo contrast. The coin is fully struck, with only microscopic hairlines limiting the grade. Census: 25 in 65 Cameo (3 in 65 ★ Cameo), 7 finer (3/14). PCGS# 87058

**1879 Trade Dollar PR64
Popular Proof-Only Date**

- 4615 1879 PR64 NGC.** Vivid shades of cobalt-blue and greenish-gold toning blanket the well-preserved surfaces of this attractive Choice proof Trade dollar. The design elements are sharply detailed throughout and the fields are deeply mirrored under the patina. From a proof-only mintage of 1,541 pieces. NGC ID# 27YR, PCGS# 7059

- 4616 1880 PR45 ANACS.** A deeply toned example of this proof-only strike, still mildly reflective under pinkish-gold and blue-gray patina on each side. The circulation wear and scattered marks are as expected for a circulated proof with 15 points of wear. NGC ID# 27YS, PCGS# 7060

- 4617 1880 PR60 NGC.** One of the more available proof Trade dollar issues, and popular among type specialists. This pleasing lower-grade example displays light mirroring in the fields, with silver-gray luster overall. A few amber accents are present in the protected areas. NGC ID# 27YS, PCGS# 7060

**1882 Trade Dollar, PR64
Proof-Only Year**

- 4618 1882 PR64 PCGS.** This popular, proof-only date had a production run of only 1,097 pieces. This is an attractive coin, with layers of speckled violet and deep blue toning over both sides. Deep mirroring shines through the patina when tilted under a light, highlighting sharply struck devices. Only a couple of small contact marks prevent a Gem grade.
Ex: Long Beach Signature (Heritage, 2/2008), lot 906. NGC ID# 27YU, PCGS# 7062

1882 Trade Dollar, PR65 Cameo
Impressive Cameo Specimen

4619 1882 PR65 Cameo NGC. An impressive and beautifully preserved survivor, this Gem Cameo example displays a pleasing degree of contrast, providing this piece with exceptional visual appeal. The strike is sharp, adding to the desirability. Several as-made lint marks are present on the reverse, including a long curving one extending below the U in UNITED. Census: 32 in 65 Cameo (4 in 65 ★ Cameo), 16 finer (2/14). PCGS# 87062

1882 Trade Dollar, PR64
Rare Deep Cameo Example

4620 1882 PR64 Deep Cameo PCGS. Likely one of the first coins struck from the dies of this proof only issue due to the Deep Cameo contrast present. The contrast between the devices and well-mirrored fields is considerable. This specimen displays faint golden toning and a sharp strike. Population: 9 in 64 (1 in 64+) Deep Cameo, 22 finer (3/14).

Ex: Andy Geosits Collection of Trade Dollars (Heritage, 1/2006), lot 4530, which realized \$8,625. PCGS# 97062

1883 Trade, PR63 Cameo
Proof-Only Issue

4621 1883 PR63 Cameo PCGS. From the final year of regular production, proof 1883 Trade dollars are scarcely encountered with pleasing cameo contrast. This deeply mirrored representative exhibits lightly frosted, strongly contrasted design elements, with substantial visual appeal. The strike is needle-sharp, with particular definition on the stars and Liberty's head. Close examination reveals some faint, wispy hairlines in the fields, though they are hardly noticeable to the unaided eye. Mainly brilliant, with a faint tint of light golden peripheral toning. PCGS# 87063

End of Session Two

SESSION THREE

MORGAN DOLLARS

- 4622** 1878 8TF MS65+ PCGS. VAM-21. A pleasing Gem example of the first 1878 Morgan variety. The luster is frosty and mainly brilliant, with just a tint of light golden at the rims. Well struck, no significant abrasions are present. NGC ID# 253H, PCGS# 7072

1878 8 Tailfeathers Dollar, Elusive MS66 An Important Design Type Attractively Toned

- 4623** 1878 8TF MS66 PCGS. VAM-17. The 1878 8 Tailfeathers silver dollar initiates the Morgan dollar series (excluding the three 1878 proof-only prototypes). While the actual mintage of the 8 Tailfeathers reverse is not known, Breen (1988) estimates 699,300+ business strikes and about 500 proofs. Bowers (2007) presents an estimate of 750,000 circulation strikes and 500 proofs. According to Breen, the 8 Tailfeathers was produced from March 12 to March 25, after which the design was changed to 7 over 8 Tailfeathers. Although many of the 8 Tailfeathers variety were distributed in 1878 and thereafter, enough remained in the Treasury that there is an ample supply of Mint State coins from which to choose today (per Bowers). In fact, this issue is readily available through Gem condition after which it becomes very elusive.

The MS66 coin in this lot displays a melange of cobalt-blue, lavender, and violet patination resting on frosty luster. Well-struck design elements exhibit fairly strong detail in the hair above Liberty's ear and slightly less definition on the eagle's breast feathers. Both sides have been well cared for, though some grazes are visible in the field left of Liberty's nose and on the cheek. These may or may not help to pedigree the coin. This coin exhibits very pleasing eye appeal. Highly important as the only year and mint of the 8 Tailfeathers design. Population: 40 in 66 (3 in 66+), 2 finer (3/14). NGC ID# 253H, PCGS# 7072

- 4624** 1878 8TF MS63 Deep Mirror Prooflike PCGS. CAC. VAM-23. Ex: Key West Collection. A Top 100 Variety. A spectacular Select specimen of the popular "Crazy Lips" variety, with well-detailed frosty design elements and brightly reflective fields that show a few minor signs of contact. Population: 10 in 63 Deep Mirror Prooflike, 3 finer (3/14). PCGS# 40204

1878 7/8 Tailfeathers VAM-36 Dollar Strong 7/4, MS64 Deep Mirror Prooflike

- 4625** 1878 7/8TF Strong 7/4 MS64 Deep Mirror Prooflike PCGS. VAM-36. Ex: Key West Collection. Four tailfeathers emerge from beneath the seven, two spikes emerge from the lower fletchings, and two pairs of small die lines from beneath the olive branch. This is among the few finest certified of the VAM-36 variety, showing brilliant surfaces with high contrast and top-flight eye appeal.

- 4626** 1878 7/8TF Strong MS65 PCGS. VAM-38. The surfaces remain largely brilliant on this Gem representative. The Strong designation refers to the number of underfeather tips visible, with a minimum of four required. A few scattered tiny dark flecks appear on both sides, primarily the reverse. Housed in a first generation holder. Only 9 examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 2TXZ, PCGS# 7078

- 4627** 1878 7/8TF Strong MS63 Deep Mirror Prooflike PCGS. VAM-41A. Brilliant and untuned, this deeply mirrored example of the Doubled Tailfeathers variety has a few abrasions on Liberty's portrait and some light chatter in the left obverse field. Vestiges of five tailfeathers are visible beneath the overstruck eagle's tail. NGC ID# 2TXZ, PCGS# 97079

1878 7/8TF Morgan Dollar MS64 Deep Mirror Prooflike

- 4628** 1878 7/8TF Strong MS64 Deep Mirror Prooflike PCGS. CAC. VAM-41A. Long Nock Reverse. The Strong designation by PCGS refers to VAM-41, which used reverse die B/Ak. VAM-41A uses the same reverse die, but it has been heavily polished creating this sub-variety. This near-Gem representative displays deeply mirrored fields and softly frosted devices. The obverse is fully struck, while the reverse exhibits the aforementioned die polishing. Nearly brilliant, with a tint of light golden around the periphery. Population: 34 in 64 Deep Mirror Prooflike, 3 finer (3/14). NGC ID# 2TXZ, PCGS# 97079

1878 7/8TF VAM-41A Dollar
7/4 Weak, MS65 Deep Mirror Prooflike
Extremely Appealing Premium Coin

- 4629 1878 7/8TF Weak MS65 Deep Mirror Prooflike NGC. VAM-41A.** The horizontal die line to the left of the bow (other die lines passing through the bow center) is a handy pickup point for this 7/4 Weak VAM variety. The bright, untuned surfaces exhibit deep contrast and superlative eye appeal, with minimal contact marks. The die lapping on the reverse in each wing, characteristic, is blatant and startling. An extremely appealing coin, worthy of premium bids from VAM specialists. PCGS# 40212

- 4630 1878 7TF Reverse of 1878 MS65 NGC. VAM-141A "Tripled Star & Gouge."** A Top 100 Variety. The tripling in the second star to the right of the date is clear. This Gem example displays brilliant, frosty luster on both sides, with well-preserved surfaces. The strike is razor-sharp, providing pleasing eye appeal for this popular variety. Elusive any finer. NGC ID# 253K, PCGS# 7074

1878 7TF Morgan Dollar, MS66
Sharply Struck Reverse of 1878 Variety

- 4631 1878 7TF Reverse of 1878 MS66 PCGS.** An intricate strike is among the attributes this Premium Gem specimen possesses. Toning appears on both sides, though to a greater degree on the obverse. The hues include golden-orange, plum, and teal. The reverse has a prooflike appearance, with the fields exhibiting strong reflectivity. Aside from a few small marks near the eagle's head, the abrasions are minuscule. Population: 38 in 66 (3 in 66+), 0 finer (3/14). NGC ID# 253K, PCGS# 7074

- 4632 1878 7TF Reverse of 1878 MS64 Deep Mirror Prooflike PCGS.** Beautiful butter-gold, powder-blue, and lavender toning endows much of the reverse. The obverse is lightly die doubled, most noticeably on the R in PLURIBUS. As expected at this grade level, a number of distributed marks are present. Encased in an old green label holder. Population: 77 in 64 (3 in 64+) Deep Mirror Prooflike, 14 finer (3/14). NGC ID# 253K, PCGS# 97075

- 4633 1878 7TF Reverse of 1878 MS64 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. An attractive near-Gem with the Deep Mirror Prooflike designation, this coin exhibits lovely eye appeal. Aside from the extreme centers, the strike is sharp. The piece displays few signs of toning aside from a few splashes of gold color and a tiny toning spot to the right of the R in DOLLAR. A couple of tiny marks at Liberty's eye pose minimal distraction, if any. Population: 77 in 64 (3 in 64+) Deep Mirror Prooflike, 14 finer (3/14). NGC ID# 253K, PCGS# 97075

1878 7TF Morgan, MS65 Deep Mirror Prooflike
Reverse of 1878

- 4634 1878 7TF Reverse of 1878 MS65 Deep Mirror Prooflike PCGS. CAC.** The seven tailfeathers variety comprises the majority of 1878 Morgan dollars, but pieces exhibiting deeply prooflike mirroring in the fields are in the significant minority. PCGS has awarded the Deep Mirror Prooflike designation to only 14 examples, with none finer (3/14). This Gem representative displays a pleasing cameo appearance with deep mirroring in the fields. The luster is mainly brilliant, with a thin golden ring around the rims. Fully defined design elements only add to the visual appeal of this piece. NGC ID# 253K, PCGS# 97075

- 4635 1878 7TF Reverse of 1879 MS65+ PCGS.** The slanted top arrow feather and rounded breast on the eagle are diagnostic of this major 1878 Morgan dollar subtype. This is a nice, frosted, untuned example with plenty of eye appeal. Population: 21 in 65+, 18 finer (3/14). NGC ID# 253L, PCGS# 7076

- 4636 1878-CC MS65 PCGS.** Despite a higher mintage (more than 2.2 million coins), the 1878-CC Morgan is scarcer in full Gem condition than many of the later issues from this mint. This fully struck representative displays fiery lemon-orange toning, with violet and sky-blue peripheral accents over the entire obverse, while the reverse is frost-white with small splashes of orange-gold overall. A highly lustrous example of this early Carson City Morgan. NGC ID# 253M, PCGS# 7080

- 4637 1878-CC MS65 NGC.** Frosty, brilliant luster blankets both sides of this Gem Carson City dollar. The strike is needle-sharp throughout with full definition in the hair above Liberty's ear and the eagle's breast feathers. Only a few light grazes preclude a higher grade. NGC ID# 253M, PCGS# 7080

- 4638 1878-CC MS65 PCGS. VAM-11.** A Top 100 Variety. The well-known "Lines in Wing" VAM with many bold die lines within the wings. This Carson City Gem is lustrous and boldly struck. The dusky obverse is golden-brown, dove-gray, and apple-green. The reverse toning is similar but confined to the borders. NGC ID# 253M, PCGS# 7080

- 4639 1878-CC MS65+ PCGS.** Possessing wonderful eye appeal, this high-end Gem displays silver-white surfaces with only a few light areas of toning. The strike is sharp, including the centers, further adding to the attractiveness. A few scattered marks and grazes are not distracting. NGC ID# 253M, PCGS# 7080

- 4640 1878-CC MS65+ PCGS.** A full strike and high eye appeal are common characteristics of this Carson City issue, which is almost always well-struck, lustrous, and attractive. Unfortunately, the historic Mint in Carson City could not compete with the other Mints when striking silver dollars, with manufacturing costs as much as four times greater on a per-coin basis than the New Orleans or Philadelphia Mints and more than double that of the San Francisco Mint. This Gem example is nearly untuned and white, with a small accent of gold toning over Liberty's hair. Appealing and high-end for the grade. NGC ID# 253M, PCGS# 7080

- 4641 1878-CC MS65+ PCGS.** A high-end Gem, this piece exhibits sharply struck design features throughout, evidenced by strong definition in the hair at Liberty's ear and on the eagle's breast feathers. The surfaces are bright and virtually free of toning, aside from a couple of faint spots on the obverse. NGC ID# 253M, PCGS# 7080

4642 1878-CC MS63 Deep Mirror Prooflike PCGS. Dazzling field reflectivity and a precise strike ensure the eye appeal of this carefully preserved Carson City dollar. The obverse is brilliant and the reverse displays light tan-gold toning. NGC ID# 253M, PCGS# 97081

4643 1879 MS66 PCGS Secure. An outstanding example, this Premium Gem exhibits tremendous eye appeal, due in part to lustrous, virtually untuned surfaces. The strike is sharp, even at the extreme centers. Only 3 examples have achieved higher grades from PCGS (3/14). *From The Northern Lights Collection.* NGC ID# 253S, PCGS# 7084

4644 1879 MS64 Deep Mirror Prooflike PCGS Secure. CAC. Ex: Key West Collection. A near-Gem example exhibiting Deep Mirror Prooflike surfaces, this sharply struck and beautifully preserved piece has lovely eye appeal. Even the extreme centers reveal strong detail. Minor marks and grazes held this coin from a higher grade, though they do not pose a distraction. Population: 67 in 64 (1 in 64+) Deep Mirror Prooflike, 9 finer (3/14). NGC ID# 253S, PCGS# 97085

**1879-CC Silver Dollar, MS63
Shimmering, Satiny Luster**

4645 1879-CC MS63 PCGS. The surfaces on this key-date Morgan dollar are virtually untuned with shimmering, satiny luster a bit more lively on the obverse. The fields are especially smooth for a Select example, but a cluster of facial abrasions and a reeding mark on Liberty's brow contribute to the overall grade. *Ex: Central States Signature (Heritage, 5/2004), lot 8181.* NGC ID# 253T, PCGS# 7086

4646 1879-CC Capped Die — Cleaned — ANACS. Unc. Details, Net MS60. VAM-3. A Top 100 Variety. Light die chipping around the mintmark identifies this scarce variety. Vibrant mint luster blankets both sides of this Carson City Morgan, while amber-gold peripheries surround fully brilliant centers. Extreme scrutiny is required to detect any signs of cleaning, as the surfaces display a frosty, fresh appearance. NGC ID# 253T, PCGS# 7088

**1879-CC Morgan Dollar, MS60
Reflective VAM-3 Example**

4647 1879-CC Capped Die MS60 NGC. VAM-3. A Top 100 Variety. Though not designated as such, this Mint State coin has the appearance of a prooflike coin, with intensely mirrored fields and well-frosted devices on both sides. Numerous scattered abrasions appear on the sharply struck surfaces, accounting for the grade. *Ex: ANA Boston (Heritage, 8/2010), lot 5225.* NGC ID# 253T, PCGS# 7088

**1879-CC VAM-3 Dollar, MS63
Capped Die**

4648 1879-CC Capped Die MS63 PCGS. VAM-3. A Top 100 Variety. The so-called Capped Die variety is a Large over Small Mintmark variety with intentional die chipping that was meant to remove the previous mintmark. This brilliant Select Mint State example is an ideal collecting grade, combining quality and price. Both sides are brilliant, lustrous, sharp, and untuned. NGC ID# 253T, PCGS# 7088

**1879-CC Morgan Dollar, MS63
VAM-3, Capped Die Variety**

4649 1879-CC Capped Die MS63 PCGS. VAM-3. A Top 100 Variety. Magnificently patinated on both sides. The obverse is bathed in lavender, ocean-blue, and butter-gold. The reverse displays peach-gold, aquamarine, and lilac toning. Satiny and nicely struck with the expected number of small marks. The 1879-CC is a much better Carson City date, and the "Capped Die" repunched mintmark constitutes a minority of the issue. NGC ID# 253T, PCGS# 7088

**1879-CC Capped Die Morgan, MS64
Top-Notch Eye Appeal, Seldom Seen Finer**

4650 1879-CC Capped Die MS64 PCGS. VAM-3. A Top 100 Variety. This near-Gem 1879-CC offers satin surfaces with thoroughgoing cartwheel luster and top-notch eye appeal. a couple of diagonal cuts on the eagle's breast are perhaps all that preclude an even finer grade. The curious "Capped Die" moniker persists, but we know this variety is actually a Large CC over Small CC, with attempted repair marks from the mint engraver. Seldom seen in finer grades. PCGS has seen 17 in 64+ and 12 finer (3/14). NGC ID# 253T, PCGS# 7088

**1879-O Dollar, MS65
Outstanding Eye Appeal**

- 4651 1879-O MS65 PCGS.** A lustrous Gem representative with outstanding visual appeal, this Morgan dollar exhibits a sharp strike. Other than a few small splashes of golden-yellow color in the right obverse field, this piece is virtually untuned. The 1879-O Morgan is popular with collectors as the inaugural O-mint issue of the type after a 19-year hiatus in the production of Silver Dollars. PCGS has awarded higher numeric grades to a mere 15 examples (2/14). NGC ID# 253V, PCGS# 7090

- 4652 1879-O MS63 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. The first year of issue from the New Orleans Mint. The frosty design elements contrast nicely with the mirror surfaces. Only some scattered contact marks keep this specimen from being assigned a higher grade. Scarce in Select Uncirculated Deep Mirror Prooflike. NGC ID# 253V, PCGS# 97091

- 4653 1879-S Reverse of 1878 MS64 PCGS. CAC.** The ever-popular Reverse of 1878 variant, offered here as a shining, mostly brilliant near-Gem. Some small abrasions are present, as the grade suggests, but hardly interrupt the frosty luster.
Ex: *FUN Signature* (Heritage, 1/2010), lot 2820. NGC ID# 253W, PCGS# 7094

**1879-S Reverse of 1878 Dollar, MS65
Lovely, Lightly Toned Example**

- 4654 1879-S Reverse of 1878 MS65 PCGS.** Only a small percentage of the 1879-S Morgan dollars showed the old-style Reverse of 1878 with parallel top feather on the fletchings and the flat eagle's breast. This lovely Gem boasts peripheral patina in shades of jade and saffron, with central pinkish-copper hues. Scattered contact marks are few, and the strike is solid save for minor weakness on the lower wreath on the reverse. Population: 51 in 65, 1 finer (3/14). NGC ID# 253W, PCGS# 7094

**1879-S Morgan, MS64 Prooflike
Reverse of 1878**

- 4655 1879-S Reverse of 1878 MS64 Prooflike PCGS. CAC. VAM-6.** A Top 100 Variety. The upper serif is missing on the R in TRUST, forming instead TIUST. A stone-white and strongly mirrored Choice Morgan dollar from the elusive Second Reverse subtype. Fully struck with frosty motifs and good cameo contrast, particularly on the reverse. Light, grade-defining abrasions are seen on the cheek, but are not overly detracting. Population: 8 in 64 Prooflike, 0 finer (3/14). NGC ID# 253W, PCGS# 7095

**1879-S Dollar, MS68
Frosty and Top-Notch**

- 4656 1879-S MS68 PCGS.** Simply put, this piece is one of the finest certified examples of the 1879-S, one of the early S-mint issues in the Morgan dollar series generally acknowledged to be among the best-produced. This pristine example is eloquent testimony, showing essentially a full strike over frosty surfaces that are untuned except for light rose accents near the rims front and back. Population: 92 in 68 (3 in 68+), 0 finer (3/14).
From *The Northern Lights Collection*. NGC ID# 253X, PCGS# 7092

**1879-S Silver Dollar, MS68
Tied for Finest Certified**

- 4657 1879-S MS68 NGC.** The Bland-Allison Act resulted in extraordinarily high silver dollar production, beginning in 1878. In the first five years under that legislation, the San Francisco Mint coined just under 50 million silver dollars. Nearly all of those coins remained in government vaults, in San Francisco and later in Washington, D.C., and many survived in high grades, such as this Superb Gem. Neither NGC nor PCGS has certified a finer piece (3/14). This brilliant, untuned example has highly lustrous silver surfaces with reflective fields and satiny devices. NGC ID# 253X, PCGS# 7092

**1879-S Morgan Dollar, MS68
Magnificently Preserved Example**

4658 1879-S MS68 PCGS. CAC. A fully struck and magnificently preserved Superb Gem. The beautifully clean surfaces are snow-white and intensely lustrous, with a bold cartwheel sheen across each side. The 1879-S is within a run of available San Francisco issues, but, like most Morgan dollars, it is conditionally rare at the MS68 level. In fact, neither PCGS nor NGC have assigned a higher numerical grade to any example of this date and mint (3/14).
Ex: Dallas Signature Sale (Heritage, 12/2005), lot 2281. NGC ID# 253X, PCGS# 7092

4659 1880 MS66 PCGS. This sharply detailed Premium Gem displays vivid shades of violet and golden-brown toning on both sides. The well-preserved surfaces radiate vibrant mint luster underneath the patina and eye appeal is outstanding. PCGS has graded no numerically finer examples (3/14). NGC ID# 253Y, PCGS# 7096

4660 1880 MS66 PCGS. Readily obtainable in lower grades, the 1880 Morgan dollar becomes incredibly elusive in Premium Gem condition. The present example displays fully brilliant, heavily frosted luster, with sharply struck design elements. The surfaces are beautifully preserved, with Liberty's cheek virtually undisturbed. PCGS has graded no numerically finer representatives (3/14). NGC ID# 253Y, PCGS# 7096

**1880 Morgan Dollar, MS66+
Clashed Dies**

4661 1880 MS66+ PCGS. Clash marks are visible at the usual places, including Liberty's chin and lips, on both sides of this Premium Gem, perhaps allowing the specialist to cherry-pick a rare VAM variety. This example has frosty silver luster and untuned surfaces with excellent eye appeal. It is tied for the finest that PCGS has certified (3/14). NGC ID# 253Y, PCGS# 7096

**1880 Dollar, MS65 Deep Mirror Prooflike
Flashy and Well-Preserved**

4662 1880 MS65 Deep Mirror Prooflike PCGS. *Ex: Key West Collection.* Flashy surfaces are ice-white and thoroughly contrasted front and back, showing looking-glass fields and frosted devices. Liberty's cheek is nice and clean, and the preservation is excellent overall. This high-mintage issue is nonetheless seldom seen in Deep Mirror Prooflike. Population: 32 in 65 Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 253Y, PCGS# 97097

4663 1880-CC MS66 PCGS. *Ex: Ray George.* A narrow crescent of deep amber and iridescent ice-blue graces the left obverse border, with frosty, light golden luster overall. Close examination reveals a few faint grazes over the obverse surfaces, but they do not detract from this piece's visual appeal. PCGS has awarded higher numeric grades to only 29 pieces (3/14).
Ex: FUN Signature (Heritage, 1/2007), lot 6908. NGC ID# 2542, PCGS# 7100

4664 1880-CC MS66 PCGS. CAC. Elusive any finer. This Premium Gem Carson City Morgan displays thick, frosty mint luster with just a tint of light golden developing on each side. Only a few minuscule grazes preclude an even higher grade. A well-struck CAC-approved example. NGC ID# 2542, PCGS# 7100

**1880-CC Dollar, MS64 Deep Mirror Prooflike
Boldly Contrasted Example**

4665 1880-CC MS64 Deep Mirror Prooflike PCGS. *Ex: Key West Collection.* The brilliant silvery fields provide bold field-device contrast with the sharply detailed frosty design elements. The well-preserved surfaces show an occasional mark that prevents a Gem designation. Population: 64 in 64 (1 in 64+) Deep Mirror Prooflike, 27 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2009), lot 1700. NGC ID# 2542, PCGS# 97101

**1880-CC Morgan, MS65 Deep Mirror Prooflike
Strong Cameo Contrast**

4666 1880-CC MS65 Deep Mirror Prooflike PCGS. Well-represented in the GSA sales of the late 1970s and early 1980s, 1880-CC Morgan dollars are readily available, even in Gem grades. However, in high-grade Deep Mirror Prooflike its another story entirely; Gems are rare, and finer pieces are virtually unobtainable. This beautifully preserved Gem displays deep mirroring in the fields and heavily frosted devices. Nearly untuned, this sharply struck representative exhibits light amber-gold toning around the peripheries. Population: 25 in 65 (1 in 65+) Deep Mirror Prooflike, 2 finer (3/14). NGC ID# 2542, PCGS# 97101

4667 1880/79-CC Reverse of 1878 MS64 NGC. VAM-4. A Top 100 Variety. The overdate is clearly visible. Frosty, minimally abraded surfaces complement a full strike and pleasing luster. Mainly brilliant with just a faint blush of golden toning on both sides. NGC ID# 253Z, PCGS# 7108

4668 1880/79-CC Reverse of 1878 MS64 Prooflike PCGS. CAC. VAM-4. A Top 100 Variety. Exemplary white-on-black cameo contrast increases the appeal of the present boldly struck Choice Carson City overdate. A loupe reveals infrequent moderate marks. NGC ID# 253Z, PCGS# 7109

**1880/79-CC Morgan, MS65 Prooflike
Full Cameo Contrast**

4669 1880/79-CC Reverse of 1878 MS65 Prooflike PCGS. CAC. VAM-4. A Top 100 Variety. The undertype is plainly visible inside the second 8 and the 0 of the date. A popular variety that is scarcely encountered with prooflike fields. This Gem example displays heavily frosted devices set against deep mirroring in the fields. Rich blue and violet peripheral toning frames fully brilliant centers on this sharply struck Carson City dollar. This coin must have just missed a Deep Mirror Prooflike designation. Population: 10 in 65 Prooflike, 1 finer (3/14). NGC ID# 253Z, PCGS# 7109

**1880/79-CC Morgan Dollar
MS64 Deep Mirror Prooflike**

4670 1880/79-CC Reverse of 1878 MS64 Deep Mirror Prooflike PCGS. CAC. VAM-4. A Top 100 Variety. A popular, clearly visible overdate. This variety is usually available in most grades, but not with a Deep Mirror Prooflike designation. This piece exhibits strong cameo contrast with heavily frosted devices amid deeply mirrored fields. The surfaces exhibit scattered, light, grade-limiting grazes, but the visual appeal is balanced by a needle-sharp strike. Just a tint of golden peripheral toning surrounds otherwise brilliant luster. Population: 17 in 64 Deep Mirror Prooflike, 3 finer (3/14). NGC ID# 253Z, PCGS# 97109

**1880-CC 8 Over High 7 Dollar, MS66
Popular VAM-5 Top 100 Variety**

4671 1880-CC 8 Over High 7 MS66 PCGS. CAC. VAM-5. A Top 100 Variety. Frosty silver-white surfaces show splendid luster and an absence of perceptible patina throughout both sides. The CAC endorsement lends added cachet. Excellent eye appeal for this untuned, popular overdate VAM variety. Population: 76 in 66 (12 in 66+), 7 finer (2/14). PCGS# 7102

**1880-CC Dollar, MS66+
VAM-5, 8 Over High 7**

4672 1880-CC 8 Over High 7 MS66+ PCGS. CAC. VAM-5. A Top 100 Variety. An extremely popular overdate variety, the 7 is clearly visible in the upper loop of the second 8 on this Premium Gem. Both sides have reflective fields and lustrous devices, although beneath an impressive display of gold and iridescent toning. Population: 77 in 66 (12 in 66+), 7 finer (3/14). PCGS# 7102

1880-CC VAM-5 8 Over High 7 Dollar
MS65 Deep Mirror Prooflike

- 4673** 1880-CC 8 Over High 7 MS65 Deep Mirror Prooflike PCGS. VAM-5. A Top 100 Variety. Ex: Key West Collection. The second 8 is repunched over a high 7. The reverse die is easily spotted due to the vertical die line connecting the fletchings with the olive stem above. This bright, silver-white example is untuned and markedly contrasted throughout, a great-looking example of this popular Carson City VAM variety. PCGS# 97103

1880-CC Morgan, MS65 Prooflike
8 Over Low 7

- 4674** 1880-CC 8 Over Low 7 MS65 Prooflike PCGS. CAC. VAM-6. A Top 100 Variety. The underdigit is easily seen beneath the second 8 in the date. Like many VAM varieties, the 8 over low 7 variety is scarcely seen with prooflike fields. This fully brilliant representative boasts moderate mirroring in the fields and heavily frosted devices. The motifs are sharply struck, and only a few faint surface grazes preclude an even finer grade. Population: 23 in 65 Prooflike, 2 finer (3/14). PCGS# 7105

1880-CC VAM-6 Morgan, MS66 Prooflike
Top 100 Variety, 8 Over Low 7

- 4675** 1880-CC 8 Over Low 7 MS66 Prooflike PCGS. VAM-6. A Top 100 Variety. Although the VAM-6 is not a rare variety, it is extremely popular as one of the two clearest overdates in the Morgan dollar series. The 7 is almost entirely visible inside both loops of the second 8. This impressive Premium Gem has a gold strike and brilliant, untuned silver surfaces. The fields are fully mirrored around frosty and highly lustrous devices. An exceptional example. Population: 2 in 66 Prooflike, 0 finer (3/14). PCGS# 7105

1880-CC VAM-6 Dollar, MS64 Deep Mirror Prooflike
8 Over Low 7; Top 100 Variety

- 4676** 1880-CC 8 Over Low 7 MS64 Deep Mirror Prooflike PCGS. CAC. VAM-6. A Top 100 Variety. This impressive Carson City dollar has strongly reflective fields and light golden-brown peripheral toning. The devices are crisply struck for the issue, and there are no distracting marks. The major devices display consistent light frost that provides noticeable cameo contrast. Ex: Dallas Signature Sale (7/2006), lot 2752. PCGS# 97105

- 4677** 1880-O MS64 NGC. Attractive toning appears on the obverse, while the reverse is largely free of toning. The intermingled colors on the obverse include attractive shades of gold, orange, and aquamarine. Aside from the extreme centers, the strike is sharp. Scattered marks, though not severe, limited the grade. Only 30 examples submitted to NGC have achieved a Gem grade or higher (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2543, PCGS# 7114

- 4678** 1880-O MS64 PCGS. Rarely encountered finer. Frosty, light golden luster blankets both sides of this well-struck, O-mint Morgan. Only a few faint grazes preclude full Gem status, with overall excellent eye appeal. PCGS has seen only 35 numerically finer submissions (3/14). NGC ID# 2543, PCGS# 7114

- 4679** 1880-O MS64 PCGS. VAM-21. A Hot 50 Variety. Micro O. A Checkmark VAM with minute die doubling on each side and an interesting die scratch on Liberty's eye. Medium autumn-brown and navy-blue patina clings to the margins of this lustrous and nicely struck near-Gem.
Ex: Dallas Signature (Heritage, 11/2007), lot 1055, which realized \$1,265. NGC ID# 2543, PCGS# 7114

- 4680** 1880-O MS64 PCGS. Ex: Larry Shapiro. Medium O. Wisps of golden-tan preclude full brilliance, but this crisply struck and lustrous near-Gem is splendidly preserved aside from a solitary graze on the left obverse field.
Ex: Dallas Signature (Heritage, 11/2007), lot 1059. NGC ID# 2543, PCGS# 7114

- 4681** 1880-O MS64 NGC. Small or micro O. Brilliant and highly lustrous with a good strike and pleasing preservation. An attractive near-Gem example of this conditionally scarce issue.
Ex: Long Beach Signature (Heritage, 9/2006), lot 4995. NGC ID# 2543, PCGS# 7114

**1880-O Morgan Dollar, MS64+
Possible New VAM**

4682 1880-O MS64+ PCGS. We have been unable to locate this variety in the VAM references. In addition to the distinctive Oval O mintmark, the reverse has a short, horizontal die scratch, resembling a short spear, from the base of the eagle's lower beak. This brilliant near-Gem has exceptional luster and untuned silver surfaces. A highly attractive dollar that may prove to be a prize for the specialist. NGC ID# 2543, PCGS# 7114

4683 1880-O MS64 PCGS. CAC. Relatively obtainable in lower grades, the 1880-O Morgan quickly becomes rare at the Gem grade level. This CAC-approved near-Gem reveals only a few light, scattered grazes upon close examination, with largely unbroken luster. Sharply struck and high-end for the grade. NGC ID# 2543, PCGS# 7114

4684 1880-O MS64 PCGS. CAC. Relatively few bags of this New Orleans date were part of the Treasury releases in the 1940s through the 1960s, meaning most of the production circulated shortly after mintage. As a result, the issue is common in lower grades but rare in any finer grade than MS64, with high-quality coins always in demand. This example is attractive — frosty and lustrous — with a sharp strike except for minor softness over Liberty's ear. Widely scattered light abrasions do not detract from the appeal of this untuned, brilliant-white near-Gem. NGC ID# 2543, PCGS# 7114

**1880/79-O Morgan Silver Dollar VAM-4
MS64 Prooflike**

4685 1880/79-O MS64 Prooflike PCGS. VAM-4. Ex: Key West Collection. A Top 100 Variety. The top of the 7 is visible inside the upper loop of the second 8 on this variety, with a Micro O mintmark on the reverse. This example is an impressive near-Gem prooflike dollar with brilliant silver surfaces. Fully mirrored fields contrast nicely with the frosty devices. Population: 14 in 64 Prooflike, 0 finer (3/14). PCGS# 7117

4686 1880/79-O MS63 Deep Mirror Prooflike PCGS. VAM-4. A Top 100 Variety. Small or Micro O. Even a quick glance at this Select specimen confirms the Deep Mirror Prooflike designation. In addition, this is an example of the VAM-4 variety, with a crossbar 80/79 overdate. A number of scattered marks held this attractive coin from a higher grade. Population: 12 in 63 (2 in 63+) Deep Mirror Prooflike, 3 finer (3/14). PCGS# 97117

4687 1880-S MS67 PCGS. Medium S. Remarkable bands of cherry-red, lemon-gold, jade-green, and powder-blue illuminate the right obverse. The right reverse margin has slender but nonetheless attractive arcs of golden-tan, ice-blue, and lilac-red. NGC ID# 2544, PCGS# 7118

4688 1880-S MS67+ NGC. CAC. A magnificent arc of sky-blue, apricot-gold, ruby-red, and apple-green endows the left obverse margin. Fully struck and highly lustrous with minimal contact. The Large S mintmark is lightly repunched on its upper serif. NGC ID# 2544, PCGS# 7118

4689 1880-S MS67+ PCGS. CAC. Large S. Potent cartwheel luster and gorgeous silver-white surfaces provide this high-end Superb Gem with exceptional visual appeal. In addition, the strike is sharp. The few scattered marks and grazes present do not detract from the desirability of this piece. NGC ID# 2544, PCGS# 7118

**1880-S Silver Dollar, MS68
Undesignated Prooflike Example**

4690 1880-S MS68 NGC. Large S. A prooflike example, although without any designation on the holder, this piece has brilliant silver surfaces with fully mirrored fields and exceptional, frosty devices. There is no toning on either side of this Superb Gem. The 1880-S is the ideal candidate for a type collection, with examples available in all Mint State grades up to MS69. NGC and PCGS have each certified five submissions in that finer grade (3/14). NGC ID# 2544, PCGS# 7118

**1880/9-S Morgan, MS66 Deep Mirror Prooflike
Bold Cameo Contrast**

4691 1880/9-S MS66 Deep Mirror Prooflike PCGS. CAC. VAM-11. A Hot 50 Variety. The undertype is clearly visible inside the upper loop of the 0 in the date. This popular variety is easily found in high grade, but not with the Deep Mirror Prooflike designation. Incredibly deep mirroring and heavily frosted devices deliver exceptional visual appeal on this Premium Gem representative. Only a few faint grazes disturb the light gold-tinted luster, while the design elements exhibit sharp overall definition. Population: 9 in 66 (1 in 66+) Deep Mirror Prooflike, 1 finer (3/14). PCGS# 97123

4692 1881 MS66 PCGS. Despite President Chester Arthur's comment in 1881 that "the minting of silver dollars is unnecessary," the Philadelphia Mint produced more than 9 million of them for the year. Today, it is scarce in Premium Gem condition and rare any finer. This brilliant-white MS66 example is lustrous and sharp. Only a few tiny marks are present. Just seven numerically higher examples are certified by PCGS and NGC combined (3/14). NGC ID# 2546, PCGS# 7124

- 4693 1881 MS66 PCGS.** Delicate frost highlights the central devices and lightly covers the fields. Strong detail is present, while the surfaces exhibit only a trace of light golden patina over silvery-white cartwheel luster. PCGS has graded only three numerically finer examples (3/14). NGC ID# 2546, PCGS# 7124

**1881 Dollar, Conditionally Scarce MS66+
Above-Average Strike and Luster**

- 4694 1881 MS66+ PCGS.** The 1881 Morgan dollar was struck in large numbers (9.163 million pieces), and the certification services have graded several thousand examples through Gem condition. The population declines precipitously in MS66 where the date becomes very scarce. While this issue is often weakly struck and lusterless, this high-end Premium Gem is well-defined, though the centers are not full, as is typical. Both sides yield pleasing luster and are nicely preserved. Whispers of russet and cobalt-blue cling to the obverse margin. NGC ID# 2546, PCGS# 7124

**1881 Morgan Dollar, MS66+
Only Three Finer at PCGS**

- 4695 1881 MS66+ PCGS. CAC.** More than 9 million silver dollars were struck in 1881 at the Philadelphia Mint, and typical survivors grade about MS63. This substantially finer example, an impressive Premium Gem, marks the finest grade generally available, as PCGS has only certified three better pieces (3/14). An exceptional dollar, this piece has frosty silver surfaces with brilliant mint surfaces and no toning on either side. NGC ID# 2546, PCGS# 7124
- 4696 1881-CC MS66 PCGS.** Sharply struck and lustrous, this Premium Gem displays silver-white surfaces with only the most subtle hint of toning. The 1881-CC dollar, despite being a low-mintage issue of 296,000 pieces, is plentiful in Mint State due to the dispersal of former Treasury holdings in the 1950s to 1970s. NGC ID# 2547, PCGS# 7126
- 4697 1881-CC MS66 NGC. CAC. VAM-2.** Though undesignated on the holder, this is an example of VAM-2, with a doubled 88. Silver-white surfaces and strong luster are among the attributes this wonderful specimen possesses. A few minute flecks of tan toning appear on the reverse. The surfaces reveal few marks, all minuscule.
From The Northern Lights Collection. NGC ID# 2547, PCGS# 7126

1881-CC Morgan, Frosty MS67

- 4698 1881-CC MS67 NGC.** This frosty Superb Gem 1881-CC dollar displays whispers of light tan. The design elements are well brought up and include nice definition in the hair over Liberty's ear and on the eagle's breast feathers. Well-preserved surfaces reveal a few minor luster grazes on Liberty's cheek and neck and in the left obverse field. A couple of small rim bruises above the first T of STATES are mentioned for accuracy. NGC has seen only four examples numerically finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2006), lot 2255. NGC ID# 2547, PCGS# 7126

**1881-CC Silver Dollar, MS67+
Only Four Finer at NGC**

- 4699 1881-CC MS67+ NGC. CAC.** This amazing Superb Gem Carson City Morgan silver dollar has fully brilliant and untuned silver surfaces with impressive luster. The fields are reflective and nearly prooflike, while the devices are frosty and sharply detailed. An exceptional dollar. NGC has only certified four finer examples (3/14). NGC ID# 2547, PCGS# 7126

**1881-CC Morgan Dollar, MS65
Gorgeous Deep Mirror Prooflike Example**

- 4700 1881-CC MS65 Deep Mirror Prooflike PCGS.** Cartwheel luster is among the attributes this impressive Gem displays. The strike is sharp, including at the centers, adding significantly to the appeal of this specimen. The two tiny marks on Liberty's cheek are not distracting. The number of examples with the Deep Mirror Prooflike designation drops significantly above the Gem level, with only 53 pieces having achieved grades of MS66 or higher (2/14). NGC ID# 2547, PCGS# 97127

**1881-CC Morgan Dollar
MS66 Ultra Deep Mirror Prooflike**

- 4701 1881-CC MS66 Deep Mirror Prooflike ANACS.** Both sides of this incredibly attractive Morgan dollar exhibit deeply mirrored silver surfaces with highly lustrous devices. The contrast is most impressive. Peripheral gold, blue, and violet toning enhance the eye appeal. ANACS has certified this single MS66 Ultra Deep Mirror prooflike example, with one finer piece that is a VAM variation. PCGS and NGC have combined to certify 67 MS66 DMPL or DPL graded pieces, with three finer (3/14).
Reportedly once from the Bill Lower Collection of U.S. Morgan and Peace Dollars. NGC ID# 2547, PCGS# 97127

- 4702 1881-O MS65 PCGS.** A virtually brilliant and crisply struck New Orleans Gem whose potent luster and pleasing preservation ensure imposing eye appeal.
Ex: Dallas Signature (Heritage, 11/2007), lot 1085, which realized \$1,955. NGC ID# 2548, PCGS# 7128

- 4703 1881-O MS65 PCGS. CAC.** Just one notch up on the grading scale and this New Orleans date is 10 times more expensive, suggesting a brilliant, silver-white Gem like this coin is a more prudent choice. A wonderful, bold strike and brilliant silver luster cover unmarked, smooth fields. High-end for the grade, and CAC-Approved for quality and appeal. NGC ID# 2548, PCGS# 7128

- 4704 1881-O MS64 Deep Mirror Prooflike PCGS. CAC.** As designated on the holder, this near-Gem displays Deep Mirror Prooflike surfaces. A sharp strike and virtually untuned surfaces add to the eye appeal. A couple of as-made strike-throughs are present on the obverse. PCGS has awarded higher numeric grades to only 13 examples with the DMPL designation (3/14). NGC ID# 2548, PCGS# 97129

- 4705 1881-O MS64+ Deep Mirror Prooflike PCGS. CAC.** Heavily frosted relief elements and fully mirrored fields deliver outstanding black-on-white cameo contrast. Sharply struck with fully brilliant, vibrant luster. Only a few minuscule grazes keep this Plus-graded Morgan from full Gem status. PCGS has awarded Deep Mirror Prooflike designations to just 13 numerically finer specimens (3/14). NGC ID# 2548, PCGS# 97129

- 4706 1881-S MS66 ★ NGC.** Deep magenta, teal-blue, and greenish-gold hues blanket the obverse of this Premium Gem, while the reverse displays a rainbow periphery surrounding a light golden center. The strike is full, with well-preserved surfaces and frosty luster beneath the patina. NGC ID# 2549, PCGS# 7130

- 4707 1881-S MS66 NGC. CAC.** An outstanding Premium Gem example. Vibrant hues of turquoise, violet, gold, and lemon-yellow cover the entire obverse, while the reverse displays mainly brilliant luster with a light golden periphery. Well-preserved surfaces show no detracting abrasions, and the strike is razor-sharp. CAC-approved in a prior NGC holder. NGC ID# 2549, PCGS# 7130

- 4708 1881-S MS67 ★ NGC.** An incredible array of vibrant royal-blue, green, violet, gold, and champagne hues adorn the entire obverse and surround the reverse periphery. The underlying surfaces are beautifully preserved, with Liberty's cheek virtually pristine. Highly lustrous with heavy frost that covers the patina, and a needle-sharp strike on both sides. A nearly perfect Superb Gem. NGC ID# 2549, PCGS# 7130

**1881-S Dollar, Exceptional MS68
Just Two Coins Numerically Finer by PCGS**

- 4709 1881-S MS68 PCGS.** The surfaces are nearly untuned, save for a whisper of smoke-gray and golden patina. Only a single small, shallow tick appears on Liberty's otherwise-pristine cheek, and the strike is predictably full, underlining why the 1881-S is the ultimate Morgan dollar type coin. Certified in a green-label holder. Just two examples are certified numerically finer by PCGS and none by NGC (2/14).
Ex: Orlando FUN Signature (Heritage, 7/2011), lot 3999 where it realized \$3,220.00. NGC ID# 2549, PCGS# 7130

**1881-S Morgan Dollar, MS68 ★
Spectacular Type Coin**

- 4710 1881-S MS68 ★ NGC.** The 1881-S is one of the most available issues of the Morgan dollar series in high grade, and the date is always popular with type collectors. This magnificent MS68 ★ specimen is sharply detailed throughout and the vibrant mint luster is mixed with prooflike reflectivity in selected areas. NGC has graded no numerically finer examples (3/14).
From The Northern Lights Collection. NGC ID# 2549, PCGS# 7130

- 4711 1882 MS66 PCGS.** This Premium Gem representative displays frosty, fully brilliant luster on both sides, with well-preserved surfaces. The strike is razor-sharp, with the eagle's talons and the hair above Liberty's ear well-defined. PCGS has graded just seven numerically finer examples (2/14). NGC ID# 254A, PCGS# 7132

- 4712 1882 MS66 PCGS.** Cartwheel luster and gorgeous silver-white surfaces provide this Premium Gem with exceptional visual appeal. The strike is sharp other than the extreme centers. Aside from a few hair thin marks near 2 o'clock on the obverse, the coin is largely free of signs of contact. PCGS has awarded higher numeric grades to only 7 examples (3/14). NGC ID# 254A, PCGS# 7132

- 4713 1882 MS66+ PCGS.** Cartwheel luster beams brightly from both sides of this Premium Gem dollar. Thickly frosted surfaces show only the most minor marks, with none to distract from the high-end appeal of this untuned and brilliant-white example. Although MS66 representatives of this date are often available, few receive the Plus designation from PCGS indicating superior quality and appeal. Just seven examples are certified numerically higher by PCGS (3/14). NGC ID# 254A, PCGS# 7132

**1882 Morgan Dollar, MS66+
Lustrous Silver-White Surfaces**

- 4714 1882 MS66+ PCGS. CAC.** Gorgeous silver-white surfaces and cartwheel luster are among the attributes this high-end Premium Gem specimen possesses. This beautifully preserved piece displays tremendous eye appeal. The strike is sharp aside from the extreme centers and the surfaces reveal few signs of contact, all minor. A tiny luster break appears near OF on the reverse. Population: 17 in 66+, 7 finer (3/14). NGC ID# 254A, PCGS# 7132

**1882 Morgan Silver Dollar
MS65 Deep Mirror Prooflike**

- 4715 1882 MS65 Deep Mirror Prooflike PCGS. Ex:** Key West Collection. The sharply defined, satiny devices contrast nicely with the deeply mirrored fields of this Gem Morgan dollar. Rarely is this date found so fine, with only one numerically finer DMPL example at PCGS, and none at NGC. Population: 22 in 65 (1 in 65+) Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 254A, PCGS# 97133
- 4716 1882-CC Doubled 882, Stage Three MS66 NGC. VAM-2B.** A Hit List 40 Variety. The doubling in the date numerals is clear with low-power magnification. The surfaces are beautifully preserved with brilliant, frosty luster blanketing both sides. A razor-sharp strike only adds to the eye appeal of this Premium Gem Morgan dollar. NGC ID# 254B, PCGS# 7134
- 4717 1882-CC MS66 PCGS.** This Premium Gem showcases a needle-sharp strike with fantastic, frosty luster. A dramatic rainbow crescent graces the obverse from 9 to 1 o'clock, and overlaps to the corresponding rim on the reverse. A beautiful, well-preserved Carson City Morgan dollar. NGC ID# 254B, PCGS# 7134
- 4718 1882-CC MS66 PCGS.** The majority of this Premium Gem example retains silver-white surfaces, with the obverse revealing light toning at the upper right. The reverse includes a swath of color at the left portion. The toning includes hues of golden-brown, plum, teal, and frosty yellow. A tiny spot of struck-in grease appears in Liberty's hair. Only 67 examples have achieved higher numeric grades from PCGS (2/14). NGC ID# 254B, PCGS# 7134
- 4719 1882-CC MS66 PCGS.** Rich luster and silver-white surfaces provide this Premium Gem with strong eye appeal. In addition, the coin exhibits a sharp strike. The few minor grazes present do not detract from the appearance of this pleasing piece. NGC ID# 254B, PCGS# 7134
- 4720 1882-CC MS66+ PCGS. CAC.** A minimally marked, high-end Premium Gem, this coin exhibits frosty luster and appealing silver-white surfaces. The level of design detail is strong, even at the extreme centers, adding to the appeal of this wonderful piece. *From The Northern Lights Collection.* NGC ID# 254B, PCGS# 7134

- 4721 1882-CC MS66+ PCGS. CAC.** Virtually untuned surfaces and frosty luster combine to provide this high-end Premium Gem with strong eye appeal. Although a VAM number is not listed on the holder, this piece possesses a number of characteristics, including a doubled lip, break cap back, areas of clash marks, and only the right CC being clear. Very few marks are present, all minuscule. NGC ID# 254B, PCGS# 7134

**1882-CC Morgan Dollar, MS67
None Numerically Finer at NGC**

- 4722 1882-CC MS67 NGC.** Sharply struck, this Superb Gem specimen displays a strong degree of design detail. Areas of toning are present, primarily on the obverse, including shades of gold and golden-brown. A couple of minor marks appear on the obverse rim. Census: 57 in 67 (4 in 67 ★), 0 finer (3/14). NGC ID# 254B, PCGS# 7134

**1882-CC Silver Dollar, MS67
Technically and Visually Superb**

- 4723 1882-CC MS67 NGC.** Thickly piled mint frost draws attention to the bold strike on Liberty's hair strands, and the boldness is pervasive throughout the devices of this brilliant-white Carson City dollar. A condition rarity in Superb Gem and virtually unavailable any finer, this exceptional dollar represents the pinnacle of technical and visual appeal. A single, numerically finer example has been certified by PCGS, but none numerically finer by NGC. Census: 57 in 67 (4 in 67 ★), 0 finer (3/14). NGC ID# 254B, PCGS# 7134
- 4724 1882-O MS65 Prooflike NGC.** Readily available in most grade levels, the 1882-O dollar becomes elusive in Prooflike Gem condition. The present example boasts deeply mirrored fields and heavily frosted devices. The luster is mainly brilliant, with just a hint of lemon-gold around the rims. Only a few light grazes preclude a higher grade. Census: 22 in 65 Prooflike, 0 finer (3/14). NGC ID# 254C, PCGS# 7137
- 4725 1882-O MS65 Prooflike PCGS.** This flashy Carson City Gem is close to brilliant but displays a few dollops of russet patina near the arrowheads. Well preserved save for a reed mark beneath the right (facing) wing. NGC ID# 254C, PCGS# 7137
- 4726 1882-O/S MS64+ NGC. VAM-4.** A Top 100 Variety. The "O/S Recessed" VAM. The crossbar of an undertype S is clearly visible inside the loop of the primary mintmark. This is a lovely untuned coin with satiny luster and boldly struck design motifs, save for an area of flatness on the upper left (facing) quadrant of the eagle's breast. A light coating of die rust nestles over obverse and reverse alike. NGC ID# 254D, PCGS# 7138

4727 1882-O/S MS64 PCGS. CAC. VAM-3. A Top 100 Variety. Attractively toned on both sides, this near-Gem exhibits a number of colors, among them yellow, gold, peach, pastel green, copper, and pale blue. Although not designated as such on the holder, this is an example of the “flush” O/S mintmark variety. Scattered abrasions are present, including a couple of hair thin marks on the obverse. The number of certified examples drops drastically beyond the MS64 level, with PCGS having awarded higher numeric grades to a mere 2 examples (3/14). NGC ID# 254D, PCGS# 7138

4728 1882-O/S Weak MS64+ PCGS. VAM-5. A Weak O/S example, this high-end near-Gem exhibits strong eye appeal. Though undesignated as such on the holder, this is an example of VAM-5 with the “broken” O/S mintmark. Flashy fields and virtually untuned surfaces are among the attributes this piece possesses along with a sharp strike. Population: 31 in 64 (2 in 64+), 2 finer (3/14). PCGS# 87138

**1882-S Morgan Dollar, MS68
Outstanding Surfaces and Eye Appeal**

4729 1882-S MS68 NGC. A ring of lemon-gold toning surrounds the bright, silver centers of this Superb Gem San Francisco dollar. The coin displays prooflike tendencies over its reflective surfaces, with a full strike in bold evidence on Liberty's hair and the eagle. Smooth and attractive, this exceptional example will be difficult to exceed since PCGS and NGC have not assigned a higher numeric grade to any others (3/14). NGC ID# 254F, PCGS# 7140

**1882-S Morgan, MS68 ★
Among the Finest Certified**

4730 1882-S MS68 ★ NGC. Known for vibrant luster and overall excellent eye appeal, 1882-S Morgan dollars are highly sought as type representatives. Awarded the Star designation by NGC, this spectacular Superb Gem showcases dazzling, frosty mint luster shining through vivid hues of iridescent green, violet, yellow-gold, and pastel-blue on the obverse and surrounded by light golden peripheral toning on the reverse. The strike is sharp and the surfaces are virtually undisturbed. None have graded finer at NGC or PCGS (3/14). NGC ID# 254F, PCGS# 7140

4731 1883 MS67 PCGS. Virtually untuned aside from a swath of yellow-gold toning at the lower reverse, this Superb Gem exhibits frosty luster and a sharp strike overall, with minor incompleteness at the centers. A number of wispy dies cracks are present. Struck from moderately rusted dies, as made. PCGS has assigned higher numeric grades to only 2 examples (3/14).
From The Northern Lights Collection. NGC ID# 254G, PCGS# 7142

4732 1883 MS67 PCGS. An extraordinary Superb Gem, this 1883 Morgan dollar exhibits frosty silver luster with untuned surfaces. A few hair strands over Liberty's ear are merged, but the balance of the design motifs on both sides are bold and fully struck. The surfaces are exceptional. Population: 98 in 67 (8 in 67+), 2 finer (2/14). NGC ID# 254G, PCGS# 7142

4733 1883-CC MS66+ PCGS. CAC. A high-end Premium Gem minted in Carson City, this piece exhibits cartwheel luster and attractive toning on the obverse. Among the colors present are gold, red, forest-green, teal, orange, and plum. Aside from a small swath of color at the periphery, the reverse is an appealing silver-white. A few scattered marks on the obverse pose little distraction, if any. NGC ID# 254H, PCGS# 7144

4734 1883-CC MS66+ PCGS. CAC. The obverse of this high-end Premium Gem displays appealing toning, while the reverse is virtually free of color. The hues include shades of golden-yellow, red-pink, sage-green, and forest-green. Close examination reveals a number of minor marks on Liberty's cheek, but the toning largely obscures them and they are not distracting. NGC ID# 254H, PCGS# 7144

**1883-CC Dollar, Untoned MS67
Blatant Cartwheel Luster**

4735 1883-CC MS67 PCGS. Untoned silver-white surfaces are close to pristine preservation throughout, with both sides radiating blatant cartwheel luster. The reverse, taken on its own, would likely rate a Prooflike designation, while the obverse fields are not quite sufficiently mirrored. Nonetheless a beautiful example of the issue, one not easily improved upon. PCGS has seen only five at the next grade level (3/14). NGC ID# 254H, PCGS# 7144

**1883-CC Morgan, MS67
Rarely Seen Finer**

4736 1883-CC MS67 PCGS. Readily available in lower Mint State grades, the 1883-CC Morgan becomes elusive at the Superb Gem level. This high-end representative displays vibrant cartwheel luster, with frosty brilliance on the reverse and deep amber-gold toning over much of the obverse. A well-struck example, with excellent surface preservation. PCGS has seen only five numerically finer specimens (3/14). NGC ID# 254H, PCGS# 7144

**1883-CC Morgan, MS67
Vibrant Multicolor Toning**

- 4737 1883-CC MS67 NGC.** Due to the Treasury releases of the early 1960s, the 1883-CC is a more obtainable issue from this mint in high grade, much to the delight of specialists. This is a beautiful Superb Gem example, with an essentially brilliant reverse and blended rainbow hues over the obverse. Sharply struck devices further complement excellent surface preservation. None have graded numerically finer at NGC (3/14). NGC ID# 254H, PCGS# 7144

**Superb Gem 1883-CC Silver Dollar
Seldom Seen Any Finer**

- 4738 1883-CC MS67 PCGS.** Courtesy of the GSA hoard, the 1883-CC is among the most available Carson City dollars in Mint State. However, it is not like the 1880-S dollar, which is plentiful at the MS67 level. In fact, Superb Gem 1883-CC dollars are few and far between, and the issue is virtually unobtainable any finer. The present magnificent piece is separated from perfection by only the faintest contact on the cheek and neck. Just five examples are certified numerically finer by PCGS and none by NGC (2/14).
Ex: Dallas Signature (Heritage, 12/2005), lot 2350; Orlando FUN Signature (Heritage, 7/2012), lot 4283. NGC ID# 254H, PCGS# 7144

1883-CC Morgan, Untoned MS67

- 4739 1883-CC MS67 PCGS.** The frosty silver surfaces are untuned and virtually free of distractions, although two minor cuts on the neck appear to limit an even finer grade. Perceptible contrast prevails on each side, although short of a Cameo designation. A coin that would be difficult to improve upon. PCGS has seen only five numerically finer examples (3/14). NGC ID# 254H, PCGS# 7144

- 4740 1883-O MS65 PCGS. CAC.** The reverse of this highly lustrous dollar is mostly brilliant with traces of gold patina at the periphery, while the obverse showcases dramatic rainbow toning with deep green and blue at the top that turn to violet and golden-yellow toward the center. A well-preserved and eye-appealing Gem.
Ex: Long Beach Signature (Heritage, 9/2006), lot 5116; Long Beach Signature (Heritage, 2/2007), lot 5479. NGC ID# 254J, PCGS# 7146

- 4741 1883-S MS61 NGC.** Cartwheel luster and virtually untuned surfaces add to the eye appeal of this piece. The strike is pleasing overall, with minor incompleteness at the centers. A number of scattered marks are present, consistent with the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 254K, PCGS# 7148

**1883-S Dollar, MS63
Outstanding Eye Appeal**

- 4742 1883-S MS63 PCGS.** The 1883-S Morgan dollar is a scarce issue in mint condition that is actually rare in Gem condition or finer, despite a hefty mintage of 6.25 million coins. This Select Mint State example displays a generous portion of flashy cartwheel luster across brilliant surfaces. Well struck with typical marks for the grade and exceptional eye appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 254K, PCGS# 7148

**1883-S Morgan Dollar, MS63
Impressive Semikey Example**

- 4743 1883-S MS63 PCGS.** The 1883-S Morgan dollar had a generous mintage of 6.25 million pieces, but the coins either entered the channels of commerce on the West Coast or were stored in Mint bags that were roughly handled. Consequently, high-grade Uncirculated examples are scarce.
This Select Mint State piece displays fully brilliant surfaces that exhibit intense cartwheel luster and well-struck design motifs. Scattered small marks limit the grade but not the eye appeal of this impressive dollar. Encapsulated in a green label PCGS holder. NGC ID# 254K, PCGS# 7148

4744 1883-S MS63 PCGS. This Select Mint State example from San Francisco is from a high mintage of 6.25 million coins, yet examples graded any finer than MS64 are scarce. The bright mint frost over silver-white untuned surfaces gives this piece a flashy, pleasing appearance. Scattered minor marks define the grade. NGC ID# 254K, PCGS# 7148

4745 1883-S MS63 PCGS. This precisely struck and highly lustrous Select dollar is virtually brilliant, and has the look of a finer grade despite a hair-thin mark on the field near the chin. The 1883-S is the first of many conditional rarities from the San Francisco Mint, rarer than the heralded 1879-CC at the MS65 level.
Ex: *Dallas Signature* (Heritage, 11/2007), lot 1123, which realized \$2,328.75. NGC ID# 254K, PCGS# 7148

**1883-S Dollar, MS63+
High-End for the Grade**

4746 1883-S MS63+ NGC. In discussing the 1883-S dollar, David Bowers writes in his *Encyclopedia*, "In fact, for my money, if I were collecting the series, a carefully cherrypicked MS-63 might be the best buy of all." This date, more than many in the series, requires careful grade vs. price consideration. The price jump between MS63 and MS64 is considerable, and the change in value between MS64 and MS65 is astronomical. This Select Uncirculated example is clearly high-end for the grade, as confirmed by the important NGC Plus designation. A bit of golden rim toning frames brilliant, untuned surfaces that display reflective, silver luster. A bold strike (as typical for the issue) provides sharp detail on the devices. A number of tiny, distributed abrasions, none individually significant, determine the grade of this attractive San Francisco dollar. NGC ID# 254K, PCGS# 7148

**1883-S Morgan Dollar, MS63+
Cartwheel Luster and Brilliant Surfaces**

4747 1883-S MS63+ PCGS. CAC. A high-end Select specimen, this piece exhibits bold cartwheel luster and virtually untuned surfaces. The strike is sharp, even at the centers, on this piece displaying strong eye appeal. Scattered marks held this example from a higher grade, though none are worthy of individual mention. NGC ID# 254K, PCGS# 7148

**1883-S Morgan, MS64
Sharp and Brilliant**

4748 1883-S MS64 PCGS. The 1883-S Morgan is a notable rarity in the higher Mint State grades approaching the Gem level. This piece is sharply struck with brilliant cartwheel luster and excellent eye appeal. Scattered minor ticks comprise the grade but are nonetheless quite undistracting. A great example to fill that empty slot in your Morgan collection at a price far less than a Gem — if you can find one. PCGS has seen only 18 examples of this issue in numerically finer grades (3/14).
Ex: *Denver Signature* (Heritage, 8/2006), lot 2653; *Summer FUN* (Heritage, 7/2007), lot 1382. NGC ID# 254K, PCGS# 7148

**1883-S Silver Dollar, MS64
Light Obverse Patina**

4749 1883-S MS64 PCGS. While the San Francisco Morgan dollar issues between 1878 and 1882 are commonplace, the 1883-S and 1884-S are surprisingly scarce in Mint State despite mintages in the millions. This beautiful near-Gem offers peripheral gold and pink-champagne obverse toning. The reverse is nearly brilliant. The well-struck surfaces are lustrous and minimally abraded. PCGS has seen 18 finer (3/14).
Ex: *Summer FUN* (Heritage, 7/2007), lot 1381. NGC ID# 254K, PCGS# 7148

**1883-S Morgan Silver Dollar, MS64+
Strong Eye Appeal**

4750 1883-S MS64+ PCGS. CAC. A high-end near-Gem, this coin possesses strong eye appeal, due in part to silver-white surfaces and cartwheel luster. The strike is sharp other than the extreme centers. A few pinpoint flecks are present. Scattered marks, though minor, held this lovely piece from a higher grade. Population: 17 in 64+, 18 finer (3/14). NGC ID# 254K, PCGS# 7148

4751 1883-S MS61 Prooflike NGC. The 1883-S Morgan is usually available in lower Mint State grades, but Prooflike examples are distinctly rare. This sharply struck representative boasts fully mirrored fields and lightly frosted central devices. The luster is mainly brilliant, with a thin peripheral ring of light golden toning. Scattered abrasions define the grade. Census: 5 in 61 Prooflike, 38 finer (3/14).

Ex: Long Beach Signature (Heritage, 2/2003), lot 7335; Milwaukee Signature (Heritage, 8/2007), lot 8728. NGC ID# 254K, PCGS# 7149

4752 1884 MS66+ PCGS. CAC. Frosty, fully brilliant luster adorns both sides of this well-struck Premium Gem. Close examination fails to reveal any detracting surface blemishes. CAC-approved with a high degree of eye appeal. NGC ID# 254L, PCGS# 7150

4753 1884 MS66+ PCGS. CAC. Lustrous silver-white surfaces are among the attributes this high-end Premium Gem representative possesses. The strike is sharp aside from the extreme centers. Adding to the appeal, the surfaces reveal very few marks, all minuscule. Population: 39 in 66+, 44 finer (3/14). NGC ID# 254L, PCGS# 7150

4754 1884 MS66+ PCGS. CAC. Lustrous and brilliant, this high-end Premium Gem specimen exhibits strong visual appeal. The strike is sharp, with only minor incompleteness at the extreme centers. In addition, the surfaces are virtually free of toning and few marks are present. Population: 39 in 66+, 45 finer (3/14). NGC ID# 254L, PCGS# 7150

**1884 Morgan Dollar, MS67
Impressive In This High Grade**

4755 1884 MS67 PCGS. This issue had a relatively high but typical mintage of 14 million pieces, for the Philadelphia Mint. Examples are plentiful in all grades up to and including MS65, scarce at MS66, and rare at the current grade of MS67. This example is brilliant with a rich luster sheen that is evenly distributed from rim-to-rim over both sides. Liberty's cheek is virtually immaculate. A shallow planchet void is noted on the reverse, abutting the outer edge of the eagle's left (facing) wing, but this mint-made flaw is neither grade-limiting nor distracting. Population: 43 in 67 (6 in 67+), 2 finer (3/14).

From The Northern Lights Collection. NGC ID# 254L, PCGS# 7150

**1884 Morgan Silver Dollar
MS65 Deep Mirror Prooflike**

4756 1884 MS65 Deep Mirror Prooflike PCGS. *Ex: Key West Collection.* This impressive Morgan dollar has brilliant and untuned silver surfaces with fully mirrored fields that frame the frosty silver devices. A highly appealing Gem for the connoisseur. Population: 32 in 65 Deep Mirror Prooflike, 5 finer (3/14). NGC ID# 254L, PCGS# 97151

4757 1884-CC MS66+ PCGS. CAC. Exhibiting strong eye appeal, this high-end Premium Gem displays cartwheel luster, gorgeous silver-white surfaces, and a sharp strike. A beautifully preserved example, this piece displays only a few minuscule marks on the obverse while the reverse is virtually pristine. NGC ID# 254M, PCGS# 7152

4758 1884-CC MS66+ PCGS. CAC. VAM-2. Approximately half of the obverse exhibits rich toning on this attractive example. The colors include gold, pink, and apple-green. The reverse has faint, but more widely distributed color, including shades of gold and olive-green. This is an example of the VAM-2 repunched date variety, although it is not designated as such on the holder. Liberty displays a number of minor abrasions, but they are not readily apparent due to the color present. The certified population drops drastically beyond the MS66 level, adding to the appeal of Premium Gems with the Plus designation. NGC ID# 254M, PCGS# 7152

**1884-CC Dollar, MS67
Beautiful, Frosty Example**

4759 1884-CC MS67 NGC. A Carson City issue that Dave Bowers celebrates as "within the reach of all", in his *Guide Book of Morgan Dollars*. Yet only a couple hundred have been graded as Superb Gems by the two major services, showing that even the most common dates tend to become scarce at this advanced grade level. This example is sharply struck with clean surfaces that only display faint amounts of toning and beautiful frosty mint luster. *From The Northern Lights Collection. NGC ID# 254M, PCGS# 7152*

**1884-CC Morgan Dollar, MS66 Deep Mirror Prooflike
Beautiful and Technically Superior**

- 4760 1884-CC MS66 Deep Mirror Prooflike PCGS.** The jet-black fields provide stark contrast to the immensely frosted icy-white devices. Fully struck and exceptionally well-preserved, this beautiful Premium Gem combines technical superiority with remarkable visual appeal. The trivial surface marks can be counted on the fingers of one hand. NGC ID# 254M, PCGS# 97153

1884-O Dollar, Well-Struck MS67

- 4761 1884-O MS67 PCGS.** The 1884-O Morgan sports a hefty mintage approaching 10 million pieces. Moreover, thousands of coins have been certified through MS66. The population drops significantly at the MS67 level, and PCGS and NGC have seen a mere two pieces finer. This Superb Gem is awash with pleasing luster and exhibits well-struck design elements, including almost full detail in the hair over Liberty's ear. A few light scuffs are within the parameters of the grade designation. Population: 89 in 67, 1 finer (3/14). NGC ID# 254N, PCGS# 7154

- 4762 1884-S AU58 ANACS.** A highly attractive example, this nearly mint 1884-S dollar exhibits just a brush of rub over the eagle's breast and the hair immediately above Liberty's ear. The fields display nearly prooflike mirroring, while amber-rose peripheral toning complements mainly brilliant centers.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 254P, PCGS# 7156

- 4763 1884-S AU58 NGC.** Attractive luster remains on this near-Mint survivor displaying lovely toning in shades of gold, teal, rose, and apricot. The sharply struck coin reveals light wear on the high points. None of the marks present is worthy of individual mention. Housed in a prior generation holder.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 254P, PCGS# 7156

- 4764 1884-S AU58 PCGS.** Brilliant and untoned, with nearly full remaining luster and a sharp strike. Light abrasions in the obverse fields and a couple of minor slide marks across the portrait define the grade. A classic 1884-S slider, this example is just a few bagmarks and a touch of high-point rub away from Mint State. NGC ID# 254P, PCGS# 7156

- 4765 1884-S AU58 ANACS.** With Mint State 1884-S Morgan dollars scarcely available, high-end AU examples offer an excellent alternative. This near-Mint representative displays substantial mint luster with only a brush of wear seen over the high points of the design. Sharply struck with semiprooflike fields, the mainly brilliant surfaces exhibit a thin ribbon of violet-blue peripheral toning.
Ex: Central States Signature (Heritage, 5/2007), lot 4687. NGC ID# 254P, PCGS# 7156

- 4766 1884-S AU58 NGC.** This lovely, lightly circulated example portrays silver-gray surfaces with nice remaining luster and some golden-brown peripheral color on the obverse. Well impressed, with just a touch of softness in the hair over Liberty's ear. This specimen has remarkably clean surfaces, showing just a few small, trivial marks.
Ex: Long Beach Signature (Heritage, 2/2006), lot 1972, which realized \$920. NGC ID# 254P, PCGS# 7156

- 4767 1884-S AU58 NGC.** Light to medium autumn-brown toning enriches this coruscating and minimally marked better date silver dollar. Light wear above Liberty's ear confirms a momentary stint in commerce.
Ex: Dallas Signature (Heritage, 4/2007), lot 1108, which realized \$1,035. NGC ID# 254P, PCGS# 7156

- 4768 1884-S AU58 NGC.** The 1884-S Morgan is scarcely seen in Mint State condition, as most pieces entered circulation early on, increasing the appeal of high-end AU examples. This near-Mint representative retains most of its original luster and is free of any significant surface abrasions. Only a brush of friction is seen over the high points of the design, leaving this piece with a high degree of eye appeal.
Ex: Central States Signature (Heritage, 4/2006), lot 3411. NGC ID# 254P, PCGS# 7156

- 4769 1884-S AU58 NGC.** Medium apricot and dove-gray colors visit this boldly struck and unblemished near-Mint dollar. Luster is nearly full, and friction on the centers is minuscule. The 1884-S is notoriously scarce in Uncirculated grades.
Ex: Long Beach Signature (Heritage, 2/2006), lot 1970. NGC ID# 254P, PCGS# 7156

- 4770 1884-S AU58 NGC.** The '84-S is famous for its scarcity in Uncirculated grades. The present piece displays bright peripheral luster along with slight friction at the centers. The untuned surfaces are only lightly abraded.
Ex: Dallas Signature (Heritage, 4/2007), lot 1107. NGC ID# 254P, PCGS# 7156

**1884-S Morgan, AU58
Elusive Early S-Mint**

- 4771 1884-S AU58 PCGS. CAC.** Untoned aside from pastel straw-gold and ice-blue tints. The cartwheel luster is strong and unbroken, but the experienced eye detects slight friction on the eagle's breast. No marks are remotely consequential. Encased in a green label holder.
Ex: Summer FUN Orlando (Heritage, 7/2010), lot 4127. NGC ID# 254P, PCGS# 7156

- 4772 1885 MS67 PCGS.** The obverse of this Superb Gem displays vivid toning, while the reverse is almost entirely silver-white. The obverse toning includes teal, copper, gold, and yellow colors. The strike is sharp, even at the extreme centers. Scattered marks are present, including a few above Liberty's eye. Only two examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 254R, PCGS# 7158

**1885 Morgan Silver Dollar
MS66 Deep Mirror Prooflike**

- 4773 1885 MS66 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. PCGS has only certified one numerically finer submission, with five higher grade pieces at NGC. This plentiful date is rarely found with such a high degree of contrast and eye appeal. Both sides are brilliant and untuned, with exceptional mirrored fields and lustrous devices. Population: 77 in 66 (3 in 66+) Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 254R, PCGS# 97159

**1885 Morgan Dollar, MS66
Flashy Deep Mirror Prooflike**

- 4774 1885 MS66 Deep Mirror Prooflike PCGS.** The enormous mintage of 1885 Morgan dollars exceeded 17 million pieces, but few measure up to the quality of this Premium Gem certified Deep Mirror Prooflike. The flashy fields and thickly frosted devices are untuned front and back, showing few mentionable marks. The pristine preservation further heightens the excellent eye appeal. Population: 77 in 66 (3 in 66+) Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 254R, PCGS# 97159
- 4775 1885-CC MS64+ PCGS. CAC.** A brilliant Carson City specimen with dazzling cartwheel luster and a couple of wispy marks on Liberty's cheek that keep it from an even higher grade. A great near-Gem example that will please the type specialist. NGC ID# 254S, PCGS# 7160
- 4776 1885-CC MS65 PCGS.** This Gem Carson City dollar displays pale tan-gold toning on the obverse, while vivid ribbons of teal, magenta, green-gold, and amber cross the reverse. The strike is sharp and careful examination reveals minimal surface abrasions beneath the toning.
Ex: *Baltimore Signature* (Heritage, 7/2003), lot 8615. NGC ID# 254S, PCGS# 7160
- 4777 1885-CC MS65 PCGS.** Both sides of this Gem example display blended areas of silver-gray, olive, and pale magenta, with frosty underlying mint luster. The details are sharply impressed and close examination reveals well-preserved surfaces beneath the patina.
Ex: *Baltimore Signature* (Heritage, 7/2003), lot 8618. NGC ID# 254S, PCGS# 7160
- 4778 1885-CC MS65 ★ NGC. CAC.** An attractive, upper-end Gem example of this sought-after Carson City issue. The reverse is primarily brilliant, while a wide, vivid rainbow crescent encompasses nearly the entire obverse. The surfaces exhibit a razor-sharp strike with frosty luster beneath the patina. NGC ID# 254S, PCGS# 7160

- 4779 1885-CC MS66 NGC.** Cartwheel luster and an overall silver-white appearance are among the factors contributing to the strong eye appeal of this Premium Gem specimen. In addition, the strike is intricate, including the extreme centers. Scattered grazes and a couple of tiny areas of as-made struck-in grease are present.
From *The Northern Lights Collection*. NGC ID# 254S, PCGS# 7160

- 4780 1885-CC MS66 PCGS.** This Premium Gem 1885-CC is delightfully toned with a golden blush over the entire surface that starts to deepen toward amber near the rim. Only a few undistracting, grade-consistent marks are present.
Ex: *Dallas Signature* (Heritage, 11/2005), lot 3273; *FUN Signature* (Heritage, 1/2007), lot 7061. NGC ID# 254S, PCGS# 7160

- 4781 1885-CC MS66 NGC. VAM-2.** Dash Under 8. An example of the variety with a dash under the second 8 in the date, this Premium Gem example displays scattered toning in varying shades of gold, with some areas of ice-blue intermixed. Rich luster adds to the visual allure of this highly lustrous representative. NGC ID# 254S, PCGS# 7160

- 4782 1885-CC MS66 PCGS.** This low-mintage Carson City representative displays a narrow zone of attractive electric-blue, purple, and golden-tan patina at the margins. Additionally, partially prooflike fields establish pleasing contrast with the satiny motifs. Sharply struck, including the hair over Liberty's ear and the eagle's breast feathers. A few minor grazes do not detract.
Ex: *Long Beach Signature* (Heritage, 9/2008), lot 2741. NGC ID# 254S, PCGS# 7160

- 4783 1885-CC MS66 PCGS.** Ex: Michigan Collection. A frosty and flashy Premium Gem with a touch of haze in the fields. Solidly struck with well-preserved surfaces and ample eye appeal.
Ex: *Dallas Signature* (Heritage, 11/2006), lot 1278, which realized \$2,185. NGC ID# 254S, PCGS# 7160

**1885-CC Morgan, MS66+ Prooflike
Dazzling Mint Luster**

- 4784 1885-CC MS66+ Prooflike PCGS. CAC.** Despite a low mintage of only 228,000 coins, the 1885-CC is among the more plentiful Morgans from the Nevada facility, as more than half of the total production was represented in the Treasury releases; high-end prooflike examples, however, are in the minority. This fully brilliant Premium Gem displays moderately mirrored fields and heavily frosted devices, with an overall sharp strike. Well-preserved surfaces deliver the outstanding eye appeal that is characteristic of this issue. Population: 45 in 66 (4 in 66+) Prooflike, 1 finer (3/14). NGC ID# 254S, PCGS# 7161

**1885-CC Morgan, MS65 Deep Mirror Prooflike
Bold Cameo Contrast**

- 4785 1885-CC MS65 Deep Mirror Prooflike PCGS.** Despite a high survival rate as a date, the 1885-CC Morgan is scarcely encountered with Gem-level Deep Mirror Prooflike qualities. This boldly detailed representative exhibits deep mirroring in the fields, with heavily frosted central devices. The surfaces are largely brilliant, with light amber-gold toning around the peripheries. A few light grazes preclude a higher grade, but hardly detract from the visual appeal of this Carson City Gem. PCGS has awarded Deep Mirror Prooflike status to 43 numerically finer examples (3/14). NGC ID# 254S, PCGS# 97161

**1885-CC Morgan Dollar, MS66+ Deep Mirror Prooflike
Extraordinary Visual Appeal**

- 4786 1885-CC MS66+ Deep Mirror Prooflike NGC.** The dazzling surfaces of this high-end Premium Gem reveal gleaming silver mirrors and thickly frosted devices, ensuring the Deep Mirror Prooflike designation. Only a few small areas of cloudy patina visit the fields. Non-grade-affecting die polish lines and tiny planchet defects mingle with a few post-striking faults, but the overall impression this coin provides is magnificent. While the 1885-CC dollar was saved in quantity through the Treasury/GSA holdings, the original mintage was in the lower six figures and few of those can compare with the amazing preservation and visual appeal of this piece. Census: 20 in 66 (1 in 66+) Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 254S, PCGS# 97161

- 4787 1885-O MS67 PCGS.** Phenomenal, frosty mint luster is the strong suit of this superior O-mint type dollar, with fully defined details on each side. Just a blush of pale golden complements the otherwise brilliant surfaces, with a tinge of rainbow at 2 o'clock on the reverse periphery.
Ex: FUN Signature (Heritage, 1/2007), lot 7072; ANA Signature (Heritage, 3/2010), lot 1443. NGC ID# 254T, PCGS# 7162

- 4788 1885-O MS67 PCGS.** The lustrous surfaces of this Superb Gem reveal scattered areas of faint toning. The coin is minimally marked and sharply struck, adding to the desirability of this piece. PCGS has yet to assign a higher numeric grade to a single example (2/14). NGC ID# 254T, PCGS# 7162

- 4789 1885-O MS67 PCGS. CAC.** Among the attributes this Superb Gem possesses are silver-white surfaces and satin luster. Aside from the extreme centers, the strike is sharp, further adding to the appeal. In addition, very few signs of contact are present, all minor. A simply wonderful specimen. PCGS has yet to award a higher numeric grade to a single example (3/14). NGC ID# 254T, PCGS# 7162

- 4790 1885-O MS67 PCGS. CAC.** Attractive pastel toning appears on the obverse of this lustrous Superb Gem representative, while the reverse remains largely untoned save for the periphery. The colors include shades of gold, sea-green, lavender, fuchsia, and cobalt-blue. The strike is sharp aside from the centers. PCGS has not awarded a higher numeric grade to a single example (3/14). NGC ID# 254T, PCGS# 7162

**1885-O Morgan Dollar, MS68
Beautifully Toned and Lustrous**

- 4791 1885-O MS68 NGC. CAC.** Gorgeous obverse toning along with potent luster provide this piece with an exceptional appearance. The waves of color, extending from the lower left, range from yellow, lemon-lime, apple-green, fuchsia, violet, red, golden-yellow to pale blue. Aside from faint gold toning along the periphery, the reverse is largely silver-white. The strike is sharp overall, with minor incompleteness at the centers. Census: 10 in 68, 0 finer (3/14). NGC ID# 254T, PCGS# 7162

**1885-O Morgan, MS66+ Deep Mirror Prooflike
Bold Cameo Contrast**

- 4792 1885-O MS66+ Deep Mirror Prooflike PCGS Secure. CAC.** The 1885-O is among the most available Morgan dollars in lower Mint State grades, but Deep Mirror Prooflike Premium Gem examples are truly rare. This beautifully preserved representative showcases stark cameo contrast, with heavily frosted devices and a faint golden tint overall. The strike is uncharacteristically sharp for an O-mint Morgan, and the eye appeal is exceptional. Population: 41 in 66 (1 in 66+) Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 254T, PCGS# 97163

- 4793 1885-S MS65 PCGS.** Scarcely encountered finer. This Gem representative showcases brilliant, frosty luster and fully struck details. The surfaces reveal only a few light grazes, with overall attractive visual appeal. Housed in an old green label holder. NGC ID# 254U, PCGS# 7164

- 4794 1885-S MS65 PCGS. Ex: The Michigan Collection.** Coruscant mint frost and crisp striking details are the main selling points of this untoned, snow-white Gem. Only the eagle's breast feathers are a bit soft, as scattered superficial field marks prohibit an even higher grade designation. Rare any finer than MS65, at both services.
Ex: Orlando FUN Signature (Heritage, 1/2007), lot 7076. NGC ID# 254U, PCGS# 7164

**1885-S Silver Dollar, MS64 Prooflike
Rarely Certified Finer**

4795 1885-S MS64 Prooflike PCGS. CAC. Ex: Key West Collection. This elusive issue is available at the present grade level from time-to-time, but it is rarely found in finer grades. Both sides are brilliant and sharply defined with bright silver surfaces. Excellent field-to-device contrast appears on both sides. Population: 50 in 64 (1 in 64+) Prooflike, 9 finer (3/14). NGC ID# 254U, PCGS# 7165

4796 1886/1886 MS62 NGC. VAM-20. A Hot 50 Variety. The date was initially entered with an upward slant, then corrected. Traces of the first logotype impression are noted beneath the 1 and inside the lower loop of the 6. Light tan toning visits protected areas of this lustrous, minimally marked, and nicely struck example. NGC ID# 254V, PCGS# 7166

4797 1886 MS67 NGC. The dies were used heavily for the 1886 issue, as was the case with this Superb Gem displaying areas of grainy texture. The coin is virtually free of toning and exhibits a sharp strike. Light clash marks are present. NGC has awarded higher numeric grades to only 25 examples (3/14).
From *The Northern Lights Collection*. NGC ID# 254V, PCGS# 7166

4798 1886 MS67 PCGS. Cartwheel luster provides this Superb Gem with strong eye appeal. The surfaces display a silver-white appearance overall, with only faint toning present aside from a streak of gold at the lower right reverse. The strike is sharp except for the extreme centers. PCGS has assigned higher numeric grades to only 5 examples (2/14). NGC ID# 254V, PCGS# 7166

4799 1886-O MS62 PCGS. A victim of the Pittman Act melts, the 1886-O Morgan becomes increasingly elusive in Mint State grades and is virtually unknown at the Gem level. This piece exhibits few abrasions for the grade, with an above-average strike for the issue. The reverse is largely untuned, while the obverse displays patches of amber and blue-gray over softly frosted mint luster.
Ex: *Central States Signature* (Heritage, 5/2007), lot 4739; *FUN Signature* (Heritage, 7/2007), lot 1440. NGC ID# 254W, PCGS# 7168

4800 1886-O MS62 NGC. Lustrous surfaces are largely untuned save for a touch of gold and pink patina near the rims, and there are surprisingly few marks for the grade. A great-looking example of this conditionally scarce date. NGC ID# 254W, PCGS# 7168

1886-O Dollar, Well-Struck MS63

4801 1886-O MS63 PCGS. The 1886-O Morgan dollar is common in circulated grades, and can even be located through the Select level of preservation with relatively little trouble. Obtaining near-Gems will take diligent searching and higher-grade examples are virtually unobtainable. The lustrous surfaces of this MS63 offering display light peripheral toning, especially on the reverse. The hair over Liberty's ear and the eagle's breast feathers, while not absolutely full, still exhibit strong definition. Light marks and scuffs limit the grade. NGC ID# 254W, PCGS# 7168

**1886-O Morgan Dollar, MS63
Elusive Issue in Finer Grades**

4802 1886-O MS63 PCGS. An attractive Select example, this coin displays frosty satin luster and virtually untuned surfaces. The centers reveal incompleteness although the strike is sharp overall. Minor clash marks are present on the reverse. The certified population of 1886 Morgan dollars struck in New Orleans drops significantly above the MS63 level. NGC ID# 254W, PCGS# 7168

1886-O Dollar, Satiny MS63

4803 1886-O MS63 PCGS. The satiny surfaces exhibit only a few minor marks on this brilliant silver-white piece, housed in a green-label PCGS holder. The 1886-O is a conditionally elusive date and a rarity in higher grades. Q. David Bowers calls MS63 the "Optimal Collecting Grade" for the issue.
Ex: *Dallas Signature* (Heritage, 4/2007), lot 1130. NGC ID# 254W, PCGS# 7168

**1886-O Morgan, MS63+
Vibrant Mint Luster**

- 4804 1886-O MS63+ PCGS.** A victim of the Pittman Act melts of 1918, the 1886-O Morgan is elusive finer than MS63, and prohibitively rare at the Gem grade level. This Plus-graded representative displays frosty, untuned cartwheel luster over both sides, with no outwardly detracting surface abrasions. The strike is exceptional for an O-mint Morgan of this period, with notable definition on Liberty's hair curls and the eagle's talons. A remarkable coin for the grade. NGC ID# 254W, PCGS# 7168

1886-O Morgan, Frosty MS63

- 4805 1886-O MS63 PCGS. CAC.** The 1886-O becomes far more elusive in the higher Mint State grades, although Select examples such as this frosty piece may be had for a price. A few scattered ticks are largely away from the prime focal points. The reverse shows some die clashing, and both sides show excellent eye appeal for the grade. NGC ID# 254W, PCGS# 7168

- 4806 1886-O MS60 Deep Mirror Prooflike NGC.** The 1886-O Morgan is rarely encountered with Deep Mirror Prooflike fields and is highly sought-after with such in any grade. Rich blue-green peripheral toning around light golden centers accents the deeply mirrored fields of this well-struck representative. Scattered, faint surface grazes define the grade, though they are collectively unobtrusive. Census: 2 in 60 Deep Mirror Prooflike, 6 finer (3/14). NGC ID# 254W, PCGS# 97169

**1886-S Morgan Dollar, MS65
Sought-After VAM-2**

- 4807 1886-S MS65 PCGS. CAC. VAM-2.** Ex: Michigan Collection. A Top 100 Variety. PCGS did not acknowledge the Top 100 variety status on the label, although the attribution is unmistakable; the mintmark is boldly repunched and die chips are observed within the 6 of the date. Attractive cartwheel luster with a hint of semiprooflikeness in the fields. This untuned Gem dollar offers an interesting variety and ample eye appeal. PCGS has certified 40 numerically finer examples (3/14). NGC ID# 254X, PCGS# 7170

- 4808 1887/6 MS65+ PCGS. CAC. VAM-2.** A popular *Guide Book* Variety. The bottom curve of a 6 straddles the base of the 7 in the date. A brilliant Gem with coruscating mint luster and dazzling cartwheel effects in the fields. Sharply struck and well-preserved; the reverse is especially impressive and clean. NGC ID# 254Z, PCGS# 7174

**1887/6 Morgan, MS65 Prooflike
Deeply Mirrored Fields**

- 4809 1887/6 MS65 Prooflike PCGS. CAC. VAM-2.** A Top 100 Variety. The bottom curve of the underdigit is clearly seen at the base of the 7. A popular overdate, scarcely encountered with prooflike contrast. This Gem example exhibits deeply mirrored fields and softly frosted devices. The surfaces are fully brilliant and are void of any significant distractions, while the design elements exhibit well-defined detail overall. Population: 14 in 65 Prooflike, 2 finer (3/14). NGC ID# 254Z, PCGS# 7175

**1887/6 Morgan Dollar VAM-2
MS64 Deep Mirror Prooflike**

- 4810 1887/6 MS64 Deep Mirror Prooflike PCGS. VAM-2.** Ex: Key West Collection. A Top 100 Variety. Collectors who understand the minting process should have little difficulty understanding the rarity of the 1887/6 Morgan Dollar as a Deep Mirror Prooflike. The die polishing that results in the reflective features of DMPL coins also weakened the remnants of the 6 with the result that the underdigit wore away after far fewer striking. In fact, it is remarkable that the polishing did not completely efface the underdigit. A loupe reveals traces of the 6 to the left and right of the base of the 7 on the present example. Sharply impressed with no toning to report, both sides are uniformly brilliant with a minimum number of wispy abrasions. Population: 7 in 64 Deep Mirror Prooflike, there are just three coins finer with this finish (3/14). Ex: ANA Signature Sale (Heritage, 3/2003), lot 6652. NGC ID# 254Z, PCGS# 97175

- 4811 1887 MS67 NGC.** Ex: Binion Collection. Ted Binion was a Las Vegas casino magnate, and the son of reputed gangster Benny Binion. The present lustrous Superb Gem displays vivid teal, lavender, amber, and green-gold hues over the reverse, while a light golden crescent graces the right obverse border. Close examination reveals only a few insignificant surface grazes, with pleasing overall visual appeal. Only three examples have graded numerically higher at NGC (3/14). NGC ID# 254Y, PCGS# 7172

- 4812 1887 MS67 PCGS Secure.** A beautiful swath of deep iridescent rainbow colors, primarily across DOLLAR on the reverse, adds to the visual appeal of this piece. Light rose hues drape the obverse. The piece is brilliantly lustrous and reveals only a few signs of contact when viewed with a loupe. PCGS has awarded a higher numeric grade to only a single example (2/14). NGC ID# 254Y, PCGS# 7172

**1887 Morgan Dollar, Partial E Reverse, MS63
Sole Finest Certified, VAM-1B**

- 4813 1887 Partial E Reverse MS63 PCGS. VAM-1B, R.6.** A Hot 50 Variety. VAMWorld.com writes, quoting Jeff Oxman, "Acquiring an 1887 with a clashed E is considered a landmark event by most variety specialists" Besides the clashed partial E below the tail feathers, the obverse shows a lateral die crack through 887 in the date. Other wispy die cracks connect much of the peripheral elements on the obverse. Die clashing appears (unsurprisingly, given the variety) on other areas of the reverse. This is nice, untuned, flashy and frosty example for the grade. It also happens to be the sole finest certified of the variety at PCGS (3/14). PCGS# 134003

- 4814 1887/6-O MS63 PCGS. CAC. VAM-3.** Ex: The Michigan Collection. A Top 100 Variety. The underdigit appears under magnification. A lustrous and well struck example of this popular variety, which has scattered abrasions on both sides that are consistent with the grade.
Ex: *Denver A.N.A. Signature* (Heritage, 8/2006), lot 1453; *Dallas Signature* (Heritage, 10/2006), lot 1453. NGC ID# 2553, PCGS# 7178

- 4815 1887-O MS63 Deep Mirror Prooflike PCGS. CAC.** The surfaces are blatantly contrasted, deeply reflective fields and well-frosted devices. The surfaces are largely untuned silver-white save for a touch of pale lavender blush near the rims, and a few scattered luster grazes and scuffs determine the numeric grade. NGC ID# 2552, PCGS# 97177

- 4816 1887-O MS64 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. The deeply mirrored fields of this impressive Choice Morgan dollar contrast boldly with the well-detailed frosty design elements. The well-preserved surfaces show hints of greenish-gold toning and a few minor signs of contact. Population: 93 in 64 Deep Mirror Prooflike, 7 finer (3/14). NGC ID# 2552, PCGS# 97177

**1887-S Morgan Dollar, MS65+
Lovely Unusual Toning, Seldom Seen Finer**

- 4817 1887-S MS65+ PCGS.** Glorious cartwheel luster is blatant on each side of this MS65+ PCGS 1887-S Morgan. Irregular (but lovely) patina includes blotches of copper-russet, blue-gray, with light-gold and untuned silver areas. Few marks of any significance appear (save for a couple of ticks on the neck), and the cheek of Liberty is nice and clean. Population: 9 in 65+, 24 finer (3/14). NGC ID# 2554, PCGS# 7180

- 4818 1887-S MS64 Prooflike PCGS. CAC.** Ex: Key West Collection. Although the 1887-S saw sudden availability in the 1970s in Uncirculated grades because of the distribution of the Redfield hoard, very few pieces from that group could be called Prooflike. The Prooflikes that are available are generally seen heavily abraded, and PCGS has yet to certify any Gems (03/14). Moderately mirrored fields display tremendous cameo contrast with the frosted devices. Fully struck and almost entirely brilliant save for a few tiny splashes of golden toning. Population: 28 in 64 (1 in 64+) Prooflike, 0 finer (3/14).

Ex: "A Gift of Undeserved Favor" Collection (Heritage, 8/2008), lot 2221, which realized \$2,990. NGC ID# 2554, PCGS# 7181

- 4819 1888 MS66+ PCGS.** This Plus-graded Premium Gem displays a full strike, with frosty, fully brilliant luster. The well-preserved surfaces reveal only a few minuscule abrasions when tilted under a light. NGC ID# 2555, PCGS# 7182

- 4820 1888 MS65 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. While prooflike examples are often seen of the issue, Deep Mirror Prooflike coins are scarce. This deeply-mirrored dollar is untuned except for some orange highlights in Liberty's hair and in a few areas of orange patina on the reverse rim. Boldly struck over the ear and on the eagle, this Gem shows only a few minor abrasions on the lustrous, reflective fields and on the frosted motifs. Population: 48 in 65 Deep Mirror Prooflike, 10 finer (3/14). NGC ID# 2555, PCGS# 97183

**1888-O 'Scarface' Silver Dollar, MS63
VAM-1B3, Mid-to-Late Die State**

- 4821 1888-O MS63 ANACS. VAM-1B3, R.6.** A Top 100 Variety. The Scarface dollar is rare in late die states such as the present example, which is the traditional across-the-face die break described as the "largest die crack in the Morgan dollar series." An Ash Harrison article in VAMview described 10 stages of the die break. Die Stage 10 is terminal, with the crack extending from the rim between E and P, through the field, and all the way across Liberty's face and neck into the hair. The current example would rate Die State 8 (a traditional Scarface) — the equivalent of VAM-1B3 since it extends across the face to Liberty's jaw. This Select Uncirculated example is frosty and lustrous. Sharp details include the Bearded Eagle on the reverse, so-called because of die clashing beneath the eagle's neck that is another diagnostic of the rare Scarface variety. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2556, PCGS# 7184

- 4822 1888-O MS66 PCGS.** Ex: David S. Emery. The lustrous surfaces of this Premium Gem O-mint dollar are mainly brilliant and exhibit well-struck design features, though the centers reveal some of the usual softness. Nicely preserved throughout, with higher-grade specimens virtually unobtainable.
Ex: *Dallas Signature* (Heritage, 12/2004), lot 7552. NGC ID# 2556, PCGS# 7184

- 4823 1888-O MS66 PCGS. CAC.** Strong luster and largely brilliant surfaces provide this Premium Gem with a wonderful appearance, with only a few hints and tiny flyspecks of toning present. A small as-made strike-through appears in the right obverse field. Housed in a green label holder. PCGS has yet to award a higher numeric grade to a single example, while a sole specimen has achieved a finer level from NGC (3/14). NGC ID# 2556, PCGS# 7184

1888-O Dollar, Pastel-Toned MS66+

- 4824 1888-O MS66+ PCGS. CAC.** This Premium Gem 1888-O Morgan dollar is a prize for the toning enthusiasts, showing mostly untuned surfaces that contrast with a wash of light pastel patina at the upper obverse, pale jade, gold, and amber tones combining to great effect. The near-pristine preservation and bold strike are notable pluses. Population: 14 in 66+, 0 finer (3/14). NGC ID# 2556, PCGS# 7184

1888-O Dollar, MS65 Deep Mirror Prooflike

- 4825 1888-O MS65 Deep Mirror Prooflike PCGS.** Housed in a green-label PCGS holder, this exceptional Gem has flashy silver surfaces with mirrored fields and lustrous devices. Both sides are brilliant and untuned. A few trivial marks are consistent with the MS65 grade. Population: 60 in 65 Deep Mirror Prooflike, 4 finer (3/14). NGC ID# 2556, PCGS# 97185

- 4826 1888-S MS65 PCGS.** An attractive Gem Morgan dollar with well-detailed design elements that show just a trace of softness on the hair above the ear. The well-preserved surfaces radiate vibrant mint luster under shades of golden-tan toning. PCGS has graded 27 numerically finer examples (3/14). NGC ID# 2557, PCGS# 7186

- 4827 1888-S MS65 PCGS.** Potent cartwheel luster provides this Gem with immediate eye appeal. The centers are largely brilliant, with areas of toning appearing at the peripheries. The shades include golden-brown, teal, dark plum, and olive-green, primarily on the obverse. This piece exhibits a die gouge at the eye and a number of die polish lines on both sides. The number of certified examples drops dramatically above the MS65 level, with only 27 examples having achieved higher numeric grades from PCGS (3/14). NGC ID# 2557, PCGS# 7186

**1888-S Morgan, MS66
Important Condition Rarity**

- 4828 1888-S MS66 PCGS.** From a mintage of just 657,000 pieces, most surviving Mint State examples of the 1888-S dollar fall into the MS63 to MS64 grade range, with Premium Gem survivors down-right rare and finer specimens prohibitively rare.

This is a truly remarkable coin, showcasing an uncharacteristically needle-sharp strike and strong eye appeal. The reverse displays light golden peripheral toning surrounding brilliant, semiprooflike fields, while the obverse exhibits deep, iridescent hues of violet, magenta, teal-blue, aquamarine, and amber-rose. Significant mint luster shines through the frosted patina, and close examination reveals no detracting surface abrasions. Housed in a green label holder. Population: 24 in 66 (1 in 66+), 3 finer (3/14). NGC ID# 2557, PCGS# 7186

**1888-S Morgan Dollar, MS64 Deep Mirror Prooflike
A Marvelous Example with Strong Eye Appeal**

- 4829 1888-S MS64 Deep Mirror Prooflike PCGS.** Ex: Key West Collection. A marvelous Deep Mirror Prooflike example of this conditionally scarce San Francisco Morgan dollar issue. Sharply defined with dark, glassy fields and brilliant-white central devices. The eye appeal of the piece is improved by russet-brown and maroon peripheral patina on both sides. Population: 43 in 64 Deep Mirror Prooflike, 3 finer (3/14). NGC ID# 2557, PCGS# 97187

- 4830 1889 MS66 PCGS.** Blended hues of violet, amber, and greenish-gold toning blanket both sides of this Premium Gem representative with glowing mint luster beneath. The surfaces display pleasing preservation and sharply struck design elements. PCGS has certified only four numerically finer examples (2/14). NGC ID# 2558, PCGS# 7188

1889-CC Morgan Dollar, XF45
Elusive Carson City Issue

- 4831 1889-CC XF45 PCGS.** A Choice XF example of the most elusive date of the Carson City Morgan dollar series, this coin shows some light wear on the eagle's breast, but Liberty's hairlines remain strong and the surfaces are lightly abraded. Traces of original mint luster shine through shades of pleasing lavender-gray toning. NGC ID# 2559, PCGS# 7190

1889-CC Morgan, XF45
Still Lustrous, Struck From Late-State Dies

- 4832 1889-CC XF45 PCGS.** This Choice XF 1889-CC Morgan dollar shows about half of the luster remaining on lightly abraded surfaces that are silver-white with light gold accents. The obverse die is the most frequently seen for the issue, showing a small die gouge between the larger leaf on the bonnet and smaller one to its left; the 9 in the date is also a tad higher than the remaining digits. This coin was struck from late-state dies on each side: Light die cracks run through the date, the left-side stars and E PL, and on the reverse clashing *and* die cracks occur, the heaviest connecting the left wing tip to the rim. NGC ID# 2559, PCGS# 7190

1889-CC Dollar, AU50
Great Choice for a Date Set

- 4833 1889-CC AU50 NGC.** The 1889-CC Morgan dollar is the most elusive of the Carson City issues, especially in Mint State. An About Uncirculated example such as the present offering is therefore an excellent alternative for a collector working on a high-grade date collection. Its silver-gray surfaces display traces of luster in the protected areas and are lightly marked for a coin that saw some circulation. The hair above Liberty's ear exhibits a modicum of detail. NGC ID# 2559, PCGS# 7190

1889-CC Silver Dollar, AU50
Silver-Gray Surfaces, Remaining Luster

- 4834 1889-CC AU50 PCGS.** A lightly abraded, silver-gray example of this rare Carson City date, always a series key and perennially in demand as such. Some nice, brilliant luster remains at the margins, with additional luster across the fields on the reverse and within the strands of Liberty's hair on the obverse. Nice detail remains, although there are some wispy lines on the obverse high points with chatter in the fields. NGC ID# 2559, PCGS# 7190

1889-CC Morgan Dollar, AU55
Key to the Carson City Series

- 4835 1889-CC AU55 NGC.** The brilliant luster, mirrored fields, and delicate peripheral gold toning on both sides of this piece combine to create excellent eye appeal. Only a trace of wear appears on the high points, while the overall appearance is finer than many that carry a Mint State grade. This piece would make an excellent addition to a mostly Mint State Morgan dollar collection. NGC ID# 2559, PCGS# 7190

- 4836 1889-O MS64+ PCGS. CAC.** Potent luster and pastel toning in several shades provide both sides of this high-end near-Gem with strong eye appeal. The colors include hues of gold, blue, orange, yellow, and plum. The strike is sharp overall, with incompleteness present at the centers. Scattered marks, primarily on the obverse, held this lovely piece from a higher grade. NGC ID# 255A, PCGS# 7192

1889-S Silver Dollar, MS66+
Only One Certified Finer

- 4837 1889-S MS66+ PCGS. CAC.** Frosty mint luster appears on both sides of this delicately toned example, showing hints of champagne over brilliant silver surfaces. This pristine example ranks as one of the finest certified examples. Population: 68 in 66 (3 in 66+), 1 finer (3/14). NGC ID# 255B, PCGS# 7194

4838 1889-S MS63 Deep Mirror Prooflike PCGS. Ex: Key West Collection. The Deep Mirror Prooflike surfaces of this Select example provide this faintly toned piece with lovely eye appeal. An intricate strike is an additional attribute. A few as-made strike-throughs are present. Dispersed marks and grazes held this lovely piece from a higher grade. Population: 17 in 63 Deep Mirror Prooflike, 24 finer (3/14). NGC ID# 255B, PCGS# 97195

4839 1890 MS65+ NGC. The lover of originality will fully appreciate the beauty of this gorgeously toned Gem. Wonderfully deep hues of golden-brown, purple-rose, and electric-blue adorn the obverse. The reverse is brilliant across the fields and centers, with a pleasing band of russet-red and sunset-orange patina that decorates the peripheries. A well-struck, lustrous example showing just one or two minuscule nicks on each side. NGC ID# 255C, PCGS# 7196

4840 1890 MS65 PCGS. CAC. Despite an ample mintage of more than 16 million coins, few examples of the 1890 dollar survive in Gem condition, and the date is prohibitively rare any finer. This well-struck representative exhibits blended rainbow hues over much of each side, delivering excellent visual appeal. A beautifully preserved, CAC-approved Gem. Only two examples have graded numerically finer at PCGS (3/14). NGC ID# 255C, PCGS# 7196

4841 1890 MS64 Deep Mirror Prooflike PCGS. Ex: Key West Collection. Deep Mirror Prooflike coins are scarce for this issue in near-Gem condition, and altogether rare any finer. This MS64 example is brightly reflective across the deep fields, with the motifs lightly frosted for some pleasing contrast. The eagle is especially bold and contrasted on the reverse. Only minor abrasions dot the fields, with Liberty's portrait smooth and unmarked. PCGS has seen just seven finer examples in Deep Mirror Prooflike (3/14). NGC ID# 255C, PCGS# 97197

**1890-CC Tail Bar Dollar, VAM-4
Seldom-Seen MS63 Deep Mirror Prooflike**

4842 1890-CC Tail Bar MS63 Deep Mirror Prooflike PCGS. CAC. VAM-4. A Top 100 Variety. The dramatic spike from the lower tail feathers on reverse is among the most impressive die anomalies in the entire Morgan series. This silver-white example shows untuned silver-white surfaces with optimal contrast and scattered light contact marks that determine the grade. Seldom seen in DMPL. Population: 5 in 63 Deep Mirror Prooflike, 5 finer (3/14). PCGS# 987199

**1890-CC Morgan Dollar, MS64 Deep Mirror Prooflike
Popular Tail Bar Variety, VAM-4**

4843 1890-CC Tail Bar MS64 Deep Mirror Prooflike PCGS. VAM-4. Ex: Jackson Hole-Key West Collection. A Top 100 Variety. Identified by a spectacular die gouge that runs from the juncture of the arrow feathers and the eagle's tailfeathers down to the wreath. In their *The Top 100 Morgan Dollar Varieties: The VAM Keys*, Michael Fey and Jeff Oxman say of this variety: "Heavily promoted as a major rarity, the VAM-4 is actually more common than most collector's realize." While some numismatists may debate the authors' contention about the variety's rarity level, Deep Mirror Prooflike examples, like the near-Gem specimen in this lot, are anything but common. Indeed, when Fey and Oxman wrote their booklet (1996), they indicated that Deep Mirror Prooflike specimens were unknown!

An attentive strike brings out sharp definition on the design elements, including the hair at Liberty's ear and the eagle's breast feathers. The only hint of patina are some milky freckles visible under magnification. A few minor marks on each side preclude full Gem status. Population: 5 in 64 Deep Mirror Prooflike, 0 finer (3/14). Ex: *Milwaukee Signature* (Heritage, 8/2007), lot 1745. PCGS# 987199

4844 1890-CC MS64 NGC. Despite having the highest mintage of all the Carson City Morgans (over 2.3 million coins), Mint State 1890-CC dollars were anything but plentiful in the Treasury releases. This fully struck, near-Gem representative displays minimal abrasions with lustrous surfaces. The lavender, golden, and ocean-blue peripheries fade to mainly brilliant centers. NGC ID# 255D, PCGS# 7198

4845 1890-CC MS64 NGC. The obverse is largely silver-gray, with freckles of blue-green at the periphery. The reverse displays the same intermixed with splashes of peach patina. Well-struck with coruscating mint luster. The reverse is smooth and there is only minor contact on the obverse.
Ex: Dr. Curtis R. Paxman Collection (Bowers and Ruddy, 11/1974), lot 798. NGC ID# 255D, PCGS# 7198

4846 1890-CC MS64+ NGC. A virtually brilliant near-Gem example of this scarcer Carson City Morgan issue. A pleasing strike and vibrant cartwheel luster deliver substantial eye appeal. The surfaces are uncommonly free of noticeable abrasions, and the portrait exhibits only a few faint grazes. NGC ID# 255D, PCGS# 7198

4847 1890-CC MS64+ PCGS. Multicolor toning covers both sides of this lustrous, borderline Gem Carson City dollar, with vivid tones variegated and equally prevalent on both sides of the coin. Shades of aqua, blue, orange-red, and gold appear across the coin, with lime-green tones at the margins. The devices show significant mint frost and a bold strike. A small abrasion on Liberty's cheek defines the grade, although PCGS granted the Plus designation for quality and eye appeal. NGC ID# 255D, PCGS# 7198

4848 1890-CC MS64+ PCGS. Sparkling mint frost illuminates the snow-white surfaces of this visually compelling near-Gem from the mint in Carson City. Sharply struck with only superficial ticks on the obverse and just a couple of bagmarks noticed in the reverse fields that restrict the grade. NGC ID# 255D, PCGS# 7198

4849 1890-CC MS64 PCGS. CAC. VAM-5. The mintmark is clearly repunched. A well struck and highly lustrous Choice Carson City Morgan. The stone-white surfaces are smooth aside from faint facial grazes.
Ex: Orlando Signature (Heritage, 1/2006), lot 6715, which realized \$1,955. NGC ID# 255D, PCGS# 7198

4850 1890-CC MS64+ PCGS. CAC. VAM-5. The second C in the mintmark is clearly repunched north. This lustrous Carson City Morgan exhibits a full strike and pleasing surface preservation. Both sides display merely a hint of tan-gold toning. NGC ID# 255D, PCGS# 7198

4851 1890-CC MS64 Prooflike PCGS. Stark cameo contrast and razor-sharp details are among the pleasing attributes this near-Gem Carson City Morgan has to offer. Deep mirroring in the fields and lightly frosted devices deliver outstanding visual appeal when tilted under a light. Scattered grazes on the high points preclude a finer grade, but are not overly prominent. NGC ID# 255D, PCGS# 7199

4852 1890-O MS64 Deep Mirror Prooflike PCGS. CAC. *Ex: Key West Collection.* This near-Gem example exhibiting Deep Mirror Prooflike surfaces remains largely brilliant, with a few small areas of toning present, primarily shades of gold on the lower reverse. A couple of tiny toning spots appear on the portrait. The strike is sharp, with only minor incompleteness at the centers. A few hair thin marks are present, but are not distracting. PCGS has assigned higher numeric grades to only 18 examples (3/14). NGC ID# 255E, PCGS# 97201

4853 1890-S MS65 ANACS. Sharply struck and lustrous. A blush of light golden toning warms both sides, with pale lavender accents on the obverse. The surfaces exhibit only minor grazes, with an overall attractive appearance.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255F, PCGS# 7202

4854 1890-S MS65 NGC. A pleasing Gem representative with faint splashes of gold toning over each side. The strike is needle-sharp with the eagle's talons fully defined. Highly lustrous, with only minimal abrasions.
Ex: Long Beach Signature (Heritage, 2/2008), lot 1323. NGC ID# 255F, PCGS# 7202

**1890-S Silver Dollar, MS66+
Only Seven Certified Finer**

4855 1890-S MS66+ PCGS. CAC. Combined, PCGS and NGC have certified just seven finer examples of this important issue (3/14). Both sides are fully brilliant and highly lustrous with no evidence of toning. Sharply detailed with sharp hair details over Liberty's ear. An exceptional example with amazing eye appeal. NGC ID# 255F, PCGS# 7202

**1890-S Morgan Silver Dollar
MS64 Deep Mirror Prooflike**

4856 1890-S MS64 Deep Mirror Prooflike PCGS. *Ex: Key West Collection.* It is almost beyond belief that a business strike could look this good. Remarkable fields are brimming with reflection, against which are set nicely frosted devices. Just a few trivial contact marks limit the grade of this near-Gem. Population: 28 in 64 Deep Mirror Prooflike, 8 finer (3/14).
Ex: Long Beach Signature (Heritage 2/2000), lot 5609; Long Beach Signature (6/2001), lot 6523. NGC ID# 255F, PCGS# 97203

**1890-S Dollar, MS64 Deep Mirror Prooflike
Only Six Finer at NGC**

4857 1890-S MS64 Deep Mirror Prooflike NGC. The "S" mintmark on the reverse of this lovely dollar is the only feature that distinguishes this piece from a proof dollar. The fields are deeply mirrored with boldly defined and satiny silver devices. Both sides have full brilliance without toning. Census: 29 in 64 Deep Mirror Prooflike, 6 finer (3/14). NGC ID# 255F, PCGS# 97203

4858 1891 MS64+ PCGS. CAC. A high-end near-Gem specimen, this coin displays vibrant luster and gorgeous silver-white surfaces, with only a few subtle hints of toning appearing. Aside from the extreme centers, the piece exhibits a strong strike. The scattered marks present, primarily on the obverse, pose minimal distraction, if any. NGC ID# 255G, PCGS# 7204

4859 1891 MS64+ PCGS. CAC. Aside from the extreme centers, the strike is sharp on this high-end near-Gem representative, adding to the appeal. Other attributes of this piece include rich luster and faintly toned surfaces. The scattered marks present do not pose a distraction. NGC ID# 255G, PCGS# 7204

4860 1891 MS64+ PCGS. CAC. This Philadelphia issue is not often seen with such attractive, frosty brilliance. Silver-white and untuned, strong luster emanates in bold cartwheels from both sides of the coin. A full strike on the motifs resides on fields that are only a few small abrasions away from an even higher grade. PCGS granted this example the Plus designation for eye appeal and high-end quality, which is confirmed by the CAC label. NGC ID# 255G, PCGS# 7204

**1891 Morgan Dollar, MS65
Scarce Any Finer**

4861 1891 MS65 PCGS. A faintly toned Gem, this piece exhibits lovely satin luster. The strike is pleasing overall, with softness present at the centers. A die chip appears on the front of Liberty's neck. PCGS has awarded higher numeric grades to only 3 examples, while NGC has assigned finer grades to only 2 examples (3/14). NGC ID# 255G, PCGS# 7204

**1891 Morgan Dollar, MS65
Only Three Numerically Finer Coins at PCGS**

4862 1891 MS65 NGC. A few tiny hints of toning appear on this Gem representative. The surfaces display ice-white color overall and frosty luster. Aside from the extreme centers, the strike is sharp. Although the 1891 Morgan dollar issue consisted of almost 8.7 million coins, examples are readily available only through the near-Gem level. At MS65, the population drops substantially and higher-grade examples are virtually unobtainable, with NGC and PCGS combined having awarded higher numeric grades to a mere 5 examples (2/14). NGC ID# 255G, PCGS# 7204

4863 1891 MS63 Deep Mirror Prooflike PCGS. Ex: Key West Collection. The devices are deeply frosted and the fields are flashy on this Select representative. Faint toning is present on this well-struck example. Despite a high mintage of over 8.6 million business strikes, few 1891 Morgan dollars have achieved the Deep Mirror Prooflike designation at the upper grade levels. Population: 27 in 63 Deep Mirror Prooflike, 20 finer (3/14). NGC ID# 255G, PCGS# 97205

4864 1891-CC MS64 NGC. Splashes of amber, violet, and aquamarine cover both sides of this sharply struck, near-Gem Carson City dollar, with strong, frosty mint luster shining through. Close examination reveals only a few insignificant abrasions, well-concealed by the patina. NGC ID# 255H, PCGS# 7206

**1891-CC Morgan Dollar, MS65
Attractive, Outstanding Example**

4865 1891-CC MS65 NGC. Not a common coin despite its relatively high mintage for a Carson City Morgan dollar, the 1891-CC is nevertheless an obtainable issue at the MS65 grade level. This example is sharply struck with glassy, prooflike fields and pleasing electric-blue and reddish-brown peripheral toning on both sides. The near-absence of surface marks, save for a couple on Liberty's jaw and neck, confirms the Gem status of this outstanding representative. NGC ID# 255H, PCGS# 7206

1891-CC Dollar, Vibrant MS65+

4866 1891-CC MS65+ PCGS. CAC. Struck from a mintage of 1.618 million pieces, the 1891-CC Morgan dollar today has a certified population numbering several thousand coins through near-Gem. Gems can be located with a bit of searching and higher-grade specimens are elusive. Vibrant luster emanates from the untuned surfaces of this high-end Gem and the devices exhibit strong definition. Neither side reveals the extensive bagmarks seen on most surviving examples. PCGS and NGC have graded fewer than 40 pieces finer (3/14). NGC ID# 255H, PCGS# 7206

**1891-CC Morgan Dollar, MS64 Deep Mirror Prooflike
VAM-3, 'Spitting Eagle' Variety**

4867 1891-CC MS64 Deep Mirror Prooflike PCGS. VAM-3. Ex: Key West Collection. A Top 100 Variety. This brilliant white-on-black near-Gem was perhaps among the first "Spitting Eagle" dollars struck, since the fields are strongly prooflike. Crisply struck, and the reverse is particularly smooth. Population: 4 in 64 Deep Mirror Prooflike, 0 finer (3/14).
Ex: *Denver Signature (Heritage, 8/2006)*, lot 3030. NGC ID# 255H, PCGS# 97207

4868 1891-O MS64+ PCGS. CAC. Not many coins are certified finer for this New Orleans issue, especially with the Plus designation from PCGS. A borderline Gem, the coin features a vivid obverse toning display with streaky, variegated patches of blue, russet-red, and honey-gold tones across the silver surfaces. The reverse shows a more even translucent, honey-gold patina. A sharp strike for the issue is evident. CAC-Approved. NGC ID# 255J, PCGS# 7208

4869 1891-O MS64+ PCGS Secure. CAC. This satiny MS64+ 1891-O dollar is close to a Gem grade in every way, seemingly just a couple of minor ticks from the vaunted MS65. This untuned example offers generous cartwheel luster and bold eye appeal. The strike through the center high points is typical for the issue. NGC ID# 255J, PCGS# 7208

**1891-O Morgan Silver Dollar
MS63 Deep Mirror Prooflike**

4870 1891-O MS63 Deep Mirror Prooflike PCGS. Ex: Key West Collection. In his *Complete Encyclopedia of Silver Dollars*, Q. David Bowers writes that "the striking qualities of 1891-O dollars is, on the average, very poor, indeed the worst in the series" and "Prooflike and DMPL coins are very rare at all grade levels, but nearly always have unsatisfactory surfaces." However, the present lightly toned piece is a noteworthy exception: it is sharply struck, has flashy mirrored fields, and no heavy bagmarks. An opportunity for the DMPL specialist. Population: 8 in 63 Deep Mirror Prooflike, 14 finer (3/14).
Ex: *New York Signature Sale (Heritage, 7/2004)*, lot 7231. NGC ID# 255J, PCGS# 97209

4871 1891-S MS65+ PCGS. CAC. Fully struck with snow-white surfaces that exhibit wild cartwheel luster across both sides. A pair of paper-thin luster grazes in the left obverse field and two or three minuscule marks in the reverse fields seemingly keep it from an even loftier grade. Still a tremendous coin with great eye appeal. NGC ID# 255K, PCGS# 7210

**1891-S Dollar, MS64 Deep Mirror Prooflike
Well-Struck and Appealing**

4872 1891-S MS64 Deep Mirror Prooflike PCGS. Ex: Key West Collection. In his *Guide Book of Morgan Dollars*, Bowers says that this issue is usually well produced and appealing, a "Morgan dollar as a Morgan dollar should be." He also notes that: "Prooflikes are sometimes encountered and are attractive." This is a well-struck example with impressively deep reflectivity in the fields, lovely light toning, and minimal surface marks. Population: 32 in 64 (1 in 64+) Deep Mirror Prooflike, 4 finer (3/14). NGC ID# 255K, PCGS# 97211

4873 1892 MS64 NGC. A lightly frosted near-Gem example of this Philadelphia issue. The surfaces are nearly brilliant with a faint golden hue. A few light grazes on Liberty's jaw preclude a higher grade. The details are well-struck overall, though some typical softness is noted at the centers. NGC ID# 255L, PCGS# 7212

**1892 Morgan Dollar, MS65
Rare Any Finer**

4874 1892 MS65 PCGS. Rich, frosty luster and brilliant, untuned surfaces provide this Gem with a strong degree of eye appeal. The coin exhibits a strong strike with only a touch of blending at the centers. A small area of residue appears near the S in PLURIBUS. PCGS has awarded higher numeric grades to only 4 examples (2/14). NGC ID# 255L, PCGS# 7212

**1892 Morgan Dollar, MS65
Extremely Rare Any Finer**

4875 1892 MS65 PCGS. CAC. A sharply struck Gem, this specimen is virtually free of toning and exhibits strong satin luster. An additional attribute is that the coin is largely free of evidence of contact, with a tiny rim nick appearing on the reverse near 9 o'clock. PCGS has awarded higher numeric grades to only 4 examples (3/14). NGC ID# 255L, PCGS# 7212

4876 1892 MS64 Prooflike PCGS. Ex: Key West Collection. A well-detailed Choice Morgan dollar with frosty design elements and brilliant mirrored fields that show a few minor hairlines and contact marks. Population: 27 in 64 Prooflike, 2 finer (3/14). NGC ID# 255L, PCGS# 7213

4877 1892-CC MS62+ PCGS Secure. CAC. Despite a high mintage for a Carson City issue (1.3 million pieces), the Treasury hoards contained fewer Mint State examples of the 1892-CC dollar than other issues from this mint. This flashy, fully brilliant example displays a sharp strike and a fantastic cartwheel effect. Scattered abrasions define the grade.
Ex: *Long Beach Signature (Heritage, 6/2010)*, lot 8465. NGC ID# 255M, PCGS# 7214

4878 1892-CC MS63 NGC. This well-preserved Carson City dollar delivers outstanding eye appeal, with heavily frosted surfaces and a beautiful halo of rainbow toning around both peripheries. Surprisingly few abrasions are present, given the grade, with largely uninterrupted luster. NGC ID# 255M, PCGS# 7214

4879 1892-CC MS63 ANACS. A highly attractive example of this later Carson City issue, with frosted devices set into nearly prooflike fields. A few scattered abrasions define the grade, but hardly detract from the visual appeal of this piece. The luster is mainly brilliant, with violet and lilac accents around the peripheries. NGC ID# 255M, PCGS# 7214

4880 1892-CC MS63 NGC. Reflective, semiprooflike fields display translucent auburn-red toning around the margins of both sides of the coin, with frost-white silver centers. Appealing surfaces show a sharp strike and minimal abrasions for this popular Carson City date. An attractive, Select Uncirculated example. NGC ID# 255M, PCGS# 7214

4881 1892-CC MS63 PCGS. Lustrous, overall silver-white surfaces provide this Select specimen with a lovely appearance. Areas of faint toning are present. The design elements are well defined aside from the centers. Clash marks appear on both sides. Scattered marks and grazes held this piece from a higher grade. NGC ID# 255M, PCGS# 7214

1892-CC Morgan, MS64 Frosty Mint Luster

4882 1892-CC MS64 NGC. Large numbers of this later Carson City issue were released into circulation at the time of production, leaving few Mint State examples for the early 1960s Treasury releases. This near-Gem example displays vibrant frost-white luster over both sides, while minimal surface abrasions are present. A well-struck example of this slightly scarcer issue. NGC ID# 255M, PCGS# 7214

1892-CC Dollar, MS64 Beautiful, Lightly Abraded Example

4883 1892-CC MS64 PCGS Secure. A blush of pale rose appears in the central obverse while the untuned silver-white reverse is starkly contrasted and near to a Prooflike designation, if taken on its own. The reverse shows some light die clashing, die cracks appear around the peripheries of each side, and scattered contact marks that determine the grade are chiefly confined to the obverse. A beautiful example of this late Carson City issue. NGC ID# 255M, PCGS# 7214

1892-CC Dollar, Nicely Preserved MS65

4884 1892-CC MS65 PCGS. The 1892-CC dollar can be located through near-Gem, but obtaining a Gem will require more patience and searching, and higher-grade pieces are elusive. The silver-gray surfaces of this Gem offering display pleasing luster and well-struck design elements, though some light roller marks slightly impede the definition in the hair above Liberty's ear. Nicely preserved for the grade designation. NGC ID# 255M, PCGS# 7214

1892-CC Morgan, MS65 Vibrant Cartwheel Luster

4885 1892-CC MS65 PCGS. Brilliant snow-white surfaces exhibit a thick layer of intense mint frost over both sides of this lustrous Gem, while semiprooflike fields are mildly contrasted against the devices. The design elements are sharply defined and the surfaces are well-preserved. A beautiful representative of this scarcer Carson City issue, encapsulation in an old green label holder. PCGS has certified only 28 numerically finer pieces (3/14).
Ex: *Denver Signature* (Heritage, 8/2006), lot 3060; *FUN Signature* (Heritage, 1/2007), lot 7235. NGC ID# 255M, PCGS# 7214

4886 1892-CC MS63 Prooflike PCGS. Despite a mintage in excess of 1.3 million coins, the 1892-CC is among the scarcer Morgan dollars from this mint, especially with Prooflike contrast. This sharply struck representative displays moderate mirroring in the fields, with lightly frosted central devices. Scattered, light abrasions contribute to the grade, but none are individually noteworthy. NGC ID# 255M, PCGS# 7215

4887 1892-CC MS63 Prooflike PCGS. VAM-4. Ex: Diamond Head. Repunched Mintmark. The 1892-CC Morgan was not well-represented in the Treasury releases, and fully Prooflike survivors are scarcely encountered. This fully brilliant piece displays deeply mirrored fields around heavily frosted, sharply struck devices. The surfaces show only minimal abrasions, with the fields particularly clean.
Ex: *ANA Signature* (Heritage, 8/2007), lot 2369. NGC ID# 255M, PCGS# 7215

4888 1892-CC MS63 Deep Mirror Prooflike ANACS. This remarkable Select Morgan dollar displays sharply detailed design elements, with a frosty texture that contrasts boldly with the deeply reflective fields. A few minor contact marks are evident on both sides, explaining the grade. NGC ID# 255M, PCGS# 97215

4889 1892-O MS64 NGC. A lovely coin with excellent luster, a clean cheek, and minimally marked surfaces that are essentially brilliant, save for a slight band of plum color near the lower right reverse border. An outstanding near-Gem example of this New Orleans issue. NGC ID# 255N, PCGS# 7216

4890 1892-S AU50 PCGS. Easily obtainable in lower circulated grades, the 1892-S Morgan quickly becomes rare in Mint State. This pleasing About Uncirculated example retains much of its original mint luster and displays light silver-gray color overall. The design elements are only slightly worn on the highest points, and the surfaces are free of distracting faults.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255P, PCGS# 7218

**1892-S Morgan, AU55
Highly Lustrous**

4891 1892-S AU55 PCGS. Usually available in circulated grades, the 1892-S dollar suddenly becomes rare at the Mint State level, with proportionately high demand from wealthy collectors. This Choice Almost Uncirculated piece retains substantial original mint luster, with a faint golden hue overall. Just a touch of wear is seen over the high points of the design, while the surfaces exhibit remarkably few consequential abrasions. NGC ID# 255P, PCGS# 7218

**1892-S Morgan Dollar, AU58
Attractive Near-Mint Example**

4892 1892-S AU58 NGC. The great rarity of its San Francisco counterpart from the succeeding year has doubtless provided added cachet to the reputation of the 1892-S Morgan. This issue is actually relatively common in lower circulated grades, but Mint State and even near-Mint coins such as this one are rare and keenly pursued in the numismatic marketplace.

The silver-gray surfaces are minimally disturbed and the boldly struck devices only show minor signs of high-point wear. A small reeding mark on the lower reverse, between the arrowheads and the wing, is mentioned solely for accuracy and as a potential pedigree marker. An attractive and problem-free example of this important issue.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255P, PCGS# 7218

**1892-S Morgan Dollar
Sharp Uncirculated Details**

4893 1892-S — Cleaning — PCGS Genuine. Unc. Details. The San Francisco mint produced just 1.2 million Morgan dollars in 1892, and it is believed that most of that total was paid out early into circulation; by the 1962 to 1964 Treasury releases, no bags of Mint State examples remained in government vaults. The rarity of Uncirculated pieces was not fully recognized, however, until years afterward, when collector demand suddenly increased at a rapid pace.

This unworn representative exhibits a sharp strike and minimally abraded surfaces. Both sides show signs of old cleaning, but have since retoned a pale golden hue. A pleasing example of this sought-after issue. NGC ID# 255P, PCGS# 7218

4894 1893 MS64 PCGS. One of just 378,000 business strike Morgan Dollars produced in the Philadelphia Mint in 1893, this near-Gem example reveals bright, nearly untinted surfaces and sharply defined design elements.

Ex: Palm Beach Signature (Heritage, 11/2004), lot 9774. NGC ID# 255R, PCGS# 7220

4895 1893 MS64 PCGS. An appealing example of this low-mintage issue with highly lustrous surfaces that offer an attractive array of intermingled hues over clean, carefully preserved surfaces. A well-struck near-Gem with a single wispy line along the side of Liberty's cheek that seemingly limits the grade. NGC ID# 255R, PCGS# 7220

4896 1893 MS64 PCGS. A boldly struck example, slightly weak above the ear and on the eagle's breast feathers, with smooth satiny luster and untinted stone-white surfaces. A small number of wispy marks keep it from a Gem grade. NGC ID# 255R, PCGS# 7220

**1893 Dollar, MS64+
Low-Mintage Philadelphia Issue**

4897 1893 MS64+ PCGS. A high-end near-Gem representative, this coin exhibits cartwheel luster and largely untinted surfaces. The centers reveal a minor incompleteness of strike. A planchet flake and a slender planchet flaw appear across the lower portion of Liberty's face. The reverse rim exhibits a couple of nicks near 3 o'clock. NGC ID# 255R, PCGS# 7220

4898 1893 MS64+ PCGS. Possessing a strong degree of visual appeal, this high-end near-Gem displays lustrous surfaces. Areas of toning are present, primarily at the outer edges. The hues include gold and golden-brown. The strike is sharp, with only minor incompleteness noted at the extreme centers. As-made lint marks appear near 5 o'clock on the obverse. NGC ID# 255R, PCGS# 7220

**1893 Morgan Dollar, MS64
Low-Mintage Philadelphia Issue**

- 4899 1893 MS64 PCGS. CAC.** A lustrous coin, this near-Gem displays appealing silver-white color overall, with a few subtle hints of toning present. Aside from the extreme centers, the strike is sharp. Light clash marks appear on the reverse and a tiny area of as-made struck-in grease is noted above Liberty's ear.
Ex: ANA Fort Worth (Heritage, 3/2010), lot 1559. NGC ID# 255R, PCGS# 7220

**1893 Morgan Dollar, MS64
Pleasing Example, Low-Mintage Issue**

- 4900 1893 MS64 PCGS. CAC.** The eagle's breast feathers, beak, tongue and talons are remarkably well-struck, as are all of the obverse design elements. A frosty and untuned representative of this scarce, low-mintage issue. Wispy luster grazes on Liberty's cheek and in the right reverse field keep it from a Gem grade; otherwise a pleasing Choice Mint State example. NGC ID# 255R, PCGS# 7220

**1893 Morgan Dollar, MS65
Lustrous and Pleasingly Toned**

- 4901 1893 MS65 PCGS. CAC.** This sharply struck Gem is intensely lustrous and shows complete definition over the centers. Brilliant-white in the centers, attractive plum and lavender peripheral toning strays into some of the outer field areas, and adds a pleasing layer to the coin's overall visual appeal. Carefully preserved with minimal marks. This Philadelphia Mint issue is rare any finer, and just eight examples have been rated above MS65 by NGC and PCGS combined (3/14). NGC ID# 255R, PCGS# 7220

- 4902 1893-CC XF40 PCGS.** A smooth-looking representative of this popular final-year issue from Carson City. The pewter-gray surfaces only display modest abrasions. NGC ID# 255S, PCGS# 7222

- 4903 1893-CC XF45 NGC.** A pleasing, lightly circulated example of the last Carson City dollar. Good detail for the grade is present, with subtle hints of luster remaining beneath the steel-gray patina. The surfaces reveal only minuscule circulation-caused imperfections.
Ex: Baltimore Signature (Heritage, 7/2008), lot 9185. NGC ID# 255S, PCGS# 7222

- 4904 1893-CC XF45 ANACS.** An attractive Choice XF example with a touch of wear on the eagle's breast and wingtips. The surfaces are lightly abraded for the grade, with prooflike reflectivity in sheltered areas. NGC ID# 255S, PCGS# 7222

**1893-CC Dollar, AU58
Last-Year Carson City Issue**

- 4905 1893-CC AU58 NGC.** Golden-tinged silver surfaces show abundant mint frost on the devices with much field reflectivity and nearly full cartwheel luster remaining on each side. Scattered light marks attest to a short spate in circulation; the only singular mark is a small dig on the lower eagle's breast.
Ex: Exclusively Internet Auction (Heritage, 6/2003), lot 13787. NGC ID# 255S, PCGS# 7222

**1893-CC Morgan Dollar, MS63
Low-Mintage Collector Favorite**

- 4906 1893-CC MS63 NGC.** Brilliant with frost-white centers and golden-orange toning at the rims, this final-year Carson City dollar displays brightly lustrous surfaces and a full strike. A bit of prooflike character adds flash to the fields and accentuates the frosted devices. Perhaps the most charismatic Carson City date of the series for collectors, this Select Uncirculated example shows excellent quality. Relatively few abrasions for the issue determine the grade, but do not hinder the eye appeal. NGC ID# 255S, PCGS# 7222

1893-CC Morgan Dollar, MS63
Lustrous, Attractive Example

- 4907 1893-CC MS63 PCGS.** This is a well-struck piece from the last year of Carson City coinage production. The satiny mint luster is unimpeded and generates pleasing cartwheel effects, especially on the reverse. Superficial marks are noted on each side, but all are well within the context of the Select Mint State grade designation. A highly attractive, brilliant representative of this popular final-year issue. NGC ID# 255S, PCGS# 7222

Select 1893-CC Morgan Dollar
Last Carson City Issue

- 4908 1893-CC MS63 PCGS.** Although both sides of this lovely Select Mint State Carson City dollar have trivial marks, the surfaces are far finer than normally encountered. The fields are lightly reflective, with lustrous devices. This piece is brilliant and untuned with excellent eye appeal. NGC ID# 255S, PCGS# 7222

1893-CC Dollar, MS63
Absolute and Conditional Rarity

- 4909 1893-CC MS63 ANACS.** Among the most sought-after Morgan dollar issues, the 1893-CC had a mintage of only 677,000 pieces. In addition to being an absolute and conditional rarity, the 1893-CC carries a certain cachet as the final year of issue from the historic Carson City Mint. This attractive coin should please an advanced collector. The surfaces are bright and show noticeable field-device contrast on the reverse. The strike is decent on the obverse and quite sharp on the reverse. A touch of light gold appears throughout, with pale rose near the lower reverse rim.
Ex: Central States Signature (Heritage, 4/2006), lot 3625. NGC ID# 255S, PCGS# 7222

1893-CC Morgan Dollar, MS63
Popular Final-Year Type Issue

- 4910 1893-CC MS63 PCGS.** The strike definition is very bold and crisp on both sides of this intensely lustrous, highly attractive example. Bright and brilliant on the obverse, with subtle elements of creamy-tan patina noted on the reverse. A popular final-year type issue from the Carson City Mint. NGC ID# 255S, PCGS# 7222

1893-CC Morgan Dollar, MS63 Prooflike
Conditionally Scarce, Final-Year CC Issue

- 4911 1893-CC MS63 Prooflike ANACS.** This date represents the final Morgan dollar issue from the mint in Carson City, and it is much loved by collectors. The 1893-CC is well-known as a heavily bagmarked issue, but this Prooflike piece only shows a single noticeable mark on the obverse, along Liberty's jaw, and a handful of trivial nicks located in the reverse fields. Speckled russet and reddish-brown patina complements the creamy-silver surfaces. The fields are remarkably reflective for a business strike dollar. NGC ID# 255S, PCGS# 7223

1893-CC Dollar, MS63 Prooflike
Final Carson City Issue

- 4912 1893-CC MS63 Prooflike PCGS.** *Ex: Key West Collection.* A lifespan of 23 years seems to be the default for the defunct Mints of the United States; Charlotte and Dahlonega operated from 1838 until they shut down in 1861, as did the New Orleans Mint, though it was later returned to service. By a strange coincidence, the Carson City Mint lasted 23 years as well, from 1870 to the year of this piece, 1893. The present example is well struck with frosted devices and strongly reflective luster. Light blue patina in the fields does not obscure the mirrors. Highly appealing despite light abrasions. Population: 22 in 63 Prooflike, 2 finer (3/14).
Ex: FUN Signature (Heritage, 1/2007), lot 7268. NGC ID# 255S, PCGS# 7223

- 4913 1893-O AU58 NGC.** The low mintage of just 300,000 pieces makes this a much better date in the series. This lustrous, brilliant-white example is just a whisper away from Mint State and more appealing than most lower-grade Uncirculated coins. Sharply struck for the issue and Liberty's cheek is smooth. Few abrasions exist on the coin. NGC ID# 255T, PCGS# 7224

**1893-O Morgan Dollar, MS60
Scarce in Mint State**

- 4914 1893-O MS60 PCGS.** Lustrous, largely silver-white surfaces provide this MS60 example with a lovely appearance, with the reverse being particularly attractive. The dentils at the upper obverse display toning and a few tiny toning spots appear. Although scattered marks are present, none is overly distracting.
Ex: *Central States Milwaukee (Heritage, 4/2010)*, lot 1381. NGC ID# 255T, PCGS# 7224

**1893-O Morgan Dollar, MS60
Untoned and Lustrous**

- 4915 1893-O MS60 PCGS.** This untoned silver-white example shows excellent cartwheel luster. The centers are a bit soft, as usual for the issue, and the shows a few wispy slide marks and luster grazes that determine the grade. Certified in a green-label holder.
Ex: *Dallas Signature (Heritage, 12/2005)*, lot 2531. NGC ID# 255T, PCGS# 7224

**1893-O Morgan Dollar, MS62
Second Lowest 1893 Mintage**

- 4916 1893-O MS62 PCGS.** Ex: Key West Collection. Of four Morgan dollar issues in 1893, the 1893-O has the second-lowest mintage, its 300,000 pieces struck higher only than the famous 1893-S. This MS62 example offers strong luster with considerable reflectivity on the reverse. The obverse is slightly more subdued beneath a thin layer of silver-gray toning. Moderately abraded overall but pleasing.
Ex: *Long Beach Signature Sale (Heritage, 2/2009)*, lot 1871; *Summer FUN Signature Sale (Heritage, 7/2009)*, lot 967. NGC ID# 255T, PCGS# 7224

**1893-O Morgan, MS63
Low-Mintage Semikey**

- 4917 1893-O MS63 NGC.** From a low mintage of only 300,000 coins, the 1893-O dollar stands as a sought-after semikey in pleasing Mint State condition. It is elusive finer than MS63, and very rare in Gem grades.

This survivor displays mainly brilliant surfaces, with a thin ribbon of gold, violet, and ocean-blue surrounding the peripheries. The luster is uncharacteristically frosty, with well-defined details, delivering a high degree of eye appeal. Some surface abrasions are present, as the grade suggests, but none are overly detracting. NGC ID# 255T, PCGS# 7224

**1893-O Morgan, MS61 Prooflike
Reflective and Impressive**

- 4918 1893-O MS61 Prooflike NGC.** The 1893-O Morgan dollar, a low-mintage issue of 300,000 pieces, is rare in any Mint State grade. This reflective, well-struck piece shows mauve-plum and peach patina around the rims, contrasting against lustrous silver centers. The reverse is impressively smooth, while the left obverse has the expected number of individually minor marks. This piece is encapsulated in an NGC "no-line fatty" holder. Census: 6 in 61 Prooflike, 15 finer (3/14).
Ex: *Milwaukee ANA Signature (Heritage, 8/2007)*, lot 2400. NGC ID# 255T, PCGS# 7225

**1893-S Morgan Dollar
Key-Date Issue**

- 4919 1893-S PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an XF specimen that has been cleaned. Light wear is seen over both sides, with scattered light abrasions, though the overall visual appeal remains pleasing. Pale steel-gray patina covers both sides of this key-date S-mint dollar. NGC ID# 255U, PCGS# 7226

4920 1893-S Good 6 PCGS. A pleasing lower-grade example of this key-date issue. Gunmetal-gray fields complement lighter gray devices, with relatively even wear overall. Strong detail is present for the grade, particularly on the obverse. The surfaces are virtually free of faults.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255U, PCGS# 7226

4921 1893-S Good 6 NGC. The key to the series, the 1893-S Morgan is seldom encountered with this much eye appeal at the Good 6 grade level. Battleship-gray centers are framed by darker gray margins with tinges of rainbow hidden in the fields. No surface faults of any kind are present, with strong detail in the devices. NGC ID# 255U, PCGS# 7226

4922 1893-S — Improperly Cleaned — NGC Details. VG. Medium battleship-gray patina masks old cleaning on both sides of this evenly worn representative. Strong detail remains for the grade level, with no major surface abrasions. A pleasing example of this sought-after key-date San Francisco issue. NGC ID# 255U, PCGS# 7226

**1893-S Morgan Dollar, Fine 12
Naturally Attractive Surfaces**

4923 1893-S Fine 12 NGC. Survivorship of this rare San Francisco issue is skewed toward circulated examples, indicating at least a fair number of the 100,000 pieces produced made it into the hands of commerce in the West. The relatively few that survive, however — plus the fact that few remain in Uncirculated state — indicate that not all of the mintage survived the Pittman Act melting pots. This example is well-worn but smooth and unbothered. Decent rims remain. Attractive, silver-gray surfaces have a natural appeal with glimpses of reflectivity.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255U, PCGS# 7226

**1893-S Morgan Dollar, Fine 12
Well-Circulated, Original Appeal**

4924 1893-S Fine 12 NGC. A rich patina of heirloom silver covers the surfaces of this scarce San Francisco date, which has the look of long circulation among the merchants, tradesmen, bankers, and speculators of the West. A few indignities mark the surfaces in the form of tiny digs, marks, and minor stains, but overall this coin is smooth and original with no signs of ever being dipped or cleaned. Strong rims and nice detail on the motifs remain. NGC ID# 255U, PCGS# 7226

1893-S Dollar, VF Sharpness

4925 1893-S — Improperly Cleaned — NGC Details. VF. A nicely defined representative of the famous key date. The stone-gray surfaces are mildly granular and slightly glossy. Abrasions are relatively few, and concentrated on Liberty's jaw and the field above the arrowheads. Rarest of the business issues, and the mintage of 100,000 pieces is lowest except for the proof-only 1895. NGC ID# 255U, PCGS# 7226

**1893-S Dollar, VF30
Low-Mintage, Key-Date Example**

4926 1893-S VF30 PCGS. A desirable midrange representative of this ever-popular West Coast key, an issue that circulated substantially until increased awareness of its rarity saw it culled from circulation. The present coin has a mixture of medium to charcoal-gray shadings across its surfaces. Minor, scattered abrasions contribute to the grade.

Ex: Dallas Signature (Heritage, 10/2008), lot 1407; Long Beach Signature (Heritage, 2/2009), lot 1885. NGC ID# 255U, PCGS# 7226

**1893-S Morgan Dollar, VF35
A Nicely Circulated, Key-Date Example**

4927 1893-S VF35 PCGS. This Morgan dollar key issue is more available in circulated grades than it is in Mint State, but the series' lowest business strike mintage of 100,000 pieces combines with a poor overall survival rate to ensure the scarcity of the 1893-S at any level of preservation. This Choice VF example displays gunmetal-gray color with slight olive and forest-green peripheral accents. The evenly worn surfaces reveal a handful of minor blemishes on each side. NGC ID# 255U, PCGS# 7226

1893-S Morgan Dollar, VF35

- 4928** 1893-S VF35 NGC. Natural violet and gray patina appear on both sides of this lightly worn S-Mint dollar. The 1893-S is the key to the series, from a mintage of only 100,000 coins. It is likely that an unknown quantity was later melted, judging by today's limited supply. An excellent chance to fill that hole in a Morgan collection. NGC ID# 255U, PCGS# 7226

1893-S Silver Dollar, XF Details Business Strike Rarity

- 4929** 1893-S — Rim Damage — NGC Details. XF. A pair of rim nicks — one at 4 o'clock on the obverse, the other at 11 o'clock on the reverse — define the NGC Details designation. Lightly abraded, silver-gray surfaces are a bit weak at the centers of this challenging, low-mintage key issue. A small amount of mint luster remains among the lettering and stars.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255U, PCGS# 7226

1893-S Morgan Dollar, XF Details

- 4930** 1893-S — Cleaning — PCGS Genuine. XF Details. Abrasive cleaning lines are evident on both sides of this important dollar. However, the surfaces have reacquired a pleasing and fully natural light gray tone, with gold and iridescent peripheral toning. This is an important opportunity for the collector who seeks great detail at an affordable price. NGC ID# 255U, PCGS# 7226

1893-S Dollar, XF40 Appealing Key-Date Specimen

- 4931** 1893-S XF40 PCGS. The lowest business strike mintage of the entire series belongs to the 1893-S issue. Since the Morgan dollar is the most popular of all 19th century U.S. coin types, and perhaps the most popular U.S. type of all time, that means that thousands of collectors have fervently pursued this issue for many decades, and will doubtless continue to do so for a great many more.

This example displays even, light silver-gray coloration over both sides. The central devices exhibit noticeable wear, but most of the other design motifs are nearly complete. Delicate hairlines and a few small marks are easily consistent with the assigned grade of this appealing key date specimen.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255U, PCGS# 7226

1893-S Morgan Dollar, XF40 Pleasing, Well-Detailed Example

- 4932** 1893-S XF40 ANACS. This important key date has the lowest business strike mintage in the entire series (100,000 pieces), and thousands of those coins may have been melted in 1918 due to the Pittman Act. This example is well-detailed, showing even high-point wear and a few stray hairlines on each side. Slight touches of golden-brown and cobalt-blue peripheral toning complement the creamy-gray fields and centers. NGC ID# 255U, PCGS# 7226

1893-S Morgan Dollar, Choice XF Nicely Preserved Example

- 4933** 1893-S XF45 PCGS Secure. Ex: Key West Collection. Remnants of the original mint luster cling to this attractive Choice XF 1893-S, an issue that is on collectors' short lists of most-desired Morgan dollar issues. This silver-white example lightly tinged with gold near the rims is far finer than the usual Very Fine example ubiquitous in the market. Liberty's cheek is smooth, and the surfaces are nicely preserved front and back. NGC ID# 255U, PCGS# 7226

1893-S Morgan Dollar, AU Details
Affordable Key-Date Representative

4934 1893-S — Cleaning — Genuine PCGS. AU Details. An untuned silver-gray representative of this key issue, somewhat bright from improper cleaning. A lengthy mark on the reverse, extending below the eagle's head just above the wing, seems to be as made. A typically struck example, softly impressed over the centers, with few other marks evident except for wispy hairlines. NGC ID# 255U, PCGS# 7226

4935 1894 VF30 NGC. A strongly detailed example of this sought-after semikey issue. The surfaces display pleasing steel-gray coloration and exhibit no distracting abrasions. An exceptional middle-grade representative.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4936 1894 VF35 NGC. A predominantly silver-gray example of this often-elusive issue, which has one of the lowest mintages of any Morgan dollar issue. Lightly abraded overall with a spot of darker gray at the eagle's neck and another near 2 o'clock on the reverse rim.
Ex: Milwaukee ANA Signature (Heritage, 8/2007), lot 2410. NGC ID# 255V, PCGS# 7228

4937 1894 XF40 NGC. The 1894 Morgan dollar had one of the lowest mintages of the series, adding to the appeal of circulated examples. Faintly toned, the surfaces of this piece reveal even wear on the high points and no overly distracting marks.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4938 1894 XF45 NGC. A few small areas of light toning appear on this Choice XF representative. Aside from a reed mark on the nose, there are relatively few marks on the portrait, adding to the appeal of this piece.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4939 1894 — Questionable Color — Genuine PCGS. AU Details. PCGS suggests the pale golden toning of this semikey Morgan to be of questionable origin, however, the coin retains pleasing eye appeal with significant mint luster shining through. Close examination reveals just a touch of rub on the highest points of the devices, with otherwise sharp detail overall.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4940 1894 AU50 NGC. A lightly circulated example, this coin displays only subtle hints of toning. The high points of the design reveal light wear. Scattered marks are present, as expected at this grade level, with the only mentionable marks appearing on the portrait.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4941 1894 AU50 ANACS. A minimal mintage of 110,000 pieces makes this a classic key date in the series. This deeply toned example displays deep gunmetal gray surfaces with some gold and ebony accents. Nicely detailed, although a pair of slight rim bumps on the reverse are barely visible in the holder. NGC ID# 255V, PCGS# 7228

4942 1894 AU53 PCGS. From a low mintage of only 110,000 coins, this About Uncirculated dollar retains significant mint luster and just a brush of wear on the eagle's breast and the hair immediately above Liberty's ear. The surfaces are mainly brilliant, with a hint of amber on the two worn points. Light, scattered abrasions are noted, but do not subdue the eye appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4943 1894 AU55 NGC. Areas of light toning, in hues of peach and rose, appear on this Choice AU example displaying a strong strike and nice eye appeal. A couple of hair thin marks cross the portrait on this piece.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4944 1894 AU55 NGC. Essentially untuned, with lightly hairlined surfaces that display a smattering of small marks. A well-struck and overall pleasing example of this low-mintage Philadelphia Mint issue. NGC ID# 255V, PCGS# 7228

4945 1894 AU58 NGC. Virtually free of toning aside from small portions of the outer edges, this near-Mint representative has a lovely appearance. None of the scattered marks present is worthy of individual mention.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

4946 1894 — Obverse Improperly Cleaned — NGC Details. Unc. A well-struck example of this semikey issue. NGC notes light obverse cleaning, though substantial original luster remains over both sides. Faint golden toning adds just a blush of color overall.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

1894 Morgan Dollar, MS60
Low-Mintage Philadelphia Issue

4947 1894 MS60 NGC. The 1894 is a respectable Morgan dollar issue with a low mintage of 110,000 business strikes. In fact, Dave Bowers says: "The 1894 is the first true key date in the Philadelphia Mint lineup of Morgan dollars." This example is satiny and essentially untuned, with bold strike definition and a couple of reeding marks noted on the eagle's breast. NGC ID# 255V, PCGS# 7228

**1894 Morgan Dollar, MS61
Scarcer Low-Mintage Issue**

4948 1894 MS61 NGC. Uncirculated examples of this low-mintage issue are always welcome, and generate plenty of interest among serious Morgan dollar collectors when they appear. Only 110,000 business strikes were produced, a low total that rivals that of the famous 1893-S key issue. The 1894 has a higher survival rate than its San Francisco mint predecessor, but retains a highly respected position in the pantheon of scarce and desirable issues. This example is sharply struck and essentially untoned, showing good luster quality and mild scuffiness in the left obverse field that seemingly restricts the grade.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228

**1894 Morgan Silver Dollar, MS61
Nice Eye Appeal**

4949 1894 MS61 NGC. The strike is sharp on this MS61 example from a low-mintage issue, save for the centers. The coin is virtually devoid of toning. As expected at this grade level, the piece exhibits numerous signs of contact, though most are not worthy of individual mention except for a couple of hair thin marks near the eagle's head. NGC ID# 255V, PCGS# 7228

**1894 Morgan Dollar, MS62
Visually Appealing Semikey Example**

4950 1894 MS62 NGC. This satiny example has a higher-than-expected degree of visual appeal for an MS62 example. The strike is sharper and the preservation level better than those of many similarly-graded Morgan dollars. We must conclude that this coin seems conservatively graded by NGC. A high-end example of this low-mintage semikey issue that should appeal to the savvy specialist. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228*

**1894 Morgan Dollar, MS62
A Scarce Semikey Issue**

4951 1894 MS62 ANACS. Due to its mintage of only 110,000 business strikes, the second-lowest in the Morgan dollar series, this issue is automatically rated as scarce and is usually referred to as a semikey date. This example displays somewhat weak definition over the centers, with decent luster and typical small marks that are as expected for the grade. The fields and centers are untuned and white, while wisps of plum color are noted near the borders. NGC ID# 255V, PCGS# 7228

**1894 Morgan, MS62
Low-Mintage Issue**

4952 1894 MS62 PCGS. Only 110,000 Morgan dollars were struck at Philadelphia in 1894, the second-lowest production figure of the series, creating a sought-after semikey in Mint State condition. This sharply struck example delivers pleasing eye appeal with fully brilliant, softly frosted luster. Light, scattered abrasions define the grade, though none are individually noteworthy. NGC ID# 255V, PCGS# 7228

**1894 Morgan Dollar, MS63
Low-Mintage Semikey Issue**

4953 1894 MS63 NGC. It is interesting to compare the survival rates for the 1893-S and the 1894 Morgan dollars. With mintages of 100,000 and 110,000 pieces, respectively, the San Francisco and Philadelphia Mint issues could logically have a similar number of Uncirculated survivors. In actual fact, the 1894 is much more available in mint condition than the 1893-S, for reasons that will remain forever unknown. This piece is boldly struck and lustrous, with silver-gray surfaces that display fewer marks than one might expect, for a coin graded MS63. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255V, PCGS# 7228*

4954 1894-O MS62 PCGS. Satiny, fully brilliant luster blankets both sides, with few detracting surface abrasions. The strike is atypical, with weakness in the eagle's breast and the hair above Liberty's ear. A pleasing lower-grade Mint State example of this popular issue. NGC ID# 255W, PCGS# 7230

4955 1894-O MS62 NGC. Scattered areas of light gold toning appear on this specimen. Aside from a mark on Liberty's chin and two in the field above the eagle's head, none of the relatively few marks present poses any distraction. This MS62 example has nice eye appeal for the grade.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255W, PCGS# 7230

1894-O Dollar, MS64 Lustrous and Attractive

4956 1894-O MS64 PCGS. Bowers decries the typical striking quality of this issue, in his *Guide Book of Morgan Silver Dollars*, when he states: "Mint State examples of the 1894-O dollar are often wretched in appearance. Is there hope? Yes, there is, but a great deal of searching will be needed to find an example that is decent or above average (but not sharp) in striking details and with attractive luster — a cherry-picker's challenge and delight."

While this example shows typical softness over the centers, the luster quality is excellent and the well-preserved surfaces exhibit pleasing original toning, especially on the obverse. NGC ID# 255W, PCGS# 7230

4957 1894-S MS62 NGC. A sharply detailed representative. The luster is satiny, with just a blush of light golden toning on both sides. Minimal surface abrasions are present, with the reverse particularly clean.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255X, PCGS# 7232

1894-S Morgan Dollar, MS64 Prooflike Flashy, Conditionally Scarce Example

4958 1894-S MS64 Prooflike PCGS. Well struck with a beautiful rich coating of silver-white patina on both sides, a few minor blemishes and luster grazes, and dramatically reflective, flashy fields. Population: 29 in 64 Prooflike, 2 finer (3/14).

Ex: Milwaukee Central States Signature (Heritage, 5.2004), lot 8660. NGC ID# 255X, PCGS# 7233

4959 1895-O AU53 NGC. VAM-3A. Though not designated as such on the holder, this lightly circulated piece is an example of the "Bearded Eagle" variety. Hints of gold appear on both sides. As expected at this grade level, scattered marks are present. Though most of the marks appear on the portrait, they do not pose a significant distraction. NGC ID# 255Y, PCGS# 7236

4960 1895-O AU55 PCGS. Significant mint luster remains in the protected regions of this Choice AU representative. The surfaces display a light golden hue overall, with only slight wear seen over the high points. NGC ID# 255Y, PCGS# 7236

4961 1895-O AU55 NGC. Although both sides of this Choice AU example reveal toning, the colors are more pronounced, and arguably more attractive, on the obverse. The hues include gold, teal, and plum. Areas of luster remain. As expected at this grade level, a number of scattered marks are present.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255Y, PCGS# 7236

4962 1895-O AU55 PCGS. From a low mintage of 450,000 pieces, the 1895-O Morgan dollar is seldom encountered in attractive Mint State condition. The present coin is a lightly circulated, well-detailed example, with highly lustrous surfaces and no significant distractions.

Ex: Summer FUN Signature (Heritage, 7/2010), lot 4238. NGC ID# 255Y, PCGS# 7236

1895-O Morgan Dollar, AU58 Low-Mintage Branch Mint Issue

4963 1895-O AU58 NGC. David Bowers (2006) believes that "well over 100,000" of the 450,000-piece 1895-O mintage was melted. This near-Mint State example possesses considerable luster and displays light golden toning at the peripheries. While most examples are weakly struck at the centers, this specimen exhibits good detail in those areas despite high-point wear. A few light contacts are scattered about, including a hair-thin mark in the right obverse field.

Ex: Los Angeles Signature (Heritage, 8/2009), lot 2003. NGC ID# 255Y, PCGS# 7236

1895-O Silver Dollar, AU58 Close to Full Luster

4964 1895-O AU58 NGC. This near-Mint State 1895-O shows just a whisper of high-point rub with essentially all of the original cartwheel luster remaining on frosty silver-white surfaces. Mentionable marks are chiefly confined to the obverse, including a couple on Liberty's cheek and chin. A nicely struck example of this key date. NGC ID# 255Y, PCGS# 7236

4965 1895-S XF40 NGC. A pleasing original, old-silver gray toning covers the moderately worn fields and devices of this scarce San Francisco issue. The margins display hints of remaining luster beneath orange-gold and blue accents. Nice rims frame the well-balanced, minimally marked surfaces. A low-mintage issue, with just 400,000 pieces produced. NGC ID# 255Z, PCGS# 7238

4966 1895-S XF45 NGC. Both the New Orleans and San Francisco dates for this year are scarce but available up through About Uncirculated conditions. This San Francisco example is mostly brilliant with the beginnings of silver-gray patina on the motifs. Nice luster remains over the lightly abraded surfaces. Just 400,000 were minted. NGC ID# 255Z, PCGS# 7238

4967 1895-S XF45 PCGS. CAC. Natural, silver-gray surfaces show only minimal marks for the grade, and make this coin an especially appealing example for any circulated set. A much better date, and highly prized when this original and Choice. CAC-Approved for quality. NGC ID# 255Z, PCGS# 7238

4968 1895-S AU50 PCGS. Untoned with numerous wispy hairlines on each side. Normal wear is noted on the highpoints, for the grade assigned. An important issue, and one of the most sought-after in the Morgan dollar series. NGC ID# 255Z, PCGS# 7238

4969 1895-S AU53 NGC. A pleasing, lightly circulated example of this low-mintage (400,000 coins) semikey. Substantial original mint luster remains in the recesses, accenting golden-gray overtones on the exposed surfaces. Strong detail and a lack of significant abrasions give this piece exceptional visual appeal for the grade. NGC ID# 255Z, PCGS# 7238

4970 1895-S AU58 NGC. This low mintage issue comes under extra market pressure due to the absence of P-mint examples for the year, combined with the scarcity of the only other available issue, the 1895-O. This piece is boldly struck, brilliant, and shows a few noticeable abrasions. The coin seems to be free of wear, however. Ex: *Dallas Signature* (Heritage, 10/2006), lot 1616. NGC ID# 255Z, PCGS# 7238

**1895-S Silver Dollar, MS64
Highly Sought Issue**

4971 1895-S MS64 PCGS. CAC. Ex: The Michigan Collection. One of the most sought-after issues in the Morgan series, the 1895-S is scarce in all grades. This satiny near-Gem has excellent eye appeal created by a combination of brilliant silver surfaces and traces of russet toning along the lower obverse border. A few scattered marks on the reverse prevent an even higher grade. The reverse fields are nearly prooflike. Sharply struck. PCGS has only certified 38 finer examples (3/14).

Ex: *Central States Signature Sale* (4/2007), lot 4934; *Summer FUN Signature Sale* (7/2007), lot 1655. NGC ID# 255Z, PCGS# 7238

4972 1895-S AU58 NGC. VAM-3. A Hot 50 Variety. The mintmark was initially entered at an awkward, tilted angle, to the left of its proper position. This variety is one of two premium 1895-S VAMs; the other is the VAM-4 S Over Horizontal S. Of course, any 1895-S is desirable in AU58, as it is a low-mintage issue. This piece is lustrous and lightly toned, with attractive surfaces and minor central incompleteness of strike. NGC ID# 255Z, PCGS# 7238

**1895-S Dollar, VAM-4, S Over Horizontal S
MS63 Prooflike**

4973 1895-S S Over Horizontal S MS63 Prooflike PCGS Secure. VAM-4. A Top 100 Variety. Ex: Diamond Head-Key West Collection. This variety was discovered by numismatist Tom DeLorey, former editor of *Coin World's* "Collector's Clearinghouse" column, in November 1979. The remains of a dramatic horizontal S mintmark appear at top left and within the final upright mintmark. This is a lovely example of the 1895-S issue even without the VAM, reflective silver-white with a light golden tinge and minimal surface marks that are suggestive of an even finer grade. Population: 4 in 63 Prooflike, 3 finer (3/14). PCGS# 43807

**1896 Morgan, MS67
Beautiful Multicolor Toning**

4974 1896 MS67 PCGS. Boasting a mintage of nearly 10 million coins, the 1896 Morgan is readily available to type collectors in grades up to and including MS66; at the Superb Gem grade level, however, the date becomes significantly scarce. This sharply struck piece displays vibrant cartwheel luster beneath intermingled violet, green-gold, and aquamarine hues over each side. The surface preservation is outstanding, while the eye appeal is excellent. Only two examples have graded numerically finer at PCGS (3/14). NGC ID# 2562, PCGS# 7240

**1896 Morgan Dollar, MS67
Only Two Finer Coins at PCGS**

4975 1896 MS67 PCGS. CAC. The 1896 Morgan dollar was produced in large numbers, but the date is scarce in MS67 condition and conditionally very rare in finer grades. This delightful Superb Gem displays vibrant mint luster and sharply detailed design elements throughout. A few hints of rose and champagne-gold toning highlight the well-preserved surfaces. PCGS has graded two numerically finer examples (3/14). NGC ID# 2562, PCGS# 7240

4976 1896-O MS60 NGC. As is almost always the case with the 1896-O Morgan dollar, this Mint State example reveals a soft strike. Numerous scattered marks, particularly on the portrait, contributed to the grade of this piece exhibiting only subtle hints of toning. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 2563, PCGS# 7242

4977 1896-O MS61 NGC. A truly exceptional example of this typically weak, lackluster issue, with strong mint brilliance and moderate sharpness overall. A thin ring of golden peripheral toning surrounds only lightly abraded surfaces, delivering excellent visual appeal for the grade. A pleasing Mint State example of this elusive New Orleans issue. NGC ID# 2563, PCGS# 7242

4978 1896-O MS61 NGC. A trifle weak over the central high points, this New Orleans example has a satiny, somewhat lackluster appearance, which probably restricted the grade assessment by NGC. It displays creamy beige-white coloration with russet border accents and just a handful of trivial marks on each side. NGC ID# 2563, PCGS# 7242

4979 1896-O MS61 PCGS. Luster rolls across the cheek in addition to the open fields. Nicely struck for this conditionally challenging date, which is seen far more often in well circulated grades. Void of mentionable marks, and the obverse border offers freckles of original peach toning.

Ex: Atlanta ANA Signature (Heritage, 4/2006), lot 1159, which realized \$1,610. NGC ID# 2563, PCGS# 7242

4980 1896-O MS61 NGC. An essentially brilliant silver dollar that boasts sweeping luster and surprisingly few marks. The centers exhibit incompleteness of strike. An affordable Mint State example of this conditionally elusive O-mint Morgan.

Ex: Denver Signature (Heritage, 8/2006), lot 3133, which realized \$1,610. NGC ID# 2563, PCGS# 7242

4981 1896-O MS61 NGC. Light to medium lilac-red and forest-green toning adorns the margins of this better date New Orleans silver dollar. The lustrous surfaces exhibit fewer marks than expected for the designated grade. In a prior generation holder.

Ex: Baltimore Auction (Bowers and Merena, 11/2007), lot 2904. NGC ID# 2563, PCGS# 7242

4982 1896-O MS61 NGC. Known for its rarity in better Uncirculated grades, the 1896-O is also elusive with a strike as sharp as seen on the present example. Lightly toned and lustrous with a smooth reverse and scattered minor obverse marks.

Ex: Milwaukee Signature (Heritage, 8/2007), lot 8998, which realized \$1,552.50. NGC ID# 2563, PCGS# 7242

4983 1896-O MS62 PCGS. A lustrous and appealing New Orleans representative with a sharp strike and a clean reverse. The obverse has a few faint luster grazes, but these flaws are largely trivial. A notable condition rarity within the Morgan dollar series.

Ex: Hans Poetsch Collection (Heritage, 9/2002), lot 7566; Pittsburgh Signature (Heritage, 8/2004), lot 6981; Diamond Head Collection (Heritage, 8/2007), lot 2455, which realized \$2,990. NGC ID# 2563, PCGS# 7242

**1896-S Morgan, MS63
Sought-After in Mint State**

4984 1896-S MS63 NGC. Scarce in Mint State, the 1896-S Morgan remains a sought-after issue, and is particularly elusive with pleasing overall eye appeal.

The present example displays well-detailed design elements, with violet and light golden peripheries surrounding mainly brilliant centers. The surfaces are void of any significant abrasions, and showcase softly frosted luster overall. NGC ID# 2564, PCGS# 7244

4985 1897 MS66 PCGS. This well-preserved Premium Gem displays a sharp strike and frosty, virtually unbroken luster. The surfaces are nearly brilliant, with just a faint suggestion of golden toning overall. PCGS has graded 24 numerically finer examples (3/14). NGC ID# 2565, PCGS# 7246

**1897 Morgan Dollar, MS66 Prooflike
None Finer at PCGS**

4986 1897 MS66 Prooflike PCGS. This impressive silver dollar exhibits a bold strike with brilliant, untuned silver surfaces. The fields are fully mirrored and provide a wonderful frame for the lustrous devices. PCGS has certified 10 examples as MS66 Prooflike and two others as MS66 Deep Mirror Prooflike (3/14). Those are the finest mirrored finish 1897 dollars that service has examined. NGC ID# 2565, PCGS# 7247

1897 Dollar, Flashy MS65 Deep Mirror Prooflike

4987 1897 MS65 Deep Mirror Prooflike PCGS Secure. *Ex: Key West Collection.* The ice-white surfaces on this appealing Gem are deeply reflective in the fields and offer thick mint frost on the devices. The strike is sharp throughout both sides, and contact marks are scattered and minor, a flashy and great-looking example of this issue seldom seen with Deep Mirror Prooflike surfaces. Population: 29 in 65 Deep Mirror Prooflike, 2 finer (3/14). NGC ID# 2565, PCGS# 97247

4988 1897-OMS61 NGC. Areas of light golden-brown toning are present at the outer edges of this example. The strike is sharp overall, with minor incompleteness at the centers. Aside from a couple of marks on Liberty's cheek, there are no mentionable signs of contact.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2566, PCGS# 7248

4989 1897-O MS62 PCGS. Light tan-gold luster covers both sides, but is more prominent on the reverse where it is joined by whispers of light blue. The central obverse exhibits some minor softness, a characteristic of the issue, while the rest of the details are well-defined. Some scattered light abrasions contribute to the grade.
Ex: Long Beach Signature (Heritage, 9/2008), lot 2943.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2566, PCGS# 7248

4990 1897-S MS65 Deep Mirror Prooflike PCGS Secure. *Ex:* Key West Collection. Deep Mirror Prooflike examples of this issue are scarce, with few certified by either service. This Gem dollar is remarkably unabraded and attractive. Liberty's cheek is smooth and mark-free save for one light abrasion beneath the eye. The coin is untoned, and presents a full strike with Mint-fresh appeal. Population: 33 in 65 (1 in 65+) Deep Mirror Prooflike, 7 finer (3/14). NGC ID# 2567, PCGS# 97251

4991 1898-O MS67 PCGS. Appealing cartwheel luster and brilliant, virtually untuned silver-white surfaces provide this Superb Gem with impressive visual appeal. The strike is sharp, with only minor incompleteness present at the extreme centers. PCGS has yet to award a higher numeric grade to a single example (3/14). NGC ID# 2569, PCGS# 7254

4992 1898-O MS67 PCGS. An uncharacteristically sharp strike and dazzling luster adorn this high-end Superb Gem. The hair above Liberty's ear is well-defined, with good detail on the eagle feathers. Fully brilliant and well-preserved. None have graded numerically finer at PCGS (2/14). NGC ID# 2569, PCGS# 7254

**1898-O Dollar, MS66 Deep Mirror Prooflike
Top-Notch Example of This Former Great Rarity**

4993 1898-O MS66 Deep Mirror Prooflike PCGS. *Ex:* Key West Collection. The 1898-O was a former great rarity in the series (along with the 1903-O and 1904-O) before the Treasury releases of 1962 and thereafter. Nowadays the issue is widely available in Gem and finer conditions, but a piece such as this MS66 Deep Mirror Prooflike coin is still a conditional rarity. Sparkling contrast and sterling preservation put this piece in the top rung of remaining survivors. Population: 40 in 66 Deep Mirror Prooflike, 3 finer (3/14). NGC ID# 2569, PCGS# 97255

4994 1898-S MS65 NGC. Intense mint frost radiates from the snow-white surfaces of this gorgeous Gem. Close inspection with a loupe fails to reveal any mentionable marks. NGC ID# 256A, PCGS# 7256

**1898-S Dollar, MS66
Brilliant, Intensely Lustrous Example**

4995 1898-S MS66 PCGS. This brilliant, intensely lustrous Premium Gem dollar is generally well-struck, even if the hair detail above Liberty's ear is a tad weak. The only noted surface marks are too wispy and superficial to limit the grade or the eye appeal of this splendid example. Population: 72 in 66 (3 in 66+), 3 finer (3/14). NGC ID# 256A, PCGS# 7256

4996 1899 MS66 PCGS. Largely silver-white in color, this Premium Gem displays pleasing luster and minimally abraded surfaces. The strike is sharp aside from the extreme centers. The eye appeal of this piece is lovely. Housed in an old green label holder. PCGS has assigned higher numeric grades to only 18 examples (3/14). NGC ID# 256B, PCGS# 7258

4997 1899 MS66+ PCGS. As the grade and Plus designation indicate, this high-end Premium Gem exhibits outstanding eye appeal. The silver-white surfaces are virtually free of toning and display a sharp strike. Minimally abraded, this piece possesses a wonderful appearance. Population: 12 in 66+, 18 finer (3/14). NGC ID# 256B, PCGS# 7258

4998 1899 MS66 PCGS. CAC. *Ex:* The Michigan Collection. A solidly struck example with attractive luster and just a hint of iridescence. A light luster scrape is present between the wings of the eagle.
Ex: Orlando FUN Signature (Heritage, 1/2007), lot 7391. NGC ID# 256B, PCGS# 7258

4999 1899-O MS67 PCGS. Strong luster and silver-white surfaces are among the attributes this Superb Gem specimen exhibits. Areas of faint gold toning appear at portions of the outer edges. Very few abrasions are present, all minuscule. The reverse reveals minor clash marks and wispy die breaks. Housed in a green label holder. Only a single example has been awarded a higher numeric grade by PCGS (3/14).
From The Northern Lights Collection. NGC ID# 256C, PCGS# 7260

**1899-O Morgan, MS67
Superb O-Mint Representative**

5000 1899-O MS67 PCGS. CAC. The population of Mint State 1899-O Morgan dollars was greatly increased in autumn 1962 when the Treasury released large quantities to the numismatic world, making the date excellent for type purposes. This Superb Gem example displays softly frosted, light golden luster over both sides, with beautifully preserved underlying surfaces. A sharply struck example, housed in an old green label holder. Only one example has graded numerically finer at PCGS (3/14). NGC ID# 256C, PCGS# 7260

5001 1899-O MS65 Deep Mirror Prooflike PCGS. CAC. Ex: Key West Collection. Flashy fields and frosted devices provide this Gem with strong visual appeal. The obverse reveals scattered splashes of gold toning, while hues of golden-brown, teal, and sky-blue appear on the reverse. An intricate strike is among the attributes this piece possesses. Population: 44 in 65 Deep Mirror Prooflike, 21 finer (3/14). NGC ID# 256C, PCGS# 97261

5002 1899-S MS65 Prooflike PCGS. CAC. Ex: Key West Collection. Areas of faint toning are present on this piece exhibiting a moderate depth of reflectivity and only a few light surface marks. This is a scarce late-date San Francisco dollar with prooflike qualities, especially in such an outstanding grade. As was the case when we cataloged this piece in 2006, there remain only four numerically finer examples at PCGS, with the current numbers standing at 38 in 65 (1 in 65+) Prooflike, 4 finer (3/14).
Ex: *Central States Signature* (Heritage, 4/2006), lot 3739, realizing \$2,530. NGC ID# 256D, PCGS# 7263

1900 Dollar, MS65 Prooflike Impressive, Conditionally Rare

5003 1900 MS65 Prooflike PCGS. CAC. Ex: The Key West Collection. Well-struck with impressively prooflike fields and lovely russet-gold peripheral toning on the obverse. The reverse is mostly brilliant with just a slight degree of pale gold color near the borders. Faint die striations increase the reflectivity in the fields. Population: 22 in 65 Prooflike, 5 finer (3/14). NGC ID# 256E, PCGS# 7265

5004 1900-O/CC MS65+ PCGS. CAC. VAM-8. A Top 100 Variety. This brilliant, upper-end Gem representative showcases a razor-sharp strike, with all design elements fully defined. Frosty mint bloom reveals beautifully preserved surfaces, with virtually uninterrupted luster. NGC ID# 256G, PCGS# 7268

5005 1900-O/CC MS65 PCGS. VAM-8. Ex: Key West Collection. A Top 100 Variety. A Gem example of the popular O/CC mintmark, this piece displays radiantly lustrous surfaces, with faint hints of light tan under magnification, along with sharply struck design elements. A retained lamination appears on the upper reverse below the TA of STATES. A die scratch is visible in the base of the T in LIBERTY, but no die chip is seen in the G of GOD. Some inoffensive grade-consistent marks are present on the obverse.
Ex: *FUN Signature* (Heritage, 1/2008), lot 5648, which realized \$2,070. PCGS# 133960

5006 1900-S MS65 ANACS. Elusive in finer grades. This Gem 1900-S Morgan displays small splashes of blue, violet, and amber around the peripheries, with a faint tint of light golden in the centers. Sharply struck and exhibiting frosty, well-preserved surfaces, with Liberty's cheek particularly clean.
From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 256H, PCGS# 7270

1900-S Dollar, Radiant MS66+ Only Three Finer Known

5007 1900-S MS66+ PCGS Secure. More than 9,000 coins make up the certified population of 1900-S silver dollars, thanks to the many bags paid out from storage at the San Francisco Mint between the 1930s and 1950s and to the 1962-1964 Treasury release. The radiantly lustrous surfaces of this MS66+ example are nearly untuned save for a few whispers of soft charcoal-gray around the upper obverse border. The hair over Liberty's ear, though not full, shows some detail. Both sides are devoid of mentionable marks or grazes. PCGS and NGC have seen a mere three specimens finer (3/14). NGC ID# 256H, PCGS# 7270

5008 1900-S MS64 Prooflike PCGS. Ex: Key West Collection. Hints of gold color occur at the borders of this well struck near-Gem prooflike specimen. A few handling marks define the grade. Only 26 examples have achieved higher numeric grades from PCGS (3/14).
Ex: *Dallas Signature* (Heritage, 4/2007), lot 1236. NGC ID# 256H, PCGS# 7271

5009 1901 AU58 NGC. Warm yellow-gold patina blankets both sides of this nearly Mint State Morgan. Light wear is present on the high points, though the devices retain well-defined overall detail. A few scattered abrasions are present, with none outwardly distracting.
From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 256J, PCGS# 7272

5010 1901 MS60 NGC. One of the most sought-after Morgan dollars in Mint State condition. The present example displays mainly brilliant mint luster with a faint tint of light golden around the rims. The surfaces exhibit scattered abrasions, as the grade suggests, but few are outwardly distracting. Some weakness of strike is noted in the left obverse stars.
From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 256J, PCGS# 7272

1901 Morgan Dollar, MS61 Important Key Issue in Mint State

5011 1901 MS61 PCGS. In an old green PCGS holder, this conditionally scarce Mint State survivor from the Philadelphia Mint will garner considerable interest when it crosses the auction block. Typically soft across the centers, with shallow breast feather definition on the C4 reverse, this is an essentially untuned piece with pleasing satin luster. Trivial blemishes on Liberty's cheek and in the left obverse field define the grade of this example. NGC ID# 256J, PCGS# 7272

**1901 Morgan, MS61
Sought-After in Mint State**

- 5012 1901 MS61 ANACS.** Mint State 1901 Morgan dollars likely owe their scarcity to the Pittman Act of 1918 which melted over 270 million silver dollars in one fell swoop. This Uncirculated survivor displays brilliant mint luster over most of both sides with small tinges of amber around the peripheries. Scattered abrasions define the grade, but they are minor and unobtrusive. A sharply struck representative. NGC ID# 256J, PCGS# 7272

**1901 Morgan Dollar, MS62
Important Issue in Mint State**

- 5013 1901 MS62 PCGS.** This issue has been well-recognized as conditionally scarce in Uncirculated condition since the 1960s. It comes close to being a key or semikey issue, but is not usually referred to as such because of its common status in circulated grades. This is one of the most attractive examples that we have seen in recent years. The intensely lustrous surfaces are brilliant in the fields and centers while showing lovely bands of gold-orange, and sky-blue peripheral toning on both sides. Surface marks are about average for the grade. NGC ID# 256J, PCGS# 7272

**1901 Morgan Dollar, MS62
Scarce Issue in Mint State**

- 5014 1901 MS62 PCGS.** The scarcity of the 1901 dollar is definite, but buyers should be cautioned that this is only true of Uncirculated examples. Circulated examples of this issue are numerous, and should not command premium prices. This MS62 coin is untoned, with satiny luster and typically struck design motifs. Both sides are essentially free of marks. NGC ID# 256J, PCGS# 7272

- 5015 1901 Doubled Die AU50 ANACS. VAM-3.** A Top 100 Variety. A popular VAM with profound doubling of most reverse design elements. Deep blue, violet, and amber toning accent steel-gray surfaces, with slightly subdued luster overall. A few minor abrasions are present.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 7302

- 5016 1901 Doubled Die AU53 NGC. VAM-3.** A Top 100 Variety. The most important doubled die variety of the Morgan dollar series. The tailfeathers exhibit a wide spread, as do the arrows, the branch, and the eagle's beak. This example has light golden-brown toning and a few minor marks on the portrait. Census: 13 in 53, 24 finer (2/14). Ex: *Baltimore Signature (Heritage, 3/2009), lot 1513; Long Beach Signature (Heritage, 9/2010), lot 4721.* PCGS# 7302

- 5017 1901 Doubled Die AU53 PCGS. VAM-3.** A Top 100 Variety. Reverse doubling of all major design elements is discernable even with the unaided eye. The surfaces are natural silver-gray and still exhibit substantial underlying mint luster. A few circulation marks are present, but are not distracting. A visually appealing AU example of this popular variety. Population: 24 in 53, 46 finer (2/14). PCGS# 7302

- 5018 1901 Doubled Die AU53 PCGS. VAM-3.** Ex: Key West Collection. A Top 100 Variety. Finding an attractive AU representative of this popular VAM variety further confounds an already complicated search, as any 1901 Morgan dollar is elusive the closer one comes to the Mint State grades. This coin is well struck with considerable luster beneath thin aqua-gray and green-gold patina. Light wear appears at the highpoints, though this has little impact on the tailfeathers, which show this variety's famous and bold doubling. Population: 24 in 53, 47 finer (3/14). Ex: *Central States St. Louis (Heritage, 5/2007), lot 5008, which realized \$1,955.* PCGS# 7302

**1901 Doubled Die Reverse, VAM-3, AU55
Scarce and Important Guide Book Variety**

- 5019 1901 Doubled Die AU55 PCGS. VAM-3.** The "Shifted Eagle" variety. According to the *Comprehensive Catalog and Encyclopedia of Morgan and Peace Dollars*, by Van Allen and Mallis: "It is the strongest doubled reverse die of the Morgan series, and shows pronounced doubling of the bottoms of the eagle's wings and tail feathers, olive branch and arrow shafts. It commands a large premium in all grades and only two are known in uncirculated." This variety is also listed in the *Guide Book*.

This example is weakly struck over the centers, with untuned silver-gray surfaces and satiny mint luster. Scattered minor abrasions and faint high-point wear define the grade of this pleasing Choice AU specimen. Population: 30 in 55, 16 finer (3/14). PCGS# 7302

**1901 Morgan Dollar, AU55
Doubled Die, VAM-3 Variety**

- 5020 1901 Doubled Die AU55 PCGS. CAC. VAM-3.** Ex: California-Michigan Collection. A Top 100 Variety. Along with the 1888-O “Hot Lips,” the 1901 VAM-3 is the best known doubled die variety of the series. The second hubbing was north of the initial hubbing, and fortunately for collectors, the initial hubbing was strong. The pick-up point is the eagle’s tail. An untoned example that boasts much of its introductory luster.
Ex: Long Beach Signature (Heritage, 2/2008), lot 1493. PCGS# 7302

**1901 Morgan, MS61
Rare Prooflike Example**

- 5021 1901 MS61 Prooflike NGC.** Highly sought-after in any Mint State grade, the 1901 Morgan is furthermore remarkably rare with prooflike fields; NGC and PCGS combined have awarded Prooflike status to just 11 coins in all grades (one in Deep Mirror Prooflike). This well-struck representative displays moderate mirroring in the fields, with faint lavender-gray patina over both sides. Light, scattered abrasions define the grade, but are not overly detracting. A pleasing example of this conditionally rare issue. Census: 2 in 61 Prooflike, 1 finer (3/14). NGC ID# 256J, PCGS# 7273

**1901-O Morgan Dollar, MS65 Deep Mirror Prooflike
Gorgeous, Conditionally Rare Example**

- 5022 1901-O MS65 Deep Mirror Prooflike NGC.** This high-mintage issue is far from rare, and examples are easily obtained in Mint State grades up to and including MS65. With Prooflike or Deep Mirror Prooflike fields, however, this is a conditionally scarce-to-rare date. Prooflike coins are somewhat available, but Deep Mirror Prooflikes are few and far-between. This is a gorgeous example with rich toning and clean, well-preserved surfaces. The deeply prooflike fields are indeed glassy and highly reflective, while the crisply struck devices show a bit of light frosting on both sides. Census: 24 in 65 Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 256K, PCGS# 97275

**1901-S Morgan Dollar, MS66
Very Rare in Finer Grades**

- 5023 1901-S MS66 PCGS.** The 1901-S Morgan dollar was overlooked by contemporary collectors and relatively few high-grade examples have survived over the years. This spectacular Premium Gem exhibits sharply detailed design elements and vibrant mint luster throughout. The well-preserved surfaces show a few hints of pink and pale gold toning. Population: 30 in 66 (1 in 66+), 2 finer (3/14).
From The Northern Lights Collection. NGC ID# 256L, PCGS# 7276

**1901-S Morgan, MS66
Prohibitively Rare Any Finer**

- 5024 1901-S MS66 PCGS.** Of all the San Francisco issues well-represented in the Redfield hoard, the 1901-S was not among them. Paid out to the public in large quantities early on, few sealed bags of Mint State coins survived to supply the numismatic market with high-grade examples. The resulting rarity of Premium Gem representative makes them highly sought-after by specialists. This softly frosted, lustrous survivor exhibits excellent surface preservation and well-struck devices. A thin ribbon of amber-gold and sky-blue peripheral toning surrounds fully brilliant centers, delivering a high degree of eye appeal. Close examination reveals some faint roller marks on the central obverse. Population: 30 in 66 (1 in 66+), 2 finer (3/14). NGC ID# 256L, PCGS# 7276

-
- 5025 1902 MS63 Prooflike PCGS.** Ex: Key West Collection. Prooflike examples of the 1902 Morgan dollar are not impossible rarities, but they certainly represent an extremely small percentage of surviving dollars of that issue. This piece has a few grade-consistent marks with brilliant silver surfaces and excellent design definition. Population: 8 in 63 Prooflike, 48 finer (3/14). NGC ID# 256M, PCGS# 7279

- 5026 1902-O MS66+ PCGS. CAC.** A coin with outstanding eye appeal, this high-end Premium Gem possesses largely silver-white surfaces revealing a few areas of golden toning at the outer edges. The luster is strong and the strike is sharp aside from the extreme centers. The few marks present are minuscule. Population: 43 in 66+, 15 finer (3/14). NGC ID# 256N, PCGS# 7280

- 5027 1902-S MS63 Prooflike PCGS. CAC.** Ex: Key West Collection. Subtle hints of gold toning are present on this attractive Select specimen. The strike is sharp, with only minor incompleteness at the extreme centers. Although scattered marks are present, none poses a significant distraction. Population: 13 in 63 Prooflike, 10 finer (3/14). NGC ID# 256P, PCGS# 7283

**1903 Morgan Dollar, MS67
Beautiful, Pristine Example**

- 5028 1903 MS67 PCGS.** This Superb Gem dollar is fully struck and brilliant, with bright satiny mint luster that gives the coin a lively, fresh appearance. Under close examination with a loupe, the sparkling surfaces are remarkably clean and distraction-free. The 1903 is a well-produced issue and is predictably scarce at the MS67 grade level. Population: 82 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 256R, PCGS# 7284

**1903 Morgan Dollar, MS67
Notable Condition Rarity**

- 5029 1903 MS67 PCGS.** Ex: Larry Shapiro. A splendid Superb Gem, this Morgan dollar displays satiny brilliance with exceptionally sharp design details, including fully defined hair strands over Liberty's ear. A mere hint of champagne toning is evident primarily on the obverse. Population: 82 in 67 (1 in 67+), 0 finer (2/14).
Ex: Cincinnati Central States (Heritage, 4/2009), lot 3225; Chicago Rosemont Central States (Heritage, 4/2011), lot 5899. NGC ID# 256R, PCGS# 7284

**1903 Morgan, MS67+
Single Finest Certified at PCGS**

- 5030 1903 MS67+ PCGS.** While lower-grade examples are plentiful, 1903 Morgan dollars become highly elusive at the MS67 grade level, with finer pieces virtually unobtainable. This sharply struck Superb Gem displays the bright, satiny luster characteristic of this issue, with a faint golden hue overall. Semiprooflike fields add to the visual appeal of this Plus-graded example. Population: 80 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 256R, PCGS# 7284

- 5031 1903 MS65 Prooflike PCGS. CAC.** Ex: Key West Collection. The Prooflike surfaces of this faintly toned Gem provide this piece with lovely eye appeal. The design elements exhibit a strong level of detail, adding to the attractiveness. Relatively few abrasions are present on this lightly hairlined example. Population: 31 in 65 Prooflike, 5 finer (3/14). NGC ID# 256R, PCGS# 7285

- 5032 1903-S — Cleaned — Genuine PCGS.** The PCGS number ending in 92 suggests Improper Cleaning as the reason, or one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of a Uncirculated specimen that has been lightly cleaned. A boldly struck example with speckled russet patina over parts of the obverse. The surfaces display minimal negative effects from the cleaning. NGC ID# 256T, PCGS# 7288

**1903-S Morgan Dollar, MS61
High-End for the Grade**

- 5033 1903-S MS61 PCGS.** This bright, satiny, untuned representative is well-struck and shows only the slightest slide marks across Liberty's cheek. All other surface defects are minimal, causing this attractive piece to seem undergraded. Encased in an early-generation PCGS holder with a light-green label. NGC ID# 256T, PCGS# 7288

- 5034 1903-S Micro S XF40 PCGS. VAM-2.** A Top 100 Variety. The Small S or "Micro S" as it is sometimes called. Gold, rose, and violet accents settle on medium-gray surfaces that remain subtly lustrous. The distinctive, diminutive mintmark makes this coin a prize for the Morgan dollar variety collector. Population: 27 in 40, 48 finer (2/14).
Ex: Central States Signature (Heritage, 4/2010), lot 1416. PCGS# 7306

**1903-S Morgan Dollar, XF45
Micro S, VAM-2 Variety**

- 5035 1903-S Micro S XF45 PCGS. CAC. VAM-2.** Ex: Larry Shapiro-Michigan Collection. A Top 100 Variety. Specialists believe that a mintmark punch intended for Barber quarters was used to create this rare variety. PCGS refers to it as a Micro S, while the Top 100 book calls it a Small S. By either name, it is only about half the size of the normal Large S. This example has light gold toning and noticeable remaining luster. Smooth aside from a thin mark in front of the beak. Population: 32 in 45, 16 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2008), lot 1518. PCGS# 7306

5036 1904 MS65 PCGS. Attractive toning covers both sides of this lustrous Gem. The colors include pale yellow, teal, rich gold, red-orange, and aquamarine. A sharp strike is an additional attribute. Scattered marks are present, including a few on Liberty's brow and nose, but they are minor. PCGS has awarded higher numeric grades to only 18 examples (3/14). NGC ID# 256U, PCGS# 7290

5037 1904-O MS66 Prooflike PCGS. CAC. A Premium Gem representative, this piece exhibits faint toning and well-struck devices. Scattered marks and hairlines are present. Although the 1904-O is common without a prooflike finish, thanks to the Treasury releases of the 1960s which provided a quantity of Mint State examples to collectors, flashy examples are scarce and perhaps underappreciated. Population: 65 in 66 (1 in 66+) Prooflike, 0 finer (3/14).

From The Northern Lights Collection. NGC ID# 256V, PCGS# 7293

1904-S Morgan Dollar, MS63 Lustrous and Well-Preserved

5038 1904-S MS63 PCGS. The intensity of the satiny mint luster is perhaps the most outstanding feature of this Morgan dollar from San Francisco, but its other attributes include bold strike definition and minimal surface marks for the assigned grade. Encapsulation in a green label PCGS holder will only increase the appeal of this conditionally scarce example. NGC ID# 256W, PCGS# 7294

1904-S Morgan Dollar Exceptionally Toned Gem

5039 1904-S MS65 PCGS. The surface quality is distinctly above average on this delightfully toned silver dollar. A deep strike provides a fully rounded cheek — an inviting target for abrasions, but none are seen on the clean portrait or surrounding fields. The eagle is bold, too, on all but the highest breast feathers, where some blending exists. The main attribute of this lustrous example, however, is the exceptional two-sided toning. Concentric circles of lime-green, cyan, rose-gold, and tangerine surround lilac centers. Just 17 pieces are certified numerically higher than this Gem dollar by PCGS and NGC combined (3/14), and most higher-grade examples would be hard-pressed to surpass the visual appeal of this coin. NGC ID# 256W, PCGS# 7294

5040 1921 Wide Reeds MS62 NGC. VAM-44, R.8. A Top 100 Variety. Per VAMworld.com, VAM-44 "is by far the rarest of the Wide Reeding varieties and is the stopper in the set." Specific die scratches in the eagle's left wing are diagnostic for the variety. Light almond-gold patina visits lustrous, well struck, and moderately abraded surfaces. NGC ID# 256X, PCGS# 7296

5041 1921 MS66 PCGS. Gorgeous luster and an attractively toned obverse provide strong eye appeal for this splendid Premium Gem specimen. The colors include hues of gold, deep plum, purple-blue, deep yellow, cherry, and vibrant green. The reverse exhibits areas of light gold color, primarily at the outer edges. A sharp strike adds to the appeal. Although scattered marks are present, their appearance is subdued due to the toning. Only 8 examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 256X, PCGS# 7296

5042 1921 MS66+ PCGS. CAC. With more than 44 million pieces minted and millions still available in Mint State, quality and eye appeal are necessary as well as a high numeric grade. This example displays both attractive surfaces and a bold strike. Lemon-gold toning covers frosted silver surfaces. Just 15 examples are graded numerically higher by PCGS and NGC combined (3/14). NGC ID# 256X, PCGS# 7296

1921 Morgan, MS66+ Dazzling Mint Luster

5043 1921 MS66+ PCGS. CAC. Struck with a shallower relief than earlier issues, 1921 Morgan dollars exhibit a slightly modified version of George Morgan's design and often show softness on the eagle's breast feathers and the lower wreath leaves. This exceptional Premium Gem displays an above-average strike and fully brilliant, frosty luster overall. Only a few faint surface grazes preclude a higher grade. PCGS has graded only eight numerically finer examples (3/14). NGC ID# 256X, PCGS# 7296

5044 1921 MS66+ NGC. CAC. Fully struck with impressive cartwheel luster, this frosty, silver-white dollar is unquestionably high-end for the grade. Awarded both the NGC Plus designation and CAC approval, the untuned, Premium Gem surfaces display smooth and appealing quality. Just 15 examples are certified numerically higher by PCGS and NGC combined (3/14). NGC ID# 256X, PCGS# 7296

**Presentation 1921-D Dollar
'9th Dollar Released From the Denver Mint'
From 1923 Mehl Auction**

- 5045 1921-D — 9th Dollar Released From the Denver Mint, Presentation Piece — Ungraded PCGS.** Housed in a large-format Regency holder. This left obverse field is carefully engraved "9TH DOLLAR RELEASED FROM 1ST 100 / EVER COINED AT DENVER MINT / THOMAS ANNEAR SUPT." In May 1921, Morgan dollars were struck for the first time in the Denver mint. While no special ceremonies were held for the striking of these coins, the first two pieces were sent to State Senator L.C. Phipps, who gave one to the Colorado School of Mines and the other to the Colorado Historical Society. Both pieces were not engraved as were coins 3-12, and both were subsequently stolen. Coins 3 through 12 have the above inscription engraved. Numbers 3 through 12 appeared in a B. Max Mehl sale in December 1923 as lots 1040 through 1049. The lot 1040 description includes a quote from a May 22, 1921 letter from Supt. Annear to Charles W. Cowell, "the ten silver dollars purchased by you from the Mint were from the first hundred ever coined in this institution. At the request of the Director of the Mint, I sent two silver dollars to Washington ... Yours were the next ten released." Researcher Adna Wilder concluded that Cowell was responsible for the engraving. This is a bagmark-free example with light peripheral golden toning and no evidence of high point wear, though the field luster is slightly diminished.
Ex: *Thomas Annear*; *Charles W. Cowell*; *Cowell Collection* (B. Max Mehl, 12/1923), lot 1046; *unknown intermediaries*; *New York ANA Signature* (4/1997), lot 8394.

- 5046 1921-D MS66 PCGS.** For some reason, the 1921-D Morgan dollar often appears with unusual but attractive toning patterns. This Premium Gem is one such, showing mottled light-green, tan, and gold patina on the obverse with strong luster. The reverse is largely pinkish with blue rim accents. An appealing coin for the grade and issue. PCGS has seen only eight numerically finer (3/14). NGC ID# 256Y, PCGS# 7298

- 5047 1921-D MS66 PCGS.** A sliver of brilliance on each side is nearly engulfed by teal, russet, and forest-green patina. A boldly struck, highly lustrous Premium Gem; PCGS has certified only eight numerically finer examples (2/14).
Ex: *Long Beach Signature* (Heritage, 9/2006), lot 5580. NGC ID# 256Y, PCGS# 7298

**1921-D Morgan Dollar, MS66+
Lustrous and Appealing**

- 5048 1921-D MS66+ PCGS. CAC.** One of the ultra high-mintage issues of 1921, the Denver Mint production was well in excess of 20 million coins. This was the only D-mint Morgan dollar issue, and an example would be needed by the collector seeking to complete a full date and mintmark set. This is an unusually lustrous and attractive example with intensely frosty untuned surfaces and sharply defined motifs. A few wispy marks are detected with the aid of a loupe, but none of these are individually noteworthy or distracting. NGC ID# 256Y, PCGS# 7298

- 5049 1921-D TRU_T Variety MS63 PCGS. VAM-1A.** A Top 100 Variety. A Select example of one of the few outstanding filled die varieties known within the series, this piece displays rich luster. Areas of toning are present on both sides, with the colors including shades of golden-brown and teal. Scattered marks and hairlines held this appealing piece from a higher grade. PCGS# 133970

- 5050 1921-D MS64 Prooflike PCGS.** Ex: D.T. Miller-Key West Collection. A sharply detailed Choice example from the last year of the Morgan design, this coin offers sharply detailed design elements and satiny fields with prooflike reflectivity in selected areas. A few hints of golden-brown toning enhance the well-preserved surfaces. Population: 14 in 64 Prooflike, 4 finer (3/14). NGC ID# 256Y, PCGS# 7299

- 5051 1921-S MS65 NGC.** A highly lustrous, frosty Gem. Fully brilliant surfaces exhibit only a few minor grazes on the obverse, while the reverse is largely free of abrasions. The design elements are well-struck, with a touch of softness noted in the eagle's breast and a few of the lower wreath leaves. Elusive in finer grades.
From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 256Z, PCGS# 7300

- 5052 1921-S MS65 PCGS. CAC.** A brilliant Gem, this piece exhibits a better strike than most of the coins from this issue and offers satiny white luster with subliminal gold toning. PCGS has awarded higher numeric grades to only 53 examples (3/14). NGC ID# 256Z, PCGS# 7300

- 5053 1921-S MS65 NGC. CAC.** Lustrous silver-white surfaces provide both sides of this Gem with splendid visual appeal. An intricate strike is an additional attribute. The number of certified examples drops dramatically above the MS65 level, with NGC having awarded higher numeric grades to only 60 examples (3/14). NGC ID# 256Z, PCGS# 7300

**1921-S Morgan Dollar, MS66
Conditionally Rare in this Lofty Grade**

- 5054 1921-S MS66 PCGS. CAC.** Thick mint frost encompasses the snow-white surfaces of this conditionally rare Premium Gem. Generally well-struck, if a trifle weak over the centers, this example shows much better preservation than is usually encountered on one of these coins from any of the massive 1921 mintages. Far fewer of the 1921-S dollars have been rated in high grades than their Philadelphia or Denver Mint counterparts, and this issue is rare at the current MS66 grade level, at both of the major services. Population: 53 in 66 (2 in 66+), 0 finer (3/14). NGC ID# 256Z, PCGS# 7300

PROOF MORGAN DOLLARS

- 5055 1879 PR61 NGC.** Deeply mirrored fields complement razor-sharp design elements on this early proof Morgan. The surfaces are mainly brilliant, with just a tint of light golden around the peripheries. Well-preserved, with no significant surface imperfections. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 27Z2, PCGS# 7314
- 5056 1879 PR62 PCGS.** From a generous proof mintage of 1,100 pieces, this impressive Morgan dollar displays well-detailed design elements and reflective fields under vivid shades of greenish-gold and cerulean-blue toning. NGC ID# 27Z2, PCGS# 7314
- 5057 1879 PR62 PCGS.** Blended hues of teal and amber-gold over lightly mirrored fields accent deep gunmetal-gray overall. A few thin hairlines are noted in the fields, but are well-hidden by the rich patina. A well-detailed example of this early proof Morgan. NGC ID# 27Z2, PCGS# 7314
- 5058 1880 PR61 Cameo ANACS.** A pleasing lower-grade proof Morgan with deeply mirrored fields. Amber-gold peripheral toning frames the fully brilliant, sharply struck devices. Faint, wispy hairlines define the grade, but do not distract from the overall eye appeal. PCGS# 87315

**1880 Silver Dollar, PR67 Cameo
Strong Eye Appeal**

- 5059 1880 PR67 Cameo PCGS.** Attractive toning covers large portions of both sides of this Superb Gem exhibiting Cameo contrast, with portions of the central devices on both sides remaining virtually free of toning and adding to the eye appeal. The toning includes hues of gold, peach, and teal, with the reverse also exhibiting shades of fuchsia and turquoise. A sharply struck specimen, this coin displays a strong level of design detail, even at the centers. The 1880 Philadelphia Morgan dollar proof mintage was 1,355 pieces, with few surviving examples at the upper end of the grading scale. Population: 8 in 67 Cameo, 5 finer (3/14). PCGS# 87315
- 5060 1881 — Stained — NGC Details. Proof.** Deep amber and teal stains moderately subdue the luster of this early proof Morgan, however, remnants of mirroring are still discernable in the fields. Sharply detailed, with the overall appearance of a heavily toned, lower-grade example. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

**1883 Morgan Dollar, PR66
Fully Struck and Brilliant**

- 5061 1883 PR66 PCGS Secure.** This impressive, Premium Gem proof Morgan dollar displays razor-sharp definition on all design elements, but there is only minimal contrast with the mirrored fields, the result of a rather light coating of mint frost on the motifs. A few hints of pale gold toning accent the mostly brilliant surfaces. Population: 16 in 66, 6 finer (2/14).
Ex: *Schaumburg CSNS Signature (Heritage, 4/2012)*, lot 5804, where it realized \$7,475.00. NGC ID# 27Z1, PCGS# 7318

**1886 Morgan Dollar, PR65
Pleasing Eye Appeal**

- 5062 1886 PR65 PCGS.** Soft greenish-blue and lavender patina on the obverse yields to slightly deeper hues of this palette on the reverse. Sharp definition shows on the design elements. Mint frost on the devices is balanced by the deep toning, so contrast is limited with the similarly toned fields, but that does not mitigate the pleasing overall eye appeal of this Gem proof. Scarce in this condition with few graded finer. Population: 23 in 65, 14 finer (2/14).
Ex: *New York Signature (Heritage, 12/2011)*, lot 4120. NGC ID# 27ZE, PCGS# 7321

**1889 Morgan Dollar, PR65 Cameo
Dramatic Field-Device Contrast**

- 5063 1889 PR65 Cameo PCGS.** Pronounced Cameo contrast and virtually untuned surfaces combine to provide this Gem with a stunning appearance. Areas of faint champagne visit the rims. The coin exhibits a sharp strike, adding to the appeal. Though a few faint hairlines are present, they are not distracting. Population: 12 in 65 (1 in 65+) Cameo, 7 finer (3/14). PCGS# 87324

**1889 Silver Dollar, PR65+ Cameo
Bold Contrast, Liquid Fields**

- 5064 1889 PR65+ Cameo PCGS. CAC.** Framed by a bit of orange-gold toning at the rims, this highly contrasted proof dollar is silver-white and deeply reflective. Frosted motifs display a full strike and seemingly float on the liquid fields. Few proofs of this date are designated Cameo by PCGS, and the visual appeal of this example earned it not only the prized Cameo certification, but also the PCGS Plus confirmation of high quality (the only one of this Gem grade) and CAC-Approval as well. Population: 12 in 65 (1 in 65+) Cameo, 7 finer (2/14). PCGS# 87324

- 5065 1892 PR58 NGC.** An attractively toned lower-grade proof, with a thin ribbon of rainbow surrounding the peripheries. Slight friction on the high points of the devices is balanced by ample mirroring in the well-preserved fields. A navy blue toning spot is noted at the base of Liberty's neck.
From *The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation*. NGC ID# 27ZM, PCGS# 7327

**1892 Morgan Dollar, PR65
Vivid Multicolor Toning**

- 5066 1892 PR65 PCGS.** A generous proof mintage of 1,245 Morgan dollars was struck in 1892, but examples in Gem condition are very scarce today. This well-detailed Gem displays deeply reflective fields under thick shades of cobalt-blue, lavender-gray, and lime-green toning. Population: 27 in 65, 34 finer (2/14). NGC ID# 27ZM, PCGS# 7327

**1892 Silver Dollar, PR65 Cameo
Nicely Contrasted Example**

- 5067 1892 PR65 Cameo PCGS.** The silvery central devices complement deeply reflective, mirrored fields with tinges of copper-gold and ice-blue at the extreme rims on this nicely contrasted Cameo Gem proof 1892 Morgan. The proof mintage of 1,245 pieces was the largest in the series, but few survive in so fine a grade today, especially with the Cameo designation. Population: 7 in 65 Cameo, 12 finer (3/14). PCGS# 87327

- 5068 1896 PR58 PCGS.** A pleasing, lower-grade proof Morgan dollar. Splashes of blue, amber, and violet toning cover both sides of this sharply struck example, and only slightly subdue the mirroring in the fields. Well-preserved for the grade, revealing only the barest signs of rub over the high points, with no detracting abrasions. NGC ID# 27ZT, PCGS# 7331

**1897 Morgan Dollar, PR67
High Technical and Visual Quality**

- 5069 1897 PR67 NGC.** The Morgan dollar proofs of the late 1890s have become objects of affection among series specialists, who rightly view them as the epitome of high production standards within the series. This example from the proof mintage does not disappoint, although there is little evident field-device contrast. On the other hand, the surfaces are brilliant, silver-white with an overall suggestion of golden tinge, and contact is unseen throughout. The strike is marvelously sharp. A few faint streaks of gray appear on the reverse. Census: 15 in 67 (1 in 67+), 5 finer (3/14). *From The Northern Lights Collection.* NGC ID# 27ZV, PCGS# 7332

**1897 Silver Dollar, PR64 Cameo
Conditionally Rare**

- 5070 1897 PR64 Cameo PCGS.** The shimmering surfaces of this near-Gem include highly reflective fields exhibiting appreciable contrast against the devices. An intricate strike led to strongly defined design details. A few as-made strike-throughs are present, including a lint mark on Liberty's cheek and a mark above the eagle's left wing. A tiny yellow spot appears on Liberty's neck. Population: 7 in 64 (1 in 64+) Cameo, 17 finer (3/14). PCGS# 87332

**1898 Dollar, PR62+ Cameo
Stunning White-on-Black Contrast**

- 5071 1898 PR62+ Cameo PCGS.** Proofs of this date are usually sharply struck with bold cameo contrast. Michael Fuljenz (1992) contends that: "This date was probably the best made in the entire series." Both sides of this PR62+ display stunning black and white contrast, slightly more pronounced on the reverse, and the frosty motifs are boldly impressed. Hairlines in the fields prevent a significantly higher numerical grade. Nevertheless, this beautiful coin will stand out in a high-grade Morgan dollar collection. Population: 5 in 62 (1 in 62+) Cameo, 28 finer (3/14). PCGS# 87333
- 5072 1899 PR58 NGC.** An attractive lower-grade proof Morgan. Close scrutiny reveals just a trace of rub on the eagle's breast and the hair above Liberty's ear, with otherwise sharp design elements. Tinges of teal, violet, and amber accent the mirrored fields, delivering a high degree of eye appeal when tilted under a light. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 27ZX, PCGS# 7334

**1899 Dollar, PR64 Cameo
Lovely Eye Appeal**

- 5073 1899 PR64 Cameo PCGS.** A pleasing degree of contrast exists between the fields and devices on this attractive near-Gem representative. Strongly defined design elements add to the appeal. A few tiny as-made strike-throughs and minuscule toning spots are present along with hairlines. Population: 21 in 64 (2 in 64+) Cameo, 20 finer (3/14). PCGS# 87334

**1901 Morgan Dollar, PR65
In-Demand Proof Issue**

- 5074 1901 PR65 PCGS. CAC.** Deeply toned on both sides, the devices exhibit lighter color overall, providing a lovely appearance. This Gem displays shades of teal, plum, and golden-orange. The design elements exhibit strong definition. A few scattered untoned spots appear on both sides. Population: 15 in 65, 16 finer (3/14). NGC ID# 27ZZ, PCGS# 7336

5075 1902 — Artificial Toning — NGC Details. Proof. Deep mirroring in the fields offers significant visual appeal on this proof Morgan. The deep violet and amber hues, despite their artificial origin, attractively accent the flashy surfaces. Close examination reveals some wispy hairlines in the fields, though the devices are largely mark-free.

5076 1902 PR61 NGC. Deeply mirrored fields frame well-detailed devices on this flashy proof Morgan. Close examination reveals some faint grade-limiting hairlines, but the surfaces retain a high degree of eye appeal. Mainly brilliant, with light golden peripheries. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2822, PCGS# 7337*

PEACE DOLLARS

5077 1921 MS64 NGC. An outstanding example of this first-year high relief type. The strike is bold, with significant detail on the hair over Liberty's ear and well-defined eagle feathers. A blush of light golden toning warms the lustrous surfaces, with minimal abrasions for the grade.

Ex: Baltimore Signature (Heritage, 7/2008), lot 9358. NGC ID# 2U4E, PCGS# 7356

5078 1921 MS64 NGC. A light golden tint warms frosty luster on this near-Gem High Relief type representative. Some of the typical weakness is seen at the central obverse, though the strike is otherwise bold. Only a few faint grazes limit the grade of this attractive Peace dollar. NGC ID# 2U4E, PCGS# 7356

5079 1921 MS65 PCGS. From the first year of the Peace design, this attractive Gem exhibits well-detailed design elements and brilliant well-preserved surfaces with no mentionable distractions. NGC ID# 2U4E, PCGS# 7356

5080 1921 MS65 PCGS. A frosty Gem example of this one-year type. Champagne-gold patination becomes slightly deeper at the peripheries, where it is joined by whispers of violet. The usual strike weakness is apparent in the centers. A few minor, grade-consistent grazes do not distract from this coin's eye appeal. *Ex: West Palm Beach Signature (Heritage, 7/2009), lot 1047. NGC ID# 2U4E, PCGS# 7356*

5081 1921 MS65+ NGC. A high-end Gem specimen, this piece exhibits attractive toning, particularly on the reverse. Among the colors present are gorgeous yellow-gold, pale denim-blue, plum, and violet. Satin luster further enhances the appearance of this example. NGC ID# 2U4E, PCGS# 7356

5082 1921 MS65+ PCGS. A lustrous, well-preserved example of this one-year High Relief type, displaying a light golden hue over both sides. The strike is slightly soft at the centers, as is normal for this issue, but is bold in the peripheral legends. A pleasing, Plus-graded Gem. NGC ID# 2U4E, PCGS# 7356

5083 1921 MS65 PCGS. CAC. Lustrous silver-white surfaces provide this Gem with exceptional eye appeal. This example is minimally marked, aside from a few signs of contact at the I in PLURIBUS on the reverse. This one-year type consisted of a mintage of just over 1 million pieces and the number of certified examples above the MS65 level drops considerably. NGC ID# 2U4E, PCGS# 7356

1921 High Relief Peace Dollar, MS66 Always in Demand

5084 1921 MS66 NGC. The 1921 Peace dollar is in great demand as it is the first year of the series and its high-relief design. As Roger Burdette (2008) notes, the first release of coins on December 28, 1921 are generally well-struck (though not necessarily fully struck). The present Premium Gem may well be among the first struck as the design elements, notably the hair over Liberty's ear and the eagle's plumage, exhibit better detail than ordinarily seen. Its lustrous surfaces are quite well-preserved. NGC and PCGS have graded only 13 finer (3/14). NGC ID# 2U4E, PCGS# 7356

Premium Gem 1921 Peace Dollar Boldly Struck

5085 1921 MS66 PCGS. Due to the difficulty of striking high relief coins efficiently, the Peace dollar's relief was lowered following 1921, making this first-year issue a highly sought-after one-year type. This piece showcases incredibly bold detail on Liberty's hair and the eagle's feathers, putting this coin in a class by itself for strike quality. The luster is fully brilliant with a satiny appearance, and the surfaces exhibit excellent preservation. Only seven examples have graded numerically finer at PCGS (3/14). NGC ID# 2U4E, PCGS# 7356

1921 Peace Dollar, MS66 High Relief, High-Grade Example

5086 1921 MS66 PCGS. A high-grade example of this famous issue, struck in high relief for circulation only in 1921. Splashes of honey-gold and russet endow lustrous and lightly abraded surfaces. The strike is certainly above average, although incomplete as are all business strikes of the date. The chin and nose exhibit strike doubling. PCGS and NGC combined have certified just 13 pieces numerically finer (2/14). *Ex: Long Beach Signature (Heritage, 2/2010), lot 730; Los Angeles Signature (Heritage, 8/2009), lot 2074. NGC ID# 2U4E, PCGS# 7356*

5087 1922 MS66+ NGC. CAC. Faint toning is present on this lustrous high-end Premium Gem example. The toning includes attractive shades of orange, red, and red-brown, primarily at the outer edges. Both sides reveal a long, thin die break at the lower portion. Census: 19 in 66+, 4 in 66 ★, 37 finer (3/14).
From The Northern Lights Collection. NGC ID# 257C, PCGS# 7357

5088 1922-D MS66 PCGS. Strong luster is among the attributes this Premium Gem specimen possesses. Areas of light toning are present, including hues of golden-brown. A long wispy die break appears on the obverse, extending through the base of Liberty's neck. PCGS has awarded higher numeric grades to only 3 examples (3/14). NGC ID# 257D, PCGS# 7358

5089 1922-D MS66 PCGS. A great looking Premium Gem with top-notch eye appeal, satiny with cartwheel luster and largely untoned, save for a halo of iridescence above Liberty's head. PCGS has seen only three numerically finer (3/14). NGC ID# 257D, PCGS# 7358

5090 1922-D MS66+ NGC. Razor-sharp detail is present on Liberty's hair strands and the eagle's feathers, while the virtually unabraded surfaces radiate vibrant mint luster and outstanding eye appeal. NGC has graded 16 numerically finer examples (3/14). NGC ID# 257D, PCGS# 7358

5091 1922-D MS66 PCGS. CAC. A long, thin die crack extends through the bottom of Liberty's neck on this lustrous well-struck example exhibiting silver-white surfaces. Another die crack bisects the bun. The number of certified examples drops dramatically above the Premium Gem level, with PCGS having awarded higher numeric grades to a mere three examples (3/14). NGC ID# 257D, PCGS# 7358

**1922-S Peace Dollar, MS66
Tied for Finest Certified**

5092 1922-S MS66 NGC. Boldness of strike sets this untuned, silver-white Peace dollar apart from the few other high-grade examples that exist of this issue. Conditionally rare, it is an impeccable Premium Gem with extraordinary luster, pristine surfaces, and sharp design elements. Both sides are frosty, displaying full mint bloom. This piece is tied for the finest certified among all coins submitted to NGC and PCGS. Census: 14 in 66, 0 finer (3/14).
From The Northern Lights Collection. NGC ID# 257E, PCGS# 7359

**1923 Dollar, MS67
Among the Finest Certified**

5093 1923 MS67 NGC. The 1923 Peace dollar is readily obtainable in most grades, but its availability drastically plunges in Superb Gem condition. The present coin displays thick mint frost over highly lustrous surfaces, with a faint golden tint over each side. Beautifully preserved surfaces deliver a high degree of eye appeal on this high-end type example. None have graded finer at NGC or PCGS (3/14). NGC ID# 257F, PCGS# 7360

**1923 Tail in O Peace Dollar, MS65
Top 50 VAM-1C, Sole Finest Graded**

5094 1923 Tail on O MS65 PCGS. VAM-1C, R.6. A Top 50 Variety. The bold "tail bar" drooping from the O in DOLLAR on the reverse is rather mustache-shaped and quite prominent. VAMWorld.com calls the variety "extremely rare in all conditions," giving it the R.6 rarity rating. This piece certainly must certainly be among the few finest known, as it is currently the sole finest certified VAM-1C at PCGS; the finest at NGC are a number of pieces in MS64 (3/14). This coin boasts lovely, frosted luster over greenish-gold surfaces with superlative eye appeal. An important variety for Peace dollar specialists. PCGS# 133754

**1923-D Peace Dollar, MS66
Prohibitively Rare Any Finer**

5095 1923-D MS66 PCGS. Usually available in lower Mint State grades, the 1923-D Peace dollar becomes highly scarce in Premium Gem condition, and is virtually unobtainable finer, with only one Superb Gem certified at PCGS and NGC combined (3/14). This heavily frosted, fully brilliant example displays vibrant luster and beautifully preserved surfaces. A sharp strike only increases the visual appeal of this piece. NGC ID# 257G, PCGS# 7361

1923-S Peace Dollar, MS65
Only Four Numerically Finer at Both Services

- 5096 1923-S MS65 PCGS.** Small splashes of toning cover the surfaces on both sides of this Gem specimen. Rich gold shades are predominant, with areas of light teal also present. A die break extends from the obverse rim between the T and Y in LIBERTY, ending at the first point in the tiara. Scattered marks appear on the obverse, including one at the rim to the left of the date. The number of certified examples drops drastically above the Gem level, with PCGS having awarded higher numeric grades to only 3 examples and NGC to a single coin (3/14). NGC ID# 257H, PCGS# 7362

1923-S Peace Dollar, MS65
Rarely Encountered Finer

- 5097 1923-S MS65 NGC.** Despite the 1923-S Peace dollar's mintage of more than 19 million coins, availability of the issue dramatically drops at the Gem grade level, and finer examples are prohibitively rare. This lustrous representative displays sharply struck design elements and frosty, well-preserved surfaces. A peripheral ring of golden toning surrounds fully brilliant centers on this highly attractive Gem. Only one example has graded numerically finer at NGC (3/14). NGC ID# 257H, PCGS# 7362

- 5098 1924 MS66+ PCGS. CAC.** Frosty luster and virtually untuned surfaces provide this high-end Premium Gem representative with strong eye appeal. There are no signs of contact worthy of individual mention on this minimally abraded coin. A few small milky spots appear on both sides. Population: 37 in 66+, 26 finer (3/14). NGC ID# 257J, PCGS# 7363

- 5099 1924 MS66+ PCGS. CAC.** Toning is present on both sides of this high-end Premium Gem example. Among the colors present are gold, red, and several shades of green. The obverse strike is sharp overall, with the outer legends in particular on the reverse exhibiting softness. The surfaces reveal the use of worn dies. Population: 41 in 66+, 26 finer (3/14).
From The Northern Lights Collection. NGC ID# 257J, PCGS# 7363

- 5100 1925 MS66+ PCGS. CAC.** Strong luster adds to the eye appeal this faintly toned high-end Premium Gem example possesses. The degree of design detail is pleasing, adding to the desirability of this piece. In addition, very few abrasions are present, all minuscule.
From The Northern Lights Collection. NGC ID# 257L, PCGS# 7365

- 5101 1925 MS67 NGC.** An exceptional type representative, with vibrant, frosty luster beneath lemon-gold toning overall. The design elements are fully struck, and the surfaces are virtually undisturbed. NGC has certified a single numerically finer example (3/14).
Ex: Dallas Signature (Heritage, 10/2008), lot 1577. NGC ID# 257L, PCGS# 7365

1925 Peace Dollar, MS67+
Only One Finer at PCGS

- 5102 1925 MS67+ PCGS. CAC.** An impressive high-end Superb Gem, this specimen displays a strong strike and lovely luster. A partial ring of tan patina on the outer edge of the obverse reveals areas of pastel pink and green shades when examined closely. This example exhibits the faint gold toning elsewhere generally found on examples from this issue. Although this is considered one of the more common dates in the series, this particular coin is an exceptional representative. Population: 1 in 67+, 1 finer (3/14). NGC ID# 257L, PCGS# 7365

- 5103 1925-S MS64+ NGC. CAC.** A high-end Choice example, with well-detailed design elements and brilliant well-preserved surfaces that radiate vibrant mint luster. No mentionable distractions are evident and eye appeal is outstanding. NGC ID# 257M, PCGS# 7366

- 5104 1925-S MS64+ PCGS. CAC.** This better San Francisco date becomes rare in grades any higher than MS64. This is an appealing Choice Mint State specimen with creamy, essentially untuned surfaces that display few marks. NGC ID# 257M, PCGS# 7366

- 5105 1926 MS66 PCGS.** An impressive Premium Gem with sharply detailed design elements and well-preserved lustrous surfaces under attractive shades of golden-brown toning. PCGS has graded no coins in higher numeric grades (3/14). NGC ID# 257N, PCGS# 7367

1926 VAM-3A Dollar, MS66+
Doubled Die Obverse

- 5106 1926 MS66+ PCGS. CAC. VAM-3A.** The lower obverse is lightly die doubled, including the monogram and the tip of the 6 in the date. A dull die scratch beneath the V in TRVST confirms the later die state. A lustrous, brilliant, and nicely struck Premium Gem. The reverse is particularly well preserved. Population: 187 in 66 (4 in 66+), 0 finer (3/14). NGC ID# 257N, PCGS# 7367

- 5107 1927 MS65 PCGS.** Lustrous well-struck surfaces are among the attributes this lovely Gem possesses. Subtle toning with a slightly golden hue is present. The 1927 Philadelphia issue was one of the smallest in the series, consisting of 848,000 coins.
From The Northern Lights Collection. NGC ID# 257S, PCGS# 7370

- 5108 1927 MS65 NGC.** Well struck and lustrous, with pleasing pearl-gray toning and a few small, scattered abrasions on each side. An attractive Gem example of this scarcer date in the Peace dollar series. Only 2 examples have surpassed the Gem grade level at NGC (3/14).
Ex: ANA Atlanta (Heritage, 4/2006), lot 1248, which realized \$2,185. NGC ID# 257S, PCGS# 7370

- 5109 1927 MS65 PCGS.** Areas of faint toning are present on this Gem, along with a few tiny splashes of darker color. The strike is pleasing and minimal abrasions appear. Certified examples beyond the MS65 level are scarce, with only 8 coins having been awarded higher numeric grades by PCGS (3/14). NGC ID# 257S, PCGS# 7370

1927 Peace Dollar, MS65
Pleasing, Conditionally Scarce Example

- 5110 1927 MS65 PCGS. CAC.** A lovely, intensely lustrous Gem with bold strike definition and essentially untoned surfaces that only show a few superficial marks. The relatively low mintage of 848,000 coins helps to make this a conditionally scarce issue at the MS65 grade level, and PCGS has only rated eight examples finer (3/14). NGC ID# 257S, PCGS# 7370

- 5111 1927-D MS64 PCGS. CAC.** Lustrous, virtually untoned surfaces provide this near-Gem representative with strong eye appeal for the grade. The design elements exhibit a pleasing degree of detail. Very few abrasions are present and they are not distracting. NGC ID# 257T, PCGS# 7371

- 5112 1927-S MS64 NGC.** Intermingled splashes of toning, in shades of golden-brown and sage green, appear on both sides of this near-Gem. The surfaces reveal a pleasing degree of luster. Only 74 examples have achieved higher numeric grades from NGC (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 257U, PCGS# 7372

1927-S Peace Dollar, MS65
Only One Finer at NGC

- 5113 1927-S MS65 NGC.** A mottled pale purple and russet patina appears on both sides of this attractive and lustrous Gem displaying originality. This issue is known for being poorly struck, with this piece serving as a pleasing exception. Aside from a mark above Liberty's forehead, there are no signs of contact worthy of mention. This San Francisco Mint issue is very scarce at the MS65 grade level, and rare any finer, with NGC and PCGS combined having certified only three coins beyond the Gem level (2/14). *Ex: Summer FUN West Palm Beach (Heritage, 6/2008), lot 1556, which realized \$6,325.* NGC ID# 257U, PCGS# 7372

Gem 1927-S Peace Dollar
Rarely Encountered Finer

- 5114 1927-S MS65 PCGS. CAC.** Despite the discovery of several bags of 1927-S Peace dollars in the Redfield hoard, sharply struck Gem examples remain scarce on the market, and finer pieces are nearly unobtainable. This highly lustrous, frosty representative boasts an above-average strike and excellent surface preservation. Faint splashes of deep amber toning accent each side, while a ribbon of rainbow is seen around the reverse periphery. PCGS has certified only two numerically finer examples (3/14). NGC ID# 257U, PCGS# 7372

1927-S Peace Dollar, MS65
Conditionally Scarce

- 5115 1927-S MS65 PCGS Secure. CAC.** With a low mintage of only 866,000 pieces, the 1927-S is among the rarest Peace dollars in Gem condition, and PCGS and NGC combined have certified only three numerically finer examples (3/14). This CAC-approved Gem displays softly frosted luster, with faint splashes of light amber toning overall. An above-average strike and pleasing surface preservation only add to the visual appeal of this piece. NGC ID# 257U, PCGS# 7372

- 5116 1928 MS64 PCGS.** The 1928 Peace dollar is a popular low-mintage date. This attractive Choice example displays well-detailed design elements and creamy lustrous surfaces with few signs of contact. NGC ID# 257V, PCGS# 7373

- 5117 1928 MS64+ PCGS.** Availability of this sought-after low-mintage date drops off rapidly at the Gem grade level, making high-end MS64 examples an attractive prospect. A light golden hue covers both sides of this frosty, Plus-graded example, with only a few light grazes seen periodically over the surfaces. An above-average strike only adds to the appeal of this attractive coin. NGC ID# 257V, PCGS# 7373

- 5118 1928 MS64+ PCGS.** As the Plus designation indicates, this high-end near-Gem exhibits outstanding eye appeal, with the reverse arguably being the most attractive side. Lustrous surfaces, strong definition, and only subtle hints of color are present. This is a lovely representative. NGC ID# 257V, PCGS# 7373

**1928-S Peace Dollar, MS64+
Lustrous, Attractive Example**

5119 1928-S MS64+ PCGS. CAC. Well-struck and intensely lustrous, this near-Gem displays slight, speckled russet and olive peripheral toning, and careful preservation. Just a handful of trivial surface marks are noted, most of them in the reverse fields. This conditionally scarce issue becomes rare and costly at the Gem grade level. NGC ID# 257W, PCGS# 7374

5120 1934 MS66 PCGS. Fully lustrous and attractive with satiny silver luster. This is an important opportunity to acquire an issue that is almost never found any finer. In fact, PCGS has only certified three finer examples of this date (3/14). Just the faintest trace of color can be found, but this Premium Gem presents as an all-brilliant dollar. *Ex: New York Signature (Heritage, 6/2005), lot 7029.* NGC ID# 257X, PCGS# 7375

5121 1934 MS66 PCGS. The 1934 Peace dollar, with a mintage approaching 1 million pieces, is readily available in Mint State grades, especially through the MS64 level. Gems are obtainable with a little patience and searching, and Premium Gems become more challenging. Lustrous, satiny surfaces on this MS66 coin reveal hints of light gold-tan patina, and are quite well preserved. A sharp strike brings out nice definition on the motifs. PCGS has graded three numerically finer examples (3/14). *Ex: Milwaukee Signature (Heritage, 8/2007), lot 2593.* From *The Northern Lights Collection*. NGC ID# 257X, PCGS# 7375

5122 1934 MS66 NGC. After a six-year production gap, striking of silver dollars briefly resumed in 1934, to conform to the Silver Purchase Act of June 19, 1934. This low-mintage Peace dollar displays softly frosted cartwheel luster, with light tawny-gold toning overall. No abrasions are visible with the unaided eye, and even a loupe reveals only trivial imperfections. Census: 35 in 66, 5 finer (3/14). *Ex: Dallas Signature (Heritage, 11/2007), lot 1454.* NGC ID# 257X, PCGS# 7375

5123 1934-D MS64 PCGS. CAC. A crisply struck and softly lustrous Choice example of this later Denver issue. The obverse offers variegated plum, sea-green, golden-tan, and silver-gray patina, while the reverse has amber peripheral toning around a silver-gray center. A strike-through appears at the ES of STATES on the latter side. NGC ID# 257Y, PCGS# 7376

5124 1934-S MS62 NGC. This frosty example of the ever-popular 1934-S shows few contact marks overall on surfaces that boast cartwheel luster, with just a light golden patina. A nick above the E of PEACE and one on the second U in PLURIBUS are the only singular marks, not overly distracting. An attractive coin. NGC ID# 257Z, PCGS# 7377

**1934-S Peace Dollar, MS63
Key Series Issue**

5125 1934-S MS63 NGC. Some wisps of faint, smoke-gray patina float across the sharply struck surfaces of this attractive, key date San Francisco dollar. Brilliant silver luster is in full bloom beneath the smooth and appealing surfaces. A few tiny abrasions define the grade, but they are light and insignificant field marks, random and of little concern. This glowing Select Uncirculated dollar is an excellent value at today's levels — underrated and often overlooked in this grade. NGC ID# 257Z, PCGS# 7377

**1934-S Peace Dollar, MS63
Satiny, Appealing Key Date Example**

5126 1934-S MS63 PCGS. This low-mintage emission out of San Francisco was heavily circulated, helping to ensure its perennial status as a key Peace dollar issue. A satiny, essentially untoned example with bold strike definition and rather flashy luster. Some of the reverse elements are softly struck, as usual. A modest number of superficial marks are noted on each side of the coin. NGC ID# 257Z, PCGS# 7377

**1934-S Peace Dollar, MS64+
Low-Mintage Issue**

5127 1934-S MS64+ PCGS. CAC. While not quite the rarest in Gem condition, the 1934-S is the scarcest Peace dollar in terms of total known examples, and pleasing Mint State pieces are highly sought-after. This Plus-graded near-Gem displays softly frosted mint luster beneath a light golden hue overall. The surfaces are free of any noticeable abrasions, complementing the sharply struck design elements. A pleasing representative of this late San Francisco issue. NGC ID# 257Z, PCGS# 7377

5128 1935 MS66 PCGS. Soft blue and gold overtones grace subtly frosted surfaces on this well struck Premium Gem. Well-preserved with only a few small rim faults, including one above the TA in STATES. Tied for the finest certified by PCGS (2/14). *Ex: Dr. Barry Southerland Collection II (Heritage, 1/2011), lot 6247.* NGC ID# 2582, PCGS# 7378

1935 Dollar, Better-Struck MS66+

- 5129** 1935 MS66+ PCGS. CAC. Many 1935 dollars from the Philadelphia Mint were held in Treasury vaults for years, and not released into circulation. Consequently, thousands of examples are available through near-Gem. Even MS65s can be located with patience and searching. Premium Gems become much more challenging and finer specimens are very rare. The lustrous silver-white surfaces of this high-end Premium Gem have been nicely cared for. The design elements are better-defined than typically encountered on this issue, with fairly strong definition on Liberty's hair. NGC ID# 2582, PCGS# 7378

- 5130** 1935-S MS65 PCGS. CAC. Three rays below ONE. Splashes of peach toning endow the margins of this otherwise cream-gray Gem. Sharply detailed design elements and lustrous surfaces with pleasing preservation. NGC ID# 2583, PCGS# 7379

EISENHOWER DOLLAR

- 5131** 1971 MS66 PCGS. CAC. Intermingled shades of gold, silver, and lavender are present on this Premium Gem specimen. The coin is well struck and possesses nice eye appeal. Neither PCGS nor NGC has awarded an MS67 grade or higher to a single example, with PCGS having assigned the MS66 grade to only 51 coins (3/14). NGC ID# 2584, PCGS# 7406

MODERN ISSUES

1997-W Jackie Robinson Five, MS70 Low-Distribution Commemorative

- 5132** 1997-W Jackie Robinson Gold Five Dollar MS70 NGC. The 1997-W Jackie Robinson five dollar commemorative business strike was the ultimate contrarian play in recent U.S. numismatic history, ending up with a net distribution of 5,174 pieces, according to the *Guide Book*. This pristine yellow-gold piece is certified in an NGC Top 50 holder. NGC ID# 28UG, PCGS# 9759

- 5133** 2000-W Library of Congress PR70 Deep Cameo PCGS. Ex: U.S. Vault Collection. A starkly contrasted, perfectly preserved Deep Cameo representative of this bimetallic Library of Congress Bicentennial. Struck at the West Point mint to celebrate the establishment of what is now the second largest library in the world. NGC ID# 28V6, PCGS# 99784

- 5134** 2000-W Library of Congress PR70 Deep Cameo PCGS. Ex: U.S. Vault Collection. A perfectly preserved example of this bimetallic commemorative, with bold cameo contrast and needle-sharp detail. Struck to commemorate the 200th anniversary of the establishment of the Library of Congress. NGC ID# 28V6, PCGS# 99784

- 5135** 2000-W Library of Congress PR70 Deep Cameo PCGS. Ex: U.S. Vault Collection. A perfect coin in both strike and preservation, this Library of Congress Bicentennial exhibits the beautiful bimetallic composition consisting of a gold ring surrounding a platinum center. Fully mirrored fields, with heavily frosted design elements. NGC ID# 28V6, PCGS# 99784

MODERN BULLION COINS

- 5136** 1986 Half-Ounce American Gold Eagle MS70 NGC. From the first year of production with a Roman numeral date. This fantastic example displays a full strike and perfect preservation. Close scrutiny exposes no faults. NGC ID# 28Y8, PCGS# 9805

- 5137** 1992 Half-Ounce American Gold Eagle MS70 NGC. Awarded the highest possible grade from NGC, this phenomenal gold American Eagle is indeed perfectly struck and perfectly preserved. Close examination reveals no imperfections of any kind, with full mint bloom radiating from the surfaces. NGC ID# 26ND, PCGS# 9862

- 5138** 1993-P Silver Eagle PR70 Deep Cameo PCGS. Ex: John M. Mercanti, 12th Chief Engraver of the U.S. Mint. The icy-white devices are richly frosted, and the jet-black fields exhibit illimitable depths of watery reflectivity. A flawlessly preserved specimen with tremendous eye appeal. NGC ID# 26JK, PCGS# 9867

- 5139** 1994-P Silver Eagle PR70 Deep Cameo PCGS. With silver near \$5.00 an ounce in 1994, there were relatively few takers for the production of just over 370,000 pieces — the lowest mintage of the series. This example offers seemingly unimprovable quality with exquisite frosted details and unblemished, watery-deep fields. Numerically and aesthetically perfect. NGC ID# 26JM, PCGS# 9877

- 5140** 1994-P Silver Eagle PR70 Deep Cameo PCGS. The breathtaking Deep Cameo contrast on each side of this Superb example seems unimprovable. Struck with razor-sharp precision on every design detail, and impeccably preserved, this beautiful coin will thrill its new owner for many years to come. NGC ID# 26JM, PCGS# 9877

1995-W Silver Eagle, PR69 Ultra Cameo Capstone to the Series

- 5141** 1995-W Silver Eagle PR69 Ultra Cameo NGC. The modern key to the American Silver Eagle series, the 1995-W is hotly pursued along with some of the more-recent keys, including the 2008-W burnished Reverse of 2007 variety and the interesting five-piece issues of 2011. This PR69 Ultra Cameo NGC example shows stark contrast on each side, completely untuned, deeply reflective, and essentially a perfect example with no distractions. NGC ID# 28WZ, PCGS# 9887

**1995-W American Silver Eagle
Key Date, PR69 Ultra Cameo**

- 5142 1995-W Silver Eagle PR69 Ultra Cameo NGC.** The 1995-W issue was the first true key in the American Silver Eagle series, but other later entries in the series have helped propel it to the modern equivalent of the Morgan dollar series, one widely popular and hotly pursued. The 2006 three-piece sets containing the 2006-W burnished “circulation strike,” 2006-W proofs, and 2006-P reverse proofs were a numismatic sensation that also helped fan the flames for earlier issues. This frosty, untoned example displays reflective fields that easily “fade to black” when tilted under a light. NGC ID# 28WZ, PCGS# 9887

**1995-W Silver Eagle, PR69 Ultra Cameo
Deeply Contrasted**

- 5143 1995-W Silver Eagle PR69 Ultra Cameo NGC.** Essentially a flawless, deeply mirrored example of this key to the modern American Silver Eagles set, with a skimpy net distribution of 30,125 pieces that was held back by the silver issue’s inclusion in a four-piece American Gold Eagle proof set. This piece is certified in a retro-style NGC 25th Anniversary black holder. NGC ID# 28WZ, PCGS# 9887

1996 Silver Eagle, Pristine MS70

- 5144 1996 Silver Eagle MS70 NGC.** The 1996 American Silver Eagle issues had the P mintmark reserved for proofs only, while the “circulation strikes” issues such as this piece lacked a mintmark. Perusal with a loupe locates no mentionable flaws, as expected, and the surfaces are uniformly frosted silver-white save for a light touch of pale gold at the extreme rims on each side. NGC ID# 26JR, PCGS# 9900

- 5145 2006-W One-Ounce Gold Eagle, First Strike MS70 PCGS.** A technically perfect example of the 2006 one-ounce American Eagle, with fully struck design elements and vibrant mint luster throughout. This coin represents the “burnished” format, one of three formats used in the 20th Anniversary sets, the others being the reverse proof and regular proof striking. PCGS# 89993

- 5146 2006-W One-Ounce Gold Eagle, First Strike, 20th Anniversary PR70 Deep Cameo PCGS.** The famous 20th Anniversary sets included three formats for the one ounce gold coin: the reverse proof, burnished, and regular proof format. This incredible specimen represents the regular proof issue, with fully struck frosty devices and deeply mirrored fields that show no visible flaws. PCGS# 89997

- 5147 2006-W One-Ounce Gold Eagle Reverse Proof PR70 NGC.** This scarce Anniversary Issue Reverse Proof American Gold Eagle offers visual and technical perfection. The flawlessly executed design features glossy devices surrounded by matte fields — the opposite of previous proofs with reflective, mirrored fields and frosted design elements. NGC ID# 28ZH, PCGS# 89994

- 5148 2006-W One-Ounce Gold Eagle, Reverse Proof, 20th Anniversary PR70 NGC.** This lovely Reverse Proof type displays satiny, mattelike fields and brilliant, highly reflective devices. Fully struck and flawlessly preserved. NGC ID# 28ZH, PCGS# 89994

- 5149 2006-W One-Ounce Gold Reverse Proof, First Strike, PR70 PCGS.** A technically perfect example of the reverse proof format, with mirrored design elements that contrast profoundly with the frosty fields. This delightful specimen was among the first coins issued at the West Point facility in 2006, as part of the 20th Anniversary sets. PCGS# 89995

- 5150 2008-W Silver Eagle, Reverse of 2007 MS70 PCGS.** A technically flawless example of this increasingly popular variety, this is a representative of the only significant variety within the American Silver Eagle series. The mintage consisted of an estimated 47,000 pieces. The coins appear as number 17 on the list of the *100 Greatest U.S. Modern Coins*. The transitional variety is identified by the font differences, with the absence of a spur at the bottom right portion of the U serving as the diagnostic for the 2007 reverse.
Ex: Long Beach Signature (Heritage, 9/2010), lot 4921, which realized \$948.75.
From The Northern Lights Collection. NGC ID# 26KM, PCGS# 396411

- 5151 2008-W American Buffalo Four-Piece Gold Set PR70 Ultra Cameo NGC.** Included are: \$5 tenth-ounce; \$10 quarter-ounce; \$25 half-ounce; and a \$50 one-ounce. This is the only year the Mint produced four-piece American Buffalo fractional coin sets, and the Mint has subsequently discontinued production of these gold sets. Each piece is .9999 fine gold, with mirrored fields and contrasting, heavily frosted devices. (Total: 4 coins) PCGS# 399932

- 5152 2008-W Quarter-Ounce Gold Buffalo, Early Releases MS70 NGC.** The design of this lovely gold type is an exact duplication of the classic Buffalo nickel. This ten-dollar piece is highly lustrous and perfectly preserved from the date of its production at the U.S. Mint in West Point. PCGS# 399928

- 5153 2008-W Quarter-Ounce Gold Buffalo, First Strike, MS70 PCGS.** A First Strike example of this quarter-ounce gold replica of James Earle Fraser’s classic design. The matte surfaces show no visible imperfections and radiate subtle mint luster on both sides, while the design elements are fully struck throughout. PCGS# 399929

- 5154 2008-W Quarter-Ounce Gold Buffalo, First Strike, MS70 PCGS.** Containing a quarter ounce of virtually pure gold, this magnificent American Buffalo was among the first coins struck at the West Point facility in 2008. A technically perfect replica of James Earle Fraser’s iconic design, this piece is fully struck and lustrous, with mattelike surfaces that show no visible imperfections. PCGS# 399929

- 5155 2008-W Quarter-Ounce Gold Buffalo PR70 Ultra Cameo NGC.** A beautiful piece with fully struck motifs and pristine surfaces. This first-year issue had a low mintage of 13,125 pieces. PCGS# 399934
- 5156 2008-W Quarter-Ounce Gold Buffalo, Early Releases PR70 Ultra Cameo NGC.** .9999 Fine. This is a memorable type that collectors will continue to appreciate for many years to come. The contrast is profound between intensely frosted devices and jet-black, deep mirror fields. Perfectly struck and flawlessly preserved. PCGS# 399935
- 5157 2008-W Half-Ounce Gold Buffalo, Early Releases MS70 NGC.** The antique-gold surfaces are satiny and pristine. The design motifs are sharply and fully articulated on both sides. PCGS# 399931
- 5158 2008-W Half-Ounce Gold Buffalo, First Strike MS70 PCGS.** Containing a half ounce of virtually pure gold, this fully struck First Strike specimen displays mattelike yellow-gold surfaces, with strong mint luster and no visible flaws. PCGS# 399931
- 5159 2008-W Half-Ounce Gold Buffalo, First Strike MS70 PCGS.** A technically perfect example of the First Strike half-ounce gold American Buffalo, with fully struck design elements and mattelike yellow-gold surfaces that show no visible flaws. PCGS# 399931
- 5160 2008-W Half-Ounce Gold Buffalo PR70 Deep Cameo PCGS.** A technically perfect example of the \$25 denomination from the popular American Gold Buffalo series, this piece exhibits richly frosted devices and shimmering fields. The \$25 denomination contains a half ounce of .9999 fine (24-karat) gold and is struck from gold mined in the United States. The designs are based on James Earle Fraser's original designs for the 1913 Buffalo nickel, with minor modifications made to the inscriptions. The \$10 denomination earned the number 90 spot on the list of the *100 Greatest U.S. Modern Coins*.
From The Northern Lights Collection. PCGS# 399936
- 5161 2008-W Half-Ounce Gold Buffalo PR70 Ultra Cameo NGC.** A flawless, impressively preserved representative from the first year of the 24-karat Buffalo gold series. This lovely piece shows meticulous strike definition on the beloved Buffalo nickel design motifs. PCGS# 399936
- 5162 2008-W Half-Ounce Gold Buffalo, Early Releases PR70 Ultra Cameo NGC.** .9999 Fine. From the first issue of half-ounce Buffalo gold coins, at the U.S. Mint in West Point, New York, comes this perfectly struck, pristine representative. Only 16,908 examples were struck in Mint State format, along with 12,169 proofs. PCGS# 399937
- 5163 2008-W Half-Ounce Gold Buffalo, First Strike, PR70 Deep Cameo PCGS.** The year 2008 was the only one in which the fractional proof gold Buffalo coins were produced. This is a perfect example, bright yellow-gold with top-notch eye appeal, in the special PCGS Black Diamond First Strike holder. PCGS# 399937
- 5164 2008-W One-Ounce Gold Buffalo, Early Releases MS70 NGC.** The American Buffalo coins were the first 24-karat gold coins produced by a U.S. Mint. This example is fully struck and flawlessly preserved, with beautifully clean surfaces. PCGS# 400038
- 5165 2008-W One-Ounce Gold Buffalo, First Strike MS70 PCGS.** Among the first coins produced at the West Point facility in 2008, this delightful American Buffalo is fully struck, with subtle mattelike luster, and pleasing surfaces that show no post-strike imperfections. PCGS# 400038
- 5166 2008-W One-Ounce Gold Buffalo, First Strike MS70 PCGS.** From the first production run at the West Point facility, this majestic American Buffalo is a technically perfect coin, with fully struck design elements and bright matte surfaces that show no imperfections. Struck in .9999 Fine composition. PCGS# 400038
- 5167 2008-W One-Ounce Gold Buffalo, First Strike MS70 PCGS.** Containing one ounce of virtually pure gold, this technically perfect American Buffalo was among the first coins produced at West Point in 2008. The devices are fully struck and the pleasing surfaces emit strong matte luster, with no visible flaws. PCGS# 400038
- 5168 2008-W One-Ounce Gold Buffalo, First Strike MS70 NGC.** A perfectly preserved example of this popular 24-karat American Buffalo from the earliest production run at the West Point facility. A fully struck, beautiful representation of Fraser's classic artistry. PCGS# 400038
- 5169 2008-W One-Ounce Gold Buffalo, Early Releases PR70 Ultra Cameo NGC.** .9999 Fine. This is a gorgeous proof representative with crisply struck devices that have a mattelike finish and are surrounded by dark, deeply reflective fields. A pristine Superb Gem with great eye appeal. PCGS# 393330
- 5170 2008-W One-Ounce Gold Buffalo PR70 Ultra Cameo NGC.** The design details really stand out on this technically perfect specimen. As expected, profound contrast exists between the devices and fields. The holder contains NGC's Top 50 Most Popular Modern Coins special certification label.
From The Northern Lights Collection. PCGS# 393329
- 5171 2008-W One-Ounce Gold Buffalo PR70 Deep Cameo PCGS.** The American Buffalo gold bullion series began in 2006 with the \$50 denomination, with \$5, \$10, and \$25 denominations added to the program in 2008. This technically perfect example exudes strong eye appeal due to the deeply frosted devices and sparkling fields. This denomination contains one ounce of U.S.-mined 24-karat gold.
From The Northern Lights Collection. PCGS# 393329
- 5172 2008-W One-Ounce Gold Buffalo PR70 Ultra Cameo NGC.** Containing one full ounce of pure gold, this Buffalo gold coin was one of the first 24-karat pieces produced in the United States. A beautiful, flawlessly executed example. PCGS# 393329
- 5173 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The design elements of this 2009 one-ounce gold Ultra High Relief twenty are fully struck, and the pristine yellow-gold surfaces are brightly reflective, with no discernible flaws. NGC ID# 26S4, PCGS# 407404
- 5174 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** A magnificent example of the one-ounce gold 2009 Ultra High Relief double eagle, modeled after the small diameter pattern, Judd-1917. This coin is fully struck and the deeply reflective surfaces are technically perfect. NGC ID# 26S4, PCGS# 407404
- 5175 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** A fully struck example with great color and pristine, semi-reflective surfaces. NGC ID# 26S4, PCGS# 407404
- 5176 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** A modern replica of the double thickness, small diameter double eagle pattern, Judd-1917, in the Smithsonian Institution. This piece is technically perfect and possesses incredible eye appeal. NGC ID# 26S4, PCGS# 407404

**2009 Ultra High Relief, MS70
Technically Flawless**

- 5177** 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 Prooflike NGC. Struck at the West Point facility, the 2009 Ultra High Relief twenty dollar gold pieces showcase Saint-Gaudens' beautiful artistry on a smaller, 24-karat gold planchet, exhibiting the drastically improved striking capabilities of modern coining presses. This perfectly preserved examples delivers exceptional visual appeal with prooflike surfaces and immaculate detail. NGC ID# 26S4, PCGS# 407404

- 5178** 2009 One-Ounce Gold Twenty Dollar High Relief, First Strike, Mercanti Signature Insert MS70 PCGS. The insert in the holder includes the signature of John M. Mercanti, the 12th Chief Engraver of the U.S. Mint. This technically perfect specimen was part of the First Strike as designated on the holder. These pieces, inspired by the Judd-1917 pattern held by the Smithsonian, were struck with 24-karat gold in the diameter of a ten dollar eagle, but on a double-thick flan. *From The Northern Lights Collection.* NGC ID# 26S4, PCGS# 407405

- 5179** 2009 One-Ounce Gold Twenty Dollar High Relief, First Strike MS70 PCGS Secure. This First Strike 2009 Ultra High Relief double eagle is a technically perfect coin, with fully struck design elements and deeply mirrored yellow-gold surfaces that show no signs of contact. This one-ounce gold coin is modeled after the Judd-1917 pattern, with a thick planchet and reduced diameter. NGC ID# 26S4, PCGS# 407405

- 5180** 2009 One-Ounce Gold Ultra High Relief Twenty Dollar, Moy Signature Insert MS70 Prooflike PCGS. Technically perfect, this specimen is housed in a holder with an insert signed by Edmund C. Moy, the 38th Director of the U.S. Mint. The concave fields of this example display vibrant luster and rich sun-gold color, highlighting the beautiful Augustus Saint-Gaudens design. *From The Northern Lights Collection.* PCGS# 506602

- 5181** 2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 Prooflike NGC. Struck in a slightly smaller format, these pieces were produced to commemorate the beautiful Saint-Gaudens double eagle design. This example is struck with razor-sharp precision and the coin itself is a lovely, flawless representative. PCGS# 506602

- 5182** 2013-W One-Ounce Gold Buffalo, Reverse Proof, First Strike PR70 PCGS. Struck in reverse proof format to celebrate the 100th anniversary of Fraser's classic design, this perfectly preserved, fully struck representative is among the first strikes from the West Point facility. Housed in a gold label holder. PCGS# 520051

**Gold Libertas Americana Medal
Paris Mint Modern Restrike
PR68 Ultra Cameo**

- 5183** (1776) Paris Mint Libertas Americana Medal Gold Restrike PR68 Ultra Cameo NGC 46.5 mm. Edge lettered CORNUCOPIA #312/500. 64 gms, fineness .920 gold. A beautiful proof restrike in gold from the year 2000, by the Paris Mint which also struck the original Libertas Americana medals in 1783. Only 500 pieces were produced. Fully struck and pristine, with frosted golden devices that are sharply contrasted over the jet-black deep mirror fields. This lot includes the original faux blue velvet box and the Certificate of Authenticity from the Paris Mint.

**Five-Ounce Gold '1876 \$100 Union'
Ultra Cameo Gem Proof**

- 5184** (2010) Five-Ounce Gold "1876 \$100 Union" Ultra Cameo Gem Proof NGC. Struck by the private New York Mint, with the Smithsonian Institute receiving a portion of the sales revenue. The designs are based on a drawing by U.S. Mint engraver George T. Morgan that was never struck as a pattern. A different variety, struck in 2005, bears the legend ONE HUNDRED DOLLARS, but the present variety has no indication of denomination.

COINS OF HAWAII

**1847 Hawaii Cent, MS62 Red
Seldom Seen in This Designation**

- 5185** 1847 Hawaii Cent MS62 Red NGC. Medcalf 2CC-2. Crosslet 4, 15 berries. This is the most available of the Hawaiian cent die varieties but seldom seen in the Red designation, regardless of grade. This MS62 Red NGC piece appears to be the first Red example we have offered since our FUN Signature (Heritage, 1/2007), lot 7993, an MS64 Red PCGS piece that brought \$18,400. Cherry and bright orange appear on each side amid scattered signs of contact that determine the numeric grade. Census: 4 in 62 Red, 3 finer (3/14). PCGS# 10967

**1881 Hawaii Five Cent Fantasy Strike
PR64+ Deep Cameo**

- 5186 1881 Hawaii (Fantasy) Strike PR64+ Deep Cameo PCGS.** This amazing Deep Cameo Proof has bright gray surfaces with full design definition on both sides. These pieces are discussed in *Hawaiian Money Standard Catalog* by Donald Medcalf and Ronald Russell. They indicate that the dies for these non-official pieces were slightly different from the original dies, and that pieces were struck in nickel, aluminum, and copper, the first two on thin and thick planchets. This piece appears to be struck on a thick aluminum planchet, although there is no notation on the PCGS holder. PCGS# 510976

- 5187 1883 Hawaii Quarter MS66+ PCGS. CAC.** Beautiful multicolor toning and lightly frosted mint luster deliver strong visual appeal, with intermingled splashes of aquamarine, green-gold, and pale lilac over both sides. A sharply struck, Plus-graded Premium Gem representative. PCGS has graded only 15 numerically finer examples (3/14). PCGS# 10987

- 5188 1883 Hawaii Half Dollar MS62 NGC.** Charles Barber designed all of the silver coinage issued by the Kingdom of Hawaii and the coins were struck at the U.S. Mint in San Francisco. A pleasing degree of luster remains on this MS62 example of the half dollar denomination. The lightly toned surfaces include shades of gold, peach, and olive-green. Although scattered marks limited the grade, none is worthy of individual mention. Listed on page 409 of the 2014 *Guide Book*. PCGS# 10991

- 5189 1883 Hawaii Half Dollar MS63 NGC.** An attractive Mint State example of the 1883 Hawaiian half dollar, struck at the San Francisco mint. The satiny surfaces are free of any detracting abrasions, showcasing just the barest tint of light golden toning. Fully struck and attractive. Census: 34 in 63, 40 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* PCGS# 10991

**1883 Hawaii Half Dollar, MS64
Ex: Eliasberg**

- 5190 1883 Hawaii Half Dollar MS64 PCGS. Ex: Eliasberg.** Struck at the San Francisco mint, the 1883 Hawaiian half dollar (also known as the Hapalua), is scarcely seen in pleasing Mint State condition, and becomes truly rare at the Gem grade level. This boldly struck near-Gem displays blended green-gold, amber, and aquamarine toning over both sides. Excellent surface preservation only adds to the visual appeal of this piece. Population: 59 in 64 (3 in 64+), 16 finer (3/14). *Ex: The Eliasberg and Krause Collections (Stack's, 3/2010), lot 1326.* PCGS# 10991

**1883 Hawaii Dollar, PR62+ Cameo
Very Rare in Proof Format
Remarkably Attractive**

- 5191 1883 Hawaii Dollar PR62+ Cameo NGC. CAC. Ex: Forsythe Collection.** The business-strike silver issues of the Kingdom of Hawaii dated 1883, the dime, quarter, half dollar, and silver dollar, are frequent visitors at Heritage — the dime and quarter far more so than the larger-denomination pieces — but proof examples of all of these issues are remarkably rare. The proof mintages of the silver dime through silver dollar are given as 26 pieces each, and perhaps one-half to two-thirds of those survive today. The present consignment, offered in this Platinum Night session, contains examples of the pattern proof-only one-eighth dollar (mintage 20 pieces) along with a proof quarter, proof half dollar, and two examples of the proof silver dollar — the current piece, certified PR62+ Cameo by NGC, and a PR63 Cameo PCGS example. Even though the fields show a few hairlines on each side, this piece is a stunning coin nonetheless, showing perceptible field-device contrast and a razor-sharp strike. Light suggestions of champagne-gold deepen slightly at the rims to copper and amber hues. A gorgeous example of this rare crown-sized issue. PCGS has seen eight examples of this issue in all grades and contrast levels, while NGC shows 10. Census: 1 in 62+ Cameo, 1 finer (65 Cameo) (3/14). PCGS# 415929

**Hawaii Waterhouse Token, Choice AU
Conditionally Rare Early Merchant**

- 5192** (1860) Hawaii Waterhouse Token AU55 PCGS. Medcalf 2TE-1. John T. Waterhouse was a prominent Honolulu merchant who issued the earliest known Hawaiian tokens. The soft white metal alloy makes it a challenge to locate better grade examples. The present dove-gray example displays luster within the legends and has minimal marks. The high relief portrait has a blunt nose, as usual. Listed on page 410 of the 2014 *Guide Book*. Population: 4 in 55, 2 finer (3/14). PCGS# 600500

- 5193** (1871) Hawaii Wailuku Half Real Plantation Token PCGS Genuine. VF Details. Medcalf 2TE-4. Narrow Starfish. Produced in the Wailuku Plantation blacksmith shop in Maui for use by the Plantation's employees. This well-detailed piece exhibits the Roman numeral VI, meaning 6 1/4 cents, the token's denomination. This example exhibits a clean hole at the 12 o'clock position, but given the rarity of these pieces in any condition, many collectors will overlook that minor fault. An excellent piece of Hawaiian history. Listed on page 410 of the 2014 *Guide Book*. PCGS# 600506

**1871 Wailuku 12 1/2 Cents Plantation Token, AU53
Broad Starfish Variety, Medcalf 2TE-3**

- 5194** 1871 Hawaii Wailuku 12 1/2 Cents Plantation Token, Broad Starfish AU53 NGC. Medcalf 2TE-3. A lightly circulated example of the broad starfish variety, as opposed to the narrow starfish type, this piece lacks definition on portions of both sides. Several shades of brown and tan appear. A few hair thin marks are present, with one across the star posing minimal distraction, if any. Listed on page 410 of the 2014 *Guide Book*. PCGS# 600503

**1880 Wailuku Plantation Token, AU50
1 Real, M. 2TE-6**

- 5195** 1880 Hawaii Wailuku 1 Real Plantation Token AU50 PCGS. Medcalf 2TE-6. A lightly circulated example of a one real Wailuku Plantation token, this piece exhibits a strong strike and attractive chocolate-brown color. The high points of the design display light wear. Aside from a diagonal hair thin line on the lower reverse, there are no marks worthy of mention. The plantation was the site of a sugar company, with laborers emigrating from many different countries to work in the fields. Listed on page 410 of the 2014 *Guide Book*. PCGS# 600512

- 5196** 1879 T. Hobron, Kahului-Wailuku 12 1/2 Cent Railroad Token AU50 PCGS. Medcalf 2TE-8 Two varieties are known, having either two stars or six stars flanking the date on the reverse. In all grades, PCGS has certified 42 of the six stars variety, and four of the two stars coins. This pleasing example has light reddish-brown surfaces with peripheral weakness that is typical of the issue. Listed on page 410 of the 2014 *Guide Book*. Population: 3 in 50, 15 finer (3/14). PCGS# 600515

**1879 T. Hobron 12 1/2 Cent Token, MS62 Brown
Mint State Example of Medcalf 2TE-8, Six Star Reverse**

- 5197** 1879 T. Hobron, Kahului-Wailuku 12 1/2 Cent Railroad Token MS62 Brown NGC. Medcalf 2TE-8. Captain Thomas H. Hobron built the first narrow gauge railroad in Maui to help transport sugar from the plantations to Kahului's port. The railroad began operations in July 1879, the year Hobron began issuing these tokens. There are two varieties of the 12 1/2 cent denomination, one with six stars on the reverse such as this example, with the other variety displaying two stars. Hobron also issued 25 cent tokens, but they are extremely rare, with only three examples known. This piece graded MS62 exhibits brown and mahogany shades. The design elements are all visible, though lacking full definition. Very few marks are present, all minor. Listed on page 410 of the 2014 *Guide Book*. PCGS# 600515

ERRORS

**1882 Shield Nickel, AU55
Struck on a Cent Planchet**

- 5198** 1882 Shield Nickel — Struck on a Cent Planchet — AU55 PCGS. 3.1 gm. A well centered strike with virtually all of the design intact. The chocolate-brown surfaces retain substantial gloss, though the coin likely traded hands a few times (as a cent) before its unusual nature was noticed. Soft definition on the leaves and shield border is due more to the strike than circulation wear. Letters in STATES OF AMERICA exhibit slight spreading toward the rim, characteristic of wrong planchet strikes. Each side has a few minor hair-thin marks.

**1913-S Type Two Nickel, XF45
Struck 20% Off Center**

- 5199** 1913-S Type Two Buffalo Nickel — Off Centered — XF45 NGC. Struck about 20% off-center at 7 o'clock, with just the tops of the date visible on the obverse, and only enough to identify the year. The "S" mintmark on the reverse is clearly present on this Type Two nickel. Both sides of this Choice XF example show splashes of tan on the light gray surfaces.

**1973-S Quarter Mated Pair
PR65 and PR66**

- 5200** 1973-S Washington Quarter — Mated Pair — PCGS. Coin #1 is graded PR65 and is struck 15% off center toward 12 o'clock with a uniface obverse. Coin #2 is graded PR66 and has a nearly complete reverse design while the obverse has an 85% indent. Both pieces were fed between the dies and struck simultaneously, with the reverse of Coin #1 indenting the obverse of Coin #2. Both coins have a large arc of unstruck surface. (Total: 2 coins)

**Guam U.S. Territories Quarter
Struck on a Cent Planchet
Uniface Invisible Strike
MS64 Red and Brown**

- 5201** 2009-? Guam U.S. Territories Quarter — Struck on a Cent Planchet, Obverse Uniface Invisible Strike — MS64 Red and Brown PCGS. 2.5 gm. A copper-plated zinc cent planchet and an unknown planchet were fed together between quarter dies. The cent planchet rested between the reverse (Guam design) die and the unknown planchet, and was struck moderately off center toward 4:30 relative to the reverse. The reverse is indented by the unknown planchet. The obverse exhibits an "invisible strike," caused when an object (the unknown planchet) allows an unexpectedly thin planchet (the cent planchet) to receive a die-struck design, despite the fact that the minimum die clearance of the quarter dies exceeds the thickness of the cent planchet.

1956 Half Dollar, MS65
Struck on a Silver Quarter Planchet

- 5202** 1956 Franklin Half Dollar — Struck on a Silver Quarter Planchet — MS65 PCGS. Struck aligned with the collar at 4:30. The date is complete while LIBERTY, UNITED, and HALF are off the flan. This lustrous Gem has a cream-gray and wheat-gold obverse. The colorful reverse is toned ocean-blue, apple-green, and golden-brown. Pristine aside from a slender mark on the bell.

Franklin Half on a Struck Cent
MS65 Red and Brown

- 5203** 1967-D Franklin Half — Struck on a Struck Cent — MS65 Red and Brown NGC. This off-metal mint error is richly toned in cobalt-blue and cherry-red. All of the mintmark is present, as are the first three date digits. E PLURIBUS UNUM is also intact, but the remaining legends are completely off the flan. Traces of the Lincoln cent undertype are evident within Franklin's hair. *Ex: Boston ANA Signature (Heritage, 8/2010), lot 5603.*

1963-D Half Dollar, MS63
Struck on a Silver Dime Flan

- 5204** 1963-D Franklin Half — Struck on a Silver Dime Planchet — MS63 NGC. 2.5 gm. Ideally centered such that both the date and mintmark are fully present. The remaining legends are almost entirely off the flan. A majority of Franklin and the Liberty Bell are included. Brilliant and satiny with minimally abraded surfaces. A scarce wrong

1963-D Half Dollar, MS65
Struck Off Center on a
Silver Quarter Planchet
Partial Brockage Reverse

- 5205** 1963-D Franklin Half — Off Center on a Silver Quarter Planchet, Reverse Brockage — MS65 NGC. 6.24 gm, virtually the statutory weight of a silver quarter. An intriguing double mint error. A half dollar (not the present piece) was struck normally but failed to fully eject. It covered a majority of the reverse die when the present piece was fed in between the obverse die and the off-center coin. The strike indented most of the reverse of the present coin with the obverse of the previously struck coin. The date is bold, and, fortuitously, the mintmark is part of the portion struck by the reverse die. LIBERTY and the denomination are absent. The Franklin portrait is complete. Lustrous and unabraded with light golden patina over pearl-gray surfaces.

GSA DOLLARS

1878-CC GSA Dollar, MS65 ★ Brilliant and Semiprooflike

5206 1878-CC MS65 ★ NGC. This brilliant Gem has semiprooflike luster, likely the reason it received the coveted Star designation from NGC. The strike is full and only incidental marks are present. A better grade example of the introductory Carson City Morgan issue. The GSA box and certificate is included with the lot. PCGS# 407080

5207 1879-CC — Reverse Scratched — Uncertified. Unc. Details. The 1879-CC is a semikey issue, especially in a GSA holder. This is a semiprooflike example, lightly toned aside from a few small splashes of gray on the obverse. The eagle displays a deep linear impression from the edge of a blade, a highly unusual occurrence on a coin within a GSA holder. The portrait is somewhat bagmarked. The box and certificate of GSA issue accompany the lot.

1879-CC Silver Dollar, MS63 Elusive GSA Issue

5208 1879-CC MS63 NGC. Glimpses of golden toning visit the margins of this lustrous and nicely struck Select Carson City dollar. The fields are well preserved, though grazes on the portrait limit the grade. The Carson City GSA dollars were predominantly struck between 1880 and 1885. Outliers of those dates are rare, especially the '79-CC and '90-CC. The box and certificate of GSA issue accompany the lot. PCGS# 407086

5209 1882-CC MS66 NGC. Areas of toning appear on both sides of this Premium Gem example, with the obverse displaying golden-brown toning along the outer portions of the right side. The reverse exhibits richer luster and more extensive toning, in shades of golden-brown, olive-green, teal, orange, and plum. The strike is sharp, adding to the appeal. Faint roller marks cross Liberty's jaw, but they are not distracting. No box or certificate is included. PCGS# 407134

1882-CC GSA Dollar, MS67 Frosty and Untoned

5210 1882-CC MS67 NGC. The 1882-CC, 1883-CC, and 1884-CC Morgan dollar issues were each produced in relatively small totals of 1.1 million to 1.2 million pieces originally, but they were held back in vast numbers in the great Treasury releases of the 1960s-1970s, and today are available in plentiful supply. They are also extremely well-made Morgan dollar issues, as the present MS67 1882-CC aptly demonstrates. The surfaces are uniformly untuned silver-white and exhibit thick, admirable mint frost throughout both sides. There is no mentionable contact and the strike is quite bold, although some light roller marks appear on Liberty's cheek and the hair over the ear, which is nonetheless quite sharp. No box or certificate is included. PCGS# 407134

**1885-CC GSA Silver Dollar
MS65 Deep Prooflike**

- 5211 1885-CC MS65 Deep Prooflike NGC.** An arc of lemon-gold toning along the lower reverse precludes full brilliance, but this prominently mirrored Carson City dollar is only moderately abraded and boasts attractive eye appeal. The strike shows minor incompleteness at the centers and on the eagle's claws. No box or certificate is included. PCGS# 497161

- 5212 1890-CC MS61 NGC.** The 1890-CC is scarce but collectible in Uncirculated grades. GSA 1890-CC dollars are very scarce. Many were undoubtedly broken out of their holders and submitted to third party grading services during the late 20th century. The present lustrous GSA example has light straw-gold toning and a typical strike. The fields are clean and facial marks are consistent with the MS61 level. A box and certificate of GSA issue accompany the lot. PCGS# 407198

- 5213 1891-CC MS61 NGC.** A virtually brilliant Carson City representative. Lustrous with a typical strike and a lightly abraded reverse. The portrait and left obverse field display small marks consistent with the grade. A GSA box accompanies the lot, along with the certificate for an 1882-CC dollar. PCGS# 407206

REDFIELD DOLLAR

- 5214 1879-S Reverse of 1878 MS64 NGC (MS65 Paramount). VAM-39.** Ex: Redfield Collection. Housed in its vintage early-1980s red Paramount holder. A small NGC grading certificate is attached to the upper back of the holder. Lustrous and well struck with rich forest-green and rose-red peripheral patina. NGC ID# 253W, PCGS# 7094

WASHINGTONIA

**1805 Washington Eccleston Medal
Baker-85, Dies by Thomas Webb**

- 5215 1805 Washington Eccleston Medal MS60 Lightly Pitted Uncertified. Baker-85.** Bronze. 76 mm. Obverse: armored, confident high relief bust of Washington right. Reverse: Indian with bow and arrow, surrounded by concentric rings bearing laudatory inscriptions. Original pink-gold throughout the legends and design recesses. The fields are golden-brown. The centers exhibit pinpoint pits. A vertical die crack through WAS OURS is also seen on the Rulau/Fuld plate piece. A superb medal issued by Daniel Eccleston of Lancaster, England. The dies were cut by Thomas Webb, a British engraver who worked from 1804-1827. The piece was issued with a subtle twist of satire. The picture of Washington in a heavy suit of amour is a 'singular conceit' as noted by Baker. On the reverse the Indian in the center is surrounded by the words THE LAND WAS OURS. The medal appears to be more of a commentary of the expropriation by colonists of Indian lands than a tribute to Washington.
Ex: Troy Wiseman Collection (Heritage, 9/2006), lot 6104.

U.S. MINT MEDALS

**1871 U.S. Grant Indian Peace Medal
Silver, IP-42**

- 5216 1871 U.S. Grant Indian Peace Medal. Julian IP-42.** Silver, 62 mm. Small hole at 12 o'clock, as issued. Small loop attached. The high points and open fields are cream-gray while protected areas show deep brown and charcoal toning. Likely prized for many years by its unknown recipient. Sharpness of XF40. A loupe reveals pinscratches and hairlines.

U.S. PRESIDENTS & STATESMEN

- 5217 1864 Lincoln-Johnson Campaign Medal, MS62 Prooflike NGC. DeWitt-AL-1864-1.** White metal. 42mm. Dies by W.H. Key of Philadelphia. This large and elusive jugate campaign medal is slightly wavy, but the moderately reflective and nearly untuned surfaces display only wispy field hairlines. A tiny aqua spot is detected on the eagle's breast.
Ex: Long Beach Signature (Heritage, 9/2006), lot 6112.

SO-CALLED DOLLARS

- 5218 1902 Wells Fargo 50th Anniversary MS65 PCGS. HK-296, R.5.** These pieces are popular with collectors due in part to the numerous Western scenes depicted on both sides. A Gem example with wonderful eye appeal, this specimen displays doubling of the tree near 10 o'clock on the obverse. The few marks present are minuscule. The pieces were struck for distribution to employees with a year or more of service to the company. The original dark maroon leatherette presentation case is included with this lot, with the interior lining reading, "WELLS FARGO & COMPANY, / MARCH 18, 1852./MARCH 18, 1902."

**Silver 1920 Wilson Dollar, MS66
Manila Mint Opening, HK-449
Fully Patinated**

- 5219 1920 Manila Mint Opening, Silver MS66 PCGS. HK-449.** Vibrant golden-brown, lavender-gray, and aquamarine patina embraces this lustrous and nicely struck representative. A lens reveals only minor marks beneath the toning. The popular "Wilson dollar," which features the lame duck President on the obverse. As of (3/14), the single finest certified by PCGS, whether listed under #513280 (as Krause X#11) or #643969 (as HK-449).

MINT SETS

- 5220 Uncertified 1942 "Double Mint Set."** Prior to the regular issue double mint sets that first appeared in 1947, collectors were able to place special orders for current coins from the Treasury Department in Washington, D.C. Few collectors were aware of the special order situation, and even fewer thought to preserve the mailing materials that came with the coins. This lot contains 28 coins that were current in 1942, including only the Wartime composition nickels struck at Philadelphia and San Francisco. Preserved with this lot is the February 1, 1943 transmittal letter from the Treasury department, the canvas shipping bag, and the original mailing label postmarked February 1, 1943 in Washington, D.C. and February 3, 1943 in Waterloo, Iowa. This lot and the next four lots provide an exceptional look at current coin collecting during World War II. (Total: 28 coins)
- 5221 Unopened 1943 "Double Mint Set." Uncertified.** Our discussion above for the 1942 set discusses the possibility of special order sets during World War II. This set retains its Treasury seal, having never been opened. The postmark of November 15, 1943, suggests that the coins are dated 1943, while the weight of the package suggests a double mint set of 30 coins. A transmittal letter is likely included in the canvas bag. (Total: 30 coins)
- 5222 Unopened 1944 "Double Mint Set." Uncertified.** Our discussion above for the 1942 set discusses the possibility of special order sets during World War II. This set retains its Treasury seal, having never been opened. The postmark of November 24, 1944, suggests that the coins are dated 1944, while the weight of the package suggests a double mint set of 30 coins. A transmittal letter is likely included in the canvas bag. (Total: 30 coins)
- 5223 Uncertified 1945 "Double Mint Set."** This set of 30 coins was sent to the same address as the various other coin sets from 1942 to 1953 offered in the present sale. The postmark of this set is December 20, 1945. There is no transmittal letter with this set. (Total: 30 coins)
- 5224 Unopened 1946 "Double Mint Set." Uncertified.** Our discussion above for the 1942 set discusses the possibility of special order sets during World War II. This set retains its Treasury seal, having never been opened. The postmark of November 27, 1946, suggests that the coins are dated 1946, while the weight of the package suggests a double mint set of 30 coins. A transmittal letter is likely included in the canvas bag. (Total: 30 coins)
- 5225 Uncertified 1947 Double Mint Set.** This 1947 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 16, 1948. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 28 coins as no 1947-S half dollars were minted. (Total: 28 coins)
- 5226 Uncertified 1948 Double Mint Set.** This 1948 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 7, 1949. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 28 coins as no 1948-S half dollars were minted. (Total: 28 coins)
- 5227 Uncertified 1949 Double Mint Set.** This 1949 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 12, 1950. All of the coins are lightly to moderately toned, and the typical example grades MS63 to MS64. This set contains 28 coins as no 1949-S quarters were minted. 1949-D half dollars with Full Bell Lines are especially important. (Total: 28 coins)
- 5228 Unopened 1951 Double Mint Set.** This 1951 PDS double mint set has never been opened and remains housed in the original cardboard holders, with the sealed manila mailing envelope that is postmarked March 6, 1952 at Washington, D.C., and March 8, 1952 at Waterloo, Iowa. This set contains 30 coins. (Total: 30 coins)
- 5229 Unopened 1951 Double Mint Set.** This 1951 PDS double mint set has never been opened and remains housed in the original cardboard holders, with the sealed manila mailing envelope that is postmarked March 6, 1952 at Washington, D.C., and March 8, 1952 at Waterloo, Iowa. This set contains 30 coins. (Total: 30 coins)
- 5230 Uncertified 1951 Double Mint Set.** This 1951 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked March 28, 1952. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 30 coins. The Full Bell Lines half dollar enthusiast might take a close look at the 1951-S half dollars. (Total: 30 coins)
- 5231 Unopened 1952 Double Mint Set.** This 1952 PDS double mint set has never been opened and remains housed in the original cardboard holders, with the sealed manila mailing envelope that is postmarked at Washington, D.C. This set contains 30 coins. (Total: 30 coins)
- 5232 Unopened 1952 Double Mint Set.** This 1952 PDS double mint set has never been opened and remains housed in the original cardboard holders, with the sealed manila mailing envelope that is postmarked at Washington, D.C. This set contains 30 coins. (Total: 30 coins)
- 5233 Unopened 1952 Double Mint Set.** This 1952 PDS double mint set has never been opened and remains housed in the original cardboard holders, with the sealed manila mailing envelope that is postmarked at Washington, D.C. This set contains 30 coins. (Total: 30 coins)
- 5234 Uncertified 1953 Double Mint Set.** This 1953 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 29, 1954. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 30 coins. (Total: 30 coins)

5235 Uncertified 1953 Double Mint Set. This 1953 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 29, 1954. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 30 coins.(Total: 30 coins)

5236 Uncertified 1953 Double Mint Set. This 1953 PDS double mint set remains housed in the original cardboard holders, with the manila mailing envelope that is postmarked January 29, 1954. All of the coins are lightly to moderately toned, and the typical example grades MS64 to MS65. This set contains 30 coins.(Total: 30 coins)

5237 Uncertified 1954 Double Mint Set. An attractive double Mint Set containing representatives of all three active mints, with grades ranging from MS63 to MS66. The cents display color ranging from vibrant orange-gold to deep burgundy-red, while the nickel and silver pieces exhibit varying degrees of light golden peripheral toning. Housed in the original green cardboard holders with manilla envelope.

CERTIFIED MODERN PROOF SET

5238 Five-Piece 1937 Proof Set PCGS. The coins are separately housed in PCGS holders with consecutive certification numbers. The set includes: **cent PR63 Red**, a lovely deep orange proof; **nickel PR64**, delicate ice-blue tints grace the mirrored surfaces; **dime PR63**, a pleasing mirrored proof with wispy gold toning; **quarter PR64**, brilliant and untuned silver surfaces; and a **half dollar PR64**, fully struck and brilliant with hints of cameo contrast. (Total: 5 coins) NGC ID# 22L4, PCGS# 3338

BOOKS

5239 Three Rare Coin Books. Heath's Infallible Counterfeit Detector Pocket Edition, Third Edition, by Laban Heath & Co., copyright 1870; The Rare Coins of America, Fifty Edition, William Von Bergen, copyright 1889; and Handbook of United States Coins, First Edition, by R.S. Yeoman, Lee F. Hewitt, and Charles E. Green, copyright 1942. The books are in Fine condition.(Total: 3 books)

MISCELLANEOUS

1877 Milton Bradley Box of Educational Toy Money

5240 Toy Money. This has been one of the favorite lots around the office, and we hate to see it go. Housed in the original box this "United States Educational Toy Money" was made by Milton Bradley & Co. and has a patent date of March 20, 1877. Includes: (11) 1872 "cents;" (9) 1867 "two-cent pieces;" (15) 1870 "Shield nickels;" (14) 1875 "dimes;" (11) 1876 "quarters;" (5) 1875 "halves;" (5) 1878 "Morgan dollars;" (2) 1853 "quarter eagles;" (1) 1862 "three-dollar;" (1) 1883 "half eagle;" (2) 1880 "eagles;" and (2) 1873 Open 3 "twenties." Obviously, none of the money is real, it is printed on cardboard and the overall condition is quite nice. Ex: Long Beach Signature (Heritage, 2/1994), lot 7551. PCGS# 661000

INGOT

5241 San Francisco Mint 5.3-Ounce Silver Assay Ingot. This small silver ingot has the oval imprint of the San Francisco Mint at the top, with part of the upper portion of the imprint and a small amount of the left side off the ingot. The individual ingot number 342 follows, with 999.5 FINE in two rows below. The weight is on the reverse, 5.30 OZS in two lines. This is a nice silver-gray example with an occasional slight trace of charcoal-gray. 50 mm long by 31 mm wide by 10 mm thick.

MORGAN DOLLARS

1878 8TF Morgan Dollar, MS66 ★
Super Strike, One-Sided Prooflike

5242 1878 8TF MS66 ★ NGC. Uncompromisingly white and powerfully struck, this high-end Premium Gem is visually and technically impressive. The full strike is especially bold on the prooflike obverse, with Liberty's cheek, hair, and cap fully brought up against the mirrored fields. The frosted reverse is equally dramatic in its own way, with the feather details amazingly sharp and pristine. A few expected ticks and a small grouping of marks in the right obverse field are magnified by the prooflike surfaces, but not at all serious. An exquisite example, very close to the next grade level as indicated by the NGC Star designation. Census: 25 in 66 (6 in 66 ★), 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253H, PCGS# 7072

1878 7/8TF Morgan Dollar, MS66 ★
Finest Certified, Deep Mirror Prooflike

5243 1878 7/8TF MS66 ★ Deep Mirror Prooflike NGC. VAM-41A. Long Nock Variety. This is the only MS66 Deep Mirror Prooflike example of the 1878 Doubled Tailfeathers variant to be certified by either service, and this coin received the respected NGC Star for high-end quality and appeal. Formerly known as the 7/8 Tailfeathers variety, it was renamed several years ago because no Morgan Dollar has eight tailfeathers visible beneath the 7 Tailfeathers overtype, although many collectors still prefer to think of it that way.

Brilliant, deeply mirrored surfaces contrast with fully struck, frosted devices of this Premium Gem. Doubling of the tailfeathers is clearly evident, with four vestigial tips visible. A few minor abrasions dot the surfaces, with a small scrape on the nose serving as a pedigree marker for this untuned, highly attractive dollar. Variety collectors will recognize the diagnostics for VAM-41A, all of which are present on this important coin. Census: 1 in 66 (1 in 66 ★) Deep Mirror Prooflike, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2TXZ, PCGS# 97079

1878 7TF Morgan Dollar, MS66
High-Grade, Reverse of 1878 Variety

- 5244** 1878 7TF Reverse of 1878 MS66 NGC. A flat, slightly sunken breast on the eagle and parallel fletchings on the arrows typify this 1878 silver dollar variety. Extremely lustrous and smooth surfaces reveal a full strike and virtually perfect fields. A cluster of tiny, grazelike abrasions on Liberty's chin are all that keep this brilliant-white dollar from an even higher grade. Census: 25 in 66 (1 in 66 ★), 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 253K, PCGS# 7074
-

1878 7TF Morgan Dollar, MS66
Condition Rarity; Reverse of 1879

- 5245** 1878 7TF Reverse of 1879 MS66 NGC. Although seemingly infinite varieties and die pairings of 1878 Morgan dollars exist, four basic varieties need to be located before entering the strange and idiosyncratic world of *Cherrypickers'* and VAMs. The basics for 1878 are 8 Tailfeathers; Doubled Tailfeathers; 7 Tailfeathers, Reverse of 1878; and 7 Tailfeathers, Reverse of 1879. Of these, the scarcest variety is the 7 Tailfeathers, Reverse of 1879. A slanted upper feather on the arrow fletchings and a rounded breast on the eagle are diagnostic of the variety. This purely brilliant, frost-white example is boldly struck with a minimum of abrasions. A few tiny ticks are widely scattered and inconspicuous. Cartwheel luster abounds. PCGS and NGC combined have certified none numerically finer than this outstanding Premium Gem. Census: 17 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 253L, PCGS# 7076
-

1878-CC Silver Dollar, MS67
Top-Notch Example, Tied for Finest

5246 1878-CC MS67 NGC. VAM-9, R.3. Broken 4th star, CC tilted right, die chips in WE TR, die line from wreath through O(NE). The 1878-CC Morgan dollar is one of the favorite issues within the series for many a specialist, be they advanced numismatist or rank beginner. The lure and lore of the Old West survives within that tiny-yet-coveted CC mintmark, and the first-year magic of the series' introduction in 1878 adds to the issue's cachet.

Yet another lure is present for many advanced collectors of 1878-CC Morgan dollars, given the presence of many die varieties such as the VAM-9 of the present coin. The VAM-9 variety is one often seen and widely available, so the present coin is far more valuable as the absolute conditional rarity that it is, rather than as a Van Allen-Mallis variety.

This frosty-white, untuned 1878-CC Morgan is an example of the many top-notch pieces in the Moser Collection that are tied for the finest of their issue. NGC has seen only nine submissions of the 1878-CC in MS67 including the present piece, and there are none finer (3/14). The MS67 grade of this piece is well-earned: Liberty's cheek is smooth and unperturbed by marks, and the hair curls over Liberty's ear are virtually full, despite the presence of a few minute roller marks visible there. The strike is soft on the eagle's claws and parts of the lower wreath on the reverse, but the overall excellent preservation and top-notch eye appeal more than compensate.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253M, PCGS# 7080

1878-S Silver Dollar, MS67 ★
Frosted, Semiprooflike Brilliance

- 5247 1878-S MS67 ★ NGC.** NGC wisely assigned its respected Star designation to this starkly brilliant, untoned San Francisco example. Intricately struck and exceptionally lustrous, this remarkable dollar displays frosted devices and terrific eye appeal. The obverse is a bit more prooflike than the reverse, with both sides of the coin almost completely free of even the tiniest abrasions. A condition rarity this nice. Census: 32 in 67 (4 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 253R, PCGS# 7082

1879 Silver Dollar
Bold Strike, Silver-White Premium Gem

- 5248 1879 MS66 NGC.** This Philadelphia issue is not always found with a sharp strike or smooth, appealing surfaces such as this Premium Gem displays. The coin was likely struck from fresh dies, judging by the nearly complete hair above Liberty's ear and the boldly detailed eagle's breast on the opposite side. Brilliant, silver-white surfaces show only minor luster grazes. A tiny planchet defect on the rim above the R in PLURIBUS does not detract from the excellent eye appeal of this lustrous dollar. Only eight pieces are certified numerically finer by PCGS and NGC combined (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 253S, PCGS# 7084

1879-CC Silver Dollar, MS65
Rare Issue, Brilliant and Attractive
Large CC Mintmark Variety

- 5249 1879-CC MS65 NGC.** Clear CC. One of the signs of a great collection is the quality of its 1879-CC dollar — the rarest, early-date Carson City issue both by reputation and by fact. The Carson City Mint competed with the San Francisco Mint for silver bullion, and because of favorable railroad tariffs San Francisco was the preferred destination for newly-mined silver. As a result, just 756,000 silver dollars were produced at Carson City in 1879, while the San Francisco mintage was more than 9 million pieces.
- This appealing, silver-white dollar is heavily frosted on Liberty's portrait and on the eagle. Frosty-brilliant fields surround the bold devices with cartwheel silver luster. The fields are clean and smooth, save for a few minor abrasions that define the Gem grade. A touch of softness in the hair strands is as much a function of the thick mint frost as it is from striking weakness. Just four pieces are graded numerically higher by the two services combined. Census: 40 in 65 (1 in 65+, 1 in 65 ★), 2 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 253T, PCGS# 7086

1879-CC Dollar, MS64
VAM-3, Capped Die Variety

5250 1879-CC Capped Die, VAM-3, MS64 NGC. A Top 100 Variety. A brilliant example of this popular VAM variety, from the second year of Morgan dollar production at the mint facility in Carson City. This piece is softly defined over the centers, with billowy mint frost and modestly abraded surfaces.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. PCGS# 133869

The Carson City Mint.

1879-O Morgan, MS65
Bold, Deep Mirror Prooflike Dollar
None Certified in Higher Grades

5251 1879-O MS65 Deep Mirror Prooflike NGC. The New Orleans Mint was certainly capable of producing well-struck, attractive dollars such as this Deep Mirror Prooflike example, but apparently not consistently because full strikes are a rarity and most O-Mint coins show signs of rough handling. The occasional Deep Mirror Prooflike coin is always quite a find, let alone locating one in Gem condition.

This brightly reflective, richly contrasted example displays exceptional deep mirrors with a surprisingly full strike on the thickly frosted devices. Luminescent-gold toning rides the rims and creeps into the margins to accentuate the brilliant-silver centers. PCGS and NGC have each certified only three examples as Gem Deep Mirror Prooflike with none higher. Census: 3 in 65 Deep Mirror Prooflike, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253V, PCGS# 97091

1879-S Reverse of 1878 Dollar, MS65
Deep Mirror Prooflike, None Equal or Finer

- 5252 1879-S Reverse of 1878 MS65 Deep Mirror Prooflike NGC.** A Top 100 Variety. The diagnostic parallel top arrow feather and the concave breast on the eagle identify this rare variety, estimated to represent perhaps only 1% of the year's mintage (between 90,000 and 100,000 coins). It is about 100 times rarer than the typical 1879-S dollar with the Reverse of 1879.

PCGS has not certified a single Deep Mirror Prooflike example. NGC reports ten pieces in lesser grades, but only this example in Gem condition (3/14). The coin is as exceptional in appearance as it is rare, with brilliant, reflective fields and deeply frosted devices. Some mint caused die striations appear on the reverse, but the coin is remarkably unabraded for the assigned grade and fully struck. *From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.* NGC ID# 253W, PCGS# 97095

1879-S Morgan Dollar, MS68
None Certified Finer

- 5253 1879-S MS68 NGC.** This Superb Gem is the more-common Reverse of 1879 variety. For more than 60 years, most 1879-S dollars sat in storage at "the Granite Lady" (the San Francisco Mint). Massive releases in the early 1940s and 1960s increased the availability of high-grade pieces, but few can match the aesthetic appeal of this brilliant dollar. A Superb Gem in every way, the reflective fields emphasize fully struck, frosted devices. A mere hint of almond tone at the upper obverse rim and a single light abrasion in the left obverse field are the only signs of its dormancy in a cloth bag. Otherwise, the coin is as fresh as the day it was struck. Neither service has certified a numerically finer example (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253X, PCGS# 7092

1880 Silver Dollar, MS66 Prooflike
Rare with Prooflike Surfaces

- 5254 1880 MS66 Prooflike NGC.** David Akers reported a bag (1,000 pieces) of excellent, prooflike 1880 dollars appeared in 1971, most with deep-mirror surfaces, frosted devices, and minimal bagmarks. Perhaps this coin traces to that single bag of exceptional dollars. If so, very few qualified for Premium Gem status based on current grading events at PCGS and NGC. This coin certainly fits the profile described by Akers, with an especially bold strike also in evidence. Only eight coins are certified MS66 Prooflike plus two coins in Deep Mirror Prooflike by the two services combined, with none finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253Y, PCGS# 7097

1880/79-CC Reverse of 1878 Dollar, MS66
Scarce VAM-4 Overdate

- 5255** 1880/79-CC Reverse of 1878 MS66 NGC. VAM-4, R.4. A Top 100 Variety. Brilliant-white, thickly frosted surfaces glow with silver cartwheel luster. Abrasions are limited to a few tiny marks and luster grazes, with a full strike emerging from the pervasive mint frost. Both the Reverse of 1878 and the VAM-4 overdate features are highly prized by collectors. No overdated 80/79, Reverse of 1878 dollar is certified in a higher numeric grade by either service than this stunning Premium Gem (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 253Z, PCGS# 7108

1880-CC Morgan Silver Dollar, MS67 ★
8/High 7 Variety, VAM-5
Exotic Toning

- 5256** 1880-CC 8 Over High 7 MS67 ★ NGC. VAM-5. A Top 100 Variety. One of the few toned Morgans in the Moser Collection, but a standout coin in this remarkable set of high-grade rarities. The overdate is clearly visible with a glass. Tiny points of an underdigit seven are perched on the upper loop of the second 8 in the date, and a ghost of the rest of the 7 is visible within the loops, emerging beneath the bottom loop of the overdigit. The first 8 in the date is doubled at the top inside of the lower loop.

Wildly variegated toning displays an exotic assemblage of electric-blue, violet, aqua, forest-green, and orange gold across the unblemished obverse fields. Honey-gold margins frame a brilliant-silver center on the reverse. This Carson City Superb Gem is fully struck, lustrous, and technically superior. It deservedly received the NGC Star for exceptional quality and eye appeal.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. PCGS# 7102

1880-O Morgan, MS65
Boldly Struck, Snow-White Surfaces

5257 1880-O Ear Overdate MS65 NGC. VAM-6A. A Top 100 Variety. Both a condition rarity and a strike rarity, this New Orleans issue is seldom seen in Gem or finer grades, or with a full strike. This brilliant-white example displays both positives. Highly lustrous fields are smooth and clean. Liberty's cheek is unmarked. High, protective rims apparently shielded the coin from postmint contact with other coins, as there are very few disturbances seen on the attractive, frosted surfaces. PCGS and NGC combined have certified just two numerically higher examples (3/14).

The VAM-6A variety is characterized by a remaining "ear" of a 7 at the top left side of the second 8 in the date and a Small O mintmark placed slightly to the right of its normal centered position.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2543, PCGS# 7114

1880-S Dollar, MS68 ★
Beautiful Superb Gem

5258 1880-S MS68 ★ NGC. Few Morgan dollars were produced with the consistently high quality of the 1880-S and 1881-S issues. Any collector seeking an excellent representative of the type or mint should consider owning one of these beautiful pieces. This magnificent specimen displays sharp definition and beautifully clean, intensely lustrous surfaces.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2544, PCGS# 7118

1881 Morgan Dollar, MS67+
Single Finest Graded at NGC

5259 1881 MS67+ NGC. In his *Guide Book of Morgan Silver Dollars*, Bowers states: "Sharply struck, lustrous coins with superb eye appeal are hard to find and mount a challenge for the serious collector."

Here is one such example. This piece is sharply struck with vibrant luster and exquisitely preserved surfaces that are nearly pristine. The visual appeal of the coin is undeniable. It is also conditionally rare and the single finest-graded example at NGC. Census: 4 in 67 (1 in 67+), 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2546, PCGS# 7124

**1881-CC Silver Dollar, MS68
First Choice for Carson City Type**

5260 1881-CC MS68 NGC. The low mintage of 296,000 pieces is deceiving, since virtually all of the mintage was stored at the U.S. Treasury in Washington, DC for 70+ years until released off and on throughout the 1950s into the mid-1960s. Probably 90% of the coins survive, with about two-thirds of those in Mint State.

Few, however, have survived in the condition of this Superb Gem example. One of just eight coins certified MS68 by PCGS and NGC combined — with none finer — this exceptional representative is essentially flawless (3/14). Brilliant, frost-white surfaces emit waves of silver luster. Fully struck devices display frosted and immaculate details. The epitome of quality for the date and a Registry Set must.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2547, PCGS# 7126

**1881-O Silver Dollar, MS66
Among the Finest-Graded**

5261 1881-O MS66 NGC. There are a surprisingly high number of Gems graded as such from this New Orleans issue, considering the paucity of Premium Gem coins from NGC and PCGS combined. This example displays snow-white surfaces complemented by the thick cartwheel luster in the fields. Outstanding strike definition includes the central areas, and both sides of the piece reveal impressive preservation. Census: 8 in 66, 0 finer (3/14). *From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2548, PCGS# 7128*

**1881-S Morgan Dollar, MS68+ ★
Finest Graded at NGC**

5262 1881-S MS68+ ★ NGC. This great coin is the single finest-graded example of the 1881-S Morgan dollar at NGC. Of the thousands seen in Mint State, including those awarded the special Plus and Star designations, this piece is the only one to combine those two honors with this superlative MS68 assessment. Fully struck and brilliant, with surfaces that come ever-so-close to pristine, it seems unlikely that many others, if any, will be discovered to challenge the preeminent status of this wonderful Superb Gem.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2549, PCGS# 7130

**1882 Silver Dollar, MS67
Underrated Condition Rarity**

- 5263 1882 MS67 NGC.** While the average 1882 dollar is greeted with a collective yawn, astute silver dollar specialists know how few examples exist in Superb Gem condition. Of those that do, not all are technically or visually outstanding. This pristine dollar is both, with tempting surfaces and frosted brilliance seldom seen for the issue. Boldly struck devices display snowy perfection. A couple of tiny abrasions on the reverse fields are the only obstacles to an even higher grade. None are certified numerically higher by either service. Census: 8 in 67 (1 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254A, PCGS# 7132

**1882-CC Morgan Dollar, MS67 ★
Technically and Visually Stunning**

- 5264 1882-CC MS67 ★ NGC.** A lovely example of this Carson City issue, with beautiful mint frost over fully brilliant ice-white and silver-white surfaces. Sharply struck with exquisitely preserved surfaces that only reveal a few minute marks to the viewer, with the aid of a magnifier. Technically and visually superior to all but a handful of coins from the same date and mint. Census: 57 in 67 (4 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254B, PCGS# 7134

**1882-O Silver Dollar, MS67
Just One Certified Finer**

- 5265 1882-O MS67 NGC.** One of the better-produced and more common New Orleans issues in the series, where much of the mintage of 6 million pieces was safely tucked away in bags until the early 1960s, and provided many examples through grades MS64. Any finer and the issue is scarce, with true MS65 examples few and far between. Superb Gem coins are almost never seen, and they are highly prized by both Morgan dollar and type collectors.

The current example is certainly one of the finest extant, with a beautiful, full strike and gleaming silver luster. The coin is without any meaningful marks, and just a couple of tiny abrasions serve as hallmarks for future identification. The bold detail of this coin suggests an early strike from the dies, which will be of interest to variety collectors, since the O mintmark reveals an anomaly within the space of the O, perhaps the ghostly image of the diagonal center of an S, typical of the earliest die state of the VAM-4 overmintmark variety. Just one example of the 1882-O dollar is certified finer, a single MS68 by PCGS. NGC Census: 2 in 67, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254C, PCGS# 7136

1882-O/S Dollar, VAM-5, MS65
An Impressive High-Grade Example

5266 1882-O/S Broken MS65 NGC. VAM-5. A Top 100 Variety. This famous overmintmark variety rates its own listing in the *Guide Book*, and its own chapter in Dave Bowers' *Guide Book of Morgan Silver Dollars*. Bowers states elsewhere that: "The 1882-O/S is very scarce in lower Mint State grades, scarcest in MS64, and very rare in MS65." This Gem example is well-struck and highly lustrous, with light, attractive russet, gold, and olive peripheral toning on both sides. A few wispy marks, well within the context of the grade, keep it from an even finer rating.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
PCGS# 87138

1882-S Dollar, Beautiful MS68 ★

5267 1882-S MS68 ★ NGC. This common date issue has a substantial mintage of 9.2 million pieces, and numerous coins exist in mint condition. At the MS68 level, however, the numbers are obviously much smaller. This example adds the elusive Star designation, granted to only eight coins for their outstanding visual appeal. Fully struck and near-pristine, this awesome Superb Gem is untoned on the reverse, while the obverse shows an arc of lovely rainbow toning near the left border.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254F, PCGS# 7140

1883 Morgan, MS68
Supreme Candidate for Type

5268 1883 MS68 NGC. The silver runup orchestrated by the Hunt Brothers in the 1970s did quite a bit to thin out the ranks of 1883 silver dollars (as well as other common dates), but the issue is still a favorite target of type collectors because of its availability. Those putting together an extremely high-grade set should pay particular attention to this coin because of its untuned, gleaming silver appeal. The surfaces display exceptional frosty brilliance — fully struck for the issue, with only a couple of tiny marks preventing total perfection. No 1883 silver dollar is certified numerically finer by either service. Census: 4 in 68, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254G, PCGS# 7142

1883-CC Morgan Silver Dollar, MS67
Condition Rarity in Deep Mirror Prooflike

- 5269 1883-CC MS67 Deep Mirror Prooflike NGC.** A visually impressive, untoned dollar with pleasing mirrored surfaces and lightly frosted central details. Only a couple of minor, pinprick abrasions reside on the silver surfaces, and they do nothing to distract from the smooth reflectivity of the fields. Liberty's portrait and the full-feathered eagle are virtually unmarked and attractive. Variety specialists will note a bit of die clashing at Liberty's neck, diagnostic of a few VAM varieties for the date. No numerically finer examples have been certified by either service in Deep Mirror Prooflike. Census: 5 in 67 Deep Mirror Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254H, PCGS# 97145

1883-O Dollar, MS67
One of the Finest-Known

- 5270 1883-O MS67 NGC.** Well-struck and remarkably preserved, this highly lustrous Superb Gem will impress the viewer with its clean, problem-free appearance. Few coins from this high-mintage New Orleans issue survive at this lofty grade level, despite an initial production of 8.7 million pieces. Census: 37 in 67 (2 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254J, PCGS# 7146

1883-S Morgan Dollar, MS65
Rare and Attractive, Few Finer

- 5271 1883-S MS65 NGC.** Attractive, Gem-quality 1883-S dollars remain rare despite the Treasury releases in the 1940s through 1960s and an influx from private holdings such as the Redfield hoard in the late 1970s. Relatively few Gems have surfaced in the past 15 years, and the issue remains one of the most highly sought-after condition rarities of the series.

This exceptional example displays brilliant, reflective silver surfaces with light orange-gold toning at the rims. Only a few minor abrasions are seen in the fields, with a tiny mark or two on Liberty's bust truncation. The boldly struck portrait and eagle show no mentionable abrasions. Lustrous and attractive, this is the first Gem 1883-S dollar we've offered since 2010. PCGS and NGC combined have certified just six pieces numerically higher (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254K, PCGS# 7148

**1884 Silver Dollar, MS68
Confirmed Registry-Set Quality**

5272 1884 MS68 NGC. Conditionally rare, with just four examples in MS68 certified by both services combined and none finer. Auction appearances in this lofty grade confirm the rarity, with just three appearances in the last 15 years. Yellow-gold toning sits on the rims of the present example, but the fields and devices display frost-white surfaces with strong mint luster. The coin is remarkably unabraded and pristine. A full strike completes the powerful appeal. Census: 2 in 68, 0 finer (3/14).

*From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254L, PCGS# 7150*

**1884-CC Deep Mirror Prooflike Dollar
High-Contrast Superb Gem**

5273 1884-CC MS67 Deep Mirror Prooflike NGC. In one of the anomalies of the Carson City series, it is nearly as much of a surprise to find a circulated, VF25 example of this issue, as it is to locate an example in Superb Gem, Deep Mirror Prooflike condition. Few 1884-CC dollars were distributed when minted, with about 85% of the mintage going into storage, not to be released until 60 or 70 years later, when an assortment of dealers, collectors, speculators, and hoarders absorbed the various Treasury releases.

Today, only a handful of the issue remains in the brilliant-white, Deep Mirror Prooflike condition of this example. Unabraded, mirrored fields contrast sharply with the frosted, fully struck devices. The issue is unavailable any finer in Deep Mirror Prooflike. Census: 3 in 67 Deep Mirror Prooflike, 0 finer (3/14).

*From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254M, PCGS# 97153*

1884-O Morgan Dollar, MS67
Available High-Grade Example for Type

5274 1884-O MS67 NGC. Wayne Miller regarded this issue as one of the most common of all Morgan dollars in Mint State, along with the 1921. Like the latter issue, the population numbers for the 1884-O decrease dramatically at this Superb Gem level, however.

This example is noteworthy for its superlative luster that illuminates bright, silver-white surfaces. It is also sharply struck and virtually mark-free on both sides. Truly a splendid and beautiful silver dollar from the old Southern mint in New Orleans.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254N, PCGS# 7154

1884-S Morgan Dollar, MS63
High-End for the Grade

5275 1884-S MS63 NGC. This is one of the rare Morgan dollar issues — moreso in relation to its demand (as opposed to absolute rarity), although its scarcity is undeniable. The issue is truly rare when located in attractive, brilliant-white condition with strong mint luster, such as this Select Uncirculated example. Only two mentionable abrasions interrupt smooth, unmarked surfaces, with a small reeding mark on Liberty's jawline and a minimal scrape above the eagle's head. A full strike is bold even on the eagle's breast (a problem spot for this issue), and the coin has a fresh-from-the-Mint, high-end appeal. Census: 46 in 63 (1 in 63+, 1 in 63 ★), 15 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 254P, PCGS# 7156

1885 Morgan Dollar, MS67+
One of the Finest-Graded at NGC

- 5276 1885 MS67+ NGC.** With a high mintage of nearly 17.8 million coins, and already a common date long before the great Treasury releases of the early 1960s, the 1885 Morgan dollar is nevertheless a relatively scarce issue at the MS67 grade level. This well-struck Superb Gem is untoned and carefully preserved, showing nearly flawless surfaces and attractive satiny mint luster.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254R, PCGS# 7158

1885-CC Morgan Dollar, MS67
Few Certified Finer

- 5277 1885-CC MS67 NGC.** Smoothly reflective and highly lustrous, this low-mintage Carson City date had a production of just 228,000 pieces. It is one of the unusual quirks in numismatics that virtually none of the mintage circulated to any extent, and the 1885-CC date is the rarest Morgan in worn condition. Uncirculated examples are common until the highest Mint State levels are achieved, such as this vibrant, silver-white dollar. A tiny bit of blending in the strands above the ear prevent a full strike designation, but the coin is extremely bold everywhere else and pristine save for a few tiny, insignificant marks. For variety enthusiasts, a dash under the second 8 below the date is easily seen. Census: 84 in 67 (5 in 67 ★), 5 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254S, PCGS# 7160

1885-O Morgan, MS67
Profound Details and Appeal

- 5278 1885-O MS67 NGC.** Like many New Orleans issues, the Jekyll-and-Hyde 1885-O issue is either sharp or flat, lustrous or dull. This example is the former, beaming bright silver luster from smooth surfaces that show only the most minor, pinprick abrasions. The frost-white fields and devices display a glimpse of light gold on the rims — none of which invades the silver surfaces. The strike is profoundly strong for this O-Mint date. NGC has certified just ten examples numerically finer, but likely none with more eye appeal (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254T, PCGS# 7162

1885-S Morgan Dollar, MS66 ★
Finest-Graded Example at NGC

- 5279 1885-S MS66 ★ NGC.** A fully struck Morgan dollar with intensely frosty surfaces that are fully brilliant. Surface marks are virtually nonexistent. This is the finest-graded 1885-S dollar at NGC, where 13 others are graded at MS66, but without the ★, and none have received a higher numerical rating (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254U, PCGS# 7164

1886 Silver Dollar, MS68
None Certified Finer

- 5280 1886 MS68 NGC.** Immaculate, bright-silver surfaces show off a powerful, full strike on this Registry Set star. Not a bit of toning exists on the silk-smooth fields and devices. Because extended die use was the rule for this high-mintage issue (almost 20 million struck), this example must have been an early strike and exceedingly well cared for. The luster is fantastic. Census: 25 in 68 (3 in 68+, 2 in 68 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254V, PCGS# 7166

1886-O Morgan Dollar, MS64
Virtually Unavailable Any Finer
Exceptional Eye Appeal

5281 1886-O MS64 NGC. For all practical purposes, a near-Gem grade is the best that can be hoped for when it comes to this conditionally rare dollar. Despite more than 10 million pieces produced, most either circulated or were melted by the millions under the Pittman Act. No great loss — the New Orleans Mint production was shoddy with widely spaced dies delivering poor strikes, and the production was roughly handled. Excessively bagmarked coins were the frequent result.

To find the date with eye appeal and a bold strike is exceptional. This example displays Choice brilliant, frosty surfaces with excellent silver luster. The strike is as close to full as possible for the issue, with minor weakness above the ear but strong definition on the eagle's breast and legs. Only a handful of minor abrasions visit the surfaces. Just three specimens are graded numerically finer, all by PCGS (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254W, PCGS# 7168

1886-S Morgan, MS67
Low-Mintage Issue

5282 1886-S MS67 NGC. Extremely close to Prooflike, this example displays exquisite, reflective fields on both sides of the coin. It is a carefully preserved representative of the low-mintage San Francisco date, with just 750,000 business strikes produced. Although the Redfield hoard contained many thousands of 1886-S dollars, they were not of this quality or even nearly so.

There are no abrasions or marks of consequence on the coin, which features a sharp strike — although not quite full at the centers. Not a hint of toning visits the surfaces of this silver-white Superb Gem, and the eye appeal is outstanding. Of course, the coin is a prominent candidate for any Registry Set, confirmed by PCGS and NGC, which have combined to certify just six coins in MS67 and none finer (3/14). It is doubtful any of the others can match the quality of this coin.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254X, PCGS# 7170

**1887/6 Overdate Morgan Dollar, MS66
VAM-2, Condition Rarity
None Certified Finer**

- 5283 1887/6 MS66 NGC. VAM-2.** A Top 100 Variety. The true rarity of this sought-after variety is evident from its population in MS66, which consists of a mere 18 coins from both services combined and no pieces graded numerically higher by either PCGS or NGC. This Premium Gem example undoubtedly ranks high on the list of finest known, since the fields are very nearly prooflike and the overdate is as bold as it is ever seen on this variety. Despite the highly reflective fields, no more than a couple of unimportant abrasions are seen anywhere on the coin. The frosted portrait of Liberty is sharp clean; the eagle is bold. A condition rarity and an important coin for the variety specialist. Census: 6 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254Z, PCGS# 7174

**1887 Dollar, MS67 ★ Prooflike
Full Strike, Nicely Contrasted**

- 5284 1887 MS67 ★ Prooflike NGC.** A high-mintage date with more than 20 million business strikes produced and nearly 135,000 grading events at the two major services, it seems unlikely so few Prooflike or Deep Mirror Prooflike examples exist in Superb Gem condition. But in fact, only a dozen are seen on the population reports in MS67 — and none are finer. The aesthetics of this Superb Gem coin are equally impressive. Silver-white and untuned, the mirrored fields frame fully struck, frosted devices for nice contrast. The reflective fields are amazingly free of marks. NGC has awarded just one MS67 Prooflike coin with the Star designation (this coin). Census: 8 in 67 (1 in 67 ★) Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 254Y, PCGS# 7173

**1887/6-O Silver Dollar, MS64
Conditionally Rare VAM-3, Overdated Variety**

- 5285 1887/6-O MS64 NGC. VAM-3, R.7.** A Top 100 Variety. Brilliant, frost-white surfaces are boldly struck — especially at the date, where evidence of the underdigit 6 is sharp, and at least as bold as the VAM-3 plate coin. This variety is seldom seen any finer than near-Gem condition, and it is rarer still with the eye appeal of this attractive, minimally abraded example. Smooth, untuned surfaces display cartwheel luster and an especially Mint-fresh look. Census: 40 in 64 (2 in 64+), 11 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2553, PCGS# 7178

**1887-O Morgan Dollar, MS65 ★
Rare Deep Mirror Prooflike**

- 5286 1887-O MS65 ★ Deep Mirror Prooflike NGC.** All of the important attributes that are the goal of Morgan dollar collectors are normally missing on this New Orleans issue. Gem examples are rare and almost unheard of in Prooflike or Deep Mirror Prooflike conditions. This glittering dollar from the Moser Collection is exceptional in all of the categories seldom available for the issue. Deep Mirror Prooflike fields are minimally marked and boldly reflective. The strike — so often poor for the date — is only a touch soft at Liberty's ear, and otherwise sharp. Eye appeal is unmatched as indicated by the NGC Star designation, the only Gem example seen by NGC to earn the distinction. Few 1887-O dollars can compete with this lustrous, silver-mirrored example. Brilliant, frosted devices contrast with liquid fields with a bit of translucent gold at the rims. Census: 3 in 65 (1 in 65 ★) Deep Mirror Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2552, PCGS# 97177

1887-S Morgan Dollar, MS67
Tied for Finest Known
Ex: Eliasberg

5287 1887-S MS67 NGC. VAM-2. Ex: Eliasberg. A Top 100 Variety. The boldness of the doubled mintmark makes this variety numismatically interesting and popular with variety collectors, but the overall Superb Gem appearance of this untuned, brilliant-white dollar will be of the greatest interest to any advanced collector of Morgan dollars. Dazzling, cartwheel luster and incredible, silver surfaces highlight the eye appeal of this Registry Set caliber coin. The fact that this coin possesses the distinguished Eliasberg provenance is equally important.

The 1887-S is often found with central weakness, but this example is boldly struck with only minor blending of the hair strands above Liberty's ear. The eagle is sharp from every aspect. The fields display a combination of brilliance and reflectiveness that provide a double dose of lustrous impact. Only delicate abrasions are visible with a glass. PCGS and NGC have each certified one coin in MS67, with none finer (3/14).

Ex: Eliasberg II (Bowers and Merena, 4/1997), lot 2275.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2554, PCGS# 7180

1888-O Dollar, The Eliasberg Coin
The Sole MS67 Example and None Finer

5289 1888-O MS67 NGC. Ex: Eliasberg. Somewhat of an anomaly among the brilliant-white dollars that make up most of the Moser Collection, this wonderfully toned Superb Gem dollar is no doubt in the Collection not only for its inherent beauty, quality, and appeal, but also for its provenance and to pay homage to the great dollar collections of the past. It came out of the Bowers and Merena 1997 Sale of the Louis E. Eliasberg, Sr. Collection, where it was described as prooflike with "delicate toning at the center changes to deeper gold and blue at the borders. A truly superb coin." Now in an NGC holder, it is the sole MS67 example of the issue by either PCGS or NGC, with none certified finer.

The coin passed to the Eliasberg collection from J.M. Clapp, John H. Clapp, and the Clapp estate in 1942. Previously, it was in the John G. Mills, Esq. Sale cataloged by S.H. & H. Chapman, 1904, where it realized \$1.75.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2556, PCGS# 7184

1888 Morgan Silver Dollar, High-Quality Superb Gem

5288 1888 MS67 NGC. Throughout the 1880s, the Bland-Allison Act of 1878 guaranteed large production of silver dollars and this Philadelphia date kept pace with over 19 million pieces minted. Such large mintages resulted in overuse of some die pairs and early strikes when new dies were implemented, resulting in wide variations of quality depending on when the coin was struck. This brilliant, frosted Superb Gem was obviously an early strike from fresh dies. The strike is full and deep. Smooth, silver-white surfaces show no die cracks, clashing, or other signs of die deterioration. It is important to note just one coin is graded numerically finer by either service (by NGC). Census: 77 in 67 (3 in 67 ★), 1 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2555, PCGS# 7182

**1888-S Morgan Dollar, MS66
Scarce San Francisco Issue**

5290 1888-S MS66 NGC. The strike on this frosty-white, high-end Premium Gem is notably strong for the issue, which is often seen weak at the centers. Only a bit of blending above the ear keeps the coin from displaying a full strike. Smooth, lustrous surfaces are lightly marked by a few shallow abrasions, but they are widely scattered and inconsequential for the grade. Just four examples are certified in a numerically higher grade by PCGS and NGC combined. Census: 12 in 66 (1 in 66 ★), 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 2557, PCGS# 7186

**1889 Silver Dollar, MS66
Smooth and Attractive, Rare Any Finer**

5291 1889 MS66 NGC. Millions of this issue were likely melted under terms of the Pittman Act, but it hardly made a dent in the record mintage of almost 22 million pieces. With the Mint operating full bore to produce as many dollars as possible, relatively few Gem-or-finer examples survive. This Premium Gem displays an understated elegance, perhaps from the vignette of golden toning at the margins that frames smooth, silver centers. A bold strike prevails on the devices. Remarkably, just 5 examples are graded numerically higher by the two services combined (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 2558, PCGS# 7188

**1889-CC Morgan Dollar, MS63
Carson City Key Issue, High Quality**

5292 1889-CC MS63 NGC. Far and away the rarest of the Carson City silver dollars, just 350,000 pieces were minted. This rare date is seldom seen with the exceptional eye appeal demonstrated by this brilliant, lustrous-white example. The coin is seemingly conservatively graded, with only a few minor abrasions seen on the smoothly glowing surfaces. Liberty's cheek is clean and smooth, where just a slight luster graze marks the truncation. The strike is full on Liberty's hair strands and cap, with the eagle's breast and talons fully brought up. Satiny luster is flows freely across the surfaces of this Select Uncirculated example, certainly at the high end of its assigned grade. Census: 70 in 63 (1 in 63 ★), 49 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 2559, PCGS# 7190

1889-O Morgan Dollar, MS66
Supremely Challenging This Nice

- 5293 1889-O MS66 NGC.** Often overlooked because many low-grade, Mint State examples lack both technical quality and eye appeal, collectors soon realize that only a few hundred coins exist in the Gem category, and fewer than two dozen examples are available any finer. No coins are certified higher than MS66 by either service. This exceptional example is bold and beautiful. The strike is strong by New Orleans standards; in fact, it is virtually full. Smooth, silver white surfaces glow with frosty mint luster and not a bit of toning. There are no abrasions other than two or three inconsequential pinpricks. Census: 7 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255A, PCGS# 7192

1889-S Silver Dollar, MS66
Stunning, White-Silver Appeal

- 5294 1889-S MS66 NGC.** Flashy silver luster is the calling card of this high-end Premium Gem Morgan. A brilliant and reflective coin, only tiny marks pay an infrequent visit to its surfaces, and none are bothersome. David Bowers tells the story in his *Encyclopedia* of how this issue was a great rarity at the turn of the century. It was once considered the rarest of all Morgan dollars, but Treasury and hoard releases changed all that. Pristine examples such as this coin remain rare. Just one coin is certified numerically higher by PCGS and NGC combined (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255B, PCGS# 7194

1890 Morgan Dollar, MS66
Conditionally Rare

- 5295 1890 MS66 NGC.** A beautiful Premium Gem dollar from the Moser Collection with silver-white surfaces that are intensely lustrous and display relatively bold strike definition for this frequently softly struck date. From this poorly-produced issue, few examples have been rated at the Gem grade level or finer, and Superb Gems are nonexistent at the two major services. Census: 5 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255C, PCGS# 7196

1890-CC Dollar, MS65
Attractive and Conditionally Scarce

- 5296 1890-CC MS65 NGC.** Despite a high mintage of more than 2.3 million coins, easily the largest among Carson City Morgan dollars, this issue is scarce at the Gem level of preservation and virtually unobtainable any finer. This is an attractive, sharply struck piece with few marks and substantial mint frost. Hints of pale gold patina complement the border regions of this mostly-white coin. Census: 90 in 65, 2 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255D, PCGS# 7198

1890-O Silver Dollar, MS66 Prooflike
None Certified Finer

- 5297 1890-O MS66 Prooflike NGC.** The obverse of this prooflike Premium Gem is impeccable, with no marks or abrasions of any kind and a smooth, clean cheek on Liberty. The strike is better than normally seen for this New Orleans issue, with only token softness over the ear. The reverse displays mirrored surfaces, with the frosted eagle set off against the reflective fields. A small gathering of marks in and around STATES and one or two minor abrasions at the lower reverse are the only mentionable marks. Extremely attractive, this delightfully untuned, brilliant-white dollar is one of three certified this fine by the two services combined, and the only one by NGC. None are finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255E, PCGS# 7201

**1890-S Dollar, Gem Deep Mirror Prooflike
None Certified Finer by PCGS or NGC**

- 5298 1890-S MS65 Deep Mirror Prooflike NGC.** While several Deep Mirror Prooflike examples of this San Francisco date exist in lower grades, most are heavily bagmarked and lack appeal. But on this exceptional example, only a few scattered, pinprick abrasions show over the deeply reflective fields. A fully struck portrait of Liberty and the full-feathered eagle are mark-free and highly attractive. This Gem example is one of just 14 grading events in MS65 Deep Mirror Prooflike, with none certified finer by either service. Census: 6 in 65 Deep Mirror Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255F, PCGS# 97203

**1891 Morgan Dollar, MS66
Condition Census Quality
Tied for Finest-Graded at NGC**

- 5299 1891 MS66 NGC.** Despite its high mintage of nearly 8.7 million coins, this issue is rare at the MS66 grade tier and just one example is graded finer — an MS67 — by PCGS. Snow-white brilliant surfaces highlighted by intense mint frost are outstanding features of this gorgeous Premium Gem. This sharply detailed piece shows only a small number of trivial nicks on each side. Census: 2 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255G, PCGS# 7204

**1891-CC Silver Dollar, MS66+
Among the Finest Known**

- 5300 1891-CC MS66+ NGC.** Common as a date, the 1891 Carson City issue is a favorite for type collectors because it is usually well-struck and attractive. Easily found through MS65 grades, the issue becomes scarce in Premium Gem condition and is virtually unknown any finer. This example is at the upper reaches of the Premium Gem category, as confirmed by the NGC Plus designation.
Deeply frosty and beautiful, this silver-white dollar is wholly untuned and fully struck. Minuscule luster grazes and tiny abrasions are seen in two or three locations, but none are significant or distract from the compelling, lustrous appeal of this coin. Just two examples are graded numerically higher, one each by PCGS and NGC. Census: 9 in 66 (1 in 66+), 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255H, PCGS# 7206
-

1891-O Morgan Dollar, MS66
Great O-Mint Rarity, Registry Set Leader

5301 1891-O MS66 NGC. Invariably found with a weak strike and sketchy eye appeal, the 1891-O dollar is rare in MS65 and all but unknown any finer. It is unpriced in the 2014 *Guide Book, Professional Edition* in MS66 condition. There are no listed auction appearances in this grade going back 12 years for a PCGS or NGC-graded coin.

This is an unquestioned Premium Gem example, starting with the strike, which is extremely bold for an 1891-O dollar. Just a bit of weakness remains over the ear, with nice detail on the eagle's breast. Eye appeal is outstanding, with brilliant-silver luster over the untoned, smooth surfaces and virtually no abrasions anywhere on the coin. PCGS has not certified an MS66 example, and NGC reports only two coins certified as MS66. None are finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255J, PCGS# 7208

1891-S Dollar, MS66
Remarkably Preserved

5302 1891-S MS66 NGC. This is a visually appealing Morgan dollar, well-struck and highly lustrous, with attractive golden-brown and sea-green peripheral toning that complements the brilliant fields and centers. Remarkably preserved, the surfaces are free of any distracting signs of coin-to-coin contact. Census: 19 in 66, 2 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255K, PCGS# 7210

1892 Silver Dollar, Gem Prooflike
None Certified Finer by Either Service

5303 1892 MS65 Prooflike NGC. Those who search auction appearances with an eye for cherrypicking high-end, attractive silver dollars should have one hand ready to pluck, and the other hand on the wallet when this outstanding candidate crosses the block. Brilliant, mirrored fields embrace frosted devices for nice contrast. Liberty's cheek is squeaky clean. Only two or three tiny abrasions are seen (far fewer than allowed for the grade) and just a touch of softness over Liberty's ear limits the grade. Census: 8 in 65 Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255L, PCGS# 7213

**1892-CC Morgan Dollar, MS66
Nice Appeal, Few Certified Finer**

5304 1892-CC MS66 NGC. When the great Treasury releases of the early 1960s were halted in 1964, just a single 1892-CC dollar remained for the General Services Administration sales that commenced in the following decade. With no more fresh coins coming on the market, the rarity of this issue in high grades was soon apparent. Ever since, this Carson City date has been in great demand, especially for Gem examples and the few coins that are certified finer than Gem.

This reflective, nicely contrasted Premium Gem dollar is brilliant-white with frosted motifs. A bold strike emphasizes Liberty's clean cheek, while the unabraded fields radiate cartwheel luster. Like many of the coins in the Moser Collection, it is an untuned, snowy beauty with minimal marks and tremendous eye appeal. PCGS and NGC have certified just three numerically finer examples combined. Census: 15 in 66, 1 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255M, PCGS# 7214

**1892-O Morgan Dollar, MS65+
An Exceptional High-End Example**

5305 1892-O MS65+ NGC. A great example with well-struck design motifs and vibrant mint frost over both sides. The clean surfaces are brilliant. An exceptionally attractive high-end example. NGC and PCGS have graded just five coins each finer than this lovely Gem. Census: 77 in 65 (1 in 65+), 5 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255N, PCGS# 7216

The New Orleans Mint.

1892-S Silver Dollar
Select Uncirculated Example
Notable Condition Rarity, Seldom Available

5306 1892-S MS63 NGC. A check of auction records going back a dozen years reveals remarkably few sales of this key date in Select Uncirculated or finer conditions. Oddly, it is more unusual to see a coin offered at the MS63 level (such as the present coin) than it is at higher Mint State 64 or 65 grades. David Bowers noted the same anomaly when writing his 1993 *Encyclopedia*, with higher-grade coins appearing more frequently seen than their mid-grade, Uncirculated counterparts. He suggested only 25 to 50 coins exist in Select Uncirculated condition, an estimate that seems accurate (or even a bit overstated) based on today's population reports. Given the large price differences between grades, it is a trend worth noting when assembling a Select-or-better set.

Apparently, almost all 1892-S dollars entered circulation shortly after production, and today the mintage is most often represented by coins in circulated grades. Almost no Uncirculated examples emerged from the final Treasury releases or GSA sales, and sliders were widely sold as Uncirculated coins before third-party grading evolved to help put an end to the practice. For many years, the 1892-S had a "bad reputation" of being overgraded and overvalued. The irony is those price levels seem unbelievably generous in today's market.

This untoned, silver-white example is wonderfully unabraded for the grade, with exceptional smoothness to the fields and Liberty's cheek. Soft, satiny luster is abundant over the semiprooflike surfaces. A touch of weakness over the ear does not detract from the otherwise-bold devices. Census: 7 in 63, 12 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255P, PCGS# 7218

1893 Morgan Dollar, MS65
Conditionally Challenging

5307 1893 MS65 NGC. All of the Morgan dollar issues from 1893 are low-mintage, and the Philadelphia Mint issue is no exception. Just 378,000 business strikes were produced, and this date is very challenging at MS65. Premium Gems are rare with just four pieces seen at each of the major services. This brilliant Gem displays scintillating mint frost and carefully preserved surfaces. Census: 81 in 65 (1 in 65+), 4 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255R, PCGS# 7220

1893-CC Silver Dollar
Rare, Final-Year Gem Example
Minimal Marks for the Issue

5308 1893-CC MS65 NGC. VAM-2, R.3. The late die state of the VAM-2 variety is notable not only for the spectacular “cap vee” clashmarks between the wreath bough and eagle’s right (facing) wing, but also for a prominent die crack through AMERICA — a crack that has special significance for Carson City aficionados.

This variety is believed to represent the very last coins struck at the Carson City Mint prior to suspension of coinage operations on June 1, 1893. The final coins minted are believed to be twelve branch-mint proof silver dollars, said to be struck from strongly repolished dies of this marriage, with just the tip of the “vee” clashes visible and the iconic (and ironic) bold crack through AMERICA still clearly evident.

Actually, the closure of the Carson City Mint is memorialized by the entire production of 677,000 total silver dollars dated 1893. Few were saved as mementos of the fabled Mint at the time. Most were unceremoniously distributed into circulation and the rest were placed in storage. Judging by the number of circulated survivors in worn condition, the larger portion of the mintage was distributed at the time of production. Those that were stored received rough handling and were heavily bagmarked when gradually released through the 1950s.

This brilliant-white Gem somehow escaped most of the marks seen on virtually all survivors of this date. Several inconsequential pinpricks are present in the left obverse field, but very few additional abrasions exist on the coin. A full strike accompanies the unmarked, frosted devices. This untuned dollar displays strong cartwheel luster on both sides, with excellent eye appeal.

The 1893-CC date is rare in the absolute sense as well as by condition, with just 18 pieces certified in MS65 by PCGS and NGC combined, and only nine coins certified numerically finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255S, PCGS# 7222

1893-O Dollar, Rare MS64
Just 300,000 Minted

5309 1893-O MS64 NGC. Although collectors started to embrace the significance of branch-mint coinage with the 1893 publication of Augustus G. Heaton's book, *Mint Marks*, apparently few readers grasped the significance of this low-mintage, New Orleans issue. Virtually no Choice examples were saved at the time of production, and precious few emerged from storage over the years.

Brilliant and semiprooflike, this near-Gem Morgan is the antithesis of most 1893-O dollars. Examples are almost always heavily bagmarked, yet the surfaces of this coin display nearly unmarked fields and devices. A bold strike — although soft at Liberty's ear — is sharp everywhere else, and the coin exudes attractive, cartwheel luster. Few examples of this rare date exist any finer. Census: 32 in 64 (1 in 64+), 3 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 255T, PCGS# 7224

1893-S Morgan Dollar, Satiny MS65
Capstone of the Moser Collection
Only One Graded Finer at NGC

5310 1893-S MS65 NGC. The M L Moser Collection has made news for many years as the #1 NGC Registry Set of circulation strike Morgan dollars, having won awards for the past seven years according to the NGC website. The collection is replete with “top-population” or “top-pop” coins by the dozens, and Heritage is honored and privileged to offer this marvelous assemblage to the collecting public. The present Gem NGC-certified 1893-S Morgan dollar is, of course, among the capstones of the series, a coin that needs no further introduction. It is one of only two examples of the issue certified MS65 at NGC, and there is a single MS66 finer at that service (3/14).

The 1893-S Morgan dollar is a numismatic icon today, but its beginnings were humble. The issue owes its lofty status to two watershed events that occurred in 1893 and profoundly impacted the fortunes of silver dollars in general and the 1893-S in particular: The financial Panic of 1893 caused a drastic reduction in the silver dollar mintage totals, and the publication of Augustus Heaton’s work on mintmarks spurred collector interest in a previously ignored area of branch mint numismatics. The effects of these events were not fully realized for many years, but their consequences were decisive in molding the history of the 1893-S.

The 1893-S boasts a series-low mintage of 100,000 pieces as a direct result of the mandated reduction in silver coinage brought on by the financial panic. The small supply was undoubtedly reduced in later years by the extensive melting carried out under the provisions of the Pittman Act. The vast majority of coins seen today are in VF grades, indicating the issue must have circulated in some quantities for an extended period of time, but exactly *when* the coins circulated is something of a mystery. Q. David Bowers tells of the difficulty numismatist E.S. Thresher experienced trying to locate an example for his collection. Writing in 1925, Thresher complained a six-year search had failed to produce a single specimen of the desired date. Auction appearances of the 1893-S were rare in the early 20th century. An example in “good” condition was offered as part of lot 118 of the Lepere, Coleman, Zimmerman and Wilcox Collections (S.H. and H. Chapman, 2/1904). A superior piece, described as “Uncirculated, bright” was featured as lot 55 of the Woodin Collection (Elder, 3/1911). Aside from a few terse descriptions such as these, the auction record is bare during this early era. The evidence indicates the 1893-S was seldom encountered during the time period and did not circulate widely. Possibly the same economic factors that prompted the low mintage of silver dollars in 1893 resulted in the issue’s limited release. The coins were simply unneeded in the regional economy of the time and were only gradually released into circulation, most remaining in bank vaults until after 1925. Perhaps rising demand in later years, due to factors such as the demand from the Nevada gaming industry, resulted in the gradual release of the hoarded dollars. Collector interest in Morgan dollars was low before the 1960s Treasury releases made the denomination popular. The long-stored mintage of 1893-S silver dollars probably circulated in the Rocky Mountain region without attracting numismatic interest during the second quarter of the 20th century, so that most survivors are moderately worn today. The supply was apparently exhausted by the 1960s, as no significant quantities surfaced in the Treasury releases.

The effects of Heaton’s treatise on mintmarks were only gradually felt among Morgan dollar collectors. A few astute collectors were aware of the importance and rarity of the 1893-S at an early date and did not hesitate to pay significant premiums when an example was offered. One unknown collector purchased the “Uncirculated gem” specimen in lot 288 of the World’s Greatest Collection (Numismatic Gallery, 1/1945), for \$75 on a \$25 estimate. Heaton’s work eventually spread the popularity of collecting branch mint coins to all denominations, creating great demand for scarcer issues like the 1893-S. Unfortunately, by the time the enthusiasm became widespread, few examples of the 1893-S remained in Mint State. Experts estimate perhaps 100-200 Mint State examples survive today, mostly in lower Uncirculated ranges. Today the long-neglected 1893-S is recognized as the key date of the series and holds its place as the most valuable Morgan dollar.

Only one die pair is known for the 1893-S silver dollars, with specific obverse identification features that make authentication simple. Two obverse die characteristics distinguish the genuine 1893-S dollars: A raised diagonal die line begins at the left top of the upright of T in LIBERTY just below the crossbar and angles up to the right across the crossbar, meeting the extreme top of that letter nearly above the right upright of the same letter. A small rust mark or die lump appears within the left foot of the R, nearly resembling tiny “rabbit ears.” Like the diagonal die line, this die lump or rust mark can be seen in nearly any grade encountered, as long as the R remains visible.

The current population data show 28 submissions in Mint State at NGC, including the present coin and one other in MS65 and one in MS66. PCGS shows 36 grading events in Mint State, including five in MS65 and one in MS67.

The present Gem ranks among seven such submissions at NGC and PCGS combined, with the one MS66 at NGC and one MS67 at PCGS finer. Although a specific Condition Census of these coins has never been attempted, so far as we know, it seems reasonable to suggest that the true population includes four or five MS65 coins. Both sides display fully brilliant silver-white luster and a faint champagne tint with satiny fields and frosty devices. The hair over Liberty’s ear is a bit indistinct as usual, and the breast feathers are slightly merged, but the remaining detail on both sides is sharp. A few tiny marks are present on Liberty’s cheek, but the surfaces otherwise are excellently preserved.

Ex: Sanderson Family Collection / FUN Signature (Heritage, 1/2009), lot 5025, which realized \$299,000; Central States Signature (Heritage, 4/2013), lot 4378.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255U, PCGS# 7226

1894 Morgan Dollar, MS64
Brilliant, Frost-White Example

5311 1894 MS64 NGC. Clearly, the dollars from the Moser Collection were selected with an unwavering eye for quality. This gleaming, 1894 dollar is a perfect example, although the numeric grade is lower than that of the majority of coins in this outstanding collection. Just 110,972 pieces were minted. The grading services seldom identify a coin any higher than near-Gem status, and prices quickly quadruple when found any finer than MS64.

A few minor abrasions and luster grazes account for the grade of the present example, but the eye appeal is extraordinary for this lustrous, frost-white coin. A bold strike is only slightly weak at Liberty's ear. This is one of the most challenging dates to find with so much positive appeal. A mere 30 examples are certified numerically higher by PCGS and NGC combined (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255V, PCGS# 7228

1894-O Morgan Dollar, Elusive MS65
Tied for Finest Certified

5312 1894-O MS65 NGC. The Moser Collection is celebrated as the #1 NGC Registry Set of Morgan dollars, a remarkable assemblage of some of the finest survivors of this incredibly popular series. As befits a top-graded Registry Set, more than half of the 105-coin Moser Collection comprises issues for which there are no numerically finer examples certified at NGC. And more than a dozen series issues in the Moser Collection are pieces that are "pop 1/0" coins, the single finest certified at NGC.

The present 1894-O Morgan dollar certified MS65 NGC is among those tied-for-finest issues, one of seven such *submissions* — possibly not all separate coins — graded at NGC with none finer. PCGS shows 11 submissions in MS65, and again there are none numerically finer.

The 1894-O Morgan dollar is not a particularly low-mintage issue for New Orleans, having a production exceeding 1.7 million pieces. Most examples surviving today, however, are either well-circulated, heavily bagmarked — or sometimes both. The typical survivor is around AU, with considerable signs of contact.

Mint State examples of the 1894-O may be had for a price, however, and some of them show attractive luster. The Moser Collection coin is untoned and displays radiant cartwheel luster over each side. The cheek and neck of Liberty are clean overall, showing only minor contact under a loupe. The strike over the ear is soft as expected, but the satiny luster and excellent preservation give this piece a high eye appeal quotient that few survivors of this elusive issue possess. Census: 7 in 65, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255W, PCGS# 7230

1894-S Silver Dollar
High-End Premium Gem

5313 1894-S MS66+ NGC. Despite a mintage of over 1.2 million pieces, this popular San Francisco date is challenging to find any finer. PCGS and NGC report a combined total of just three higher-graded examples (3/14). However, it is doubtful any other representative of the date could exceed the eye appeal of this lustrous, frost-white coin. The fields appear nearly unmarked and supremely lustrous, with smooth, glowing surfaces and frosted devices. A tiny nick on Liberty's chin and a hidden scrape in the hair above the ear are the only visible marks on the motifs. A bold strike completes the appeal of this high-end Premium Gem, which is awarded NGC's Plus designation for proximity to the next highest grade. *From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255X, PCGS# 7232*

1895-O Morgan Dollar Near-Gem Rarity

5314 1895-O MS64 NGC. In 1895, the Treasury in Washington D.C. held more than 103 million silver dollars in storage. The Philadelphia Mint stored over 50 million dollars, the San Francisco Mint 33 million, plus the New Orleans Mint had another 9 million silver dollars tucked away. Even Carson City, although closed for coinage operations, had more than 5 million silver dollars on hand. Lesser, yet substantial amounts of half dollars were set aside, too, at the various Mints.

The replacement of the Bland-Allison Act with the Sherman Silver Purchase Act helped put an end to free-wheeling production of silver dollars, although 200 million pieces in storage had a lot to do with the lower production, too. It's no wonder that just 450,000 silver dollars were produced by the New Orleans Mint in 1895. Yet even this small production had little attention to quality (since most of the dollars were destined for interminable storage) and the coins were struck with little regard to correct die spacing or attention to die wear.

As a result, the 1895-O dollar has a well-deserved reputation for poor strikes and lackluster surfaces. Luckily, the occasional rare dollar exists that defies the norm, and this example is such a coin. Perhaps a slightly thicker planchet helped alleviate the die spacing problem, or possibly a new set of dies was used for the strike (although just five die pairs were prepared for the entire production, and it is not certain all pairs were used).

This near-Gem example displays attractive, satiny luster and a bold strike that, while not full, is sharply detailed everywhere, with only slight weakness above the ear. Untoned and silver-white surfaces show only two or three insignificant, tiny abrasions, but to the unaided eye the coin appears mark-free. The issue, and this coin in particular, are incredible rarities in the Morgan dollar series. Census: 13 in 64, 3 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 255Y, PCGS# 7236

1895-S Silver Dollar
Splendid, Nearly Unmarked Premium Gem

5315 1895-S MS66 NGC. Morgan dollar date collectors have three choices when faced with the filling the 1895 spot in their collection. The prospect of obtaining an 1895-P proof coin is daunting, as is the 1895-O issue in Gem or finer grades. That leaves the 1895-S, which is a rarity in its own right in Gem or higher grades but not quite as prohibitive as the other two options. Those who collect by date and mintmark will have to “bite the bullet” all three times.

This attractive, Premium Gem San Francisco example can fulfill the high-end wishes of any advanced collector. Untoned and silver-white, a trace of prooflike surface appears at the margins of the obverse, which is virtually unabraded aside from one or two minuscule marks. Liberty’s cheek is smooth and lightly frosted. The fields are lustrous and amazingly clean for this often-bagmarked issue. Both sides of the coin display a full strike, with the reverse frost-white and supremely appealing. No more than a handful of 1895-S dollars can possibly equal this coin for eye appeal and overall quality. PCGS and NGC combined have certified just six examples in MS66 (plus three coins in MS66 or finer Deep Mirror Prooflike), and we are aware of at least one duplication in those populations (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 255Z, PCGS# 7238

1896 Morgan Dollar, MS67 ★
One of the Finest-Known Examples

5316 1896 MS67 ★ NGC. Morgan dollar specialists are well aware of the common date status of the 1896 issue, in grade levels up to and including MS65. At MS66, the numbers drop considerably, and at MS67 this issue is scarce. This well-struck example is brilliant and highly lustrous, with a dazzling cartwheel sheen appearing on both sides. A marvelously preserved coin and obviously one of the finest-known from this high mintage of nearly 10 million pieces. Census: 69 in 67 (1 in 67+, 7 in 67 ★, 1 in 67+★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 2562, PCGS# 7240

1896-O Dollar, MS63
An Attractive Example of the Issue

5317 1896-O MS63 NGC. A bit softly struck on the obverse but generally bold and crisply detailed on the reverse, this Select Mint State example displays smooth, satiny luster and mostly untuned surfaces that reveal subtle hints of sky-blue and almond-gold toning. Minor surface marks keep it from a higher grade. NGC has only graded 13 coins from this poorly-produced New Orleans issue finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 2563, PCGS# 7242

1896-S Morgan Dollar, MS66
Extreme Condition Rarity

5318 1896-S MS66 NGC. VAM-5. Although not a common issue in circulated grades, the 1896-S dollar becomes rare in Gem Mint State condition and is extremely rare in Premium Gem condition or finer. Lesser Mint State grades are populated by several coins recovered from the estate of LaVere Redfield, the eccentric Reno, NV investor, but MS63 is the upper limit of those coins.

A generous mintage of 5,000,000 pieces was reduced greatly by the Pittman Act meltings — perhaps as many as 60% of the 1896 San Francisco mintage went into the melting pots, with no regard for numismatic value because most Morgan dollars were seldom worth more than their intrinsic silver value at the time. Many other pieces of the issue circulated heavily in the West and few were preserved.

This coin, however, must have had special care over the years. The surfaces are essentially abrasion-free and pristine. Bright and frosty luster is pervasive over the untuned, silver fields and devices, with the merest hint of golden patina at the rims. The technical quality of this Premium Gem is impressive, with a bold strike and exceptional eye appeal that are seldom seen for this challenging issue.

Variety collectors will note this is the S/S repunched mintmark, the “Hot 50” VAM-5 variety, with clear evidence of the undermark and an unfinished area of the die within the bow. However, most advanced collectors and Registry Set enthusiasts will simply be attracted to the coin’s undeniable eye appeal and outstanding technical merits. Census: 4 in 66, 1 finer (3/14).

Ex: Orlando FUN Signature (Heritage, 1/2008), lot 2998, where it realized \$69,000.00.

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2564, PCGS# 7244

1897 Morgan Dollar, MS67
Outstanding, Conditionally Rare

5319 1897 MS67 NGC. The full strike definition and outstanding surface preservation exhibited by this Superb Gem example are complemented by vibrant mint frost over the untoned surfaces. Morgan dollars rarely display such superior quality, because they were typically stored in bags that held 1,000 coins, resulting in frequent abrasions caused by coin-to-coin contact. Census: 10 in 67, 0 finer (3/14).

From the M L Moser Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2565, PCGS# 7246

The San Francisco Mint.

1897-O Dollar, Rare and Attractive
Lustrous, Full-Strike Gem

5320 1897-O MS65 NGC. Attractive, fully struck examples of this issue are seen so infrequently that, when found, they are immediately recognized to be among the rarest of all Morgan dollars and are priced accordingly. Fewer than two dozen coins are in Gem or finer condition and of these, perhaps only a small handful combine the elements of strike, surface, and eye appeal to the extent of this outstanding coin.

This New Orleans dollar is entirely unexpected and exceptional for the issue. While most are weakly struck, this Gem is well-produced down to the tiniest details. When others are dull or average-looking, this radiant coin is amazingly lustrous and appealing. Where some are bagmarked or abraded, this coin is entirely smooth and wholesome. To be accurate, a few tiny abrasions and luster grazes touch Liberty's chin area, but they are hardly visible when viewed in-hand. Pleasing clear, amber-gold toning frames vibrant silver centers. Certainly this is a coin for Registry Set consideration or for any advanced Morgan dollar collection. Census: 6 in 65 (1 in 65 ★), 2 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set. NGC ID# 2566, PCGS# 7248

1897-S Morgan Dollar, MS67
A Beautiful, Highly Lustrous Example

5321 1897-S MS67 NGC. An outstanding example with strong cartwheel luster and fully brilliant surfaces that are beautifully preserved. It seems unlikely that this Superb Gem ever spent any time stored in a mint bag, and was probably spared from that indignity by a serious numismatist; perhaps even one who worked at the mint facility in San Francisco.

Although a common issue in lower grades, the 1897-S is rare at MS67 or finer. This fully struck piece is one of only 33 coins graded at that lofty level by PCGS and NGC combined, and just two examples are graded higher at MS68, both by PCGS (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 2567, PCGS# 7250

1898 Morgan Dollar, MS67 Prooflike
Single Finest Known in Prooflike at NGC

5322 1898 MS67 Prooflike NGC. Liberty's cheek and the eagle's breast are both remarkably clean on this Prooflike Superb Gem. The design motifs are sharply struck and the untuned silver-white surfaces display bright mint frost. The single finest-graded 1898 dollar in Prooflike condition, at NGC. Census: 1 in 67 Prooflike, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 2568, PCGS# 7253

1898-O Morgan Dollar, MS67 ★
One of the Finest Known Examples

5323 1898-O MS67 ★ NGC. This high-mintage New Orleans issue is relatively available at MS65, relatively scarce at MS66, and rare at MS67. This snow-white dynamically lustrous Superb Gem is well-struck, showing just a hint of central weakness on each side. Both sides are impressively preserved and nearly flawless. One of just three coins to be rated as MS67 ★ at NGC, and only a single piece is graded numerically finer at the same service, at MS68 (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 2569, PCGS# 7254

1898-S Dollar, MS66
Scarce High-Grade Example

5324 1898-S MS66 NGC. Exceptional mint luster flashes from the brilliant, snow-white surfaces of this impressive Premium Gem dollar. Generally sharp, if a tad weak on the hair detail just above Liberty's ear, this piece displays stellar preservation on both sides. Despite a substantial mintage of 4.1 million coins, this issue is surprisingly scarce at higher Mint State grade levels. Census: 11 in 66, 1 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 256A, PCGS# 7256

**1899 Morgan Dollar, MS66 Deep Mirror Prooflike
A Splendid Example of this Low-Mintage Date**

- 5325 1899 MS66 Deep Mirror Prooflike NGC.** A splendid Premium Gem example of this Philadelphia issue, which is not often seen with Prooflike or Deeply Prooflike surfaces. Sharply struck and brilliant, with a slight degree of cloudiness noted in the glassy, highly reflective fields. The reverse seems blemish-free, while the obverse just shows a handful of tiny nicks. Census: 8 in 66 Deep Mirror Prooflike, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256B, PCGS# 97259

**1899-O Morgan Dollar, MS67
Only One Piece Certified Finer**

- 5326 1899-O MS67 NGC.** A large quantity of coins from this New Orleans issue were released from the Treasury hoard in 1962, but it remains relatively scarce at the MS67 grade level and just one piece is rated finer at MS68, by PCGS (2/14). A beautiful frosty sheen enlivens each side of this brilliant white Superb Gem. The design motifs are fully struck, showing complete definition over Liberty's ear and on the eagle's breast feathers.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256C, PCGS# 7260

**1899-S Morgan Dollar, MS66 Prooflike
Virtually Flawless and Rare This Nice**

- 5327 1899-S MS66 Prooflike NGC.** A glimpse of golden rim toning frames brilliant devices and mirrored fields of this fully struck Premium Gem. Remarkably unabraded surfaces show no mentionable marks, while the clean fields surround equally pristine elements in virtually flawless, untuned silver reflectivity. Prooflike and Deep Mirror Prooflike examples are exceptionally rare for this date in Premium Gem grades or higher. This is the only MS66 Prooflike coin by NGC with none finer; PCGS has seen four Deep Mirror Prooflike examples in MS66 and two others in MS66 Prooflike, with just two finer examples in Prooflike condition (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256D, PCGS# 7263

**1900 Dollar, MS67
Among the Finest Known**

- 5328 1900 MS67 NGC.** Although known as a common date in Uncirculated condition, this issue is actually quite scarce at the MS67 grade level and nonexistent any finer at both services. This is an attractive coin with snow-white surfaces that approach perfection on both sides. Frosted mint luster and sharp strike definition increase the eye appeal and the technical merit of this compelling Superb Gem. Census: 42 in 67, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256E, PCGS# 7264

**1900-O Morgan Dollar, MS67
Impressive High-Grade Example**

- 5329 1900-O MS67 NGC.** This issue is well known as a common date with a high mintage, and examples are easy to locate even at the MS66 grade level. Superb Gems are scarce, however, at both services. This is a lovely example with highly lustrous surfaces that are untoned and splendidly preserved. The design elements are generally well-defined, with softness noted only on the eagle's talons and upper breast feathers, and on the hair detail just above Liberty's ear on the obverse. Census: 76 in 67 (2 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256F, PCGS# 7266

**1900-O/CC Dollar, MS66, VAM-10A
Popular Overmintmark**

- 5330 1900-O/CC MS66 NGC. VAM-10A, R.5.** A Top 100 Variety. This is a lovely Premium Gem dollar with shimmering mint luster over untuned silvery-gray surfaces. The design motifs are well-struck save for slight incompleteness above the ear. The surfaces are impressively preserved and only show a few minute marks and luster grazes. Census: 10 in 66, 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256G, PCGS# 7268

**1900-S Morgan Dollar, MS66
Superior Mint Luster**

- 5331 1900-S MS66 NGC.** This turn-of-the-century S-mint issue is readily available in lower Mint State grades, but it becomes scarce at the Gem level or finer. This radiantly lustrous Premium Gem is well-struck and essentially untuned. Both sides exhibit clean, carefully preserved surfaces; only slight luster grazes are found in the left reverse field. Census: 24 in 66, 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256H, PCGS# 7270

**1901 Morgan, MS64
Lustrous and Sharp**

- 5332 1901 MS64 NGC.** Perhaps this Philadelphia date was a bit overhyped 10 to 15 years ago, yet it remains an important series rarity in all Mint State grades. It is exceptionally rare when lustrous and sharply struck such as this near-Gem example, with brilliant-white surfaces and strong cartwheel luster. The strike is almost never seen any stronger, with most of the hair-strand definition visible over the ear and the eagle's breast and legs full-feathered. The abrasions usually associated with this issue are minimal on the coin, with only a few wispy grazes on the cheek, and a tiny mark hidden in the eagle's left (facing) wing/breast juncture. Just six examples are certified numerically finer by PCGS and NGC combined (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256J, PCGS# 7272

1901-O Dollar, MS67
Brilliant and Semiprooflike

5333 1901-O MS67 NGC. Well-struck overall with only minor weakness observed across the centers. Intense satiny mint luster gives the piece a flashy, bright appearance. The surfaces are mostly untuned save for a handful of russet specks. This Superb Gem ranks high on the list of certified examples, and is only surpassed by one PCGS coin graded at MS68. Census: 13 in 67, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256K, PCGS# 7274

1901-S Dollar, MS66
Remarkable High-Grade Example

5334 1901-S MS66 NGC. The 1901-S Morgan dollar is a conditionally scarce issue at MS66 and it is extremely rare any finer, just two MS67s graded as such by PCGS. This is a delightful Premium Gem with lustrous brilliant-white surfaces that display remarkable preservation. Sharply struck on both sides with essentially full definition across the centers. Census: 7 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256L, PCGS# 7276

1902 Morgan Dollar, MS67
Impressively Preserved

5335 1902 MS67 NGC. A relatively common issue in the lower grades of Mint State, the 1902 is rare as an MS67. This Superb example, with sharply detailed motifs and vibrant mint frost, is essentially brilliant, save for faint traces of sky-blue and pale gold peripheral toning. The well-preserved surfaces are nearly flawless. Census: 17 in 67 (2 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256M, PCGS# 7278

1902-O Morgan Dollar, MS67
Technically and Visually Superb

5336 1902-O MS67 NGC. The high-mintage 1902-O Morgan dollar is readily obtainable at lower grades, but it is rare at MS67. This is a technically and visually impressive Superb Gem from New Orleans, with a bold strike and intensely lustrous surfaces that are wonderfully preserved. Census: 24 in 67 (1 in 67 ★), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256N, PCGS# 7280

1902-S Dollar, MS66
Conditionally Rare

- 5337 1902-S MS66 NGC.** The mint in San Francisco struck 1.53 million Morgan dollars in 1902. This issue is not scarce in lower Mint State grades, but examples grading finer than MS65 are rare. A high degree of eye appeal results from vibrant mint luster and lovely peripheral toning on each side of this splendid Premium Gem. The well-preserved surfaces are distraction-free. Census: 9 in 66, 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256P, PCGS# 7282

1903 Morgan Dollar, MS67
Scarcer, Late-Date Philadelphia Dollar

- 5338 1903 MS67 NGC.** While not as elusive as some other issues from the same time period in this lofty grade, the 1903 Morgan dollar is certainly scarce as an MS67, and rare any finer. The untuned surfaces of this Superb Gem display shimmering mint frost and splendid preservation. The design elements are boldly impressed and nearly complete across the centers.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256R, PCGS# 7284

1903-O Morgan Dollar, MS67
Impeccable High-Grade Example

- 5339 1903-O MS67 NGC.** This impressive Superb Gem from the once-rare 1903-O issue is impeccably preserved and offers brilliant surfaces that display satiny mint luster. The design elements are exceptionally well-struck for a Morgan dollar from New Orleans, and only minimal weakness is noted near the center of each side. Census: 43 in 67 (1 in 67+), 0 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256S, PCGS# 7286

1903-S Silver Dollar, MS66
Important, Key Issue

- 5340 1903-S MS66 NGC.** Struck from the new-over-old hub (C-4 over C-3) on the reverse, with the over-hub identified by a doubled olive at the claw. This San Francisco date is rare in Premium Gem condition, and the issue is only occasionally available in Registry Set condition such as this gleaming example. Rich, mahogany-gold toning spreads lightly from the rims to the brilliant-silver centers. Cartwheel luster accents a full strike on the design elements. Although this issue is normally found with bagmarks and abrasions, almost none can be found on the surfaces of this smoothly lustrous coin, even under magnification. Liberty's cheek is flawless, and the eye appeal is fantastic. Just five pieces are certified numerically higher by PCGS and NGC combined (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256T, PCGS# 7288

1904 Morgan Dollar, MS66+
Pleasing and Impressive
One of the Top-Graded Examples

5341 1904 MS66+ NGC. In terms of production quality, the 1904 issue is not favorably rated by either Wayne Miller or Dave Bowers, both of whom regard it as inferior. This Premium Gem example is finer than those usually encountered, however, as the striking quality is sharp and the eye appeal of the piece is pleasing. Satiny and well-preserved, with faint amounts of gold-tan peripheral toning, this coin is understandably ranked as one of the top coins currently known to NGC and PCGS. Census: 10 in 66 (1 in 66+, 2 in 66 ★), 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 256U, PCGS# 7290

1904-O Morgan Dollar, MS67 Prooflike
One of the Finest-Known Examples

5342 1904-O MS67 Prooflike NGC. It is difficult to imagine a more visually impressive representative of this later issue from the mint facility in New Orleans. In addition to substantial reflectivity in the glassy fields, the devices also exhibit sharp definition and light frosting. A well-preserved example that is one of the finest-graded Prooflikes at NGC. Census: 3 in 67 Prooflike, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 256V, PCGS# 7293

1904-S Dollar, MS65
Scarce, Final-Issue S-Mint Dollar

5343 1904-S MS65 NGC. The 1904-S is an elusive issue in high grades, despite its moderate mintage of 2.3 million pieces. Gems are scarce and coins that grade higher than MS65 are rare. This lustrous example is untoned and exhibits crisp strike definition. There are only a few tiny surface marks, none of which are out of context for the assigned grade. Census: 30 in 65, 6 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 256W, PCGS# 7294

1921 Morgan Dollar, MS67
Among the Finest Certified

5344 1921 MS67 NGC. Almost 45 million examples of the 1921 Morgan dollar were struck, yet just 15 coins have been rated as Superb Gems by PCGS and NGC combined. This amazing example displays sharply struck design motifs and intensely frosty mint luster, both of which are unusual for the issue. Somehow preserved from the typically seen bagmarks, this piece is nearly blemish-free on both sides. A great coin that will receive considerable attention from specialists. Census: 7 in 67, 0 finer (3/14).

From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
 NGC ID# 256X, PCGS# 7296

**1921-D Morgan Dollar, MS66+
Impressive High-End Example**

5345 1921-D MS66+ NGC. This sharply struck Premium Gem is among the finest-graded examples of this D-mint issue, which saw an original production in excess of 20 million pieces. Just 17 coins are currently known at NGC and PCGS combined that are rated higher than this piece (2/14). Intense mint frost enlivens the clean, icy-white surfaces. Several slivers of prooflikeness are noted on the upper reverse from die polish.
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256Y, PCGS# 7298

**1921-S Silver Dollar, MS66+
Beautiful Upper-End Example for the Grade**

5346 1921-S MS66+ NGC. This issue had an enormous mintage of nearly 21.7 million coins, yet high-grade survivors are relatively scarce when that huge production figure is taken into account. To date, the major services have only seen a single coin rated as MS67 by NGC. This brilliant Premium Gem displays luminous snow-white surfaces that are illuminated by an intense satiny sheen. Both sides are well-preserved and free of all but the most minute nicks. Census: 59 in 66 (3 in 66+, 3 in 66 ★), 1 finer (3/14).
From the M L Moser Collection, #1 NGC Morgan Dollar Registry Set.
NGC ID# 256Z, PCGS# 7300

HERITAGE

U.S. COIN AUCTION

APRIL 23-27, 2014 | CSNS | CHICAGO

PLATINUM NIGHT®

Dear Bidder:

Welcome to Platinum Night! We have identified nearly 500 of our most valuable coins from the approximately 8,000 lots in our main catalogue as the Official Auctioneer of the 2014 Central States Numismatic Society. One of the most-used phrases of the numismatic marketplace is "fresh material." Collectors want it and sellers claim they have it. In this Platinum Night, "fresh material" is no empty phrase.

With special acknowledgment of our featured collections in the Main Catalog, our Platinum Night contains lots from the following Featured Collections:

- Christopher Bently's Nob Hill Collection, Part II
- The Jim O'Neal Collection of U.S. Type, Part One
- The Riverboat Collection
- The Old New England Collection
- The Northern Lights Collection
- The Ray Levoi Collection
- The Charles G. Wright Family Collection
- The Dale Hopkins Collection
- The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation
- The M L Moser Collection, #1 NGC Morgan Dollar Registry Set
- The Collection of Philip Poier

We offer many different ways to participate in Platinum Night: pre-auction bids through HA.com, mail, fax, and e-mail, as well as day-of bidding via telephone and our award-winning online system, Heritage LIVE!™ Of course, if you would rather watch in person as history is made, the CSNS Annual Convention and our auction floor are open to you. Heritage's lot viewing and auction rooms are located in the center of all of the convention activity. Remember to stop by our booth on the Bourse and say hello.

This should prove to be a very exciting Platinum Night indeed and we are grateful to have your participation.

Good luck!

Sincerely,

Greg Rohan
President

Todd Imhof
Executive Vice President

SESSION FIVE

THE RIVERBOAT COLLECTION OF TERRITORIAL GOLD

1830 Templeton Reid Quarter Eagle, AU50 Rare Georgia Gold Rush Issue First Territorial Gold Minter

5401 1830 Templeton Reid Quarter Eagle AU50 PCGS. K-1, R.6. Most Americans associate the words “Gold Rush” with the massive immigration to California that followed the discovery of gold at Sutter’s Mill in 1848. However, the first major gold rush in the United States took place much earlier, in southern Appalachia in the 1820s and 1830s. The first discovery of gold in the area actually took place in Mecklenburg County, North Carolina in 1799, when 12-year-old Conrad Reed found a huge 17-pound nugget in Little Meadow Creek, near Charlotte. Unfortunately, the significance of his find was not recognized at the time, and the Reed family used the nugget as a door stop for several years before someone apprised them of its value. Even then, the Reeds reportedly sold the massive nugget for a song, receiving only \$3.50 for their prize. More finds followed sporadically over the years, but the region was inaccessible and news of the potential bonanza was slow to reach the rest of the country. It was not until the late 1820s that large scale mining operations began in Georgia and the Carolinas, and the first documented gold mine in Georgia was reportedly established in 1829. When the news finally spread, the reaction was predictably dramatic and the region was inundated by a flood of prospectors and fortune seekers. Benjamin Parks, a North Carolina native who was one of the earliest prospectors in the Dahlonega area, reminisced in the *Atlanta Constitution* in 1894:

“The news got abroad, and such excitement you never saw. It seemed within a few days as if the whole world must have heard of it, for men came from every state I had ever heard of. They came afoot, on horseback and in wagons, acting more like crazy men than anything else. All the way from where Dahlonega now stands to Nuckollsville there were men panning out of the branches and making holes in the hillocks.”

The influx of miners created chaos in the local economy, which had been conducted on the barter system in earlier times. A practical medium of exchange was desperately needed, as there was virtually no circulating federal currency in the region at the time. Into this vortex stepped an enigmatic man of German ancestry named Templeton Reid, who had earlier established himself as a jeweler, watchmaker, gunsmith, and manufacturer of cotton gins in Milledgeville, Georgia. By July 1830, Reid had set up a mint and commenced production of gold coins in two and a half, five, and ten dollar denominations. While several private mints had been established in colonial times, and Ephraim Brasher had produced his famous gold doubloons in 1787, Reid’s coins were the first privately issued circulating gold coins manufactured since the ratification of the Constitution. His coinage set an important precedent for later generations of private minters, who would flourish in the much larger California Gold Rush two decades later. Templeton Reid is rightly regarded as the father of the Territorial gold series.

Fort Worth coin dealer B. Max Mehl offered the following description of a Templeton Reid quarter eagle in lot 404 of his B.W. Smith catalog in May of 1915:

“1830 \$2.50 Obverse T. REID ASSAYER; in center, 2.50. Rev. GEORGIA GOLD; the date, 1830, in center all within

a circle. Milled edge. The lower portion of both the obverse and the reverse not struck as bold as the rest of the coin but is strictly fine for the coin. Excessively rare. One of the rarest of all Pioneer gold coins. The first to be offered in several years. Record about \$400."

Mehl's record of \$400 was a formidable price for a coin in 1915. The current price realized for an 1830 Templeton Reid quarter eagle is \$329,000, brought by the AU58 PCGS example in the ANA National Money Show in August 2013.

Reid only struck coins for a few months, from July to October of 1830. The coins were initially well-received, but the problems with public confidence and acceptance of the coins that faced all private minters soon developed. Despite his claim to be an assayer, Reid did no chemical refining of the raw gold dust he used to strike his coins. He just separated the gold from the sand and debris that the typical deposit contained. He did not realize that the remaining ore was alloyed with silver, tin, and trace elements. As a result, his quarter eagles were found to have an intrinsic value of only \$2.27 when the correct fineness of the gold was used to calculate their value. Opposition to the coins became quite vocal in the local newspapers once their low gold content became known. Faced with public resentment and lack of confidence in his coins, Reid closed his coinage operations by late fall of 1830.

Estimates of Reid's mintage totals vary widely. Dr. Dexter Seymour, who studied Reid's coinage extensively, estimates his output to be between 1,500 and 1,600 coins, including all denominations, for a face value of approximately \$7,000. Estimates in contemporary newspaper accounts are much higher, including figures as high as \$200,000 in face value. What can be said with certainty is that few examples were saved for numismatic purposes and the coins are rare in all grades today. PCGS and NGC have combined to certify a total of 15 examples in all grades, with an unknown number of resubmissions and crossovers (3/14). Our roster below, compiled with the help of numismatic researchers Wayne Burt and Saul Teichman, lists 23 distinct examples, with five coins in institutional collections and one whose location is unknown since its theft in the 1960s.

The present coin is an attractive AU piece, with well-detailed design elements that show a touch of the typical softness on the lower inscriptions on both sides. The pleasing orange-gold surfaces retain traces of original mint luster and show the expected number of minor abrasions for the grade. A thin scratch through the upper-left curve of the G in GOLD acts as a pedigree marker. This coin will be a welcome addition to a fine collection of Territorial gold. Housed in a green label holder. Listed on page 375 of the 2014 *Guide Book*. Population: 3 in 50, 3 finer (3/14).

Roster of 1830 Templeton Reid Quarter Eagles

1. MS62 Prooflike NGC. Waldo Newcomer (exhibited at the 1916 ANA Convention); B. Max Mehl, circa 1931; F.C.C. Boyd; Abner Kreisberg FPL (4/1971); Kreisberg FPL (4/1972); John A. Beck Collection, Part II (Kreisberg, 2/1976), lot 606; private collection.

2. MS61 NGC. Charles Gregory Collection (S.H. Chapman, 6/1916), lot 2283; exhibited at the 1914 ANS Exhibition; Arthur C. Nygren Collection (Henry Chapman, 4/1924), lot 20; Virgil Brand (Brand Journal number 130847); Brand Estate; Great American Collection (J.C. Morgenthau, 11/1933), lot 236; James Lawson; ANA Convention Auction (Numismatic Galleries, 8/1947), lot 462; Public Auction Sale (Quality Sales, 9/1973), lot 1366; Stanislaw Herstal Collection (Bowers and Ruddy, 2/1974), lot 803; A-Mark Coin Co. in August 1976; Jim Leeuw; Lighthouse Collection (Stack's, 6/1978), lot 677; Coles Collection (Stack's, 10/1983), lot 193; Charles Michaels; Archangel Collection (Stack's, 11/2006), lot 1059, realized \$299,000; Tom Jones; Baltimore Signature (Heritage, 7/2008), lot 1859, where it realized \$277,500

3. MS61 NGC. Dewitt Smith; Virgil Brand in 1908 (Brand Journal number 47027); Armin Brand (3/1/1945); B.G. Johnson; Jacob Shapiro (a.k.a. J.F. Bell); Hollinbeck Stamp & Coin Co. 1946 FPL; Pennsylvania Collection (Hollinbeck, 2/1947), lot 2816; Hancock & Harwell; private collection; Duke's Creek Collection, Mid-American Rare Coin Company; Chestatee Collection.

4. MS60 PCGS. Clifford-Kagin Collection.

5. AU58 PCGS. ANA Convention Auction (Jess Peters, 8/1973), lot 940; Jack Klausen; Dr. Dexter Seymour Collection; ANA National Money Show (Stack's Bowers, 5/2013), lot 1204, realized \$329,000.

6. AU55 PCGS. Lichtenfels-Linder Collections (Kreisberg-Schulman, 2/1961), lot 918; Public Auction Sale (Quality Sales, 6/1970), lot 2004; Gainesborough Collection (Quality Sales, 9/1980), lot 1693; Ed Milas; Hancock & Harwell; Duke's Creek Collection; Chicago ANA Signature (Heritage, 8/1999), lot 7706; Donald Kagin.

7. AU55 PCGS. Coles Collection (Stack's, 10/1983), lot 194; Hancock & Harwell; Gainesville Collection; Bently Collection (Heritage, 3/2014), lot 30547.

8. AU55. Hancock & Harwell; Peach State Collection; Donald Kagin (8/2006); Spectrum Numismatics.

9. AU50 PCGS. Boston ANA Convention, Ben Levin; Robert Bass; Donald Kagin; Robert Rhue; Paul Padgett; Stuart Levine; **The present coin.**

10. XF40. Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 288; Anthony Terranova; Auction '87 (Stack's, 7/1987), lot 986; Anthony Terranova; Hancock & Harwell; Donald Kagin.

11. XF. Abner Kreisberg in 1956 and 1974; Leo Young at the 1976 ANA Convention; Public Auction Sale (Stack's, 9/1981), lot 409.

12. XF. Charles Williams; Numismatic Gallery Monthly FPL (1/1951); Lammot duPont; Willis duPont; stolen in 1967, present location unknown.

13. VF35 PCGS. Sawyer family in the 19th century; Cloisters Museum Auction (Christie's, 9/1991), lot 524; Anthony Terranova; Public Auction Sale (Stack's, 3/1994), lot 1686; North Georgia Collection / FUN Signature (Heritage, 1/1999), lot 7826; Samuel J. Bergard Collection (Stack's, 7/2008), lot 2178.

14. VF30. Public Auction Sale (Stack's, 2/1978), lot 1267; New York ANA Signature (Heritage, 8/1997), lot 5705; Anthony Terranova.

15. VF30. Captain Andrew C. Zabriskie (Henry Chapman, 6/1909), lot 437; Colonel James W. Ellsworth; John Work Garrett, via Wayte Raymond and Knoedler Galleries in 1923; Johns Hopkins University; Garrett Collection, Part I (Bowers and Merena, 11/1979), lot 504; Public Auction Sale (Stack's, 9/1981), lot 410; Hancock & Harwell; ANA Convention Auction (Kagin's, 8/1986), lot 2180; FUN Sale (Mid-American, 1/1987), lot 1817; George Elliott.

16. Choice VF. Henry Clifford Collection (Bowers and Ruddy, 3/1982), lot 1; George D. Hatie Collection (Bowers and Merena, 8/1983), lot 2889.

17. VF. House Collection; currently on exhibit at the Dahlonga Gold Museum, Dahlonga, Georgia.

18. VF. Hancock & Harwell; Citizens Bank; Bank of America; Georgia Federal Reserve Bank Collection.

19. VF. Joseph C. Mitchelson; Connecticut State Library.

20. Net VF20, cleaned, repaired. Louis Eliasberg, Sr.; Eliasberg Estate, Eliasberg Collection, Part I (Bowers and Merena, 5/1996), lot 314; Hancock & Harwell; Stearns Collection.

21. G-VG, repaired and cleaned. Duke's Creek Collection.

22. Grade unknown, repaired. Smithsonian Institution, from the Mint Cabinet.

23. VF-XF. "Colonel" E.H.R. Green; Green Estate; B.G. Johnson; Smith & Son; Ruth Green advertised in June 1954 issue of *The Numismatist*; Stack's; Josiah K. Lilly; Smithsonian Institution.

Additional Appearances

A. Grade unknown. Edgar Adams mentions a specimen in Scott's 26th Sale of 3/1885, but there is no example of the Templeton Reid quarter eagle in that sale. Perhaps he was mistaken about the date of the sale.

B. Grade unknown. King Collection (S.H. & H. Chapman, 4/1892), lot 689.

C. XF. R.C.W. Brock; University of Pennsylvania in 1898.

D. Uncirculated, slight dent. James B. Wilson Sale (Thomas Elder, 10/1908), lot 1174; Virgil Brand in 1909 (Brand Journal number 50748); Brand Estate; Armin Brand.

E. Grade unknown. Jones-Rossman Collections (Elder, 12/1908), lot 526a.

F. Grade unknown. Public Auction Sale (Elder, 6/1914), lot 244.

G. G/VG-Fine. B.W. Smith Collection (B. Max Mehl, 5/1915), lot 404; Elmer Sears Collection (Mehl, 10/1918), lot 65; New Orleans Collection (Mehl, 11/1919), lot 810; Judge Charles W. Slack Collection (Mehl, 5/1925), lot 71.

H. Grade unknown. Public Auction Sale (S.H. Chapman, 6/1917), lot 353.

I. Grade unknown. St. Louis Stamp & Coin Company; Virgil Brand in 1919 (Brand Journal number 92186).

J. XF. Arthur C. Nygren Collection (Henry Chapman, 4/1924), lot 21.

K. Fine. Arthur C. Nygren Collection (Henry Chapman, 4/1924), lot 22.

L. Grade unknown. Public Auction Sale (Elder, 6/1925), lot 1493.

M. VF. Jacob Shapiro (a.k.a. J.F. Bell); Bell Collection (Stack's, 12/1944), lot 1051.

N. VF. George H. Hall Collection (Stack's, 5/1945), lot 2349.

O. Uncirculated. E.M. Wharton Collection (Stack's, 10/1945), lot 2519.

P. VF. E.M. Wharton Collection (Stack's, 10/1945), lot 2520.

Q. Grade unknown. San Francisco Collection (Stack's, 5/1946), lot 1157.

R. XF. ANA Convention Auction (Numismatic Gallery, 8/1946), lot 1157.

S. VF. Charles Deetz Collection, Part II (Stack's, 11/1946), lot 2023.

T. VF. H.R. Lee Collection (Stack's, 10/1947), lot 1908.

U. Choice VF. Chi-ANA Sale (James Kelly, 8/1956), lot 1824.

V. VF. George O. Walton Collection (Stack's, 10/1963), lot 2179; Gibson Collection (Stack's, 11/1974), lot 153; RARCOA.

W. VF, plugged. Dr. Conway Bolt Collection (Stack's, 5/1966), lot 1124.

X. XF. Public Auction Sale (Lester Merkin, 9/1967), lot 460; Public Auction Sale (Merkin, 9/1970), lot 859.

Y. VF30. Alex Shuford Collection (Abe Kosoff, 5/1968), lot 2256.

From The Riverboat Collection. PCGS# 10320

C. Bechtler Gold Dollar, AU55 Popular N Reversed Variety

5402 (1837-42) C. Bechtler Dollar, N Reversed AU55 NGC. K-4, R.4. Seventh Series: CAROLINA, BECHTLER (no initial), RUTHERF.; 28 grains per dollar, 20 carats. The Seventh Series quarter eagles, K-13, show CAROLINA GOLD, while the smaller one dollar coins offer CAROLINA. The quaint N Reversed variety is well-known and a sought-after variety. The Bechtler family made their first one dollar coins, the Third Series K-1 variety, in the winter of 1831-32 (and continuing through August 1834) according to Donald Kagin, nearly two decades before the denomination would issue from the U.S. Mint. Both the K-1 and K-4 varieties are ranked R.4 or very scarce, making them among the more available Bechtler types. The earlier one dollar coins used a 30-grain standard at 20 carats, while these post-1834 pieces used the lighter-weight 28-grain standard at 20 carats. This attractive, lightly circulated coin is free of major marks and shows an interesting two-toned color palette, light yellow-gold devices contrasting against copper-lilac fields. Listed on page 377 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10055

C. Bechtler Quarter Eagle, 67G. 21C, MS62 Rare and Underrated, Tied for Finest at PCGS

5403 (1837-42) C. Bechtler Quarter Eagle, 67G. 21C. MS62 PCGS. K-10, R.5. Fifth Series: CAROLINA GOLD, 26.8 grains per dollar, 21 carats. The large 250 (for the quarter eagle or \$2.50 denomination) dominates one side of this rare variety, with C. BECHTLER RUTHERF. around the rim. The weight and purity are given on the other side. The Bechtler quarter eagles sometimes go unnoticed between their gold dollar and half eagle counterparts, but they are all very scarce to extremely rare. The K-10 variety is the only Fifth Series Bechtler quarter eagle, showing inverted V's for A's in CAROLINA and CARATS, and quite popular as such. This lovely MS62 PCGS piece is tied for the finest at that service with one other submission, and NGC shows a single MS63 finer (3/14). The beautiful yellow-gold surfaces show vibrant luster and a bold strike that produce excellent eye appeal. This is a coin that will be difficult to improve upon. Listed on page 377 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10067

C. Bechtler Quarter Eagle, 70G. 20C., AU58 Reportedly Struck From South Carolina Gold Late Reverse Die State

5404 (1837-42) C. Bechtler Quarter Eagle, 70G. 20C. AU58 NGC. K-13, R.6. Seventh Series: CAROLINA GOLD, BECHTLER (no initial), RUTHERF.; 28 grains per dollar, 20 carats. The Seventh Series coins consisted of the K-4 one dollar coins, ranked R.4 or very scarce, and the K-13 quarter eagles, rated R.6 or very rare. The lack of an initial before BECHTLER on these coins is puzzling but unexplained. Kagin writes without clarification that these coins were struck from South Carolina gold. The four letter A's on the obverse (in CAROLINA and ASSAY) are all inverted V's, lacking crossbars, adding an even more quaint look to the pieces. The reverse is in a very late die state on this AU58 NGC piece, showing numerous die cracks through the devices, filling in both R's, and a particularly heavy die crack from the rim through T in BECHTLER. The lightly circulated surfaces show alternating golden-orange and lilac-brownish patina, a beautiful effect. Census: 4 in 58, 7 finer (3/14). Listed on page 377 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10070

C. Bechtler Five Dollar, 150G. 20C., AU55 Extremely Rare Second-Series Issue Overweight Against Post-1834 Standards

5405 (1831-34) C. Bechtler Five Dollar, 150G. 20C. AU55 PCGS. **K-15, R.7.** Second Series: NORTH CAROLINA GOLD, weights added, 30 grains per dollar, 20 carats. The Piedmont region, in the foothills east of the Appalachian Mountains in North Georgia and western North Carolina, was the site of America's first major gold rush. Scattered discoveries were also made in South Carolina and Alabama. A trickle of tall tales and anecdotes about various gold findings in the late 1700s-early 1800s would turn into a full-fledged gold frenzy by the late 1820s; by 1838 the region would see the formation of two private and two public mints.

Templeton Reid was the first American manufacturer of private gold coinage, operating for a short time in 1830 from two successive locations — Milledgeville and Gainesville — in North Georgia, near present-day Dahlonega. Templeton Reid's coinage was fleeting, his total production small, and today his coins are extremely elusive. Reid's assays were inaccurate, his coinage was underweight, and the entire enterprise fell into disfavor and was abandoned, all within the space of a few months.

In contrast, the Bechtler family's coinage, which first appeared in the following year, 1831, was far more successful and longer-lived; the last Bechtler issues were struck around 1850. The coinages of both Reid and the Bechtlers were responses to the old adage "find a need, then fill it," in both cases for a more-durable and trustworthy medium of exchange than native gold dust. But from the start, the Bechtler family made crucial moves that helped keep their coins a viable means of frontier commerce for decades. The founder of the Bechtler enterprise, the elder Christopher Bechtler, was a competent silversmith, jeweler, watch- and clock-maker, and metallurgist. Aside from their first group of coinage, the Bechtlers marked an exact weight and/or gold content (*in carats*) on every coin they struck.

Far more importantly, the Bechtlers displayed impeccable integrity in an enterprise in which the public trust and perception of good value were paramount. Donald Kagin divides the Christopher Bechtler coinage into seven distinct series based on common traits such as the source of the gold, their purity and weight, and whether those attributes are marked on the coins. The First Series coins were "weightless" issues struck to a 20-carat standard, a short-lived introductory coinage of two or three months in the summer of 1831. By the fall of 1831, the Second Series coins had their weights added. The K-15 C. Bechtler half eagle variety, containing a nominal 150 grains (9.72 grams) of 20-carat (833 fineness) gold, is an excellent demonstration of the assiduous approach Christopher Bechtler took to his products. The federal half eagles of this period were struck in gold of 916.7 fineness and weighed 8.75 grams — a standard that Bechtler could not match. But in compensation, his half eagles weighed nearly 1 gram more, yielding a net pure gold content of 8.10 grams — nearly 1% more than the federal coins.

When the U.S. Mint reduced the net gold content of all U.S. gold coins in mid-1834, Bechtler followed suit, even stamping the official date of the enabling legislation on the later half eagle coins.

These early Bechtler half eagles are extremely elusive — as are the pre-Classic Head federal gold coins of 1834 and before. Both types were subjected to heavy melting when the later pieces with lower gold content were introduced. This Choice AU PCGS-certified example of the K-15 variant is a handsome coin, certified in an early blue-label PCGS holder (PCGS 6, November-December 1998 only) with bar code on the reverse. The orange-gold surfaces are tinged with lilac and retain some mint luster in the protected areas of the peripheral lettering. No mentionable marks appear, just light wear consistent with the grade. This exceedingly rare coin is essentially one of the earliest Bechtler half eagles available, as the First Series K-14 five dollar is a remarkable rarity (R.8). Population: 7 in 55, 2 finer (3/14). Listed on page 377 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10118

**1834 C. Bechtler Plain Edge
Five Dollar, AU50
Extremely Rare K-18 Variety
RUTHERF: Reverse, 20 Close to CARATS
Second Finest at PCGS**

5406 1834 C. Bechtler Five Dollar, Plain Edge, 20 Close to CARATS, RUTHERF: AU50 PCGS. K-18, R.7. Fourth Series: AUGUST 1, 1834 date added, 28 grains per dollar, 20 carats. The August 1, 1834 date is present on all the Fourth Series Bechtler half eagles. The Fourth Series coins were struck from that date to 1837, when the Fifth Series coins were introduced, having a standard of 26.8 grains per dollar of 21-carat gold. All four Bechtler Fourth Series half eagle varieties, K-16 through K-19, show the 140G. 20 CARATS gold content. This piece is certified by PCGS in an early blue-label holder (PCGS 6, November-December 1998 only) with an incorrect PCGS number, 10112, which is no longer in use. The C. Bechtler five dollars of the Fourth Series are classified into two with the AT RUTHERFORD reverse (K-16 and K-17), the latter (while still rare) by far the most available of the four. The two varieties with the AT RUTHERF: reverse (K-18 and K-19) are seen far less often; the K-18 is ranked R.7 or extremely rare, while the K-19 is rated High R.6 or very rare. However, over the last 20 years, K-18 has retained the same degree of rarity, but more examples of K-19 have surfaced, and it is now considered to be Low R.6. The K-18 is distinguished by the RUTHERF: reverse and the 20 close to CARATS on the obverse, where it is distant from CARATS on the K-19. This AU50 example is a remarkably attractive survivor of the extremely rare K-18 issue. Medium orange-red surfaces deepen to lilac and copper-orange areas. Some mint luster remains in the protected areas. A small area of struck-in die grease appears above the date 1834, as made. The PCGS population for the correct PCGS number, 10095, shows only two examples certified, an XF40 and an AU55. This AU50 would make only the third example certified at PCGS and the second finest at that service. Listed on page 378 of the 2014 *Guide Book*.

From The Riverboat Collection.

**C. Bechtler Five Dollar, 134G.
With Star, AU55
Attractive Orange-Gold Surfaces**

5407 (1837-42) C. Bechtler Five Dollar, 134G, With Star AU55 PCGS. K-20, R.4. Fifth Series: CAROLINA GOLD, 26.8 grains per dollar, 21 carats. The Fifth Series C. Bechtler coinage based on a 21-carat standard was struck from around 1837 to 1842, the year in which the elder Christopher Bechtler died. Christopher Bechtler Sr.'s son Augustus died soon after, in 1846. Christopher Sr.'s nephew, Christopher Jr., continued striking coins through the late 1840s and possibly into the early 1850s. PCGS identifies these half eagle C. Bechtler coins as "134 Star," signifying the large star separating the weight from the gold purity of 21 carats. This Choice AU example displays attractive surfaces, with orange-gold in the fields ceding to deep lilac-purple hues around the peripheral devices on each side. Certified in an early blue-label PCGS holder (PCGS 6, November-December 1998 only) with bar code on the reverse. The K-20 variety, the most accessible of the Bechtler half eagles, is listed on page 378 of the 2014 *Guide Book*. Population: 16 in 55, 6 finer (3/14).

From The Riverboat Collection. PCGS# 10097

**C. Bechtler Half Eagle, MS61
High R.6 GEORGIA GOLD, RUTHERF: Variety
Sole Finest at PCGS**

5408 (1834-37) C. Bechtler Five Dollar, RUTHERF: MS61 PCGS. K-23, High R.6. Sixth Series: GEORGIA GOLD, 25.6 grains per dollar, 22 carats. 128.G. The Sixth Series C. Bechtler coins were all of the stated purity above, one carat higher than the 21-carat standard of the Fifth Series coins struck of Carolina gold. Given the absence of dates on the coinage (save for the AUGUST 1, 1834 pieces, which presumably struck for a period of several years) and the further absence of contemporary evidence, the issue dates for the various series must be considered approximate and are likely to overlap. Three different location stamps appear on the various Bechtler half eagles: NORTH CAROLINA GOLD, CAROLINA GOLD, and GEORGIA GOLD. Donald Kagin writes in his 1981 reference, "Since there were three different purities and corresponding weights appearing on the \$5 gold coins ... it is believed that the location inscriptions actually designated three different degrees of fineness, regardless of where the stamped gold was mined."

The present piece, with the rare GEORGIA GOLD stamp and RUTHERF: reverse, is certain to hold particular appeal for collectors of Dahlonge and Charlotte gold, and will no doubt spark interest among other collecting disciplines. It is a very rare variety in all grade levels. This MS61 PCGS-certified coin is the only Mint State example of the variety certified at PCGS (3/14). The yellow-gold surfaces on this piece display generous mint luster and show only light field chatter rather than mentionable marks, a coin in a remarkably fine state of preservation. Listed on page 378 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10109

**A. Bechtler Dollar, 27G. 21C.
Plain Edge, MS63
One Finer at PCGS**

5409 (1842-52) A. Bechtler Dollar, 27G. 21C., Plain Edge MS63 PCGS. K-24, R.3. CAROLINA GOLD. Donald Kagin dates the A. Bechtler gold dollars to the period from 1842 — the year that Christopher Bechtler Sr. died — to possibly as late as 1850, the year after the United States finally introduced the gold dollar denomination. The Plain Edge A. Bechtler gold dollars struck to the 27-grain, 21-carat standard are far and away the most available of all the Bechtler issues. This marvelous consignment contains two examples, both in the MS63 PCGS grade. This example, like many of the Bechtler gold coins offered here, is certified in an early PCGS 6 holder dating from late 1998, with blue-label insert and bar code on the reverse. Considerable reflectivity emanates from each side of this attractive and virtually unmarked example, showing deep, mellow reddish-orange color and great eye appeal. Population: 6 in 63, 1 finer (3/14). Listed on page 378 of the 2014 Guide Book.

From The Riverboat Collection. PCGS# 10040

**A. Bechtler Gold Dollar, 27G. 21C.
Radiant, Well-Struck MS63 Example**

5410 (1842-52) A. Bechtler Dollar, 27G. 21C., Plain Edge MS63 PCGS. K-24, R.3. CAROLINA GOLD. The need for Bechtler gold pieces, particularly quarter eagles and half eagles, diminished after the Charlotte and Dahlonega mints both opened in 1838, but the need for gold dollars remained, as the U.S. Mint would introduce that smallest denomination years later, in 1849. The K-24 A. Bechtler gold dollars, like all but the earliest of the Bechtler coinage, showed their weight and purity. All of the Bechtler coins were slightly overweight compared to federal coins of the same era, ensuring their acceptance in the Southern economy of the 1830s through the 1860s in the Carolinas, Georgia, Tennessee, and Kentucky, and perhaps further regions. Five of the K-24 A. Bechtler gold dollars would have had a net pure gold content of about 7.6545 grams; a federal half eagle of 1842 would have contained about 7.5555 grams, giving the Bechtler coins a surplus of nearly 1% — a typical overage for the Bechtler coins of all three denominations. This MS63 PCGS-certified piece is tied with five other submissions in this grade, and one MS64 at that service is finer (3/14). This Plain Edge piece displays gorgeous eye appeal, with radiant mint luster running over wheat-gold surfaces that are well-struck and show no mentionable marks. The strike is exceptionally bold. Listed on page 378 of the 2014 Guide Book.

From The Riverboat Collection. PCGS# 10040

**A. Bechtler Gold Dollar, 27G. 21C., MS60
Exceedingly Rare Reeded Edge Variant
Finest Certified**

5411 (1842-52) A. Bechtler Dollar, 27G. 21C., Reeded Edge MS60 NGC. K-25, High R.7. CAROLINA GOLD. The A. Bechtler gold dollars struck in the standard of 27 grains per dollar of 21-carat gold with Plain Edge are ranked R.3, and are widely available in the marketplace, averaging AU to Choice AU. But the Reeded Edge A. Bechtler gold dollars of this standard are notable rarities. PCGS shows a total of four graded, one each in VF30, XF45, AU53, and AU55. At NGC there are only two pieces certified, one in AU58 and the present piece in MS60, the current finest-certified example. Given the difficulties that encapsulated coins (and coin catalogs) pose in examining the edges of coins, we have not attempted a Census of this issue. We would mention, however, that an AU55 PCGS example in a Stack's Bowers auction, June 2011, lot 9143, brought \$18,400.

This piece exhibits light greenish-gold color and flashes of semi-reflective luster within the lettering. A thin planchet streak runs from the top of 7 to the G in the weight. The 2014 *Guide Book* lists the A. Bechtler 27G. 21 C. gold dollars on page 378 with no differentiation between the two edge variants.

*Ex: Baltimore Signature (Heritage, 7/2003), lot 10924.
From The Riverboat Collection. PCGS# 10041*

**A. Bechtler Five Dollar, 134G. 21C., AU53
Rare Late Bechtler Half Eagle**

5412 (1842-52) A. Bechtler Five Dollar, 134G. 21C. AU53 PCGS. K-27, Low R.5. CAROLINA GOLD, No Star in Center, RUTHERFORD. The Kagin-27 A. Bechtler half eagle was struck in 134 grains of 21-carat gold. While rare, the Kagin-27 is the only A. Bechtler half eagle that is occasionally available. The remaining three A. Bechtler half eagle issues are each R.6 or higher. This AU53 PCGS example of the K-27 shows good eye appeal on deep orange-yellow surfaces that blend into deeper reddish-orange patina around the edges of the lettering. Like several others in this marvelous Bechtler consignment, this coin is certified in an early blue-label PCGS holder (PCGS 6, November-December 1998 only) with bar code on the reverse. PCGS has seen six submissions in this grade with four AU55 and one AU58 finer; none are known in Mint State at PCGS (3/14). Listed on page 378 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10046

A. Bechtler Half Eagle, 128G. 22C., AU50 Anomalous R.6 22-Carat CAROLINA GOLD Type

5413 (1837-42) A. Bechtler Five Dollar, 128G. 22C. AU50 PCGS. **K-28, R.6.** CAROLINA GOLD, No Star in Center, RUTHERFORD. The A. Bechtler K-28 half eagle variety is very rare and somewhat anomalous within the Bechtler series as the only 22-carat gold issue with the CAROLINA GOLD stamp. The Sixth Series C. Bechtler coins were struck in 22-carat gold, but they all bear the GEORGIA GOLD stamp (K-11 and K-12 quarter eagles, K-21 through K-23 half eagles). PCGS has seen only 14 submissions of this issue in all grades, including possible duplications, and a sole MS61 piece crosses the Mint State threshold. This AU50 PCGS coin is one of three submissions in this grade with five finer (3/14). The sandy-gold surfaces display a bold strike along with minimal marks and light wear consistent with the grade, making this quite an attractive example. Listed on page 379 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10043

1849 Norris, Gregg, & Norris Half Eagle, MS61 Rare Period After ALLOY, Plain Edge Type

5414 1849 Norris, Gregg, & Norris Five Dollar, Plain Edge MS61 NGC. **K-2, R.5.** Period after ALLOY. Norris, Gregg, & Norris are considered today to be the first firm to actually strike gold coinage in California, at the end of May 1849. Their coinage, however, foreshadows the difficulties that would dog all of the early producers, with the sole exception of Moffat & Co. Their pieces proclaim CALIFORNIA GOLD WITHOUT ALLOY — it is almost certain that they lacked the parting acids and skill to increase the fineness of the native gold — and the reverse offers FULL WEIGHT OF HALF EAGLE.

Today we know that the freshly mined gold in California, with its natural silver alloy, averaged from 880 to 887 fineness, meaning that the Norris, Gregg, & Norris coins were likely 1.5% to 2.3% underweight compared to the federal half eagles. In any case, the 1850 opening of the California State Assay Office doomed the efforts of such early coiners to failure. The Plain Edge Norris, Gregg, & Norris half eagle with period after ALLOY is rare, more so than its very scarce Reeded Edge equivalent. The last two auction appearances at Heritage in the MS61 grade of this NGC-certified example were an MS61 PCGS coin that brought \$24,701 in our Philadelphia Signature (Heritage, 8/2012), lot 5477, and an MS61 NGC coin that brought \$25,300 in our Denver Signature (Heritage, 8/2006), lot 5784.

This Mint State coin shows a few small marks consistent with the grade, but its calling card is the deep, beautiful reddish-orange color splashed with daubs of lilac on each side. The obverse shows two small dark areas that are most likely struck-in die grease, as made, or else impurities in the unrefined planchet stock. Listed on page 379 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10279

**1849 Norris, Gregg, & Norris
Five Dollar, AU58
Very Rare No Period, Reeded Edge Variety**

5415 1849 Norris, Gregg, & Norris Five Dollar, Reeded Edge AU58 NGC. K-3, R.6. SAN FRANCISCO, no period after ALLOY. The first California coiners, Norris, Gregg, & Norris struck their San Francisco half eagles dated 1849 in Plain Edge and Reeded Edge types. Although only one die marriage is known, some of each edge type lack the period after ALLOY. This Reeded Edge, No Period example is the rarest of the four San Francisco types.

The Norris, Gregg, & Norris half eagles employ a design that is unique in Territorial gold coinage, showing an eagle with sharp-pointed, triangular wings and the denomination "\$5" on a shield in the center of its breast. The reverse further identifies the coin as a HALF EAGLE and identifies the striking location as SAN FRANCISCO. (A unique reverse die is known showing STOCKTON as the location, a coin discovered in Stockton, California, in 1959.)

The Norris, Gregg, & Norris pieces clearly circulated, although they were struck from unalloyed, native California gold. Later 1849- and 1850-dated ingots and coins showing a precise fineness would have been preferred over these early pieces.

This lightly circulated example of the Kagin-3 variety shows medium yellow-gold fields contrasting with deeper orange-gold patina around the device outlines on each side. The surfaces display a totally original look and no mentionable distractions are present. A coin with great eye appeal. Listed on page 379 of the 2014 *Guide Book*. From *The Riverboat Collection*. PCGS# 10282

1849 Norris, Gregg, & Norris Five Dollar, MS62 Period After ALLOY, Tied for Finest Graded

5416 1849 Norris, Gregg, & Norris Five Dollar, Reeded Edge MS62 PCGS. K-4, R.4. Period after ALLOY. The Norris, Gregg, & Norris five dollar gold pieces are considered by numismatists today to be the first private gold coins actually issued for circulation in the California Territory, in May 1849. Many other coiners planned to strike California gold and may have struck a few trial pieces, including Templeton Reid of Georgia, Pacific Company, Pelican Company, J.S. Ormsby, Moran and Clark, and others. Most of these firms struck the known trial pieces from dies made in the East; but the machinery for making coins was often abandoned during the trip westward by those who even attempted the journey to the "fields of gold." A newspaper article from the *Alta California* dated May 31, 1849 is reprinted thusly in Edgar Adams' 1913 work on California private gold:

"We have in our possession a Five Dollar gold coin, struck at Benicia City, though the imprint is San Francisco. In general appearance it resembles the United States coin of the same value, but it bears the private stamp of Norris, Grieg & Norris, and is in other particulars widely different."

The meaning of this little blurb can be subjected to wide interpretation, as the Norris, Gregg, & Norris gold coins known today certainly bear no resemblance to the "United States coin of the same value." In fact, the meaning of the "N.G. & N." stamp on the reverse of these pieces was unknown until the Chapman brothers' sale of the Augustus Humbert estate in 1902 — a well-known tale to Territorial gold specialists. The ad appears to refer to a variety unknown today, or else the "facts" were garbled somehow.

Humbert spelled it "Grigg"; Edgar Adams at first thought "Grieg" was correct, as in the newspaper article, but later adopted the modern spelling "Gregg" based on 1849 directory listings and advertisements for New York City. "Norris, Gregg, & Norris," with partners "Thomas H. Norris, Hiram A. Norris, and Charles Gregg," dealt in "Wrought Iron Pipes, and Fittings of all kinds." Thomas H. and Hiram A. Norris and Charles Gregg were engineers living on Gold Street in Brooklyn, and there is an 1849 record of H.A. Norris bound for California from New York on a passenger vessel. Based on these data, Adams, and Kagin after him, we use the "Gregg" orthography.

The K-4 variety, Reeded Edge with Period after ALLOY, is very scarce yet the most available of the four variants known today, presenting a real opportunity for collectors of high-grade Territorial gold. The present MS62 PCGS example is one of only three submissions in this grade, and none are finer (3/14). This piece shows orange-gold surfaces with only light field chatter but no singular marks amid generous eye appeal. The bold strike brings up all details to good effect. A marvelous example of this first California gold coiner. Listed on page 379 of the 2014 *Guide Book*, appropriately at the beginning of the California gold section.

From The Riverboat Collection. PCGS# 10282

**1851 Humbert Reeded Edge
Fifty Dollar, AU58
Lightly Circulated, Sharply Struck
Gold Rush Memento**

5417 1851 Humbert Fifty Dollar, Reeded Edge, 887 Thous. AU58
PCGS. K-7, R.4. Reverse without 50 in center, small concentric circles, ribbon close to engine turning. The Humbert and U.S. Assay Office fifty dollar octagonal gold coins dated 1851 and 1852 demonstrate a rapid evolution of technology that was an attempt to keep pace with the dire need for circulating gold coinage in Gold Rush era California. Even though the U.S. government named Augustus Humbert as official assayer in late 1850, it would be more than a year, until February 1852, before there was any kind of enduring authorization for Moffat & Co., or the successor United States Assay Office, to strike gold coinage in denominations lower than fifty dollars.

For 1851 and early 1852, this meant that rectangular ingots, gold dust (at a steep discount), foreign gold and silver coins of unknown or suspect weight and content, a few of the earlier private/unofficial gold issues — those that had not been melted as discredited, usually trading at deep discounts — and the bulky fifty dollar octagonal coins were the primary vehicles for trade.

The early Lettered Edge fifty dollar gold coins were incredibly labor-intensive, requiring at a minimum 13 different, individual stamping operations to produce a coin with the fineness specified, value 50 D on the obverse, and lettering on all eight edges of the octagonal pieces; 14 operations were required if the denomination 50 was added to the central reverse.

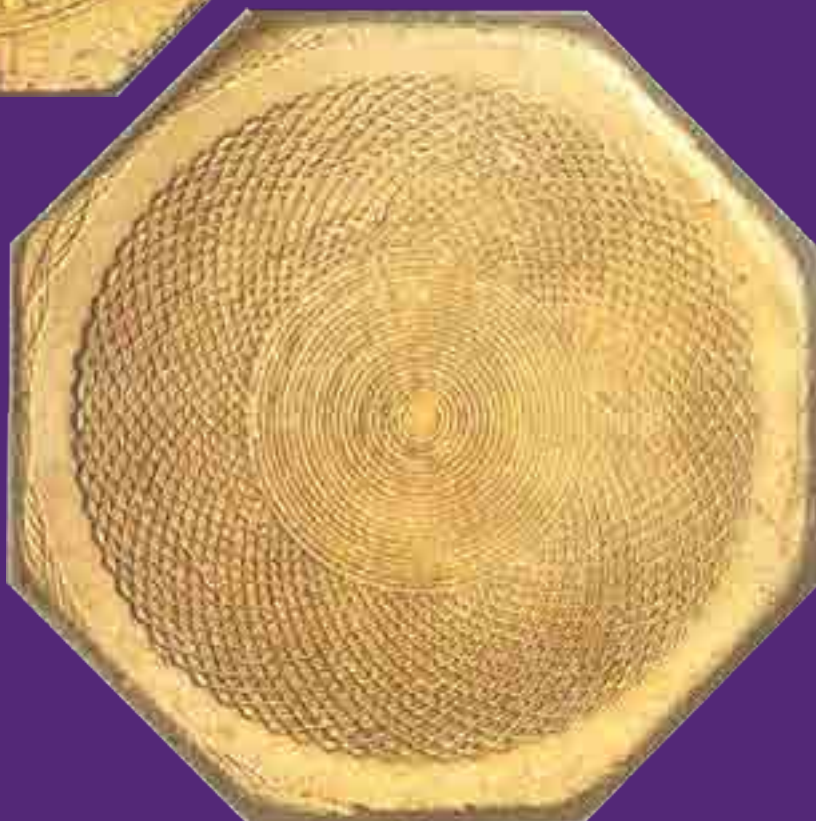

The redesign of the Reeded Edge fifty dollar pieces moved the Humbert/Assay Office legends and date to the obverse periphery of the dies, an incredible time-saver, and the edge-reeding helped prevent the practice of shaving small pieces of gold from the sides.

The Kagin-7 variety can be distinguished from the similar Kagin-6 by the smaller concentric circles in the center and the outer ribbon positioned somewhat closer to the engine turning in the center. This AU58 NGC example shows deep, original reddish patina on each side, with minor hints of circulation in the form of limited high-point wear, a few scattered contact marks — none severe — and the slight rim bumps that are expected on even lightly circulated examples of these large, heavy gold coins. The needle-sharp strike, attractive color, and overall excellent surface preservation make this a particularly appealing example of this memento of Gold Rush era California. Listed on page 381 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10214

PLATINUM NIGHT

1851 Humbert Fifty Dollar, 887 Thous., MS63 'Wonder Coin' Tied for Finest Known

5418 1851 Humbert Fifty Dollar, Reeded Edge, 887 Thous. MS63 NGC. K-6. R.4. Target Reverse. The present Select Mint State 1851 Humbert octagonal gold piece is a coin of enormous quality and importance, tied for the finest certified with five other submissions. (We highly doubt the existence of six separate coins of this issue in so high a grade, and in fact find no public auction records within our database of even a *single trade* in MS63.) The MS63 grade exceeds the finest at PCGS, comprising two submissions in MS62 (1/14). We offered one of those MS62 PCGS examples in our FUN Signature Auction this year (Heritage, 1/2014), lot 5621, which brought \$440,625. We anticipate that this coin will generate even greater bidder enthusiasm.

The iconic octagonal fifty dollar gold pieces that emanated from the California Gold Rush, struck by Moffat & Co. with Augustus Humbert as U.S. assayer, are all dated either 1851 or 1852. While there were later 1855-dated fifty dollar issues struck by Territorial gold coiners-assayers Wass, Molitor & Co. and Kellogg & Co. (these last in proof format only), those pieces were round. The unusual octagonal conformation instantly dates any such fifty dollar gold pieces to the narrow 1851-1852 timeframe.

The 1851 octagonal pieces, the first of their kind seen in the commercial channels of gold coin-starved California, were of two broad types. The first were of the very rare Lettered Edge fifty dollar type: cumbersome, labor-intensive pieces that amounted to little more than blank octagonal ingots, with spaces left for dollars and cents amounts and edge-lettering that required the punching — by hand — of the date 1851 and AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD. These Lettered Edge pieces of varying finenesses (including 880 and 887) bore the familiar Eagle, Scroll, and Rock motif on the obverse, and the engine-turned reverses showed minor differences, including the presence or absence of a small 50 and/or a 12-pointed star at their centers.

The Lettered Edge pieces were soon retired in favor of a more technologically advanced, less labor-intensive design: the Reeded Edge pieces with legend and date around the outer margins of the obverse. Some 1851-dated examples, such as the present coin, read AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA along with the date; in 1852 the peripheral legend became UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO.

Other minor differences appear among the Lettered Edge pieces, including the fineness, the presence or absence of a Target Reverse, and slight positioning variations of the main devices.

The development of the Lettered Edge format was a case of the quick evolution that rapidly changing circumstances demanded. There were a plethora of early California private coiners. Most of their enterprises perished in the first wave of reaction created by yellow journalist James King of William's exposé of companies whose coinage products were considered — rightly or wrongly — to be subpar. After sending coins from three companies — Shultz & Co., Dubosq & Co., and Baldwin & Co. — to assayer Augustus Humbert, James King of William published the results showing that the three companies' gold coins contained from 97% to 99% of their expected value.

The public blowback from the story painted many other private coiners, guilty or innocent, with the same broad brush. Only Moffat & Co.'s gold coins (and its reputation) escaped unscathed. Demand for the Moffat-Humbert fifty dollar gold coins surged as many of the older issues of other private minters were melted and recoinced.

In the long run, however, most of the Humbert and U.S. Assay Office fifty dollar pieces met a similar fate; they were, in turn, melted down into smaller, more commercially viable denominations. Today the K-6 variety survives to the extent of an estimated few hundred pieces, but certified survivors average only XF40 or so. Rim bumps, considerable wear, and heavy contact marks are the norm, and many survivors are so impaired that they will not be graded without caveats at NGC or PCGS.

This exceptional Humbert fifty dollar certified MS63 NGC is a "wonder coin" that has managed to survive for 163 years in remarkable shape. The surfaces still show generous mint luster with orange-gold prevailing, deepening into brownish-gold near portions of the upper obverse and the central reverse. There are none of the usually seen rim bumps or heavy abrasions. The peripheral legends are faint on AUGUSTUS HUMBERT, as usually seen, although the remainder is legible. Listed on page 381 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10214

1852 Close Date Moffat & Co. Ten, AU50 Deep Copper-Orange Patina

5419 1852 Moffat & Co. Ten Dollar Close Date AU50 PCGS. K-8, R.6. Deep copper-orange patina liberally graces each side of this AU50 PCGS-graded Close Date Moffat ten dollar gold. Two die varieties are known for these coins, the Close Date and Wide Date; both are considered very rare. The Moffat ten dollar gold coins dated 1852 were struck during a prolonged period of indifference on the part of faraway Washington bureaucrats to the needs of commerce in California.

This marvelous consignment contains three examples of the 1852 Moffat tens, but they are far more elusive than that might imply. There are really no recent auction offerings of coins comparable to the present piece. We offered an AU Details, Repaired NCS coin at our ANA Signature (Heritage, 7/2005), lot 7975, which nonetheless brought \$6,900. A problem-free VF30 PCGS example pedigreed to the *S.S. Central America* shipwreck brought \$8,050 in our Central States Signature (Heritage, 4/2010), lot 4108.

The present lightly circulated AU50 PCGS specimen shows only slight scattered marks consistent with the grade, along with a sharp strike and great eye appeal on the richly toned surfaces. This piece should prove to be an important bidding opportunity for collectors for whom the Mint State Moffat tens in this auction are simply out of reach. Listed on page 382 of the 2014 *Guide Book*.

PLATINUM NIGHT

1852 Moffat & Co. Close Date Ten Dollar, MS60
Finest Known Example By Far
Very Rare Close Date Variety

5420 1852 Moffat & Co. Close Date Ten Dollar MS60 NGC. K-8, R.6. Also known as Narrow Date or Close, Even Date. The San Francisco firm of Moffat & Co. opened an assay office in that city in June 1849, according to a June 21 advertisement in the *Alta California* newspaper. The firm's partners, John L. Moffat, Samuel H. Ward, Joseph R. Curtis, and P.H. Perry, touted that they "have erected suitable furnaces, and are provided with all the necessary apparatus and the most ample facilities for Smelting and Assaying Gold Dust." The ad further promised "the highest market price paid for Gold Dust." In late June or early July the company struck rectangular gold ingots of varying sizes and values, ranging from \$9.43 to \$264, due to the lack of circulating gold coinage. Today three sizes are known: \$9.43 and \$14.25 ingots, each unique and in the Smithsonian Institution, and the extremely rare \$16 ingots. Shortly afterward, likely by September 1849, Moffat & Co. struck five and ten dollar gold coins bearing that date.

Moffat & Co. was far from alone in sensing a market opportunity. Other assayers who set up shop and struck coins in California in 1849 included Norris, Gregg & Norris; Miners' Bank; J.S. Ormsby (in Sacramento); and, possibly, the Pacific Company.

Aside from Moffat & Co., none of this first wave of California assayers-coiners survived to their second year due to newspaper accounts that, correctly or not, reported that their products contained less gold than represented. A second wave of short-lived businesses sprang up in 1850 and did little better; their products, if accepted, were often steeply discounted. Unlike those companies, Moffat & Co.'s reputation was never seriously questioned, and their ingots and coinage passed at par.

Moffat & Co. and its successors, the United States Assay Office of Gold under Curtis, Perry, and Ward (after Moffat retired in February 1852), and Curtis and Perry (after Ward's death), continuously enlarged, evolving into what would become, in 1854, the United States Branch Mint at San Francisco.

The curious 1852 Moffat & Co. ten dollar coins would be the last appearing with the Moffat brand, struck in the Wide Date and Close Date varieties. They were an emergency issue struck at a time when Washington bureaucrats had finally given permission for the firm to strike gold coins in denominations smaller than the bulky octagonal fifty dollar pieces — only to revoke that permission the following day. Both communications arrived in mid-January 1852. The response on the part of Moffat & Co. was the production of the Moffat-branded ten dollar coins in the same month, bearing no identification tying them to official United States Assayer Augustus Humbert or the U.S. Assay Office of Gold.

The 1852 ten dollar coins bear a significantly different design from the 1849 Moffat pieces, and they show clear signs of being hastily produced. The obverse is similar to the federal-style 1849 coins, but the reverse bears an 880 THOUS: fineness claim along with 264 GRS. CALIFORNIA GOLD and TEN D. beneath the familiar eagle, scroll, and rock device. The date is evenly spaced on the obverse, but the 2 is noticeably lower than the other digits. The lettering in TEN D. is askew, particularly the last letter which is tilted far backward. RNIA is lower than CALIFO.

This 1852 Close Date example is certified MS60 by NGC, the sole finest example graded at NGC and PCGS of this very rare variety; the finest at PCGS are two Close Date coins (or one coin twice) in AU50 (2/14). Full mint luster appears on medium orange-gold surfaces, which show extensive mostly light marks along with a few larger ones, accounting for the grade. The strike is quite sharp on Liberty's hair, the stars, and the cords of the hair bun, despite the primitive die-work. Some reflective, semiprooflike luster appears in the recesses below MOFFAT & CO. and underneath the forecurls. A similar effect appears on the reverse around some of the peripheral letters, and again the strike is impressively well-detailed.

It has been nearly four years since we offered an example of this very rare variety in any grade; the last piece was a VF30 PCGS example. Many survivors of this issue occur with various surface problems, and those certified at NGC and PCGS average a bit more than XF40. These are coins that circulated extensively, befitting the circumstances of their creation. As the sole finest Close Date Moffat ten certified, this piece represents an important bidding opportunity for Territorial gold specialists. Listed on page 382 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10252

1852 Moffat Ten Dollar, Wide Date, MS61 Possibly the Second Finest Known

5421 1852 Moffat & Co. Wide Date Ten Dollar MS61 NGC. K-9, R.6. The ten dollar gold pieces bearing the Moffat stamp were produced only in 1849 and 1852, although Moffat & Co. and its successor firm, the United States Assay Office of Gold, struck many other gold coins with the Augustus Humbert and Assay Office brands. The 1852 Moffat ten dollar coins were emergency issues, struck for a short period early in the year when permission to strike smaller-denomination coins under the Humbert/Assay Office nameplates was first granted, then immediately rescinded. Thus the Moffat ten dollar coins were hastily produced with new dies for the obverse and reverse, and the Moffat, rather than the Humbert imprint. The Close Date is also called the Close, Even Date, and the Wide Date the Wide, Uneven Date. The wider spacing between the 5 and 2 in the date is the obvious diagnostic.

Between the two die varieties, some 8,650 pieces were struck in mid-January 1852 as an emergency issue after San Francisco merchants and bankers petitioned Moffat & Co. for the coins. Donald Kagin writes in his standard reference from 1981 that “the 264 grains impressed on the reverse complies with comments by the United States mint assayers, Eckfeldt and Dubois, that California gold had to weigh 264 grains to render ten dollars’ worth of gold when refined.”

This marvelous consignment contains two examples of the 1852 Close Date and the present example of the 1852 Wide Date; having such rare coins side-by-side enables some die comparisons. The Close Date and Wide Date obverses were each paired monogamously with distinctive reverses as well:

Close, Even Date, Kagin-8

Obverse

Date closely spaced, 2 slightly lower

Two dots below Co

2nd F in MOFFAT lower

Star 1 higher and farther from bust tip than on Wide Date

Star 13 farther from bust tip than on Wide Date

Narrow rim with prominent denticles

Reverse

R and especially NIA lower

LI closely spaced

D in TEN D. rotated left at top and close to rightmost leaf

O lower than 88, S lower than THOU

Narrow rim with prominent denticles

Wide, Uneven Date, Kagin-9

Obverse

Date widely spaced, gap between 5 and 2

No dots below o in Co

2nd F in MOFFAT higher

Star 1 lower and closer to bust tip than on Close Date

Star 13 closer to bust tip than on Close Date

Wide rim with denticles weak or missing

Reverse

CALIFORNIA even

Wide gap between LI

T higher than EN, D in TEN D farther from rightmost leaf

O in THOUS larger than other letters

2nd 8 in 880 THOUS higher than other numerals

Wide rim with denticles less prominent

This MS61 NGC example of the 1852 Moffat & Co. Wide Date ten dollar coin is one of three such submissions at that service (2/14). NGC also shows an MS62 Prooflike coin in its Census. PCGS shows no examples of the Wide Date in Mint State. The wheat-gold surfaces of this charming piece display considerable eye appeal, and significant luster remains on both sides. Scattered marks are largely inconsequential. The strike is well-executed despite the somewhat primitive engraving of the hastily produced dies, and good detailing is seen on the hair, coronet, and star radials on the obverse. The reverse is very well-preserved and on its own might achieve an even finer grade.

Given the rarity of this issue overall and the added conditional rarity of this piece, we are unsurprised to find that this is the first Mint State offering of this Territorial variety since we began our Permanent Auction Archives in 1993. This piece poses an important opportunity for California gold specialists.

The Moffat ten dollar coins of 1852 are listed on page 382 of the 2014 *Guide Book*, which provides an Uncirculated price of \$72,500 for both Close Date and Wide Date variants.

From The Riverboat Collection. PCGS# 10254

**1852 Humbert Ten Dollar
884 Fineness, MS61
Very Rare Uncirculated Example**

5422 1852 Humbert Ten Dollar MS61 PCGS. K-10a, R.4. Moffat & Co., in its role as semiofficial branch mint and United States Assay Office of Gold in California, struck both overdated (1852/1) and normal-date 1852 ten dollar gold pieces of 884 fineness using the Humbert nameplate on the reverse. This example of the non-overdated variety shows several small peripheral die cracks typical of the late die state: through UNITED, the wing tip, and STA; from the F to the wing tip; through MERICA and the following period; and through DOLS. The sandy-gold surfaces show only small contact marks consistent with the grade, fewer than might be expected, and the eye appeal is excellent. Most survivors are well circulated, and true Uncirculated examples are rare. Only six coins have been graded MS61 or MS62 at both services. PCGS has graded two in MS61 and two in MS62 (2/14) with none higher. NGC has only certified one each in MS61 and MS62. The sole coin graded higher is the amazing Newman MS68, a possible specimen, which we sold for over \$1 million (4/13). The present example is seemingly undervalued in today's marketplace. Listed on page 382 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10187

1852/1 Humbert 'Double Eagle,' MS64 Sole Finest Certified *Guide Book* Plate Coin, Ex: Eliasberg

5423 1852/1 Humbert Twenty Dollar MS64 NGC. K-9, R.6. Ex: Eliasberg. 884 THOUS., as are all of the overdated 1852/1 Humbert twenty dollar coins. The U.S. Assay Office of Gold was established via congressional act in September 1850 under the auspices of Moffat & Co.; Augustus Humbert, who arrived in California in January 1851, was appointed chief assayer. This small issue, amounting to only 7,500 pieces, was reportedly struck all in a single day sometime between March 5 and April 2, 1852, according to both Breen and Kagin. Later 1852-dated (nonoverdate) twenty dollar gold pieces would be issued, but bearing the U.S. ASSAY OFFICE OF GOLD imprint rather than AUGUSTUS HUMBERT on the reverse.

These overdated 1852/1 twenty dollar coins and their companion 1852/1 ten dollar gold pieces were struck from dies that had been originally prepared in 1851, in anticipation of U.S. Treasury Secretary Thomas Corwin granting permission for Moffat & Co. and the official U.S. assayer of gold to strike coins in denominations smaller than fifty dollars. That permission was given in December 1851 and then lifted the very next day. An emergency issue of ten dollar gold pieces was struck in early 1852 with the Moffat brand, and in February 1852 the authorization was again given; the 1851 dies were overdated 1852/1, and ten and twenty dollar coins were struck that bore the Humbert-Assay Office identification.

Most examples of the 1852/1 Humbert twenty dollar gold coin, including the present finest known piece certified MS64 NGC, show a die crack joining many of the peripheral letters. This coin shows the crack extending all the way around the obverse periphery, with the sole exception of DOLS. The bright yellow-gold surfaces are quite reflective and prooflike, boldly struck, and simply distraction-free. A loupe reveals die polishing lines evident on each side, which, along with the near-pristine preservation, makes us wonder if this piece would have passed as a special presentation or specimen strike in early Gold Rush California. There is no conclusive evidence one way or the other, but in any case the exceptional surface quality makes this example stand out from the small surviving population. This piece is equally remarkable as the ***Guide Book* Plate Coin**.

The R.6 rarity rating of these seldom-seen "Humbert double eagle" pieces is possibly understated. Trades of this issue in any grade are infrequent; in fact, except for the Eliasberg coin at hand, we can find no auctions in Mint State for the issue in recent decades, at Heritage or elsewhere. We handled an AU58 NGC example in our Chicago Signature (Heritage, 8/2011), lot 7722, which brought \$38,813, and that is tied for the finest graded we have ever handled of this issue, prior to the appearance of this remarkable piece. The certified populations at both NGC and PCGS, particularly in Mint State, seem quite inflated. Listed on page 382 of the 2014 *Guide Book*. Census: 1 in 64 (the present specimen), 0 finer (2/14).

Ex: Louis E. Eliasberg, Sr.; *Eliasberg Collection* (Bowers and Merena, 5/1996), lot 345, where it was conservatively graded as "MS-60, prooflike, one of the finest known" (raw), realizing \$31,900.

From *The Riverboat Collection*. PCGS# 10193

1852/1 Humbert Twenty Dollar, MS61 Important Humbert-Imprinted Double Eagle From the United States Provisional Branch Mint

5424 1852/1 Humbert Twenty Dollar MS61 PCGS. K-9, R.6. 884 THOUS. Even though any Mint State K-9 1852/1 twenty dollar Territorial gold coin is a remarkable rarity, the present offering contains two examples — this MS61 PCGS coin, as well as an extraordinary MS64 NGC piece. All of the 1852/1 Humbert twenty dollar coins were made from a single overdated die pair.

As early as March 1851, Moffat & Co. requested permission from U.S. Treasury Secretary Thomas Corwin to coin gold in smaller denominations than the cumbersome fifty dollar gold pieces that were the only authorized denomination the company could strike in its official capacity as the United States Assay Office. In anticipation of approval of the request, the firm prepared obverse dies for round ten and twenty dollar gold pieces of .884 fineness, similar to the fifty dollar pieces, with the familiar eagle, scroll, and rock device on the obverse. The obverse denominations read TEN DOLS. and TWENTY DOLS., respectively. The reverse of each denomination bore an engine-turned design with rectangular nameplate in the center, reading AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA 1851.

Secretary Corwin gave permission for smaller-denomination coins to be produced in December 1851 — and promptly rescinded the request the next day. Both of those communications arrived in assayer Augustus Humbert's hands in January. The bureaucratic indifference to the needs of California commerce most likely incensed both Humbert and local businessmen.

In the interim, in early January 1852 Moffat & Co. issued ten dollar gold pieces that were quite unlike the earlier Moffat designs, and they were accepted eagerly in commerce. They bore the MOFFAT & CO. legend on Liberty's headband on the obverse, with the eagle, scroll, and rock reverse — but there was no mention of Humbert or the United States Assay Office.

After the permission to strike smaller-denomination coins was reinstated in February 1852, the dies previously made in 1851 with the Humbert identification were overdated 1852/1 and used to strike the ten and twenty dollar gold coins. The K-9 variety is the only Territorial issue of the twenty dollar denomination that bears the Augustus Humbert imprint, making it a particularly important issue from this historic era, another product of California's provisional branch mint before the San Francisco Mint was finally established in 1854.

This lustrous Mint State Humbert twenty dollar displays canary-yellow areas in the protected device crevices, complementing the prevailing rich, deep reddish-orange patina prominent in the fields, the obverse high points, and toward the rims on each side. The eye appeal is quite strong throughout. As on the MS64 example of this issue in the present auction, a die crack encircles most of the obverse peripheral legend. The strike is razor-sharp on this piece, further enhancing the great eye appeal. Listed on page 382 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10193

PLATINUM NIGHT

1852 Assay Office Fifty Dollar Gold, MS62
Rare 900 Thous. Variety
A Coin of Remarkable Quality and Beauty

5425 1852 Assay Office Fifty Dollar, 900 Thous. MS62 NGC. K-14, High R.5. The Humbert-U.S. Assay Office fifty dollar gold pieces were struck under the auspices of Moffat & Co. and its successor firm, the United States Assay Office of Gold. To numismatists today, the iconic octagonal shape of these coins is part and parcel of the California Gold Rush era, tangible evidence of a time that was “one of the most sensational in our national history,” as numismatist Edgar H. Adams wrote in his 1913 work, *Pioneer Gold Coinage of California, 1849-1855*. The coins have been among the most desirable California Territorial gold coins for decades — so much so that, when the 1915-S Panama-Pacific gold coins were issued, those commemorative fifty dollar gold pieces were offered in round or octagonal formats, the latter paying direct tribute to their illustrious forebears.

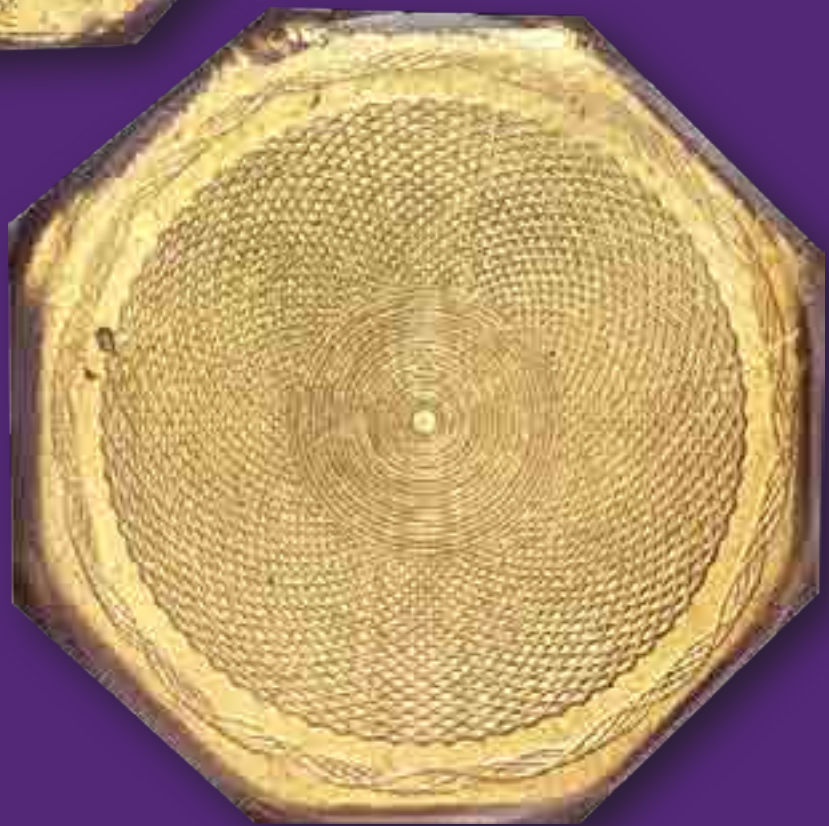

But in the early Gold Rush days, the large fifty dollar gold pieces were scarcely considered coins at all. They were rather just so much bullion, a known quantity of gold of a given purity and weight (and therefore of a known value), assayed by the U.S. government official in charge of that function, Augustus Humbert.

The fifty dollar coins of 1851-52 were cumbersome pieces that were necessary but largely despised, needed for the payment of Customs duties but too large for most commercial transactions. The original obverse dies for the Lettered Edge 1851 fifty dollar pieces had (blank) D (blank) C on the obverse for dollars and cents, where the assayer-coiner could engrave or punch odd amounts, in theory; in practice only pieces in fifty dollar amounts were issued. The work-intensive Lettered Edge coins were soon revised to the more-efficient Reeded Edge pieces, issued with the Humbert and U.S. Assay Office imprints. The plethora of contemporary names for these coins included “ingot,” “slug,” “adobe,” “quintuple eagle,” and “five-eagle piece.”

The U.S. Assay Office fifty dollar pieces dated 1852 were issued in 887 and 900 fineness, the latter actually struck in early 1853. Once the San Francisco Mint opened the following year, 1854, the great majority of the fifty dollar pieces were melted and recoinced into federal gold of smaller denominations. The 1852 900 fine K-14 coins are rarer across the board, although only slightly more so, than their 887 fine siblings.

The present MS62 NGC K-14 example is one of only two submissions in this grade at NGC, and a single MS64 is finer at that service (2/14). This is a coin of remarkable quality and beauty; survivors of this rare issue, even when graded, average somewhere between XF45 and AU50, and an example in Choice AU is a notable rarity. This MS62 example shows abundant luster on each side of the blond-gold surfaces, which deepen to rose tinges near the lower obverse, in the date area. The legend UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO CALIFORNIA 1852 is bold all the way around the periphery, as is the FIFTY DOLLS. and UNITED STATES OF AMERICA inside the inner circle. A few inconsequential surface ticks dot each side, in concert with the grade, but this piece is free of major marks. The vertices of the octagon are notably free of the rim bumps and crushes that normally plague these coins. There are a few edge anomalies, as made, including two small planchet voids near the rim, just below the 1 in the date, near the lower-left obverse vertex. Another small void appears just above the O in CALIFORNIA. Notice how sharply the small (and large) feather details are brought up on the eagle's wings, and observe the evidence of tiny texturing details on the rock (which is usually seen worn smooth). The engine-turned reverse is equally sharp, although the regularity of its design makes the few scattered, small contact marks stand out against the background. Listed on page 383 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10019

**1852 Assay Office Fifty Dollar, 900 Thous., MS63
Iconic Issue From the Provisional Branch Mint
High Within the Condition Census for the Issue**

5426 1852 Assay Office Fifty Dollar, 900 Thous. MS63 PCGS. K-14, High R.5. In a pattern that would repeat worldwide wherever major gold deposits were found — often in conjunction with silver, copper, and other minerals — the earliest miners would have to content themselves with using “pinches” of gold dust of approximated values for commercial transactions. Enterprising private assayers-coiners would soon move in, however, assaying gold dust (sometimes) more reliably and producing coins and/or ingots that would be more commercially viable. The longest-lived of such assayers-coiners would be, of course, those whose products were perceived to be of good value.

These unofficial entities would sometimes be supplanted (or supplemented) by semiofficial or official mints when the supply and demand for gold coinage was sufficiently long-lasting. This is a theme with variations that played out not only in California but also in Georgia, North Carolina, Colorado, Nevada, Australia, Canada, the Yukon Territory of Alaska, South Africa, and Brazil during the late 18th to the early 20th centuries.

John L. Moffat sailed aboard the bark *Guilford* from New York in February 1849, opening an assay office in San Francisco in June of that year with partners Messrs. Curtis, Perry, and Ward. Moffat & Co. made rectangular ingots as well as five dollar and ten dollar gold coins beginning in September 1849. Other early private coiners, such as Norris, Gregg, & Norris, Miners’ Bank, and several others, saw their products rapidly fade from commercial circulation due either to poor quality or the perception thereof. Attempts were made in 1850 to outlaw the production of private gold coinage in California by making it a misdemeanor; those attempts failed, owing to the scarcity of circulating gold coins and ingots. Unfortunately, underweight and sometimes counterfeit gold bars and ingots were prevalent, the combined results of greed, incompetence, and fraud.

In November 1850 the popular newspaper *Alta California* announced the appointment of Augustus Humbert as United States assayer of gold “with the proprietors of some well established assaying works, now in successful operation in California.” That unidentified firm was, of course, Moffat & Co., the most prominent, successful, and longest-lived of the California Territorial gold coiners. The firm began issuing rectangular gold ingots in 1849, of which three denominations are known today.

Moffat & Co. also issued five and ten dollar gold coins, and later twenty dollar gold pieces, that closely imitated the federal style, save for replacing LIBERTY on the headband with MOFFAT & CO. John L. Moffat retired in February 1852, and the remaining partners, Curtis, Perry, and Ward, reorganized as the U.S. Assay Office.

After the appointment of Augustus Humbert as United States assayer in late 1850, Humbert stamped his name and the U.S. government imprint on the gold ingots of Moffat & Co., attesting to their purity and value. The Moffat & Co. and U.S. Assay Office enterprise was, in effect, a provisional U.S. branch mint. Their fifty dollar octagonal gold pieces, as well as other smaller-denomination coins issued from 1851 through 1853, passed at par with federal gold coins (although the latter were seldom seen).

The Humbert and U.S. Assay Office coins were the first Territorial gold coins that bore the official imprint of the United States of America and of its official assayer, Augustus Humbert. This gave the Humbert-Assay Office fifty dollar pieces and other denominations a cachet and respectability that coins from private, unofficial coiners simply could not match. The 900 fineness Assay Office fifty dollar coins, despite their 1852 date, were struck in January and February 1853 on an emergency basis. During this period, other private coiners had ceased operations, and yet the San Francisco Mint would not open for another year. The planchets were assayed and the coins struck to the federal 900 fine standard.

The 900 fineness Assay Office fifty dollar coins are rarer across all grade levels than the 887 fine pieces, and the present MS63 PCGS example is certainly high within the Condition Census for the issue. PCGS shows two submissions in MS63 with one higher in MS64, and NGC also shows one piece in MS64 (1/14). This piece displays medium yellow-gold surfaces with blended traces of auburn and orange that offer eye appeal and preservation that are nothing short of extraordinary. The peripheral legend UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO CALIFORNIA is bold all the way around the periphery, and all of the central details are boldly brought up. A few stray marks are minor and as expected on these large, soft gold coins. Small irregularities in the planchet near the edges of each side are as made. A small dig on the reverse between the inner and outer rings at about 9:30 will help pedigree this piece. Listed on page 383 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10019

1852 Assay Office Ten Dollar, MS62 Beautiful Two-Toned Surfaces

5427 1852 Assay Office Ten Dollar MS62 PCGS. K-12a, R.4. Moffat & Co., along with its successor entities, was by far the most prominent, important, and longest-lasting of the many California gold coiners and assayers. It was the only firm that struck coins and/or ingots as early as 1849 as well as in later years, up until 1853. The ten dollar coins dated 1852 come with both the Augustus Humbert and U.S. Assay Office nameplates on the reverse, the latter appearing after John L. Moffat had retired from the firm in February 1852. The 884 fineness of both types was typical of the California gold, which was generally found in native form alloyed with silver, and characteristically somewhat below the Federal 900 fineness standard. The present U.S. Assay Office ten dollar coin is certified MS62 by PCGS, one of nine submissions in this grade with three finer (2/14). Beautiful, original surfaces are the hallmark of this piece, alternating reddish-orange with yellow-gold on the nameplate and sandy-gold on the balance of the reverse. The sharp strike on each side and few singular marks create generous eye appeal. Listed on page 383 of the 204 *Guide Book*.

From The Riverboat Collection. PCGS# 10001

1853 Assay Office Ten Dollar, AU53 Very Rare 900 Fineness Variety

5428 1853 Assay Office Ten Dollar, 900 Thous. AU53 PCGS. K-16, R.6. The 1852 Assay Office and Humbert ten dollar gold pieces used the abbreviation TEN DOLS. on the reverse. In 1853 the Assay Office coins shortened it further, to TEN D., as it appeared on the federal eagles of that year. The Assay Office ten and twenty dollar coins, and the enigmatic Moffat-style twenties of 1853 (which imitated the federal style), were the last coinage of Moffat & Co. and its successor entities. The Curtis and Perry partnership was dissolved in December 1853, and the San Francisco Mint opened for coinage in 1854. The K-16 Assay Office ten dollar coins of 900 fineness are very rare as a variety. The present piece displays light field chatter and minor wear consistent with the grade. The orange-gold surfaces offer significant eye appeal and are excellently preserved overall. Listed on page 383 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10007

1853 Assay Office Ten Dollar 900 Fine, MS63 Impeccable Quality, Tied for Finest Graded

5429 1853 Assay Office Ten Dollar, 900 Thous. MS63 PCGS. K-16, R.6. In February 1852 the Moffat & Co. firm reorganized as the United States Assay Office of Gold under the remaining partners Curtis, Perry, and Ward, John L. Moffat having retired. San Francisco Customs collector T. Butler King was directed by Treasury Secretary Thomas Corwin to accept the new firm's coinage for lawful Customs payments.

In January and February 1853 the U.S. Assay Office of Gold struck the last of the fifty dollar octagonal slugs, of 900 fineness and dated 1852. A new table of tariffs — the amount the firm charged for coinage, based on the volume of gold deposited — obviated the need for the large-denomination coins. An 1853 article in the *Alta California* newspaper listing the table of tariffs showed that ten dollar gold coins, in sufficient volume, would be charged at a 2% rate, and twenty dollar gold coins at 1.5 % with sufficient volume. This note concluded the article:

"It will be apparent on examining the above that the issue of [fifty dollar] ingots will for the present cease, as no person would pay the same percentage for coining them (1-1/2 percent, the rate) as for \$20 pieces. We may therefore reasonably congratulate ourselves on having soon a circulating medium without any of the objections so long and strenuously urged against the octagon."

Given the tariff structure, it is certain that more twenty dollar gold coins were struck than ten dollars; it matters little today, however, as both denominations were subjected to heavy melting once the San Francisco Mint opened in 1854. The overwhelming preference was for federal gold over private issues, even those of the well-respected Moffat-Humbert-Assay Office brands.

This MS63 PCGS-graded U.S. Assay Office ten dollar piece is one of two such submitted to PCGS, and none are finer (2/14). NGC shows only a single coin in this grade. The surfaces on this example show remarkable preservation, an impeccable strike, and extremely attractive orange- and sandy-gold coloration throughout; no detracting marks are seen. Note the sculptural detail on the eagle's wings and the originality of the surfaces, both due to decades of careful preservation. This piece is a Territorial coin of noteworthy quality and an important opportunity for collectors of Western gold. Listed on page 383 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10007

1853 Assay Office Twenty Dollar, MS63 Rare 884 Thous. Variety Tied for Finest Graded

5430 1853 Assay Office Twenty Dollar, 884 Thous. MS63 NGC. **K-17, Low R.7.** The Humbert/U.S. Assay Office twenty dollar pieces were issued in 1852 and 1853, the 1852 coins actually overdated 1852/1 and bearing the Augustus Humbert nameplate on the reverse. In 1853 the twenty dollar coins bore the United States Assay Office nameplate on the reverse, indicative of the retirement of John L. Moffat and the reorganization of the firm as the U.S. Assay Office of Gold under the remaining partners, Curtis, Perry, and Ward.

The 1853-dated Assay Office twenty dollar coins were struck in two finenesses, 900 and 884. The 900 fine pieces matched, of course, the federal standard, while the 884 fine coins are anomalies with an interesting backstory. On August 31, 1852, Congress passed a bill requiring that any coinage accepted for Customs payments adhere to the federal 900 fineness standard. Assistant Treasury Secretary William L. Hodge wrote to San Francisco Customs collector T. Butler King, revoking his authority to collect sub-900-fine coinage for Customs payments — this, in what was by far the most important port on the West Coast at the time. Donald Kagin wrote in his 1981 reference on private gold that “the effect was virtually to deprive California of all legal currency.”

The Herald newspaper at the time published an article revealing that California Senator William M. Gwin had vigorously supported the measure. As Kagin explains it, Gwin believed that the continued support and encouragement of the United States Assay Office as a provisional branch mint was, in effect, preventing or delaying the establishment of an official branch mint in San Francisco — a recommendation that had been made as early as December 1848 by President James K. Polk in an address to Congress.

Although the Assay Office could by late 1852 make 900 fine gold coinage (as a result of the temporarily purer gold deposits received), to strictly adhere to the federal standard (set in 1837) would also require an alloy of at least 50% copper admixed with the remaining silver. This requirement for copper alloy was made moot at an October 9, 1852, meeting of local businessmen with Customs collector King. The businessmen agreed to indemnify King against loss — he was in a difficult position, serving not only as the Customs collector but also as the assistant treasurer for California — and he agreed to again accept the 900 fine Assay Office coins even though they lacked the requisite copper alloy.

The transient shortages of parting acids would return in 1853 (as they did during the early years of the San Francisco Mint), and the Assay Office could only make lower-fineness gold coins, of 880 and 884 thousandths' purity. There was again an acute shortage of lower-denomination gold coins. Assayer Humbert delayed as long as possible, then produced dies engraved first with 880 fineness, then 884, contravening the latest Congressional mandate. Soon afterward the parting acids arrived, but not before a few 884 fineness ten and twenty dollar pieces had been struck off. The majority were remelted into 900 fine coinage soon after, making the survivors especially rare, even within the already-rare context of Territorial gold. (The 884 fineness twenty dollar coins, K-17, are all 884 over 880; the 900 fineness twenty dollars of 1853, K-18, are 900 over 880.)

This example of the K-17 884 fineness twenty dollar coin in MS63 is tied for the best at NGC with one other submission; the highest graded at PCGS are two in MS62 (2/14). The prevailing sandy-gold surface color is punctuated with daubs of deeper orange and lilac patina on surfaces that show impeccable preservation. The strike is quite sharp, both on the obverse with the familiar eagle, scroll, and rock motif as well as on the engine-turned reverse. This is another Territorial coin of immense importance in this impressive consignment. Listed on page 383 of the 2014 *Guide Book*.

PLATINUM NIGHT

1853 Moffat Twenty Dollar, MS62 Puzzling Late-Gold Rush Numismatic Curiosity

5431 1853 Moffat & Co. Twenty Dollar MS62 NGC. K-19, High R.5. The Moffat & Co. twenty dollar pieces of 1853 are a fairly close imitation of the federal-style double eagles of the same period, save for the imprint of MOFFAT & CO. rather than LIBERTY on the coronet and SAN FRANCISCO CALIFORNIA around the upper reverse rim rather than UNITED STATES OF AMERICA. No stated fineness appears.

Numismatists and historians of the California Gold Rush find the existence of the Moffat & Co. twenty dollar pieces dated 1853 puzzling. Why would the company revert to the Moffat & Co. brand for 1853-dated coinage, when earlier in the year they had used the Assay Office nameplate for both the 884 and 900 fineness coins of the same denomination?

At least a partial answer comes in the form of an advertisement that appeared the *San Francisco Herald* on July 26, 1853, as published in Donald Kagin's 1981 reference:

"Curtis & Perry, survivors of Curtis, Perry, and Ward, having for the present discontinued operations under their contract with the Secretary of the United States Treasury, for Smelting and Assaying Gold in California, announce to the public that they will continue to receive deposits of gold for smelting and assaying into bars and ingots on the same terms as heretofore.

"Their BARS will be stamped 'CURTIS, PERRY & WARD', 'AUGUSTUS HUMBERT, ASSAYER', together with their weight and fineness.

"Their issues of TENS and TWENTIES will be stamped on the obverse: 'MOFFAT & CO' and on the reverse, 'SAN FRANCISCO, CALIFORNIA,' and will be nine hundred thousandths fine. The weight of the former will be 258 grains, and of the latter 516 grains.

"The name of the old firm, 'Moffat & Co.' is retained in accordance with the articles of dissolution.

"Augustus Humbert, Esq., will continue his connection with the establishment, and superintend, as formerly, the Assaying department."

While this explains the source for these anomalous designs, it explains neither the reason for their creation, nor why the surviving company would issue private gold coinage when the laws of the new State of California expressly forbade it. Neither does it explain why no bars bearing the Curtis, Perry, and Ward stamp are known, nor why only the twenty dollar Moffat coins of 1853 are known today. No ten dollar pieces surviving with the 1853 Moffat brand are known to the numismatic community. John L. Moffat retired in February 1852 and Samuel Ward died in April 1853, so this was clearly a decision undertaken between Curtis and Perry, and possibly included Humbert. Even more confusing is that the Assay Office of Gold continued to exist as an entity until December 14, 1853 — and 900 fine twenty dollar coins with the Assay Office nameplate on the reverse were struck in abundance during the year.

A final curiosity concerning the Moffat twenty dollar gold coins concerns their departure from the Assay Office designs in favor of something resembling a federal motif, and the omission of any fineness. Perhaps the pieces were struck to test the waters of a contemplated split between Moffat & Co. (or its surviving partners) and its official character as the United States Assay Office? While the pieces are beautiful and well-executed, they remind numismatic researchers that many questions regarding Gold Rush era history and coinage remain to be answered.

Edgar Adams writes in his pioneering 1913 work on *Private Gold Coinage of California* that "Just what reason they [Curtis, Perry, and Ward; Adams was apparently unaware of Ward's death in April 1853] could have had for the striking of a piece bearing their private stamp at a time when the United States Assay Office was in full operation, and when pieces of that stamp of \$10 denomination were being made, is not however apparent."

This MS62 NGC-certified piece is tied with one other at that service, and one MS63 is finer (3/14). The finest at PCGS is a single MS61 example, the sole Mint State PCGS coin. The medium-gold surfaces show a sharp strike and excellent preservation overall, producing top-notch eye appeal. The execution of the dies is not quite on a par with federal standards, but it is close. These coins are many times more rare in Uncirculated condition than their Kellogg & Co. counterparts struck in 1854-5. This numismatic curiosity from the Gold Rush era represents yet another important opportunity, both for bidders and researchers. Listed on page 384 of the 2014 *Guide Book*.

1849 Pacific Company Gold Dollar, MS61 The Finest of Only Three Examples Known

5432 1849 Pacific Company Gold Dollar MS61 NGC. As late as 1988 it was widely publicized, and generally believed, that no Pacific Company dollars struck in gold existed. In his landmark reference published that year, Walter Breen stated: "Of the \$1, only silver and tin trial pieces survive (there is no proof any gold striking was ever made) ..." This is a curious statement (as many of Breen's statements are today after more extensive examination) as his previous employer, Wayne Raymond, had published a listing in 1931 along with a photo of a Pacific Company gold dollar in *Private Gold Coins Struck in the United States, 1830-1861*.

The most complete story of this coin and its discovery as a gold coin, rather than a silver-gilt piece, is contained in a press release from NGC on August 15, 2002, after Stuart Levine recognized this piece as a gold coin from examining a test cut appearing on the edge. In an extended quote from NGC and Levine, the background and recently discovered status of this piece were discussed.

"The newly confirmed specimen appeared as Lot 943 in The Rarities Sale, ... by Bowers & Merena Galleries, held July 31, 2002. It was therein described as silver-gilt, and no data was provided on the coin's specifics. The specimen had previously been part of the vast holdings of famed collector/hoarder Virgil M. Brand, who acquired it from a Ben Green auction of August, 1910. It was last sold publicly in 1984 in Bowers & Merena Galleries' sale of the Virgil M. Brand Collection and had resided within the Jay Roe Collection of pioneer gold coins until appearing at auction last month. As this newly confirmed gold specimen is undamaged aside from a small test mark on its obverse rim, it is easily the finer of the two examples known.

"Acting on his suspicion that this was, in fact, an actual gold striking, dealer Stuart Levine bid liberally and secured the lot after fierce competition with a telephone bidder. Levine then submitted the coin to NGC, requesting that it be tested in a non-destructive manner to determine its actual composition. This proved to be .722 gold, .168 silver and .110 copper, as compared to the federal standard of .900 gold and .100 silver and copper. This low gold fineness is not unusual with pioneer coins. The bullion was often coined as found, the minters compensating for any discrepancy by increasing the coin's weight. For example, the gold dollars minted by the Bechtler Family in North Carolina ranged in weight from 30 grains down to 27 grains. Indeed, this specimen weighs 29.56 grains, noticeably heavier than the U.S. Mint standard of 25.80 grains."

The lack of gold of this Pacific Company gold dollar is a story that is familiar to the underweight (and subsequently devalued and discredited) Mormon coinage. The concept of "relative fineness," as defined by Sheridan L. McGarry in his 1950 *Numismatist* articles on Mormon gold coins and currency, rests on the assumption of the purity of California gold. In the case of the Pacific Company gold dollar, the native gold used in the coin obviously did not contain enough gold to bring it to a dollar in value, thus leading to the increased weight of 29.56 grains. Another of the three Pacific Company gold dollars, found with a metal detector in 1999, has been metallurgically analyzed. That coin was found to contain 64.5 % gold, 16.1% silver, 8.9% copper, 5.3% silicon, 4.0% aluminum, and 1.1% iron. Apparently, different locations of the native ore accounts for the differing variations in composition between that piece and the current one.

A surprising amount of background information exists on the Pacific Company, a company that was organized to strike coins needed in Gold Rush era California. Several pages are devoted to the background of Pacific Company and its subsequent owners, Frederick D. Kohler and David C. Broderick, in Edgar Adams' volume *Private Gold Coinage of California* (1912). A brief version of the history of the company was included in the NGC press release from 2002:

"Pacific Company was a joint partnership of 38 individuals formed in January of 1849. Their goal was to reach California with the prospect of coining the gold bullion then in such abundance. Arriving in San Francisco September 16, the company disbanded before ever using the dies they'd commissioned in the East. Instead, the dies evidently were sold to the established assaying firm of Broderick & Kohler in San Francisco, which then produced eagles and half eagles for general circulation. When the coins proved to be worth less than their face value, recipients refused to take them except at steep discounts. Thus discredited, nearly the entire coinage was melted within just a few years, accounting for the great rarity of these issues."

This example is not only the finest, but also the only undamaged survivor. The surfaces are bright and faintly golden; it is easy to see how this and other Pacific Company gold dollars were mistaken for silver-gilt pieces in the past. The strike details are exceptionally strong on each side, and only the slightest high-point softness can be seen on the reverse. There is an interesting die crack on the left portion of the reverse, an indication that many more gold dollars were produced by Pacific Company before attrition through melting eliminated almost the entire production run. The test cut is located at 4 o'clock on the obverse rim, and as noted by Stuart Levine in 2002, shows no variation in color from the remainder of the coin. Today only three gold dollars are known to have survived of Pacific Company. The following is the most complete roster we have been able to compile of each example.

Roster of Pacific Company Gold Dollars

1. MS61 NGC. Ben Green Auction (8/1910); Virgil Brand, purchased in 8/1910 (this appears to be a private sale not an auction, Brand Journal number 54157); Great American Collection (J.C. Morgenthau, 10/1933), lot 275, bought in; Brand Estate - Armin Brand - Jane Brand Allen; Virgil Brand Collection, Part II (Bowers and Merena, 6/1984), lot 1545; Jay Roe Collection; Rarities Sale (Bowers & Merena, 7/2002), lot 943; Stuart Levine; the present consignor. **The present example.**

2. Fine 12 Soldered. Located by detectorist, Jerold Reinford, in New Bethlehem, Pennsylvania (June 1999); Paul S. Mory Collection (Bowers and Merena, 6/2000), lot 1041; American Numismatic Rarities (8/2006), lot 1128.

3. Holed. H. O. Granberg (1914 ANS Exhibition); Newcomer; Mehl (circa 1931); Charles Williams (Numismatic Galleries 1951 FPL); possibly to Lammot duPont; Willis duPont, and stolen in 1967.

1849 Pacific Company Five Dollar, AU58 Only Four Examples Known Finest Certified, Ex: Garrett

5433 1849 Pacific Company Five Dollar AU58 PCGS. K-1, High R.7. The 1849 Pacific Company five dollar gold piece is one of the rarest and most mysterious coins in the Territorial gold series. Heritage Auctions has never offered an example of this famous rarity in gold before, although there was a gilt copper pattern in lot 9034 of our September 2002 Long Beach Signature Auction. A diligent search of auction records yields no public offering of a Pacific Company five dollar piece in gold since the Coles Collection (Stack's, 10/1983), more than 30 years ago. Population data shows only two examples certified, a single coin at NGC in XF45 and the present AU58 PCGS specimen (1/14). We are privileged to offer the finest certified example of this historic Territorial gold issue, one of the most important coins in this remarkable sale.

Little is known about the origins of the 1849 Pacific Company five dollar gold piece, or its closely related one and ten dollar counterparts. In *Private Gold Coins and Patterns of the United States*, Donald Kagan lists four companies connected with the California Gold Rush that were formed in 1849 with the word Pacific in their official names. All of these companies are possible originators of the dies used to coin these issues, but the most likely candidate is the Pacific Company, which was formed on January 8, 1849 by Boston merchant John W. Cartwright. The Pacific Company consisted of 38 members who purchased the ship *S.S. York* at Boston and sailed for California, arriving in San Francisco on September 16, 1849. They continued on to Benicia, but the company began to break up almost immediately after arrival and was formally dissolved on October 20, 1849. While it is not certain that the Pacific Company was the entity that devised the coinage plan that resulted in the 1849 Pacific Company issues and created the dies for their coinage, the chronology of this group fits the known facts best.

Most evidence (method of manufacture, chronology, and known fineness of the various issues) indicates that the firm of Kohler & Company actually struck the Pacific issues. The firm was a partnership of F.D. Kohler and David C. Broderick, backed by Col. Jonathan D. Stevenson. The colonel commanded a regiment of New York volunteers sent to California during the Mexican War and became one of the first men to strike it rich when gold was discovered in 1848. Both Kohler and Broderick were former firemen in New York, with Kohler also working as a jeweler, metal worker, and assayer. Broderick was an expert stone cutter. Kohler did the engraving and assaying for the firm, while Broderick handled the heavy work of melting the gold, pouring it into ingots, weighing the resulting bars, and striking the coins. The coins were struck in the ancient manner, by a sledge hammer, rather than a coin press. Stevenson remained a silent partner and, along with a few English investors, provided financial backing.

The dies for the coins were acquired by Kohler & Company sometime in late 1849. The designs for all the denominations were similar, with the obverse featuring an eagle with spread wings and head to left, holding an olive branch in the right talon and a hammer in the left, with PACIFIC COMPANY, CALIFORNIA around and the date below. The reverse displays a radiant Phrygian cap on pole, with 30 stars arranged in groups of three between the rays and the denomination below. The radiant cap is similar to the device seen on many Mexican coins of the period and may have been chosen because of its familiarity to the general public, as California was part of Mexico until 1846. The edge of the five dollar coin is reeded, but both plain and reeded edge ten dollar pieces are known. One, five, and ten dollar coins are known in gold, but several off-metal patterns exist from Pacific Company dies, including two and a half dollar pieces in silver, some of which have been gilt. A few of these patterns have been struck over federal and foreign silver coins.

The Pacific Company coins were accepted at par initially, but assays conducted by Eckfeldt and DuBois for the U.S. Mint in 1851 revealed that the five dollar coin contained only \$4.48 value in gold and the ten dollar piece contained just \$7.76 worth of the precious metal. Once the report of this assay was made public, the coins became immensely unpopular and were only accepted at a steep discount. Most of the mintage was melted for recoinage, accounting for the rarity of the Pacific Company coins today. Of course, this imbalance between the face value and intrinsic value of the coins worked in favor of the manufacturers, resulting in high profits for Kohler and Broderick. Both men earned a fortune quickly through their assaying and coining operations and investments in real estate. Broderick was elected state senator in January 1850 and left the business shortly thereafter. He became a U.S. Senator in 1857, and was killed in a duel over the issue of slavery (he was an abolitionist) on September 13, 1859. Kohler continued the business after Broderick left, but only for a short time. He sold the equipment and facilities to Baldwin & Co. in March of 1850, long before the Eckfeldt and DuBois assay that caused the Pacific Company coins, and many other private issues, to fall into disrepute. Kohler was commissioned Assayer for the State Assay Office in April 1850 and became the first chief of the San Francisco Fire Department. He died of kidney failure in San Francisco on December 6, 1864.

Because much of the mintage was melted in the 1850s, the Pacific Company issues have always been very rare. The earliest appearance of any Pacific issue we can trace was the ten dollar coin offered in lot 1755 of the J.N.T. Levick Collection (Woodward, 5/1884):

"1849. Ten Dollars. Radiated Liberty cap, surrounded by stars; rev., eagle with olive branch and hammer, Pacific Company, California. An original piece; gold, full weight and value; rudely struck, but fine, *extremely* rare. Plate."

It is interesting to note Woodward's insistence on the composition and value of the coin. Perhaps some of the off-metal patterns had been gold plated and passed off as gold pieces by contemporary con men. Lot 1762 in the same sale was an 1849 Pacific one dollar pattern in tin. We can find no public offering of a Pacific Company five in the 19th century.

The early history of the coin offered here is unknown. It first appeared in lot 935 of the Garrett Collection, Part II, where the cataloger called it "A splendid example." Unlike almost all lots in that catalog's Territorial gold section, no pedigree information was included in the description. The coin may have been acquired in the 19th century by T. Harrison Garrett, or it may have been purchased by one of his sons at a later date. It was not included in the inventory of Territorial and Colonial pieces that John Work Garrett purchased from Col. James Ellsworth in 1923.

The present coin is an attractive near-Mint example that exhibits sharp definition in most areas, but displays a touch of softness on the eagle's legs, a trait that is seen on all four of the surviving examples. The pleasing orange-gold surfaces show only minor contact marks, with a circular planchet flaw in the obverse field, above the eagle's right (facing) wing, that serves as a pedigree marker. Traces of mint luster are evident in protected areas. The dies were misaligned, with the reverse rotated about 45 degrees clockwise. PCGS has encapsulated this coin with the side usually identified as the obverse in the reverse position, because of the eye-catching quality of the Cap and Rays design. This example, which has not been offered publicly in more than 34 years, possesses a combination of absolute rarity, intriguing origin, illustrious pedigree, and pleasing appearance. It may be decades before a comparable specimen becomes available. Listed on page 386 of the 2014 *Guide Book*.

Roster of 1849 Pacific Company Fives

- 1. AU58 PCGS.** Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 935, realized \$180,000; **the present coin.**
- 2. XF45 NGC.** Possibly Bruce Cartwright; DeWitt Smith; Virgil Brand, circa 1908; Horace Brand; Robert Friedberg; Brand-Lichtenfels Collections (Kreisberg-Schulman, 3/1964), lot 2211; Gibson Collection (Stack's, 11/1974), lot 200; Public Auction Sale (Stack's, 9/1981), lot 417; Coles Collection (Stack's, 10/1983), lot 252, realized \$57,750; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1813; Paul Padget; Stuart Levine and Donald Kagin: Private Collection.
- 3. Grade unknown,** but on the Newcomer plate it appears to have full detail, possibly cleaned. Waldo Newcomer; possibly "Col." E.H.R. Green; Charles Williams; purchased by Willis duPont circa 1951 for \$5,000, per Walter Breen.
- 4. AU50,** per numismatist David McCarthy, with a small obverse planchet flaw on the rim. Mint Cabinet; Smithsonian Institution.

PLATINUM NIGHT

1850 Dubosq & Co. Ten Dollar Gold Piece, MS60 Very Rare Territorial Issue Second-Finest Certified Example

5434 1850 Dubosq & Co. Ten Dollar MS60 NGC. K-2, R.7. The 1850 Dubosq & Co. ten dollar gold piece is one of the most elusive issues in the Territorial gold series. In his 1909 publication *Official Premium List of United States Private and Territorial Gold Coins*, Edgar Adams noted only two examples were known. As late as 1981, Donald Kagin rated the Dubosq ten dollar gold piece a High R.7 issue, meaning he was aware of 4-6 specimens in all grades. A few more have been discovered since, including one in the S.S. *Central America*, another found by a treasure hunter in Placerville, California, and the present coin. This piece was found by Allen Pankey, of Breckinridge, Colorado in the San Francisco Bay area in 1986 with the aid of a metal detector. Even with the recent finds, only eight coins are extant in all grades, with two examples in institutional collections and the status of one coin unknown since its theft in 1967. Heritage Auctions is privileged to offer the second-finest certified example of this rare Pioneer gold issue in just its second auction appearance.

The firm of Dubosq and Co. was founded by Theodore Dubosq, a Philadelphia jeweler, and his family in 1849. Apparently, the Dubosqs came to California for the express purpose of starting a private mint, as evidenced by the following account of their departure on the ship *Grey Eagle* in the January 18, 1849 edition of the *Philadelphia Evening Bulletin*:

"Mr. Theodore Dubosq, Sr., jeweler, North Second Street, we understand takes out with him the machinery for melting and coining gold, and stamping it with a private mark, so as to establish a currency which will afford the greater convenience and facility for dealing in the raw material."

The Dubosqs arrived in California on May 18, 1849, but they may not have set up business operations right away, despite the dire need for circulating coinage in the local economy. No 1849-dated coins are known with the Dubosq name, but a few pattern quarter eagles and half eagles in copper exist, so it is possible that gold coins were struck, but none have survived. The only surviving gold coins from Dubosq & Co. are the very rare 1850-dated five and ten dollar pieces. Edgar Adams believed Dubosq engraved the dies for the 1849 patterns himself, but there is much speculation that the 1850-dated coins were struck from dies engraved by James B. Longacre, Chief Engraver at the Philadelphia Mint. The design elements on the 1850 five and ten dollar Dubosq coinage closely resemble the motifs used for regular-issue federal coinage of that time, and a pair of Dubosq patterns were found in Longacre's estate, corroborating this theory. However, the 1849 copper patterns do not look at all like the 1850 gold issues, so it seems unlikely that Longacre engraved the 1849 dies. The case for Longacre engraving the 1850 dies is much stronger, and Donald Kagin accepted it in his *Private Gold Coins and Patterns of the United States*. However, when Kagin's offered the present coin in the 1986 ANA Convention sale, the cataloger thought it more likely that Albert Kuner engraved, or at least reengraved, the obverse.

Whoever engraved the ten dollar dies, they were certainly well-made and durable. They were apparently used to strike all the Dubosq ten dollar coins in 1850 and 1851 (without changing the date), and then sold to Wass, Molitor & Co. for use on that firm's 1852 ten dollar coinage. A careful comparison of the 1850 Dubosq ten dollar obverse, K-2, with that of the 1852 Wass, Molitor ten dollar gold piece, K-3, reveals the following similarities:

1. The placement of the stars and their orientation in relation to the dentils and the bust are an exact match.
2. The placement of the first three numerals of the date also matches.
3. The contours of the hair, coronet, and facial features are identical.
4. Both coins show 210 dentils on the obverse.

It would be virtually impossible to duplicate all these features so closely with the technology the California minters had at their disposal in the early 1850s. Kagin noted the final digit in the date had been drilled out and replaced by a 2, but he theorized that Wass, Molitor & Co. had prepared the die in late 1851 and had not used it that year, making it necessary to alter the date for 1852 coinage. It now seems more likely that it was the 0 in the Dubosq ten dollar die that was drilled out and replaced. Of course, the inscription on the coronet was extensively reworked. Remnants of the U and S of DUBOSQ are barely visible in the area of the first and second periods on the W.M. & Co. inscription. The Wass, Molitor coins have always been known for their weak strike, but the extensive reworking of the die probably accounts for much of the incomplete detail. Kagin noted that the reverse dies for the Dubosq ten dollar coins were also used by Wass, Molitor & Co., but we believe this is the first time the reworking and later use of the obverse has been noted.

Dubosq formed a partnership with a man named Goodwin in 1850, and it is likely that the firm began issuing gold coins at that time. Judging by later reports, their output must have been prodigious during this period. The San Francisco *Alta California* reported that Dubosq & Co. struck \$150,000 face value in gold coins during the first three months of 1851. Either the firm was still using the 1850-dated dies, or the entire mintage from this period was later destroyed, because no 1851-dated coins of any denomination are known today. Seven ten dollar coins and three five dollar pieces were assayed by Augustus Humbert, at the behest of James King of William, on March 21, 1851. The ten dollar pieces were found to contain on average \$9.93 worth of gold and the five dollar coins had an intrinsic value of \$4.96. Dubosq claimed the small difference in face versus intrinsic value was made up by the inclusion of silver alloy in each coin, which Humbert failed to evaluate in his assay. Even though the results of the assay were much better than those for many other firms, Dubosq & Co. was tarred with the same brush as the other private mints. The exact date when the firm stopped operations is not known, but the discredited coinage, which had circulated widely, was soon turned in for recoinage and the Dubosq coins became extremely elusive at an early date.

The first auction appearance of a Dubosq ten dollar gold piece was not until 1929, in lot 1357 of Thomas Elder's Dr. George Alfred Lawrence Collection:

"1850. \$10. Head of Liberty to left. DUBOSQ & CO. on coronet. 13 stars, date. Rx. Eagle holds arrows and sprig in talons. S. M. V. CALIFORNIA GOLD. Below, TEN D. Edge milled. A few edge nicks. Fine. Exceedingly rare. It is believed none has been offered at auction in forty years, if ever. It is said to have cost its owner several thousands of dollars. Adams # 39. **Perhaps the greatest headliner of this sale. Plate.**"

The lot realized \$3,900, a staggering price at the time, when the average car cost \$425 and the median price for a single family dwelling was \$7,882. PCGS has certified only four examples, the finest in AU50, while NGC has graded just two coins, this specimen in MS60 and another in MS61 (2/14).

The present coin is an attractive Mint State example, with sharply detailed design elements that show full star radials and just a touch of softness on the hair above the ear. The pleasing yellow-gold surfaces retain much of their original mint luster and show a scattering of minor contact marks. A shallow scratch between stars 10 and 11 and some light pinscratches in the left obverse field act as pedigree markers. This coin has been off the market for almost 27 years, and it may be decades before a coin with this combination of absolute rarity, great historic interest, and high technical grade becomes available again for public offering. Listed on page 387 of the 2014 *Guide Book*.

Roster of 1850 Dubosq & Co. Ten Dollar Gold Pieces

1. **MS61 NGC.** Found in a Placerville, California creekbed in 1985; purchased by Ron Gillio; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1814, realized \$55,000.
2. **MS60 NGC.** Discovered in the San Francisco Bay area in May of 1986 by Allan Pankey, of Breckinridge, Colorado, using a metal detector; ANA Convention Auction (Kagin's, 8/1986), lot 5456, bought-in at \$46,200; unknown intermediaries; **the present coin.**
3. **AU53 estimated grade.** Smith & Son; Stack's; Josiah K. Lilly; Smithsonian Institution.
4. **XF40 PCGS.** A specimen recovered from the wreck of the *S.S. Central America*; Gold Rush Treasures (Christie's-Spink, 12/2000), lot 122.
5. **XF estimated grade.** A specimen in the collection of the Bank of California.
6. **VF20 PCGS.** R.C.W. Brock; University of Pennsylvania; Phillip Ward; Rovensky-Hoffecker Collections (B. Max Mehl, 11/1954), lot 1919; Amon Carter, Sr.; Amon Carter, Jr.; Carter Family Collection (Stack's, 1/1984), lot 1153, realized \$38,500; San Francisco Collector; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1815; Charles Kramer; Kramer Collection (Stack's-Superior, 11/1988), lot 935, realized \$23,100; Jascha Heifetz Collection (Superior, 10/1989), lot 5550, realized \$25,850; Father Flanagan's Boys Home Sale (Superior, 5/1990), lot 6012, realized \$19,250.
7. **VF estimated grade.** Discovered in California by B. Max Mehl in 1914; Waldo Newcomer; B. Max Mehl, circa 1931; Charles Williams; Numismatic Gallery Monthly January 1951 FPL; Lammot duPont; Willis duPont; stolen in 1967; possibly recovered; present location unknown.
8. **VG 8 PCGS.** Joel Rettew Winter 1976 FPL; Jack Klausen; ANA Convention Auction (Kagin's, 8/1983), lot 3625, realized \$27,500; Paul S. Mory Collection (Bowers and Merena, 6/2000), lot 1042; offered by Bowers and Merena in the June 11, 2001 issue of *The Coin Collector* at \$49,500; Rarities Sale (Bowers and Merena, 1/2002), lot 849, realized \$29,900.

Additional Appearances

- A. A specimen reportedly in the possession of B. Max Mehl in 1923; sold to Virgil Brand for \$1,500.
- B. An example exhibited at the January 2, 1924 meeting of the Chicago Coin Club by Henry Chapman, per the March 1924 issue of *The Numismatist*. Walter Breen believed this was the coin in number 8 above. It might also be the coin in C below.
- C. Dr. George Alfred Lawrence; Lawrence Collection (Thomas Elder, 6/1929), lot 1357, realized \$3,900.
- D. **VF in 1948, possibly XF today.** DeWitt Smith; Virgil Brand in 1908 (Brand Journal number 47372); Brand Estate; Armin Brand; purchased by B.G. Johnson on 3/19/1946 for \$4,500; Jacob Shapiro (a.k.a. J.F. Bell); Hollinbeck Coin Company 1946 FPL number 28 at \$6,000, unsold; Jacob Shapiro; Memorable Collection (Numismatic Gallery, 3/1948), lot 960, realized \$1,950. Possibly the coin in number 3 or 5 above.

1850 Baldwin & Co. Five Dollar Gold Piece, MS61 Tied for Finest Certified at PCGS

5435 1850 Baldwin Five Dollar MS61 PCGS. K-2, R.5+. George Baldwin and Thomas Holman established a jewelry and watchmaking concern on Clay Street in San Francisco in 1849. Shortly afterward, they purchased F.D. Kohler's profitable coining operation, as he was preparing for his new position as assayer for the newly established California State Assay Office. Baldwin & Co. began issuing coins in five, ten, and twenty dollar denominations, which were initially well-received by merchants and bankers like Dunbar's Banking and Exchange Office and Tucker & Reeve, jewelers. According to Donald Kagin, Albert Kuner engraved the dies for the Baldwin coinage.

Henry Chapman gave a good description of the 1850 Baldwin & Co. five dollar gold piece, designated as the K-2 variety in Kagin's *Private Gold Coins and Patterns of the United States*, in lot 1862 of his catalog of the Matthew Stickney Collection (Chapman, 6/1907):

"1850 \$5. Head of Liberty with BALDWIN & CO., around 13 stars, below 1850. R. Eagle with olive branch in right talon, three arrows in left talon. S. M. V. (Standard Mint Value) CALIFORNIA GOLD, below FIVE DOL. Border beaded, edge milled. Very fine. Excessively rare, probably only about five known. See plate."

Unfortunately, Baldwin's coins were found to contain less than face value in gold when assayed by Augustus Humbert at the United States Assay Office in March of 1851. The five dollar pieces had an average intrinsic value of \$4.91 according to Humbert's findings. The assay was undertaken at the request of journalist James King of William, who was also a rival of Baldwin & Co. in the private coinage business and obviously had an axe to grind in the affair. Humbert himself was not a disinterested party, as Baldwin & Co. was the only private mint to nearly match the output of the Assay Office in its most productive years, 1850 and 1851. Baldwin claimed there was a plot by competitors to discredit his coins, and a later assay at the Philadelphia Mint was much more favorable in its findings, but there was an immediate backlash in the local press, and the public lost all confidence in the Baldwin & Co. coinage. Baldwin was forced to flee the territory in the face of this public outrage, and greedy merchants only accepted his coins at a steep discount, to be profitably turned in for recoinage at the Assay Office. By December of 1851, few Baldwin & Co. coins were still in circulation.

Although the Baldwin & Co. five dollar gold piece is not as elusive today as it was in Henry Chapman's time, it is still quite rare. In fact, true Uncirculated examples are extremely rare, with less than a handful known. PCGS and NGC list a combined total of 29 coins in their population tables, including an unknown number of resubmissions and crossovers. Territorial enthusiasts prize the Baldwin & Co. coins in all grades and conditions, and will no doubt seize this exceptional opportunity.

The present coin is an attractive MS61 example, with vivid orange-gold surfaces. Kagin notes this color indicates the presence of copper alloy in the native California gold. The design elements are sharply detailed and an often-seen die crack runs through the letters MV and the wingtip on the reverse. Some specimens of the K-2 variety show a heavy die break and cud on the obverse rim at star 12, but this coin was struck before that crack developed. The surfaces show some effects of die rust, in the form of tiny circular lumps on the fields, especially on the upper reverse. A number of minor contact marks are evident on the pleasing Prooflike surfaces, but none are large or distracting individually. The overall presentation is most attractive for this rare Territorial gold issue, which is tied with one other coin for finest certified at PCGS. Listed on page 387 of the 2014 *Guide Book*. Population: 2 in 61, 0 finer (3/14).

From *The Riverboat Collection*. PCGS# 10025

1850 Baldwin & Co. Horseman Ten Dollar Gold Piece, MS61 Sought-After Territorial Rarity Iconic Vaquero Design

5436 1850 Baldwin Ten Dollar MS61 PCGS. K-3, R.6. The obverse of the 1850 Baldwin & Co. ten dollar gold piece exhibits the celebrated Vaquero design, one of the most evocative and widely popular designs of the Territorial gold series. The die was engraved by Albert Kuner, inspired by a print entitled “Californians Throwing the Lasso,” which appeared in the 1831 publication *Narrative of a Voyage to the Pacific and Beering’s Strait* by F.W. Beechy. The original drawing was a watercolor by William Smyth, a member of the expedition. Unlike the typical coinage design of the Gold Rush era, which tended to be a simple, often crude, imitation of the familiar federal motifs, the Vaquero was an intricate, finely detailed depiction of Western life. Collectors have always prized this issue for its beauty, rarity, and purely American spirit.

The firm of Baldwin & Co. was originally established as a San Francisco jewelry shop. The principals were George C. Baldwin and Thomas S. Holman, but another partner named Bagley apparently took over Holman’s share of the business sometime before April of 1851. On April 1, 1850, Baldwin & Co. purchased the coining facilities and machinery of F.D. Kohler, as evidenced by the following advertisement in the *Pacific News*:

“Successors to F.D. Kohler & Co., assayers, refiners, and coiners, manufacturers of jewelry, etc. George C. Baldwin and Thos. S. Holman. All kinds of engraving. Our coins redeemable on presentation. The undersigned, having disposed of their stock in trade, machinery, etc., to Messrs. Baldwin & Co., would cheerfully recommend them to the confidence of the public. F.D. Kohler & Co.”

Baldwin & Co. issued both five and ten dollar coins in 1850 and, according to Edgar Adams, they “struck a large number of coins, probably outranking any of the private coiners who did business in 1850 or 1851, with the exception of the United States Assay Office.” For some unknown reason, Baldwin struck the Vaquero design for just one year, and then used it only on the ten dollar denomination. The following year saw tremendous mintages of Baldwin coins, in five, ten, and twenty dollar denominations during the first quarter of the year, but all those coins featured the familiar bust of Liberty on the obverse.

Baldwin & Co. alloyed their gold with copper, and it seems they were a bit too generous with their mixture, as an 1851 assay by Augustus Humbert revealed that the ten dollar coins were worth only \$9.74, a 2.6 % discount. The five and twenty dollar denominations were also found wanting, and great public outrage ensued against all the private minters, as abuses by several other companies were revealed by the assay as well. Public resentment against Baldwin & Co. was especially strong, and Baldwin attempted to restore the firm’s reputation by citing a more favorable assay by F.D. Kohler. He also accused rivals like Moffat & Co. of spreading false reports about his company, but nothing could stem the flood of bad press in the local newspapers. Baldwin and Bagley surreptitiously fled the state on a steamer headed east on April 15, 1851. Shortly afterward, the California Legislature banned all private mints in the state, except for the U.S. Assay Office.

Once the bad news broke, merchants rejected Baldwin & Co. coinage, except at a stiff discount. The coins rapidly disappeared from circulation and were eagerly turned in for recoinage after the San Francisco Mint opened in 1854. After only a few years, examples of the beautiful Vaquero design were seldom encountered. By the time coin collecting became popular in the late 1850s, almost the entire mintage had been destroyed. Experts estimate only 15-20 examples are extant today in all grades, an estimate that agrees well with the current population data. PCGS and NGC have combined to record a total of 17 submission events, including an unknown number of resubmissions and crossovers (3/14).

One of the earliest auction appearances of the 1850 Baldwin & Co. \$10 was in an auction held in Berlin in 1878, when Adolph Weyl offered the huge collection of Jules Fonrobert for public sale. Fonrobert was a wealthy industrialist who had traveled the world in his youth, acting as an agent for the House of Rothschild. After his return to Germany, he seems to have become an early version of Virgil Brand, buying coin collections intact and participating in auctions around the world to build up his collection, which eventually numbered more than 50,000 pieces. His North American holdings, more than six thousand lots, were sold by Weyl in February 1878. Lot 1452 was an example of the beautiful 1850 Baldwin \$10, which Weyl graded *Stempelglanz* (Uncirculated).

The Vaquero has appeared in its share of illustrious American collections, as well. Storied collections such as those of Mathew Stickney, Andrew Zabriskie, Virgil Brand, Louis Eliasberg, the Norwebs, and the Garretts all included an example of this popular Territorial issue. Henry Chapman described the coin in lot 1861 of the Matthew Stickney Collection (Chapman, 6/1907) as:

“1850 \$10. Cowboy mounted to right casting a lariat; above CALIFORNIA GOLD, beneath 1850, TEN DOLLARS. R. Eagle with shield on his breast, olive branch in right and three arrows in left talon; above BALDWIN & CO., at either side 5 stars; beneath SAN FRANCISCO. Borders beaded. Edge milled. Very fine. Excessively rare, possibly about five known. Only one offered in many years. See plate.”

An important feature Chapman overlooked in his description was the designer’s signature, A. KUNER, at the bottom left of the ground supporting the horse. The lot realized \$355, a strong price at the time. A few more specimens have surfaced since 1907, always inspiring spirited competition in their public offerings. The current auction record for an 1850 Baldwin \$10 is \$281,750, realized by the MS64 NGC coin in lot 7554 of the Chicago ANA Auction (Stacks Bowers, 8/2011).

The present coin is an attractive MS61 example with vivid orange-gold surfaces and vibrant mint luster on both sides. A few hints of prooflike reflectivity cling to the devices. Razor-sharp definition is evident on the obverse design elements, with individual strands showing in the horse’s mane and fine detail evident in the cowboy’s clothing. The pleasing surfaces show a scattering of minor contact marks, but none of the deep abrasions that plague so many Territorial gold issues.

This coin possesses outstanding eye appeal, great beauty of design, absolute rarity, and intense historic interest. It merits a place in the cabinet of an advanced collector of Territorial gold. Population: 2 in 61, 4 finer (3/14).

1851 Baldwin & Co. Ten Dollar Gold Piece, MS61
Classic Territorial Gold Rarity
Finest Certified at PCGS

5437 1851 Baldwin Ten Dollar MS61 PCGS. K-4, High R.6. After issuing the famous “Vaquero” ten dollar gold piece in 1850, the firm of Baldwin & Co. opted for a design that was more familiar to the general public for their 1851 ten dollar issue, no doubt hoping to widen the acceptance of their coins. The new design featured the familiar bust of Liberty on the obverse, surrounded by 13 stars, with the date below. Liberty’s coronet bore the inscription BALDWIN & CO. The reverse featured a heraldic eagle with the legend S. M. V. CALIFORNIA GOLD around and the denomination expressed as TEN D. below. The presentation was quite similar to the federal issues of the period. According to Edgar Adams, Albert Kuner engraved the dies.

Baldwin & Co. was immensely successful early on, due in part to their advertisements claiming banks and merchants like Dunbar’s Banking and Exchange Office and Tucker & Reeve, Jewelers would receive their coins at par. The San Francisco *Herald* reported Baldwin & Co. issued \$590,000 face value in gold coins, in denominations of ten and twenty dollars, from January through March of 1851. Among all California mints, only the U.S. Assay Office issued as many gold coins as Baldwin & Co. during this period.

Unfortunately, the success was short-lived. In March of 1851, James King of William sent samples of gold coinage from several private mints to Augustus Humbert for assay. The coins assayed included 13 Baldwin twenty dollar pieces, 10 specimens of the ten dollar coin, and 23 examples of the Baldwin five dollar issue. Humbert found the twenty dollar coins had an intrinsic value of only \$19.40, the ten dollar pieces were valued at \$9.74, and the five dollar coins were worth only \$4.91. King practiced several careers in California, including mining, banking, issuing private coinage, and journalism. He vigorously denounced the other private minters for issuing underweight coinage, and started a campaign in the local newspapers that soon drove all the private minters except the Moffat/Humbert/U.S. Assay Office complex out of business. An acute shortage of circulating coinage ensued, and California sank into a year-long economic depression.

Public outrage against Baldwin & Co. was especially strong, and all the firms’ coinage was refused by local merchants, except at a steep discount. After accepting the coins at approximately a 20% discount, the merchants turned them in posthaste to be melted. The coins soon disappeared from circulation and the 1851 Baldwin \$10 became even rarer than its 1850 Vaquero counterpart. By the time coin collecting became popular in this country, the 1851 Baldwin ten dollar gold piece was almost unobtainable. Collecting Territorial gold became quite popular in the late 19th and early 20th century, spurred on by the research of Edgar Adams and the offering of such great collections as George Ulex (Lyman Low, 7/1902) and Captain Andrew Zabriskie (Henry Chapman, 6/1909). In his Public Auction Sale of October 18-20, 1923, Thomas Elder offered a remarkable specimen of the 1851 Baldwin \$10 in lot 2451:

“The Exceedingly Rare Baldwin & Company Ten Dollar Gold Piece Dated 1851.

Offered for the first time in any of these sales

“Obv. Liberty head to left, 13 stars, BALDWIN & CO. on coronet of Liberty; below the date, 1851. Reverse: Eagle as on \$10 of the period. S. M. V. CALIFORNIA GOLD TEN D. A coin of fine workmanship. VERY FINE condition. Note. - We know of at least one private sale for \$2,000, made in times when money was far more valuable than it is today. As Mr. Elder has stated in his letter to collectors, it only needs a few additional collectors of wealth to enter the field to send all such rarities skyward in price, with records for coins which are made at the present time for stamps not nearly as rare as these private gold coins.”

The lot sold to Wayte Raymond, acting as agent for Dr. George Alfred Lawrence. Elder’s prediction about the rising price of the coins came true over the years. Auction sales include the MS62 NGC specimen in lot 2122 of the Milwaukee Signature Sale (Heritage, 8/2007), which realized \$172,500, the current record for sales of this piece. Although the coin offered here is of a slightly lesser grade, it is clearly superior in appearance, in our opinion. It is also the most highly struck-up example we have seen.

Experts estimate only 10-12 examples of the 1851 Baldwin ten dollar gold piece survive today in all grades. The present coin is the second finest certified example, and the finest certified at PCGS (3/14). The well-detailed design elements show a touch of the softness always seen on the centers of this issue. Donald Kagin reports the coins were struck from convex dies, resulting in loss of detail in the centers. The lustrous yellow-gold surfaces show traces of prooflike reflectivity in protected areas around the devices. A scattering of minor contact marks on both sides is consistent with the grade, and the only mark worthy of individual mention is a short scratch near star 12. Eye appeal is outstanding for the issue. This coin should find a home in the finest collection of Territorial gold. Housed in a green label holder. Listed on page 387 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10031

1851 Baldwin & Co. Twenty Dollar, XF45 Only Four Examples Traced Finest Certified at PCGS, Ex: Garrett

5438 1851 Baldwin Twenty Dollar XF45 PCGS. K-5, High R.7. The 1851 Baldwin & Co. twenty dollar gold piece is a classic rarity in the Territorial gold series, with only four examples known to present-day collectors. Two coins are held in institutional collections, making the issue even more challenging. This attractive Choice Extremely Fine example is tied with a single coin at NGC for finest-known honors and claims an illustrious pedigree to the Garrett Collection, one of the finest numismatic gatherings of all time. The present consignor had the option of choosing between both certified XF45 examples and found the Garrett coin more pleasing and original. Heritage Auctions has never handled a Baldwin & Co. \$20 before, and the last public offering we can find was the sale of this identical coin in the Garrett Collection (Bowers and Ruddy, 3/1980), more than 34 years ago.

The firm of Baldwin & Co. was owned and operated by George C. Baldwin and Thomas S. Holman, who ran a jewelry and watchmaking concern before entering the coin business. They purchased F.D. Kohler & Co.'s coining operation on March 15, 1850 and proceeded to strike large numbers of coins in five, ten, and twenty dollar denominations until April of 1851. Edgar Adams states the dies for the Baldwin coinage were engraved by Albert Kuner. Despite the large number of private gold coiners in the Gold Rush era, only the United States Assay Office minted more coins than Baldwin & Co. and, during some periods, Baldwin's output even topped theirs. Adams cites the period from January 1 to March 31, 1851, during which Baldwin & Co. struck \$590,000 face value of gold coins against \$530,000 for the Assay Office.

Unfortunately, the Baldwin & Co. coins were found to be severely underweight when assayed by Augustus Humbert in 1851. The Baldwin & Co. \$20 had an intrinsic value of just \$19.40. Public outrage was widespread and *The Pacific News* reported that a citizen who redeemed two Baldwin & Co. \$20 coins at the office of Baldwin & Co. itself received only 38 dollars in silver in return. Baldwin tried to allay the suspicions of the general public by citing a more favorable assay by Albert Kuner and claiming that rivals like Moffat & Co. were trying to discredit him, but the damage was irreversible. On April 17, 1851, *The Pacific News* reported Baldwin had fled the state on the steamer *S.S. Panama*, rather than face the consequences of the "swindle." The great majority of the Baldwin & Co. coins were subsequently melted and the twenty dollar denomination is especially rare today.

The 1851 Baldwin & Co. \$20 was the first California gold issue to feature the twenty dollar denomination, but the Mormons had issued a twenty dollar piece in 1849 and other private minters would soon follow suit. The first auction appearance of an 1851 Baldwin & Co. \$20 gold piece we can find was in lot 297A of the Auction Sale (New York Coin & Stamp, 4/1904):

"1851 **Baldwin & C** on coronet; head of Liberty to left; 13 stars. Rev. eagle with three arrows and olive branch; S.M.V. CALIFORNIA GOLD. TWENTY D.; few small nicks, very fine impression, with sharp stars. The only specimen of this exceedingly rare coin we have ever seen, and we have been looking for them for the past 30 years."

The catalog was not plated, but a line drawing of the coin was displayed on the front cover. The lot description notes the symbols & C following BALDWIN on the coronet, a feature not described by Edgar Adams and apparently not visible on worn examples of the Baldwin & Co. \$20. Kuner made an error in the size of letter punches he used when he engraved the dies, and the final part of CO. was left off because it did not fit. The C tends to get lost in the hairlines at a casual glance, as well. The & C is visible on the present coin and the rest of the lot description is consistent with its general appearance, but a check of the Virgil Brand Journals at the ANS Library reveals that Virgil Brand purchased the lot for \$385.

The first auction appearance of the present coin that we can determine with any degree of certainty is in lot 61 of the Arthur Nygren Collection (Henry Chapman, 4/1924):

"1851 \$20. Head of Liberty left, with Baldwin & C on diadem, below 1851: around 13 stars. R. S.M.V. CALIFORNIA GOLD TWENTY D. Displayed eagle with olive branch in right talon, and three arrows in left. Edge milled. Very fine. Slight bruise on edge to right of date but so small as to be hardly noticeable. Of the greatest rarity, one of the gems of this great collection. This example is so fine that it supplies part of the inscription on the diadem which Mr. Adams in his admirable book on these coins omits, viz: & C after BALDWIN on diadem - see his NO. 43, page 75 second line. Plate."

The lot was purchased by John Work Garrett for \$2,525, the highest total for any lot in the sale (thanks to P. Scott Rubin for the preceding information). Garrett was a connoisseur, with an eye for quality as well as rarity, and this piece was a highlight of his collection. The Garrett holdings were finally dispersed in a series of four auctions held by Bowers and Ruddy from 1979-1981, with this coin selling in Part II of the series for \$110,000. The lot description included the following:

"... the Baldwin & Co. \$20 is one of the greatest of all territorial rarities and is one of the most important issues in the present offering. The quality for the issue is superb. A landmark coin which will be forever remembered by specialists in the California gold series."

We heartily agree with the cataloger of the Garrett Collection regarding the quality and importance of this coin. The design elements of this piece were strongly impressed in most areas, with just a touch of softness on the central reverse. The devices show only slight wear and retain much interior design detail. The vivid antique-gold surfaces are

lightly marked and traces of mint luster are evident in protected areas; a few hints of turquoise and amber patina visit the borders. This coin is encapsulated in an older PCGS green label holder. For the Territorial gold specialist, this lot represents a once-in-a-lifetime opportunity. Listed on page 388 of the 2014 *Guide Book*.

Roster of 1851 Baldwin Twenty Dollar Gold Pieces

- 1. MS61**, per numismatist David McCarthy. Henry Clifford; Bank of California.
- 2. AU55**, per numismatist David McCarthy. Charles M. Williams; possibly Clinton Hester; Thomas G. Melish Collection (Abe Kosoff, 4/1956), lot 2331; Smith & Sons; Josiah K. Lilly; Smithsonian Institution.
- 3. XF45 PCGS**. Arthur C. Nygren Collection (Henry Chapman, 4/1924), lot 61, realized \$2,525, the highest price in the sale; John Work Garrett; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 881, realized \$110,000; **the present coin**.
- 4. XF45 NGC**. H.O. Granberg, exhibited at the 1914 ANS Exhibition; Waldo Newcomer, illustrated in Mehl's Newcomer plates; unknown intermediaries, possibly "Col." E.H.R. Green; Henry Clifford; Donald Kagin; Paul Padgett; Stuart Levine and Donald Kagin; Private Collection. Plate coin in Kagin's *Private Gold Coins and Patterns of the United States* and Walter Breen's *Complete Encyclopedia of U.S. and Colonial Coins*. This coin is the XF45 example in the NGC Census Report.

Additional Appearances

- A.** Auction Sale (New York Coin & Stamp, 4/1904), lot 297A: Virgil Brand (Journal number 27320), per Wayne Burt and Saul Teichman.
 - B.** Edgar Adams refers to a specimen sold by Thomas Elder in 1909, but we are unable to locate this sale.
 - C.** DeWitt Smith; Virgil Brand in 1908 (Journal number 47370), per Wayne Burt and Saul Teichman.
 - D.** An example offered by E.M. Katten, of New Orleans, Louisiana in the May 1937 edition of *The Numismatist*, per Wayne Burt and Saul Teichman.
- From The Riverboat Collection. PCGS# 10034*

PLATINUM NIGHT

1851 Shultz & Co. Five Dollar, MS62 Very Rare Territorial Gold Issue Finest-Known Example

5439 1851 Shultz & Co. Five Dollar MS62 NGC. K-1, R.7. The 1851 Schultz & Co. \$5 gold piece is one of the rarest issues in the Territorial gold series. We have traced only 10 examples of this storied issue in our roster below, with a few earlier citations that may or may not represent the same coins. One specimen is held by the National Numismatic Collection at the Smithsonian Institution. PCGS and NGC have combined to certify 12 coins in all grades and conditions, undoubtedly including some resubmissions and crossovers (1/14). Heritage Auctions is pleased to offer the finest-known example of this famous rarity in our 2014 Central States Signature Auction.

These rare five dollar gold pieces were minted by the firm of Schultz & Co., operated by Judge G.W. Schultz and William Thompson Garrett. The business was located on Clay Street, in San Francisco, directly behind the better-known Baldwin coining facility. Schultz and Co. started as a metalworking shop and foundry, with Judge Schultz as the principle financial backer and Garrett as the machinist. Schultz & Co. forged the dies for most of the private coining operations in San Francisco, with Moffat & Co. the notable exception. Albert Kuner engraved the dies and Garrett turned the hubs, while Schultz handled the financial end of the business.

Schultz & Co. soon graduated to minting their own coinage, issuing five dollar coins from January to April of 1851. Some sources report that ten dollar pieces were also struck, but no example of that denomination has ever surfaced. Curiously, Kuner misspelled the name of the firm when he engraved the dies, and all examples seen have the inscription SHULTS & CO on Liberty's coronet. There is considerable confusion about the correct spelling of Schultz's name, as Edgar Adams refers to him as both Schultz and Shultz, but most historians consider Schultz the preferred spelling. Our headline reflects the NGC label on the holder, but we have followed the *Guide Book* nomenclature in the narrative. The firm was dissolved in April of 1851, with Garrett continuing the foundry operation and Schultz retaining the coining business afterward. On April 21, 1851, the California Legislature prohibited the private minting of gold coinage, bringing the Schultz & Co. operation to a close.

An early assay by Augustus Humbert found the five dollar coins of Schultz & Co. contained only \$4.87 value in gold, causing the coins to be repudiated by the general public. A later assay at the U.S. Mint by Eckfeldt and Dubois was more favorable, yielding a value of \$4.94 for the five dollar coin, but the outrage over the earlier report was hard to overcome. In fact, when knowledge of the higher intrinsic value of the coins became widespread, it encouraged mass melting, and the issues of Schultz & Co. were one of the first private gold coinages to vanish from circulation. By 1909, Edgar Adams knew of only two coins in existence, one owned by H.O. Granberg and another in the collection of J.C. Lighthouse.

The first auction appearance of the Schultz & Co. five dollar gold coin was in lot 12 of *The Romance of the Pioneers*, a catchy title B. Max Mehl composed for his catalog of Judge Charles W. Slack's collection. Charles Slack was a Justice of the Superior Court in San Francisco and an avid collector of Territorial gold issues. Mehl's description reads:

"\$5.00, 1851. Liberty head facing left, **Shultz & Co.** [sic] on diadem, date below, thirteen stars. Reverse, eagle similar to regular issue, FIVE D. below, legend, PURE CALIFORNIA GOLD. Milled edge.

"Exceedingly rare, considered as one of the real great rarities of the entire Pioneer Gold Series. Until a few years ago, only two specimens were known. To the best of my knowledge, there are only three or four specimens now known, including this one. **And this is the first specimen ever to have been offered at auction.** Although other great rarities with records well into the four-figure mark, have been offered at auction, some ... soon after their issue, but of this great rarity not a single record of sale at auction exists. Even when Pioneer gold coins were more or less plentiful, before they were generally melted up, this coin, owing to its higher intrinsic value, apparently found its way into the melting pot much sooner than all other Pioneer issues. As the other two or three known specimens are, apparently, out of the market for all time, the opportunity of securing this rarity is almost as rare as the coin itself."

Although Mehl's enthusiasm got the better of his grammar at times, his description faithfully recorded the history of the Schultz & Co. \$5, and established it as one of the rarest and most valuable issues in the Territorial gold series. The lot realized \$1250, a huge sum at the time, to famous collector John Work Garrett. The popularity of the Schultz & Co. \$5 has grown steadily over the years, and recent auction appearances include the sale of the AU53 piece in lot 5957 of our August 2013 Rosemont Signature Auction, which realized \$235,000.

The present coin is by far the finest-known example and the only coin certified in Mint State by either of the leading grading services. It was unknown to early collectors, as it was only discovered in December of 1982 by James Owens, of Sand City, California. Owens found the coin on a deserted beach near Monterey, with the help of a metal detector. Pacific Coast Auction Galleries featured the coin in their June 1987 Long Beach Sale. This is only its second auction appearance and it has been off the market for 27 years.

The design elements of this attractive MS62 example are sharply detailed in most areas, with just a touch of softness on the eagle's right (facing) claw. Several Schultz & Co. five dollar coins show a dramatic die break on the reverse, from the rim above the eagle's wing to the rim above the letter L in GOLD. This piece must have been one of the last coins struck, as the break has developed into a large cud. The attractive, slightly granular surfaces retain much of their original mint luster and show only minor signs of contact. A thin luster graze below star 13 is an easy pedigree marker, although the superior condition of this piece makes it hard to confuse with any other example. Eye appeal is head-and-shoulders

above that of any other Schultz & Co. \$5. As B. Max Mehl said in his historic description, the opportunity to acquire any Schultz & Co. \$5 is a rare event. The chance to bid on this finest-known example has come only once before in its 163-year history. Territorial gold enthusiasts should bid accordingly. Listed on page 388 of the 2014 *Guide Book*.

Roster of 1851 Shultz & Co. Five Dollar Gold Pieces

- 1. MS62 NGC.** James Owens; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1820, realized \$42,000; **the present coin.** Plate coin for Walter Breen's *Complete Encyclopedia of U.S. and Colonial Coins*.
- 2. AU53 PCGS.** J.C. Lighthouse, of Rochester, New York before 1909; Lighthouse Collection (J.C. Morgenthau, 2/1936), lot 192; Louis E. Eliasberg, Sr.; Eliasberg Collection, Part I (Bowers and Merena, 5/1996), lot 355; Samuel J. Bergard Collection (Stack's, 7/2008), lot 2243; Rosemont Signature (Heritage, 8/2013), lot 5957, realized \$235,000. Plate coin for the 2014 *Guide Book*.
- 3. AU53 NGC.** Stack's in 1939, purchased by Col. James Flanagan for \$1,000; Flanagan Collection (Stack's, 3/1944), lot 1547; possibly Arthur Nussbaum; Kenyon Painter; Boston ANA Auction (Jess Peters, 8/1973), lot 1008; Auction '79 (RARCOA, 7/1979), lot 1472; the present consignor. This coin is the preceding lot in the Riverboat Collection.
- 4. AU50 PCGS.** Auction '84 (Stack's, 7/1984), lot 1494; United States and World Coins, Medals & Banknotes (Butterfield, Johnson, Gillio, 1/1996), lot 4163.
- 5. AU Details NCS.** Great Western Collection of Territorial Gold (Heritage, 7/2005), lot 10470.
- 6. XF Details NCS.** Nathan M. Kaufman Collection (RARCOA, 8/1978), lot 51; ANA Auction (Kagin's, 8/1983), lot 3645; Old West and Franklinton Collections (American Numismatic Rarities, 8/2006), lot 1131.
- 7. VF20 PCGS.** Kagin Collection; Paul S. Mory Collection (Bowers and Merena, 6/2000), lot 1044, the plate coin in Don Kagin's *Private Gold Coins and Patterns of the United States*.
- 8. VF Details, Net VG8 ANACS.** New York ANA Sale (Superior, 8/2002), lot 2346.
- 9. VF20,** per numismatist David McCarthy. Josiah K. Lilly; Smithsonian Institution.
- 10. VG8.** Judge Charles W. Slack Collection (B. Max Mehl, 5/1925), lot 12; John Work Garrett; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 941; Coles Collection (Stack's, 10/1983), lot 253.

Additional Appearances

- A.** An example owned by Virgil Brand before 1912.
- B.** H.O. Granberg, before 1909, exhibited at the 1914 ANS Exhibition; Waldo Newcomer; possibly "Col." E.H.R. Green; the plate coin in Wayte Raymond's *Private Gold Coins Struck in the United States 1830-1861* and *Standard Catalog of United States Coins*.
- C.** Dr. George Alfred Lawrence; Lawrence Collection (Thomas Elder, 6/1929), lot 1392.
- D.** A second example owned by Kenyon Painter; Boston ANA Auction (Jess Peters, 8/1973), lot 1009, described with moderate to heavy nicks and scratches, light edge nicks, possibly the coin in number 4 above.

1851 Shultz & Co. Five Dollar, AU53 Very Rare Private California Issue Only 10-12 Examples Known

5440 1851 Shultz & Co. Five Dollar AU53 NGC. K-1, R.7. The firm of Schultz & Co. started out as a foundry in October 1850. The principal partners were Judge G.W. Schultz, who provided the financial backing and business connections, and William T. Garratt, who had the metalworking expertise and did much of the manual labor. Initially, Schultz & Co. forged many of the dies used by other firms who issued private gold coinage. Albert Kuner engraved the dies and Garratt did the machine-work. Seeing great potential for profit, the firm began issuing its own coinage in January 1851 and continued until April 1851, with production ceasing just before the California Legislature passed a bill prohibiting private gold coinage on April 21, 1851.

Some sources indicate Schultz & Co. issued both five and ten dollar pieces, but no ten dollar coin has ever appeared in any collection. Except for the legends, both obverse and reverse designs closely resemble the federal five dollar issues of the time. The reverse legend was PURE CALIFORNIA GOLD, and the name of the firm replaced LIBERTY on the coronet. Curiously, Kuner misspelled the name of the firm when he engraved the dies, and all examples seen bear the inscription SHULTS & CO. on Liberty's headpiece. Although an early assay by Augustus Humbert indicated the coins were significantly underweight, a later assay by the Philadelphia Mint revealed the Schultz & Co. coins were actually much closer to full value than many other California issues. The relatively high intrinsic value of the coins caused them to be melted for recoinage at an early date, and the Schultz & Co. five dollar piece was one of the first Territorial issues to vanish from circulation. The Schultz & Co. \$5 is very rare today, with only 10-12 examples extant in all grades.

Early auction appearances of the Schultz & Co. coins were few and far between, a fact emphasized by Thomas Elder when he cataloged the coin in lot 1392 of the Dr. George Alfred Lawrence Collection in June of 1929:

"1851 \$5.00 Liberty head l. "Shults & Co." on coronet 13 stars, date. Rx. Eagle holds branch & arrows PURE CALIFORNIA GOLD. - Below FIVE D. Edge milled. Very fine. Excessively rare not in any sale in many years. One of the big rarities in private gold. Plate. Adams 45."

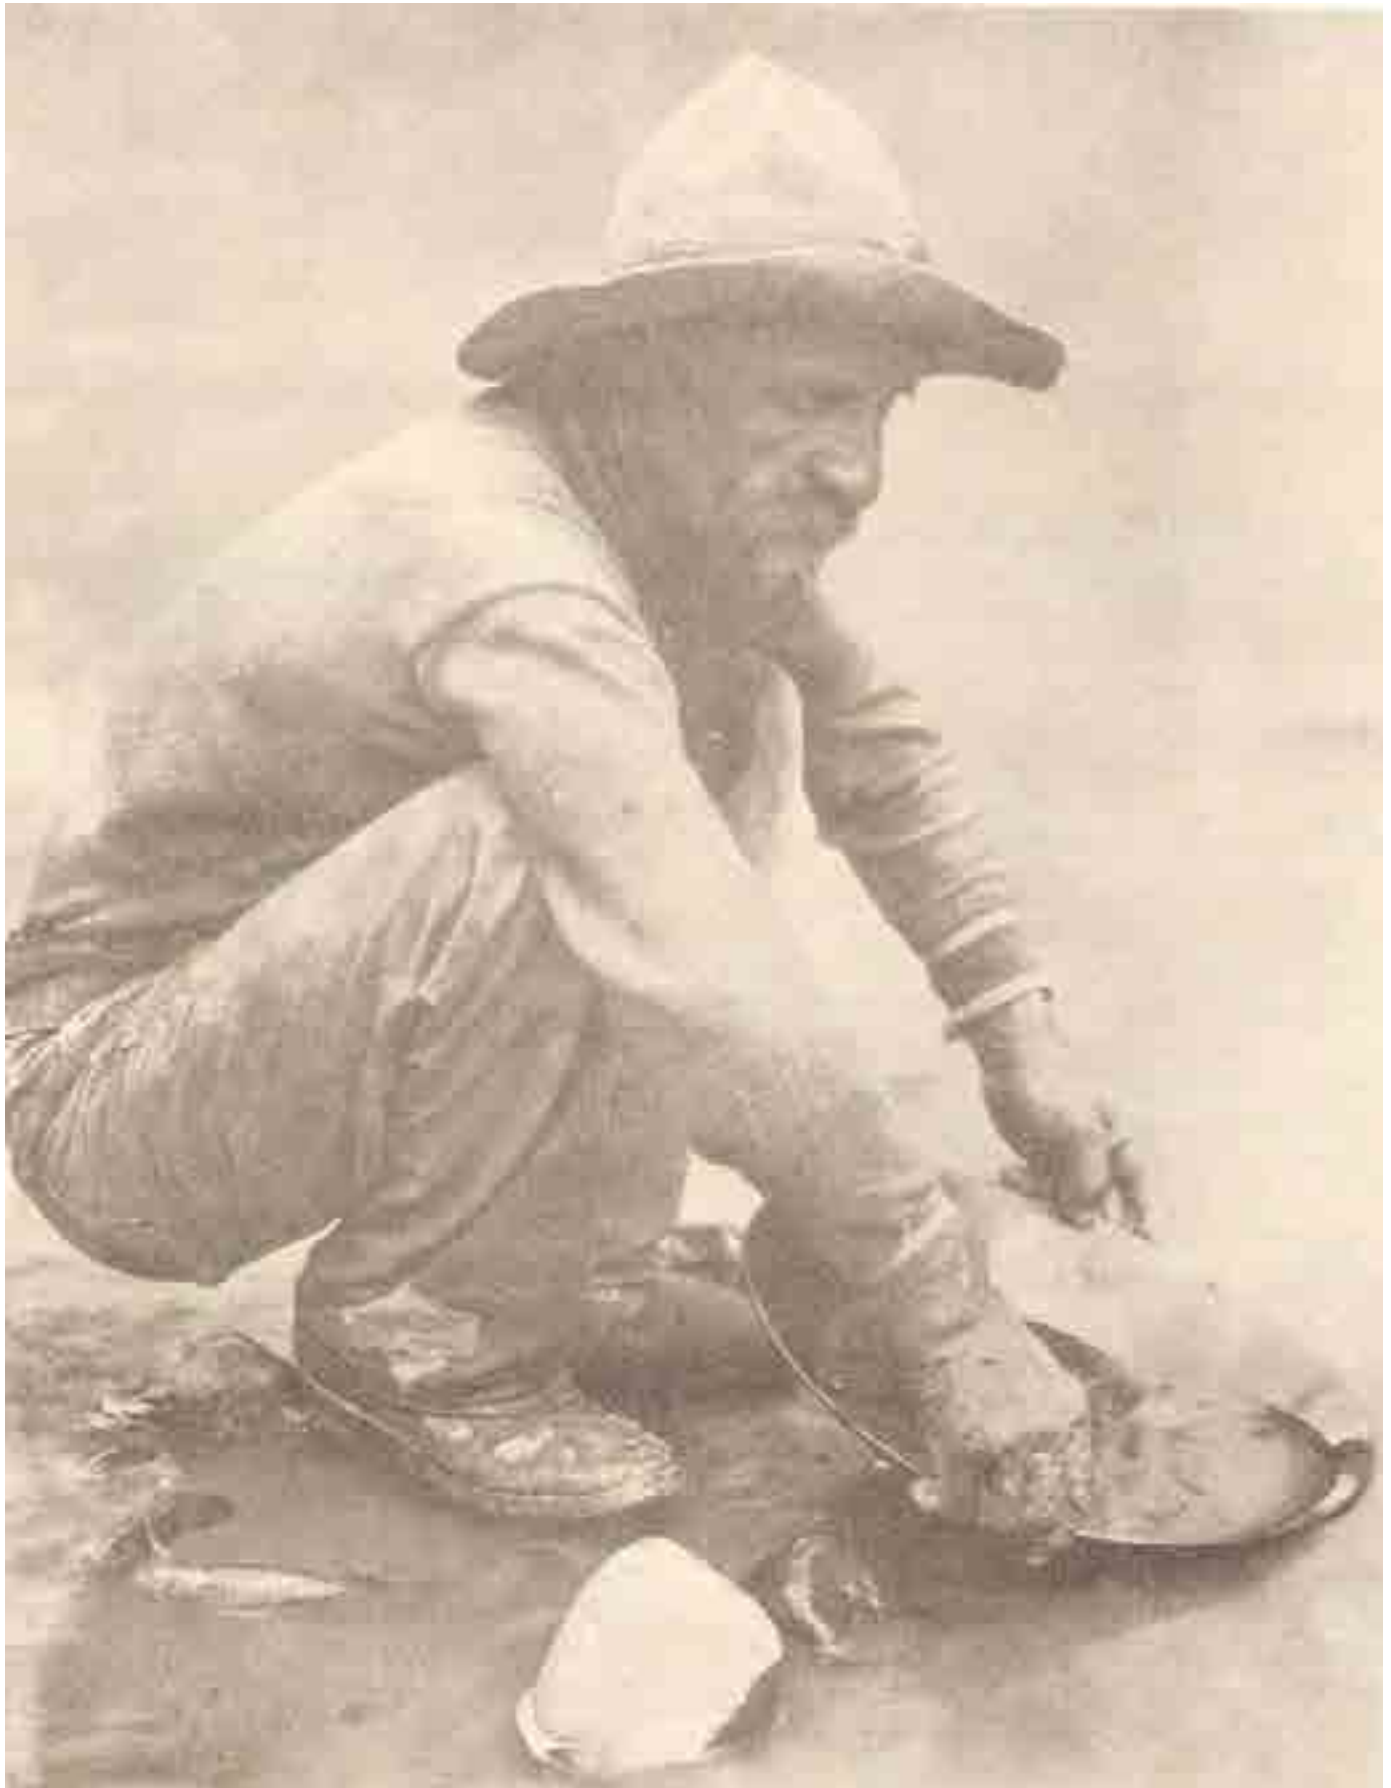

Even in today's fast-paced coin market, years frequently pass between offerings of a Schultz & Co. coin. The current record for price realized at auction is \$235,000, garnered by the AU53 PCGS example in lot 5957 of the Chicago Signature (Heritage, 8/2013).

The present coin offers pleasing antique-gold surfaces, with well-detailed design elements that show less actual wear than most examples of this issue. All star radials are complete and much interior detail remains intact on Liberty's hair. The reverse shows a touch of softness on the eagle's right (facing) leg and claw, but fine feather detail is evident on the wings. A few minor planchet voids and die cracks show on both sides, along with a scattering of minor abrasions. The overall presentation is quite pleasing for a Schultz & Co. \$5, one of the rarest of all California private gold issues. Listed on page 388 of the 2014 *Guide Book*. Census: 1 in 53, 1 finer (3/14).

Ex: Stack's in 1939, purchased by Col. James Flanagan for \$1,000; Flanagan Collection (Stack's, 3/1944), lot 1547; possibly Arthur Nussbaum; Kenyon Painter; Boston ANA Auction (Jess Peters, 8/1973), lot 1008; Auction '79 (RARCOA, 7/1979), lot 1472; the present consignor.

PLATINUM NIGHT

1852 Wass, Molitor & Co. Five Dollar Gold, MS60 Very Rare Underrated Small Head Issue Finest Known Example

5441 1852 Wass Molitor Five Dollar, Small Head MS60 PCGS. K-1, R.7. The 1852 Wass, Molitor & Co. five dollar gold piece, with the Small Head obverse, is one of the most rare and enigmatic coins in the Territorial gold series. When Edgar Adams wrote his landmark reference *Private Gold Coinage of California 1849-1855*, he classified the 1852 Wass, Molitor five dollar gold piece as Adams 49 and noted:

“Five Dollars. Obverse, Head of Liberty to left, surrounded by thirteen stars. On the coronet the letters WM & CO., while below is the date 1852. Reverse, An eagle bearing a shield upon its breast, with three arrows and an olive branch in its talons, and surrounded by the legend IN CALIFORNIA GOLD. “There is only one type of the Five Dollar piece, which is quite similar in general design to the regular United States Five Dollar coin, but there are a number of trifling die varieties.”

Either Adams was not aware of the distinctive Large and Small Head die varieties, or he considered their differences unimportant. The two varieties are easily distinguished when seen side-by-side, but the Small Head type is very rare and we suspect Adams never had the chance to compare the issues together. Moreover, it is impossible to tell from his description which variety he was describing as Adams 49, since both Large and Small Head varieties employ the same reverse and use similar motifs on the obverse. Early 20th century numismatists must have lumped both varieties together when discussing or cataloging the 1852 Wass, Molitor \$5.

Probably the first collector to notice that the issue came in two varieties was H.O. Granberg, who exhibited an example of both varieties at the 1914 ANS Exhibition. His Small Head piece was listed first and described as Adams 49. His Large Head example followed in the listing, but the cataloger transcribed the date incorrectly as “1849”, possibly because he had just referred to the Small Head coin as Adams 49. The description of the Large Head Wass, Molitor five dollar read:

“Obv. Similar to above, but cruder work, head larger and small o in Co. on coronet. Rev. Similar to above. Gold.”

It would be many years before numismatists began classifying the two varieties separately, and it is often impossible to identify which variety a cataloger was describing in early auction appearances. Wayne Raymond followed Adams in his *Standard Catalogue of United States Coins*, listing only one variety and illustrating it with a photo of the Large Head type. It was only when Donald Kagin published *Private Gold Coins and Patterns of the United States* in 1981 that knowledge of the two varieties became widespread.

Although Kagin listed the varieties separately in his Appendix VII, and illustrated both, he offered little information about the very rare Small Head variety, which he classified as K-1, in the main body of his work. Kagin noted simply that Wass, Molitor & Co. “began issuing \$5 specimens on January 6, 1852.” The coins were well-received (presumably both varieties), as they contained \$5.04 worth of gold, the highest intrinsic value of any privately coined five dollar piece. This high intrinsic value undoubtedly encouraged the public to turn the coins in to the San Francisco Mint for recoinage when that facility opened in 1854. The issue, which contemporary newspaper reports indicate was quite substantial, suffered heavy attrition in this manner, and the K-1 variety is very rare in all grades today. PCGS lists 11 certification events in its Population Report, with this MS60 coin the finest, while NGC has certified just one coin, a VF specimen (3/14). Our roster below enumerates 13 distinct examples of the K-1 variety, with a number of additional appearances that may or may not represent the same coins. A single example, designated K-1a, was struck from the Small Head dies on a thicker planchet that was intended for the Wass, Molitor \$10 issue.

While the Wass, Molitor & Co. five dollar coins were admirable in their adherence to strict standards of value, they were typically not well-made. Kagin notes, “These coins are among the poorest struck of all private coins.” The present MS60 example is easily the finest known, exhibiting well-detailed design elements that show just a touch of softness on Liberty’s curls and coronet. The pleasing yellow-gold surfaces show a few minor contact marks, but the fields are remarkably clean by Territorial gold standards. Both sides retain much of their original mint luster. This coin offers outstanding eye appeal, the highest available technical quality, and intense historic interest. A must-have example for the advanced Territorial gold collector. Listed on page 389 of the 2014 *Guide Book*. Population: 1 in 60, 0 finer (3/14).

Roster of 1852 Wass, Molitor & Co. Small Head Five Dollar Gold Pieces, K-1

- 1. MS60 PCGS.** Haig Koshkarian Collection (American Numismatic Rarities, 3/2004), lot 1092, realized \$39,100; **the present coin.** Kagin plate coin.
- 2. AU55 PCGS.** Denver Signature (Heritage, 8/2006), lot 5786, as AU55 NGC; realized \$28,750; crossed to PCGS and offered in a string of internet auctions in 2006-2007.
- 3. XF45 PCGS.** Louis Eliasberg, Sr.; Eliasberg Estate; Eliasberg Collection, Part I (Bowers and Merena, 5/1996), lot 356; FUN Signature (Heritage, 1/2014), lot 5632, realized \$35,250.
- 4. XF40 PCGS.** Jascha Heifetz Collection (Superior, 10/1989), lot 5552; Spring Quartette Sale (Bowers and Merena, 3/1992), lot 2362; ANA Signature Sale (Heritage, 7/1993), lot 5876, as XF45 uncertified.
- 5. VF30.** Colonel James W. Ellsworth; Wayne Raymond and John Work Garrett via Knoedler Galleries in 1923; John Work Garrett; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 942. Breen plate coin.
- 6. VF.** Nathan M. Kaufman Collection (RARCOA, 8/1978), lot 52.

7. **VF20.** Jascha Heifetz Collection (Superior, 10/1989), lot 5553.
8. **VF.** H.L. Hill of San Francisco; purchased by James A. Stack on June 26, 1936; Stack-Teich Collection (Stack's, 1/1990), lot 331.
9. **VF.** Numisma '95 (RARCOA-Akers, 11/1995), lot 2662.
10. **Fine+.** Kenyon Vickers Painter; ANA Convention Auction (Jess Peters, 8/1973), lot 1012.
11. **Fine.** Dalton Family Collection (Stack's, 12/1975), lot 1009; Coles Collection (Stack's, 10/1983), lot 256.
12. **AU Details NCS.** Estate of Samuel Mills Damon (Doyle New York, 3/2006), lot 2646.
13. **Grade unknown.** Celina Coin Company; Josiah K. Lilly; Smithsonian Institution.

Roster of 1852 Wass, Molitor & Co. Small Head Five Dollar Gold Pieces, K-1a

1. **AU50 PCGS.** Samuel Bergard Collection (Stack's, 7/2008), lot 2244, realized \$40,350. This piece, believed to be unique, was struck on a thicker planchet intended for the Wass, Molitor \$10 coins. The issue is listed separately in Donald Kagin's *Private Gold Coins and Patterns of the United States*, but this coin appears in the PCGS population data for the K-1 issue.

Additional Appearances

- A. **Grade unknown.** DeWitt Smith; Virgil Brand in 1908 (Brand Journal number 47409).
- B. **Grade unknown.** H.O. Granberg, exhibited at the 1914 ANS Exhibition; Waldo Newcomer; B. Max Mehl, circa 1931.
- C. **Fine-VF.** Dr. George Alfred Lawrence Collection (Thomas Elder, 6/1929), lot 1405.
- D. **Extremely Fine, original mint luster.** William Forester Dunham Collection (B. Max Mehl, 6/1941), lot 2376. Mehl considered this specimen finest-known, possibly an early appearance of the coin in number 1 above.
- E. **XF45 PCGS.** Central States Bullet Sale (Heritage, 4/1994), lot 1504.
- F. **Grade unknown.** A specimen owned by the Union Bank of California
- G. **Grade Unknown.** Offered in Joel Rettew's FPL's for Spring 1976 and Winter 1976; Auction Sale (Early American History, 6/2001), lot 1475.
- H. **Very Fine+.** ANA Convention Auction (Jess Peters, 8/1973), lot 1011.
- I. **Choice About Uncirculated.** John A. Beck Collection (Abner Kreisberg, 1/1975), lot 717.
From The Riverboat Collection. PCGS# 10339

1852 Wass, Molitor & Co. Ten Dollar, AU58 Large Head, Wide Uneven Date

5442 1852 Wass, Molitor Ten Dollar, Large Head, AU58 NGC. **K-4, R.5.** Wass, Molitor & Co. struck both five and ten dollar gold pieces in large numbers in 1852. Mintage figures for the ten dollar coins were not recorded, but contemporary newspaper accounts say the five dollar pieces were struck at the rate of 1,400-1,600 pieces per day (\$7,000-\$8,000 in face value). The design of both denominations resembles that of the federal coinage of the time. Three die varieties are known for the ten dollar coins. This coin represents the *Guide Book* Large Head variety, with a wide uneven date, designated K-4 in Donald Kagin's *Private Gold Coins and Patterns of the United States*. The Wass, Molitor coins had a high intrinsic value and were widely accepted by merchants and banks throughout California. Most examples were later turned in and melted at the San Francisco Mint, but a number of K-4 examples were recovered from the wreck of the S.S. *Central America*. The surviving population for the K-4 variety numbers approximately 100 pieces in all grades.

The present coin is a lightly circulated near-Mint example with lustrous yellow-gold surfaces that show highlights of green. The design elements are well-detailed on both sides, an unusual situation for this issue where the typical obverse is about 15 points sharper than the reverse. Both sides show an extensive network of peripheral die cracks. The overall presentation is quite attractive for this popular Territorial gold issue. Listed on page 389 of the 2014 *Guide Book*. Census: 4 in 58, 4 finer (3/14).

From The Riverboat Collection. PCGS# 10348

1852 Wass, Molitor & Co. Ten Dollar, XF40 Very Scarce Small Head Variant

5443 1852 Wass Molitor Ten Dollar, Small Head XF40 NGC. **K-3, R.6.** Wass, Molitor & Co. struck 1852-dated ten dollar gold pieces in three different varieties. The present coin represents the *Guide Book* Small Head variety, designated K-3 in Donald Kagin's *Private Gold Coins and Patterns of the United States*. The design closely resembles the dies used on federal gold coinage of the period. The reverse dies for the K-3 variety were purchased from Dubosq & Co. when they ceased coinage operations in 1851. We believe the obverse die was also purchased from Dubosq, as it matches the 1850 Dubosq K-2 obverse in every particular except the date and inscription on the coronet. The coronet shows signs of reworking where the DUBOSQ & CO. lettering was effaced and replaced by the WASS MOLITOR & CO. inscription. The dies were lapped, resulting in a slight loss of detail that makes all examples of the Wass, Molitor K-3 seem softly struck. The date has obviously been altered, as seen from a telltale circle around the final digit where the original 0 was drilled out and replaced by a 2. The Wass, Molitor & Co. coins were well-received and the public confidence in them was well-founded, as they contained full weight and value in gold. The coins were heavily melted for recoinage after the San Francisco Mint opened in 1854, and the K-3 variety is very scarce today.

The present coin is a pleasing XF40 example that shows a touch of the softness due to die-polishing always seen on this issue. The yellow-gold surfaces show a number of minor grade-consistent abrasions on both sides, none that merit individual mention. The overall presentation is quite pleasing for this elusive Territorial gold issue and the K-3 variety is seldom encountered any finer. Census: 2 in 40, 7 finer (3/14). From The Riverboat Collection. PCGS# 10345

**1855 Wass, Molitor & Co.
Ten Dollar Gold, AU55
Rarely Encountered, Especially
in High Grade**

5444 1855 Wass Molitor Ten Dollar AU55 NGC. K-6, High R.5.

Wass, Molitor & Co. resumed coinage operations in 1855 after a two-year hiatus. This new coinage was occasioned by some temporary problems at the San Francisco Mint, which made it impossible for that facility to meet the need for gold coinage in the local economy. Local businessmen and bankers petitioned Wass, Molitor & Co. to issue private coinage to help fill the gap during a particularly acute shortage in March of 1855. The firm responded promptly, striking coins in ten, twenty, and fifty dollar denominations. The ten dollar coins were produced first, as they were struck from unused 1852-dated dies that were altered by drilling out the final digit of the date and replacing it with a 5. The coins contained full weight and value in gold and were readily accepted throughout the region.

Thomas Elder gave a good description of the 1855 Wass, Molitor & Co. ten dollar piece when he cataloged the coin in lot 1407 of the Dr. George Alfred Lawrence Collection (Elder, 6/1929):

"1855. \$10. Crude large head of Liberty to left. Stars and date small. W.M. & CO. on coronet in large letters. Rx. Eagle holds branch and arrows. S.M.V. CALIFORNIA GOLD. TEN. D. Fine. V. rare. Plate. Adams 51-A."

The lot realized \$58 to an unknown buyer. Recent auction sales include the MS60 NGC coin in lot 64894 of the Sunday Internet Coin Auction (Heritage, 8/2008), which realized \$37,375.

The Wass, Molitor coinage circulated heavily at the time of issue, and most examples seen are heavily marked and moderately worn. The initial mintage was substantial, but most of the coins were turned in for recoinage when the San Francisco Mint resumed full-scale operations. The 1855 Wass-Molitor ten dollar gold piece is very scarce today, and high-grade examples are rare.

This coin exhibits well-detailed design elements, with the softness on the devices seen on almost all examples of this issue. Only a trace of actual wear is evident, and the yellow and greenish-gold surfaces show the expected number of minor abrasions for the grade. An inscribed circle surrounds the second 5 in the date, indicating the original digit was drilled out and replaced. Except for a single AU58 specimen in 2012, it has been nearly six years since Heritage Auctions has offered an example of the 1855 Wass, Molitor & Co. ten dollar gold piece in AU55 or better condition. This coin should find a home in a fine collection of Territorial gold. Listed on page 389 of the 2014 *Guide Book*. Census: 4 in 55, 7 finer (3/14).

From The Riverboat Collection. PCGS# 10354

PLATINUM NIGHT

1855 Wass, Molitor & Co. Twenty Dollar Gold Piece, AU53 Extremely Rare Large Head Obverse Newly Discovered Variety, Unique Example

5445 1855 Wass Molitor Twenty Dollar, Large Head AU53 NGC. Variety unlisted in Kagin, believed unique. An exciting new study on the 1855 Wass, Molitor & Co. Large Head twenty dollar gold piece has revealed some important new facts about the issue, one of the most elusive coins in the Territorial gold series with only four examples extant. The most important finding of the recent investigation is that the coin offered in this lot represents a previously unidentified die variety of this rare issue. All known examples of the 1855 Wass, Molitor & Co. Large Head twenty dollar gold piece, identified as K-8 in Donald Kagin's *Private Gold Coins and Patterns of the United States*, employ the same obverse die. Until now, it was believed they all featured the same reverse as well. Surprisingly, this coin exhibits the reverse of the more available Wass, Molitor & Co. Small Head twenty dollar piece, K-7. The two reverses are easily distinguished, as the K-7 reverse shows the eagle's left (facing) wingtip pointing to the R in FRANCISCO, while the wingtip in the K-8 reverse points to the F. This fact was first noticed by numismatic researcher Wayne Burt while studying the image of the present coin on the Heritage website. Further investigation by Burt, Saul Teichman, Stuart Levine, and Heritage cataloger David Stone revealed that the other three surviving Large Head coins all exhibit the K-8 reverse, making the coin offered here the only known example of this newly discovered Territorial gold variety. Ken Bressett informs us that this discovery is under consideration and is a good candidate for inclusion in future editions of the *Guide Book*.

Conventional wisdom acknowledges the existence of only three examples of the 1855 Wass, Molitor Large Head \$20, but the recent study uncovered reliable images of four distinct specimens, all listed in our roster below. One of the coins is included in the National Numismatic Collection at the Smithsonian Institution, and the present location of two other examples is uncertain. Both coins were stolen in the 1960s and, although we believe they were eventually recovered, they have not been publicly offered since. Images of these coins are almost as difficult to locate as the coins themselves. It was only the generosity of Dan Hamelberg, who provided vital information from his extensive numismatic library, that made this study possible.

The firm of Wass, Molitor & Co. was founded by two exiled Hungarian patriots, Count Samuel C. Wass and Agoston P. Molitor. They attended the prestigious School of Mines of Germany and acquired much practical experience working in various Hungarian mines before participating in their country's gallant, but futile, attempt to win independence from Austria in 1848. Forced to flee their homeland, Wass and Molitor were naturally drawn to the great opportunities offered by the California Gold Rush of 1849. Wass arrived in California in October 1850 and Molitor followed in 1851. In October 1851, the two men founded an assaying office on Montgomery Street, below Bush, in San Francisco, but soon moved to a fireproof building on the corner of Merchant and Montgomery Streets. Both men were expert craftsmen and Wass, Molitor & Co. became one of the finest assaying firms in the area. The firm established a reputation for honesty that was second-to-none, and their practice of paying back depositors in 48 hours (rather than the eight days required by the U.S. Assay Office) made them extremely popular with a variety of clients, including express company giant Adams & Co.

All private mints in the territory were closed in April 1851 by order of the California Legislature. Only the U.S. Assay Office continued to issue coinage, in the form of fifty dollar slugs that were too large for many day-to-day transactions. The resulting shortage of circulating coinage prompted Wass, Molitor & Co. to start up a coining operation of their own. They first acquired dies for coinage in 1851 and began issuing five dollar pieces on January 6, 1852. The five dollar coins were shown to include \$5.04 intrinsic value in gold when turned in to the U.S. Assay office, and some \$7,000-\$8,000 in five dollar pieces was issued daily by the firm during this period. The company began issuing ten dollar coins a week later. These coins were well-received and seemingly met the local need for coinage for some time, as no 1853 or 1854-dated coins were issued. The opening of the U.S. branch mint in San Francisco appeared to spell the end for Wass, Molitor coinage, but one final chapter was still to come.

A shortage of parting acids, among other problems, caused the San Francisco Mint to close at intermittent intervals during its first few years of operations, and the facility was unable to meet the needs of the regional economy on its own. During a particularly desperate period in March 1855, local merchants and bankers petitioned Wass, Molitor & Co. to resume private coinage to alleviate the situation. The firm responded promptly, and issued coins in ten, twenty, and fifty dollar denominations. The twenty dollar coins included both the Large and Small Head designs we are familiar with today. Wass, Molitor & Co. was dissolved shortly after the distribution of these coins and Molitor left California for London in 1856. Wass left for a time also, and his fortunes declined in his absence, but he returned in late 1858, and soon started a new assaying business with his son Stephen. Because of their high intrinsic value, most Wass, Molitor & Co. coins were turned in for recoinage at the San Francisco Mint and almost the entire mintage of Large Head twenty dollar coins was destroyed at an early date.

The early history of the present coin is unknown, but it surfaced before any of the other specimens in our roster, in the collection of O.P. Hayes, Esquire, of San Francisco, California. It moved from there through the famous collections of DeWitt Smith and Virgil Brand, and was a highlight of the fabulous collection of Belden Roach by the early 1940s. When this coin sold in lot 298 of the Belden Roach Collection (B. Max Mehl, 2/1944), Mehl summarized the then-current knowledge about the rarity and history of the piece:

"The Exceedingly Rare Wass Molitor & Co. Twenty-Dollar Gold Piece WITH LARGE HEAD

"Lot no. 298

"1855, \$20.00. Wass Molitor & Co. Obverse, very **large head**, diadem inscribed W.M. & Co. Date below. Thirteen six pointed stars. Reverse, small eagle, shield on breast, an olive branch in its right talon and three arrows in its left. 900 THOUS. On small scroll above. Legend SAN FRANCISCO CALIFORNIA TWENTY DOL. Milled edge. Fine to very fine. Of excessive rarity. Only three specimens known to exist, one of which is in the Yale University Numismatic Collection. Another is in the great Mid-West Collection which will undoubtedly never come on the market in our lifetime. And this one is the only one now available. The specimen in the Mid-West Collection I sold some fifteen years ago for well over \$2,000.00. The specimen in the Yale Collection is from the Lawrence Sale, 1929, where the coin brought &7,000.00. The specimen here offered is the second best. One of the real great rarities of the Pioneer Gold Series. When we consider the number of specimens known to exist and the still smaller available, I consider this coin equal in rarity to any Pioneer gold coin. It has a starting bid of \$2,000.00. This coin is originally from the great Virgil Brand Collection of Chicago."

The coin sold for \$2,000 to Frederic W. Geiss. The Mid-West Collection Mehl referred to was the collection of Charles M. Williams, an

insurance company mogul from Cincinnati, Ohio. Apparently, Mehl was not aware of the second example of this issue in Virgil Brand's holdings, as it did not emerge from his estate until 1951, eventually finding a home in the Smithsonian Institution. The \$7,000 price realized by the example in the Lawrence sale was extremely high for any coin at the time. However, it was only the second-highest price realized in the Lawrence sale, following the Massachusetts and California \$5 gold piece in lot 1384 that realized a staggering \$7,900. Both of these prices broke the record for any coin previously sold at auction, set by the Brasher doubloon in the Stickney sale in 1907, a record that stood for more than two decades. After Geiss sold his collection in 1947, this coin was a centerpiece of the famous Carter Family Collection until 1984. The January 1984 Stack's sale of the Carter Collection was the last time this, or any other, Wass, Molitor & Co. Large Head twenty dollar coin was publicly offered.

The present coin is the finest-certified example, and probably challenges the Smithsonian coin for finest-known honors among the Wass, Molitor & Co. Large Head twenty dollar pieces. Of course, it is absolutely the finest-known specimen of this newly discovered variety, as it is believed to be unique. The design elements exhibit only light wear and retain much of their original design detail. The pleasing orange-gold surfaces show a few russet highlights, and traces of mint luster remain in sheltered areas. This piece is lightly abraded for such a large gold coin. Prices realized for some exceptional Territorial gold coins offered at auction in the past year have approached, and even exceeded the \$1 million mark, including the \$1,072,000 realized by the magnificent MS68 NGC example of the 1852 Humbert ten dollar in lot 4058 of the Eric P. Newman Collection, Part I (Heritage, 4/2013). We expect intense competition from advanced Territorial gold collectors when this unique and historic issue crosses the auction block for the first time in more than 30 years. Listed on page 390 of the 2014 *Guide Book*.

Roster of 1855 Wass-Molitor & Co. Large Head Twenty Dollar Gold Pieces

1. AU53 NGC. Possibly O.P. Hayes Collection (S.H. & H. Chapman, 2/1896), lot 51, realized \$132.50; DeWitt Smith; Virgil Brand (Journal number 47413); Brand Estate; Horace Brand; Ruth Green, advertised in the December 1942 issue of *The Numismatist*, page 928; Belden Roach Collection (B. Max Mehl, 2/1944), lot 298, realized \$2,000; Frederic W. Geiss Collection (Mehl, 2/1947), lot 2226, realized \$1,750; Amon G. Carter, Sr.; Amon G. Carter, Jr.; Carter Family Collection (Stack's, 1/1984), lot 1161, realized \$40,700; unknown intermediaries; **the present coin.**

2. AU53 PCGS. Discovered circa 1922 per Wayne Burt; Dr. George Alfred Lawrence Collection (Thomas Elder, 6/1929), lot 1406, realized \$7,000; Henry Chapman; Francis Patrick Garvin; Yale University; stolen in 1967; believed recovered, present location unknown.

3. AU55, per numismatist David McCarthy. Recovered from a consignment of coins from the United States of Columbia received by the banking firm of Zimmerman & Forshay in 1908; Public Auction XVI (Thomas Elder, 4/1908), lot 838; Virgil Brand; Brand Estate; Horace Brand; Ruth Green, advertised in the April 1951 issue of the *Numismatic Scrapbook Magazine*; unknown intermediaries; Abner Kreisberg; Josiah K. Lilly; Lilly Estate; Smithsonian Institution. The Kagin plate coin.

4. XF40. Waldo Newcomer; B. Max Mehl, circa 1931; Charles M. Williams; Abe Kosoff; offered in the January 1951 issue of the *Numismatic Gallery Monthly*; Lamot duPont; Willis H. duPont; stolen in 1967; present location unknown.

PLATINUM NIGHT

1855 Wass, Molitor & Co. Fifty Dollar, MS63 Sought-After Round California Issue Tied for Second-Finest Certified

5446 1855 Wass Molitor Fifty Dollar MS63 NGC. K-9, R.5. The Wass, Molitor & Co. fifty dollar gold piece was the flagship coin for that company's 1855 coinage issue. The firm had stopped striking coins after 1852, in anticipation of the opening of the San Francisco Mint. Unfortunately, many problems arose that hampered the operations of the federal facility in its early years. A shortage of parting acids was particularly troublesome in refining the raw gold turned in by depositors to suitable fineness for coinage. The Mint was forced to close on intermittent occasions and found itself unable to meet the demand for coinage in the regional economy. When the Mint experienced an especially long layoff in March of 1855, a group of influential bankers and merchants petitioned Wass, Molitor & Co. to resume coinage operations to alleviate the situation.

Wass, Molitor & Co. replied on March 24 that they would begin issuing coins within the week. Ten dollar coins were struck first, followed by twenty and fifty dollar pieces shortly afterward. The Wass, Molitor fifty dollar pieces were round, unlike the familiar octagonal slugs issued by the United States Assay Office. They were eagerly accepted, as the firm had established a reputation for honesty that was fully justified by an assay conducted by Agoston Haraszthy at the San Francisco Mint. The subsidiary coinage of ten and twenty dollar coins was accepted without question as well.

The obverse design of the 1855 Wass, Molitor & Co. fifty dollar gold piece features a central bust of Liberty, with no inscription on the coronet, surrounded by 13 stars and the date below. The reverse displays the legends SAN FRANCISCO CALIFORNIA above and WASS, MOLITOR & CO. below. The denomination, expressed as 50/DOLLARS, is enclosed by a wreath, with a ribbon inscribed 900 THOUS. above. Although the design is not really beautiful, the coins were well-received by the public. An article in the April 30, 1855 edition of the *Sacramento Daily Union* summarized the popular feeling:

"This coin is circular, almost entirely destitute of ornament, and plain as a maiden's countenance who has breathed the air of fifty summers...the coin certainly has no pretensions to beauty; nevertheless we would not like to refuse a few to break with our friends."

What they lacked in aesthetic appeal the Wass, Molitor fifty dollar pieces made up for in stately size and instant recognition. An article in the *San Francisco Herald* of March 1, 1854 outlined the desirability of such a coin for trade purposes:

"In a country like our own, where the currency is purely metallic, it is of great importance to have coins issued of a size which will admit of rapid and easy counting, both in receiving and paying money; and the experience of all our businessmen goes to show that in the absence of bank notes the Fifty Dollar piece is the most convenient coin for such a purpose."

The coins circulated widely throughout the region and in other parts of the country. An article in the *Alta California* reported that Wass, Molitor was issuing \$38,000 worth of twenty and fifty dollar gold coins per day at their peak. Some of the coins were even used in international transactions and found their way into European collections. One such piece was the example in lot 679 of the John G. Murdoch Collection (Sotheby, Wilkinson & Hodge, 7/1903). This lot description followed four fifty dollar octagonal slugs in preceding lots:

"Another, 1855, ROUND, bust to left, with 1855 below, within a circle of stars; rev. 50 DOLLARS, within an olive wreath, with 900 THOUS. on a scroll above, WASS, MOLITOR & CO SAN FRANCISCO CALIFORNIA, edge grained, extremely fine and excessively rare. [Pl. VII]"

The lot was purchased by Samuel Hudson Chapman, for 84 pounds. Murdoch's collection also included the Mint State 1794 dollar that would later belong to George Earle and Harry Bass, which sold for 48 pounds to Spink, and the 1783 Nova Constellatio bit that is presently in the collection of the Eric P. Newman Numismatic Education Society, which also sold to Chapman, for 26 pounds (Heritage Auctions will offer this coin and many fine Colonial pieces from the Eric P. Newman Collection in a monumental Signature auction in May 2014). The current price realized record for the Wass, Molitor & Co. fifty dollar gold piece is \$345,000 brought by the finest-known MS65 example, ex: Garrett, in Stack's sale of October 2003. Wass, Molitor ceased coinage operations after the 1855 coinage was dispersed.

The present coin is a spectacular MS63 specimen, which is tied with one other coin for second-finest honors at NGC (MS64 is finest). PCGS apparently graded one coin in MS63 previously, but it no longer appears in the Population Report, and no other PCGS-graded example is better than AU58 (3/14). The lustrous orange-gold surfaces of this Select piece are remarkably clean for such a large gold coin, and both sides retain significant amounts of original mint luster. The design elements are well-detailed, with full star centers and just a trace of softness on the ribbon bow. Eye appeal is outstanding. A diligent search of auction records reveals no offering of an MS63-certified Wass, Molitor fifty dollar gold piece since the inception of third party grading in 1986. Territorial gold enthusiasts should bid accordingly. Listed on page 390 of the 2014 *Guide Book*. Census: 2 in 63, 1 finer (3/14).

From The Riverboat Collection. PCGS# 10363

**1854 Kellogg & Co.
Twenty Dollar Gold Piece, MS62
Well-Preserved, Lustrous Example
Tied for Second Finest at PCGS**

5447 1854 Kellogg & Co. Twenty Dollar MS62 PCGS. K-2, R.4. The firm of Kellogg & Richter was founded by John Glover Kellogg and George F. Richter, respectively the cashier and assayer of the U.S. Assay Office of Gold until that operation closed in 1853. The two men started their own assay business at No. 106 Montgomery Street in San Francisco on December 14, 1853. The following month, a number of banking houses in San Francisco and Sacramento petitioned Kellogg to issue private coinage to help fill the need for a circulating medium of exchange until the San Francisco Mint opened later in the year. The firm rose to the occasion and began issuing twenty dollar gold pieces at a prodigious rate on February 9, 1854. Kellogg claimed he could produce \$20,000 per day in twenty dollar coins during this period; even heavier production was achieved the following year, when the San Francisco Mint experienced grave difficulties meeting the needs of the expanding regional economy. Edgar Adams estimates the total coinage of the firm amounted to \$6 million dollars in 1854-1855. Richter left the business in October of 1854, replaced by Augustus Humbert soon afterward, but the coins issued by the firm always carried the inscription Kellogg & Co. The dies were engraved by Albert Kuner.

The design of the Kellogg twenty dollar pieces closely resembled the federal double eagles of the period. Both Long and Short Arrows varieties exist for the 1854 date, with this coin representing the Long Arrows type, designated K-2 in Donald Kagin's *Private Gold Coins and Patterns of the United States*. A good description of a K-2 example was provided by Thomas Elder in lot 1366 of his catalog of the Dr. George Alfred Lawrence Collection (Elder, 6/1929):

"1854. \$20. Obv. Head of Liberty to left. KELLOGG & CO. on band. 13 stars, date. Small letters in coronet. Rx. Heraldic eagle, stars above. SAN FRANCISCO CALIFORNIA. TWENTY D. Arrows touch scrollwork. Adams 52. (Chapman-Sears to Dr. L.) VF. Rare. Plate."

Actually, the Long Arrows variety, with the arrows nearly touching the scrollwork, is Adams 53 (K-2), but Elder should be credited for attempting to differentiate between the varieties at this early date. The Kellogg twenty dollar pieces have always been a favorite of Territorial collectors, and recent auction sales include the MS64 PCGS coin that realized \$310,500 in the New York Connoisseur's Collection (American Numismatic Rareities, 3/2006).

The present coin is a sharply detailed MS62 example, with vibrant mint luster and well-preserved orange-gold surfaces that show remarkably few contact marks for a large gold coin. Eye appeal is terrific. Donald Kagin remarks that many high-grade examples of this variety come from the Thayer County Hoard, which was discovered by two boys in a field near Alexandria, Nebraska in 1907. Whatever its origin, this coin is tied for second finest certified at PCGS and we expect spirited competition when it crosses the auction block. Listed on page 391 of the 2014 *Guide Book*. Population: 2 in 62, 1 finer (3/14).

PLATINUM NIGHT

1855 Kellogg & Co. Fifty Dollar Gold Piece, PR64 Cameo
“The Most Beautiful of All Pioneer Gold”
Finest Known, Ex: Humbert, Zabriskie, Garrett

5448 1855 Kellogg & Co. Fifty Dollar PR64 Cameo PCGS. K-4, R.7. Prominent Fort Worth coin dealer B. Max Mehl referred to the Kellogg & Co. fifty dollar gold piece as “the most beautiful of all Pioneer gold coins and one of the rarest.” Only 14 examples of the Kellogg \$50 are known to present-day collectors and the coin offered here has been called the finest known since its first public offering in 1909. Territorial gold issues in Heritage auctions have been making headlines in recent times, with Eric P. Newman’s incredible MS68 NGC 1852 Humbert \$10 realizing \$1,057,500 in our April 2013 Central States Signature Auction and the remarkable SP63 PCGS 1852 Moffat \$10 realizing \$940,000 in the January 2014 FUN Signature Auction. We are proud to continue this tradition of spectacular Territorial gold offerings with the present coin, which is sure to be of the greatest interest to all students of the series.

The origins of the 1855 Kellogg & Co. fifty dollar gold piece are shrouded in mystery, as none were released into circulation at the time of striking and knowledge of the issue was quite limited in the 19th century. In 1912, Edgar Adams noted the following in *Private Gold Coinage of California 1849-1855*:

“Although the California newspapers in 1855 mention the Fifty Dollar piece of Wass, Molitor & Co., yet they do not contain the slightest reference to that of Kellogg & Co. (that could be found), which would seem to indicate that the coinage of that denomination did not go beyond the experimental stage, and that the thirteen known pieces now located were scarcely more than trial pieces.”

All known examples of the Kellogg \$50 were struck in proof format, lending credence to the idea that the coins were intended to serve as presentation pieces for influential officials and businessmen. Kellogg & Co. was considering issuing a fifty dollar coin to compete with the round fifty dollar pieces of Wass, Molitor & Co. in 1855 and these remarkable proofs would have been very impressive show-pieces. No coins were ever struck for circulation, and most of the proof examples were retained by the principles of the firm, rather than distributed to local VIPs. It seems the idea of a fifty dollar coinage was abandoned almost immediately, despite the popularity of the Wass, Molitor issue and the earlier fifty dollar slugs from the U.S. Assay Office. Even though the establishment of the San Francisco Mint in 1854 signaled the end of private coinage in California, it took several years for that institution to produce enough coins to satisfy the needs of the local economy. Kellogg & Co., under the partnership of John Glover Kellogg and Augustus Humbert, continued in operation until 1860, but no coins were issued by the firm after 1855.

The original mintage for the 1855 Kellogg \$50 was not recorded, and the initial distribution of the pieces is unknown. Kellogg’s heirs were still in possession of three examples many years after his death in 1886. Augustus Humbert retained at least six specimens until his death in 1873. Most likely the original mintage was divided between the two partners, who parceled out a few examples to interested parties before their deaths and left the remainder of the issue to their heirs, but other scenarios are possible. Adams was aware of 13 examples by 1912, and a 14th specimen recently surfaced and was offered in lot 3692 of the Boston Signature Auction (Heritage, 8/2010). Since so many of the coins were preserved by the original owners and distributed only to numismatists, it seems unlikely that attrition has claimed many examples over the years, although some show evidence of mishandling.

This coin was one of the six retained by Augustus Humbert; he left his collection to his brother, Pierre, who held it intact until he died in 1901. Pierre’s executors allowed Captain Andrew Zabriskie to purchase most, or possibly all, of Humbert’s collection shortly afterward, as revealed by Henry Chapman in his introduction to the catalog of the Zabriskie Collection (H. Chapman, 6/1909):

“Capt. Zabriskie some years ago had the good fortune to purchase from his executors the collection of coins left by Mr. Humbert, the California Assayer, and from which collection he derived many of the most remarkable Pioneer Gold Coins, which, added to his collection that had been forming for many years, makes his Pioneer Gold the best ever offered at public sale.”

Zabriskie’s collection was indeed one of the greatest offerings of Territorial gold ever assembled, and it also contained the magnificent 1852 Humbert \$10 that would later pass to “Col.” Green and Eric P. Newman. Chapman described the present coin in lot 341 of the catalog:

“1855 \$50. Head of Liberty L., with KELLOGG & CO. on diadem; on truncation of neck F. GRUNER, the die sinker, who was also a jeweler in San Francisco; around border, 13 stars and beneath head 1855. R. Defiant eagle facing left, head turned to right, his left talon supports a U.S. shield and three arrows, while the right talon holds prostrate on the ground the olive branch of Peace, a plain ribband [sic] starts from the left side of the shield, extends through the eagle’s beak and terminates in right field, above on a double scroll 1909 GRS. 887 THOUS. Around border SAN FRANCISCO CALIFORNIA. FIFTY DOLLS. Edge milled. *Round*. Brilliant proof; a slight striae in the gold still shows, as if an attempt to polish the planchet before striking with a gritty cloth. Sharp beautiful specimen. The finest known, as Capt. Zabriskie had his choice of the six which Mr. Humbert had preserved. So far as I am aware, it is possible about 10 are known, in fact, this is the number it is said were coined. A magnificent coin, and of extreme rarity. See plate.”

The lot realized a staggering \$1250 to Col. James Ellsworth. Chapman’s estimate of the surviving population was a bit off. He probably only knew about the three coins still owned by Kellogg’s descendants, a piece in the possession of coin dealer J.W. Scott, and the six coins acquired by Zabriskie, which were marketed through the Chapman brothers over the years. A roster of all known 1855 Kellogg fifty dollar gold pieces is listed below.

This coin remained in Ellsworth's collection for 14 years, after which he sold his holdings in a blockbuster private transaction through Knodler Galleries in 1923. The buyers were noted New York coin dealer Wayte Raymond and super-collector John Work Garrett of Baltimore. Garrett received the Territorial and Colonial segments of the collection, while Raymond kept the federal issues. The present coin was a highlight of the famous Garrett Collection until it was dispersed in a series of four auctions by Bowers and Ruddy from 1979-1981. The Kellogg \$50 was offered in lot 910 of the Garrett Collection, Part II in March 1980, where it realized \$300,000. After a few dealer intermediaries, the coin passed to the present consignor via Stuart Levine. It has not been offered publicly in more than 34 years.

The present coin is a magnificent PR64 Cameo specimen, with razor-sharp definition on all design elements and deeply reflective yellow-gold surfaces that show a number of die striations on both sides. The frosty devices contrast noticeably with the mirrored fields, giving the coin a dramatic black-on-gold cameo flash when it is tilted in the light. A few minor contact marks are present, but the surfaces are remarkably clean for such a large gold coin. A short vertical scratch in the obverse field near star 4 serves as a pedigree marker. This coin possesses intense historic interest, terrific eye appeal, the highest available technical quality, and an illustrious pedigree. In the words of the cataloger of the Garrett Collection, "Certainly a more significant Kellogg & Co. coin does not, or could not, exist." Listed on page 391 of the 2014 *Guide Book*.

Roster of 1855 Proof Kellogg & Co. Fifty Dollars

This roster was compiled from many sources, expanding on previous efforts by Walter Breen and DeWitt Smith, with extensive contributions by Mark Borckardt and Dave Stone of Heritage Auctions, numismatic researchers P. Scott Rubin and Karl Moulton, and pioneer gold specialist Donald Kagin. It is believed that 14 examples of this famous rarity survive, but some earlier appearances are unaccounted for. The associated number from Walter Breen's roster has been included where applicable. Grades of the coins in private hands are listed per the most recent auction appearance. Population data indicates many of the coins that were not certified at their last public offering have since been submitted for third party grading, and some of the certified coins have undoubtedly been resubmitted or crossed over.

1. PR64 Cameo PCGS. Breen #1. Augustus Humbert; Humbert's heirs; Capt. Andrew C. Zabriskie; Zabriskie Collection (Henry Chapman, 6/1909), lot 341; Col. James W. Ellsworth; John Work Garrett; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 910; Kagin's; Paul Padget; Donald Kagin and Stuart Levine; private collection; **the present coin.** In the Garrett catalog, the description noted: "It is believed to be the finest known example of its kind." Walter Breen recorded the Garrett piece as later appearing in Auction '85. However, the coin in that auction was actually the unique 1854 Kellogg twenty dollar proof from the Garrett Collection.

2. PR64 PCGS. Breen #11. British private collection; Greater New York Convention (Stack's, 5/1984), lot 784; Robert Hughes; Rarities Sale (Bowers and Merena, 8/1995), lot 498; Stuart Levine; 2007 FUN Signature Auction (Heritage, 1/2007), lot 3893, realized \$747,500. In the 1984 catalog, Stack's noted: "From information conveyed to us, this coin has recently come from England along with a few less important Territorial and Federal gold coins."

3. PR63 PCGS. Not in Breen. Smith & Son (3/1941); Frank Heim (6/2000); Don Kagin; Q. David Bowers; Donald Kagin; Elite Coin Auction (Superior, 1/2005), lot 953; Western collector; ANA Signature Auction (Heritage, 8/2007), lot 2119; FUN Signature Auction (Heritage, 1/2008), lot 3448.

4. PR63 PCGS. Breen #2. Kellogg family; possibly sold privately by Thomas Elder around 1916; New York collector, possibly F.C.C. Boyd; "J.F. Bell" in 1945; Memorable Collection (Numismatic Gallery, 3/1948), lot 967; Don Keefer; F.K. Saab; Gibson Sale (Stack's, 11/1974), lot 189; Auction '79 (Stack's, 7/1979), lot 996; Jerome S. Coles Collection (Stack's, 10/1983), lot 239; 68th Anniversary Sale (Stack's, 10/2003), lot 2292; 72nd Anniversary Sale (Stack's, 10/2007), lot 4017; FUN Signature Auction (Heritage, 1/2009), lot 4228.

5. Choice Brilliant Proof. Not in Breen. Buddy Ebsen Collection (Superior, 5/1987), lot 3140. This piece appears to be an example that matches none of the others and was unlisted in the Breen Census.

6. PR62 PCGS. Breen #3. George W. Rice; Virgil M. Brand; William F. Dunham (B. Max Mehl, 6/1941), lot 2369; W.D. Waltman Collection (B. Max Mehl, 6/1945), lot 37; Chicago ANA (James Kelly, 8/1956), lot 1850; Amon Carter, Sr.; Amon Carter, Jr. Collection (Stack's, 1/1984), lot 1149; Harlan White; ANA Signature Auction (Heritage, 8/1997), lot 7898; Donald Kagin; Craig Smith; Paul S. Mory Collection (Bowers and Merena, 6/2000), lot 1053; Rarities Sale (Bowers and Merena, 1/2002), lot 857; Midwest collection.

7. PR62 NGC. Breen #7. N.M. Kaufman Collection (RARCOA, 8/1978), lot 66; Auction '80 (Paramount, 8/1980), lot 982; Auction '84 (RARCOA, 7/1984), lot 2000; ANA Signature Auction (Heritage, 8/1992), lot 2583; RARCOA; Donald Kagin; private collection.

8. PR62. Breen #9. Augustus Humbert; Humbert's heirs; Capt. Andrew C. Zabriskie; Henry Chapman; John Story Jenks; Reuting Collection; Arthur C. Nygren (Henry Chapman, 4/1924), lot 82; Henry Chapman (per Mehl in the Waltman catalog); George Alfred Lawrence (Thomas Elder, 6/1929), lot 1365; John H. Clapp; Louis E. Eliasberg, Sr.; Eliasberg Estate; Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 366; East Coast collection.

9. PR62. Breen #4. Augustus Humbert; Humbert's heirs; Capt. Andrew C. Zabriskie; Henry Chapman; George H. Earle Collection (Henry Chapman, 6/1912), lot 3782; purchased by B. Max Mehl and sold to Fred T. Huddart; Judge C.W. Slack (B. Max Mehl, 5/1925), lot 29; "Col." E.H.R. Green; Josiah Lilly Collection; Smithsonian Institution. Walter Breen recorded this specimen as once the property of Amon Carter, Sr. and Jr., although such a listing is doubtful. Additional intermediaries handled this coin on a consignment basis. Both Smithsonian pieces have recently been examined and graded by Jeff Garrett and Ron Guth.

10. PR62. Breen #5. H.O. Granberg (consigned to the 1914 ANS Exhibition); William H. Woodin (exhibited by Edgar Adams at the 1916 ANA Convention); Waldo C. Newcomer; Willis duPont; Smithsonian Institution. This piece was stolen from duPont in October 1967 and recovered in July or August 1978, as reported in *Coin World*, August 9, 1978.

Illustrated at www.americanhistory.si.edu and plate-matched to Mehl's Newcomer plates.

11. PR60 PCGS. East Coast estate / Boston ANA Platinum Night Auction (Heritage, 8/2010), lot 3692.

12. PR53 PCGS. Breen #10. J.W. Schmandt (Stack's, 2/1957), lot 1028; Dan Brown; John H. Murrell; Henry H. Clifford; ANA (Kagin's, 8/1983), lot 3630; Auction '88 (Superior, 7/1988), lot 491; Auction '90 (Superior, 8/1990), lot 1406; Orlando Sale (Superior, 8/1992); private collection; FUN Signature Auction (Heritage, 1/2014), lot 5626.

13. Impaired Proof. Breen #6. Augustus Humbert; Humbert's heirs; Capt. Andrew C. Zabriskie; Henry Chapman; John A. Beck; John A. Beck, Part I (Quality Sales, 1/1975), lot 729; Dr. Ketterman; Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 330; Hoke S. Green Collection (Bowers and Merena, 6/1985), lot 24; Ambassador J. William Midendorf II Collection (Christie's, 3/1994), lot 375; Morrison/ Licht Collection (Stack's, 3/2005), lot 1320; Donald Kagin; private collection. Described as a "Brilliant Proof with some hairlines and minor friction."

14. XF Details NCS. Breen #8. C.W. Cowell (B. Max Mehl, 1911); Waldo Newcomer (exhibited at the 1916 ANA Convention); Charles Williams (per Mehl in the Waltman catalog); New York Metropolitan Sale (Stack's, 4/1962), lot 2814; John Rowe; Abner Kreisberg (1968); Public Auction (Quality Sales Corp., 11/1972), lot 1410A; Jack Klauson; 1973 ANA (Jess Peters, 8/1973), lot 1030; Walter Breen Gold Sale #1 (Pine Tree, 3/1974), lot 455; West Coast collection; Christie's (3/1990); Morrison/ Licht Collection (Stack's, 3/2005), lot 1321; Donald Kagin; private collection. In 1972, Abner Kreisberg and Jerry Cohen commented: "The usual surface abrasions and scratches have all been removed and quite a bit of luster is still adhering. Extremely Fine."

Other Appearances

These citations represent earlier appearances of coins we are unable to positively link to the pedigree chains above. They may constitute duplicate appearances of examples above, or they may be different individual coins.

A. DeWitt Smith, of Lee, Massachusetts, by 1905; obtained by Virgil Brand when he purchased the DeWitt Smith Collection intact.

B. Augustus Humbert; Humbert's heirs; Capt. Andrew C. Zabriskie; Henry Chapman; William R. Weeks and Augustus Humbert Collections (Henry Chapman, 5/1902), lot 716; Virgil Brand.

C. Two specimens retained by the heirs of John Glover Kellogg.

D. A specimen said to be in the possession of J.W. Scott in the 19th century.

1849 Oregon Exchange Co. Five Dollar, MS62
Rare Early Pioneer Gold Issue
The Finest Known

5449 1849 Oregon Exchange Co. Five Dollar MS62 NGC. K-1, R.5. The discovery of gold in California in 1848 drastically changed the demographics of the entire country. Nowhere were the effects more immediate and dramatic than in the neighboring Oregon Territory. A large percentage of the male population gave up farming and trapping to seek their fortunes in the nearby gold fields. The Oregon prospectors were among the earliest to arrive in California and, consequently, had their pick of the best claims. Many of them made sizeable fortunes in a short time and returned home with their new-found wealth, which they transported in the form of gold dust. For the settlers who stayed home to pursue occupations in lumber and farming, the Gold Rush era provided an even bigger windfall. The population of cities like San Francisco increased tremendously, with a flood of immigrants from around the world, providing a ready market for the food and raw building materials that were plentiful in Oregon. It is estimated that \$400,000 worth of gold dust made its way north to Oregon by the winter of 1849, a figure that would swell to \$2 million over the next two years.

Unfortunately, gold dust has serious drawbacks as a medium of exchange. It is unwieldy and difficult to transport, small amounts are easily lost in handling, and unscrupulous merchants can easily cheat customers by using inaccurate scales, etc. The Oregon Territory found itself in dire need of a more effective medium of exchange at a time when there was virtually no circulating federal currency in the region. To fill this need, the Oregon Exchange Company established a private mint in Oregon City, which began operations in late March of 1849. The principals of the firm were William Kilborn, Theophilus Magruder, James Taylor, George Abernethy, William Wilson, William Rector, John Gill Campbell, and Noyes Smith. Five dollar coins were struck first, with ten dollar pieces following later. It was intended that the initial of each partner's last name would be placed on the coinage, but the dies were mistakenly engraved with a G instead of a C for Campbell. Another blunder occurred when the engraver transposed the initials for the Oregon Territory, inscribing T.O. instead of O.T. These inconsistencies would cause some confusion among later numismatists. An early description of the coins was provided by Henry Chapman, when he cataloged the specimen in lot 1960 of the Matthew Stickney Collection (Chapman, 6/1907):

"1849 \$5. Beaver on a log faces right, above the initials of the members of the Oregon Exchange Co. as follows. K.T.A.W.R.G.S., (Kilbourn, Magruder, Taylor, Abernethy, Wilson, Rector, Campbell, Smith,) Below T.O. (Thomas Ormsby), 1849, branch at either side of date. R. OREGON EXCHANGE COMPANY, in center 130 G. NATIVE GOLD, 5D. Borders and edge plain. Very good. Extremely rare. See Plate."

Chapman correctly interpreted the erroneous G as a "typo" for the C in Campbell, but he mistakenly believed the O (Oregon) stood for Ormsby. The Ormsby brothers, John and William, operated a private mint in Sacramento in 1849-1850, so Chapman's incorrect association was a natural one. It was certainly a persistent error for Chapman, as he cataloged the Oregon \$5 in the Humbert Collection (5/1902) the same way. He realized his mistake by the time he cataloged the Zabriskie Collection in 1909, a watershed year in the study of private gold issues that saw the publication of Edgar Adams' *Official Premium List of United States Private and Territorial Gold Coins*.

The Oregon Exchange Co. five and ten dollar coins were struck from raw gold, without refining by the coiner. As a result, the coins varied in fineness and color, and they wore quickly because they were not alloyed with harder metals, like silver. Approximately 6,000 five dollar pieces and 2,850 ten dollar coins were struck in a six-month period ending in September 1849. William Rector, who did much of the work striking the coins, left the company to return to the gold fields at that time. The crucibles used to melt the gold dust were broken and the firm decided to cease operations, as they believed their coinage was sufficient to meet the needs of the local economy for some time. When the San Francisco Mint opened in 1854, most of the surviving Oregon coinage was turned in for recoinage, as the coins had an unusually high intrinsic value compared to other privately minted issues. Before long, the "Beaver Money" of Oregon was seldom encountered in circulation. The five dollar pieces are rare today, although not as elusive as the fabled ten dollar coins. PCGS has certified 25 five dollar coins in all grades, with AU58 the finest, while NGC has graded 21 coins, with this piece the single finest certified at MS62 (3/14). The population data includes an unknown number of resubmissions and crossovers.

The present coin is an attractive MS62 example, the finest of only two Mint State coins known. The design elements are well-defined, with much interior detail intact on the log and beaver's fur. Just a touch of softness is evident on the peripheral letters. The pleasing yellow and orange-gold surfaces show well-scattered minor contact marks, the result of the coin's soft "unalloyed" gold composition. A horizontal scratch between the G in GOLD and the G in OREGON serves as a pedigree marker. Original mint luster is evident on both sides, and the eye appeal is quite strong. It may be many years before a comparable example becomes available. Territorial gold enthusiasts should bid accordingly. Listed on page 392 of the 2014 Guide Book.

1849 Oregon Exchange Ten Dollar Gold Piece, AU55 Early Territorial Gold Rarity Finest Certified Example

5450 1849 Oregon Exchange Co. Ten Dollar AU55 PCGS. K-2, High R.6. The 1849 Oregon Exchange ten dollar gold piece is one of the rarest issues in the Territorial gold series. The last public offering of an Oregon Exchange ten dollar piece was in lot 1136 of the Old West and Franklinton Collection (American Numismatic Rarities, 8/2006), almost eight years ago. In the headline for that lot description the cataloger estimated "Perhaps 15 Known." Despite its relatively low grade of VF20 PCGS, the coin realized a record \$138,000. Our roster below includes 14 distinct examples, with two pieces included in the National Numismatic Collection at the Smithsonian Institution, and several more in impaired condition (thanks to Saul Teichman and Wayne Burt for their help with the roster). Heritage Auctions is pleased to offer the single-finest certified example of this rare issue in this important sale.

Prior to 1848, there were more settlers in Oregon than in Northern California, as both trapping and trade flourished there at an early date. When gold was discovered at Sutter's Mill, an estimated two-thirds of the male population flocked to the gold fields, stealing a march on the rest of the world and arriving well before the flood of fortune seekers that would inundate the area the following year. Being first in the field, the Oregon miners were among the most successful in finding productive claims. Like the Mormons from Utah, they were able to make their finds and return home with their fortunes in gold dust before the larger wave of settlers arrived. A thriving trade sprang up between the two regions, with supplies and lumber needed to house and feed the burgeoning population of San Francisco coming from Oregon in exchange for California gold. The city of Portland was founded after a man named Pedigrew sold his land at the mouth of the Willamette River for a leather pack he could use to carry provisions to the gold fields. A village quickly grew up on the spot, with many vessels sailing back and forth facilitating the lucrative trade between the gold fields and the farmers and lumbermen of Oregon.

As in California, the rapidly expanding economy was in dire need of a more practical medium of exchange than the abundant gold dust, which was subject to loss during handling and vulnerable to unscrupulous parties with inaccurate scales. An attempt to set up a mint under the auspices of the provincial government in 1849 was scrapped when Oregon became a Territory of the United States, with the first territorial governor, General Joseph Lane, arriving only eight days before the mint was scheduled to open in Oregon City. Both federal and territorial governments were unwilling, or unable, to provide the region with an adequate supply of currency, so the private Oregon Exchange Company was formed by local officials and businessmen to remedy the situation.

Initially established for the purpose of weighing and stamping gold, the Oregon Exchange Company set up its mint in a two-story building at the corner of 5th and Water Streets in Oregon City. The founding members were William Kilborn, Theophilus Magruder, James Taylor, George Abernethy, William Wilson, William Rector, John Gill Campbell, and Noyes Smith. The dies for the first five dollar coins were engraved by William Rector and Hamilton Campbell, after a design drawn up by J.G. Campbell. Thomas Powell, a Salem blacksmith, was the machinist, and Victor M. Wallace provided a lathe. The first coins were struck in March of 1849, but the exact date was not recorded. An estimated 6,000 five dollar coins were struck. Soon after, coinage of ten dollar pieces commenced, with the design of the new dies slightly altered to correct some mistakes seen on the five dollar pieces. The new obverse dies featured the initials of the founding members (minus Abernethy and Wilson) K.M.T.R.C.S. above, with seven stars underneath and the central figure of a beaver on a log, with O.T. (for Oregon Territory)/1849 between two laurel branches below. The reverse featured the legend OREGON EXCHANGE COMPANY around, with the inscription 10.D.20.G./NATIVE./GOLD./TEN D. in the center. All examples seen are softly struck on the centers. The reported mintage of ten dollar coins was 2,850 pieces.

The coins were known as "Beaver Money" and were enthusiastically accepted by the local economy. The coins were struck without alloy and were not assayed or refined. The raw gold came from different places, so it varied in purity and color. To compensate, the coins were deliberately struck on planchets that were overweight by federal standards. As a result, the coins were found to contain a higher intrinsic value than their face value when assayed. The coins commanded a 10% premium when exchanged at the San Francisco Mint in 1854, leading to their rapid disappearance from circulation. By the late 1850s, almost the entire mintage had been turned in for recoinage. Both five and ten dollar pieces are rare today, with the ten dollar coins especially elusive.

In his description of the Oregon ten dollar piece in lot 49 of the Judge Charles W. Slack Collection (B. Max Mehl, 5/1925), Mehl noted:

"The only specimen of the Oregon Ten Dollar Gold Piece that has appeared at auction in the past about forty years is a poor and holed specimen, in the great Zabriskie Sale, in 1909. None of the great collections, such as the Ten Eyck, Earle, Nygren, and other great collections which were rich in Pioneer gold, had a specimen of this great rarity. I doubt if more than six specimens are known.

"Among my records, I find a letter I received in 1911 from Mr. George H. Hines, of the Oregon Historical Society, Portland, Oregon, stating that the total number of coins issued originally in 1849, was 8850 - 6000 \$5.00 pieces and 2850 \$10.00 pieces. Mr. Hines also states, 'prior to 1860 many of these coins were gathered into the Mint at San Francisco and melted up, the bullion value of the coin being greater than the face value. Hence the scarcity. \$3,000.00 was refused for a Ten Dollar Beaver in this city during the last year.'

"The specimen Mr. Hines refers to is undoubtedly one of two or three specimens that were unearthed in Portland some fifteen years ago, since then not a single new specimen has been discovered. One of the greatest of all Pioneer rarities."

The coin realized \$1,200, although it was only in VF grade. The same piece realized \$40,000 in 1980, when it was sold as part of the legendary Garrett Collection. A few more specimens have surfaced over the years, including the coin offered here, which made its first appearance in lot 1033 of the ANA Convention Sale in 1973.

The present coin is an attractive Choice AU specimen, the single-finest certified example. PCGS has graded a total of seven coins, with this one the finest, while NGC has graded only one specimen, an XF40 (2/14). This piece exhibits a better-than-average strike for the issue, with some of the weakness always seen on the central design elements, but the peripheral devices are sharp. Only a trace of actual wear is evident, and the vivid orange-gold surfaces show only minor abrasions. The mint luster is remarkably vibrant for a Territorial gold issue, and traces of prooflike reflectivity remain in sheltered areas. A few minor planchet flaws are present, including a tiny fissure on the obverse rim above M. An insignificant rim bruise at 9 o'clock on the obverse acts as a pedigree marker. Off the market for almost 22 years, this coin combines absolute rarity, great historic interest, and the finest available technical quality. It may be decades before a comparable specimen becomes available. Listed on page 392 of the 2014 *Guide Book*.

Roster of 1849 Oregon Ten Dollar Gold Pieces

- 1. AU55 PCGS.** Kenyon V. Painter; ANA Convention Sale (Jess Peters, 8/1973), lot 1033, realized \$35,000; Dr. Curtis R. Paxman Collection (Bowers and Ruddy, 11/1974), lot 1013, realized \$38,000; Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 332, realized \$50,600; Orlando Sale (Superior, 8/1992), lot 519, realized \$36,300; **the present coin.**
- 2. AU55.** Waldo Newcomer, one of two coins pictured in Mehl's Newcomer plates circa 1931; F.C.C. Boyd; Numismatic Gallery 1945 FPL; Hans Schulman 1946 FPL number 26 at \$2,750; possibly Don Keefer; John J. Ford, Jr.; John H. Murrell; Henry Clifford; Clifford-Kagin Collection. The Kagin plate coin.
- 3. AU.** Smithsonian Institution, from the Mint Cabinet.
- 4. AU.** John A. Beck; Beck Collection (Abner Kreisberg, 1/1975), lot 734, realized \$28,600; Dallas and Newport Beach Sale (Heritage, 6/1987), lot 4538, realized \$28,600.
- 5. XF45 PCGS.** DeWitt Smith; Virgil Brand in 1908 (Brand Journal number 47418); Armin Brand; Celina Coin Company ad in the August 1946 issue of *The Numismatist*; Jane Brand Allen; Virgil Brand Collection, Part II (Bowers and Merena, 6/1984), lot 1551, realized \$38,500; dealer intermediaries; T.C. Pham; Pre-Long Beach Sale (Ira and Larry Goldberg, 2/2006), lot 1440.
- 6. XF45.** Joel Rettew Winter 1976 FPL; N.M. Kaufman Collection (RARCOA, 8/1978), lot 95, realized \$31,000; Charles Kramer Collection (Superior-Stack's, 11/1988), lot 941, realized \$26,400.
- 7. XF40 PCGS.** Auction '79 (RARCOA, 7/1979), lot 1486, realized \$57,500; Jack Klausen; Klausen Estate; Long Beach Signature (Heritage, 9/2002), lot 9033, realized \$126,500.
- 8. XF.** Virgil Brand in 1920; Brand Estate; Horace Brand; Davis-Graves Collection (Stack's, 4/1954), lot 902, realized \$3,250; Josiah K. Lilly, via Stack's; Smithsonian Institution.
- 9. Very Fine, choice.** Waldo Newcomer, stolen and recovered in 1913; B. Max Mehl circa 1931; Charles M. Williams; Numismatic Gallery 1951 FPL; Ruth Green, offered in a *Numismatic Scrapbook* ad in October of 1951; George O. Walton; Walton Collection (Stack's, 10/1963), lot 2222, realized \$10,500; Gibson Collection (Stack's, 11/1974), lot 221, realized \$21,000.
- 10. VF20 PCGS.** ANA Convention Sale (Kagin's, 8/1983), lot 3683; Old West and Franklinton Collections (American Numismatic Rareities, 8/2006), lot 1136, realized \$138,000.
- 11. VF20.** Possibly H.O. Granberg, exhibited at the 1914 ANS Exhibition; Judge Charles W. Slack; Slack Collection (B. Max Mehl, 5/1925), lot 49, realized \$1,200; Public Auction Sale (Anderson Galleries, 3/1927), lot 318, realized \$1,425; John Work Garrett, via Wayte Raymond, who acted as an agent for him at the Anderson Galleries sale; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 949, realized \$40,000; Coles Collection (Stack's, 10/1983), lot 273, realized \$16,500.
- 12. Net VF20, cleaned.** ANA Sale of the Millennium (Bowers and Merena, 8/2000), lot 4028, realized \$50,600.
- 13. Net VF, counterstamped Ladd & Tilton 1871.** Discovered by Charles Foster in the cornerstone of the Grand Masonic Lodge; William H. Foster; Pacific Northwest Numismatic Association Convention (Robert Burgraff, 5/1964), lot 641.
- 14. VG, holed and plugged.** Dohrmann, Brick and Calder Collections (S.H. & H. Chapman, 4/1886), lot 781; Captain Andrew C. Zabriskie; Zabriskie Collection (Henry Chapman, 6/1909), lot 454; B.W. Smith; Smith Collection (B. Max Mehl, 5/1915), lot 540; Benson, Gutttag & Jones Collections (Thomas Elder, 1/1930), lot 1374.

Additional Appearances

- A.** Two or three specimens discovered in Portland Oregon circa 1910, per Mehl in the Slack catalog.
- B.** A specimen owned by F.H. Smith; purchased by Virgil Brand in 1902 for \$225 (Brand Journal number 23515); Brand Estate; Armin Brand (sold 11/1/1944 for \$2,500).
- C. Very Fair/Poor.** George F. Ulex Collection (Lyman Low, 7/1902), lot 534, realized \$150.
- D.** A specimen exhibited by B. Max Mehl at the 1917 ANA Convention, per Carl Carlson.
- E.** A specimen owned by H.O. Granberg in 1922, per John Work Garrett's notebook.
- F. Uncirculated.** Fred Joy; B. Max Mehl ad in the November 1925 issue of *The Numismatist*, page 599; possibly "Col." E.H.R. Green.
- G. Very Good, edge trimmed.** Alex J. Rosborough Collection (B. Max Mehl, 4/1929), lot 442.
- H. XF.** Smith & Son ad in the March 1943 issue of *The Numismatist*, page 231.
- I. Fine.** Hollinbeck Coin Co. ad in the March 1946 issue of *The Numismatist*, page 348, offered at \$3,000.
- J.** Abe Kosoff ad in the July 1956 issue of *The Numismatist*, page 813.
- K.** Willis duPont; stolen in 1967, reportedly recovered in 1968.
From *The Riverboat Collection*. PCGS# 10291

1849 Mormon Quarter Eagle, AU58 Early Private Gold Issue

5451 1849 Mormon Quarter Eagle AU58 NGC. K-1, High R.5. After a small issue of ten dollar coins in late 1848 ended because of equipment failure, the Mormons embarked on a more ambitious program of coinage in 1849. The gold dust was provided by returning members of the Mormon Battalion, who had served in California during the Mexican War and successfully prospected in the newly discovered gold fields before returning to the Great Salt Lake Valley. The new Deseret Mint was established on South Temple Street in the home of local dentist Dr. William Sharp and the dies were engraved by John Moburn Kay, a Salt Lake City blacksmith. Coinage was resumed on September 12, 1849, with coins issued in two and a half, five, ten, and twenty dollar denominations. Similar motifs were used on all denominations, with some difference in the legend on the ten dollar pieces, which Donald Kagin suggests may have been struck from a leftover die from 1848. B. Max Mehl provided a description of the 1849 Mormon quarter eagle in lot 56 of the Judge Charles W. Slack Collection (Mehl, 5/1925):

"\$2.50, 1849. Bishop's hat above eye, HOLINESS TO THE LORD around border; reverse, clasped hands above date, G. S. L. C. P. G. TWO. AND. HALF. DO. Raised borders; plain edge. Fine. Very rare, far more so than any of the \$5's."

The letters in the legend stood for Great Salt Lake City Pure Gold. Mehl was correct in thinking the quarter eagles were more elusive than the half eagle pieces. The lot realized \$112.50, a respectable price at the time. More recent sales include the AU55 PCGS example in lot 7565 of the ANA Convention Auction (Stack's Bowers, 8/2011) that realized \$86,250.

The Mormon coins were primarily intended for local use, but Salt Lake City became a popular stop for settlers and miners on their way to California and the coins were picked up by travelers passing through. They soon began appearing at port cities throughout the country. Unfortunately, the Mormon coins were found to be both underweight and of lower fineness than the federal issues of the time when assayed at both the New Orleans and Philadelphia Mints in January 1850. The coins were vilified in the press and only accepted at a steep discount outside of the Mormon community after 1850.

The present coin is a sharply detailed near-Mint example with more definition than usually seen on this issue, which Kagin notes was struck from bulging dies. The pleasing yellow and greenish-gold surfaces display highlights of rose and are remarkably free of large or distracting abrasions. Much original mint luster remains in sheltered areas, especially on the reverse. Visual appeal is quite strong for this popular Territorial gold issue. Listed on page 393 of the 2014 *Guide Book*. Census: 4 in 58, 7 finer (3/14).

1849 Mormon Quarter Eagle, MS62 Among the Finest Known

5452 1849 Mormon Quarter Eagle MS62 NGC. K-1, High R.5.

The United States was home to a series of new religious movements in the 19th century that had longstanding effects on the country. Of these new religious movements, the longest-lasting and most thriving has been that of the Latter Day Saints, popularly known as “Mormons.” They are numismatically significant, as they are the sole religious group represented in the field of private and territorial gold coinage. True to their origin, the Mormon gold coins display iconography of their faith; the eye beneath the cap is Jehovah’s, the motto is HOLINESS TO THE LORD, and on the reverse two hands clasp in fellowship.

The first issues of Mormon gold coinage are dated 1849 and range in denomination from two and a half dollars to twenty dollars. The top three certification events for the Mormon quarter eagle are an MS63 PCGS coin (also part of the magnificent Riverboat Collection) and a pair of MS62 NGC pieces. The two NGC entries are for distinctly different coins. The other piece is ex: Heritage Auctions’ July 2005 ANA Auction and has a distinct pedigree-marker abrasion above the left downstroke of the N in AND on the reverse. The present coin, on the other hand, shows a couple of light ticks on the bottom edge of the Phrygian cap. Further, this piece shows generally yellow-gold coloration with occasional orange accents around the clasped hands and displays generous mint luster. A scrape past the right cuff is not obvious but contributes to the technical grade. Despite these modest faults, the overall eye appeal is strong and there are few survivors that can compare.

1849 Mormon Quarter Eagle, Amazing MS63 Quality The Finest Known with Unparalleled Luster

5453 1849 Mormon Quarter Eagle MS63 PCGS. K-1, High R.5. The arrival of Mormons in Utah and the settlement of Salt Lake City was a case of fortuitous timing. Settlement began in July 1847 with “about \$50” of Brigham Young’s own money, virtually the only money in Utah, according to noted 19th century historian Hubert Bancroft. The following year, gold was discovered along the American River in California. After the Mormon Battalion returned from the Mexican War and subsequent prospecting for gold in California, significant quantities of gold dust arrived in Salt Lake City. By 1849, a means was needed to convert this gold dust into coinage. Sheridan L. McGarry wrote in the 1950 *Numismatist* that John Kay was called upon by Brigham Young to aid in the design of the Mormon coinage. The basis for his selection was not knowledge of coin production, but rather his “skill in pattern making which he had learned while working in his uncle’s foundry in Bury, Lancashire, England.” The ten dollar coins were struck first, then the crucibles broke. New crucibles were not obtained until September 1849, at which time all four gold denominations were struck. The new mint shared space in a dentist’s office, an adobe structure on South Temple Street, and this new facility was called the Deseret Mint.

Much has been made then and now about the low fineness of Mormon gold. McGarry explains in his October 1950 article the unintentional nature of the low value of the Deseret coins:

“It is generally admitted that during the early coinage there was no effort made to assay or refine the gold because there was no one connected with the mint capable of determining such facts. The fact has been substantiated by Captain H. Stansbury in his report on his exploration and survey of Great Salt Lake, on page 130. The coinage was done in good faith, however, because of the then prevailing theory of “relative fineness.” Because of this fact, the Mormons based the worth of all gold upon the purity of California gold. Little did they realize that the coins minted from “native gold” were very low in assay due to the fineness of the gold, although it was of full weight. All coins made from California gold was, [sic] of course, of full weight and value. According to Col. Lock, the 1849 \$5 gold piece was actually worth \$4.91. The mistake was later brought to light, but not before losses had been sustained by many who had purchased gold on the “relative fineness” theory.”

The quarter eagle is the smallest of the four denominations in Mormon gold coinage. The leaders of the Great Salt Lake Valley settlement were the first to implement circulating twenty dollar gold pieces, trumping the U.S. Mint by months. The quarter eagle was the smallest denomination adopted and struck by them. Certainly the public favored the smaller denominations over the larger ones once full-range coining operations were underway in 1849. Don Kagin’s *Private Gold Coins and Patterns of the United States* quotes from the July 17, 1898 edition of *The Salt Lake Tribune*: “At first the \$2 1/2 pieces were most plentiful and popular. Then a large number of \$5 coins were made, and these, with the first named, constituted the bulk of the mint’s work. Not many \$10 pieces were minted, and the \$20 coins were still fewer.”

The relative rarity factors of the 1849-dated Mormon gold coins bear out the *Tribune*’s report. The five dollar pieces (K-2 variety) are rated as a Rarity-5, while the quarter eagles are similarly rated but just a trifle more elusive. The ten dollar coins are R.7 (extremely rare), but the twenty dollar coins are “only” R.6 (very rare). This variance from the expected pattern comes in part from the ten dollar coins’ earlier striking and the period of several months in which they were the only gold coins in the Great Salt Lake Valley and thus subject to considerable attrition.

Mormons have a well-deserved reputation for genealogical records. Therefore, it would not be unreasonable to expect that they also kept precise records about their coinage. But that did not happen. Leonard Arrington, the “Dean of Mormon History,” estimated a total value of approximately \$70,000 was struck in all denominations from 1849 through 1851. His estimate was based upon an account of rolling gold bars entered in the *Journal History of the Church*, as recorded by Thomas Bullock, noted Mormon pioneer, historian, and private clerk to Joseph Smith.

To be certain, the Mormon gold pieces were meant to circulate, and they did almost to a coin. This quarter eagle, rated MS63 by PCGS, is an impressive exception. It is the sole finest Mormon gold coin in the PCGS *Population Report*, and NGC’s *Census Report* lists only two 1860 five dollar pieces in the same grade with none higher (2/14). By extension, this is the *single-finest* pre-1860 Mormon gold coin certified by a major service.

Beyond the technical grade, this is simply a beautiful piece. Superb luster, mostly yellow-gold but with touches of green, is diffusely reflective, the most “prooflike” these frontier-operation coins could possibly be. On the clasped hands on the reverse, the right hand’s thumbnail is clearly visible. The excellent strike, unrivaled luster, and magnificent eye appeal combine to make this coin vastly superior to any other Mormon gold coin.

From *The Riverboat Collection*. PCGS# 10259

1849 Mormon Five Dollar, AU55 The Most Enduring of All Denominations Issued

5454 1849 Mormon Five Dollar AU55 PCGS. K-2, R.5. Of the various Mormon gold denominations, the five dollar piece proved the most enduring. Out of four denominations dated 1849, it was the only one carried on into 1850 (with a revised version of the eye-and-hands motif). The 1860 revival with its radically different lion-and-beehive design was a five dollar coin as well.

In the pre-California Gold Rush period, among federal gold denominations the half eagle enjoyed the strongest mintages overall with the quarter eagle a distant second. It is unsurprising, then, that the five dollar denomination should have been one of the most populous among the Mormon issues and that it should have carried on when other values fell into disuse. Though in the 1850s the federal half eagle fell out of favor relative to smaller denominations (gold dollar, quarter eagle) and the new double eagle, such developments came too late and were too distant to affect the five dollar piece as the Mormons' gold coin of choice.

All Mormon gold issues are rare regardless of condition, though the 1849 Mormon five dollar coin is among the more accessible. Even so, coins as well-preserved as this AU55 example are very rare indeed. Gold-orange color at the margins and parts of the centers yields to noticeable copper-blue over the lightly worn central devices and much of the nearby fields. The protected areas remain alive with luster. Though both sides show a handful of scattered small marks, this Choice AU piece's eye appeal is smooth and strong. Population: 9 in 55, 4 finer (2/14).

PLATINUM NIGHT

1849 Mormon Ten Dollar, AU58 Earliest and Rarest Mormon Gold Coinage Finest of Fewer Than a Dozen Pieces Known

5455 1849 Mormon Ten Dollar AU58 NGC. K-3, R.7. The Deseret Assay Office in what is now Salt Lake City, established by the Latter-Day Saints (Mormons) who had recently settled in the Great Salt Lake Valley, is among the best-documented non-federal operations for coining gold in what is now the United States. The history of private and territorial gold coinage is incomplete and forever will be; many partnerships formed and dissolved within a matter of months, leaving little documentation behind, and some companies are known solely by their coins. The LDS Church, by contrast, still exists today and information on the mint and its operations can be found in its archives and elsewhere. The circumstances surrounding the production of the first Mormon gold pieces, the ten dollar coins dated 1849 but actually produced in December 1848, are particularly clear.

Gold dust first appeared in the Great Salt Lake Valley on September 28, 1848, brought by veterans of the U.S. Army's Mormon Battalion who had wintered in California after their discharge late in 1847. To support themselves and to make money for their eventual journey to the Valley, some of them went to work building a sawmill for John Sutter on the American River. On January 24, 1848, project engineer James Marshall found gold, and the Mormon veterans working for him were among the first to strike it rich in California — and also among the first to leave the gold fields with their wealth.

As in so many locales around the world, the discovery of gold sent a shock through Great Salt Lake City. Like California at the time and for years after, the Mormon settlement had an acute shortage of small change, or indeed currency of any kind. Soon a gold economy sprang up to complement the barter system, but gold dust was an inconvenient medium of exchange on many levels. Willard Richards, who as Second Counselor to LDS President Brigham Young was one of the highest-ranking and most trusted members of the community, took responsibility for a small weighing office that placed gold dust into paper packets representing specific dollar figures. The packets then passed as currency.

Richards was a doctor who had received training preparing medicines. He was best-qualified in the community for the delicate task of measuring the envelopes of gold dust. It was only a stopgap solution, though, and Brigham Young recognized this. Donald Kagin's *Private Gold Coins and Patterns of the United States* reprints Young's writing on a business transaction dated November 15, 1848: "*The coined money [italics in Kagin] I have not now on hand, but we are preparing to put the gold dust into coin without any alloy, which if you dispose to take, you can have out the value ...*"

Kagin writes that less than a month later, after great efforts to set up a modest mint with the tools and skilled labor available in the Valley, the first coins — 25 ten dollar gold pieces — were struck on December 12, 1848. Brigham Young received 20 coins, while the other five went to John Moburn Kay. Kay, an English-born metalworker, had fashioned the coinage dies, contributed to their design, and done the physical work of striking the coins. One week later, on December 19, 1848, another 21 of the ten dollar gold pieces were minted and Brigham Young received them all. Soon after, the crucibles for melting gold dust broke, and though the mint at Great Salt Lake City eventually received new crucibles the next year, no more of the ten dollar gold coins were struck that year or any other.

As the earliest Mormon gold pieces, the ten dollar coins have a slight design difference from the rest of the 1849-dated pieces from quarter eagle to double eagle. Instead of the acronym G.S.L.C.P.G. for Great Salt Lake City Pure Gold, they read simply PURE GOLD over the clasped hands. In no case were the coins pure gold in the chemical sense, as California gold naturally is alloyed with other metals such as silver. (The Philadelphia Mint assay of 228 ounces of California gold obtained by the U.S. military in 1848, source of the famous CAL. quarter eagles of the same year, averaged 894 fineness.) The Mormon ten dollar gold coins may well have been "without any alloy" *added by the mint*, but they still contained significantly less than ten dollars' worth of gold as it was valued at the time, which led to later problems with the coins' acceptance outside the Mormon community.

Of the various Mormon gold issues, the 1849-dated ten dollar pieces are the rarest by far with fewer than a dozen distinct survivors known out of the 46 coins struck. They seldom appear at auction and are inevitably the subject of fierce competition when they are offered. Two facts about the issue's auction history are particularly telling. First, the auction record for the Mormon ten dollar coins was set in 1984 with the offering of the remarkable Amon G. Carter, Jr. Family Collection specimen, which brought \$132,000. Second, this is the first time since 1992 that Heritage has had the privilege of offering a Mormon ten dollar piece at auction, a fact made all the more remarkable by the firm's sale of multiple Brasher doubloons, 1913 Liberty nickels, and 1804 dollars, among other great rarities.

At least two examples of the Mormon ten dollar gold piece are in the National Numismatic Collection at the Smithsonian Institution. Another two specimens are held in the collection of the Church of the Latter-Day Saints in the Mormon Temple. Our roster below includes these four institutionally held examples as well as seven more in private hands. The PCGS *Population Report* lists three examples, one each in VF35, XF40, and AU53, while NGC lists only the present coin, in AU58 (2/14).

This attractive near-Mint example offers well-detailed design elements, with a weak 1 in the date and some fading on the 8 as well. The most prominent pedigree markers on its still-lustrous orange-gold surfaces are a shallow planchet flaw above the D in DOLLARS and a long but shallow mark below the O in the same word. The upper right reverse shows a partial wire rim. Eye appeal is quite strong for the issue, and this coin boasts the highest technical grade of any known Mormon ten dollar gold piece.

We believe this identical coin appeared in at least two 19th century auctions, but whether it was offered by the named consignors to those sales or consigned by the prominent dealers who cataloged those auctions is unknown. This coin's first confirmed owner was Captain Andrew Christian Zabriskie, whose collection of important pioneer gold coins was sold by Henry Chapman in June 1909; its picture on Plate VIII of the Zabriskie catalog clearly shows the markers mentioned above. H.O. Granberg owned this coin in 1914, when it was part of the American Numismatic Society's January-February Exhibition of United States and Colonial Coins and plated in the exhibition catalog. Later the Zabriskie specimen appears in the plates of the Waldo Newcomer Collection, sold through B. Max Mehl in the early 1930s. Many prominent collectors have owned the coin since then and we expect its next home will be in the finest collection of Territorial gold. The following roster was a collaborative effort and we wish to thank David McCarthy, P. Scott Rubin, and Donald Kagin for their valuable contributions.

Roster of 1849 Mormon \$10 Gold Pieces

1. AU58 NGC. Emil Justh Collection (Henry Griswold Sampson, 4/1884), lot 100, realized \$16; Frank Dietrich Collection (Charles Steigerwalt, 6/1884), lot 296, realized \$22; Captain Andrew C. Zabriskie; Zabriskie Collection (Henry Chapman, 6/1909), lot 458, realized \$75; Sheppard Collection; purchased by the Chicago Coin Company (T.E. Leon and Virgil Brand) as part of a six-piece set of Mormon gold coins on December 31, 1911 for \$3,700; the set was sold to H.O. Granberg in 1912 for \$5,000, exhibited at the 1914 ANS Exhibition; Virgil Brand, purchased from Granberg in 1920 for \$3,000, per Q. David Bowers; Waldo Newcomer; Abe Kosoff's 1948 FPL; Charles M. Williams; Kosoff's 1951 FPL; Henry Clifford; sold privately to the Clifford-Kagin Collection; Robert Campbell; Donald Kagin; Robert Rhue; Paul Padget; Donald Kagin; Stuart Levine; **the present coin.**

2. AU55 uncertified. U.S. Mint (retrieved from gold sent in for melt); Smithsonian Institution.

3. AU53 PCGS. Waldo Newcomer, exhibited at the 1916 ANA Convention; "Col." E.H.R. Green; Jerome Kern; Golden Jubilee Sale (B. Max Mehl, 5/1950), lot 728, realized \$2,600; Amon Carter, Sr.; Amon Carter, Jr.; Carter Family Collection (Stack's, 1/1984), lot 1163, realized \$132,000; ANA Signature Auction (Heritage, 7/1988), lot 2691; Dwight Berger; Robert L. Hughes; ANA Signature Auction (Heritage, 8/1992), lot 2592; Heritage Auctions; Thomas, Don Kagin; private collection.

4. XF40 PCGS. Dr. George Alfred Lawrence Collection (Thomas Elder, 6/1929), lot 1372, realized \$1,125; Yale University; Tuldes Estate; Aurora; Donald Kagin; Ed Milas; Mid-American Rare Coins; Don Kagin; private collection.

5. XF40 uncertified. DeWitt Smith; Virgil Brand; Josiah K. Lilly; Smithsonian Institution.

6. VF30 uncertified. Dr. Conway Bolt; Bolt Collection (Stack's, 4/1966), lot 1148, realized \$11,000; Mormon Temple.

7. VF uncertified. Kenyon Painter, Jr.; ANA Convention Auction (Jess Peters, 8/1973), lot 1038, realized \$32,500.

8. Fine to Very Fine, uncertified. Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 335, realized \$57,200.

9. Fine uncertified. Willis duPont.

10. Fine Details, plugged. Judge Charles W. Slack; Slack Collection (Mehl, 5/1925), lot 52, realized \$765, Morris and Beach Collections (Mehl, 4/1931), lot 926, realized \$865; William D. Waltman Collection (Mehl, 6/1945), lot 70, realized \$850; Stack's; Mormon Temple.

11. VG details, repaired. F.H. Knoop Collection (Mehl, 12/1931), lot 305, realized \$345; George O. Walton Collection (Stack's, 10/1963), lot 225, realized \$14,000; Gibson Collection (Stack's, 11/1974), lot 224, realized \$22,000; Brown; Jack Klausen; 1983 ANA Sale (Kagin's, 8/1983), lot 3659; Patrick Hoolihan; George Eggiman; Donald Kagin; Robert Campbell.

Additional Appearance

Well Worn. T.B. Lynch Collection (Édouard Frossard, 5/1886), lot 36.

PLATINUM NIGHT

1849 Mormon Twenty Dollar, MS62

The Finest Known Example of This Major Territorial Rarity

5456 1849 Mormon Twenty Dollar MS62 NGC. K-4, R.6. Where were the first coins made of California gold struck? It is a close race between the Philadelphia Mint, which produced the 1848 CAL. quarter eagles, and the Deseret Assay Office in (Great) Salt Lake City, where the 1849-dated Mormon ten dollar coins were produced in December 1848. Philadelphia received its first deposit of California gold on December 8th, one day before the 228 ounces of gold that went into the CAL. quarter eagles arrived. Meanwhile, the Deseret Assay Office accepted its first gold dust to be turned into coins on December 10th. The first Mormon gold pieces, face value ten dollars, were struck on December 12th, per Kagin; learning whether the Philadelphia Mint made its first coins of California gold before or after that date would require research beyond the scope of this lot description.

Another, more easily answered question is where the first twenty dollar gold coins circulated within United States territory. While the U.S. Mint's double eagles did not receive general distribution until March 1850 - the unique 1849 double eagle in the National Numismatic Collection is one of the country's most famous pattern coins - by September 1849 the Deseret Assay Office was striking twenty dollar gold coins, along with five dollar and two-and-a-half dollar pieces. These coins were made with the express approval of Brigham Young, who held temporal and ecclesiastical power over his followers, and within the Mormon settlement the coins passed at face value and without question.

Outside the community, the coins met with far less success. Throughout the history of money, acceptance of any piece of currency depends on trust. The Mormons were, to put it mildly, mistrusted. This was not due solely to differences of religion but also to the failure of the Kirtland Safety Society, an "anti-bank" or "quasi-bank" established by the Mormon leadership as a joint-stock company because they could not obtain a bank charter in Ohio. The Kirtland Safety Society issued notes that soon were lumped in with the rest of the suspicious paper money issued by "wildcat banks." An ill-fated venture from the start, the Kirtland Safety Society was founded at the start of 1837, a year notorious for a financial panic, and failed in November with immediate consequences for the Mormons. Many left the religious movement and those who remained were forced to flee the state.

West of the Continental Divide, trust remained in short supply. The many private assayers in California during the state's Gold Rush era provided a medium of exchange, but only so long as no one attacked the value of the coins they issued. Miners' Bank, to give one example, issued coins late in 1849, saw them discredited, and ceased to exist by mid-January of 1850. The muckraker James King of William destroyed the remaining atmosphere of uneasy trust by having certain coiners' products assayed by Augustus Humbert in March 1851 and then spreading the results far and wide; the California Legislature effectively banned private gold coinage the next month.

The coins James King of William decried had been short only small percentages of their stated value. The Mormon twenty dollar pieces, when assayed, fared worse. As noted by Jacob R. Eckfeldt and William E. DuBois in *New Varieties of Gold and Silver Coins* (1850), reprinted in Donald Kagin's *Private Gold Coins and Patterns of the United States*:

"The Mormon coins have just been received, through a gentleman who came overland from Great Salt Lake in eighty-one days. ... In fineness they are about .899 thous., with little variation; and they contain only the native silver alloy. The weights are more irregular, and the values very deficient. The 20-dollar piece weighs from 436 to 453 grains, value \$16.90 to \$17.53."

Most of the Mormon twenties soon were melted down for their actual gold content, leaving few survivors for posterity. This MS62 NGC representative is the finest certified and the only one recognized by a major service in Mint State (2/14). Only the Josiah Lilly coin in the National Numismatic Collection is a possible rival for the top census slot, and of course that coin is inaccessible to collectors.

Fully intact butter-yellow luster shows elements of orange and green from the native alloy. The clasped hands are lightly outlined, though this is typical, and scattered abrasions are as expected for the grade. This is an offering without precedent in the certification era and it is the first Mormon twenty to cross the Heritage auction block since the Eliasberg coin (a mere PCGS VF30) was offered in January 1997.

This roster of high-grade specimens was compiled by numismatic researcher Wayne Burt. We believe at least 23 separate examples of the 1849 Mormon \$20 are extant in all grades.

Roster of High-Grade 1849 Mormon Twenty Dollar Gold Pieces

1. MS62 NGC. John Glover Kellogg; Kellogg heirs; Public Auction Sale (Thomas Elder, 10/1916), lot 741, realized \$450; Virgil Brand (Brand Journal number 81206); Brand Estate; Armin Brand (priced at \$600 on 3/1/1942); B.G. Johnson; Jacob Shapiro (a.k.a. J.F. Bell); J.F. Bell Collection (Stack's, 12/1944), lot 1020, realized \$900; Major Alfred Walter; 60th Public Auction (New Netherlands, 12/1968), lot 593, realized \$8,000; Henry Clifford; Kagin Collection; the present coin. Note: In the Bell catalog, Stack's identified this coin as the Wayte Raymond-George Alfred Lawrence-"Col." E.H.R. Green specimen, but that attribution is incorrect, as pointed out in New Netherlands' 60th Sale. Plate coin in Donald Kagin's *Private Gold Coins and Patterns of the United States*.

2. MS61, estimated grade per David Hall. Mint Cabinet; Smithsonian Institution.

3. AU53 PCGS. Judge Charles W. Slack; Slack Collection (B. Max Mehl, 5/1925), lot 51, realized \$475; unknown intermediaries; Dr. Russell H. Renz; Royal Sale (Mehl, 3/1948), lot 3923; James A. Stack; Stack-Teich Collections (Stack's, 1/1990), lot 332, realized \$41,250.

4. AU50 PCGS. Captain Andrew C. Zabriskie; Zabriskie Collection (Henry Chapman, 6/1909), lot 457, Col. James W. Ellsworth; John Work Garrett, via Wayte Raymond and Knoedler Galleries in 1923; Johns Hopkins University; Garrett Collection, Part II (Bowers and Ruddy, 3/1980), lot 954, realized \$50,000; Charles Kramer; Kramer Collection (Stack's- Superior, 11/1988), lot 943, realized \$45,100.

5. AU50 NGC. Stocker Estate; Pre-Long Beach Sale (Ira and Larry Goldberg, 9/2012), lot 2251, realized \$253,000.

6. AU50 estimated grade. Smith & Son; Stack's; Josiah K. Lilly; Lilly Estate; Smithsonian Institution.

1850 Mormon Five Dollar Gold Piece, MS61 Second of Three Mormon Designs

5457 1850 Mormon Five Dollar MS61 NGC. K-5, High R.5. After a limited effort in 1848, and an ambitious coinage program in 1849, the Mormons issued only five dollar gold pieces in 1850. New dies were made for the 1850 coinage, as mentioned in the journal of Thomas Bullock, Brigham Young's clerk, on March 15, 1850, "B.Y. called in morning & gave orders about the new dies." The 1850-dated dies differed in several details from the 1849 issue, with different styling of the clasped hands, eye, and bishop's miter, and the addition of a circle of stars around the central design elements. A description of the 1850 Mormon five dollar gold piece was provided in lot 820 of the Charles W. Cowell Collection (B. Max Mehl, 11/1911):

"1850 \$5.00 Obv. Eye of Providence within a circle of 9 five pointed stars, around HOLINESS TO THE LORD. Rev. clasped hands, below which, is date. Around G. S. L. C. P. G. FIVE DOLLARS. Plain edge. Fine. Everything well struck up including date. Very rare."

Mehl also gave an interesting theory about the reason for the rarity of all Mormon coinage:

"There is great religious sentiment felt by all Mormons toward these coins, and in order that their coins should not be possessed by the Gentiles, nearly all of these coins that they could possibly get possession of, were remelted."

Mehl's theory notwithstanding, it is more likely that the Mormon issues were destroyed in the same way that most Territorial gold issues were handled. Once they were shown to be debased and underweight, the coins were only accepted at a steep discount by merchants, who were then able to profitably turn them in for recoinage. In this fashion, most of the Mormon gold coins were eventually removed from circulation. Despite an initial coinage of about \$70,000 in face value by the end of 1850, all Mormon issues are quite elusive today. Currently, NGC and PCGS have combined to certify 112 examples of the 1850 Mormon five dollar gold piece between them, including an unknown number of resubmissions and crossovers. The issue is especially rare in Mint State grades, where NGC has graded one coin in MS60 and four, including this example, in MS61, with none finer. PCGS has graded a single Mint State coin, in MS62 (3/14).

From The Riverboat Collection. PCGS# 10265

1860 Clark, Gruber Five Dollar, MS63 Sharply Struck First-Year Colorado Issue

5458 1860 Clark, Gruber & Co. Five Dollar MS63 PCGS. K-2, R.4. The firm of Clark, Gruber was a well-respected banker, purveyor of commercial goods and commodities, assayer of gold and silver, and private coiner that was of paramount importance to the growth of Denver and the Pike's Peak region of Colorado during the late 1850s and early 1860s. The enterprise struck coins only in two fleeting years, 1860 and 1861, and struck gold ingots only in its third and final year. The Clark, Gruber building was sold to the U.S. government and became, with some expansion and renovation, the first facility for a planned Denver Mint. The powers-that-be in Washington reversed course, however, and for many years the facility would function only as a government assay office. In 1879 Mint Director Horatio C. Burchard wrote of the facility:

"The mint is located in the midst of a prosperous and rapidly growing community. Being at the railroad center of connecting lines from the principal mining sections of the State, as well as from New Mexico, the wealth of precious metals pouring in should be treated there, and settlement made with depositors. I estimate the production of Colorado alone to be at the rate of at least \$15,000,000 of gold and silver per annum, and the present facilities at the Denver mint for operating upon this amount of bullion are totally inadequate."

Plans began for a new facility that finally opened in 1906. With expansions in 1935 and 1944, the Denver Mint is now the largest supplier of coins in the world — giving the early Clark, Gruber coinage singular and special importance to history-minded numismatists.

The ten and twenty dollar gold coins of Clark, Gruber & Co. dated 1860 featured a fanciful (or amateurish) Pike's Peak on the obverse (undated side), but the smaller 1860-dated quarter eagle and half eagle issues from the firm adhere closely to the federal-style Liberty Head gold coins of the same period. Given the die evidence, the likely explanation for the dissimilar design pairs is that the dies for the ten and twenty dollar coins were fashioned in the East by a die engraver who had never seen Pike's Peak (or possibly any other mountain). In 1861, all four denominations were federal-style, with some legends rearranged.

This MS63-PCGS example of the 1860 Clark, Gruber half eagle is one of five submissions in this grade, and four pieces are finer at that service (3/14). It is encapsulated, like many of the Territorial gold coins in this advanced consignment, in an early PCGS 6 holder with blue insert and bar code on the reverse, a fleeting design used only in November-December 1998. The surfaces are sharply struck, largely wheat-gold with small areas of deeper brownish-gold and orange-gold. Light field chatter rather than mentionable marks determine the grade. Listed on page 394 of the 2014 *Guide Book* From *The Riverboat Collection*. PCGS# 10136

1860 Clark, Gruber Half Eagle, MS64 Tied for Finest at NGC Rich Reddish-Orange Color

5459 1860 Clark, Gruber & Co. Five Dollar MS64 NGC. K-2, R.4. The enterprising Clark, Gruber firm of Denver was by far the most important and longest-lasting of the few private coiners during the Colorado Gold Rush, although two other commercial assayers and coiners, J.J. Conway & Co. and Parsons & Co., are known; their few issues are all extremely rare to unique.

As the forerunner of what would become first the Denver Assay Office and finally, in 1906, the Denver Mint which still continues to operate today, Clark, Gruber occupies an important position in the history of private and Territorial gold issues. Such private assayers and coiners filled crucial roles in fostering commerce and encouraging growth in pioneer areas during America's three most important gold rushes, namely those of North Carolina and Georgia, followed by California, and finally Colorado. Without a more-reliable medium of exchange than unassayed gold dust, trade was stunted, miners could not reap the maximum fruits of their labor, and middlemen involved in trades such as transport, insurance, and security would reap much of the profits.

Establishing their mint in Denver in 1860, Clark, Gruber struck a full suite of four denominations from quarter eagle to double eagle each in 1860 and 1861, a status that no other private gold coiner can equal. The 1860 Clark, Gruber half eagles or five dollar pieces, while still very scarce, are the most available of all Colorado gold issues. Clark, Gruber redesigned their half eagle dies between the 1860 and 1861 issues, but with little improvement. The 1860 Liberty faces *outward* with a squarish, masculine jaw; the 1861 version tilts her head *upward*. The 0 in the 1860 date is overlarge, suggesting that the digit may have been added later by hand with the 186 produced by a three-digit gang punch.

This near-Gem NGC-certified example is tied for the finest at that service with two other submissions; PCGS has seen two graded MS64, along with one MS65 and one MS66+ finer (3/14). Rich reddish-orange coloration complemented by scattered lilac accents is the hallmark of this piece. Excellent surface preservation results in no mentionable marks on either side. A small dark fleck near star 1 identifies this example. Listed on page 394 of the 2014 *Guide Book*.

From *The Riverboat Collection*. PCGS# 10136

1860 Clark, Gruber Ten Dollar, MS63 Important Colorado Private Gold Issue Tied for Finest Graded

5460 1860 Clark, Gruber & Co. Ten Dollar MS63 NGC. K-3, R.5. Both the 1860 ten and twenty dollar gold pieces struck by Clark, Gruber & Co. bear some interesting — perhaps fascinating — attributes. Both denominations feature an eagle bearing an olive sprig, shield, and arrows on the reverse that is roughly imitative of the federal style, with CLARK GRUBER & CO. around the rim and the date 1860 below the eagle. The obverse of the ten and twenty dollar pieces displays a curious image of a roughly triangular central device that purports to be Pike's Peak. The legend PIKES PEAK GOLD and the denomination TEN D. or TWENTY D. encircles the obverse rim. On the K-3 ten dollar variety, the word DENVER is quite close beneath the base of the mountain, and on the K-4 twenty dollar DENVER is slightly lower. On both types, the lower reaches of Pike's Peak show three small groves of trees left, right, and center.

The design of the Clark, Gruber ten and twenty dollar coins is odd, as the location DENVER just beneath Pike's Peak seems to suggest that the city nestles at the base of the mountain; in reality, Pike's Peak is 90-plus miles away from Denver, near present-day Colorado Springs. The design, however awkward, nonetheless accomplishes some important "brand positioning" on the part of the clever partners, functioning much the same way Civil War store cards would a few years later.

The present MS63 NGC-certified Clark, Gruber 1860 ten dollar gold coin is the sole finest example at that service, tied for the finest certified with two submissions at PCGS (3/14). This piece is in a remarkable state of preservation for an issue that normally is found in AU condition at best. Generous mint luster flows over the medium yellow-gold surfaces on both sides. A sharp strike has brought up all details throughout both sides to good effect, and a few light field marks account for the grade. A die break runs from the rim through the middle of E and the bottom of AK in PEAK.

Given the notable rarity of both of the larger-denomination Clark, Gruber issues, the present consignment stands out among the few to contain a complete run of all four sizes from quarter eagle to double eagle of this important Colorado gold private coinage. Listed on page 394 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10137

ADDITIONAL TERRITORIAL GOLD

1860 Clark, Gruber Twenty Dollar, XF45 Standout Memento of the Colorado Gold Rush Legend 'Pikes Peak Gold-Denver'

5461 1860 Clark, Gruber & Co. Twenty Dollar XF45 PCGS. K-4, High R.6. The first American gold rush was in the Piedmont region of North Carolina and North Georgia in the late 1820s-early 1830s. A second and much larger event was the great California Gold Rush, which began in 1848 with James Marshall's discovery of gold in the tailrace of John Sutter's sawmill in Coloma, California, on the American River. But within a decade or so, by 1858, America's second gold rush was largely tapped out.

But yet another, third gold rush turned miners' attentions elsewhere at about the same time. Tales of earlier small discoveries in Colorado from miners en route to California began to circulate, and some small placer deposits were uncovered in 1857 along the South Platte River, near present-day Denver. Also in 1857, news of gold discoveries in Colorado reached the East, and various parties set out for Colorado. Auraria, Georgia, native William Greeneberry "Green" Russell and his party (including his brothers Levi and Oliver) set out for Colorado in February 1858. They worked a site near present-day Englewood, Colorado, in July 1858, recovering about 20 troy ounces of gold, the first major strike in the Rocky Mountains. Reports of these gold strikes were published in the *Kansas City Journal of Commerce* in August 1858, and the rush was on. Russell and his party named a site "Auraria" at the confluence of Cherry Creek and the South Platte River in honor of his Georgia hometown; on the opposite side of Cherry Creek, another settlement sprang up, and by 1860 the two had merged and become Denver. (Today the area is known as Confluence Park, in Denver's redeveloped Lower Downtown or LoDo district.)

Many miners had already gone home from California with varying degrees of success. Some of them made the trek to Colorado from as far away as the East Coast. Others who had remained in California began the arduous trip eastward through the passes of the Rocky Mountains to areas on the eastern slope, including Denver and the Pike's Peak Country near present-day Colorado Springs. Local organizing committees formed a rudimentary civil government, dubbing the area the Jefferson Territory. This unorganized, unofficial entity overlapped land in parts of the officially recognized territories of Kansas, Nebraska, New Mexico, Utah, and Washington.

Just as there were Twenty-Niners in North Carolina and Forty-Niners in California, so there were Fifty-Niners — an estimated 100,000 people at their maximum, digging and panning for riches with their famous slogan, "Pike's Peak or Bust!" Glowing, sometimes exaggerated reports of the newfound Colorado gold and its unusually high purity fired the popular imagination once again.

Meanwhile, native Ohioan brothers Austin M. and Milton Edward Clark were operating a successful mercantile business in Leavenworth, Kansas, in the autumn of 1857, when word of the Colorado finds began to circulate. By March 1859 they had formed a banking enterprise in partnership with Emanuel Henry Gruber, as announced in the Leavenworth *Daily Times*. They offered certificates of deposit, exchange services, U.S. Treasury notes, and bought gold dust in addition to receiving it for their commodities business. But the trip to the Philadelphia Mint for assaying and coining gold dust was arduous, time-consuming, and expensive. By December 1859, Milton Clark had bought all necessary equipment for a mint and assay office, and in January 1860 the firm purchased three lots in Denver, on the corner of G and McGaa (later renamed Market) streets.

By July 1860 Clark, Gruber was open for business and became by far the most successful private coiner in Colorado, striking quarter eagles, half eagles, eagles, and double eagles in 1860 and 1861, and gold assayer's bars or ingots in 1862. The thriving enterprise's products were widely accepted — much like Moffat & Co.'s private coinage in California and, before them, the Bechtler family's gold coins in the Southeast — and its reputation was beyond reproach.

The present Clark, Gruber double eagle is an impressive memento of the largest-denomination coin that the firm ever struck, and this piece is only the second example in gold of this notable rarity that we have ever handled (trial strikes in copper are also known). The first gold piece was a fantastic MS64 NGC example that brought \$690,000 in our FUN Signature (Heritage, 1/2006), lot 3673. The design of the coin is a fanciful pyramidal structure with trees at the base and DENVER just beneath, supposedly a depiction of Pike's Peak but in reality resembling the mountain not at all. PIKES PEAK GOLD and TWENTY D. encircle the rim. The reverse bears an eagle more or less in the Federal style, with the date 1860 below and CLARK GRUBER & CO. around.

This Choice XF PCGS-certified piece is not in the same class as the record-breaking MS64 coin above, but it offers many charms of its own — not the least of which is that it is a tad more affordable, while still offering many of the virtues of a Mint State coin. The piece is certified in an early PCGS blue-label holder with bar code on the reverse (used only in November-December 1998). Deep, mellow reddish-orange color is consistent throughout both sides of this piece, which shows a scattering of light marks but no singular abrasions. A series of reeding marks in the reverse right (facing) field is clear evidence of coin-to-coin contact, likely with another example of these Reeded Edge gold pieces. The strike through the central devices is sharp, and around the periphery, PIKES PEAK is weaker than the remaining legends. PCGS shows a total of nine submissions in all grades, ranging from VF20 to MS61, and including one in AU50, two in AU55, and one each in MS60 and MS61 (3/14). Even in such a monumental consignment of Territorial gold coins, this piece is a standout. Listed on page 394 of the 2014 *Guide Book*.

From The Riverboat Collection. PCGS# 10138

1861 Clark, Gruber Quarter Eagle, MS63 Boldly Struck Conditional Rarity Final-Year Colorado Gold Issue

5462 1861 Clark, Gruber & Co. Quarter Eagle MS63 PCGS. K-5a, R.4. The year 1861 was the final one for gold coinage from Denver's Clark, Gruber & Co., although the company did make ingots in 1862. The company likely suspended its coinage in anticipation of an official branch mint being constructed in Denver — a plan that would take decades to come to fruition.

The early relationship of Clark, Gruber with the surrounding Denver community shows many parallels with the early history of Nevada, whose fabled Comstock Lode discovery in 1859 would lead, by 1870, to the opening of the Carson City Mint. In both instances, rich strikes — mostly of gold in Colorado, mixed silver and gold in Nevada's Comstock region, on Mount Washington — would rapidly lead to the requirement for improved forms of trade beyond barter or unassayed precious metals (in whatever form).

But there was a crucial difference.

In 1860 Clark, Gruber filled the need privately in a remote area of what is today the state of Colorado, at a time when the area had essentially zero political influence. The 1870 opening of the Carson City Mint was in a region that had achieved statehood six years previously, in 1864, and amassed considerable wealth along the way; yet even then, the Carson City Mint had numerous detractors from varying factions with agendas of their own, including Washington bureaucrats and politicians from Pennsylvania and California, the two other states with operating federal mints at the time.

The 1861-dated Clark, Gruber coinage represents the final year for the illustrious firm's products, aside from the 1862 ingots (of which apparently none survive today). The 1861 quarter eagles of the firm are seen far less frequently than the 1860-dated coins of that denomination. This 1861 quarter eagle graded MS63 PCGS is conditionally quite rare, tied with one other submission for the finest at PCGS. NGC shows three in this grade with one MS64 finer, although those may represent some duplications (3/14). Attractive, deep orange-reddish color accented with glints of lilac dominates each side of this coin, a piece that is quite boldly struck yet emphasizes the rather crude nature of the die work. PIKES PEAK now occupies the coronet on the obverse, while CLARK GRUBER & CO. DENVER appears on the reverse. The date is haphazardly positioned on the obverse die. The recutting visible on the star above the P in PIKE represents a later state of this same obverse die, in our opinion; some earlier-state coins show the star with no recutting. The hair cords, beads, and curls are richly textured on the obverse, as are the eagle's feathers, olive leaves, and shield stripes on the reverse. An impressive example. Listed on page 394 of the 2014 *Guide Book*.

END OF THE RIVERBOAT COLLECTION OF TERRITORIAL GOLD

ADDITIONAL TERRITORIAL GOLD

(1842-1852) A. Bechtler Five Dollar 134G. 21C., AU58

5463 (1842-52) A. Bechtler Five Dollar, 134G. 21C. AU58 NGC. **K-27, Low R.5.** Luster brightens the legends of this difficult variety, the only 134 G. August Bechtler issue. The fields are lightly abraded, but the dusky lime-gold toning is attractive. The obverse rim is flat between 3 and 5 o'clock, as made, but from an unknown cause. This is the most available of the four A. Bechtler five dollar types, as the other three are rated as R.6. NGC has graded 28 examples of this variety, but just two of those pieces are graded finer than this AU58 specimen: one at MS60 and the other at MS61. Listed on page 378 of the 2014 *Guide Book*. Census: 11 in 58, 2 finer (3/14).

Ex: Milwaukee, WI ANA Signature (Heritage, 8/2007), lot 3528. PCGS# 10046

**1851 Lettered Edge Humbert Fifty, MS63
Rare K-2 880 Thous. Variety
Seldom Offered Finer**

5464 1851 Humbert Fifty Dollar, Lettered Edge, 880 Thous. MS63 NGC. CAC. First type, 50 D C underneath eagle, no 50 in center reverse. The Lettered Edge fifty dollar octagonal pieces struck under the auspices of Augustus Humbert, official assayer at the Moffat & Co. provisional U.S. branch mint in San Francisco, are the most iconic and memorable numismatic mementos of the history-making California Gold Rush.

All of the Lettered Edge and slightly later Reeded Edge Humbert-U.S. Assay Office octagonal fifty dollar coins date from a compact but event-filled period of the California Gold Rush, the period from 1851 to late 1852-early 1853, when the last of these coins were struck. Two waves of private coiners — one in 1849, a second wave in 1850 — had come and gone, falling victim variously to primitive conditions for performing accurate assays and striking coins; bad (and inaccurate) publicity — perhaps yellow journalism; the loss of public trust, sometimes justified, more often not; conflicts of interest, at least, on the part of assayer Humbert; as well as various levels of incompetence, greed, and outright fraud.

The first Lettered Edge octagonal coins were labor-intensive in the extreme; in fact, merely calling them “Lettered Edge” underemphasizes the large number of details that had to be applied by hand to each example of the type. Q. David Bowers’ *California Gold Rush History* rather nicely summarizes the various operations:

1. The obverse and reverse were stamped from a pair of dies.
- 2-4. The fineness — in this case 880 — was hand-stamped on the obverse scroll from individual numeral punches. (Note that the 880 is incuse, with the first 8 markedly lower than the second, the 0 is tilted slightly to the right, and THOUS — in the die — is raised.)
5. The value 50 was stamped on the obverse to the left of DC (for dollars and cents), from a single punch. (Again, 50 is incuse, while the D and C are raised.)
- 6-13. In eight separate operations, each of the octagonal edges was stamped with a logotype punch, AUGUSTUS / HUMBERT / UNITED / STATES / ASSAYER / OF GOLD / CALIFORNIA / 1851. (Unfortunately, the Lettered Edge is hidden from view in the present holder.)
- 14 (optional). The value 50 was (sometimes) hand-stamped on the reverse.

The present K-2 1851 Lettered Edge Humbert fifty, of 880 thousandths fineness, is certified MS63 by NGC, a coin of simply stunning quality. The fact that it is one of the Lettered Edge types, rather than the more-often-seen Reeded Edge coins, makes it that much more impressive. It is true that the Lettered Edge types without the 50 in the center reverse are seen more frequently than the With 50 types, but more relevant is that *these coins are seldom seen in Mint State, and the appearance of any Mint State Lettered Edge Humbert at public auction is an event of extreme importance in the numismatic community.* Rather than the 50 on reverse, the K-2 and similar varieties show a small concentric circle of small triangular shapes, numbering 24 in all. (The high quality of the present piece is a great aid in counting these bits.)

The surfaces of this piece are a remarkably consistent orange-gold throughout, showing fewer small marks even than we might expect at this high grade level. Mint luster is quite apparent on each side — how many Humbert-Assay fifties show that? Both the strike and preservation are of impeccable quality; clearly, someone considered this piece as far more than a mere “ingot” or “slug.” A small tick appears in the left obverse field below the U in UNITED. On the reverse, a couple of tiny scrapes appear near the central element — but frankly, we have never seen this interesting, engine-turned reverse in a superior state of preservation.

Only four times previously have we offered examples of the K-2 variety in the MS63 grade (and none with the CAC approval), and we know of no finer auctions of certified pieces. An MS63 NGC example brought \$149,500 in our Long Beach Signature (Heritage, 6/2005), lot 8278 (more than nine years ago now). A nice greenish-gold example, also graded MS63 NGC, realized \$264,500 in our Milwaukee ANA Signature (Heritage, 8/2007), lot 2107. An MS63 PCGS coin in our Boston ANA Signature (Heritage, 8/2010), lot 3677 — the former Eliasberg Collection coin, which was featured on the cover of the May 1996 Eliasberg Collection sale — brought \$546,250. Finally, another MS63 NGC coin in our FUN Signature from this past January, lot 5991, garnered \$352,500.

Even in this incredible Platinum Night offering of Territorial gold, this piece is a remarkably nice offering. Listed on page 380 of the 2014 *Guide Book*. Census: 4 in 63, 3 finer (3/14).

From The Charles G. Wright Family Collection. PCGS# 10196

**1851 Humbert Octagonal
Fifty Dollar, AU50
Very Scarce K-7 887 Thous. Variety**

5465 1851 Humbert Fifty Dollar, Reeded Edge, 887 Thous. AU50 NGC. K-7, R.4. Reverse without 50 in center, small concentric circles, ribbon close to engine turning. The 1851-52 fifty dollar Humbert-U.S. Assay Office ingots or slugs produced by Moffat & Co. under the auspices of the U.S. Government and Augustus Humbert, U.S. assayer, are today considered semiofficial issues from what was a provisional branch mint of the United States in San Francisco, a couple of years before the establishment of the San Francisco Mint. They are properly collected alongside regular-issue U.S. gold coins and were considered “quintuple eagles” in their day. The fifty dollar coins are also the most impressive and popular issues of the California Gold Rush and the “Forty-Niners” who flocked in by the many thousands to find their fortunes in the Fields of Gold.

Obstructionism and indifference on the part of Washington bureaucrats to the needs of commerce in faraway California meant that for a brief time in the early 1850s, the fifty dollar gold slugs were a glut in the market, the only coins that would pass at par for regular transactions (although too large for day-to-day business) and be acceptable for Customs duties as well — a crucial attribute for market acceptability in the rapidly expanding port of San Francisco. This AU50 NGC example is of the 887 fineness K-7 variety, a typical fineness for unalloyed native California gold, which was always intermingled with silver. The golden-yellow surfaces of this piece still display rich luster and excellent eye appeal. Scattered small- to medium-sized contact marks appear throughout both sides, the most noticeable a scrape just above the concentric circles on the reverse. A couple of rim bumps are also as expected. This piece should find a number of willing bidders of Territorial gold. Census: 17 in 50, 48 finer (3/14). Listed on page 381 of the 2014 *Guide Book*.

From The Charles G. Wright Family Collection. PCGS# 10214

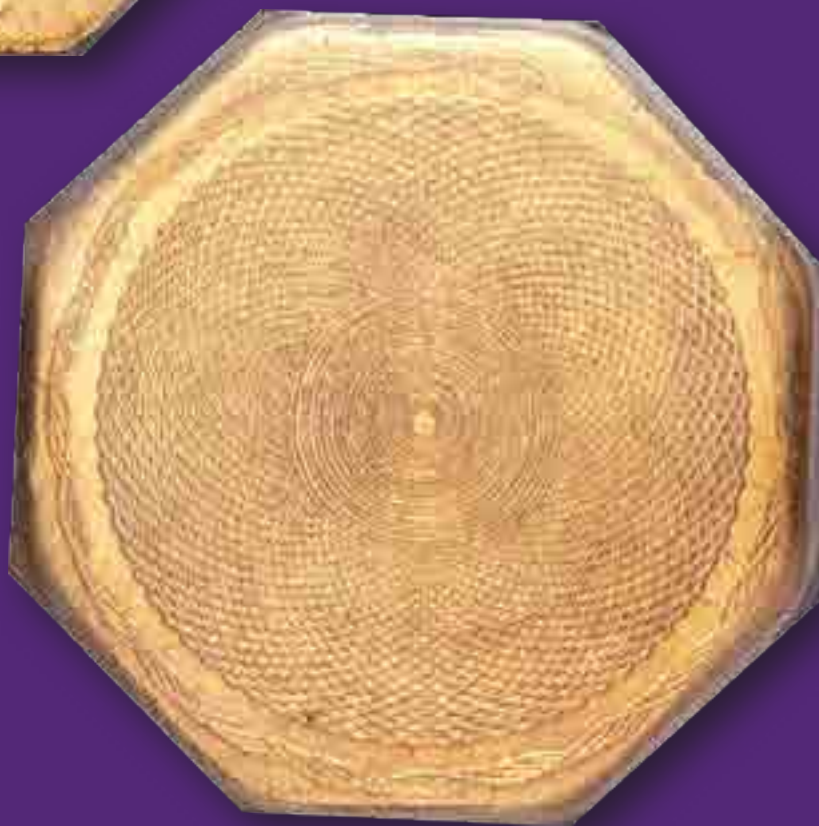

1852 Assay Office Fifty, XF40 K-14, High R.5

5466 1852 Assay Office Fifty Dollar, 900 Thous. XF40 PCGS. CAC. K-14, High R.5. Although federal authorities in 1852 told the San Francisco customs collector that he could no longer accept coinage of fineness lower than 900, the local business community managed to accede to the unreasonable demand. Fortunately, the recent gold deposits were of higher fineness than previously, so the U.S. Assay Office was able to produce gold at the higher standard. After October 1852, according to Bowers' *A California Gold Rush History*, "nearly all ingots issued by the Assay Office were 900 thousandths fine." Coinage of the U.S. Assay Office fifty dollar ingots ceased in 1853, since they were no longer needed or wanted after the lower-denomination pieces began to circulate. Donald Kagan notes that the 1852-dated octagonal pieces with .900 THOUS on the ribbon above the eagle were "emergency issues of which 13,800 were made in January, 1853 and 10,000 in February, 1853." There was apparently no time for preparation of new 1853-dated dies, or perhaps such dies were viewed as wasteful in light of the various ten- and twenty-dollar issues in circulation.

This piece shows orange-gold surfaces with moderate wear and evidence of contact consistent with the grade, and there are no major impairments or rim bumps evident, refreshingly so. The coin is solid and appealing for the grade. Listed on page 364 of the 2009 *Guide Book*.

From the Fern E. Wagner Trust. PCGS# 10019

**1852 Assay Office Fifty Dollar, MS64
900 Thous., K-14, Ex: Zabriskie
Tied for Finest Certified**

5467 1852 Assay Office Fifty Dollar, 900 Thous. MS64 PCGS Secure. CAC. K-14, High R.5. The firm of Moffat & Co. was dissolved on February 14, 1852, when John Little Moffat sold his interest to his three partners, Joseph R. Curtis, Philo H. Perry, and Samuel H. Ward. The remaining partners immediately established their new firm as the United States Assay Office of Gold and continued the federal contract to issue gold coinage in California. Augustus Humbert remained in his position as United States Assayer, and Customs Collector T. Butler King was authorized by Secretary of the Treasury Thomas Corwin to accept the firm's coins for customs payments. The summer passed uneventfully, but an economic bombshell was dropped when a federal law prohibiting the acceptance of gold coins under .900 fineness for customs dues was passed on August 31, 1852. Since the U.S. Assay Office coins were only .880, .884, and .887 fine, this virtually deprived the region of all legal tender currency.

Although the Assay Office coins were of lesser fineness than their federal counterparts, they compensated by being heavier. The intrinsic value of the coins met, or even exceeded, their face value, but Congress feared that the lesser fineness might damage the credibility of the United States if they were used in international trade. The reaction of the people of California to this destructive policy was outlined in an article in the *National Intelligencer* on September 14, 1852:

"Perhaps a more unnecessarily severe and wanton injury has never been committed upon an entire community by the National Legislature, than this enactment, comprised in two lines, has inflicted upon the people of California."

In this emergency situation, local merchants and businessmen petitioned Curtis, Perry, and Ward to issue coins of the new fineness, which Customs Collector King took it upon himself to accept for customs payments. The Assay Office complied, issuing coins of the new fineness in several denominations, with most of the gold coming from the lesser fineness coins which were turned in for recoinage. A total of 13,800 fifty dollar slugs of the K-14 variety were issued in January 1853, followed by 10,000 more in February 1853, all bearing the old 1852 date and the new fineness 900 THOUS. on the ribbon. The coins were accepted by King and circulated widely in the channels of commerce, both in California and abroad, until the opening of the San Francisco Mint in 1854 gave the people of California a dependable federally sanctioned medium of exchange.

The present coin is tied for finest-certified honors with a single specimen at NGC (3/14). It is likely that the coin was preserved by U.S. Assayer Augustus Humbert himself at the time of issue, although this cannot be proven with absolute certainty. The coin has certainly never been in circulation, and Humbert is the most likely candidate for its preservation. Humbert kept an extensive collection of private gold coinage until his death, when his coins passed to his brother, Pierre. Pierre, in turn, retained his brother's collection until his death in 1901, at which time Captain Andrew C. Zabriskie was able to purchase as much of the collection as he desired from the executors. Zabriskie was probably the biggest collector of Territorial gold in the early 20th century, and this coin made its first auction appearance in lot 360 of Henry Chapman's catalog of his collection, which was sold on June 3 and 4, 1909:

"1852 \$50. Defiant eagle to left, head turned to right, a U.S. shield which rests on rocks, and three arrows in right talon, while from the base of right wing starts a ribband inscribed LIBERTY and passing on through the eagle's beak, terminates in right field, around UNITED STATES OF AMERICA FIFTY DOLLS. above on scroll 900 THOUS this central device enclosed in a beaded circle, outside of which and following the octagon shape of the coin is UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO CALIFORNIA 1852. R. Engine turned. Edge, milled. Octagonal. Extremely fine. Sharp impression. Very rare. See plate."

The lot realized \$220 to an unknown buyer. We have not been able to trace its history over the next several decades, so it is likely it found a home in one of the great early 20th century collections, like those of Colonel James W. Ellsworth or Virgil Brand, that were later mainly dispersed through undocumented private transactions. The coin finally surfaced again in lot 820 of the Baltimore Auction (Superior, 7/1993), where it realized \$50,000.

This remarkable Choice example exhibits much sharper detail than is usually seen on this issue, with all letters in the legend plainly legible and fine definition on the eagle's feathers. These large gold coins are typically found with excessive bagmarks, but this piece shows only minor signs of contact in the fields, and displays none of the large edge bumps that often plague this issue. The most remarkable visual characteristic of this coin is its vibrant mint luster, which radiates intensely from both sides, with a few hints of prooflike reflectivity in selected areas. The vivid orange-gold surfaces add to the extraordinary eye appeal. This coin combines the highest available technical quality and eye appeal with unmatched historic interest and an illustrious pedigree. There is simply no comparable example for the finest collection of Territorial gold. Listed on page 383 of the 2014 *Guide Book*. Population: 1 in 64, 0 finer (3/14).

Ex: Possibly Augustus Humbert; Humbert Estate; Captain Andrew C. Zabriskie; Zabriskie Collection (Henry Chapman, 6/1909), lot 360; unknown intermediaries; Baltimore Auction (Superior, 7/1993), lot 820.

From The Charles G. Wright Family Collection. PCGS# 10019

**1852 Assay Office Ten Dollar
K-12a, MS63
Important Territorial Issue
An Impressive High-Grade Example**

5468 1852 Assay Office Ten Dollar MS63 PCGS. K-12a(1), R.4. O in OFFICE under N of UNITED, strong beads. On February 14, 1852, the firm of Moffat & Co., headed by Mr. John Moffat, was reorganized as The United States Assay Office of Gold, under the partnership of Joseph R. Curtis, Philo H. Perry, and Samuel H. Ward. The company immediately began to strike 10 dollar gold coins which were badly needed as circulating money in California.

Several varieties of the 10 dollar Assay Office coins were struck in 1852. The first variety, referred to as Kagin-12 or K-12, shows an arrangement of the reverse legends in which the O in OFFICE is centered below the I in UNITED.

Struck later was K-12a, showing a new arrangement of the reverse legends. In this variety, the O in OFFICE is centered under the N in UNITED. There are two different die states of K-12a, designated as K-12a(1) and K-12a(2); respectively showing strong beads (1), as on the current example, or faint beads (2) around the reverse border.

The appearance of these coins occurred within the context of a protracted, contentious struggle between factions in San Francisco and Washington, D.C. The federal government failed to act decisively in the matter of providing for the monetary needs of Californians, who suffered from a lack of circulating coinage between 1849 and 1854 when the United States branch mint was finally established in San Francisco.

This is an impressively preserved example and one of the better known pieces still in existence. The lustrous surfaces only show slight contact marks and pinscratches, and lovely antique-gold central toning yields to slightly deeper peach patina near the peripheries. Listed on page 383 of the 2014 *Guide Book*. Population: 2 in 63, 1 finer (3/14). PCGS# 10001

1851 Baldwin Ten Dollar, AU Details K-4, Rare Private California Gold Issue

5469 1851 Baldwin Ten Dollar — Cleaning — Genuine PCGS. AU Details. K-4, High R.6. For a short period of time in 1850 and 1851, the private assayers and minters of California gold provided enough gold coinage to sustain the needs of Gold Rush commerce on the West Coast. Firms such as Baldwin & Co., Schultz & Co., and Dubosq & Co. fulfilled a vital function that the U.S. Government was unable (and unwilling) to do — provide enough low denomination coins in the form of five, ten, and twenty dollar gold pieces for the public to carry on daily transactions.

It was a short-lived success, however, when the primary issuers including Baldwin & Co. were identified as producing gold coin at less than S.M.V. (Standard Mint Value). Augustus Humbert provided the assay and discovered the Baldwin pieces contained gold at values 1.8% to 3% below the S.M.V. guaranteed on the coinage. The public was outraged, the currency discredited, and soon the private gold coiners were out of business. Most of the circulating coinage was purchased at a hefty discount up to 20% (often by those who were the most outraged at the “gold swindle”) and then sold to the Mint or assay office for melting, yielding a handsome profit. Virtually all of the private gold disappeared from circulation, creating the extremely rarity of these issues today.

This olive-gold example with AU Details is well-produced with nice appeal, although cleaned with some resultant light hairlines and a loss of luster. It is one of the very few Baldwin ten dollar pieces available for collectors and a pleasing representative of the type, despite the cleaning. Listed on page 387 of the 2014 *Guide Book*. PCGS# 10031

1855 Wass, Molitor & Co. Fifty Dollar, XF40 Prized California Gold Issue Scarce K-9 Variety

5470 1855 Wass Molitor Fifty Dollar XF40 NGC. K-9, R.5. Wass, Molitor & Co. was founded by two Hungarian patriots who fled their homeland after their country's 1848 bid for freedom from Austria was quashed. Count Samuel Wass and Agoston P. Molitor had both worked extensively in the mining industry in Europe before coming to California. They established an assay office in San Francisco in October 1851. The firm issued private coinage in several denominations at various times in the early 1850s, often in response to a direct petition from local businessmen to ease the chronic coin shortage that plagued the regional economy. The firm was scrupulously honest in all its dealings and their coins were found to contain more than the stated face value in gold when assayed.

The 1855 Wass, Molitor & Co. fifty dollar gold piece is the signature coin of the firm. Other issues are more elusive and some are more valuable, but the fifty dollar piece is the most recognizable of all the firm's issues. They were struck in 1855, during a period when the newly opened San Francisco Mint had to shut down, due to a shortage of parting acids. The coins were produced in large numbers and circulated widely, as their high face value made them ideal for large transactions and bank transfers. Wass, Molitor & Co. ceased coinage operations after 1855, when the San Francisco Mint resolved its difficulties and could meet the needs of the local economy.

Most examples seen today are in XF grades, with the present coin being an attractive example. The design elements are well-detailed and lightly worn, and the bright orange-gold surfaces retain significant amounts of original mint luster. Like most large gold coins that have spent any time in circulation, the Wass, Molitor fifties tend to show many bagmarks and abrasions. The surfaces of this XF specimen are about average in this respect, with a few marks and abrasions in the left obverse field that serve as easy pedigree markers. The overall presentation is quite pleasing for this important historic issue. Listed on page 390 of the 2014 *Guide Book*. Census: 4 in 40, 26 finer (3/14). PCGS# 10363

**1861 Clark, Gruber Ten Dollar, AU58
Exceptionally Nice Colorado Territorial Gold
Ex: Eliasberg/Flannagan**

5471 1861 Clark, Gruber & Co. Ten Dollar AU58 PCGS. CAC. Ex: Eliasberg/Flannagan. Clark, Gruber was instrumental in transforming the medium of exchange in Jefferson Territory from gold dust to gold coinage — no easy task during the early days of the Colorado Gold Rush, for a firm that was honest in its dealings and precise in the production of its private gold coinage. This attractive, minimally circulated ten dollar gold piece is from the second year of operations of the Clark, Gruber & Co. Bank & Mint. Alloyed with silver rather than copper, these well-produced gold coins were of slightly less fineness than Federal standards but were overweight, for a combined gold content exceeding par. Only a few tiny imperfections appear on the surfaces of this lustrous example. The strike is bold and complete, except for the always-seen softness at the eagle's talons and branch stem. A remarkably preserved example with an impeccable provenance. Just two examples are certified numerically higher by PCGS and NGC combined. Population: 16 in 58 (1 in 58+), 1 finer (3/14). PCGS# 10141

S.S. CENTRAL AMERICA GOLD BARS

Kellogg & Humbert Gold Ingot
91.73 Ounces, 887 Fine, Large-Size
S.S. Central America Recovery

5472 Kellogg & Humbert Gold Ingot. 91.73 ounces. CAGB-719. 887 fine. The usual definitions for the term “ingot” run along the lines of a “mass of (often precious) metal, such as a bar or block, cast in a standard shape for convenient storage or shipment.” Another popular definition introduces the sense of impermanence: “a material, usually metal, cast into a shape suitable for further processing.” Yet another introduces the assayer function: “Most precious metal ingots are stamped or impressed to convey the weight and purity (assay) of the piece.” The need for metalworkers or metallurgists, assayers, and equipment suitable for processing metal is palpable in these definitions.

In Gold Rush California of the Forty-Niners, there was an acute need for assayers and equipment to process the metal mined from the Fields of Gold. Gold dust was plentiful; gold coins or ingots were not. In fact, the phenomenon is universal wherever precious (or base) metals are mined: There is a need for processing of those metals into more sophisticated shapes of a known purity or value, a process that makes the metal more convenient, more marketable, and facilitates commercial transactions of all kinds.

In the case of Georgia, California, Colorado, Nevada, and elsewhere in the United States, there were both private or unofficial assayers and producers of coins and ingots, often contemporary with semiofficial or official facilities performing similar services. Although numismatists today consider the 1851- and 1852-dated octagonal Augustus Humbert/U.S. Assay Office fifty dollar pieces to be coins, at the time of their production they were perceived as little more — or nothing more — than ingots, and that term is indeed one of several nicknames that attached to them at the time.

Various small ingots or gold bars circulated in the early days of the Gold Rush alongside coinage. F.D. Kohler was state assayer, producing ingots that ranged from \$36.55 to \$150 and terminating his ingot production in 1851 once Humbert established the U.S. Assay Office. Small \$16 ingots produced by Moffat & Co. also circulated in the summer of 1849 — that amount was the established value for an ounce of gold in San Francisco at the time.

Even after the U.S. Mint was established in 1854, private production of gold coins and ingots continued alongside the official establishment. Of the five assayers whose ingots were discovered aboard the *S.S. Central America*, the firm of Kellogg & Humbert was represented by the overwhelming majority of ingots. In a Platinum Night session such as the present, particularly rich in Territorial and private gold coins in high grade and Moffat-Humbert-U.S. Assay Office coinage in particular, it is fitting that this ingot should bear the imprimatur of Kellogg & Humbert. Once the United States Assay Office closed and the San Francisco Mint opened in 1854, it was logical that former assayer Augustus Humbert would associate himself with the well-respected John Glover Kellogg. The Kellogg & Humbert firm, organized in April 1855, was the successor to Kellogg & Richter.

This ingot is serial number 975 (stamped at the top), classified according to its weight as a “large-size ingot” in Bowers’ *California Gold Rush History*. The KELLOGG & HUMBERT ASSAYERS rectangular stamp is just beneath, with the weight, fineness, and face value of \$1681.95 following. The reverse is blank save for a repeat of the 975 serial number, in a different font, and the ingot overall is bright yellow-gold, quite an impressive example.

Justh & Hunter 26.02-Ounce Ingot From the San Francisco Office

5473 Justh & Hunter, San Francisco Gold Ingot. 26.02 ounces. CAGB-381. 884 fineness. Former Baltimore exporter Solomon Hillen Hunter partnered with Hungarian immigrant Emil Justh to form the Justh & Hunter assay office, with locations in Marysville (managed by Hunter) and San Francisco. The *Alta California* newspaper announced the opening on May 15, 1855, at 188 Montgomery St., San Francisco, with an ad that read, in part, "We guarantee our assays, and bind ourselves to pay all differences arising from the same with any of the U.S. Mints. Returns made in 24 hours. Quartz and ores of every description assayed at short notice." The ad continues by mentioning Justh's experience from April 1854 (the opening date) to May 1855 as an assistant assayer at the San Francisco Mint.

The Justh & Hunter gold ingots are the secondmost-common of the five assayers whose products were recovered from the doomed S.S. *Central America*, which sank in a hurricane in 1857. The San Francisco bars numbered 60 in all, compared to only 26 from the Marysville branch.

A listing of assayers in 1855 California from Bowers' *A California Gold Rush History* includes 14 different firms, ranging from the well-known (Kellogg & Humbert) to the virtually unheard-of (F. Schotte). Bowers also answers the question of why there were so many private assayers at a time when the San Francisco Mint was already refining gold and producing coinage. Bowers reproduces an 1866 study in the Mint Director's *Annual Report* by John Jay Knox, who had been sent to the San Francisco Mint:

"My visit to California and the mining regions in the Sierra Nevadas has entirely changed my opinion relative to the propriety of erecting United States Assay Offices in the remote mining regions. In every mineral district producing [at least] \$5 million there will be at least three private assay offices, owned by reliable men, the amount of whose business will depend upon the honesty and ability with which it is conducted. Almost every large quartz mill contains an assayer, and the stamp of these assayers is well known at the Mint, where their bars are subject at any time to delicate tests.

"Private assayers will conduct their business much more economically than government officers, and the large quartz mills will in most cases do their own assaying, even if government offices are located in the same towns. ... "

Clearly, given that Justh & Hunter bars recovered from the S.S. *Central America* numbered 86 ingots of varying sizes, their experience and integrity ranked them among the most trusted and well-run assay establishments of the momentous Gold Rush era. This is a substantial-sized ingot whose top side displays No. 9524 / the company imprint / 26.02 OZS. 884. The long bottom side displays the value: \$475.48. The surfaces are bright gold, as expected, with the expected small assaying imperfections and a few shallow handling marks.

COLONIALS

Sommer Islands Shilling, Fine 12 Extremely Rare Large Sail Variety Breen-1

5474 (1615-16) Sommer Islands Shilling, Large Sail Fine 12 NGC. Breen-1, W-11465, R.7. 86.0 gn. The short-lived "Hogge Money," named for its obverse motif, was authorized by England's King James I in June 1615 in order to facilitate commerce. Importantly, it was the first English coinage created specifically for use in the Americas.

The Bermuda Islands were named for Spanish explorer Juan de Bermúdez, whose initial landing occurred in 1505. The hogs that made their way onto the islands when Bermúdez's ship grounded and wrecked on a subsequent voyage proliferated. In 1609, the *Sea Adventurer*, one of nine British ships en route to the Virginia plantation landed on the islands as the result of a hurricane. The provisions they acquired while there, including descendants of the hogs left by Bermúdez, led them to return numerous times to re-supply.

In 1615, the British founded a colony on the islands, then known as the Sommer Islands, after Sir George Sommers. Once the plantation was granted permission for coinage, the governor of the islands, Richard Tucker, arranged to have coins produced in England. Struck in brass, the four denominations consisted of two, three, and six pence coins along with shillings. A silver wash was applied to make them more palatable to the colonists.

Until the 1960s, there were few known examples of Hogge money. The advent of metal detectors, along with archeological exploration, has led to the discovery of approximately four or five dozen pieces in the last several decades. Recovered from the ground, the majority experienced significant corrosion, with pieces missing along the rim in many cases.

As is the case with nearly all other examples, this shilling is deeply toned and granular. The central reverse displays a few small specks of aqua verdigris, and each side has two or three small digs. The rims are intact. Most of the obverse design is evident. The hull of the ship is fairly sharp, and portions of the sails are clear. The gap between the central sail and the hull confirms the Large Sail variety, which is significantly rarer than its Small Sail counterpart, partly due to a small hoard of the latter located in Bermuda in 1977. As of (3/14), NGC has certified only two Large Sail Sommer Islands shillings; one is graded Good, and the other is the present lot. Listed on page 36 of the 2014 *Guide Book*.

1652 Willow Tree Sixpence, Fine Details Rare Denomination

5475 1652 Willow Tree Sixpence — Plugged — NGC Details. **Fine. Noe-1-A, W-130, Salmon 1-A, High R.6.** 33.5 gn. Produced from 1653 to circa 1660, the Willow Tree coinage carries the distinction of being the first coins struck in what would eventually become the United States bearing a date. There is only one known die pair for the sixpence denomination, as is the case with the threepence, though there are five known varieties of the shillings. The use of only one known die pair for the two lower denominations, along with the low number of surviving examples, indicates a small number of those two designs were struck. Coins from the issue generally exhibit not only a weak strike, but often two or more strikes as well.

The method of manufacture has been debated for many decades, with some arguing that a rocker press was used in production, while others believed the coins were hammered by hand or minted with a screw press. A strong case has been made that the Oak Tree pieces and large planchet Pine Tree coins were likely produced with a rocker press. However, there is still debate as to the method of manufacture for the Willow Tree coinage. In his book, *The Silver Coins of Massachusetts*, Salmon provides substantial evidence that the Willow Tree pieces were hammered. However, other scholars of the series remain convinced a rocker press was utilized.

There are very few known sixpence survivors from the Willow Tree issue, with the 2014 *Guide Book* stating 14 known. The obverse of this almost fully circular specimen displays strong centering overall, with the reverse off-center several degrees to the left and exhibiting multiple strikes. Not surprisingly, portions of the legends are missing. The willow tree design on the central obverse displays a pleasing degree of detail aside from the lower portion. On the reverse, the date remains legible aside from the 6. Subtle hints of gold and rose appear on both sides. Listed on page 38 of the 2014 *Guide Book*.

From The Old New England Collection.

**1652 Willow Tree Sixpence
Very Fine Details
Desirable Survivor from the Silver
Coinage of Massachusetts**

5476 1652 Willow Tree Sixpence — Plugged — NGC Details. VF. Noe-1-A, W-130, Salmon 1-A, High R.6. 30.8 gn. The Ford sale in October 2005 included an unprecedented second example of a Willow Tree sixpence. With a known population of only 14 specimens, it is certainly noteworthy when a collection contains more than a single example, as is the case with The Old New England Collection.

John Hull and Robert Sanderson minted the silver coins of Massachusetts beginning in 1652, with the initial undated NE coins quickly followed by the Willow Tree coins, as they eventually came to be known. Hull was born in Harborough, Leicester, England in 1624, emigrating from England in 1635. His work with silver and gold, along with shipping interests, led to his prosperity. Hull was said to have provided a dowry of £500 when his daughter Hannah married Samuel Sewell. Sewell later became the official printer of the colony and published *The Pilgrim's Progress* by John Bunyan. Nathaniel Hawthorne incorporated the dowry story into *Grandfather's Chair*, with the payment made in Pine Tree shillings in an amount equivalent to Hannah's weight. Robert Sanderson was born in Norwich, Norfolkshire, England in 1608. He apprenticed with William Rawlins in London for nearly a decade before immigrating to New Hampshire, eventually settling in Boston.

Displaying VF details, this sixpence piece exhibits a slightly off-center strike on both sides, toward the left. Attractively toned, this specimen features hues of gold, sea-green, and sky-blue. Aside from the far right portion, the willow tree design is nicely detailed. The date on the reverse was impacted due to multiple punches on that side, though the majority is legible. Listed on page 38 of the 2014 *Guide Book*.

From The Old New England Collection.

Elegant Noe-30 1662 Oak Tree Twopence MS62, Ex: Ford

5477 1662 Oak Tree Twopence MS62 PCGS. CAC. Noe-30, R.4. 11.1 grains. An elegant survivor that combines golden-tan, silver-blue, and violet shadings in its rich and delightful patina. Considerable, pleasing luster shines through on each side. The design is properly centered on the obverse with all details visible and the center sharp, while the reverse is slightly misaligned with an unstruck crescent at the lower part and the tops of the letters NGL in ENGLAND off the flan. Noteworthy visual appeal and excellent surface quality.

Ex: F.C.C. Boyd; *The John J. Ford, Jr. Collection of Massachusetts Silver* (Stack's, 10/05), lot 66; *FUN Signature Sale* (Heritage, 1/2009), lot 3533. PCGS# 17

1652 Oak Tree Shilling, AU58 Noe-1, Sharply Struck and Well Centered

5478 1652 Oak Tree Shilling AU58 NGC. Noe-1, W-430, Salmon 1-A, R.3. IN at Left. 71.6 gn. The Oak Tree coinage was struck from 1660 to 1667. There are a number of varieties of the shilling denomination, with the diagnostics for this variety including the M appearing at the 11 o'clock position on the obverse and the 2 in the date falling opposite the first N in ENGLAND on the reverse.

A gorgeous near-Mint specimen, this well-struck piece exhibits an exceptional degree of design detail. The coin displays strong centering overall, with only a slight misalignment on the obverse. The glossy surfaces feature attractive light charcoal-gray color, with closer examination revealing scattered hues of pale gold and golden-orange. A thin die break appears on the upper reverse, extending from the top left portion of the N through the top left portion of the W and then to the rim. A planchet flaw, visible on both sides, is present at 9 o'clock on the obverse, but poses only a minor distraction on this appealing coin. Listed on page 39 of the 2014 *Guide Book*.

From *The Old New England Collection*. PCGS# 20

1652 Oak Tree Shilling, Near-Mint Noe-5, IN at Bottom

5479 1652 Oak Tree Shilling AU58 PCGS. Noe-5, W-470, Salmon 3-D, R.2. IN at Bottom. 71.14 gns. The usual die state for Noe-5 with a heavy obverse break at 12 o'clock, a series of slender breaks through ND A, and crumbling on the N in AN DOM. Slightly wavy, as made and as always, but the steel-gray and olive surfaces shimmer with luster and lack consequential marks. The obverse is misaligned a few degrees toward 7 o'clock, with a few letters partly off the flan. The reverse has full legends, and is slightly misaligned toward 3 o'clock. Listed on page 39 of the 2014 *Guide Book*. Population: 9 in 58, 4 finer (3/14).

From *The Charles G. Wright Family Collection*. PCGS# 20

1652 Pine Tree Shilling, MS60 Sharply Struck Large Planchet, Noe-2

5480 1652 Pine Tree Shilling, Large Planchet MS60 NGC. Noe-2, W-700, Salmon 2-C, R.5. 70.8 gn. A Mint State example of the variety known as the "Straight Tree," this coin exhibits a crisp strike. The marvelous fully original surfaces display a deep russet patina with intense underlying luster, with closer examination revealing silver and gold hues. A normal striking planchet split is present at 7 o'clock as viewed from the obverse, extending approximately 5mm straight from the edge toward the center, with the tree detail remaining complete. All except one of the inner beads remains, with the beads exhibiting sharp definition. The M in MASATHUSETS is largely missing due to the location of the planchet split along with the IN due to the shape and size of the planchet. Portions of the legend on the lower reverse are incomplete as well due to the same reasons. However, most of the legends are present and exhibit a bold level of detail. The coin is almost entirely free of any abrasions, save for a thin, long but faint, scratch on the obverse at the top right branches of the pine tree that is not distracting. A truly wonderful specimen. Listed on page 39 of the 2014 *Guide Book*. PCGS# 23

1652 Pine Tree Shilling, MS61 Small Planchet, Noe-16

5481 1652 Pine Tree Shilling, Small Planchet MS61 PCGS. Noe-16, W-835, Salmon 2-B, R.2. 72.8 gn. Trees were critically important to Colonial America, particularly for their use as lumber, which became a prime export. In addition to tree symbols appearing on colonial coinage, the emblems were also used on the flags of ships. It is not surprising the pine tree was among those used, as that symbol was strongly associated with New England.

Though unattributed on the holder, this surviving specimen of Massachusetts' early coinage is an example of the variety with the top of the tree on the obverse pointing to the outer left side of the S. The inner circle on the reverse is not symmetrical, coming to a slight point opposite the 1 in the date.

Both sides of this Mint State example display strong centering. The surfaces have a gray-tan appearance, with closer examination revealing hints of olive-green and rose. The strike is sharp overall, with minor incompleteness along portions of the outer right obverse along with minor softness of the tree. Listed on page 39 of the 2014 *Guide Book*. PCGS# 24

Lord Baltimore Shilling, Choice AU Rare and Important Silver Colonial Issue Hodder 1-A

5482 (1659) Lord Baltimore Shilling AU55 NGC. Hodder 1-A, W-1080, R.6. 74.9 gn. The Maryland fourpence, sixpence, and shilling were the only silver colonial coinage authorized by the English government. Although the Massachusetts colony struck silver in much greater quantity, it was never sanctioned by the Crown. By contrast, the 1632 charter given Cecil Calvert, the second Lord Baltimore, included right of coinage.

Nonetheless, Calvert was arrested in England in October 1659 and faced an inquiry from the Committee of the Council for Plantations, which had been informed that silver was illegally transported to the Maryland colony. The outcome of the inquiry is unknown, but Calvert lived until November 1675. He never visited the New World, although his younger brother Leonard and Cecil's son Charles both served as deputies in Maryland.

According to the *Whitman Colonial Encyclopedia*, "the silver issues enjoyed an extensive circulation, and most examples seen today show considerable wear. Very Good, Fine, and Very Fine are typical grades, often with surface marks or damage. Any coin conservatively graded About Uncirculated or higher is a major rarity."

From The Old New England Collection. PCGS# 34

Broad Axe Higley Copper, VF Details Coveted Early American Type Friedus 3.2-C

5483 (1737) Higley Copper, Broad Axe — **Damaged** — NGC Details. VF. Friedus 3.2-C, W-8260, Low R.7. Although Samuel Higley was a medical doctor with a degree from Yale University, his career involved the mining business in a number of capacities, including notable work with steel. He bought land containing copper mines in 1728 and began mining the ore, exporting much of it to England.

Higley appears to have been a colorful personality, as legend states he frequented taverns, presenting copper tokens believed to have been produced by him, likely with his own ore, as a means of paying his bar tab. There apparently was controversy with his initial coppers denominated as threepence, since they contained less copper than British pieces bearing the same denomination. As a result, he redesigned the pieces and added the legend, VALUE ME AS YOU PLEASE to the obverse.

He produced two new reverses as well, one stating I AM GOOD COPPER and the other reading J CUT MY WAY THROUGH. Those legends would later appear on pieces from other issuers, including several Civil War tokens. Higley died in 1737 while aboard a ship bearing his copper to England. His brother John produced the examples dated 1739. It is believed many of the Higley coppers were melted for use in gold production, since local goldsmiths were in need of copper as an alloy.

The present deep brown and evenly granular Higley copper piece has surprising detail. Most of the deer and axe are evident, as are most of the peripheral letters, with the exception of PLEASE. The surfaces are slightly wavy and display a number of small to moderate digs on both sides. A Roman column is entered as graffiti, parallel to the axe handle. The condition is typical for the rare Higley series, since such pieces were given no numismatic consideration, even by their makers, prior to the 19th century. Listed on page 49 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 213

(1737) Higley Copper, VF20
Broad Axe, VALUE ME AS YOU PLEASE
Freidus 3.2-C

5484 (1737) Higley Copper, Broad Axe VF20 NGC. Breen-242, Friedus 3.2-C, W-8260, Low R.7. 129.3 gn. Dr. Samuel Higley's father, John Higley, was among the first settlers in Simsbury, Connecticut, then known as Massacoh. The Simsbury countryside included large pine forests and many of the settlers came to the area as a result, as the need for pine byproducts was strong. Before emigrating from England to America, John served as an apprentice to a glove maker. An entrepreneur, once in America he began importing West Indies rum as well as manufacturing tar, turpentine, and pitch. He used the proceeds to purchase substantial parcels of land, becoming the largest landowner in the area. Among his ten children was Samuel Higley. Samuel also acquired land in the Simsbury area, buying 143 acres containing copper mines in 1728. That same year, the Connecticut General Court granted him exclusive rights for ten years to make steel in the colony.

Just about the time his exclusive steel rights were about to expire, Higley apparently began to produce copper tokens. Several different designs were struck, with this being an example of the variety with the legend, "VALUE ME AS YOU PLEASE" on the obverse and a broad axe with "J CUT MY WAY THROUGH" on the reverse. Chocolate-brown and red surfaces provide this well-centered specimen with a lovely appearance. Though the central obverse, in particular, displays pits, they are not overly distracting on this rare piece. A few minor planchet flaws are present.

Higley's land, located in what became East Granbury, later was the home for New Gate Prison, which operated from 1773 to 1827 and was the first State Prison in America. Prisoners, including those loyal to Britain during the Revolutionary War, were housed within the caverns. The property, known today as Old Newgate Prison, became a National Historic Landmark in 1976. The town seal of Simsbury includes an image of a Higley copper. Listed on page 49 of the 2014 *Guide Book*.

New Yorke Token, VF Details Breen-245, Rarely Encountered

5485 Undated New Yorke Token, Brass — Plugged — NGC Details. VF. Breen-245, W-1705, R.6. Intended for issue by Francis Lovelace, the second governor of New York serving from 1668 to 1673, the designs on these farthing or halfpenny-size tokens include representations of Cupid and Psyche under a palm tree on the obverse, with the Lovelace coat of arms on the reverse. According to Breen, the obverse design “suggests propaganda for the colonies as a place to enjoy life.” The tokens were struck in England, perhaps in Bristol, and there is not any evidence the pieces were ever circulated within America.

Lovelace was born in Kent, England circa 1621. A late Nineteenth Century history text, *Our Country*, described Lovelace as “a quiet man, unfitted to encounter great storms, yet he showed considerable energy in dealing with the hostile Indians and French on the northern frontier of New York during his administration... There was war, again, between England and Holland, at that time, and the Dutch inhabitants of New York had shown signs of discontent because of the abridgment of their political privileges, and a heavy increase in their taxes, without their consent. Personally they liked Lovelace, but they were bound to consider him as the representative of a petty tyrant. When, in menacing attitude, they demanded more liberty and less taxation, the governor, in a passion, unwisely declared that they should ‘have liberty for no thought but how to pay their taxes.’ This was resented.” While in office, Lovelace acquired Staten Island from the Native Americans.

What appears to be a tiny plug is present within the upper branches of the tree on the obverse of this example between 12 and 1 o’clock. The appearance of small pits on the surfaces does not detract from this rare piece. The token exhibits golden-brown color, with darker areas in portions of the fields. Close examination reveals tiny splashes of attractive toning. Among the colors present are pink, lavender, and pale denim-blue. Adding to the desirability of this specimen, the number of surviving examples is small, estimated to consist of two to three dozen examples. Listed on page 47 of the 2014 *Guide Book*.

From The Old New England Collection.

1787 Connecticut Copper, AU53
Popular Muttonhead Variety
Miller 1.2-C

5486 1787 Connecticut Copper, Muttonhead AU53 NGC. M. 1.2-C, W-2720, R.3. The Whitman *Colonial Encyclopedia* refers to the present die marriage as one of the most distinctive and famous issues in the Connecticut series. The mailed bust left is unusually large and bears a serene expression. The reverse is nearly as well known, since it is the only die in the series with a topless Liberty. Relatively early in the die's life, the dies were lapped, severely weakening the legends. They are faint on the present example, as made. The medium brown surfaces are well-defined given the die state, though the centers are incompletely brought up. Nicely centered and nearly free from marks. The upper right quadrant is somewhat granular. Listed on page 61 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 343

1787 Fugio Cent, MS64 Red and Brown
STATES UNITED, Pointed Rays
Newman 12-X

5487 1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays MS64 Red and Brown NGC. N. 12-X, W-6820, R.3. Substantial orange-red fills the borders. The centers have mellowed to lilac and steel-gray. Lustrous and devoid of abrasions. From a superior quality planchet, although inconsequential flaws are evident on the left reverse. The strike is even, and the only spot is minor and found on the sundial base above the YO in YOUR. Two straight die cracks partially frame the sun face. Struck a few degrees off center toward 5 o'clock, though only dentils and the bottom of the SS in BUSINESS are affected. Likely from the Bank of New York holdings, given the high grade and the familiar vertical reverse crack at 6 o'clock. Listed on page 87 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 884

**1787 Fugio Cent, MS66 Brown
Cinquefoils, UNITED STATES
Scarce Newman 11-B**

5488 1787 Fugio Cent, UNITED STATES, Cinquefoils MS66 Brown NGC. N. 11-B, W-6785, R.4. A magnificent Premium Gem with considerable peach-red in the recesses of the design. The high points and open fields are brown. Devoid of planchet flaws and abrasions. The strike is intricate except on the upper reverse rings. A few letters in WE ARE ONE are faint because the engraver lightly impressed those letters into the reverse die. Struck only slightly off center, toward 9 o'clock. This is the late die state with bold clash marks on both sides. According to Eric P. Newman, the authority on the Fugio coppers, the Bank of New York hoard contained 60 examples of N. 11-B. Listed on page 87 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 889

**1787 Fugio Cent, MS66 Red and Brown
N. 8-B, UNITED STATES, Pointed Rays**

5489 1787 Fugio Cent, UNITED STATES, Cinquefoils MS66 Red and Brown NGC. N. 8-B, W-6740, R.3. Glimpses of mint red fill the legends and sundial and outline the rings. The devices are light chestnut-brown. The lower obverse and upper reverse are not fully struck, which is the situation for most examples seen since the dies were slightly misaligned. A splendidly preserved representative of this interesting die marriage. A curly lintmark (as made) near the AT in STATES will identify this piece in any future auction appearances. Struck from a boldly clashed reverse die, as is usual for the variety. Listed on page 87 of the 2014 *Guide Book*.

Ex: Ft. Lauderdale FUN Signature (Heritage, 1/2005), lot 6942, which realized \$6,037.50. PCGS# 890

Bar Copper, MS63 Brown, W-8520 Seldom Found in High Grades

5490 (1785) Bar Copper, W-8520, MS63 Brown PCGS. The famous Bar copper, better known as the Bar cent to an older generation of collectors. The nomenclature changed from cent to copper with the 1987 *Guide Book*. The designs of the Bar copper resemble no other early American issue. We know approximately when this anonymous issue first circulated, due to a much-quoted article in the November 12, 1785 *New Jersey Gazette*, which states that “a new and curious kind of coppers have lately made their appearance in New York. ... These coppers are in fact similar to Continental buttons without eyes; on the one side are thirteen stripes and on the other U.S.A. as was usual on the soldiers buttons.”

The present piece has all of the diagnostics of authentic pieces, such as the spur from the end of the second bar, and a slender die crack at the center between bars. Best of all, there is no sign of wear, and the golden-brown to medium brown surfaces are nearly devoid of marks. Scattered areas of tiny sage-green residue are present, primarily at the dentils. Listed on pages 73-74 of the 2014 *Guide Book*. Population: 3 in 63 Brown, 6 finer (2/14).

Ex: Long Beach Signature (Heritage, 5/2008), lot 1994; FUN Tampa Signature (Heritage, 1/2011), lot 5405. PCGS# 599

1790 Standish Barry Threepence, VF25 W-8510, Rare Post-Colonial Silver Issue

5491 1790 Standish Barry Threepence VF25 NGC. Breen-1019, W-8510, R.6. 12.8 gn. Like John Chalmers, Standish Barry of Baltimore was a silversmith who produced his own coinage. In Barry's case, the tokens consisted of a single denomination, a 1790 threepence. A portrait appearing on the obverse has led to speculation that it was intended to be a likeness of Barry, or perhaps George Washington.

Another unanswered question involves the date appearing on the pieces: July 4, 1790. Whether the date simply reflects his patriotism, his involvement in a community celebration on that date, or some other event is unknown. Barry served in both the Revolutionary War and the War of 1812, as well as leading the Baltimore Independent Blues, a group instituted to protect Baltimore from the French after the Revolutionary War. In 1809, he directed a group consisting of silversmiths, jewelers, and watchmakers in the 4th of July celebration.

As mentioned in Arthur Crawmer's April 2000 article in *The Numismatist*, "Standish Barry and His Threepence," Barry was involved in a 1790 project led by David Evans, to whom he had been apprenticed, to build a town clock, the funds for which had been acquired via a lottery. Lotteries were a common means during the period to raise money for public works projects. Barry did not have a consistent career during his life, working in numerous fields before becoming a sheriff in his later years.

As of (3/14), NGC has certified only a single example of the rare Standish Barry threepence, and it is offered as the present lot. The medal-turn piece has golden-brown and steel-gray toning. The strike is even except for softness on the H in THREE, opposite the highest relief portion of the bust. The peripheral legends are strike doubled, especially noticeable on TOWN and 90. Abrasions are absent aside from faded thin marks beneath the T and R in THREE. Listed on page 75 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 609

1818 Texas Jola Half Real, XF45 Small Planchet, Fat Star Variety

5492 1818 New Spain (Texas) Jola Half Real, Small Planchet XF45 PCGS. Breen-1082. Authorization to strike copper coinage for Spanish Texas was received from Mexico City by ad interim Spanish Governor Manuel Pardo during the brief period he served in that role in early 1817. The 1817 jolas were struck by Manuel Barrera in San Fernando de Béxar, with the reverse design consisting solely of a star, the first appearance of the Lone Star symbol for Texas. Pardo was replaced by Antonio María Martínez, the last governor of Spanish Texas, who withdrew Barrera's authority to produce the coinage. The rights were then given to José Antonio de la Garza, who struck the pieces dated 1818, also in San Fernando de Béxar, with the coins bearing his initials, JAG. The 1817 pieces were ordered withdrawn from circulation. Varieties for the jolas include large and small planchets, "skinny" or "fat" stars, and varying placement of the fraction indicating the denomination. Many of the small number of surviving examples have been excavated after spending decades in the ground and exhibit deterioration as a result.

A Choice XF specimen, this wonderful exception exhibits a sharp strike and pleasing surfaces. The piece displays excellent centering, with all of the design elements present. Struck on a small planchet, this example bears the "fat" star. James P. Bevill and Alvin L. Stern have conducted extensive research on the jolas and some of their findings are included in an article they wrote which appeared in the May 2011 issue of *The Numismatist*. Listed on page 78 of the 2014 *Guide Book*. PCGS# 661

Lovely John Burger Regulated Half Joe, XF

5493 Brazil. Joao V 6400 Reis 1744-R. Rio mint. JB monogram mark for John Burger. KM151. XF40 NGC. Clipped, re-edged, plugged, marked with script JB monogram of John Burger, New York. Plugged twice, one inside the other, in Burger's usual location on the eye of the portrait. Current weight of one grain under 8 dwt (190.7 grains) indicates clipping after Burger's work to meet a lighter West Indian standard than the 9 dwt standard to which Burger regulated. Round Burger mark, the more often seen of the two script JB's (the other is oval). Even light yellow gold surfaces are frosty if slightly mattelike, a look most often associated with saltwater salvage. Neatly clipped nearly to the tops of the legend, leaving butts of denticles visible around most of periphery. Edge device is consistent, a taut leaf design with central ridge. No major flaws, good sharpness, an attractive example of this famed New York regulator.

Burger advertised himself as a coin regulator as early as January 1784, at which time the local New York standard was the same 9 dwt standard then current throughout most of the United States. Burger was a well respected figure, a Patriot who removed from New York during the British occupation. He was once apprentice, then partner, of Myer Myers, the influential leader of New York's goldsmithing community. He worked as a coroner (including, famously, declaring that Alexander Hamilton's death was a murder) and an assessor for the City of New York. His long career stretched from 1779 until his death in 1828. His office location, at the time of his regulating work, was at 207 Queen Street (today known as Pearl Street); Albion Cox, the first assayer of the U.S. Mint and one of the partners who struck New Jersey coppers, was his neighbor at 240 Queen. He was one of ten members of the New York Gold and Silver Smith's Society, along with his mentor Myer Myers and Ephraim Brasher, as noted in the 1786 city directory. His office was just steps away from the Bank of New York and was within the smell of New York's harbor, placing him at a vertex of international trade unlike any other.

His prominence grew with age, but his desire for positions of leadership began in his youth. On April 25, 1775, just days after Lexington and Concord, John Burger is listed among those who "promise hereafter on demand" as part of the New York City militia. In 1776, at 19, Burger and his friend (and business partner) William Pritchard wrote to a noted leader in the New York Patriot movement:

"Sir : The subscribers request you will be pleased to recommend them to the Honble Committee of Safety and inform them that we are sincere Friends to America and its libertys and desirous to serve as First and second Lieutenants in any corps they be pleased to appoint, and are sir with great respect your very humble servants."

The officer they addressed was Col. Abraham Brasher, a onetime "Liberty Boy" and brother to another silversmith, Ephraim Brasher. In 1778, during his exile from New York, Burger was at last appointed an officer in a militia regiment based in Poughkeepsie, along with New York coiner (and sword maker extraordinaire John Bailey). In 1789, he was a founding member of the famed Tammany Society. By 1802, he was representing Manhattan in the New York Assembly. One of his co-assemblymen was William Gilbert, also a silversmith and the brother-in-law of Ephraim Brasher. Clearly his was a small world, one populated with nearly every notable smith and coin regulator in New York City.

Burger's regulation stamp is a truncated version of the full length "Burger," with the same script JB monogram, found on his wrought silver works (spoons, etc.). It is found exclusively on Half Joes of Brazil and Portugal and British Guineas. Half Joes outnumber Guineas by a margin of perhaps 3 to 1 overall.

Ex: Edward Roehrs Collection of U.S. Regulated Gold (Heritage, 8/2010), lot 21345.

Libertas Americana Medal, MS60 Brown Betts-615, Celebrating American Liberty

5494 (1781) **Libertas Americana Copper MS60 Brown NGC. Betts-615, Loubat-14.** An appealing, left-facing representation of Liberty appears on the obverse of this desirable medal, with the rod of liberty behind her long, flowing hair and a Phrygian cap upon it. The reverse features representations of America (Hercules), France (Minerva), and England (the British lion). The medals were the work of French engraver Augustin Dupré (1748-1833).

An MS60 example of this medal representing American Independence, this piece displays consistent chocolate-brown color throughout along with strong design definition, providing this piece with wonderful visual appeal. Very few marks are present, all minor, with a small rim nick near 6 o'clock on the obverse serving as the only distraction, a minor one at that. A few scattered minuscule spots of verdigris are present, with the most noticeable appearing to the left of the helmet on the reverse, though the spot is tiny. Listed on page 90 of the 2014 *Guide Book*. PCGS# 151815

Libertas Americana Medal, MS64 Brown Betts-615, Famous Bronze Symbol of American Liberty

5495 (1781) **Libertas Americana Copper MS63 Brown PCGS. Betts-615, Loubat-14.** A Select example of this popular medal celebrating American Independence, this piece has an overall chocolate brown appearance, with closer examination revealing intermingled hues of pastel green, steel blue, pale yellow, violet, and red-pink. Though scattered marks are present, none poses a distraction on this desirable specimen. Noted French medallist Augustin Dupré engraved the dies for these medals in Paris, with artist Esprit-Antoine Gibelin having sketched the design. A wonderful piece of American history conceived by Benjamin Franklin. Population: 10 in 63 (1 in 63+) Brown, 10 finer (2/14). PCGS# 151815

HALF CENTS

**1793 B-3, C-3 Half Cent, XF45**
Exceptional Type Coin

5496 1793 XF45 PCGS. C-3, B-3, R.3. This variety is the second most common of the four known for this issue. Of course, no 1793 half cent can truly be considered common, as a mere 35,334 pieces were produced, and survivors are always in demand as the only coins extant of this one-year type. A choice coin for the grade with medium olive surfaces, there are no noticeable post-production impairments. The strike is well centered and sharp, and every feature retains ample definition despite light overall wear. The only mentionable surface blemishes, and we hesitate to call them blemishes because they are as struck, are a pair of bisecting laminations on the obverse that are most noticeable in the field before Liberty's portrait. A coin that would do justice to any high grade circulated type set. Our EAC grade VF30.

Ex: New York Signature (Heritage, 7/2002), lot 5785. NGC ID# 2222, PCGS# 1000

1793 Half Cent, Glossy AU58 C-4, B-4

5497 1793 AU58 PCGS. CAC. C-4, B-4, R.3. Manley Die State 2.0. The obverse die of the Breen-4 pairing was first used to strike the C-3, B-3 half cents. The 7 in the date is short. The L in LIBERTY is too low and above the juncture of the hair and brow. The juncture of the neck and bottom hair curl makes a sharp curve. On the reverse of the B-4 pairing, the U in UNITED and the last A in AMERICA are distant from the stem ends. The stem themselves are the longest of any 1793 reverse. A leaf tip appears under the right side of the E in UNITED, another under the left base of the last A. The four ends of the ribbon are quite long and wispy, trailing down nearly to the rim at each point. This is the usually seen die state, with a rust lump on top of the 7 and clash marks visible between Liberty's hair and the cap.

The 1793 half cents were produced to the extent of 35,334 pieces — interestingly, this amount is statistically, if not exactly, equal to the number of 1793 Chain cents produced. The half cents were made using two obverse and three reverse dies in four combinations, all of roughly equal rarity today, in the R.3 range.

This 1793 half cent is predominantly light olive-tan, with splashes of dark steel on each side surrounding the devices. The surfaces exhibit a glossy appearance, but microscopic evidence exists of scratches and other roughness.

We are unable to trace the provenance of this memorable example, although it is neither the Norweb coin nor the Earle, M. Holmes, Gardner, nor Bareford coins in the Breen Census from the half cent *Encyclopedia*. Population: 47 in 58, 85 finer (3/14). Our EAC grade XF45.

Ex: ANA Signature (Heritage, 8/2010), lot 3020.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2222, PCGS# 1000

1793 C-3 Half Cent, MS62 Brown First Year of Mint Operations

5498 1793 MS62 Brown PCGS. C-3, B-3, R.3. The 1793 Liberty Cap has obvious significance as the first half cent produced by the Mint, and it is also a highly coveted one-year type. In the informative *Encyclopedia of United States Half Cents: 1793-1857*, Walter Breen wrote that the Philadelphia Mint prepared two obverse and three reverse dies for this issue between April and July 1793. The obverse design was based on sketches prepared by David Rittenhouse, who in turn relied heavily on Augustin Dupré's attractive *Libertas Americana* medal of 1782. On July 20, the first 7,000 pieces were produced, followed by 24,934 coins on July 26, and a further 3,400 pieces on September 18. These three deliveries totaled a mere 35,334 coins.

The surfaces on this extraordinary Mint State representative are an appealing medium brown color with hints of faded pinkish-orange that is primarily seen around the peripheral areas of the reverse. The high points of the devices are uniformly bold, and none of the usual porosity, corrosion, or other problems that so often mar these important early coppers are visible. A small obverse rim bruise is noted over LI. The Condition Census status of this high-quality 1793 half cent is secure, making it a landmark offering for the quality-conscious collector. Our EAC grade AU55.

Ex: 1959 ANA (Leo A. Young, 8/1959), lot 402; Kagin's; Leo A. Young; Auction '80 (RARCOA, 8/1980), lot 1512; later, Long Beach Signature Sale (Heritage, 2/2002), lot 5018; Central States Signature Sale (Heritage, 8/2006), lot 5017.

1794 C-4a, B-6b Half Cent, MS62 Brown The Brobston Specimen

5499 1794 MS62 Brown PCGS. C-4a, B-6b, R.3. Manley Die State 2.0. Despite prominent clash marks on both sides, this is an early die state of the variety before the obverse bulge developed behind the hair curls. This exceptional example is nearly the equal of the Eliasberg and Norweb examples of the same die state. Both sides have rich mahogany-brown patina with splashes of darker steel-brown at the upper reverse. A small round mark in the field behind the cap identifies this piece as the Brobston specimen. Our EAC grade AU55.

Ex: Joseph Brobston Collection (Stack's, 1963 FPL); Eugene Gardner (Stack's, 2/1965), lot 1110; Alan V. Weinberg; later, Stack's (9/2010), lot 2347.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2223, PCGS# 1003

1794 C-2, B-2 Half Cent, MS63 Brown Smooth and Appealing Type Coin

5500 1794 MS63 Brown PCGS. CAC. C-2, B-2. Edge not visible through holder and not identified by the label, but more likely the C-2a, B-2b or Small Letters edge (the Large Letters edge, C-2b, B-2a, is very rare when associated with this die pair). Manley Die State 2.0, with clashes at neck and cap but minimal negative definition at the far leaves on the obverse.

Though the U.S. Mint struck only copper coins (cents and half cents) in 1793, that facility expanded its repertoire to silver the next year. The emphasis, however, remained on copper coinage, and 1794 brought with it several changes to the half cent manufacturing process. Roger S. Cohen, Jr., in his *American Half Cents: The Little Half Sisters*, notes that 1794 marked the beginning of hub use in creation of half cent dies, and that half cent planchets, though they maintained the same weight as 1793 flans, had broader diameters and proportionally decreased thicknesses.

Of the nine die pairs and their main die varieties (discounting edge-lettering variants), two of them, C-2 (B-2) and C-9 (B-9) are the most readily available and the most popular with those collecting by type or *Guide Book* variety. This attractive, unworn example of the former is pleasingly detailed for the issue with rich violet-brown surfaces. Though a few minor abrasions are scattered over each side, with a single flaw of note located on Liberty's cap, the overall eye appeal is surprisingly strong for the grade assigned. Our EAC grade AU50. Population: 5 in 63 Brown, 3 finer (3/14).

Ex: FUN Signature (Heritage, 1/2001), lot 6091; The James Mossman Collection (Heritage, 1/2009), lot 3568.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2223, PCGS# 1003

1811 C-2, B-2 Half Cent, MS63 Brown Close Date

5501 1811 Close Date MS63 Brown PCGS. C-2, B-2, R.3. Manley Die State 2.0, the intermediate die state with obverse clash marks, struck before the thin reverse die cracks developed. Both varieties of 1811, the Wide Date and the Close Date, are elusive in grades finer than XF. In his 1983 Half Cent Encyclopedia, Walter Breen reported three AU examples as the finest known to him. Since that time, a few have been located, including the Norweb, Eliasberg, and Bareford coins. PCGS has certified five Mint State examples (3/14), including this piece and two finer examples.

We are able to account for the following Mint State 1811 C-2, B-2 half cents:

MS65+ Brown PCGS. New Netherlands Coin Company (4/26/1949); Harold S. Bareford; William J. Bareford (6/8/1984); Jules Reiver; R. Tettenhorst; Missouri Cabinet (Goldberg Coins, 1/2014), lot 104.

MS63 Brown PCGS. The present specimen. We have not located any previous record of this piece.

MS63 Brown. Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Merena, 5/1996), lot 436.

MS60. Richard Picker (8/1/1957); Norweb Family (Bowers and Merena, 10/1987), lot 68.

AU examples include the Joseph Brobston, Henry C. Miller, and George Hall examples, cited by Breen.

The obverse of this reddish-tan and chocolate-brown example is nearly flawless with strong cartwheel luster. The reverse has a faint scratch inside the wreath and a few tiny verdigris spots below the M in AMERICA. Traces of mint red appear on the reverse. Our EAC grade MS60. NGC ID# 222S, PCGS# 1135

PROOF CLASSIC HEAD HALF CENT

**1831 Half Cent, Reverse of 1836, B-2
Rare PR67 Brown Specimen**

5502 1831 Reverse of 1836 PR67 Brown PCGS. Breen Die State I. Although the obverse is bulged, this early die state shows no evidence of reverse cracks that are found in the later die states. This restrike has the reverse of 1836, also known as the First Restrike. It is far more plentiful than Original or Second Restrike 1831 half cents, and yet, just 30 to 35 pieces are known in all grades. Walter Breen enumerated 26 examples in his *Half Cent Encyclopedia*, published 29 years ago. The present specimen is the only piece that PCGS has called PR67, regardless of color designation (3/14). This lovely Superb Gem has subdued mirrored fields with deep brown and pale blue patina. Our EAC grade PR62.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 1189

PROOF BRAIDED HAIR HALF CENTS

1843 B-1 Half Cent, PR65 Red Cameo Large Berries Original

5503 1843 Original PR65 Red PCGS. B-1, R.6. Large berries in the wreath identify this as an Original 1843 half cent, actually struck that year, rather than a Small Berries Restrike produced many years later. Delicate recutting is evident below the 8, and is seen on all varieties of 1843 proof half cents, proving the use of a single die over more than two decades.

Original proof half cents were minted at the time of their date, in 1831, 1836, 1840 through 1849, and 1852. The Original proofs were minted for presentation sets given to VIPs, or sold to well-known contemporary coin collectors, such as Matthew Stickney to mention just one. All are rare, but the proof half cents are more plentiful than any of the larger denominations. Stickney was known to trade with the Mint for coins needed in the nation's numismatic collection, now housed at the Smithsonian Institution. The First Restrikes were likely minted in the late 1850s, and the Second Restrikes were probably produced a decade or more after that.

Both sides of this gorgeous example have brilliant salmon surfaces with fully mirrored fields and lustrous devices, creating light cameo contrast. A few grade-limiting carbon flecks will aid researchers in the hunt for a provenance. Just under two dozen examples are known, and few are finer than this fully brilliant Gem proof. Our EAC grade PR65. Population: 1 in 65 Red Cameo, 0 finer (3/14).

Ex: Philadelphia Signature (Heritage, 8/2012), lot 5014; Greensboro Collection, Part V (FUN Signature, Heritage, 1/2014), lot 5109. PCGS# 1268

LARGE CENTS

**1847 B-3 Half Cent, PR66 Brown
Second Restrike**

5504 1847 Second Restrike PR66 Brown PCGS. CAC. B-3, High R.5. Approximately two dozen of the B-1 Original 1847 half cents survive, the large berries in the wreath diagnostic. The B-2 First Restrike half cents have small berries in the wreath and a doubled T in CENT, and for 1847 only two or three survive. The B-3 Second Restrike half cents, with small berries in the wreath and short die file lines over RIC in AMERICA, are the most plentiful proof half cents of the date, with nearly three dozen known in various grades. Much underlying cherry-red remains with a lovely autumn leaves overlay on each side. Nicely reflective surfaces show no obvious spots on either side. Our EAC grade PR63.

Ex: Orlando FUN (Heritage, 1/2012), lot 3016, where it realized \$14,950.00.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 26ZH, PCGS# 1293

**1793 S-3, B-4 Chain Cent, VF20
Straight Bust Line**

5505 1793 Chain, AMERICA VF20 PCGS. S-3, B-4, Low R.3. Sheldon-3 is quickly identified by the straight bust line that is visible on virtually all surviving examples, regardless of the grade. A single characteristic identifies four of the five Chain cent varieties: AMERI. on S-1, straight bust line on S-3, periods after the date and LIBERTY on S-4, and the Y of LIBERTY at eye level on the NC-1. A curved bust line with none of the other characteristics will identify S-2.

This nicely detailed VF example shows the straight bust line and all other characteristics of the die pair, with pleasing chocolate-brown surfaces that show only minor scattered marks. Our EAC grade Fine 12. NGC ID# 223F, PCGS# 1341

1793 S-3 Chain America Cent, XF40 Smooth, Even Dark-Brown Surfaces

5506 1793 Chain, AMERICA XF40 PCGS. CAC. S-3, B-4, Low R.3. Three major varieties and five die varieties are known for the 1793 Chain cents, the first coins struck at the newly opened Philadelphia Mint. The major varieties include the Chain AMERI cent, Sheldon-1; the Chain AMERICA cents, S-2, S-3, and NC-1; and the Chain Periods cent, S-4. Careful study of surviving specimens will demonstrate that the exact coinage order was S-1, S-2, NC-1, S-3, and S-4.

All 36,103 Chain cents were struck at the end of February and beginning of March 1793, with eight coinage deliveries dated from March 1 to 12. The March 1 delivery was the largest, including coins struck during several preceding days. In his large cent *Encyclopedia*, Walter Breen reported that some pieces might have been struck to celebrate George Washington's February 22 birthday, based on earlier research by R.W. Julian.

Breen suggested which varieties were included in each of the eight deliveries, and how many of each were struck. He indicated that part of the second delivery; all of the third, fourth, and fifth deliveries; and part of the sixth delivery included examples of the S-3 die pair. Breen posited that the actual original mintage of S-3 cents may have been nearly half the total mintage of all Chain cents. Others claim that correlating delivery figures and actual varieties is impossible.

This specimen exhibits bold clash marks on the obverse and minor die bulges on the reverse. The surfaces are smooth dark brown with splashes of lighter tan on the reverse. A few tiny rim bumps and trivial handling marks are the only distractions. Our EAC grade VF25. Ex: *Sacramento Signature* (Heritage, 3/2011), lot 3029, which realized \$63,250.

From *The Jim O'Neal Collection of U.S. Type, Part One*. NGC ID# 223F, PCGS# 1341

1793 S-2 Chain Cent, AU Details

5507 1793 Chain, AMERICA — Devices Engraved — PCGS Genuine. AU Details. S-2, B-2, High R.4. At first glance, this piece looks like an amazing Mint State Chain cent. It is only on close inspection that the burnishing and other tooling becomes apparent. It is especially obvious on the reverse, where all of the interior spaces in the chain have been tooled, for example. All of that work was done to simulate original mint color. After being tooled, the entire coin has been retoned to light brown, olive, and steel. While all of that work may seem unfortunate, we suspect that the coin was highly unattractive before any of that restoration work occurred. Despite all of its shortcomings, this is still a most attractive Chain cent. We have no EAC grade for this piece. NGC ID# 223F, PCGS# 1341

**1793 S-5, B-6 Wreath Cent, MS65 Brown
Second Finest Large LIBERTY Cent
Crosby Plate Coin
Prooflike Surfaces**

5508 1793 Wreath, Vine and Bars MS65 Brown PCGS. S-5, B-6, R.4. Plated in Sylvester S. Crosby's *The United States Coinage of 1793*. Breen Die State I. Struck before the border beads at the upper right obverse began to crumble. The reverse has a thin die crack through the tops of TE in UNITED. A few tiny die lines or "splinters" are evident on each side, especially at the base of EN in CENT. A tiny die bulge is visible between IT of UNITED, and delicate clash marks are evident below OF. Most of those die defects disappear with only slight wear, but they are prominently visible on this remarkable prooflike cent. Both Sheldon and Breen listed this variety first in the lineup of Wreath cent varieties, suggesting that it was the first Wreath cent variety minted after that design was introduced in April 1793. If it was first, then this early die state represents the first-of-the-first, one of the earliest strikes of the design. The mirrored surfaces support that theory.

In his *Encyclopedia of United States and Colonial Proof Coins*, Walter Breen mentioned this exact coin with the comment: "Three or more are known which can qualify as presentation pieces." Breen was always looking for reasons to justify calling certain early coins presentation pieces. For the S-5 Wreath cents, he wrote: "A very few struck on burnished blanks carefully centered in the press, possibly given two blows apiece, early in 1793. Occasion: achievement of a reasonably satisfactory new design for the cent, after so much scurrilous newspaper criticism had been made of Henry Voigt's rather primitive Chain design."

Del Bland grades this piece MS61, and places it second in his condition census, tied with the Charles Dupont specimen that he also grades MS61. Bill Noyes grades this example MS65, and finer than the Dupont coin. Our own view falls in the middle, and we agree with Bob Grellman's MS63 grade that was presented in the Holmes catalog. Only five Mint State examples of this variety are recorded in the Bland and Noyes census records.

Splendid medium olive surfaces show faint traces of delicate blue toning in the protected areas, with additional iridescence adding to the eye appeal. Both sides are prooflike, with mirrored fields and reflective devices. A delicate line of lamination crosses the right obverse field from the border to the tip of Liberty's nose. That feature has the appearance of a die crack, but is unobserved on any later die state example. Our EAC grade MS63.

1794 Head of 1794 Cent, MS66 Brown Tied for Finest Known S-30, B-12

5509 1794 Head of 1794 MS66 Brown PCGS. CAC. S-30, B-12, R.1. Breen's Die State III, with prominent obverse and reverse clash marks, and a crack through the R in AMERICA to the branch. The reverse fields appear granular as a result of extensive die rust. Two die flaws, called field chips, appear in their beginning stage behind the hair strands.

Del Bland's census records this piece and one other as the only two Mint State examples of the variety known. Less than 10 AU examples follow those two coins. Bill Noyes calls it third finest in his list. The chocolate-brown obverse retains peripheral planchet marks, along with a few post-production surface marks. Traces of light tan and ebony toning are barely visible on the lustrous surface. The reverse exhibits reddish-brown and steel surfaces, with several splashes of ebony patina that confirm the provenance. This exceptional Head of 1794 cent is an excellent candidate for a type or date collection. Our EAC grade MS60. Population: 11 in 66, 1 finer (3/14), for all varieties and designations of the Head of 1794 cents.

Ex: Stack's (privately, 1971); John W. Adams; Gordon J. Wrubel; Dr. Robert J. Shalowitz (8/1977); Del Bland (5/13/1986); Herman Halpern (Stack's, 3/1988), lot 41; Andrew M. Hain (Stack's, 1/2002), lot 731; Chris Victor-McCawley; Superior Galleries (6/2002), lot 2436; later, MastroNet Auctions (4/2003); later, Legend Numismatics (10/15/2008); Martin A. Logies; private collection.

1794 Head of 1795 Cent, S-67, MS64+ Brown The Masters-Oakes Specimen

5510 1794 Head of 1795 MS64+ Brown PCGS. S-67, B-59, R.3. Breen's Die State III, multiple clash marks appear on the obverse, with a faint die crack across the tops of the RTY in LIBERTY. Faint clash marks are also noted on the reverse.

This piece represents the "Head of 1795" or "Gardner's First Head," the latter Breen's usage. He attributed the design to assistant Mint engraver John Smith Gardner. Sheldon's varieties 67 through 72 are considered Head of 1795 varieties. For *Guide Book* collectors, variety 67 is the most plentiful in high grades, although the Noyes Census only lists 20 examples in AU or better for the six Sheldon numbers, combined.

On this well-preserved piece, recorded as sixth finest in the Noyes Census, both the chips out of the hair and the diagnostic die clashes before the profile are clearly visible. Del Bland grades the Masters-Oakes specimen AU50, and it appears with three others in a fifth place tie at 1794largecents.com. Lustrous surfaces are medium-brown with considerable violet overtones and the faintest hints of cinnamon-orange at the right obverse and reverse. A trivial obverse rim bruise at 9:30 confirms the provenance. Though a handful of tiny nicks and wispy flaws preclude a finer grade, this coin offers great all-around visual appeal. Our EAC grade AU50.

Ex: Stack's (3/1959); Frank H. Masters, Jr. (RARCOA, 5/1971), lot 79; Dean Oakes Collection of Large Cents (FUN Signature Sale, Heritage, 1/2014), lot 5120. NGC ID# 223R, PCGS# 1365

**1797 S-135, B-5 Cent, MS64 Brown
Reverse of 1797, Stems, Berries 6-6**

5511 1797 Reverse of 1797, Stems MS64 Brown PCGS. CAC. S-135, B-5, R.3. Breen Die State III. A mere hint of Red clings to the rims of this smoothly struck cent. This S-135 Nichols Find example is more often seen in Mint State than in well circulated grades, yet it is scarce and desirable in any grade. Medium brown surfaces are lightly marked on the high points of the devices, but the fields are relatively unmarked and attractive. A tiny bit of carbon sits below Liberty's curls at 7 o'clock. The Die State III is confirmed by a short die crack from the nearest leaf to the bottom-left serif of the I in AMERICA, with chips above the adjacent C. Our EAC grade MS60. Population: 28 in 64 Brown, 11 finer (3/14). NGC ID# 2242, PCGS# 1422

1807/6 S-273, B-3 Large Cent, MS65 Brown From the Walter J. Husak Collection

5512 1807/6 Large 7 MS65 Brown PCGS. CAC. S-273, B-3, R.1.
Ex: Husak Collection. The Large Overdate with the 7 much larger than the other digits. The obverse appears only on this variety. A leaf point on the reverse is positioned below the upright of the D in UNITED. The reverse was used for S-271, 272, and 273.

Die State II. Light clash marks are evident on each side, with minor die flaws. The two overdate varieties for the year cover both ends of the rarity spectrum. The Small Overdate (S-272) is one of the rarest Draped Bust cent varieties, especially in the 1800s, while the Large Overdate (S-273) is one of the commonest.

The obverse and reverse are illustrated in Walter Breen's *Encyclopedia of United States Large Cents*. A single amazing Gem is followed by this example and a few other Mint State pieces in Bland's Census, although it is ranked lower in Noyes' Census.

Gorgeous tan and olive surfaces with considerable faded mint red on the obverse, and splashes of bright orange luster on the reverse. The surfaces are flawless, save for a few tiny planchet flakes on the obverse. Both sides are nicely defined, although the drapery is blunt, and a few leaves lack detail. The raised die lump right of the date is clearly visible. Our EAC grade MS60+.

Ex: Barney Bluestone; Dr. Jasper Robertson; French's (3/1967), lot 575; C. Douglas Smith; Dr. Robert A. Schuman; Superior (9/2004), lot 601; Walter J. Husak (*Heritage*, 2/2008), lot 2278.

**1814 S-295 Plain 4 Cent, MS65 Brown
'Beard' Variety, Essentially Pristine**

5513 1814 Plain 4, MS65 Brown PCGS. CAC. S-295, B-2, R.1.

Ex: Joshua and Ally Walsh. Die State XI, the so-called "Beard variety," named for the mint-made die break along Liberty's chin. Steel-blue and medium-brown toning blend seamlessly throughout this lustrous and boldly struck Gem. A formidable conditional rarity at the MS65 level. Essentially pristine save for a faint pinscratch on the die break near the chin. One of only two die marriages for this collectible date. The final Sheldon variety. No Cents were struck dated 1815, and the Matron Head replaced the Classic Head in 1816. Our EAC grade MS60. Population: 2 in 65 Brown, 1 finer (3/14).

Ex: July-August Baltimore ANA Signature (Heritage, 7/2012), lot 1509, where it realized \$29,900.00.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 224Y, PCGS# 1576

1839 N-13 Cent, MS65 Red Booby Head

5514 1839 Booby Head MS65 Red NGC. N-13, R.2. N-13, R.2. NGC has certified only two 1839 cents as full Red, the present Gem and a solitary MS66. Red and Brown examples are equally rare, with only two Booby Head cents given that color designation by NGC. PCGS has certified two Red Booby Head cents, both graded MS64. Thus, the present coin is the second highest graded full Red Booby Head. The die marriage of the NGC MS66 Red cent is unknown, as it has not appeared at auction.

There are five different design subtypes of 1839 cents. The Plain Cords (N-1) and Head of 1838 (N-2 and N-3) carry over Liberty busts from prior years. The Petite Head (N-8) is the same bust used in 1840. However, the Silly Head and Booby Head were only struck in 1839. The Booby Head is promptly identified by an exposed shoulder corner. The other four 1839 subtypes have a lock of hair around the shoulder tip.

Breen credits Ebenezer Lock Mason, Jr., of Confederate half dollar die fame, as the first numismatist to consistently apply the Silly Head and Booby Head nomenclature. Mason standardized the terms in his June 1868 edition of *Coin and Stamp Collector's Magazine*. Breen notes that Booby Head was used (with a different meaning) as early as Dickeson's *American Numismatic Manual* (1859).

The Booby Head Newcomb varieties are among the most difficult to attribute among the middle date cents. N-13 is more readily identified than most, due to a series of spindly die cracks throughout UNITED STATES. That reverse die is also shared with N-15, but a recut lower point on star 12 confirms the N-13 marriage.

This is a gorgeous orange-red Gem. The mint luster is comprehensive and intense. Carbon is surprisingly minimal, and the only hint of toning is a glimpse of steel-blue near star 12. Essentially devoid of marks, and the strike is exemplary. An outstanding type coin that would provide the cornerstone of an advanced large cent collection. Our EAC grade MS60. Census: 1 in 65 Red, 1 finer (3/14).

Ex: Baltimore ANA Signature (Heritage, 7/2008), lot 1511, which realized \$29,900.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 1753

1857 N-5 Proof-Only Large Cent, PR65 Red Ted Naftzger's Finest Known

5515 1857 PR65 Red PCGS. CAC. N-5, High R.5. Ex: Naftzger Collection. In the Naftzger catalog, Bob Grellman grades this piece PR66 and calls it finest known. Bill Noyes assigns the same grade and also places it first in his census. We see no reason to call it anything less.

The cataloger for the 1952 ANA Sale wrote that this is "By far the finest Proof Large Cent we have ever seen. Few Proof 'Pennies' have survived in this preservation, and many of those have been tampered with." A decade earlier, the Morgenthau cataloger was doing his patriotic duty during World War II when he wrote: "Brilliant red proof," saving valuable paper for the war effort.

This amazing Red Gem proof large cent has brilliant orange mint color with traces of steel-blue toning and a few tiny carbon specks. Those trivial specks are visible in the 1952 ANA catalog plate, indicating no change over the last 60 years, and no risk of change in the future. The fields are flawless, with light die polishing lines that limit the depth of the mirrored fields. The polishing lines are characteristic of the proof-only N-5 die pair, and are visible to some extent on all known specimens. This amazing proof large cent offers incredible aesthetic appeal and is destined for a world-class cabinet. Our EAC grade PR66. Population: 1 in 65 Red, 0 finer (1/12).

Ex: J.C. Morgenthau (6/1942), lot 372; Henry C. Hines; Homer K. Downing (1952 ANA Sale, New Netherlands, et al., 8/1952), lot 2225; R.E. Naftzger, Jr. (Goldberg Coins, 9/2009), lot 1304; New York Signature (Heritage, 3/2012), lot 3058, which realized \$57,500.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 2002

FLYING EAGLE CENT

**1858 Flying Eagle Cent, MS66
Small Letters**

5516 1858 Small Letters MS66 PCGS. The Flying Eagle cent was one of the shorter types in the entire history of U.S. coinage. The design was issued for three years from 1856 to 1858. However, varieties abound, such as this Small Letters coin of 1858. This example features impressive golden-tan luster on satiny surfaces with a hint of pale orange on the reverse. All of the obverse details are bold, with only slight weakness in the wreath on the reverse. A few trivial surface marks and scattered flyspecks are evident, but they are inconsequential. This piece is tied with eight others at PCGS for the finest certified. Similarly, NGC has examined 15 submissions at this grade level with none finer (3/14). NGC ID# 2279, PCGS# 2020

PROOF FLYING EAGLE CENTS

**1856 Flying Eagle Cent, PR58
Popular Snow-9 Variety**

5517 1856 PR58 NGC. **Snow-9.** Snow-9 is a well made die variety struck in proof format circa-1859. Many diagnostics are present, including the vertical die crack below the beak, the diagonal die line through the U in UNITED, the horizontal die line in the wing near the I in UNITED, and the small spike from the left wreath stem. The reverse center dot is below the upper left serif of the N in ONE.

An attractive olive-green and tan-brown specimen. High point wear is imperceptible, though the open fields are slightly subdued and occasional minor marks confirm limited non-numismatic handling. No carbon is readily evident. An opportunity to acquire the first, rarest, and lowest mintage small cent date.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 227A, PCGS# 2037

1856 Flying Eagle Cent, PR65 Gorgeous Snow-9

5518 1856 PR65 PCGS. Snow-9. The most plentiful variety of proof 1856 Flying Eagle cents. Identification of this variety is accomplished through the observation of a short die line from the top right serif of the I in UNITED to the border, and a tiny center dot attached to the underside of the upper left serif of the N in CENT.

This Gem proof has steel-blue, violet, and pale green toning over lighter tan surfaces. It is sharply struck, and the fields are more deeply mirrored than usual on the 1856 Flying Eagle cents. Despite the relatively "common" nature of this popular variety, few finer examples have been certified. Population: 44 in 65, 2 finer (3/14).

Ex: Cincinnati Central States Signature (Heritage, 4/2009), lot 2055, which realized \$21,850.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 227A, PCGS# 2037

INDIAN CENTS

Exceptional 1868 Indian Head Cent, MS66 Red

5519 1868 MS66 Red PCGS. CAC. With a large mintage of more than 10 million pieces, the 1868 Indian Head cent was not considered scarce at the time of issue. Few business strikes were saved at the time, as advanced collectors usually just purchased proof specimens from the Mint to represent the date. The issue was subjected to extensive melting in the years before 1874, greatly reducing the availability of Mint State specimens. Most examples seen today are in lower circulated grades. At the Premium Gem level, coins are rare today, especially with full red color. The present coin is a pleasing example, with a sharp, but not quite full strike. The obverse is just a bit brighter than the reverse, which is a deep cherry-red. Overall visual appeal is excellent. Population: 3 in 66 Red, 0 finer (3/14).

Ex: Long Beach Signature (Heritage, 5/2009), lot 111, which realized \$25,300.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 227S, PCGS# 2093

PROOF INDIAN CENTS

**1888/7 Indian Cent, FS-301, AU53
'Number One Series Cherrypick'**

5520 1888/7 AU53 PCGS. Snow-1, FS-301. Tiny portions of the flag of the underlying 7 and the base protrude from the upper left and lower left of the last 8, respectively, but an easier method on most examples is to look for the rim cud above TED S. Cherrypickers' comments that "no coins above Very Good have been seen without this cud. This variety is the #1 cherrypick among Indian Head cents." This AU53 example should make some variety collector or series specialist quite happy. The surfaces show attractive dark-brown coloration with only light wear and no mentionable distractions, save for obverse strike weakness noted on the feather tips and the lowest curl. Population: 2 in 53, 5 finer (3/14). NGC ID# 228G, PCGS# 2169

**1859 Indian Cent, PR66 Cameo
Stunning First-Year Indian**

5521 1859 PR66 Cameo PCGS. First year of issue for the Indian cent, the figure of Liberty is actually represented by a Caucasian female that is wearing a headdress of the Chippewa tribe. Only struck with this obverse and reverse combination in 1859, some 800 proofs were minted minus an unknown number that were melted at year's end. This is a bright, lightly toned example that appears to be fully original. Each side is lightly dusted with pleasant lilac-red patina, and for pedigree purposes, a lintmark is seen through the N of UNITED into the left obverse field. The fields are deeply reflective, and there is a significant amount of mint frost over the devices that gives the coin an appealing cameo contrast. Population: 6 in 66 Cameo, 0 finer (3/14).

Ex: Palm Beach signature (Heritage, 11/2004), lot 5287, which realized \$16,100.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 82247

LINCOLN CENTS

1909-S VDB Cent, MS66 Red Highly Attractive

5522 1909-S VDB MS66 Red PCGS. The 1909-S VDB is the most famous of all Lincoln cent issues, and is indeed one of the most popular coins in all of American numismatics. The demand for this piece is incredible, not only among Lincoln cent collectors, but also from those simply fascinated with the issue.

This fully Red Premium Gem displays yellowish-green color laced with whispers of reddish-orange. The design elements are sharply struck, including excellent definition on the bow tie, date, mintmark, VDB, and lines and grains in the wheat stalks. Lustrous surfaces have been well cared for and are free of mentionable contacts or carbon. PCGS has graded only 11 Red coins higher (3/14).

Ex: Orlando FUN Signature (Heritage, 1/2004), lot 2016, which realized \$17,250.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 22B2, PCGS# 2428

1909-S VDB Cent, MS66 Red Appealing Example, Seldom Seen Finer

5523 1909-S VDB MS66 Red PCGS. CAC. We have long maintained that for most collectors, the MS66 Red level is the Goldilocks grade — “just right” — for examples of the 1909-S VDB, positioned between the frequently seen Gem Red level and the impossibly pricey MS67 Red grade, where PCGS has seen only 11 submissions — and examples in that grade can trade for upper-five or lower-six-figure prices. This Premium Gem Red example with the CAC approval will certainly appeal to a broad range of collectors, including, no doubt, some owners of fine Registry Sets. The surfaces host generous luster with light orange color that is attractive and remarkably consistent. The strike is bold throughout, and a couple of contact marks are trivial and well within the context of the grade. Population: 7 in 66+ Red, 11 finer (3/14). NGC ID# 22B2, PCGS# 2428

PROOF LINCOLN CENT

**1911 Cent, MS67 Red
Registry Set Contender**

5524 1911 MS67 Red PCGS. CAC. Pumpkin-orange surfaces feature peach-orange highlights over the smooth, brilliantly lustrous fields and devices of this radiant Lincoln cent. A full strike displays bold definition on Lincoln's portrait including full details on the problematic shoulder, hair, and beard. There are no interruptions in the swirling, vivid mint luster. Only two or three microscopic flecks are visible with a glass on the reverse. Despite a mintage of more than 100 million pieces, Registry Set enthusiasts are limited to a baker's dozen Superb Gems certified MS67 Red or better by both services combined. PCGS Population: 10 in 67 (1 in 67+) Red, 1 finer (3/14). NGC ID# 22B7, PCGS# 2443

**1990 No S Cent, PR69 Deep Cameo
Pristine, In-Demand Error Cent**

5525 1990 No S PR69 Deep Cameo PCGS. FS-101. The 1990 No S Lincoln cents are in much demand from the segment of the collecting public that endeavors to assemble the next-to-impossible "complete No S modern proof set." Such a set would include some exceedingly rare issues, most notably the 1968 No S proof Roosevelt dimes, of which fewer than two dozen likely survive in all grades. Among Lincoln Memorial cents, the 1990 No S is the only missing-mintmark proof variety, and a PR69 Deep Cameo PCGS coin such as the present piece will be hotly contested by cent collectors. This piece is sparkling orange-red with absolutely no mentionable flaws, as expected. Population: 27 in 69 Deep Cameo, 0 finer (3/14). NGC ID# 274B, PCGS# 93506

TWO CENT PIECE

1872 Two Cent, MS66 Red Among the Finest Known

5526 1872 MS66 Red PCGS. CAC. The Civil War era brought about a number of unusual denominations and methods of paying for goods and services, including encased postage stamps, fractional currency notes, paper scrip (known as obsoletes) and Civil War tokens. The two-cent coins were introduced in 1864, with the three-cent nickel coins debuting the following year. The next year, the nickel five-cent piece was also being produced. As the new denominations were issued, the two-cent pieces dwindled in popularity. The initial two-cent production figure was 19,822,500, but the mintage dropped each year, drastically the first several years. Although the series ended in 1873, production that last year consisted solely of proof coins. The number of two-cent coins produced in 1872 for circulation, the last year of business strike production, was only 65,000.

Bright orange-red surfaces along with strong luster are attributes of this Premium Gem example. In addition, the strike is sharp. A few wispy die cracks are present. An as-made lint mark appears on the leaf near 3 o'clock on the obverse. Minor scattered carbon does not pose a distraction.

An exceptional coin with strong visual appeal, this piece is tied with only four others as the finest surviving example and is housed in a first generation holder. PCGS has awarded the MS66 Red grade to three examples, with NGC having assigned only two coins the MS66 Red grade. Neither service has awarded a higher grade to a single piece (3/14), and this is the only CAC-designated MS66 Red. NGC ID# 22NG, PCGS# 3614

PROOF TWO CENT PIECES

1868 Two Cents, PR66 Cameo Attractive and Conditionally Scarce

5527 1868 PR66 Cameo PCGS. The 2014 *Guide Book of United States Coins* lists an approximate mintage of "600+" pieces for this proof issue. If this number is accurate, more or less, then a relatively high rate of survivorship would seem to be indicated for this date and type. Currently the two major services have reported 453 grading events for this issue and, even considering possible resubmissions, this is a high percentage of survivors. Cameo coins are another story. PCGS has seen only 10 Cameos, while NGC reports grading eight such examples.

This coin is fully struck and the surfaces display pleasing intermingled hues of coppery-orange, reddish-gold, and bright yellow coloration. Close examination reveals mark-free surfaces that show a modicum of scattered copper specks. Just one Cameo proof is graded higher, at PR67 Cameo, at PCGS. Population: 5 in 66 Cameo, 1 finer (3/14). PCGS# 83638

PROOF THREE CENT SILVER

**1872 Two Cent, PR66 Red
Seldom Seen Any Finer**

5528 1872 PR66 Red PCGS Secure. CAC. Pressured by date collectors stymied by the rarity of the low-mintage, business-strike format, proof examples of the date are always eagerly sought by series specialists. Although 950 proofs were minted, relatively few survived in high grades and the issue is challenging in Premium Gem condition or finer.

Blaze-orange surfaces feature smoothly reflective fields and deep, red-orange accents. Boldly struck and attractively patinated, this rare MS66 proof is seldom seen finer and is destined for an advanced set. Population: 12 in 66 Red, 1 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2752, PCGS# 3650

**1854 Three Cent Silver, PR64+
Milestone Issue**

5529 1854 PR64+ PCGS. CAC. The year 1854 marks two important milestones for the three cent silver series. First, it is the beginning of the Type Two design with double-bordered star, a design change linked to the shift in alloy from 75% silver to 90% silver. Second, and more important for this specimen, is that 1854 is the first year for which proof three cent pieces are known in any quantity, though the surviving population is small. Offered here is a sharp near-Gem proof with watery reflectivity at the green-gold margins and richer toning through blue-green inner rings and pink-gray cores. Of nine pieces certified as MS64 by PCGS, this is the only one with the Plus designation. Population: 9 in 64 (1 in 64+), 3 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 27BZ, PCGS# 3701

1870 Three Cent Silver, PR68 ★ Cameo The Finest Cameo at NGC

5530 1870 PR68 ★ Cameo NGC. The 1870 is tied with two other three cent silver issues for highest proof mintage, though as one might imagine, top-flight specimens are as challenging for the 1870 as they are for other issues with slightly smaller mintages. This exquisitely preserved piece stands alone atop the combined certified population for Cameo coins (3/14). Blue-green and gold-orange peripheral shadings add a fantastic dimension of eye appeal to each side, and the frost on the essentially untoned central devices stands out beautifully. The Star designation is well-deserved.

Ex: Cincinnati Central States (Heritage, 4/2009), lot 2116, which realized \$21,850.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 83721

PROOF SHIELD NICKELS

1867 Rays Shield Nickel, PR65 Classic Five Cent Rarity

5531 1867 Rays PR65 PCGS. CAC. Ranked in the *100 Greatest U.S. Coins* (third edition). Research by John Dannreuther indicates both original proofs and restrike proofs exist for this classic five cent rarity. While exact mintages are uncertain, perhaps 15 original proofs were made in early 1867, with the restrikes occurring at different times in small quantities. It is believed the latest restrikes were made approximately 1873 to 1879 at the direction of Mint Director Dr. Henry Linderman. Perhaps as many as 60 to 70 With Rays proofs were produced in all (originals plus restrikes), although perhaps not all survived.

Numerous restrikes of different coins are known from Dr. Linderman's time at the Mint. Most appeared during his second tenure in the 1870s, although some date from his earlier directorship from 1867 through 1869. The With Rays proofs were likely struck during both periods.

This example is the Dannreuther-3 variety with Obverse 3, State a and Reverse A, State d. The variety is identified by a diagnostic lump on the Shield Ball above the date, with the reverse die state showing a weak center ray below the second T of STATES. The die pair is thought to have been used on some of the later restrikes.

All 1867 With Rays proofs are extremely rare and important. Gem coins are especially valued for advanced collections. This example shows attractive, light champagne-gold toning over mirrored surfaces. A thin coat of mint frost covers the sharply struck devices. No carbon spots or other detractors exist other than a small mark after the D in UNITED and a bit of cloudiness at the center reverse. Housed in a green label holder, this appealing example is CAC approved for quality.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 276H, PCGS# 3818

1876 Nickel, PR67 Cameo Tied for Finest Cameo at PCGS

5532 1876 PR67 Cameo PCGS. CAC. Though its successors, the proof-only 1877 and 1878 issues, are more famous, the 1876 proof Shield nickel is elusive in its own way, and certainly far less accessible than its reported mintage of 1,150+ pieces would suggest. This Superb Gem is at the top of the Cameo listings in the PCGS *Population Report*, a position it shares with just five other submissions (3/14). Gold and blue overtones, stronger on the reverse, visit profoundly reflective fields and lightly frosted devices as well. A smooth and captivating specimen that offers generous eye appeal.

Ex: Long Beach Signature (Heritage, 6/2011), lot 3215, which realized \$13,800.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 83830

LIBERTY NICKELS

1885 Liberty Nickel, MS66 Conditionally Rare Key-Date Example

5533 1885 MS66 PCGS. This third-year date saw a low mintage of 1.4 million pieces which were little-saved at the time of issue, with the vast majority entering circulation. According to Breen, the low mintages of 1885 and 1886 were caused by an interruption in the manufacture of minor coinage from February 1885 until near the end of 1886.

This is an attractive Premium Gem example, well-struck and highly lustrous, with lovely light, natural toning and few surface marks. Only the first two obverse stars and the left reverse ear of corn exhibit slight weakness. This key date is rare at the current MS66 grade level, and extremely rare any finer. Population: 24 in 66 (2 in 66+), 3 finer (3/14). NGC ID# 2773, PCGS# 3846

BUFFALO NICKELS

1896 Five Cent, Exceptional MS66 Conditionally Rare Issue

5534 1896 MS66 PCGS. CAC. The 1896 nickel had a relatively small mintage of 8.8 million-plus pieces, creating a key date. Sharply struck pieces in the higher levels of Mint State are very elusive. While PCGS and NGC have certified over 100 Gems, the two services have seen fewer than 20 MS66 specimens and none finer.

This Premium Gem offering displays pleasing luster, along with an occasional wisp of orange patina that shows up under magnification. Sharper definition is seen on the design elements than on those of most Mint State examples. The only softness occurs on the left ear of corn. No significant marks or spots are visible on either side. Population: 13 in 66 (1 in 66+), 0 finer (3/14).

Ex: Los Angeles Signature (Heritage, 8/2009), lot 1042, which realized \$12,650.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 277B, PCGS# 3857

1913 Type One Nickel, MS68 Imposing, Condition Rarity

5535 1913 Type One MS68 PCGS. CAC. Ex: Larry Shapiro. 1913 Type One nickels are readily available through Premium Gem, and even MS67 pieces can be located with patience and searching. The current offering, however, is one of just 13 that PCGS has certified as MS68, the highest quality seen by either NGC or PCGS. Both sides exhibit a crisp strike with intense mint frost beneath pleasing gold, ice-blue, and lavender toning. The surfaces have a matte-like texture, typical of all Type One nickels (David Lange, *The Complete Guide to Buffalo Nickels*). As expected, immaculate preservation prevails throughout. This is a most imposing coin, well deserving of the CAC green label. Population: 13 in 68, 0 finer (3/14).

Ex: St. Louis Central States (Heritage, 5/2007), lot 2041, which realized \$29,900.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 22PW, PCGS# 3915

1913-S Buffalo Nickel, MS67 Low-Mintage Type Two Issue Prime Registry Set Candidate

5536 1913-S Type Two MS67 PCGS. James Earle Fraser's iconic Buffalo design debuted in 1913 to high praise from the general public and numismatists alike. The coins were produced in large numbers during the early part of the year, but one glaring defect soon became apparent. The denomination and mintmark were too exposed and wore down quickly on the Type One coins. To remedy the situation, the Type Two design, which was implemented on May 6, 1913, placed the denomination and mintmark in a recessed area called the exergue, below the grassy plain the bison stands on. Only 1.2 million Type Two Buffalo nickels were struck at the San Francisco Mint during the remainder of the year. The 1913-S Type Two Buffalo nickel is thus the rarest regular-issue coin of the series, excluding famous varieties like the 1918/7-D overdate and the 1916 Doubled Die Obverse.

The new design improved the durability of the denomination and mintmark, but the Type Two coins did not strike up as well as their Type One counterparts. Most Type Two examples are weak on the Indian's hair knot and the bison's shoulder. Fortunately, the present coin is sharply detailed throughout, with fine definition on the usual trouble spots. In addition to the design changes, the surfaces of the Type Two coins were smoothed, rather than textured like the Type One coins. This led to more satiny luster characteristics than those of the previous design. This coin displays vibrant satiny luster on both sides. The well-preserved surfaces are free of visible contact marks, and eye appeal is terrific. Neither PCGS nor NGC has certified a coin in higher numeric grade. Registry Set enthusiasts should bid accordingly. Population: 4 in 67, 0 finer (3/14). NGC ID# 22R3, PCGS# 3923

1918-S Nickel, Lightly Toned MS65 Lustrous and Sharply Struck

5537 1918-S MS65 PCGS. CAC. Far more so than its earlier neighbor the 1917-S and about tied with the renowned 1919-S, the 1918-S Buffalo nickel in Gem condition is deucedly difficult, and anything in finer grades is virtually impossible to obtain. PCGS shows only 34 submissions in MS65 with two in MS65+ and a single MS66 finer (3/14). This piece, certified in an old green-label holder with the CAC approval, will certainly gain the attention of dedicated series specialists hoping to “fill” that elusive hole in their sets. The frosty surfaces show excellent luster complementing dabs of pale jade and ice-blue near the date that contrast against the prevailing pinkish hues on both sides, a simply beautiful coin. Contact marks are minimal as desired, and the strike is much sharper than normal for this issue, showing a good full horn and a partly split tail.

From The Ray Levoi Collection. NGC ID# 22RK, PCGS# 3940

1919-S Buffalo Nickel, MS65 Attractive, Strong Strike for the Issue

5538 1919-S MS65 PCGS. Hardly any 1919-S nickels provide any degree of eye appeal or quality of strike, but this lustrous Gem claims both. David W. Lange uses words such as “disappointing luster, weakly struck, and typically seen mushy” to describe this San Francisco date in *The Complete Guide to Buffalo Nickels*, and he is correct. Yet this example offers several positives. The strike is far better than most, with nice definition on the bison’s head, horn, and back. The shoulder and tail are softly defined. Hair detail on the Indian is reasonably sharp — far above average for the issue. There will be no complaints about the eye appeal, either. Lustrous, champagne-gold surfaces display smoothly glowing yellow and rose-gold highlights. Only a few examples are certified finer. Population: 32 in 65 (1 in 65+), 2 finer (3/14).

From The Ray Levoi Collection. NGC ID# 22RN, PCGS# 3943

1924-S Buffalo Nickel, MS65+ Bold on the Bison, Rare Issue

5539 1924-S MS65+ PCGS. CAC. Both the eye appeal and the strike will draw bidders to this attractive, low-mintage San Francisco issue, with a production of just 1.4 million pieces. Only the fabled 1926-S had a lower mintage during the 1920s. The bison is unusually bold on this example, while the obverse is strong except for the hair immediately above the braid knot.

The surfaces are immaculate and appealing. Satin-smooth fields display first-strike quality and excellent mint luster. Lilac highlights enhance champagne-gold toning, and purplish accents are especially attractive on the bison. This is the only Gem 1924-S nickel awarded the Plus designation by PCGS. Population: 40 in 65 (1 in 65+), 2 finer (3/14). NGC ID# 22RZ, PCGS# 3953

1925-D Nickel, MS66 Elusive So Fine, Well-Struck Example

5540 1925-D MS66 PCGS. CAC. The strike is not absolute on this Premium Gem 1925-D but it is far better-impressed than the vast majority of survivors of the issue, notorious for weak strikes. In particular, the full horn on the buffalo makes this piece a standout, even if there is only minor evidence of a split in the tail. The date is also better-struck than normal, even though slight weakness still appears on the first two digits. The preservation is meticulous on this piece, which simply show no mentionable contact marks, even under a loupe. The surfaces are satiny and quite lustrous, with a quicksilver-gray wash accompanied by pale pink and blue tones. A great-looking example of this difficult issue. The last MS66 PCGS-CAC example we offered in this grade was lot 4159 in our Central States Signature a year ago (Heritage, 4/2013), which brought \$16,450. Population: 8 in 66, 0 finer (3/14). NGC ID# 22S3, PCGS# 3955

Key 1926-S Nickel, MS64 High-End for the Issue and Grade

5541 1926-S MS64 PCGS. CAC. The 1926-S holds the title of lowest-mintage regular issue in the popular Buffalo nickel series at 970,000 coins, and today Gems are all but unobtainable. PCGS shows only 14 in that top grade — a certified total that we note is the smallest of any nonvariety issue in the series (3/14). This near-Gem should be vigorously contested at auction, given its old green-label certification and CAC approbation. The obverse strike is fairly bold and the reverse strike, while made from fatigued dies, is still sharper than on most examples of this issue, notorious for that attribute. While not sharp, a decent level of detail appears on the horn, the fur, the tail, and the mintmark. Semireflective luster enlivens the surfaces, nickel-gray with touches of pinkish and gold. No singular contact appears on this piece, which we consider high-end for the grade.

From The Ray Levoi Collection. NGC ID# 22S7, PCGS# 3959

1937-D Three-Legged Buffalo Nickel Sparkling Gem Example

5542 1937-D Three-Legged MS65 PCGS Secure. FS-901. David Lange makes some comments in *The Complete Guide to Buffalo Nickels* concerning the 1936-D 3-1/2 Legged Buffalo variety that could equally well apply to the 1937-D Three-Legged:

"I have mixed feelings about the popularity of varieties that result from later states of a die that originally was normal. Under this heading fall other popular issues such as the 1922 'No D' cent and the many 'two-feather' Buffalo Nickels. While certainly collectable as novelties, I believe that too much value is placed on their significance with respect to the minting process. Obviously, from the prices quoted here, mine is a minority opinion, and this issue is very high on the want lists of series specialists and variety collectors in general. Upon gaining acceptance into the online certified registries maintained by NGC and PCGS, this demand only grows."

This is a fairly astonishing statement, although to his credit Lange admits to his view being a "minority" one. The absence of certain features on an otherwise-normal coin—the D on a Lincoln cent issue known to have been made only in Denver, the foreleg of a bison—is part of the *essential appeal*, the interesting *wrongness*, of many similar errors that also include the several Two Feathers Buffalo nickel varieties.

Although the reverse is rightly studied intently on the 1937-D Three-Legged nickel, both sides have numerous interesting die markers that reward further study—the stream of raised dots between the bison's legs has inspired numerous crude epithets, but the mangy tail, a missing portion of the bison's beard, and several obverse die markers all contribute further to a high interest factor.

This Gem is sure to appeal to the ambitious Buffalo nickel collector. Ample frosty luster graces the surfaces, which are pale nickel-gray where not lightly toned peach and pink. Decidedly above-average definition and preservation combine for uncommon eye appeal. PCGS has graded just six numerically finer examples (3/14).

From The Northern Lights Collection. NGC ID# 22SX, PCGS# 3982

1937-D Three-Legged Nickel, MS65 Rare and In Demand in Gem Condition

5543 1937-D Three-Legged MS65 PCGS. CAC. FS-901. The seeming contradiction between intense collector demand for the 1937-D Three-Legged Buffalo nickel and the high prices realized — despite an abundant supply — is rather neatly explained by a paragraph under the heading “Universal Rarity Scale” in *The Cherrypickers’ Guide*, volume one, fifth edition, by Fivaz and Stanton:

“Rarity and value are not always as closely related as one might suspect. If there are nine known examples of a particular variety, but only six or seven collectors are interested in it, the coin would certainly be rare, but because of a relatively low interest factor (low demand), it would not command much of a premium. Conversely, there could be 10,000 pieces known of a variety, but if 11,000 collectors are interested in obtaining one, the premium over the normal value of the coin would be much greater, due to the high interest factor (high demand). This brings us back to the age-old law of supply and demand.”

It is interesting to note that the *Cherrypickers’ Guide* gives its highest ratings of 5 for both Interest Factor and Liquidity Factor for each of the three popular varieties, the 1916 Doubled Die Obverse, the 1918/7-D, and the 1937-D Three-Legged. This seems to be out of kilter, as there are many collectors, even type collectors, who would likely consider the purchase of a 1937-D Three-Legged Buffalo in preference to the other rarer varieties; thus, we believe its Interest Factor should be even higher. The demand especially for Gem examples of the Three-Legged 1937-D can never approach the limited supply. The surfaces are bright and satiny, and each side has a layer of muted reddish-golden patina. There are no mentionable abrasions on either side, and the striking definition is above-average for this normally weak issue. Population: 55 in 65 (3 in 65+), 6 finer (3/14).

Ex: Long Beach Signature (Heritage, 6/2011), lot 3263, which realized \$40,250.

From The Jim O’Neal Collection of U.S. Type, Part One. NGC ID# 22SX, PCGS# 3982

1937-D Three-Legged Buffalo, MS65+ Only Six Numerically Finer at PCGS

5544 1937-D Three-Legged MS65+ PCGS. CAC. FS-901. The 1937-D Three-Legged Buffalo, despite its interesting status as a die-polishing error, is nonetheless one of the most popular varieties in all of American numismatics. It is widely collected alongside the regular series issues from 1913 through the 1938, and it is without a doubt more popular (and more available) than other varieties in the series such as the 1916 Doubled Die Obverse and the 1918/7-D overdate.

The popularity of the “Three-Legged Buffalo,” as it is called for short, suggests other collections that could be formed besides a “complete set of Buffalo nickels” (however one chooses to define that term). How about a Most Popular 20th Century Varieties set? Such a set might include a:

- 1955 Doubled Die Lincoln cent;
- 1937-D Three-Legged Buffalo nickel;
- 1942/1-P or 1942/1-D Mercury dime;
- 1918/7-S Standing Liberty quarter; and a
- 1909/8 Saint-Gaudens twenty dollar gold.

And there you have it: A nice five-piece set of major 20th century varieties, cent through double eagle and including copper, nickel, silver, and gold coinage metals. Of course, that is only one of innumerable possibilities when it comes to collecting. *There are no rules!*

This is a simply gorgeous Three-Legged nickel, pinkish-blue surfaces complementing glints of deep orange near the obverse rims, with no distractions on either side. Population: 55 in 65 (3 in 65+), 6 finer (3/14). NGC ID# 225X, PCGS# 3982

JEFFERSON NICKEL

1945-D Nickel, MS68 Full Steps One of Two-Finest Known

5545 1945-D MS68 Full Steps PCGS. The 1945-D five cent, from a mintage exceeding 37 million pieces, is readily available through Premium Gem, even with Full Steps designation. MS67 pieces can be located with diligent searching, but higher-grade examples are virtually unobtainable. The present MS68 Full Steps specimen is one of the latter, having a certified population of two coins, both PC-GS-graded. The radiantly lustrous surfaces display hints of light gold peripheral color on the obverse while speckles of this color palette make occasional visits to the reverse. Well-struck, save for softness on the upper portico. Immaculately preserved throughout. Population: 2 in 68 Full Steps, 0 finer (3/14). NGC ID# 22TY, PCGS# 84026

EARLY HALF DIMES

1792 Silver Half Disme, VF Details Judd-7, First Federal Issue

5546 1792 Half Disme — Plugged, Scratches — NGC. VF Details. Judd-7, Pollock-7, R.4. This well-traveled example is crudely repaired or plugged at the center reverse, with multiple scratches on both sides of the coin. Nevertheless, it is an important survivor of the first Federal Issue and is considered by many to be America's first official circulating coinage. The issue is also listed as a United States pattern coin, perhaps because a copper planchet variety exists, but also because the coin pre-dates other official issues and denominations and was minted in John Harper's cellar, before the U.S. Mint officially opened. There is no doubt, though, that the silver half dismes circulated widely and were perceived as regular issues by the public. About 300 survivors remain from an original mintage of between 1,500 and 2,000 pieces, including many that were holed and later plugged.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1795 V-5, LM-8 Flowing Hair Half Dime, MS65
Iridescent Originality, Album Toned
Ex: Benson**

5547 1795 MS65 PCGS. CAC. V-5, LM-8, R.3. Ex: Benson. This coin was Dr. Benson's primary representative of the 1795 half dime, out of one of the finest half dime collections ever assembled. Prior to the Goldberg sale in 2002, the Benson coins were stored in original Wayne Raymond coin boards for 50-plus years, where they acquired spectacular original toning. This amazingly beautiful, unabraded half dime is an example of the LM-8 variety, characterized by several positional diagnostics including the position of star 1 between curls 2 and 3, the spacing of LIB in LIBERTY, and the branch showing no berries under the left (facing) wing.

A number of spectacular die cracks represent the LM-8 die pair, with the most noticeable one meandering from the rim above LIBERTY through the Y, into Liberty's nose, then across the face and neck all the way to the portrait truncation. Oddly, neither Logan-McCloskey nor Valentine mention broad recutting of the 79 in the date that is also diagnostic of this variety.

Virtually no marks are seen on this Gem half dime, with the surfaces covered with iridescent originality. Blue, gold, green, and rose-yellow accents combine with lustrous, silver-gray toning for excellent eye appeal. The portrait and eagle are a bit soft at the center, but all other details are boldly rendered. This once-in-a-lifetime half dime is destined for the most advanced type or half dime collection. Population: 8 in 65, 11 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 22ZV, PCGS# 4251

**1796 LIKERTY Half Dime, V-1, LM-1, MS64
Among the Finest Known**

5548 1796 MS64 PCGS. V-1, LM-1, R.3. The more available of the two die varieties for this issue, though scarce in its own right, known in the *Guide Book* as the LIKERTY variation for the breaks near the vertical stroke at the upper and lower loops of the B. Interestingly, there are more *Guide Book* entries for this issue than there are die marriages; the 1796, 6 Over 5 corresponds to the V-2 or LM-2 and the 1796 LIKERTY is the V-1 or LM-1. These are the only two die varieties established for the year and denomination, leaving the "plain" 1796 entry sandwiched between the two an enigma.

The year 1796 marked the half dime's transition from the Flowing Hair obverse to the Draped Bust design, a shift that took place a year earlier for the half dollar and dollar, the other silver denominations then in production. With a stated mintage of just 10,230 pieces split between the two 1796 half dime varieties, it is little wonder that the date as a whole is scarce in an absolute sense, nor does it come as a surprise when Logan and McCloskey describe both variants as "usually seen well worn."

Such truths make the existence of coins such as the present near-Gem all the more remarkable. Its luster is gorgeous, and the strike is remarkably bold on the fine details of Liberty's hair. Ice-blue, violet, and russet shadings are dominant with occasional elements of light silver-gray glimmer at the margins. A remarkably appealing representative that is easy to appreciate. For all 1796 half dime varieties combined, Population: 2 in 64 (1 in 64+), 3 finer (3/14).

Ex: FUN Signature (Heritage, 1/2009), lot 3665; FUN Signature (Heritage, 1/2010), lot 2465.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 22ZW, PCGS# 4254

BUST HALF DIMES

**1800 LIBEKTU Half Dime, MS64
V-2, LM-3**

5549 1800 LIBEKTU MS64 PCGS. CAC. V-2, LM-3, R.4. The "common" LIBEKTU variety with about 150 pieces known in all grades, but seldom encountered so fine. The other variety, V-4, LM-4, remains an R.7 variety, with fewer than a dozen pieces known. Both varieties have the distinctive broken B punch that looks like a K and gives the variety its name. The reverse of LM-3 has a berry below the right base of the final A, while LM-4 has a berry below the left base of that letter.

This Choice Mint State example is impressive for a sharper-than-average strike that only shows a trace of weakness just left of center on each side. The surfaces are fully lustrous beneath gold, lilac, and iridescent toning. It is an exceptional piece for the collector of early type. Population: 7 in 64, 3 finer (3/14).

Ex: Long Beach Signature (Heritage, 5/2009), lot 378.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 2326, PCGS# 4265

**1833 V-4, LM-3.2 Half Dime, MS67
Prooflike Surfaces**

5550 1833 MS67 PCGS. CAC. V-4, LM-3.2, R.2. A halo of mint frosty surrounds the portrait, with similar frost at the upper left reverse where the die shows signs of swelling. The upper loop of the first S in STATES is open, while the top of the second S is filled. There are five distinct die states of the variety recorded as LM-3.1 through LM-3.5, each representing a remarriage following the use of one or both dies for other die varieties.

Both sides of this sharply die clashed Superb Gem have full prooflike mirrors, with brilliant and untuned silver surfaces. This is an extraordinary half dime that exhibits a bold strike and pristine surfaces. Population: 10 in 67 (1 in 67+), 0 finer (3/14), for all varieties. From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 232F, PCGS# 4280

1833 Half Dime, V-2, LM-8, MS67 Subtly Toned and Sharply Struck

5551 1833 MS67 PCGS. CAC. V-2, LM-8, R.3. This is a scarce die pairing showing the 83 in the date leaning together at the top without the final 3 high. The reverse shows the second E quite low in relation to the other letters, and the initial A in AMERICA is centered over the M in UNUM. This immaculate little jewel graded MS67 by PCGS is unattributed by that service as to variety, but for the date, this piece is one of 10 in MS67, including one MS67+ (3/14). Pale gold, jade, blue, and copper tones contrast against small splashes of burnt orange on the obverse. The reverse is a bit more subtly toned in a similar palette. The strike is quite sharp overall, save for the central curls above Liberty's head and the horizontal shield stripes on the reverse. A beautiful coin for a type or date set. NGC ID# 232F, PCGS# 4280

SEATED HALF DIME

1853-O Seated Liberty Half Dime, MS67 Popular Arrows Design Tied for Finest Certified

5552 1853-O Arrows MS67 PCGS. CAC. The 1852-O Seated Liberty half dime, with Arrows on either side of the date, claims a large mintage of 2.2 million pieces, making it one of the more available issues in the series. Type collectors prize this issue as a representative of the short-lived Arrows design, which was only struck from 1853-1855 on the half dime denomination. The arrows indicate a weight change instituted in 1853 on all 90% silver denominations except the silver dollar.

The present coin is a spectacular Superb Gem, tied with one other coin for finest-certified honors. This piece features sharply detailed design elements and vibrant mint luster under vivid shades of golden-brown and cerulean-blue toning. Eye appeal is tremendous. Population: 2 in 67, 0 finer (3/14). NGC ID# 233Z, PCGS# 4357

PROOF SEATED HALF DIMES

1859 Transitional Half Dime
Judd-232, PR64
Only One Graded Finer at PCGS

5553 1859 Transitional PR64 PCGS. Judd-232, Pollock-279, Low R.7. The Transitional half dimes (Judd-232) and dimes (Judd-233) of 1859 combine the With Stars obverse design of Anthony C. Paquet (better-known for the 1861-P and 1861-S Paquet Reverse double eagles) with the so-called Cereal Wreath reverse, designed by James B. Longacre and used on half dimes from 1860-1873 and dimes from 1860-1891. The legend UNITED STATES OF AMERICA was being moved (the “transition”) from its former reverse position to the obverse; the muling of the two dies resulted in “coins without a nation,” lacking any reference to their country of origin.

The Transitional half dime format was repeated in 1860 in business-strike format (Judd-267) rather than the proof format of the 1859-dated pieces. The 1859 Transitional half dimes are far more elusive than their 1860 counterparts. The website www.USPatterns.com estimates that only a dozen examples survive today. The 1859 Transitional dime, Judd-233, is also seen more “frequently” than the 1859 half dime, the USPatterns.com site estimating that “fewer than two dozen are known.”

PCGS certification data show only five submissions for the Judd-232 1859 half dime, three in PR63, the present PR64, and one PR65 example. Auction appearances of this elusive variety are certainly hard to find: We offered the former Norweb Collection example, certified PR63 PCGS in an old green-label holder, as lot 2838 in our Long Beach Signature (Heritage, 2/2007), which brought \$40,250. In our Boston ANA Signature (Heritage, 8/2010), lot 3068, a PR63 NGC example, brought \$34,500.

These Transitional half dimes are widely collected with the remainder of the series, increasing their appeal to a broad collecting spectrum. This near-Gem proof PCGS example shows vivid toning and a sharp strike, pinkish centers ceding to medium blue around the rims on each side. No contact marks of any significance appear. Population: 1 in 64, 1 finer (3/14). PCGS# 11954

1840 No Drapery Half Dime, PR64 From the Eliasberg Collection

5554 1840 No Drapery PR64 PCGS. CAC. Ex: Eliasberg. This piece represents one of the rare instances where an Eliasberg coin is certified at a lower grade than that assigned in the sales nearly two decades ago. This piece appeared as PR66 in the 1996 Eliasberg catalog. Now certified at a lower PR64 grade, it is clearly an exceptional example for that grade level. Both sides exhibit bold details and fully mirrored fields with delicate gold, turquoise, and sky-blue toning. Only five or six proofs are known of this issue, including one in the Smithsonian Institution.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 4410

1845 Half Dime, PR65, Ex: Newman Tied for Third-Finest Known

5555 1845 PR65 PCGS. CAC. High Date. This is the Eric P. Newman Collection proof 1845 half dime that was offered as PR65 NGC-CAC in our April 2013 FUN Signature as lot 5185, where it realized \$25,850. It has now been crossed to a PR65 PCGS holder, again with the CAC approval. In its last appearance we wrote, "The obverse has a tiny raised die chip between adjacent points of stars 9 and 10, with another near the top outside point of star 12. There is no evidence of date repunching, although the fields behind the closely spaced 845 appear slightly raised. The 1 is comparatively distant from the 8. The exquisite surface shows nearly imperceptible hairlines. The reverse has a tiny lint mark just right of the lower part of the F in OF, with no other imperfections. The reverse die has well-formed letters with no doubling or other anomalies. An impressive Gem with mirrored fields shining through beautiful blue, ivory, and iridescent toning."

1845 Proof Half Dime Roster

1. **PR68 NGC.** The Pittman-Kaufman coin. Menjou Collection (Numismatic Gallery, 6/1950), lot 113; John Jay Pittman (David Akers, 5/1998), lot 1711, as part of a complete 1845 proof set, the Seated Liberty coins kept intact by Phil Kaufman; Phil Kaufman Collection, Part II (Heritage, 1/2008), lot 3028; FUN Signature (Heritage, 1/2014), lot 5185.
2. **PR66 NGC.** Phil Kaufman; Bowers and Merena (1/1999), lot 1065.
3. **PR65 PCGS. CAC.** Formerly PR65 NGC-CAC. Eric P. Newman Collection (Heritage, 4/2013), lot 3902. **The present specimen.**
4. **PR65 NGC.** Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Merena, 5/1996), lot 963; Phil Kaufman; Bowers and Merena (3/1998), lot 504.
5. **PR65 NGC.** Ex: Richmond. Phil Kaufman; Richmond Collection; later, Heritage (4/2005), lot 23184; Heritage (7/2005), lot 10152.

8. **Proof.** Smithsonian Institution. NGC ID# 235D, PCGS# 4421

1847 Seated Half Dime, PR66 Cameo Only Six to Eight Specimens Accounted For

5556 1847 PR66 Cameo PCGS Secure. CAC. The 1847 proof Seated Liberty half dime is a very rare issue, from an unknown, but certainly small, original mintage. In the Pittman catalog, David Akers estimates the surviving population at six to eight pieces in all grades. We have been able to account for a total of six specimens in our roster below, with a few earlier appearances that may be duplicate citations of the coins on the list.

The coin offered here is a spectacular Premium Gem, with richly frosted devices that provide dramatic cameo contrast with the brightly reflective fields. The design elements exhibit razor-sharp definition throughout, with fine detail on the ribbon bow, leaf veins, star centrils, and Liberty's head. The surfaces are accented by iridescent shades of gold, champagne, and cobalt-blue toning. Visual appeal is extraordinary.

Roster of 1847 Proof Half Dimes:

- 1. PR66 Cameo PCGS.** Bowers and Merena (1/1999), lot 1066; Bowers and Merena (1/2000), lot 81; Superior (10/2000), lot 4326; Superior (1/2004), lot 177; Heritage (1/2012), lot 3121; **the present coin.**
- 2. PR66 NGC.** Phillip Kaufman; Baltimore ANA (Heritage, 7/2008), lot 1811.
- 3. PR65 NGC.** Richmond Sale, part III (David Lawrence Rare Coins, 3/2005), lot 1088.
- 4. Gem Proof.** John G. Mills Collection (S.H. and H. Chapman, 4/1904); J.M. Clapp; Clapp estate, 1942; Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 967.
- 5. PR65.** Wayte Raymond (5/1945), lot 810; John Jay Pittman Collection (David Akers, 10/1997), lot 476.
- 6. Proof.** Smithsonian Institution.

Additional Appearances. These may or may not be duplicates of the above.

A. Proof. Newcomb, part II (J.C. Morgenthau, 5/1945), lot 810.

B. Proof. Bullowa (5/1952).

C. Proof. Lester Merkin (4/1966), lot 80 (unplated); 1971 ANA (Stack's, 8/1971), lot 625; Reed Hawn Collection (Stack's, 8/1973), lot 60.

Ex: Orlando FUN Signature (Heritage, 1/2012), lot 3121, which realized \$41,000.

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 84423

1855 Arrows Half Dime, PR66 Tied for Finest at PCGS

5557 1855 Arrows PR66 PCGS. CAC. No official mintage exists for the 1855 Arrows proof half dime. In this regard, Al Blythe (1992) says that proofs are “unverified.” Walter Breen, on the other hand, in his 1989 proof coin *Encyclopedia*, lists 10 to 12 collections that possessed this issue. David Akers (1997), estimates 50 to 60 1855 Arrows half dimes were struck for inclusion in 1855 proof sets, with perhaps 25 to 30 coins known today, a figure that hews closely to the PCGS/NGC certified population of 27 specimens.

Splashes of cobalt-blue, violet-gray, and beige-gold patina bathes both sides of this Premium Gem proof. Frosted design elements are well struck and display modest variance with the mirrored fields when the coin is tilted slightly under a light source. A nicely preserved piece. Population: 2 in 66, 0 finer (3/14).

Ex: *Pittsburgh Signature* (Heritage, 8/2004), lot 352; *Long Beach Signature* (Heritage, 2/2005), lot 6157; *Central States Signature* (Heritage, 4/2009), lot 1124; *Los Angeles Signature* (Heritage, 8/2009), lot 1064.

From *The Jim O’Neal Collection of U.S. Type, Part One*. NGC ID# 235T, PCGS# 4433

1873 Half Dime, Exceptional PR67 Cameo Tied for Finest Certified at PCGS

5558 1873 PR67 Cameo PCGS. CAC. Dramatic aquamarine and orange-red invigorate this flashy and unabraded Superb Gem. Well-struck except for a small portion of the cereal grains. The die was heavily polished, as seen by the missing folds in Liberty’s gown. Striations are also seen on each side, both of which contribute to the extraordinarily deep fields. The final year of the denomination with only 600 proofs struck, the 1873 is always of interest to type collectors. Population: 2 in 67 Cameo, 0 finer (3/14).

Ex: *Central States Signature* (Heritage, 4/2008), lot 543; *Chicago Signature* (Heritage, 8/2011), lot 7068.

EARLY DIMES

1796 JR-6 Dime, MS63 High-Grade Early Type Coin

5559 1796 MS63 PCGS. JR-6, R.3. 1796 was the first year of dime (or disme, per nomenclature of the era) production at the First Philadelphia Mint. The Draped Bust and Small Eagle motifs originated on 1795 silver dollars. According to often repeated numismatic legend, the Draped Bust model was Philadelphia socialite Ann Willing Bingham, indirectly through paintings by noted artist Gilbert Stuart. *Guide Book* credit for the design, however, is assigned to Chief Engraver Robert Scot.

On the dime, the Small Eagle only lasted through 1797, and was replaced by the Heraldic (or Large) Eagle in 1798. The Draped Bust obverse continued until 1807, except the star count was reduced to 13 beginning in 1798. Technically, the 1796 15 Stars is a single-year design subtype, since the 1797 issue has either 16 (JR-1) or 13 (JR-2) stars.

This is a satiny and mark-free representative with primarily stone-gray toning. The reverse has a small dab of dark color right of the D in UNITED, and the obverse displays several parallel, slender, and toned alloy streaks. The strike is sharp for the Draped Bust type, though the centers show minor incompleteness.

The usually seen die state with a horizontal break through the 17 in the date, a slender crack through star 8 to the center of Liberty's neck that splits into two cracks descending to the rim at 5:30 and 6 o'clock, a crack from 10:30 through the eagle to the M in AMERICA, a vertical crack from the ribbon to the eagle's breast, a crack through the bases of OF AMER, a crack from the rim to the M, and a delicate crack from the center of the R in AMERICA. Population combined for all 1796 varieties: 12 in 63, 21 finer (3/14). NGC ID# 236B, PCGS# 4461

**1797 JR-1 Dime, MS62
16 Stars Obverse
Condition Census Quality**

5560 1797 16 Stars MS62 PCGS. CAC. JR-1, R.4. When we offered an MS62 NGC specimen as part of the Ed Price Collection in August 2008, we wrote that it was the second or third finest known behind an MS63 NGC coin that we handled a decade earlier. Since then, we have handled one piece graded MS64 NGC and a PCGS-certified MS65 in the 2013 FUN Auction. From examination of the auction records, it appears that only two or three finer pieces are known. This lovely specimen is easily in the Condition Census. Both sides are bright and lustrous with light silver surfaces and faint blue and gold toning. The strike is slightly weak in the centers, but nicely centered. The surfaces have few blemishes and excellent eye appeal. Population: 3 in 62, 4 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 236C, PCGS# 4462

**1797 Draped Bust Dime, AU58
JR-2, R.4, 13 Stars, Knobbed 9**

5561 1797 13 Stars AU58 PCGS. JR-2, R.4. A glimpse of golden-rose highlights in the fields adds life to this silver-gray early dime, with subtle mint luster still visible at the margins. Only three Uncirculated examples are known to exist with the 13 Stars obverse, assuring this near-Mint coin ranks in the top six examples known of the JR-2 variety.

Some granularity on Liberty's portrait is not unusual for the date. Otherwise, the obverse strike is bold and the surfaces are smooth with no significant marks. The reverse strike on the eagle's breast is typically soft, with even the best specimens showing weak feathers and flatness of strike on the eagle. This is an attractive, high-grade example of the Knobbed 9 type and a challenging, high grade for an advanced collection. Population: 1 in 58, 2 finer (3/14). NGC ID# 236D, PCGS# 4463

1804 14 Star Reverse Dime, VF35 Scarce JR-2 Variety

5562 1804 14 Stars on Reverse VF35 PCGS. JR-2, R.5. Ex: James Stack. The reverse distinguishes the JR-1 and JR-2, the only two varieties for the year and each is rare in an absolute sense; the former has a reverse with 13 stars below the clouds, while the latter displays 14 stars in that constellation. The JR-2, 14 Star Reverse is less frequently encountered in the numismatic marketplace, though the assessment of Davis, *et al.* in 1984's *Early United States Dimes 1796-1837*, which considered the JR-2 twice as rare as its JR-1 counterpart, may have overstated its rarity somewhat.

This richly toned Choice VF example is pleasingly detailed for the grade and fundamentally appealing. Slate-blue, silver-gray, and mocha elements converge on each side. Apart from a few small abrasions in the fields, the surfaces are generally smooth. For the JR-2 variety, Population: 1 in 35, 5 finer (3/14).

Ex: ANA Signature (Heritage, 7-8/2008), lot 1602.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 4475

1805 4 Berries Dime, JR-2, MS66 One of the Finest Known

5563 1805 4 Berries MS66 PCGS. JR-2, R.2. The majority of 1805 dimes are from the JR-2 die pair, with four olives in the branch on the reverse. The only other variety has five olives, or berries as they are usually called. The 1805 JR-2 dime is the second most common Draped Bust variety behind the 1807, and both coins are ideal for type collectors who want a single example of the design.

While an accurate census of Mint State pieces is unavailable, only a few could possibly exceed this piece for its quality. PCGS reports grading four in MS66 and just three finer pieces, although we doubt that the three finer examples represent more than one or two coins.

Before this coin was struck, the planchet strip was rolled and drawn to the proper thickness, and evidence of those operations remains in the form of roller marks, thin parallel grooves that are visible across part of the design elements on each side. These are distinguished from adjustment marks since they are all oriented in exactly the same direction on both sides, and they are of consistent depth. Rolling marks are normally struck out, although slight weakness in strike will allow them to remain. They are under no circumstance considered damage to the coin. Rather, roller marks represent an integral part of the minting process and only add to the importance and desirability of the coin. Both sides have soft, frosty silver luster and brilliant, untuned surfaces. This amazing piece is destined for a top quality date or type collection.

Ex: Central States Signature (Heritage, 4-5/2009), lot 2222; Dallas Signature (Heritage, 10/2009), lot 346; Central States Signature (Heritage, 4-5/2010), lot 2052.

BUST DIME

Untoned Gem 1821 Dime Large Date, JR-6

5564 1821 Large Date MS65 PCGS. CAC. JR-6, R.2. There is no trace of toning on this coin with bright, lustrous fields. The strike is decent, with a hint of softness on the smallest of Liberty's hair curls and the eagle's neck feathers, but the stars are sharply defined. Evidence of die clashing occurs on the reverse. A thin vertical die crack crosses the right side of Liberty's face. This Gem is about as nice as this date is ever found, worthy of serious attention from the advanced specialist. Population: 9 in 65, 0 finer (3/14).

Ex: Denver Signature (Heritage, 8/2006), lot 5133; Chicago Signature (8/2011), lot 3523.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 236Y, PCGS# 4496

PROOF BUST DIME

1835 JR-4 Dime, PR65 Cameo Extremely Rare Contrasted Proof

5565 1835 PR65 Cameo PCGS. JR-4, Low R.7 as a Proof. This piece is from the usually seen JR-4 pairing. It is most easily attributed by the counterclockwise rotation of star 10 which is also joined to an upper denticle, the low position of the D on the reverse, and the uniform thickness of the shield outline. The mintage of proofs from this date are not known, they were obviously struck on an as-needed basis from whatever dies were handy at the time. The estimate of 10 individual specimens has been suggested, but there could be a few more (perhaps 12?) as PCGS and NGC combined have seen 18 certification events (undoubtedly with several resubmissions included in that number). Cameo proofs are extremely rare with only 12 pieces certified by PCGS and NGC for all dates from 1820 through 1837.

This is an almost-brilliant example with faint speckles of russet patina around the borders of each side. The fields are uniformly deep in their reflectivity with mirroring that extends from rim to rim. The strike is strong throughout with the only area of softness seen on the claws of the eagle. There are no obvious contact marks that can be reliably used as pedigree identifiers on this important early proof. Population: 1 in 65 Cameo, 1 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 84557

SEATED DIMES

1837 No Stars Dime, MS66+ Impressive Small Date Variety

5566 1837 No Stars, Small Date MS66+ PCGS Secure. CAC. The shape of the 3 and 7 in the date, in addition to the physical size of the digits, distinguish the Small Date and Large Date. The Small Date logotype has curved tops to the 3 and 7, while the Large Date logotype has flat tops to those digits. This example has the reverse rotated a few degrees right of normal.

Both sides have a bold strike with full hair detail on the obverse and full leaf detail on the reverse. The surfaces are exceptional, with frosty ivory luster. Splashes of russet, blue, and iridescent toning add to its overall eye appeal. This impressive piece is the single finest example that PCGS has certified, and one of just four Small Date dimes that have received the MS66 numerical grade (3/14).

Ex: Long Beach Signature (Heritage, 9/2010), lot 3615, which realized \$25,300.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 237R, PCGS# 4562

1841-O Dime, Fortin-101, AU58 A Rare Transitional Variety

5567 1841-O AU58 PCGS. Transitional Reverse, Large O, Greer-102, FS-902, Fortin-101, R.6. Attributed by the Date Far Left, Large O Mintmark, Closed Bud Reverse. As noted in Greer, 1992: "High grade examples will show faint die cracks from the rim to nearly every letter in the legend." Greer also states: The Large O has less than 20 pieces presently known despite extreme searching. Both (the Small O Closed Bud Reverse and the Large O Closed Bud Reverse) are keys for the variety collector."

Considerable luster is apparent on the silver-gray surfaces laced with whispers of ice-blue. The design elements are well-struck and there are no serious contact marks. We mention a shallow, unobtrusive scrape below stars 9 and 10 solely for identification purposes, as well as two light linear marks on either side of the R in AMERICA. Housed in a prior generation holder. Population: 8 in 58, 17 finer (3/14). NGC ID# 2385, PCGS# 4580

1858-S Seated Dime, MS62
Important, Low-Mintage Issue
One of the Better-Known Examples

5568 1858-S MS62 PCGS. CAC. Fortin-101, Greer-101. The 1858-S is a scarce, low-mintage issue of 60,000 pieces, and a key date among the post-Arrows, Type Two Seated dimes. On this scarce Fortin variety, the medium date slopes upward and there are die chips around stars 3 through 6 and around stars 12 and 13. On the reverse, the mintmark is tilted slightly to the right. According to Fortin: "Variety 101 is very difficult to locate."

This is a sharply struck example with pleasing gold-tan toning and few surface marks. A satiny, attractive piece that seems conservatively graded. PCGS has seen two examples (including this one) at this grade level, two others rated at MS63, and one extraordinary piece graded MS67 (3/14). NGC ID# 2393, PCGS# 4618

1873-CC Arrows Dime, AU50 One of the Finest-Known Examples

5569 1873-CC Arrows AU50 PCGS. CAC. With a low mintage of 18,791 coins, the 1873-CC Arrows dime is a key issue in the Seated dime series. Precious few of the coins have survived in higher grades of AU or in Mint State, and a high percentage of examples are damaged in some respect. A cursory examination of our Auction Archives shows that the majority of the 1873-CC Arrows dimes sold by Heritage have been in impaired condition, making a problem-free specimen such as this one especially desirable.

Many collectors feel a special fondness for the 1873-CC Arrows dimes because of the "Eliasberg Connection." The unique 1873-CC No Arrows dime was the last coin that Louis Eliasberg obtained to complete his collection, after 25 years of effort, of one of each date and mintmark of U.S. coinage from the 1793 half cent to the 1932 double eagle. He bought the 1873-CC No Arrows dime from Jim Kelly in 1950; Kelly and Eliasberg had battled for the coin in the sale of the Adophe Menjou collection earlier in that year, when Eliasberg dropped out because he thought the coin was too expensive.

Most collectors, of course, will never own the No Arrows 1873-CC, but the present 1873-CC Arrows coin is one that any numismatist should be proud to add to his or her collection. The conditional rarity of the piece is one of its chief attributes, of course, as it resides in the upper tier of graded examples. PCGS has seen two at this grade level, including the present piece, with two coins rated higher; while NGC has graded none at AU50, and just three examples finer.

The lovely antique-silver surfaces exhibit champagne accents near the peripheries; more noticeably so on the obverse. Slight wear is evident on the upper portions of Liberty's head and flag; the shield, the scroll edges, and LIBERTY are sharp. On the reverse, the high points of the wreath and ONE DIME also display a normal degree of wear for the grade. Small abrasions reside near the reverse center, but the obverse only shows a few trivial marks. Population: 2 in 50, 2 finer (3/14). NGC ID# 23BH, PCGS# 4666

1874-CC Seated Liberty Dime, AU53 Low-Mintage Arrows Issue Only Two Finer Coins at NGC

5570 1874-CC Arrows AU53 NGC. The 1874-CC Seated Liberty dime boasts a low mintage of 10,817 pieces, making it an elusive date and one of the keys to the Seated dime series. The issue also represents the short-lived Arrows design that is so popular with type collectors. The arrows on either side of the date indicate a weight change that was mandated on most silver denominations in 1873. The Arrows design was only used on dimes during 1873 and 1874. Brian Greer evaluated the 1874-CC in his *Complete Guide to Liberty Seated Dimes*:

"The unquestioned key to the series (excluding the uncollectible 1873-CC No Arrows). Rare in any grade and probably a full R.6 in problem-free condition. Very few mint state pieces exist. Under intense demand and currently bringing well in excess of Trends prices, when available."

The rarity of the 1874-CC was recognized as soon as Augustus Heaton published his reference on mintmarks in 1893. Heaton noted that all CC-mint dimes from 1871-1874 were rare and the "1874 is the highest rarity of the four." Collectors value the 1874-CC in all grades and conditions, as evidenced by an early auction appearance in lot 1356 of the B.W. Smith Collection (B. Max Mehl, 5/1915), under the heading Dimes/Carson City Mint:

"1874 Good but slightly bent. Extremely rare. Record for a good specimen \$7.25."

The fact that \$7.25 had been paid for a ten cent coin in 1915, when the average daily wage was \$1.63 shows how highly the 1874-CC was valued at the time. Recent sales include the MS62 PCGS example in Stack's Bowers August 2012 ANA Convention Sale that realized \$115,000.

The coin offered here is an attractive AU53 example, with well-detailed design elements that show just a touch of wear on the high points. The lightly abraded surfaces show a blend of lavender-gray, sea-green, and amber patina, with traces of mint luster underneath. Census: 2 in 53, 2 finer (3/14). NGC ID# 23BL, PCGS# 4669

PROOF SEATED DIMES

**1854 Seated Dime, PR65 Cameo
Wonderful Arrows Issue**

5571 1854 Arrows PR65 Cameo NGC. As Breen describes the issue in his 1989 *Proof Encyclopedia*, “All digits and arrows touch base, 54 touch each other. About as rare as the smaller silver.” Although unmentioned in Breen, heavy obverse diagonal die striations or die polishing lines run from northwest to southeast, most visibly a bold line crossing underneath the left arrow about two-thirds of the way toward the point. This delightful silver-white piece shows considerable field-device contrast, if a trifle short of an Ultra Cameo designation. There is no discernible color on either side. A tiny, dotlike planchet flake appears in the obverse left field, near to Liberty’s arm between stars 2 and 3, a future pedigree identifier but completely undistracting. The strike is expectedly bold, and the visible contact is so minuscule that the piece appears high-end for the assigned grade. A wonderful example of this popular type. Census: 1 in 65 Cameo, 1 finer (3/14).

Ex: Baltimore ANA Signature (Heritage, 7/2008), lot 1618, which realized \$21,850.

From The Jim O’Neal Collection of U.S. Type, Part One. PCGS# 84743

**1859 Transitional Dime, Judd-233, PR66
Ex: Eliasberg**

5572 1859 Transitional PR66 PCGS. CAC. Judd-233, Pollock-280, High R.6. *Ex: Eliasberg.* The motive behind the so-called “Coin Without a Country” was not a tryout of the new design. According to the Eliasberg cataloger: “The distribution arrangement for the 1859 transitional dime is not known, but it certainly must have been regarded as a delicacy when it was struck, significantly during the term of Mint Director James Ross Snowden.” Nevertheless, the Judd-233 retains considerable popularity, especially when it is as attractive as the Eliasberg coin. Dappled green-gold and blue patina drapes gleaming surfaces. The strike is sharp, the preservation excellent. Certified in a green-label holder. Population: 2 in 66, 0 finer (3/14).

Ex: Eliasberg Collection (Bowers and Merena, 5/1996), lot 1168; Schaumburg Central States Signature (Heritage, 4/2012), lot 5065, which realized \$37,375.

From The Jim O’Neal Collection of U.S. Type, Part One. NGC ID# 23CH, PCGS# 4749

1890 Seated Dime, PR68 Ultra Cameo Single Finest-Graded Example

5573 1890 PR68 Ultra Cameo NGC. CAC. With just one year remaining in the long-lived Liberty Seated design type, 1890 saw a business strike mintage of nearly 10 million coins at the Philadelphia Mint. The proof mintage, however, was tiny by comparison with a mere 590 pieces struck. This Superb Gem is fully struck with snow-white frosted motifs and dark, deeply mirrored fields. Both sides are impeccably preserved, and the glassy surfaces are free of even the tiniest imperfection. This is the finest-known example of this proof issue. Census: 1 in 68 Ultra Cameo, 0 finer (3/14).

From The Jim O'Neal Collection of U.S. Type, Part One. PCGS# 94787

PLATINUM NIGHT

Likely Unique 1891-O Dime, PR66 The Only Certified Proof Unlisted Variety

5574 1891-O PR66 NGC. Obverse Unlisted, Reverse P. Walter Breen called the early presentation pieces and pre-1858 dated proofs the caviar of proof coinage, and then compared them to the branch mint proofs that he called “dishes of peacock’s tongues.” Proof coins were struck at the branch mints for presentation purposes, to mark special occasions, or to test equipment, although the exact circumstances are not always known today. One example is the 1838-O half dollar that was struck early in 1839 to test a new press that arrived in New Orleans. In San Francisco, proof 1855-S quarters and half dollars mark the first coins of those denominations struck at that facility.

The New Orleans Mint struck proof silver coins in 1891, including this dime that was unknown to Breen, and proof 1891-O quarters that he recorded in his *Encyclopedia of United States and Colonial Proof Coins*. The occasion was most likely the resumption of those denominations at the New Orleans Mint, the first since before the Civil War. The facility was opened in 1838 and operated continuously until January 1861, when it fell into the hands of the State of Louisiana, and a short time later, the Confederate government. Toward the end of the war, the U.S. government regained control. However, the Mint remained dormant for many years. In 1870, a joint resolution was referred to the Committee on Commerce regarding the New Orleans Mint, recommending that the buildings and property revert to the City of New Orleans, which had originally conveyed the grounds to the U.S. in 1835. Nine years later, the Mint resumed operation, striking silver dollars and a small number of double eagles.

On July 26, 1891, the New Orleans *Times-Picayune* reported the resumption of dime production. The brief article tells us something of the production:

“The United States mint is now engaged in coining one million dimes a month. The dime banks and other causes have created a scarcity and Uncle Sam has ordered his money factories to the rescue. There is considerable demand for the dimes. They are the first coins of that smallness the mint has made, and the same presses with which the dollars were coined are used, the ingots being also of similar size. The new dies reached here about the 1st of the month, and the dimes commenced to roll out on the 5th.

“The mint has on hand the bullion representing 3,000,000 trade dollars, shipped from the Philadelphia mint about two months ago, and the 863,000 ounces of uncurrent money sent from various sub-treasuries; so that there is no lack of silver to keep the presses going.”

We have never seen or heard of another 1891-O proof dime, although one or two proof quarters are known, including the Dunham coin certified Specimen 66 NGC that we handled in our August 2013 Chicago Signature sale. We have also been unsuccessful in our attempts to determine the exact die variety of this piece as recorded at Gerry Fortin’s website, www.seateddimevarieties.com. Gerry Fortin studied this piece, and determined that the obverse is unlisted and the reverse is his Reverse P. The obverse die is perfect, with no trace of date repunching, no clash marks, and no die cracks. There is no evidence of die lapping on the obverse. Similarly, the reverse die is perfect, also with no repunching of the mintmark, no clash marks, no die cracks, and no evidence of die lapping. The mintmark is close to the bow knot, and tilted sharply to the left.

This Premium Gem proof has exceptional eye appeal. The strike is absolutely full and complete, as expected for such a small coin struck on a large press intended for silver dollar coinage. This piece was almost certainly struck in the first week of July 1891, perhaps on Sunday, July 5, the day reported as the beginning of dime coinage at New Orleans. Light cameo contrast results from the combination of satiny, lustrous devices, and fully mirrored fields. The fields are warmly bathed in intermingled sky-blue, rose, and champagne toning. An extraordinary branch mint proof dime, likely unique, is destined for a specialized collection of Seated Liberty dimes. PCGS# 14789

MERCURY DIME

1916-D Dime, MS65 Full Bands Important Series-Key

5575 1916-D MS65 Full Bands PCGS. CAC. The Mercury dime series began with a key in the 1916-D, and while other issues had low production over the years, none has achieved the fame and status of the first-year coins from Denver. At 264,000 pieces struck, it has less than a quarter of the original mintage of its nearest rival, the 1921-D. Low-grade and mid-range examples are always in demand, and unquestionably Mint State survivors are far more elusive than their circulated counterparts.

While the enthusiasm for the new design did cause a number of survivors to be set aside at the time of issue, the proportion of pieces saved was smaller than it was for the more heavily populated regions served by the Mints at Philadelphia and San Francisco. According to David Lange, in his 2005 revision to *The Complete Guide to Mercury Dimes*, the popularity of coin boards, a Depression-era innovation that brought coin collecting to new prominence, also led to more widespread knowledge about the 1916-D and its rarity. Such awareness, however, did not come in time for more Mint State examples to be saved for posterity.

Delicate sky-blue and tan-orange accents visit each side of this gleaming MS65 piece. The strike is excellent for the issue, with impressive rounding and separation on the bands of the fasces. The mildly textured surfaces are impressively preserved, and the overall visual appeal is delightful. Full Bands Gems are rarities by almost any estimation, and the available population figures are likely inflated by resubmissions. Population: 32 in 65 Full Bands, 27 finer (3/14).

Ex: Long Beach Signature (Heritage, 5/2008), lot 180.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 23GY, PCGS# 4907

TWENTY CENT PIECE

1875-CC Twenty Cent Piece, MS66 Tied for Finest Certified at PCGS

5576 1875-CC MS66 PCGS. CAC. The twenty cent piece was introduced in 1875, ostensibly to eliminate problems with making change for small purchases. A meager mintage of 133,290 pieces was accomplished at the Carson City Mint during the year. Unfortunately the coin's size and appearance were too similar to the quarter, causing much confusion and irritation. The public rejected the coins, and none were made for circulation after 1876. Proofs were made for collectors in 1877 and 1878, after which the denomination was cancelled. The 1876-CC is a classic rarity, with fewer than 20 specimens known to the numismatic community today, leaving the 1875-CC as the only issue from the Carson City Mint reasonably available to collectors.

While this odd denomination was never popular with the general public, it was always popular with collectors, and the 1875-CC enjoys enduring demand across all grade levels. Auction appearances began at an early date, with an example showcased in lot 302 of the Ferguson Haines Collection (S.H. & H. Chapman, 5/1880). The coin was paired with an example from the San Francisco Mint on that occasion.

For the numismatist who demands only the finest examples, this Premium Gem is a worthy pursuit. The overall detail is pleasing, if slightly soft on Liberty's head, the top of the left (facing) eagle's wing, and the right (facing) claw. The central devices exhibit thick frosted mint luster. The fields show heavy die polishing lines and are strongly reflective beneath soft gold-tinged patina that yields to deeper orange closer to the margins. One of just five MS66 examples graded by PCGS, with none finer; NGC has certified four specimens at the Premium Gem level, with only one finer (3/14).

Ex: ANA Signature (Heritage, 8/2008), lot 1624; Central States Signature (Heritage, 4/2009), lot 2295.

From The Jim O'Neal Collection of U.S. Type, Part One. NGC ID# 23R6, PCGS# 5297

EARLY QUARTER

Gem 1806 Draped Bust Quarter Condition Census B-3 Variety Only One Numerically Finer Coin at NGC

5577 1806 MS65 NGC. B-3, R.1. Tompkins Die State 1/2. The 1806 Draped Bust quarter claims a mintage of 206,124 pieces, with 10 die varieties known for the date. This coin represents the available B-3 variety, with a missing lower-left serif on 1 in the date and 12 arrowheads on the reverse. This example is the finest of the six pieces that Steve Tompkins lists in his 1806 B-3 Condition Census.

The obverse and reverse dies were both used for other varieties in addition to the B-3 combination. The obverse die was also used for B-2, and the reverse die was also used for B-4. Tompkins has presented a detailed remarriage chart for the three varieties, showing that 1806 B-2 was struck first, B-3 was struck second, B-4 was struck third, and finally more examples of B-3 were struck fourth. The final use of the dies for B-3, struck after B-4, is called a "remarriage" since the same dies were joined together for a second time. Documenting any remarriage among early coins is an extremely difficult challenge, since multiple examples of all varieties have to be studied, and exact die state differences must be documented.

Faint traces of champagne toning appear on the obverse of this otherwise fully brilliant white quarter. Both sides have highly lustrous and frosty surfaces with few imperfections of any kind, other than a planchet impurity that is visible on the obverse rim over IB. The lower part of the obverse and upper part of the reverse show considerable weakness. Struck on a screw press, this piece is a couple turns short of a full strike. Since all of the peripheral detail is fully defined, the weakness may not be attributable to improper operation of the screw press. Instead, the possibility exists that one or both dies were slightly sunken at the center, making it impossible to achieve a full strike. Census: 3 in 65 (1 in 65 ★), 1 finer (3/14).

Ex: ANA Signature (Heritage, 7/1997), lot 6225; Richard Jewell Collection (American Numismatic Rarities, 3/2005), lot 1665; FUN Signature (Heritage, 1/2009), lot 3712; Beverly Hills Signature (Heritage, 11/2011), lot 5009; New York Signature (Heritage, 12/2011), lot 3453; Long Beach Signature (Heritage, 2/2013), lot 3774. BUST QUARTER

**1834 B-4 Capped Bust Quarter, MS67
Tied, Finest Known for Variety
Tied, Finest Known Bust Quarter**

5578 1834 MS67 NGC. B-4, R.1. Tompkins Die State 2/2. One other B-4 quarter is known in Superb Gem condition, listed in the Superior section of Auction '90 (August, 1990) as lot 1078, where it was described as "certainly the finest known 1834 Bust quarter" and "the finest Bust quarter of them all." Graded MS67 NGC, it was a full two grading points higher than the next finest 1834 quarter and was the highest certified quarter of any date between 1796 and 1838. The coin brought a strong \$100,000.00 in that sale.

With all due respect to that excellent quarter, this equally Superb Gem example is worthy of its "share of the turf." 24 years have passed, and MS67 is still the highest graded business strike for any Bust quarter of any date or variety, but about 20 different examples share the stage with the same lofty MS67 grade (not counting resubmissions or crossovers). Two Bust quarters have achieved an even higher MS68 designation, but they are in proof format.

Unfortunately, the 1990 example of the 1834 piece was plated with only a small, black-and-white photo, so an exact comparison of the two exceptional B-4 pieces is difficult. Both appear to be of the same die state, with an obverse identified by a single small die crack, but the reverse with multiple major cracks. The present example is exquisitely toned and fully struck on reflective surfaces with some prooflike tendencies. The lightly frosted central devices are covered with sunset-orange tones and framed by vivid, cerulean-blue margins. The coin displays amazing eye appeal and near-perfect technical quality.

No doubt it would be a memorable discussion to decide which 1834 quarter is the finest for its date and variety, and quite possibly for honors as being among the very top example among all Bust quarters. We are certain, however, that the current example could not possibly be outclassed by another business strike in any of the key attributes of strike, surfaces, condition rarity, color, or eye appeal. Census: 2 in 67, 0 finer (3/14). NGC ID# 23RZ, PCGS# 5353

SEATED QUARTERS

1840-O Drapery Quarter, Large O, MS64 FS-501, 'Rarest Collectible Quarter Variety' Per Series Expert Larry Briggs

5579 1840-O Drapery MS64 PCGS. CAC. Briggs 1-A, FS-501. Large O, Doubled Denticles on reverse. Only 43,000 pieces were struck of the 1840-O Drapery quarters between the Large O and Small O variants combined — an amount far smaller than the 1840-O No Drapery, struck to the extent of 382,200 coins. The mintmark is considerably larger on the Large O — *Cherrypickers'* calls it "25% larger" — than on normal O-mint quarters of this period, but an easier way to distinguish the Large O versus Small O is the centering and shape. The Large O is neatly centered at the apex of the fletchings and olive stem tip and it is elongated, where the Small O (Briggs Reverse B) is shifted perceptibly to the left (facing the coin), and it is round.

Briggs notes of the curious reverse:

"[Two] sets of dentils were hand cut into the dies. The first set was 0.9mm high and faint. The second set was 0.7mm high, boldly cut, and centered over the gaps of the first set. This gives the appearance of diagonal spurs running off the corners of the second cut dentils. A die crack runs from the rim through the left upright of the 'N' in 'UNITED to the wing. A die bulge is at the juncture of right wing and shield. Also another at the lower right thigh - field area."

When writing his 1991 series reference, Briggs called the 1840-O Large O Drapery quarter R.6 in all grades, adding that it was "to date" the rarest collectible Seated Liberty quarter.

This near-Gem offers muted luster over silver-gray surfaces accented with pale blue and copper tones near the rims. This piece should create a considerable stir within the Liberty Seated collector base. NGC ID# 23SJ, PCGS# 5398

1880 Seated Quarter, MS68 Impeccable Preservation Sole Finest at PCGS

5580 1880 MS68 PCGS. This MS68 PCGS-certified 1880 Seated Liberty quarter is the sole finest graded of this issue at PCGS, a coin of unequalled quality and great aesthetic appeal. The business strike issues of many Seated Liberty silver coins were low throughout the 1880s, a complicated situation attributed to two factors: One was the incessant demand for Morgan dollars, as mandated by the Bland-Allison Act of 1878. The second was the resumption of specie payments in 1879 and monetary interexchangeability for the first time since the beginning of the Civil War. Much silver coinage that had been exported to Canada flowed back across the border to enter circulation, as the United States had successfully extinguished inflation. There was no longer a premium for silver coinage or gold coinage or for gold-backed paper currency.

Radiant cartwheel luster appears on silver-white surfaces that are untoned on the obverse and orange-gold-rimmed on the reverse, showing impeccable preservation and a strike every bit as nice. Die lapping has effaced part of Liberty's torso area — an effect we do not recall seeing previously — and a tiny planchet flaw appears, as made, on Liberty's cheek. Neither of these affect the grade nor the high aesthetic appeal. Population: 1 in 68, 0 finer (3/14). NGC ID# 23VC, PCGS# 5512

PROOF SEATED QUARTERS

1843 Quarter, PR64 Previously Unrecorded Specimen

5581 1843 PR64 PCGS. CAC. The number of proof quarters struck in 1843 is unknown, but undoubtedly very low. Proof production in this period was low for each denomination, and the coins were often struck on-demand. We have previously been able to only trace six proofs, one of which is permanently held in the Smithsonian Institution. This piece appears does not match any of the pedigree identifiers of the known coins, making it the seventh piece known. The fields on each side are deeply reflective. This would be expected of a proof from any era, but it is especially surprising on this piece because each side is covered with deep layers of rose-golden toning that turns blue around the margins. Our research has yielded the following roster:

1. PR66 NGC. The Kaufman specimen. 1946 ANA Sale (Numismatic Gallery, 8/1946), lot 442 (unplated); John Jay Pittman Collection (David Akers, 5/1998), lot 1309; ANA Signature (Heritage, 7/2008), lot 1808, where it realized \$74,750; Central States Signature (Heritage, 4/2013), lot 4218, where it brought \$64,625.

2. PR64 PCGS. Central States Signature (Heritage, 4/2014). **The present example.**

3. PR64 NGC. Thomas L. Smith Estate (Stack's, 6/1957), lot 529; FUN Signature (Heritage, 1/2009), lot 3763; ANA Signature (Heritage, 8/2009), lot 1085.

4. PR64 NGC. Dr. Christian A. Allenburger Collection (B. Max Mehl, 3/1948), lot 1015; Floyd T. Starr Collection (Stack's, 10/1992), lot 403; Bowers and Merena (8/1998), lot 155.

5. PR64 NGC. Judge Joseph F. Sawicki (5/1948); John Jay Pittman Collection (David Akers, 10/1997), lot 832 (part of an 1843 Proof Set); Heritage (8/2006), lot 5187; Central States Signature (Heritage, 4-5/2009), lot 2351.

6. Brilliant Proof. Will W. Neil Collection (B. Max Mehl MBS, 6/17/1947; Amon G. Carter, Jr. Family Collection (Stack's, 1/1984), lot 630 (part of an 1843 Proof Set).

7. Proof. Smithsonian Institution.

Additional Appearance:

A. Proof. Davis-Graves (Stack's, 4/1954), lot 354, impaired. NGC ID# 23W6, PCGS# 5537

1845 Seated Quarter, PR64 Rare Proof Date, 5 to 7 Pieces Known Ex: Earle/Ryder

5582 1845 PR64 PCGS. CAC. Briggs 5-E. The 1845 proof Seated Liberty quarter is a very rare issue, with no recorded mintage figures and an extremely small supply of surviving specimens. After a diligent search of auction records, we can account for only five examples that are certainly extant today. Walter Breen believed there were six coins still available in 1977, but the fourth and fifth coins on his list turned out to be the same specimen. Larry Briggs also estimated there were six survivors, so the two additional appearances documented in the roster below may actually represent different coins, rather than duplicate citations of the coins in the main roster. NGC records seven certification events, possibly including some duplicate submissions, while PCGS has graded a total of six specimens, and estimates there are actually only 4 to 6 pieces known (3/14).

The present coin is a delightful Choice example with razor-sharp definition on all design elements. The fields are brightly reflective under iridescent shades of antique-gold, lime-green, and blue-steel toning. The date shows the diagnostic doubling of the last three numerals, which were recut after being initially placed too far to the left. This lot combines absolute rarity, high technical quality, and intense historic interest. Population: 4 in 64, 0 finer (3/14).

Roster of 1845 Proof Seated Liberty Quarters:

- 1. PR66 NGC.** Menjou Collection (Numismatic Gallery, 6/1950), lot 715; John J. Pittman (David Akers, 5/1998), lot 1711, as part of a complete 1845 proof set; the Phil Kaufman Collection (Heritage FUN Sale, 1/2008), lot 3030; FUN Signature Auction (Heritage, 1/2009), lot 3765; Chicago Signature (Heritage, 8/2013), lot 5589, where it brought \$129,250.
- 2. PR65 NGC.** William Dickinson Collection (Chapman Brothers, 3/1894) lot 387; J. M. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Merena, April 1997), lot 1437; Phil Kaufman; Rarities Sale (Bowers and Merena, 1/1999), lot 1112.
- 3. PR64 PCGS.** George Earle Collection (Henry Chapman, 6/1912), lot 3088; Ryder Collection; Wayte Raymond; 49th Sale (New Netherlands, 6/1957), lot 1152; Long Beach Signature (Heritage, 2/2012), lot 3489, where it brought \$48,875.
- 4. PR64 PCGS.** Eric P. Newman / Central States Signature (Heritage, 4/2013), lot 3904, where it realized \$30,550.
- 5. Proof.** Smithsonian Institution.

Additional Appearances:

- A. PR64.** Harmer Rooke (11/1989).
- B. Brilliant Proof.** Howard R. Newcomb Collection (Morgenthau, 2/1945), lot 614 NGC ID# 23W8, PCGS# 5539

1859 Seated Liberty Quarter, PR67 Cameo Tied for Finest Certified

5583 1859 PR67 Cameo NGC. Two proof die pairs are recorded in Larry Briggs' Seated quarter reference for the mintage of 800 coins. This second die pair has three prominent die lines extending up from the left base of the rock, nearly reaching the border below star 1. The reverse has QUAR. DOL. recut. This incredible Superb Gem Cameo proof exhibits full silver brilliance with no evidence of toning on either side. The devices are frosty and lustrous within a deeply mirrored frame. All design elements are bold and completely defined. NGC and PCGS have each certified one example as PR67 Cameo with none finer. A remarkable example for the connoisseur. Census: 1 in 67 Cameo, 0 finer (3/14). PCGS# 85555

1874 Arrows Quarter, PR67 Lovely, Conditionally Rare Specimen

5584 1874 Arrows PR67 PCGS Secure. CAC. The Arrows quarters were only produced for two years: 1873 and 1874, making this a brief-design variant that is crucial for type collectors. Proofs were struck in limited quantities: 540 pieces in 1873 and 700 specimens in 1874. Superb Gem type specialists must be diligent in order to locate an example of either date, as the number of coins graded at or above PR67 is very limited at both of the major services.

Toned in marvelous hues of pastel-blue, aquamarine, and caramel-gold on the obverse, and in equally compelling shades of electric-blue and purple-rose over the reverse, this Superb Gem is expertly preserved and fully struck. Population: 5 in 67, 0 finer (3/14). NGC ID# 23XS, PCGS# 5575

PROOF BARBER QUARTERS

1896 Barber Quarter, PR68 ★ Ultra Cameo Spectacular Multicolor Toning

5585 1896 PR68 ★ Ultra Cameo NGC. Only 762 proof Barber quarters were struck in 1896 but the issue seems to have been especially well-produced and contemporary collectors saved some examples of remarkably high quality. This coin is a magnificent PR68 specimen with pinpoint definition on all design elements. The richly frosted devices seem to float on the liquid mirrored fields, creating profound cameo contrast. Vivid shades of cobalt-blue and olive-gold toning highlight the well-preserved surfaces that show no mentionable flaws. The Star designation attests to the outstanding eye appeal. Census: 11 in 68 Ultra Cameo (1 in 68 ★ Ultra Cameo), 3 finer (3/14). PCGS# 95682

1896 Barber Quarter, PR68 Deep Cameo Majestic, Near-Perfect Specimen One of the Finest-Known From This Issue

5586 1896 PR68 Deep Cameo PCGS. CAC. The attention to detail and overall production quality at the Philadelphia Mint must have been higher in 1896 than in some previous years, at least as far as proof coinage was concerned. The combined populations at NGC and PCGS reveal that 16 pieces are graded at PR68 Deep Cameo (or Ultra Cameo), and three coins are rated even finer at PR69 Ultra Cameo at NGC.

This stunning example displays the desirable white-on-black appearance to maximum effect. Struck with pinpoint precision, the snow-white motifs float above jet-black fields that exhibit unfathomable depths of watery reflectivity. The delicate proof surfaces are exquisitely preserved and virtually pristine on both sides of this majestic Superb Gem specimen. Population: 5 in 68 Deep Cameo, 0 finer (3/14). PCGS# 95682

STANDING LIBERTY QUARTERS

1916 Standing Liberty Quarter, MS61 First-Year Issue

5587 1916 MS61 NGC. From the lowest mintage of the Standing Liberty series (only 52,000 coins), this first-year quarter provides a pleasing example of the most sought-after date in the series. Satiny luster complements an above-average strike for the issue with pleasing definition in the shield, gown lines, and eagle's feathers. The obverse displays a blush of golden toning with subtle tints of lavender at the periphery, while the reverse exhibits pale pastel fields with tinges of olive at the border. Close examination reveals no detracting abrasions. An exceptional coin for the grade level, and a fine addition to a quality Standing Liberty quarter collection. NGC ID# 242Y, PCGS# 5704

1916 Standing Liberty Quarter MS63 Full Head Lovely, Outstanding Key-Date Specimen

5588 1916 MS63 Full Head PCGS. Politics and practicality both played a role in the somewhat neglected status of the first-year Standing Liberty quarter issue, which ended up being produced only to the extent of 52,000 coins; and only at the Philadelphia Mint. Greater attention was given to the Mercury dime and Walking Liberty half dollar, both of which were likewise first-year types, and Hermon MacNeil's new quarter design had to wait until 1917 to see normal mintage figures.

This is a fully-struck coin with lovely antique-silver toning and light champagne accents. The satiny surfaces are well-preserved and show an unusually small number of trivial marks for the grade. The savvy collector should closely examine the merits of this key date specimen, residing in a green label PCGS holder. NGC ID# 242Y, PCGS# 5705

1916 Standing Liberty Quarter, MS64+ Super-Smooth and Bold

5589 1916 MS64+ Full Head PCGS. The inaugural 1916 Standing Liberty quarter is usually found weakly struck in both the head and shield areas, while the small mintage of just 52,000 pieces makes finding sharp examples challenging and highly competitive. Those needing a Gem 1916 example should consider this lustrous, MS64+ candidate. A borderline Gem, it has the luster and eye appeal suggestive of a higher grade. The strike, although not full, is above average for the issue with strong details on both the figure of Liberty and the shield. Slight rounding on the eagle's breast retains some breast feather definition. The surfaces of this super-smooth quarter are sparkling and attractive, with no significant marks or distractions and a touch of golden luminescence at the rims. NGC ID# 242Y, PCGS# 5705

1918/7-S Standing Liberty Quarter, MS63 Key Issue in Impressively High Grade

5590 1918/7-S MS63 PCGS. FS-101. A remarkably high-grade example of this key-issue overdate variety, caused when different-dated hubs were used to create a single working die. A die chip located just to the left of the lowest right-side obverse star helps to authenticate this sometimes counterfeited issue. Mint State specimens such as this are rare partly because this variety was not discovered until 1937, when most of the existing pieces had already been circulated. The present piece is lustrous and nicely preserved, with golden-brown and reddish-brown patina that partially adorns each side, leaving the centers largely untuned and brilliant. Population: 22 in 63, 26 finer (3/14). NGC ID# 243A, PCGS# 5726

STANDING LIBERTY QUARTERS

1919-S Standing Liberty Quarter, MS67 Full Head Sought-After Series Key Tied for Finest Certified

5591 1919-S MS67 Full Head PCGS. CAC. The 1919-S Standing Liberty quarter claims a low-mintage of 1,836,000 pieces, and few examples were saved by contemporary collectors. Collecting the series became popular in the 1930s, during the boom in the coin market occasioned by the advent of cardboard folders and price guides like Wayte Raymond's *Standard Catalogue of United States Coins & Currency*. The 1919-S Standing Liberty quarter was listed at \$1.00 in Uncirculated condition in the 1936 edition of the *Standard Catalogue*, but high-grade examples were hard to find because the coins had been circulating heavily for more than 15 years by that time. The elusive nature of the 1919-S was apparent by the 1940s, and the coins began appearing in auction catalogs and realizing significant prices. One early auction appearance was in lot 1119 of the Will W. Neil Collection (B. Max Mehl, 6/1947), under the heading of **Liberty Standing Quarter-Dollars of the San Francisco Mint**:

"1919 Uncirculated with mint luster. Just the very barest touch of cabinet friction. Hardly noticeable and just about as perfect as is obtainable. Very rare. Catalogs \$60.00. Seldom offered."

The lot realized \$57.50, close to the retail value and a good price at the time. The record price realized for the 1919-S Standing Liberty quarter is \$184,000, brought by the MS67 Full Head PCGS example in the Baltimore Rarities Night Auction (Stack's Bowers, 11/2012), lot 3118.

Noted Standing Liberty quarter specialist J.H. Cline discussed the 1919-S in his series reference *Standing Liberty Quarters*, fourth edition:

"1919-S This is one of the key dates. The top three grades have a very low population and even this low number may be inflated by as much as 20 percent from pieces that were broken out and resubmitted for one reason or another. Quite a few collectors are working on "Registry Sets," and it seems to me that any 1919-S would be a very worthwhile purchase."

Cline goes on to say:

"The 1919-S has long been considered one of the key coins of the series among most collectors and dealers. The 1919-D and 1919-S are usually paralleled in price and rarity. Full Heads of this date are very rare and would be closely paralleled with the value of the 1916, and very difficult to locate."

The coin offered here is a magnificent Superb Gem, with sharply detailed design elements that show just a touch of softness on a few shield rivets. A distinct line of separation is evident between the hair and temple area. The ear shows as an indentation in the hair, and the three olive leaves are visible in Liberty's hairline, establishing Full Head definition. The well-preserved surfaces exhibit vibrant mint luster, under pleasing shades of golden-brown and silver-gray patina. Eye appeal is extraordinary.

A diligent search of auction records reveals Heritage Auctions has never offered a 1919-S Standing Liberty quarter in MS67 Full Head before. The last time we offered an example in MS66 Full Head was in the June 2005 Long Beach Signature, almost nine years ago. The present coin is tied with one other specimen at PCGS for finest-certified honors, and NGC has also graded two examples in MS67 Full Head, with none finer (3/14). The advanced collector or Registry Set enthusiast should bid accordingly. NGC ID# 243D, PCGS# 5733

1926-D Quarter Dollar, MS67 The Single Finest Certified Full Head

5592 1926-D MS67 Full Head PCGS. As Standing Liberty quarter specialist, J.H. Cline puts it: "The 1926-D is the classic in two categories: most available and most flat heads." The generally accepted reasoning for this issue's availability in lower Mint State grades is that many more bank-wrapped rolls of this date were saved than of any other. However, with Full Head examples, no amount of hoarding could preserve what hardly existed in the first place. Cline writes in the September 11th, 1998 edition of *The Coin Dealer Newsletter*:

"... the 1926-D is a very common coin in MS62 through MS65, having an original mintage of 1,716,000. However, when struck with a Full Head and with that notation on the holder it becomes one of the rarest pieces in the series - more so than the 1916!"

Due to the rarity of high-grade survivors, Full Head 1926-D quarters make rather large jumps in value between Mint State grade levels, resulting in numerous resubmissions, which undoubtedly inflate the population data. In his book, *Standing Liberty Quarters*, fourth edition, Cline cites an occurrence when a friend of his resubmitted a single 1926-D at least seven times, hoping for an upgrade. He then estimates that as much as half of the population totals are the result of break-outs, which, if accurate, would mean that only about 62 Full Head 1926-D quarters are extant in all grades.

This exceptional Superb Gem is in a class by itself as the finest certified Full Head 1926-D quarter. Exceptionally sharp definition on Liberty's head, chain mail, shield rivets, and the leading edge of the eagle's right wing leaves no doubt as to the designation. Rich teal, violet, and golden accents grace portions of the peripheries, while frosty, brilliant luster blankets the remainder of the surfaces. A couple tiny, faint ticks are noted on Liberty's forward leg, but in no way disrupt the visual appeal of this piece. A truly remarkable example of this notoriously poor-quality issue. NGC ID# 243S, PCGS# 5757

1927-S Quarter Dollar, MS64 Full Head A Premier Series Rarity

5593 1927-S MS64 Full Head NGC. The 1927-S is one of the great rarities of the Standing Liberty quarter series with Full Head definition; it is many times rarer than the 1916 and equally as rare as the sought-after 1918/7-S overdate. Struck during an era when the San Francisco Mint was having difficulty producing sharp strikes, the characteristic weakness of this issue also owes its predominance to the design alterations of 1917, as Standing Liberty quarter expert J.H. Cline writes in his April 4th, 1991 *Coin World* article:

"When the design was modified to cover Miss Liberty's upper torso, the changes affected the way the die struck the planchet . . . As the dies of the modified design became clogged with use, detail in Miss Liberty's head, shield, toes and elsewhere began to diminish. This resulted in fewer fully struck pieces - hence the scarcity of full head pieces.

"The San Francisco Mint facilities had more problems with the minting of the Standing Liberty, Mailed Breast quarter dollars than the Philadelphia or Denver Mints. The 1918-S, 1924-S, 1926-S and 1927-S quarter dollars are well-known examples of San Francisco pieces frequently lacking head, shield and toe detail."

The second-lowest production figure of the series (396,000 pieces) did not help the survival rate of Full Head 1927-S quarters. Cline, writing in *Standing Liberty Quarters*, fourth edition, estimates no more than 10 Full Head specimens survive at the Gem grade level, and PCGS and NGC's combined population shows only 45 Full Head pieces in all grades (3/14), a number which is certainly inflated by resubmissions.

This near-Gem Full Head representative exhibits uncharacteristically strong definition on Liberty's head, chain mail, toes, and stars, as well as the reed and bead around the border. Minor softness is seen on the shield lines and rivets, the eagle's breast, and the leading edge of the right wing, though the overall strike is still exceptional. Close examination reveals fine die striations in the fields around the devices, likely from an attempt to remove clash marks, the remnants of which are still visible on the reverse. Frosty, virtually untuned luster blankets both sides, with a few faint golden accents seen periodically across the surfaces. An exceptional example of this poorly struck, key-date San Francisco issue. NGC ID# 243W, PCGS# 5765

1927-S Quarter, Elusive MS65 Full Head Key Issue and a Notable Strike Rarity

5594 1927-S MS65 Full Head NGC. Save for the first-year 1916, the 1927-S Standing Liberty quarter wins the low-mintage sweepstakes for the series, struck to the extent of only 396,000 circulation strikes, and an issue that is in demand from series collectors in any grade.

The 1927-D and 1927-S quarters are (aside from the unknown-mintage 1918/7-S overdate) the only two mintmarked issues in the series with respective mintages below 1 million coins each — 976,000 pieces in the case of the 1927-D. The collectibility of the 1927-D and 1927-S is such that they command a considerable premium even in the lowest circulated grades.

At the other end of the grading spectrum, the 1927-S in Mint State grades with Full Head is one of the most eagerly pursued series issues in such grade, and the population data are undoubtedly swelled by duplications seeking upgrade and /or Full Head status. Series pundit Jay Cline has written, “Enough cannot be said about the 1927-S in Full Head. It is as scarce as the overdate with Full Head.”

This Gem NGC Full Head 1927-S is one of five such in this grade, and that service shows only a single MS66 Full Head finer (3/14). Three olive sprigs are visible on the head, and the hairline is nearly full, although the ear area is weak; Cline says, “The weakness in the ear area is an accepted factor on the 1927-S.” The satiny surfaces on this piece beam with luster, silvery in the centers and blending into beautiful russet-copper and medium-blue tinges near the rims on each side. Only a couple of tiny contact marks are well within the Gem grade. This marvelous piece should make even the most jaded series specialists sit up and take notice. NGC ID# 243W, PCGS# 5765

BUST HALF DOLLARS

1809 O-109a Capped Bust Half, MS66+ Full Strike, Impeccable Surfaces Finest Known for the Variety

5595 1809 III Edge MS66+ NGC. O-109a, R.2. The Mint experimented with edge devices in 1809, creating the III edge and the XXX edge. The III feature appears as numerous vertical edge marks that resemble edge reeds, except they are unevenly spaced. The O-109 variety is generally found with the III edge, and other varieties with that edge are O-107, 108, and 111.

This splendid Bust half is the O-109a variety, a later die state of the O-109. It is easily identified by a heavy die crack through AMERICA, with clashed dentils behind those letters and down to the arrowheads, with parts of other letters clashed and appearing between MERI.

Awarded the Plus designation by NGC, this Premium Gem is the finest known for the die state, the variety, and the edge type. The satiny silver luster and bold design motifs shine through lovely blue-green and magenta toning that is nicely balanced on both sides. The surfaces are impeccable and smooth, with only one or two microscopic marks to be seen anywhere on the coin. This wonderful half dollar traces back to the 2006 George "Buddy" Byers Sale, a distinguished provenance to add the long list of positive attributes displayed by this eye-appealing example. NGC ID# 24ES, PCGS# 6094

1815/2 Bust Half, Sharp MS63 O-101, Lustrous and Attractive

5596 1815/2 MS63 PCGS. O-101, R.2. The low mintage of 47,150 pieces and the allure of the overdate make the 1815/2 Bust half one of the key issues in the series. Although technically the rarity rating is just R.2 for the date, collector demand exceeds the number of available pieces. In Select Uncirculated condition, perceived rarity becomes real. Just eight examples are graded MS63 by both services combined, and 15 pieces are certified numerically finer (3/14). This eye-catching example is both delightfully toned and sharply struck. Mint luster beams through azure-blue, magenta, and peach-gold obverse toning. The well-struck reverse displays golden tones around a purple-gray center. This date always attracts many bidders when in lustrous, attractive Select Mint State. NGC ID# 24F5, PCGS# 6108

1826 O-105 Bust Half, MS66
Possible Finest-Known for the Variety

5597 1826 MS66 NGC. O-105, R.3. According to auction records and Steve Herrman's valuable roster, it appears this example may be the finest 1826 O-105 half dollar extant. Identifiable by a small and well-concealed spot over the bottom of the L in LIBERTY, the coin is lightly toned in pearl-white shades with a hint of champagne-gold luminescence. The reverse impression is expertly centered, where it brings up bold detail over all the features. The obverse is also well produced, although the denticles are a bit broader at the upper border than they are at the lower. We are unable to locate a single distracting or mentionable abrasion. A diagnostic, obverse die crack (as struck) connects stars 1-7 to the rim before the end of Liberty's bust. The profile is lightly strike-doubled. This appealing, Premium Gem example is destined for inclusion within an advanced collection of Capped Bust halves.

Ex: Long Beach Signature (Heritage, 9/2009), lot 753. NGC ID# 24FM, PCGS# 6143

PROOF REEDED EDGE HALF DOLLAR

1838 Reeded Edge Half Dollar, PR64
Only Four Proofs Known
Recently Discovered Example

5598 1838 PR64 PCGS. GR-14. This is only the second distinct example of the proof 1838 half dollar we have ever offered, and it is from a different die pair than the other example, formerly in the Pittman Collection, which is attributed as GR-1. Attributions are from *A Registry of Die Varieties of Reeded Edge Half Dollars 1836-1839*, published by Dick Graham in July 2012. Only three or four proofs are known, and we believe this example is the second finest of those pieces. One of the four proofs in our roster has not been seen since 1962 and may or may not be a true proof, if it can even be found today. The reverse of this near-Gem proof has a heavy die crack through HAL, the olive leaves and wing tip, continuing through the base of many letters in the legend. For comparison, the Pittman specimen has a perfect reverse and the Reed Hawn specimen is cracked like this piece.

Roster of 1838 Proof Reeded Edge Half Dollars

- 1. GR-1 PR66 PCGS.** Howard Newcomb (J.C. Morgenthau, 5/1945), lot 850; Wayte Raymond (5/1946); John Jay Pittman (David Akers, 5/1998), lot 1513; Bowers and Merena (8/2000), lot 4114; Bowers and Merena (7/2002), lot 301.
- 2. GR-14 PR64 PCGS.** Obtained by a European noble while visiting this country in the middle 19th century and retained by the same family until the present time. **The present specimen.**
- 3. GR-14 PR64 NGC.** Apparently later recertified as PR64 PCGS. Reed Hawn (Stack's, 8/1973), lot 120; Long Beach Connoisseur (Bowers and Merena, 8/1999), lot 199.
- 4. GR-13 Proof.** Virgil Brand; Kreisberg-Schulman (2/1961); R.E. Cox, Jr. (Stack's, 4/1962), lot 1871. The current location of the Brand-Cox specimen is unknown. It is possible that this is also GR-14, although attribution is uncertain without actual inspection.

This impressive piece has full brilliance with satin luster on the silver-white devices and deeply mirrored fields on both sides. Only a hint of delicate champagne toning graces the surfaces. Here is a remarkable and rare proof Reeded Edge Capped Bust half dollar for the advanced collector. Population: 2 in 64, 1 finer (3/14). PCGS# 6225

SEATED HALF DOLLARS

1840 (O) Half Dollar, Reverse of 1838, MS65 O-Mint Issue Without Mintmark Ex: Col. Green, Eric Newman

5599 1840-(O) Reverse of 1838, Medium Letters MS65 PCGS. CAC. WB-101, Die Pair WB-4. Ex: Col. Green/Newman. No Mintmark, Large Eagle Bust Style Reverse. This issue was long thought to be a product of the Philadelphia Mint, but it is one of the few Branch Mint issues lacking a mintmark. This variety was actually minted at the New Orleans Branch Mint using a carried-over Bust reverse die from 1839, where the mintmark was on the obverse of the coin. (Bill Bugert and Randy Wiley documented this discovery in a Gobrecht Journal Issue #38 article in March 1987).

This distinguished variety holds an unusual place in American numismatic history, as a mule of dies from two different coinage designs. Among the differences on this reverse, the legend and denomination are larger (termed Medium Letters), the eagle and reverse shield are larger, the eagle's claws are open, and the olive leaves and arrowheads are more widely spread than on the usual Seated Liberty style. This reverse was paired with two different obverse dies, and this coin was struck from the first of the two with the date centered and the 8 showing minor repunching to the northeast. The reverse die shows the extensive and characteristic radial die cracks.

The surfaces display outstanding blue and gold peripheral toning with lustrous, problem-free fields. Both sides exhibit bold design definition aside from slight weakness among the stars. This variety is scarce in all grades, rare in Mint State, and extremely rare in MS65, the finest certified grade. PCGS has certified 74 examples with an average grade of XF40 and a top grade of MS65. They have only certified nine examples in all Mint State grades. The Eric P. Newman Gem is the single-finest example PCGS has certified (3/14). Over the last 20 years of our auctions, this is the only MS65 example of this rarity we have sold (this is the second time we have offered this coin). This variety is extremely popular with collectors and will see intense bidding when offered at auction.

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$35.00; Eric P. Newman Numismatic Education Society; Eric P. Newman Collection, Part II (Heritage, 11/2013), lot 33467. NGC ID# 24GP, PCGS# 6233

1842 Liberty Seated Half, MS65 WB-101, Small Date, Large Letters Condition Rarity

5600 1842 Small Date, Large Letters MS65 NGC. WB-101. Reverse of 1842. Extremely rare in Gem condition, this is the first MS65 example we have ever offered in one of our auctions. Not that we're alone — just two uncertified MS65 coins have been seen in any auction, according to our records, since 1973. Whether those coins were truly MS65 is a matter of conjecture. The grading services have tallied just five examples in MS65 and one piece numerically finer (3/14). Some of these may be duplicate submissions or crossovers.

The current example is a lovely, multicolored Gem with a bold strike and mark-free surfaces. Soft luster resides beneath the variegated toning. The rarity of this issue is underrated and underappreciated, perhaps overshadowed by the super-rare 1842 Small Date, Small Letters (Reverse of 1839) with just four pieces known in all grades. Census: 4 in 65, 1 finer (3/14). PCGS# 6240

1854-O Arrows Half Dollar, MS66 Beautifully Toned Type Coin One Numerically Finer at PCGS

5601 1854-O Arrows MS66 PCGS. The New Orleans Mint struck more than 5.2 million Arrows Seated halves in 1854 — the second year of the Arrows subtype — and it was saved in goodly numbers due to the reduced silver content which it signified, ensuring that the issue would not be melted as overweight. The 1854-O Arrows half is widely available in circulated and the lower Mint State grades, but examples such as the present Premium Gem are seldom seen. Light-to medium-intensity aqua-blue and lavender patination decorates the obverse fields on this lovely coin, highlighting the lighter champagne-tan Liberty motif. Light golden-gray dominates the reverse, becoming slightly deeper at the margins. A well directed strike leaves uniformly strong definition on the design elements. A few unobtrusive, grade-consistent handling marks are undisturbing on this piece, housed in a green-label holder. Population: 13 in 66 (1 in 66+), 1 finer (3/14).

Ex: *FUN Signature* (Heritage, 1/2009), which brought \$17,250. NGC ID# 24JM, PCGS# 6280

1855/54 Arrows Seated Liberty Half WB-102, Gem Example of the Overdate

5602 1855/54 Arrows MS65 NGC. WB-102, FS-301. The WB-102 variety is an 1855/854 overdate in earlier die states, but in later states the recutting is not as plain due to die wear and die lapping. This example falls somewhere in the middle, with the underdigit 8 weak, but the with the recutting clearly visible on the upright and flag of the first 5, and the crossmember of a 4 visible within the loop of the second 5.

This original half is rare with or without the overdate. Lustrous silver surfaces are thickly patinated with powder-gray toning on both sides of the coin. The strike is strong on Liberty's head and facial features, but a touch weak on some of the star centrils. Evidence of die clashing exists within the partial drapery beneath Liberty's elbow. Some softness of strike is seen on the eagle's talons and arrow fletchings. This overdate has an R.2 rarity rating in lower grades but is listed as R.7 in Mint State. Census: 3 in 65, 0 finer (3/14). NGC ID# 24JN, PCGS# 6282

1878-S Seated Liberty Half, VF30 Key Issue for Date/Mint Sets Original and Pleasing

5603 1878-S VF30 PCGS. WB-101, Die Pair WB-1. An historic rarity of the Seated Liberty half dollar series, the sparse mintage of 12,000 pieces was heavily circulated in Western commerce along with other small change of the day. No one paid attention to the mintmark — even well-heeled collectors preferred only a single example for the date, often in proof format, with no regard for the issuing Mint. Today, survivorship of the issue is low, with an estimated 60 examples remaining in all grades.

It wasn't until the early 1900s that any awareness of the 1878-S half dollar really hit home with collectors. Augustus Heaton's *Mintmarks* book (published in 1893) identified the 1878-S as the "great rarity of the San Francisco Half Dollar coinage," but collectors didn't really take note until after the turn of the century.

Bill Bugert's 2009 detailed *Register of Liberty Seated Half Dollar Varieties, Volume 1, San Francisco Branch Mint* contains a roster of the top 10 Uncirculated examples of the issue, as well as a thorough discussion of the die characteristics. Obverse identification keys include the date positioned slightly to the right, a "Hairy Eye" on Liberty (a small spike from the eyeball), a wavy line on Liberty's breast, and some arching lines through the shield and Liberty's lower gown. The reverse is confirmed by a very small S mintmark tilted to the left, a series of three die lumps in the shield (including one in the area commonly referred to as the Diagnostic Die Chip), and a subtle die crack above the NIT of UNITED.

All of these diagnostics remain visible on this excellent VF30 example. Pleasing, silver-gray toning covers minimally abraded surfaces, with no heavy marks anywhere on the coin. Sharp detail remains for the grade, with LIBERTY complete on the shield and only minor weakness at the E. Reverse detail approaches XF quality. This attractive example is the epitome of a mid-grade 1878-S half, with the Bugert reference estimating perhaps 25 coins in finer condition (including Uncirculated examples), and a similar number of coins in lesser condition. PCGS population: 2 in 30, 16 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24KR, PCGS# 6360

PROOF SEATED HALF DOLLAR

1855 Seated Liberty Half Dollar, PR65 Rare Normal Date Arrows Proof Tied for Second-Finest Known

5604 1855 PR65 NGC. Arrows, WB-101. This 1855 proof Seated Liberty half dollar is a well-detailed Gem from the final year of the Arrows design. The deeply mirrored fields are blanketed in vivid shades of smoky gray and cerulean-blue toning, with hints of pale gold and silver. The well-preserved surfaces show no mentionable distractions, and eye appeal is outstanding.

The present coin traces its pedigree back to the legendary "Colonel" E.H.R. Green Estate, and then to the renowned Eric P. Newman Collection. It displays a normal date, identifying the WB-101 variety. Randy Wiley and Bill Bugert estimate 20 examples of normal date proofs survive today in all grades. We feel that this figure may be too high, as NGC and PCGS have combined to certify 12 coins in all grades and designations, with an unknown number of resubmissions and crossovers (3/14). Analyzing recent auction records, we have identified five separate examples of this issue, and some other appearances that may or may not represent the same coins. A few more examples that have not appeared at auction in recent years may survive in older collections and institutions. The grades of the coins are consistent with their last auction appearance and population data suggests some specimens may have been recently crossed over or classified as Cameos.

Roster of 1855 Normal Date, Arrows Seated Liberty Half Dollars

- 1. PR66 NGC.** Baltimore '93 Auction (Superior, 7/1993), lot 427; Phil Kaufman; Central States Signature (Heritage, 4/2008), lot 2397, FUN Signature (Heritage, 1/2013), lot 5670.
- 2. PR65 NGC.** "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$50.00; Eric P. Newman Collection Part II Signature (Heritage, 11/2013), lot 33486 @ \$38,187.50, **the present coin.**
- 3. PR65 NGC.** John Jay Pittman (David Akers, 5/1998), lot 1549; Richmond Sale III (David Lawrence Rare Coins, 3/2005), lot 1798; Pre-Long Beach Sale (Ira and Larry Goldberg, 2/2006), lot 1474.

PROOF BARBER HALF DOLLARS

1897 Barber Half, Lightly Toned PR68 Tied for Finest at PCGS

5605 1897 PR68 PCGS. CAC. Thoroughgoing field reflectivity appears throughout each side of this Superb Gem proof 1897 half dollar, a coin with thickly frosted devices that might well rate a Cameo designation if the patina were slightly more translucent in selected areas. Some silver-white, mirrored areas remain, but the surfaces blend into pinkish, pale smoke-gray, and orange on this piece. Impeccable preservation and a full proof strike (save for that pesky right shield corner) separate this piece from the large majority of its fellows. For those collectors working on an 1897 proof set or Barber half set for Registry purposes, this top-notch half dollar is a *sine qua non*. Population: 4 in 68, 0 finer (3/14). NGC ID# 24NZ, PCGS# 6544

1909 Barber Half Dollar, PR68 Only 650 Pieces Struck

5606 1909 PR68 NGC. CAC. Only 650 proof Barber half dollars were struck in 1909, making the issue quite elusive in today's market. This magnificent PR68 specimen possesses extraordinary eye appeal to complement its high technical grade. The reverse displays pink-champagne and ice-blue patina which deepens dramatically on the obverse to cobalt-blue and russet, with some silvery areas remaining. This piece is fully struck (unusual for the large-format Barber half), fully reflective despite the deep partial toning, and reveals no mentionable contact. Among the finest graded at either service. Census: 7 in 68 (1 in 68 ★), 0 finer (3/14). NGC ID# 24PD, PCGS# 6556

WALKING LIBERTY HALF DOLLARS

1916-S Walking Liberty Half, MS66 Only One Finer at NGC

5607 1916-S MS66 NGC. Small, scattered splashes of toning appear primarily at portions of the outer edges on both sides of this appealing Premium Gem specimen. Among the colors present are red, orange, teal, and bright yellow-gold. Rich matte luster adds to the strong eye appeal this coin possesses. Only 508,000 examples were struck in San Francisco during the introductory year of the series and few examples are found in the upper Mint State grade ranges, with NGC and PCGS each only having assigned a grade above the MS66 level to a single example. Census: 12 in 66, 1 finer (2/14). NGC ID# 24PN, PCGS# 6568

1917-S Obverse Half Dollar, MS65 Impressive High-Grade Example

5608 1917-S Obverse MS65 NGC. The 1917-S Obverse issue of the Walking Liberty half dollar saw a mintage of 952,000 examples. Its counterpart, the 1917-S Reverse variety (referring to the location of the mintmark), had a significantly higher production of 5.5 million coins. Not surprisingly, the 1917-S Obverse halves are scarcer and more valuable, even if not quite to the extent that their more than five times lower mintage might suggest.

This beautiful Gem example is well-struck, even on Liberty's branch hand, and the satiny surfaces are smooth and unmarked. Slightly varied shades of silvery-gray toning are attractive and obviously original. Census: 29 in 65 (1 in 65+), 2 finer (3/14). NGC ID# 24PT, PCGS# 6572

1919-D Half Dollar, MS63 Denver Mint Condition Rarity

5609 1919-D MS64 PCGS. Elusive in higher grades, the 1919-D Walking Liberty half dollar is in high demand from series specialists when found in Select Uncirculated condition or finer. Gem examples are among the rarest in the series and are seldom seen, fetching up to six figures when they appear.

The present silver-white example shows scattered purple-gray toning accents primarily on the obverse, with a lesser hint of reddish-gold tone on the reverse. Noticeable softness of strike exists through the central high points on both sides of the coin as is typical for the issue, although Liberty's head is reasonably struck for the grade. A few tiny abrasions appear on Liberty's cheek, though the coin is remarkably free from any other marks. Generous luster swirls throughout both sides of this original-looking Walker, with surfaces that are untouched and quite appealing. Population: 76 in 64 (3 in 64+), 12 finer (3/14). NGC ID# 24PZ, PCGS# 6578

1919-D Half Dollar, MS64+ Conditionally Rare Walking Liberty Issue

5610 1919-D MS64+ PCGS. CAC. The 1919-D Walking Liberty half dollar, like its sibling coins the 1919-P and 1919-S, is a notable condition rarity within the series. Without knowing it, Jeff Ambio admirably summed up the appeal of a high-end 1919-D such as the present coin graded MS64+ and with the CAC approval when he wrote, for his 2008 series reference:

"When you consider that there is a nearly four-fold price increase for the 1919-D between the MS-64 and MS-65 grade levels, a premium-quality MS-64 is a sensible buy. In order to guarantee that the coin you are purchasing really is premium quality for both the issue and the grade, insist on an above-average strike that includes emerging definition to the central highpoints."

This piece displays generous satiny luster on each side amid silver-gold surfaces with scattered tinges of pinkish and iridescent color. The strike is quite sharp around the peripheral elements, notably the mintmark, the date and peripheral lettering on each side, and the lower elements of Liberty's skirt and sandal. The strike overall is quite bold on the feathers of the eagle's neck and wings alike. And the detail on Liberty's often-problematic branch hand is far more than "emerging," showing some evidence of a split thumb. There is, nonetheless, some weakness visible on Liberty's head and torso on the obverse, and on the eagle's trailing leg on the reverse. PCGS has seen only an even dozen submissions numerically finer than the present piece (3/14). NGC ID# 24PZ, PCGS# 6578

1921 Key-Date Half Dollar, MS65 Stunning, Well-Struck Example

5611 1921 MS65+ PCGS. CAC. The 1921 Liberty Walking trio of Philadelphia, Denver, and San Francisco coins are all eminently collectible due to their uniformly low mintages, and each occupies a specific niche within this great key series subset. The 1921-P is the second-lowest-mintage in the series, the 1921-D is the lowest-mintage, and the 1921-S is the rarest in Mint State. Among early-date issues in the series, it is not as rare as a handful of well-known mintmarked pieces, but it is certainly the rarest P-mint by a country mile (with the 1919-P a distant second). The 1921-P Walking Liberty is also a well-produced issue, as this admirable, high-grade MS65+ example demonstrates. Liberty's thumb and hand shows full split, much detail appears in her face, the bodice and upper drapery are well-detailed — only the lower skirt lines are somewhat flat in the upper thigh area. The eagle's trailing leg also shows far more detail than usually seen. Deep cartwheel luster appears on each side of this great-looking coin, silver-gold in the centers and melding into iridescent jade, gold, and emerald. A stunning example of this key date. Population: 59 in 65 (2 in 65+), 4 finer (3/14). NGC ID# 24R6, PCGS# 6583

1923-S Half Dollar, MS66+ A Conditionally Elusive Issue

5612 1923-S MS66+ PCGS. CAC. Following the low-mintage issues of 1921, the Walking Liberty half dollar coinage was suspended until the San Francisco Mint coined additional pieces in 1923, and further pieces were coined intermittently through 1933. Finally, in 1934, all three Mints began a relatively steady production through the end of the design in 1947, omitting only three issues.

The 1923-S is easy enough to obtain in circulated and lower Mint State grades, but it is rare in MS65 or finer grades. PCGS and NGC, combined, have certified just 12 submissions as MS66 and only two as MS67. This Premium Gem features a bold strike with satin silver luster that displays lovely gold and iridescent toning on both sides. Population: 8 in 66 (2 in 66+), 1 finer (3/14). NGC ID# 24R9, PCGS# 6586

FRANKLIN HALF DOLLAR

1953-S Franklin Half, MS65 Full Bell Lines Conditionally Scarce Key Issue

5613 1953-S MS65 Full Bell Lines PCGS. Any serious Registry Set collector of business strike Franklin half dollars should be mindful of this coin's inclusion in our upcoming Central States Auction. The 1953-S is one of the key issues in the series, especially when examples with Full Bell Lines are discussed. Only 23 Gems with this important caveat have been designated as such by PCGS, and the company has graded just one finer piece as MS66 Full Bell Lines (3/14).

This lustrous, untoned Gem, with shimmering surfaces that exhibit outstanding preservation, is one of the most attractive examples of this San Francisco date that we have examined in recent years. Minimal marks exist on each side, and are fully in-line with the MS65 assessment by PCGS. NGC ID# 24T8, PCGS# 86666

EARLY DOLLARS

1795 B-7, BB-18 Dollar, XF45 Silver Plug

5614 1795 Flowing Hair, Three Leaves, Silver Plug XF45 PCGS. B-7, BB-18, R.5 with the Silver Plug. Bowers Die State I, the usual die state for this variety, with two small die chips extending down from the end of the left ribbon. The experimental silver plug is clearly visible at the center of the obverse, and it is barely detectable on the reverse. This lovely Choice XF dollar has pleasing pewter-gray surfaces with delicate toning, showing splashes of gold on the circular surface of the plug. Hints of champagne add to the eye appeal of this splendid early dollar. PCGS# 6854

1795 Draped Bust, Off Center Dollar

B-14, BB-51, AU58

Top-Notch Draped Bust, Small Eagle Coin

5615 1795 Draped Bust, Off Center AU58 PCGS. **B-14, BB-51, R.2.** Early die state, no clash marks. The 1795 Draped Bust, Off Center silver dollar, B-14, BB-51, is one of the most-available varieties of early silver dollar. The B-14, BB-51 variety, and its Centered counterpart, B-15, BB-52, is also quite popular as a large-canvas example of the Draped Bust, Small Eagle *design type*, for collectors who assemble their holdings in that way — their half dollar counterparts of the Draped Bust, Small Eagle motif, dated 1796-97, are the rarest silver type in U.S. numismatics.

This near-Mint State PCGS example of the B-14, BB-51 is in the upper echelons of a variety that usually appears somewhere in the grade range from Very Fine to Extremely Fine. The generous mint luster of this piece would not be at all out of place on a lightly circulated Morgan dollar of a century hence. The grayish-silver surfaces show no major contact, although some planchet adjustment marks appear through the central reverse, as made at the Mint and not in the least impeding the top-notch eye appeal. Population: 9 in 58, 8 finer (3/14). PCGS# 96858

1796 B-4, BB-61 Silver Dollar, AU55 Attractive Small Date, Large Letters Coin

5616 1796 Small Date, Large Letters AU55 NGC. **B-4, BB-61, R.3.** Bowers-Borckardt Die State II, scarce. This scarce die pairing is attributed by the close TE in STATES with one leaf only under the D in UNITED on the reverse, whereas the exceedingly rare B-6, BB-64 shows two leaves under the D. This scarce die state shows the two front curls hanging down over the forehead separated from the rest of the hair due to die lapping that has effaced the rear portion. This is one of three primary *Guide Book* varieties for the year 1796, the others being the Small Date, Small Letters and the Large Date, Small Letters. Generous mint luster resides under a moderate layer of pinkish-gold patina on the obverse, with the reverse showing mottled pink and pale ice-blue. An excellent example of this better early dollar variety. PCGS# 6860

1798 B-27, BB-113 Dollar, MS62 Heraldic Eagle Reverse

5617 1798 Large Eagle, Pointed 9 MS62 PCGS. B-27, BB-113, R.2. The reported mintage of Draped Bust dollars in 1798 was 327,536 pieces, the second-largest of the series. The mintage was divided between two major design types, the Small Eagle Reverse, of which 2 die varieties are known, and the Heraldic Eagle Reverse, for which 31 varieties have been discovered. The present coin represents the BB-113 variety of the Heraldic Eagle type, identified by the high 8 in the date and the die crack from the reverse rim through the second S in States, through the top of OF and wing tip, to the rim above A. Bowers Die State II.

The coin offered here is a rare MS62 specimen with sharply detailed design elements and glossy surfaces that retain much original mint luster under iridescent lavender and gold toning. The profile of Liberty shows an odd outline, as if the coin had been struck multiple times, but there is no sign of doubling on the reverse. Population: 6 in 62, 11 finer (3/14).

From The Northern Lights Collection. NGC ID# 24X6, PCGS# 6873

**1799/8 Draped Bust Dollar, MS62+
B-1, BB-142, 13 Stars Reverse
Ex: Colonel Green/Hesselgesser**

5618 1799/8 13 Stars Reverse MS62+ PCGS Secure. CAC. B-1, BB-142, R.4. Ex: Colonel Green/Hesselgesser. Bowers-Borckardt Die State III, the shattered die state of an interesting variety, with this coin specifically mentioned in the text of the recently published Bowers *Encyclopedia of United States Silver Dollars 1794-1804* as the foremost representative of the Late Die State. Multiple, heavy die cracks encircle much of the border, with a major flaw between the R and I of AMERICA, the die approaching its demise.

An impressive provenance accompanies this coin, which is ranked third on the list of Notable Specimens in the above-mentioned Bowers *Encyclopedia*. The coin passed from the Waldo C. Newcomer Collection to Col. E.H.R. Green, to James G. Macallister and the T. James Clarke Collection, and later to Dr. Robert Hesselgesser (Ira and Larry Goldberg, September, 2011) and to our consignor.

This is a memorably toned and thoroughly attractive example of this scarce, overdated variety. Rose highlights mingle with antique-gray patina, surrounded by vivid aqua-blue margins. The strike is bold on the peripheries, but a touch soft at the centers, as is typical for the variety.

Vibrant luster resides beneath the rich, appealing toning. The fields and devices show careful preservation, with no significant abrasions or marks of any kind across the smooth, hard surfaces. Liberty's portrait is unblemished to the eye, with a single short nick on the jawline visible with a glass to serve as a pedigree marker (as if there would ever be a need, because this coin is so beautifully and distinctively toned).

One could hardly hope to find an early dollar with a more original, powerfully appealing appearance or a more numismatically significant provenance. Population: 1 in 62 (1 in 62+), 1 finer (3/14).

From The Northern Lights Collection. PCGS# 6884

**1801 Draped Bust Dollar, MS62
High-End B-3, BB-213 'Wide Date'
Bowers *Encyclopedia* Plate Coin**

5619 1801 MS62 PCGS Secure. B-3, BB-213, R.3. Ex: Hesselgesser. Bowers-Borckardt Die State II/intermediate. The Wide Date obverse, where the first 1 is about as distant from the curl as the last 1 is from the bust. Star 8 is close to the Y, but stars 1, 7, and 13 are distant from the hair, L, and bust, respectively. The right serif of I is level with the left serif of B. On the reverse, a star point touches the outside of the eagle's beak, and the right feet of all the T's are missing. AM are joined, and E is extremely close. A star under cloud 7 is double-punched, a rare error among early dollars.

While the reverse shows light die clashing from the obverse around ES OF, the obverse also shows some of the characteristics of a later Die State III, in which a small die crack, nearly horizontal, appears to the left of the 1 in the date. However, this coin lacks most of the other characteristics of that die state as listed in the reference. No other die cracks or clashing is visible on the obverse, although numerous small areas of die rust have left dotlike indentations around some of the peripheral stars.

At MS62, this coin is first for the variety in the "Notable Specimens" listed in the 2013 David Bowers *Encyclopedia of United States Silver Dollars 1794-1804*, where it is the plate coin for the 1801 BB-213 variety. Both sides are lustrous, and evenly covered in a veneer of golden, copper-gray patina, with original pinkish-gray overtones and gunmetal-blue margins. A couple of small contact marks are noted on Liberty's cheek. The strike is bold, save for a hint of softness on the eagle's tail and the highpoints of Liberty's hair on the obverse, but these are quibbling complaints. The coin radiates an impression of true high-end quality, with its original surfaces and enormous aesthetic appeal. A significant opportunity for early dollar specialists.

Ex: Rosemont, IL CSNS Signature (*Heritage*, 4/2008), lot 2341, where it realized \$60,375.00. NGC ID# 24XA, PCGS# 6893

1801 Early Silver Dollar, MS63 B-3, BB-213 Finest Certified for the Variety

5620 1801 MS63 PCGS. B-3, BB-213, R.3. We are very fortunate (and it is somewhat amazing) to have perhaps the two finest examples of the 1801 BB-213 early dollar in the same sale. The former listing, the fantastic Hesselgesser coin, is dramatically and deeply toned. This equally fantastic example is more brilliant in its toning values, but colorful and exquisite in its own way.

Although a few 1801 Draped Bust dollars from different die pairs are graded numerically finer, seldom does an early dollar reach Select Uncirculated status. This is a new coin on the scene, unlisted in the recent Bowers reference, and it is a pleasant surprise for any bust dollar enthusiast. Boldly struck, the Die State II is represented by this coin, with diagnostic die clashing on the reverse to the right of M in UNUM and an additional clash mark from the O to cloud 6. The bold legend features one of the distinctive diagnostics of this variety: both Ts in STATES are missing their right foot.

The obverse die is perfect except for a short, nearly horizontal die crack to the left of the date and, in fact, this coin was struck from an almost identical state of the dies as the Hesselgesser coin mentioned above. A minor die crack over the corner of Liberty's eye is the only discernible indication this coin was struck from a slightly later die state.

The sharply impressed devices reside on fields that are virtually abrasion-free and unencumbered by other defects. Delightfully iridescent, the silver surfaces display shades of violet, sky-blue, lime-green, and gold. Mint luster glows beneath the translucent toning. Liberty's hair strands are particularly impressive and representative of the high technical and visual quality of this magnificent dollar. PCGS Population (all varieties): 3 in 63, 3 finer (3/14). NGC ID# 24XA, PCGS# 6893

GOBRECHT DOLLARS

1836 Name Below Base Gobrecht Dollar Judd-58, Die Alignment III, PR63

5621 1836 Name Below Base, Judd-58 Restrike, Pollock-61, R.6(?), PR63 NGC. Silver. Die Alignment III: Center of Liberty's head opposite N in ONE. The popularity of the Name Below Base Gobrecht dollars is due in large part to Mint Director James Ross Snowden. In 1859 he claimed that "18 Originals" were struck of this issue. This statement has led collectors over the last 150 years to believe two falsehoods. First, only 18 coins were struck. This is clearly not the case, as far more are known. Probably 60 or so pieces are extant today. Second, there is a problem with the term "original." Collectors and dealers have generally believed this term to mean original in the sense of the "onward and upward" Die Alignment 1 coins from 1836. However, there are no such known with Gobrecht's name below the base.

This is a later die state of Die Alignment III, probably struck in the 1858-1859 timeframe, and shows a slightly diminished raised die mark (rust?) between the bottom of the A in STATES. This die mark, as well as the die crack through STATES, is less visible on this later die state from die polishing in that area. Die polishing has also removed much of the die crack through UNITED.

This piece has a magnificent appearance that belies its PR63 grade. The fields are deeply reflective. Each side is covered with an even layer of golden toning with accents of light blue on the reverse. There are no noticeable contact marks on either side of this lovely coin. Housed in an older NGC holder that does not indicate Judd-58 or Name Below Base. PCGS# 11217

SEATED DOLLARS

**1836 Gobrecht Dollar, PR62
Judd-60, Die Alignment I
Deeply Toned and Deeply Mirrored**

5622 1836 Name on Base, Judd-60 Original, Pollock-65, R.1, PR62 PCGS. Silver. Plain Edge. Die Alignment I (center of Liberty's head is opposite the D in DOLLAR). This deeply toned proof shows no evidence of the angling die clash mark above the eagle's wing, indicating it was one of the 400 pieces struck in early December. Gobrecht dollars were struck in proof format, but some are "more proof than others." Some, like this coin, are undisputed proofs and measure up to post-1858 proofing standards. Others have fields that are more like an 1881-S dollar. The fields on this piece are impressively deep in their mirrored reflectivity. Striking definition is also full throughout, but it is slightly soft over the highest points from cleaning. The deep blue-gray toning that covers each side helps subdue the hairlines, but it does not hinder the deep flash from the fields. There are no mentionable contact marks on either side. PCGS# 11225

**1846 Seated Dollar, MS64+
Boldly Struck and Attractive**

5623 1846 MS64+ PCGS. CAC. As is the situation with many Seated dollar issues of the 1840s, the 1846 is fairly common in circulated grades, but it is quite rare in Mint State. The mintage was actually fairly plentiful for this low-mintage series — 110,600 coins — but clearly most of the issue either circulated (including being exported and melted) or was melted domestically when its bullion value surpassed its face value by the early 1850s. This MS64+ PCGS example with the CAC approval is a powerfully attractive coin, showing rich luster under a light layer of copper, olive, light blue, and jade. Contact marks are scattered and inconsequential on this boldly struck coin. Population: 20 in 64 (2 in 64+), 2 finer (3/14). NGC ID# 24YG, PCGS# 6932

1846 Seated Dollar, MS65+ Impeccable Strike and Surfaces

5624 1846 MS65+ NGC. CAC. Ex: "Col." E.H.R. Green. This 1846 Seated dollar is given the MS65+ grade by NGC, making it the single finest graded (3/14). The mintage of 1846 dollars is recorded as 110,600 circulation strikes, among the larger totals from the decade of the 1840s. Nonetheless, Gem examples such as this piece are fleeting rarities, coins that are simply unseen in the normal channels of numismatic commerce. The rarity of the 1846 dollar in Gem condition is underscored by only a single MS65 example trading hands in our auctions since we began maintaining our Permanent Auction Archives in 1993. An MS65 PCGS example brought \$97,750 in our Dallas Signature (Heritage, 11/2005), lot 2211.

The 1846 silver dollar is frequently found in circulated grades, but its rarity in Mint State has been known for decades. Bruce Amspacher wrote in the July-August 1982 *Coin Dealer Newsletter* monthly that a nice Uncirculated coin turned up at the rate of one coin every five to 10 years.

The present MS65+ NGC example offers thoroughgoing eye appeal and impeccable preservation on both sides. The tops of the 1 and 8 in the date are minutely repunched. The surfaces display warm amber, emerald, and bluish hues with a strike that is quite sharp, save for the high points of the eagle's wings, but is essentially full elsewhere. There are few marks of any consequence noted. The reverse shows somewhat deeper olive and amber-russet toning with mauve and golden accents. Census: 2 in 65 (1 in 65+), 0 finer (3/14).

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$5.00; Eric P. Newman Numismatic Education Society (Heritage, 11/2013), lot 33516. NGC ID# 24YG, PCGS# 6932

1871-CC Silver Dollar, XF40 Old-Silver, Carson City Rarity

5625 1871-CC XF40 PCGS. Some serious tally-keeping goes on with Seated dollar enthusiasts over which is the rarer Carson City date — 1871 or 1873. Although the 1873-CC dollar has the higher mintage of 2,300 pieces, most were melted with only between 750 and 1,000 pieces entering channels of commerce. The 1871-CC dollar had a mintage of 1,376 coins, most of which circulated.

The two dates are equally rare in Uncirculated condition, but the 1871-CC is more frequently encountered in circulated state. This example shows pleasing, old-silver toning with some orange-gold accents. A glimpse of mint luster remains at the margins and in the folds of Liberty's gown. Abrasions are at an absolute minimum, with no significant marks. Moderate wear accounts for the grade of this original and pleasing example. Population: 21 in 40, 35 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZH, PCGS# 6967

1871-CC Seated Liberty Silver Dollar Choice Extra Fine Example

5626 1871-CC XF45 PCGS. Lilac accents visit the silver-gray, reflective surfaces of this Choice Seated dollar, one of perhaps 125 survivors from a scant mintage of 1,376 pieces. The surfaces of this smoothly circulated dollar were once prooflike, and mirrored reflectivity is still evident among the stars and legends.

Most of the tiny mintage circulated domestically. Few Uncirculated pieces exist, meaning Seated dollar collectors and Carson City enthusiasts vie for high-end XF and AU examples to fill out their sets. This excellent, XF45 example is smooth and nearly unabraded, with a small dig between stars 11 and 12 the only mentionable mark. The coin is strongly detailed and attractive. Population: 14 in 45, 21 finer (3/14). NGC ID# 24ZH, PCGS# 6967

1872-CC Liberty Seated Dollar, AU58
Rare Carson City Issue
Always In Demand

5627 1872-CC AU58 NGC. Of the four Carson City Seated dollars (1870 through 1873), the 1872-CC issue ranks behind the 1873 and the 1871 dates in terms of absolute rarity, but not in terms of demand. No CC-Mint Seated dollar is easy to come by, with many collectors vying for the few available coins. The small mintage of 3,150 pieces was produced from Comstock Lode silver in 1872, and they were extensively circulated, resulting in perhaps 250 to 300 examples of the date remaining today.

This minimally circulated representative is typical of most near-Mint survivors, with very little actual wear but several abrasions over the semiprooflike surfaces. A bit of clear, auburn-gold toning hugs the rims and devices, and surrounds the silver centers of this sharply struck dollar. Fully Mint State coins are rare and expensive, making this AU58 a wise alternative for Carson City and Seated dollar specialists. Census: 8 in 58, 14 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZK, PCGS# 6969

1872-CC Seated Dollar, MS62 Absolute and Condition Rarity Ex: Jack Lee III

5628 1872-CC MS62 PCGS. The 1872-CC is a rare and highly respected Seated dollar. Only 3,150 pieces were produced. The four Carson City issues are usually compared to each other and evaluations are made on each year's merits relative to the other ones. Such as, "the 1872-CC is the second most 'common' Carson City Seated dollar, and it is appreciably rarer than the '70-CC in all grades." The fact is, all four Carson City dollars are rare in the absolute sense and are among the rarest of all Seated dollars, and terms such as "second most common" only make sense when placed in the context of the series of these four major rarities. Rusty Goe estimates only 250 to 300 coins survive of the 1872-CC in all grades. Broken down further, a mere 16 to 19 pieces are believed extant in Uncirculated condition.

In addition to the 1872-CC being an absolute rarity, it is also a major condition rarity. Only three other pieces have been so graded by PCGS (NGC has certified two in MS62) with only three finer PCGS examples (3/14). This is a bright, semiprooflike example, not unexpected given the tiny mintage, and also a trait frequently seen on many Seated dollars. Sharply struck throughout, the definition on the eagle's plumage is especially strong and the peripheral stars are completely defined. Just the slightest accent of golden color covers each side with strong mint brilliance in evidence just beneath this light overlay of patina.

Ex: FUN Signature (Heritage, 1/2004), lot 2103; Jack Lee Collection, III / Dallas Signature (Heritage, 11/2005), lot 2230.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZK, PCGS# 6969

1873-CC Seated Dollar, AU Details Low-Mintage Final Carson City Issue

5629 1873-CC — Tooled-Cleaned — ANACS. AU Details, Net XF40. The year 1873 was the last for the Seated dollar coinage, one of the effects of the sweeping “Crime of ’73,” as it was known by its many detractors. The congressional action abolished the half dime, two cent, and three cent silver denominations, omitted the silver dollar from the list of authorized denominations, and introduced the overweight Trade dollar. The 1873-CC is the only mintmarked issue known from this final year of Seated dollar coinage, as none of the reported 700 examples struck of the 1873-S have ever turned up in numismatic circles. This example of the 1873-CC is more attractive than the caveats might sound, as the evidence is tooling is confined to subtle waviness in the fields, and the muted luster on silver-white surfaces confirms a past cleaning. Much detail remains on the devices throughout.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 24ZN, PCGS# 6972

PROOF SEATED DOLLARS

1851 Restrike Seated Dollar, PR65 Cameo A Coin of Great Absolute Rarity and Enormous Aesthetic Appeal

5630 1851 Restrike PR65 Cameo PCGS. CAC. Centered Date. Unlike the situation for the 1852 Seated dollars, where the situation of Original versus Restrike (and proof versus business strike) is murky at best, there is little confusion concerning the 1851 Seated dollars. Most numismatists believe the High Date 1851 Seated dollars were all struck in “business strike” format — this during a time when silver was going up, gold going down, and the melt values of silver coins were exceeding their face value; more on this later — and the Centered Date Seated dollars were later Restrikes, all made in proof format.

The effects of the California gold strikes of the late 1840s-early 1850s were many and far-reaching, but one was that the vast glut of newly mined gold made the price of silver skyrocket in relation to gold or paper currency. By the early 1850s, the situation was so acute that any silver coins that entered circulation would be the immediate victims of Gresham’s Law — “bad money drives out good” — and subjected to hoarding or melting as soon as it was recognized. The melt value of a silver dollar during that period was at least \$1.03.

The situation is no different from today, where any pre-1964 90% silver coinage that is recognized as such is instantly removed from circulation due to its high melt value (currently about \$7.50 for a 1964 Kennedy half).

No silver dollars dated either 1851 or 1852 entered circulation during those years, and the coins were soon (within a few years) recognized as great rarities. As in so many numismatic areas where facts are lacking, conjecture fills the void. One theory holds that “Midnight Minters” produced the Restrike 1851 dollars for personal gain; another posits that the Mint struck the coins during the late 1850s-early 1860s, possibly both, as trade bait to enhance the Mint Cabinet.

This 1851 Restrike dollar is the sole finest PCGS-certified Cameo example (and tied with one Deep Cameo for finest) of this important proof-only issue, one made to the extent of an estimated 50 to 100 pieces per the Bowers-Borckardt *Silver Dollar Encyclopedia*. Survival estimates are on the order of 40 to 60 coins. PCGS shows these as finest known in each contrast level: non-Cameo: 1 PR65; Cameo: 1 PR65 (the present piece); Deep Cameo: 1 PR63 (3/14).

Even without considering the *great absolute rarity* of this piece, this is a coin of remarkable quality and eye appeal that any collector would be proud to own, even if it were the most “common” proof imaginable. Upon examining this piece, one of our first thoughts is, “Why is this not a Deep Cameo?” The fields are deeply reflective and the devices thickly frosted; the answer lies perhaps in the toning, which PCGS might have considered a tad too thick a Deep Cameo designation. Beautiful pinkish hues dominate both sides, with a splash of light blue near the lower obverse and upper reverse rims. A loupe reveals no mentionable marks but reinforces the enormous eye appeal. Population: 1 in 65 Cameo, 0 finer (3/14). PCGS# 86993

1852 Seated Liberty Dollar, PR64 Cameo Famous Restrike Issue Finest Cameo at PCGS

5631 1852 Restrike PR64 Cameo PCGS. This piece is identified as a Restrike according to PCGS, and it probably is, as Mint State or proof Originals, from a mintage recorded at 1,100 coins, are extremely rare. In fact, PCGS only recognizes Restrikes among 1852 proof dollars. It is almost certainly true that all business strike or circulation strike 1852 Seated dollars are Original strikes, and that most proofs are Restrikes. However, a few Original proofs were probably also minted in 1852. The problem is differentiation.

When Dave Bowers published his *Silver Dollar Encyclopedia* in 1993, he described six different varieties of proofs, the first three described as "Proof issue" and the other three described as "Restrike Proof issue." The implication is that the first three varieties were Originals, but that is not stated. This issue needs substantial additional research. All six proof varieties are from a single obverse die, so attribution relies on examination of the reverse. This piece appears to meet the requirements of Variety 3 in the Bowers reference, where he comments: "It is uncertain if impressions from this combination are originals or restrikes."

Likely a Restrike, this Choice Cameo proof has mostly brilliant silver surfaces with peripheral sea-green on the obverse, and steel-gray on the reverse. The fields are nicely mirrored around satiny white devices with excellent contrast. PCGS has graded 15 proof 1852 Seated dollars, and just two of those are designated as Cameo. This piece is the finer of those two coins (3/14). PCGS# 86995

1859 Seated Dollar, Deeply Toned PR65

5632 1859 PR65 NGC. Any Gem proof Seated dollar is a rarity and the 1859 more so, an issue overshadowed by the important 1851 and 1852 proofs and the low-mintage 1858. The 1859 proof Seated dollar was struck to the extent of only 800 proofs, with a fraction of that number surviving in Gem grade today. The present PR65 NGC example offers deep reddish-copper patina on each side with glints of ice-blue. The strong proof strike has brought up all details boldly if not quite absolutely, and no mentionable distractions appear amid the patina. A rare opportunity for Seated dollar specialists to obtain an example of this underrated issue. Census: 16 in 65, 60 finer (3/14). NGC ID# 252D, PCGS# 7002

1865 Silver Dollar Gem Proof Pure-White, Contrasted Ultra Cameo

5633 1865 PR65 Ultra Cameo NGC. It seems likely the proof dollars in 1865 were all distributed in proof sets, with 500 of the sets were assembled by the Mint. Most survivors of the mintage are toned to one extent or another, especially if they were stored with their companion pieces in the original packaging. This example, however, is blazing pure-white, without even a hint of tone on the rims or anywhere else on the coin. All devices — including the rims — are fully struck, heavily frosted, and white. Watery-deep mirrors contrast boldly with the motifs. While nearly the entire proof mintage exists today, the rarity of business strikes for the date put added pressure on the availability as collectors seek to fill the missing date in their set with a proof. Census: 2 in 65 Ultra Cameo, 7 finer (3/14). PCGS# 97008

1867 Ultra Cameo Seated Dollar, PR65 All-White, Starkly Contrasted

5634 1867 PR65 Ultra Cameo NGC. Proof 1867 Seated dollars were only distributed as part of the silver proof sets of this year, and a mere 625 sets were produced. This is an impressive, all-white Gem proof. The strike is needle-sharp, and the contrast between the thickly frosted devices and the mirrored fields is profound and very pleasing. Only 625 proofs were struck in 1867, and far fewer survive than are needed to satisfy the demand from collectors of this challenging series. Extremely scarce in Cameo condition. Census: 2 in 65 Ultra Cameo, 3 finer (3/14). PCGS# 97015

1867 Dollar, Toned PR65 Deep Cameo Rare With This Finish

5635 1867 PR65+ Deep Cameo PCGS. A good many of the 46,900-piece circulation-strike mintage 1867 Seated Liberty dollars entered into international trade with the Orient, never to return to the States, at least in mint condition and/or unimpaired. Consequently, considerable date pressure is put on the proofs, of which 625 were produced in 1867. Additionally, Deep/Ultra Cameo proofs of this year are infrequently encountered. Indeed, PCGS and NGC have designated only 23 of the 507 proof 1867 dollars as Deep/Ultra Cameo (4.5 percent).

The frosty devices of this Gem example stand out against the deeply mirrored fields, yielding stunning contrast. A pale layer of reddish-gold is seen over each side. The design elements are razor-sharp, further enhancing the wonderful eye appeal of this coin. Population: 1 in 65 (1 in 65+) Deep Cameo, 2 finer (3/14). PCGS# 97015

1871 Seated Dollar, PR66+ Stunning and Concentrically Toned

5636 1871 PR66+ PCGS. CAC. The large mintage of more than 1.07 million 1871 Seated dollars for circulation was accompanied by a nominal production reported as 960 proof coins. Few indeed, however, can match the elusive quality of this concentrically toned Premium Gem graded by PCGS. Radiating outward are bands of pinkish-silver, blue and jade, pale yellow, and rich amber-gold, all accompanied by deep field reflectivity and frosted devices. Were the color a bit lighter, this piece would likely rate a Cameo designation — but even so, it is a stunning type coin. The proof strike is full, and contact marks are minimal. Population: 2 in 66 (1 in 66+), 1 finer (3/14). NGC ID# 252T, PCGS# 7019

1873 Seated Dollar, PR66 Ultra Cameo Extraordinary Appeal

5637 1873 PR66 Ultra Cameo NGC. Ex: Sweet Collection. The doubled motto (specifically IN GOD WE) is indicative of a doubled die variety that has been observed on proof Seated dollars of 1872 and 1873, along with some patterns using the regular reverse design. It is possible that the motto was entered into the die in a separate step using a complete punch that only contains that element, although such a procedure seems rather pointless even at that time, as the motto seems to remain in a constant position on all different reverse dies of this design type.

The motto was either a separate punch used on every die from 1866 to 1873, or it was part of the hub that was used to manufacture individual dies. Each known reverse die has two common characteristics: the G in GOD is punched over a stray letter, possibly an E. The W in WE has an extra serif below the upper left serif.

This is a remarkable example with amazing contrast, the devices being highly lustrous and the fields deeply mirrored. It has a sensational black and white appearance. NGC has certified two examples in PR66 Ultra Cameo and one in PR68 Ultra Cameo, while PCGS has certified just one each in PR66 Deep Cameo and PR67 Deep Cameo (2/14).

Ex: Rod Sweet Collection (Bowers and Merena, 7/2005), lot 1034; Dallas Signature (Heritage, 11/2005), lot 2262; Estate of Jack Lee Collection (Heritage, 1/2009), lot 3973. PCGS# 97021

TRADE DOLLAR

1873 Trade Dollar, MS65+ High-Grade First-of-Series Issue

5638 1873 MS65+ PCGS. The "Crime of '73," a.k.a. the Coinage Act of February 12, 1873, ushered out the Seated dollar series and in the Trade dollars, which would continue in circulation format only through 1878, before ending with a whimper of proof-only issues. The legislation contained a little-known twist (noted in the Bowers-Borckardt *Silver Dollar Encyclopedia*) by which depositors of new bullion at any mint could receive Trade dollars only, unless the silver was the byproduct of gold deposits, and then silver subsidiary coins could be paid out only at the discretion of the Mint director. In practice, few minor silver coins were paid out in 1873. The 1873 Philadelphia Trade dollar is a great choice for first-year-of-type collections, given its healthy mintage of nearly 400,000 circulation strikes. This top-drawer example is the only MS65+ piece at PCGS, and there are four MS66 and one MS67 finer (3/14). The surfaces are covered with thick silver frost, only lightly toned with an arc of pale copper-gold on the obverse. The strike is quite sharp, with only a few random, insignificant reeding and contact marks. NGC ID# 252W, PCGS# 7031

PROOF TRADE DOLLARS

1875 Trade Dollar, PR67 One of the Finest-Known Examples

5639 1875 PR67 PCGS. Type Two Reverse. According to Breen (1988), more than 90% of the 700 proofs struck in 1875 were of the Type Two Reverse variety, as is this example. The survival rate for this issue seems high, with several hundred specimens graded at each of the major services (including possible resubmissions). Superb Gems are rare, however, as just two such pieces have been seen at PCGS, and only five coins have been rated at PR67 by NGC, with none finer at either company (3/14).

This coin is fully struck with superior, seemingly flawless preservation and rich hues of variegated patina that adorn both sides. Included are shades of bright-green, deep-violet, charcoal-red, and beige. NGC ID# 27YL, PCGS# 7055

MORGAN DOLLARS

1875 Trade Dollar, PR65+ Cameo Flashy Deep Mirrors, Strong Contrast

5640 1875 PR65+ Cameo PCGS. CAC. Type Two Reverse. The scarcity of Uncirculated business strike 1875 Trade dollars places added emphasis on surviving proofs. Thickly frosted motifs rise above the brilliant and satiny fields. This is a sharply struck example aside from the lower left corner of Liberty's base. Liberty's head and the adjacent stars, often weakly struck, are well impressed. Both sides are essentially untoned and devoid of mentionable contact marks. A high grade Gem of this scarce proof issue. Population: 5 in 65 (1 in 65+) Cameo, 2 finer (3/14). PCGS# 87055

1879 Morgan Dollar, Lustrous MS66+ A Prize for Toning Enthusiasts

5641 1879 MS66+ PCGS. CAC. Despite the generous mintage exceeding 14.8 million coins, the population data at both NGC and PCGS plunge precipitously at the Premium Gem grade level. This MS66+ PCGS example is one of only seven submissions in MS66+, and only three are numerically finer, all MS67 as expected (3/14). Generous luster complements moderately but thoroughly toned surfaces on this piece, copper-pinkish hues prevailing against accents of ice-blue and lavender. Scattered contact marks are few and inconsequential. A prize for toning enthusiasts. NGC ID# 253S, PCGS# 7084

1879 Morgan Silver Dollar Impeccable MS66 Deep Mirror Prooflike

5642 1879 MS66 Deep Mirror Prooflike NGC. Even though nearly 15 million examples of the 1879 silver dollar were struck for circulation, they are seldom seen in grades above Gem condition; the certified populations thin markedly at the MS66 (or Premium Gem) level. Those survivors with Deep Mirror Prooflike surfaces are far more elusive still; the norm for any mirrored 1879 is a Prooflike piece, usually on one side. This piece offers ultimate contrast and reflectivity on untoned silver-white surfaces that are free of mentionable marks, the surfaces showing the desired “silver-on-black” effect when tilted under a light. The impeccable quality of a coin such as this is seldom seen and virtually unimprovable, given the population data. Census: 1 in 66 Deep Mirror Prooflike, 1 finer (3/14). NGC ID# 253S, PCGS# 97085

1879-CC Morgan Dollar, MS66 Untoned Silver-White Example Tied for Finest Certified

5643 1879-CC MS66 NGC. Normal Mintmark. The 1879-CC is of course one of the three great keys to the Carson City Morgan dollar set — or two great keys, if you consider the 1879-CC and 1889-CC to be the foremost rarities and the 1893-CC to be a lesser light, a thought that has occurred to us more than once.

The 1879-CC Morgan dollars were released to circulation to a far greater extent than many Carson City issues of the time, and Mint State examples are elusive as a result. There are several hundred examples surviving in all grades of Mint State, but incessant collector demand for this, a key coin in what is likely America's most-collected single series among advanced numismatists, keeps price high.

A considerable number of the survivors of this issue are Prooflike, although Gem Prooflike examples are great rarities. The present MS66 NGC-certified piece is a coin that shows much prooflike tendencies, with brilliant, reflective flash in the fields contrasted against well-frosted, devices front and back. The surfaces are untoned, further emphasizing the high degree of contrast.

This piece is in the remarkably high numeric grade of MS66, a level few survivors of the issue, Prooflike or not, will ever see. NGC has seen only two examples in this grade (including the current piece), regardless of contrast level. PCGS adds two others to the number of submissions — not necessarily separate coins — in MS66. The only singular abrasions are one above Liberty's eye and one in the right obverse field, away from the focal points. This notably high-grade 1879-CC should no doubt soon find its way into a fine collection or Registry Set. Census: 2 in 66, 0 finer (3/14). NGC ID# 253T, PCGS# 7086

1879-CC Capped Die Morgan Dollar, MS65
Lovely, Lustrous Example
Tied for Highest-Graded at Both Services

5644 1879-CC Capped Die MS65 PCGS. VAM-3. A Top 100 Variety. This interesting variety was the result of the crude effacing of a Small CC die in order to repunch that die with the new, larger CC mintmark. Not highly valued for many decades, this variety has grown more popular among collectors in recent years, and brings a premium price especially in higher Uncirculated grades.

This is an attractive, lustrous Gem example with light natural toning and clean, well-preserved surfaces and bright, nearly Proof-like fields. The strike definition is generally sharp, with just a bit of typical weakness noted on the hair above Liberty's ear and on the eagle's breast feathers. None have been graded numerically finer than this lovely piece at either of the major services. Population: 12 in 65 (1 in 65+), 0 finer (3/14). NGC ID# 253T, PCGS# 7088

1879-O Morgan Dollar, MS66
Brilliant, Silver-White Surfaces
None Certified Finer

5645 1879-O MS66 PCGS. This 1879-O Morgan dollar is proof-positive the New Orleans Mint was capable of high-quality silver dollar production, although in future years the quality was often lacking. Nearly 2.9 million pieces were struck after a 19-year break from minting silver dollars, with the most recent issue being the 1860-O Seated Liberty dollar.

A nicely frosted portrait of Liberty interrupts brilliant, silver-white fields of this Premium Gem example. Boldly struck for an O-Mint dollar, the surfaces show only minor coin-to-coin contact and slight grazes on the lustrous fields and devices. The coin is completely untuned and radiant. Population: 15 in 66 (1 in 66+), 0 finer (3/14). NGC ID# 253V, PCGS# 7090

1880-O Morgan Dollar, MS65 Only One Numerically Finer at NGC

5646 1880-O MS65 NGC. The 1880-O is one of the great condition rarities among O-mint Morgan dollars, although one would never know it by looking at the preponderance of AUs and relative availability up to and including MS63 grade. Only at the Choice level is there a dramatic drop-off of survivors and, of course, MS65 examples such as this are seldom offered. This Gem's exceptional lack of surface marks immediately sets it apart from the typical Uncirculated 1880-O. The obverse is tinted in delicate steel-blue shades while deeper blushes of coppery-orange color are noticed at the borders on each side. Census: 29 in 65 (1 in 65 ★), 1 finer (3/14).

Ex: Long Beach Signature (Heritage, 2/2006), lot 1858; Dallas Signature (Heritage, 11/2006), lot 1208. NGC ID# 2543, PCGS# 7114

1880/9-S Morgan Dollar, MS68 VAM-11, Essentially Flawless

5647 1880/9-S MS68 PCGS. CAC. VAM-11. A Hot 50 Variety. Immaculate, frosty, and brilliant, this blaze-white dollar creates a powerful impression with the near-perfect surfaces and sharp, pristine motifs. Apparently, the Mint experimented with overdates during the year, as several different varieties are known. This example is the "Hot 50" VAM-11 variety, with a ghostly 9 underdigit showing through the center of the 0, and a thread-like impression on Liberty's neck confirming the variety. But make no mistake — the appeal of this coin is its high-grade, Superb Gem status, one three so-graded by PCGS (and none by NGC) for the overdated variety. Population: 3 in 68, 0 finer (3/14).

From The Northern Lights Collection. PCGS# 7122

1882-O/S Silver Dollar, MS65 VAM-5 'Broken' Variety, Late Die State

5648 1882-O/S Weak MS65 PCGS. VAM-5. A Top 100 Variety. The VAM varieties in their current form are a tremendous help in clearing up the mysteries surrounding this important *Guide Book* variety. There were three different, re-purposed New Orleans dies (originally prepared for the San Francisco Mint), resulting in the overmintmark varieties. VAM-3 is the "Flush" variety, with curvature of the S most visible in Late Die States. VAM-4 is the "Recessed" variety, with the curvature of the S deeper in the recess of the O and lower, also most-visible in Late Die States. VAM-5 is the "Broken" S variety, with a partial S visible in Late Die States.

PCGS holders often designate Strong or Weak for the 1882 O/S variety. The designation does not relate to the quality of strike, but rather to the visibility of the overmintmark. The "Strong" designation usually applies to VAM-3 and VAM-4 Late Die States, where the curvature of the S is most visible within the O. The "Weak" designation usually applies to the VAM-5 Late Die State, with a partial S showing. It is possible Early Die States from all three VAM varieties are sometimes labeled "Weak" by PCGS, since they show lesser-presence of the S within the O.

Any O/S variety is rare in the Gem Mint State condition of this example. It is the VAM-5 Broken S variety, a Late Die State, with the partial S clearly visible. Brilliant and untuned, the coin shows few abrasions or marks of any kind on the smooth, appealing surfaces. This fully struck VAM-5 O/S is rare and desirable in Gem condition, and highly attractive. Population: 2 in 65, 0 finer (3/14). PCGS# 87138

1889-CC Morgan Dollar, AU58 Original Surfaces, Outstanding Eye Appeal The 'Col.' Green / Newman Collection Coin

5649 1889-CC AU58 NGC. CAC. Ex: "Col." E.H.R. Green. Ex: Eric P. Newman Collection. The obverse of this coin displays greenish-gold, olive, silver, and gray areas with just a trace of rub on the high points of Liberty's hair, brow, and cheek, the surfaces showing complete originality with abundant eye appeal. The reverse offers a similar color scheme, save for dabs of deeper copper-russet patina near the right border. As expected as this grade level, there are minimal signs of contact on either side. This rare and historic, borderline Uncirculated dollar spent virtually its entire numismatic life in the prominent collections of two of the most well-known names in numismatics, and it is available now to grace yet another great collection.

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$7.50; Eric P. Newman Numismatic Education Society; Eric P. Newman Part II New York Signature (Heritage, 11/2013), lot 33522. NGC ID# 2559, PCGS# 7190

1889-CC Dollar, Toned MS60 Scarce, Key Issue in Uncirculated Condition

5650 1889-CC MS60 ANACS. The popular website devoted to Morgan and Peace dollar Van Allen-Mallis (VAM) varieties, VAM-World.com, allows collectors many diagnostic tools to aid in the attribution of various VAM varieties. There are many other resources, however. In the case of the 1889-CC Morgan dollar, there is a link to an article by ANACS' John Roberts on the ANACS.com site, "1889 CC Morgan Dollar Genuine Dies," which asserts that there are five obverse dies and five reverse dies combined to form six die pairs.

The 1889-CC Morgan dollar is far and away the key to the CC-mint issues within the series, and an issue that is far rarer than the original production of 350,000 coins would imply — as most were later melted, given their rarity today across all grades. This is a curious coin with a lackluster obverse and bright, semiprooflike reverse. Each side has gunmetal-gray and lilac toning, but several shades lighter on the reverse. The strike details are fully brought up on each side, and the only mark of note is a short abrasion in the left obverse field.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2559, PCGS# 7190

1889-CC Morgan, Unc Details Highly Sought-After Key Date

5651 1889-CC — Improperly Cleaned — NGC Details. Unc. From a low mintage of just 350,000 coins, this 1889-CC dollar is by far the most sought-after Carson City Morgan, and also stands among the big keys in the entire series, especially in mint condition.

This representative displays a light golden tone overall, with significant mint luster remaining in the protected regions, despite evidence of an old, light cleaning. The strike is bold with sharply detailed devices, and only minimal surface abrasions are present. A heavily melted issue, this still-attractive survivor will fit nicely into a quality Morgan dollar collection.

1889-CC Silver Dollar Select Brilliant Uncirculated, Sharp Example

5652 1889-CC MS63 PCGS. When Carson City silver dollars emerged from the Treasury vaults and Mint cash rooms by the bagful, only minor releases of the 1889-CC dollar appeared. There were no GSA sales of the date (just one coin). As a result, the date's status as the rarest Carson City silver dollar was assured.

Although a low-mintage date, the production of 350,000 pieces seems large compared to the relatively few coins currently certified in Mint State. One has to wonder how many Mint State coins remain uncirculated, given today's price levels and demand for the date. Perhaps more coins were melted than previously thought. As a Carson City issue, heavy circulation may have taken its toll on the mintage, and the hard-used coins simply wore out. If that is the case, then the estimates of Approximate Populations in Mint State are too high for this date in the references.

The 2014 Guide Book of Morgan Silver Dollars (4th Edition) suggests MS63 is the Optimal Collecting Grade for the 1889-CC issue. Examples in higher grades become pricey (although there are no inexpensive examples of this rare date in any grade). This Select Uncirculated coin will satisfy most collectors with its bold strike and smooth, relatively unabraded surfaces.

An exceptional number of prooflike and Deep Mirror Prooflike coins are seen in Mint State for the issue. Nearly half of the Select Uncirculated examples have either Prooflike or Deep Mirror Prooflike surfaces — an unusually high percentage. While the present coin is reflective and sharp, it is best described as semiprooflike. The stark-silver surfaces are untuned and sharply lustrous.

Several examples of this key date appear in the sale, and this appealing coin is certainly one to be seriously considered by prospective bidders. NGC ID# 2559, PCGS# 7190

1889-CC Silver Dollar, MS63 Prooflike Rare and Highly Desirable

5653 1889-CC MS63 Prooflike PCGS Secure. CAC. The Carson City Mint was idle for four years before coinage operations were resumed in 1889. Full operations were not possible until October, 1889 due to the dilapidated state of the building and its equipment. With only a little more than two month's production, the output of silver dollars was a low 350,000 pieces.

As a result, any 1889-CC dollar is a rarity. There are never enough coins to satisfy the demand in all grades. In Select Uncirculated condition, this key Carson City issue is especially highly sought, with a substantial price jump to the next higher grade. When the Prooflike designation is added, the interest increases dramatically even though a high percentage (48%) of the Select Uncirculated examples are either Prooflike or Deep Mirror Prooflike.

The current example is framed by a thin veneer of gold toning at the rims, surrounding brilliant silver centers with frost-white devices. The coin is boldly struck and minimally abraded for the assigned grade. Liberty's cheek is particularly clean and unmarked. The fields display deeply mirrored surfaces with light chatter but no heavy marks.

The Carson City facility continued coinage operations for another four years, but the handwriting was on the wall. Even though huge amounts of silver were produced by the Comstock Lode and other large finds, the Mint operations were hampered by transportation costs, tariffs, and the requirement to pay for bullion with drafts rather than hard money. Inexplicably, it was less expensive for the large mine operators to send their silver and gold to San Francisco than to the nearby Carson City Mint. Population: 30 in 63 (2 in 63+) Prooflike, 8 finer (3/14). NGC ID# 2559, PCGS# 7191

1889-CC Dollar, MS63 Deep Prooflike Sharply Struck, Mostly Brilliant

5654 1889-CC MS63 Deep Prooflike NGC. In his *Guide Book* on the subject, Q. David Bowers calls the 1889-CC dollar “one of the great keys to the Morgan series, and among Carson City issues it is far and away the most elusive.” He goes on to discuss the supply-demand ratio that makes the 1889-CC so popular: “In comparison to the demand for them, examples are rare in all grades. However, for those who can afford one, attractive MS-63, 64, and 65 coins appear on the market with regularity, and gorgeous DMPL specimens are sometimes offered.” For a Morgan dollar issue with so few Mint State coins available, comparatively speaking, there is a generous proportion of Prooflike and Deep Mirror Prooflike examples in the surviving population. This is one such piece. The fields display remarkable depth of reflectivity and frosted motifs on each side. As expected for the issue, there are numerous small abrasions peppered throughout the fields. The strike is strong throughout. All in all, a highly attractive example of this key issue to the Morgan series. Census: 29 in 63 Deep Mirror Prooflike, 12 finer (3/14). NGC ID# 2559, PCGS# 97191

1889-CC Dollar, MS63 Deep Mirror Prooflike

5655 1889-CC MS63 Deep Mirror Prooflike PCGS. The Carson City Mint opened in 1870, and produced their first silver dollars that year. That mint continued to coin silver dollars through 1893 when the operation closed to future coinage. During that span, there were 18,584 Seated dollars, 4.2 million Trade dollars, and 13.7 million Morgan dollars minted. Among those coins were 350,000 1889-CC Morgan dollars. However, unlike many other issues, the 1889-CC dollars were not stored in vaults. Rather, they actually entered circulation. As a result, the typical survivor grades Very Fine. The average certified grade barely exceeds VF30.

Mint State examples are infrequently encountered. PCGS has certified 515 Mint State pieces, and NGC adds another 509. That combined total is just 10% of all submissions. Mirrored examples are rarer yet, with 215 prooflike examples and 234 Deep Mirror Prooflike examples certified at the two grading services.

This Select Deep Mirror Prooflike Mint State 1889-CC Morgan dollar is a lovely coin. Both sides exhibit a bold, pinpoint strike, with the hair details over Liberty's ear nearly complete, and with bold breast feathers on the eagle. Both sides are brilliant and highly lustrous. The fields are deeply mirrored with unencumbered silver surfaces showing no toning on either side. Contact marks that so often plague the prooflike Morgan dollars are trivial on this splendid specimen. An exceptional example with a high degree of eye appeal for the grade. Population: 47 in 63 Deep Mirror Prooflike, 15 finer (3/14). NGC ID# 2559, PCGS# 97191

1892-S Dollar, MS60 Mint State Rarity

5656 1892-S MS60 NGC. Third-party grading allows few examples of this rare date to qualify for the lowest Mint State category anymore, but this silver-gray coin made it with a combination of partial prooflikeness in the fields and relatively few abrasions across the surfaces. Charcoal-gray toning occupies the lower recesses of the devices, with hints of russet overtones.

Many AU examples of this date exist that were promoted as Uncirculated coins years ago, a practice that was reigned in with assistance of the professional grading services. While this coin has somewhat subdued mint luster and a bit of softness in the central obverse strike, it displays an original, old-silver appeal many collectors find attractive. A few scattered abrasions, including a group of small contacts on Liberty's chin, are the only marks of note. Census: 8 in 60, 40 finer (3/14). NGC ID# 255P, PCGS# 7218

1893-S Silver Dollar, AU50 Brilliant, Mint Luster Remains

5657 1893-S AU50 PCGS Secure. The low mintage of 100,000 pieces wasn't really needed at the time, with the Mint and Treasury vaults full of silver dollars from the huge production throughout the 1880s, yet at least a portion of the 1893-S mintage circulated throughout the West. Apparently, the remainder of the mintage went into storage and likely was melted under terms of the Pittman Act. Most examples seen today are circulated and worn to some extent or another. Uncirculated coins are rare (and expensive). An AU example such as this brilliant dollar is the perfect grade for many collectors, with sharp detail and much luster remaining despite 10 points of wear. This brilliant example shows just a bit of silver-gray patina over the portrait. Only a few abrasions are seen on the partially reflective surfaces. Nice for the grade. NGC ID# 255U, PCGS# 7226

1893-S Dollar, AU55

Brilliant With Significant Remaining Luster

5658 1893-S AU55 PCGS. The 1893-S Morgan dollar is the single most desirable issue in the series save for the 1895 Philadelphia proof — a special case in numismatics if ever there was one. Bowers writes in the *Silver Dollar Encyclopedia*:

"In terms of all grades combined, the Proof-only 1895 Philadelphia dollar is rarer, as only 880 Proofs were struck. However, in higher grade levels there are more 1895 dollars in existence in Proof-60 or better grade than there are 1893-S dollars in MS-60 or better preservation. That the 1893-S is not an 'impossible' rarity is because thousands of worn specimens survive. I recall being offered a group of over 250 circulated pieces in 1987, the average grade being Very Fine."

This is an all-brilliant example that is well-defined on each side, and shows just a bit of high-point friction. Noticeable traces of mint luster remain around the devices and there are no singular abrasions. Sure to be of interest to many advanced dollar collectors. Population: 32 in 55, 47 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255U, PCGS# 7226

1895-O Silver Dollar, MS60

Full Strike, Brilliant Luster

5659 1895-O MS60 NGC. An unusual full strike for this issue shows no weakness at the centers, with Liberty's hair boldly detailed and brilliant, silver luster abundant across both sides of the coin. These attributes are often sought and seldom found for this New Orleans issue, which is well-known for its weak strikes and lack of eye appeal.

The grade for this attractive dollar is limited by abrasions in several areas, perhaps incurred during counting for one of the many audits required by the Treasury. Curved abrasions are noted both on the obverse and reverse, and Liberty's cheek shows several small marks. Still, this is an obviously Mint State coin — one of high quality, if not for the grade-limiting abrasions, with far-nicer appeal than most MS60 examples.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 255Y, PCGS# 7236

1895-O Silver Dollar, MS61 Rare in Mint State

5660 1895-O MS61 NGC. For Morgan collectors, a nice, Mint State 1895-O dollar is nearly as challenging as its more famous counterpart, the proof 1895 Philadelphia issue. Many advanced collections do not have one in any Uncirculated grade. Complicating matters is the task of finding an example with appeal, since most are poorly struck and have “dull, insipid luster” (as described by David Bowers).

This MS61 representative will be a useful alternative for perceptive bidders. A significantly bolder strike than most of this issue reveals hair detail over the ear and breast feather definition on the eagle. Satiny luster floats on the untuned, pearl-white surfaces. A couple of small reed marks — one in the left obverse field, the other on Liberty’s cheek — determine the assigned grade. Overall, this is an attractive, clearly Mint State example of the rarest New Orleans dollar. Census: 57 in 61 (1 in 61+), 49 finer (2/14). NGC ID# 255Y, PCGS# 7236

1896-S Dollar, MS65 Dazzling, Frost-White Example

5661 1896-S MS65 PCGS. Exceptionally vibrant, cartwheel luster swirls over the frosted surfaces of this dazzling-white Gem. The 1896 San Francisco date is an important rarity in Gem or finer conditions. This excellent example has the eye appeal suggestive of an even higher grade, if not for a few too many minor bagmarks that are the bane of this issue.

Minor grazes to the frosty fields and portrait indicate bag storage and the inevitable coin-to-coin contact. Most notable are a few reed marks beneath the wreath on the reverse, and near Liberty’s forehead on the obverse. Some central strike weakness is noted above the ear and across the eagle’s breast. Population: 63 in 65 (5 in 65+), 4 finer (3/14). NGC ID# 2564, PCGS# 7244

PROOF MORGAN DOLLARS

1880 Morgan Dollar, PR66+ Cameo Profound White-on-Black Contrast

5662 1880 PR66+ Cameo PCGS. CAC. Deep, watery mirrors surround stark, snow-white devices of this Premium Gem proof dollar. PCGS is stingy with its Deep Cameo designation (none have been granted for this issue), but this coin must have given the graders pause. Certainly the bold contrast is one reason for the PCGS Plus designation (one of just two in this grade to receive the honor) as well as the CAC approval earned by this outstanding proof.

The strike is entirely bold, perhaps a whisper short of full, with just a touch of blending of the hair strands above the ear. The few random, delicate hairlines and minuscule cloudiness at the margins are of no concern and are visible only under powerful magnification. Not a bit of toning appears on the coin. Population: 22 in 66 (2 in 66+) Cameo, 13 finer (3/14). PCGS# 87315

1892 Dollar, Sharply Struck PR67 Cameo Rarely Seen This Nice

5663 1892 PR67 Cameo NGC. Morgan dollar proofs struck in 1892 are plagued by weak strikes, especially in the hair above Liberty's ear and on the eagle's breast feathers. David Bowers (1993) contends that:

"Among extant 1892 and 1893 Morgan dollars the flatness is particularly noticeable; more so than in earlier years. Perhaps half of the surviving 1892 Proof dollars show this lack of detail."

The present Superb Gem Cameo offering is a significant exception to Bowers' profile. It is sharply struck throughout, including the hair over Liberty's ear and the breast feathers on the eagle. Other attributes possessed by this gorgeous specimen are the strong field-motif contrast and the impeccably preserved surfaces. Soft golden patina surrounds the margins on both sides. Collectors of Morgan dollar proofs will pay keen attention to this lot. Census: 18 in 67 Cameo (3 in 67 ★ Cameo), 4 finer (3/14).

From The Northern Lights Collection. PCGS# 87327

1892 Dollar, PR67 Cameo Exceptional Visual Appeal

5664 1892 PR67 Cameo NGC. The 1892 proof dollars came from a relatively high mintage of 1,245 pieces. According to Q. David Bowers (1993), this is explained by "... their inclusion in 1892 silver Proof sets, which were in special demand due to the new Barber designs for the dime, quarter, and half dollar."

Wisps of light tan-gold color gravitate to the obverse rim and extend slightly into the fields on the reverse. The frosted devices yield stunning contrast with the deeply mirrored fields. The beautifully preserved surfaces reveal only a couple of extremely tiny spots when examined closely under magnification, including one above the 1 in the date.

The design elements are sharply struck, except for the usual weakness in the centers. Regarding this, Bowers says: "The situation of flatly struck Proof coins began in 1888. Dollars dated 1892 continue the trend and show lightness of strike above Miss Liberty's ear ... and on the eagle's breast feathers." Census: 18 in 67 Cameo (3 in 67 ★ Cameo), 4 finer (2/14).

Ex: ANA Milwaukee Signature (Heritage, 8/2007), lot 1765; ANA Boston Signature (Heritage, 8/2010), lot 3366. PCGS# 87327

1895 Morgan Dollar, PR25 Circulated Key-Date Specimen

5665 1895 PR25 NGC. Since the hope of ever finding any business strike 1895 Morgan dollars has long since been abandoned by most numismatists, that leaves us with the inevitable conclusion that our full date-and-mintmark collections must be completed, for the 1895 Philadelphia Mint issue, from a tiny mintage of just 880 proof coins. As daunting a prospect as that is, it makes the desirability of a well-circulated coin like this one all the more significant.

The excellent strike definition is obvious, despite moderate wear on the design's high points. Small to moderate abrasions are seen on each side as expected for the grade. The natural cream-gray and grayish-tan coloration yields to darker russet-brown peripheral accents. A circulated proof specimen of this unquestioned key issue that should receive considerable attention from Morgan dollar specialists. NGC ID# 27ZR, PCGS# 7330

1895 Morgan Dollar, PR40 Attractive and Affordable Example of This Key Date

5666 1895 PR40 NGC. The 1895 Philadelphia proof Morgan dollar issue is the undisputed key to the series. The Philadelphia Mint did not produce any business-strike dollars in 1895 and the proof production was limited to a mere 880 coins, leaving few survivors to fill the collections of the numerous Morgan dollar collectors today. The surviving examples appear in grades ranging from Good to PR68, with a small percentage of the coins found in circulated grades.

The medium to deep gray surfaces of this PR40 example reveal areas of silver, gold, olive-green, and rose-pink color when examined more closely. This sharply struck piece retains a surprising degree of design detail, with the wear mostly confined to the high points. Scattered marks are present, consistent with the grade; including a few marks on Liberty's face that pose little distraction, but they are well concealed by the toning. The rims reveal a few ticks, primarily on the obverse near 9 o'clock. This is a pleasing and more affordable example of the "King of the Morgans." NGC ID# 27ZR, PCGS# 7330

1895 Morgan Dollar, PR58 Affordable and Still Deeply Mirrored

5667 1895 PR58 ANACS. Even though NGC and PCGS have seen numerous certified proof Morgan dollars down as low as PR4 (one at NGC) and PR8 (four at PCGS, one at NGC), it seems likely that those pieces might be snapped up by eager budget-minded buyers as soon as they became available, as the only cost-effective way to fill that gaping hole in the collection. At Heritage we have seen numerous circulated proofs in our auctions over the years, along with some examples that were "problem children" with rim filing, tooled surfaces, or other distractions. A problem-free PR20 PCGS proof with attractive dove-gray surfaces that we offered in our West Palm Beach Summer FUN Signature in 2008 realized \$25,300. The cataloger wrote at that time that "probably less than 10% of all surviving Morgans are in the various circulated grades." Today the certified totals at NGC and PCGS combined suggest a figure closer to 15% for circulated 1895 Morgans, but the vast majority of those range from PR40 to PR58. This is a lightly handled example that retains most of the original deeply reflective proof fields. Both sides are essentially brilliant with a thin ring of golden patina around the margins. The only mark of any consequence is positioned vertically in the fields next to the eagle's beak.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 27ZR, PCGS# 7330

1895 Morgan Dollar, PR60 Important, Rare Key-Date Issue

5668 1895 PR60 ANACS. For many years, the *Guide Book of United States Coins* (also known as the Red Book) listed a business strike mintage of 12,000 coins for this date. That is no longer true, as the *Guide Book* now shows only a proof mintage for 1895 of 880 pieces. This reflects the attitude of most numismatists who believe that the business strike mintage of 1895 Morgan dollars was either fictional, and listed strictly for bookkeeping purposes; or that the coins had all been lost or destroyed, rendering the mintage figure moot.

This proof specimen displays darker toning around the peripheries. Slide marks on Liberty's cheek and a number of wispy hairlines in the reverse fields limit the grade to PR60. None of those flaws will prevent this rare, key-date specimen from finding a new owner when it appears in our upcoming Central States Platinum Night auction.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 27ZR, PCGS# 7330

1897 Dollar, Superb Gem Proof Multicolored, Deeply Reflective Surfaces None Certified Finer

5669 1897 PR68 ★ NGC. CAC. The perfect viewing angle under light is needed to fully appreciate the high aesthetic appeal and technical quality of this Superb Gem proof dollar. Viewed properly, this exquisite Morgan dollar presents unfathomably deep mirrors and generous luster throughout both sides, excellent eye appeal, and contact-free surfaces. Small areas of untuned silver-white contrast against larger patinated areas, with dusky orange and olive-green predominating against lighter blue accents. One of the finest survivors of this issue, struck to the extent of 731 pieces, and the only PR68 with the NGC Star. Census: 5 in 68 (1 in 68 ★), 0 finer (3/14).

Ex: Philadelphia Signature (Heritage, 8/2012), lot 5235, where it realized \$32,900.00. NGC ID# 27ZV, PCGS# 7332

1898 Morgan Dollar, PR67 Ultra Cameo Untoned, Deep-Mirrored Contrast

5670 1898 PR67 Ultra Cameo NGC. From a mintage of just 735 pieces, the 1898 proofs are known for careful production and high-quality examples. This Superb Gem is no exception, with thickly frosted devices that are fully struck and appear extra-dimensional against the deep-mirrored fields. Viewed from above in a strong light, the contrast is supremely white-on-black. A minor cloudy streak is seen beneath Liberty's chin.

Three pieces are graded numerically finer from this proof mintage in Ultra or Deep Cameo by NGC and PCGS combined (3/14). NGC also shows a sole PR69 example, not identified as Ultra Cameo, but it is possible because that coin was certified many years ago. PCGS# 97333

1899 Morgan Dollar, PR68+ Exceptional Preservation None Certified Finer

5671 1899 PR68+ NGC. CAC. This remarkable, high-grade proof dollar is nearly identical in preservation and toning characteristics to the 1897 proof dollar listed previously in this Platinum Night sale. They come out of the same Time Capsule Collection offered in our August, 2012 Philadelphia Signature Sale of August. The unique toning characteristics and outstanding preservation suggest both coins originated from an old-time collection, and were stored over many years in either the original Mint packaging or with a similar method such as an early kraft envelope. Each coin acquired exceptional patina masking faultless deep mirrors and multi-hued toning.

Given the ultralow P-mint production of the 1899 Morgan dollar at 330,000 pieces, the issue has long been a favorite of series aficionados, and proofs are equally popular. This PR68 specimen is among the few finest survivors of the issue, with beaming luster over compellingly attractive surfaces, largely silver-white with smoke-gray and light orange rim accents protecting underlying purple, violet, and blue tones on each side. Census: 5 in 68 (1 in 68+), 0 finer (3/14). Ex: Philadelphia Signature (Heritage, 8/2012), lot 5241, where it realized \$32,900.00. NGC ID# 27ZX, PCGS# 7334

PEACE DOLLAR

1934-S Dollar, Well-Struck MS66 The Cornerstone of a Peace Dollar Collection

5672 1934-S MS66 PCGS. The 1934-S, sporting a mintage of slightly more than 1 million coins, has long been regarded as the key to the Peace dollar series. In addition to its small mintage, many entered the channels of commerce, making Uncirculated examples difficult to obtain without patience and searching through MS65. Higher-grade pieces such as the current offering in the lofty grade of MS66 are extremely elusive, and finer specimens are unknown. Orange-gold patination at the peripheries frames the silver-gray centers and strong luster emanates from both sides. The design elements are well-struck, including the hair over Liberty's ear that is often flat on many examples. Both sides are nicely preserved. This piece will be the cornerstone of a high-grade Peace dollar collection. NGC ID# 257Z, PCGS# 7377

ERRORS

1983 Cent, MS63 Red and Brown Transitional Wrong Planchet Error Struck on Copper, Rare Example

5673 1983 Lincoln Cent — Struck on a Copper Planchet — MS63 Red and Brown PCGS. 3.05 gm. In many ways, this tantalizing mint error is similar to the 1943 cents struck on "bronze" instead of zinc-coated steel. Apparently, a small number of .950 copper/.050 zinc planchets were struck in 1983 instead of the mandated copper-plated zinc planchets (which weigh only 2.5 gms).

We have seen just two other coins with a similar error, with the most recent example an MS62 PCGS Red and Brown coin in our December, 2013 Houston Signature Sale, lot 4453, which realized \$23,500.00. This MS63 example is a notch nicer, with generous amounts of red on both sides and purple-brown accents on the high points.

Undated Off Center Half Dollar, PR65 Mint State Franklin on a Proof Quarter Flan

5674 Undated Franklin Half Dollar — Struck 65% Off Center on a Quarter Planchet — PR65 PCGS. A polished planchet intended for production of proof quarters found its way to the press being used to produce Uncirculated Franklin half dollars, creating a remarkable error. The strike was about 65% off-center at 5 o'clock, yielding the back of Franklin's head, with the letters LIB on the obverse. The reverse shows the lower left corner of the bell, with HALF and E PLURIBUS UNUM, perhaps a fitting motto for this one-of-a-kind coin. Although there is no evidence of a date or mintmark, the polished proof planchet identifies this as a Philadelphia Mint product, issued between 1950 and 1963. Satin ivory surfaces of the Franklin design show brilliant luster with a faint trace of champagne toning.

1976 Double Denomination Error, MS64 Ike Dollar Struck on a 1976 Quarter

5675 1976 Type One Eisenhower Dollar — Double Denomination, Overstruck on a 1976 Quarter — MS64 NGC. Bicentennial coinage was only struck in 1975 and 1976, and double denomination examples of the Bicentennial types are rare. This is a lustrous piece with light peripheral tan toning. The profiles of wartime generals Washington and Eisenhower are on the same side and aligned 180 degrees opposite each other. The drummer from the undertype is partially visible within the Liberty Bell and moon devices. A search through our online auction archives, which extend back to 1993, fails to locate any prior appearances of this spectacular double denomination type combination. Per the consignor, the only other known Ike dollar on a struck quarter (dated 1973) was sold by private treaty for more than \$32,000.

Stunning Reverse Brockage Gold Dollar Type Two, AU55

5676 Undated Type Two Gold Dollar — Full Brockage on Reverse — AU55 PCGS. One of the most extraordinary lots in the auction, this dateless example has a normal Type Two gold dollar obverse but an incuse mirror image (brockage) on the reverse. Gold-orange surfaces are lightly rubbed, as if the coin had been carried as a pocket-piece for a brief time. Errors on gold coins are extremely elusive, and when found, tend to be minor (such as a slight clip or off-center strike). To have a full, clear brockage on a Type Two gold dollar is an exceedingly rare delight, and the knowledgeable collector of error coins will bid accordingly.

Ex: Pittsburgh Signature (Heritage, 10/2011), lot 4605, which realized \$54,625.

Perfect Brockage Obverse 1874 Gold Dollar, MS62

5677 1874 Gold Dollar — Mirror Brockage on Obverse — MS62 NGC. *Ex: Byers Collection.* A remarkable error gold coin that shows a perfect brockage of the reverse on the obverse. The story of this error began when an 1874 gold dollar (not the present coin) stuck to the obverse die after it was struck. A new planchet (to become the present lot) was then fed in, correctly centered, and struck between the reverse die and the reverse of the previously struck coin. The brockage shows nearly complete detail, down to the veins of the cotton leaves. The brockage surface is mattelike, as made, while the reverse field is prooflike. Minimally abraded and highly desirable. Ranked #9 in the Whitman reference *100 Greatest U.S. Error Coins*, where it is described as the only known first-strike brockage on a gold coin. It is listed as #1 in the Brockages chapter of *Mike Byers' World's Greatest Mint Errors*.

**1904 Double Eagle, MS63
Struck 15% Off Center
#7 in 100 Greatest U.S. Error Coins**

5678 1904 Liberty Double Eagle — Struck 15% Off Center — MS63 PCGS. The 2010 Whitman reference *100 Greatest U.S. Error Coins* ranks this remarkable double eagle as #7, the highest rank of any off-center error. The authors (Nicholas P. Brown, David J. Camire, and Fred Weinberg) note that the coin was discovered in Geneva, Switzerland, in the early 1990s. It is the only known off-center double eagle, although a couple of uncentered broadstrikes of that denomination exist.

The authors add, “it made its first appearance at auction in 1993 and ... resided in a private collection for 15 years before changing hands again, and is now in another prominent collection of U.S. Mint errors. As would be expected, the rarity of an off-center gold coin corresponds to its size and denomination. There are 8 to 10 known off-center gold dollars, two or three Liberty quarter eagles, six to eight Indian quarter eagles, four to five Liberty half eagles, and three to four Liberty eagles known.”

In the 2009 Mike Byers reference *World's Greatest Mint Errors*, the present coin is ranked number 1 in the category of Off-Center Strikes (Chapter 18). Byers wrote, “this incredible Liberty double eagle is the farthest off-center error known for a United States gold coin. It is struck approximately 15% off center at [toward] 5 o'clock.” Byers lists the value as \$250,000.

The off-center strike affects S OF AMER, with the tops of those letters off the flan. The reverse peripheral legend exhibits the bifurcation toward the rim typical of an off-center error, since no collar die is present to restrain metal flow toward the border. The orange-gold surfaces are lustrous and only lightly abraded for the MS63 level. The strike is bold and the eye appeal is excellent.

GOLD DOLLARS

1855 Type Two Gold Dollar, MS64 Popular, Brief Design Variation

5679 1855 MS64 PCGS. Struck from boldly clashed dies, this is a highly lustrous example of the 1855 Type Two gold dollar, showing attractive orange-gold toning and only minor surface marks. Market demand for this issue is driven by the brevity of the Type Two variety, only produced for three years, and for only two of those years at the Philadelphia Mint. The mintage figure of 758,269 coins for the 1855 date is around 25,000 pieces lower than that of the 1854, and the 1855 is actually slightly scarcer than its counterpart from the previous year. NGC ID# 25C4, PCGS# 7532

1855 Gold Dollar, MS65 Scarce and In-Demand Type Two Design

5680 1855 MS65 PCGS. The scarcity of the 1854 and 1855 Type Two gold dollars is attributable, if rather indirectly, to the historic California Gold Rush of the late 1840s-early 1850s. Both the gold dollar, introduced in 1849, and the twenty dollar or double eagle, commercialized in 1850 with an identical obverse portrait of Liberty, were the byproduct, new coinage denominations intended to absorb some of the vast influxes of the precious metal to the nation's mints.

The double eagle was an instant hit — but the dollar denomination is one that the U.S. Mint, 165 years later, has yet to get right.

The first gold dollars, the so-called Type One coins, were made from the 1849 debut year through 1854, at a total of five different mints. Even though the coins were too easily lost, the gold dollar series managed to endure for 40 years as a denomination, until 1889, with three major design changes along the way. Soon after the series began, vast inflows of newly mined California gold made silver prices jump in relation; minor silver coinage became worth more as bullion than as currency and soon disappeared from circulation. The gold dollars helped fill the gap, felt most crucially through 1853, when all .900 fine silver coinage (except for the silver dollar) saw its net weight reduced.

The gold dollars were redesigned in 1854 with an Indian Princess design, a greater diameter, and thinner planchets. Mint Engraver James B. Longacre, unfortunately, placed the higher relief head of Liberty on the obverse opposite the central two digits of the date on the reverse, which usually failed to strike up properly. Many Type Two gold dollars show either strike weakness, clashed dies, or both. This Gem shows neither softness of strike nor evidence of die clashing. The surfaces are remarkably smooth and lustrous with a tinge of reddish patina. Population: 42 in 65 (1 in 65+), 17 finer (3/14). NGC ID# 25C4, PCGS# 7532

1856-S Gold Dollar, MS63 Only Type Two Issue of the Year

5681 1856-S Type Two MS63 PCGS. The notation in our Short Description field just preceding is one that is “redundant but important,” as all of San Francisco’s gold dollar output — a meager 24,600 coins — was of the coveted (and fleeting) Type Two variety. In addition, no other Type Two gold dollars were coined at any U.S. mint in 1856, as the Philadelphia and Dahlonga gold dollars struck were of the Type Three design. The effects are twofold: Not only is the 1856-S a requirement for a complete mintmark or year set of Type Two old dollars, but the S mintmark gives the 1856 Type Twos optimal collectibility.

The 1856-S Type Two is also an issue that is seldom seen in Mint State; most are lightly circulated. This Select example certified by PCGS offers rich orange-gold luster on surfaces that show light die clashing on each side, with some small die cracks on the obverse. The strike is quite sharp, the eye appeal top-notch given the minimal contact marks. Population: 6 in 63, 2 finer (3/14). NGC ID# 25C8, PCGS# 7536

1870-S Gold Dollar, MS65 Last San Francisco Gold Dollar Issue

5682 1870-S MS65 NGC. This is the final gold dollar issue of the San Francisco Mint, and an extremely important collecting opportunity. Among issues of this date and mint, we find the following: dimes are collectible, silver dollars are rarities, gold dollars are collectible, quarter eagles are collectible, three dollar gold is unique, half eagles are scarce, eagles are rare, and double eagles are collectible. A set of five gold denomination coins (without the three-dollar piece) represents an attainable goal. This is a splendid and gorgeous Gem with fully brilliant yellow-gold luster. The fields are prooflike and the devices are frosty. A few light surface marks are noted. NGC has not graded any finer examples of this issue. Census: 3 in 65, 0 finer (3/14). Ex: *FUN Signature Sale (Heritage, 1/2005), lot 30392*. NGC ID# 25D7, PCGS# 7570

PROOF GOLD DOLLARS

1869 Gold Dollar, PR65 Cameo Tied for Finest-Graded at PCGS

5683 1869 PR65 Cameo PCGS. This proof issue had a tiny mintage of 25 pieces, and the number of survivors ranges from 14 to 18 coins, depending upon the reference source consulted. PCGS estimates that 14 to 16 examples are extant, and report eight grading events for this date. Two coins, including the present piece, have been rated by PCGS at PR65 Cameo, with none finer (3/14).

This is an impressive Cameo Gem proof coin with lovely yellow-gold color and crisply struck design elements. The surfaces are clean and carefully preserved, lacking even minuscule signs of contact or improper handling. A few raised die striations on the reverse are certainly not distracting, and have been seen before on other examples of this proof issue. NGC ID# 25EC, PCGS# 87619

1881 Gold Dollar, PR66 Cameo The Pittman Specimen

5684 1881 PR66 Cameo NGC. Ex: Pittman. Out of 87 proofs struck, a number are unknown today, and many more prooflike pieces are masquerading as true proofs. This Premium Gem, on the other hand, is a coin that leaves little doubt as to its status. Intense contrast between faintly textured lemon-yellow mirrors and frosted, sharp devices grants this coin its captivating cameo effect. Impressively preserved with just a few tiny faults visible under close scrutiny, and the sole finest Cameo example known to NGC (3/14).

Ex: *John Jay Pittman I* (David Akers, 10/1997), lot 919. NGC ID# 25ES, PCGS# 87631

1881 Indian Princess Head Gold Dollar PR66 ★ Ultra Cameo

5685 1881 PR66 ★ Ultra Cameo NGC. CAC. Just 87 gold dollar proofs were made in 1881, but over the years high quality, prooflike business strikes have been mistaken as proofs and caused confusion. David Akers pointed out true proofs have an unfinished area to the left of D in DOLLAR, as demonstrated by this immaculate example.

Deeply mirrored with thickly frosted devices, this glittering, black-and-gold example is an unquestioned proof — a fully struck Premium Gem with impressive visual appeal. It is likely one of the five finest certified by NGC according to the most recent report. Census: 5 in 66 Ultra Cameo (2 in 66 ★ Ultra Cameo, 1 in 66+★ Ultra Cameo), 2 finer (2/14). NGC ID# 25ER, PCGS# 97631

EARLY QUARTER EAGLES

**1804 BD-2 Quarter Eagle, MS62
Late Die State, 14 Stars Reverse**

5686 1804 14 Star Reverse MS62 PCGS. BD-2, R.4. Bass-Dannreuther Die State c/a, with obverse die cracks from the rim to the bust right of the 4, and behind the head from the hair upward to star 7. John Dannreuther writes: "The only example seen is the ANS coin." Publication of that reference led to the discovery of a few more late die state pieces, although examples are still rarely encountered. This example is the fifth late die state piece we have handled, and it is far finer than any of the previous four pieces that were all graded AU.

Although not a "terminal" die state, meaning a state that would cause the die to be retired, this is the latest die state known to Dannreuther, or to us. In his text, Dannreuther implies that 80% of 1804 14 Stars quarter eagles are early state coins from a perfect obverse die, and that just under 20% are middle die state coins with the crack right of the 4 but no trace of the crack behind the head. We suggest that only a dozen, perhaps fewer, of the late die state coins with both die cracks exist today.

Only 25 1804 quarter eagles are graded Mint State at PCGS and NGC, combined. Those coins include 14 certified as MS61, nine graded MS62, and two called MS63. Those grading events certainly include a small number of resubmissions. This splendid green-gold example has sharp central details with minor adjustment marks on the lower left reverse that create weakness on a few of the stars. Population: 7 in 62, 2 finer (3/14). NGC ID# 25F8, PCGS# 7652

1807 Quarter Eagle, XF40 Favorite Date for Early Series Type

5687 1807 XF40 PCGS. BD-1, R.3. This date is often the favorite candidate for early quarter eagle type. Although the approximate mintage of 6,812 seems small, the date is the most often-seen for type because all the other mintages in the series are even less. This example displays green-gold surfaces with pleasing orange-gold accents. Moderate circulation defines the grade, and softens the severity of any abrasions. Remaining mint luster at the margins and within some of the devices provides nice eye appeal. Attractive XF early gold is challenging to find, making this piece especially desirable for potential bidders. PCGS has certified just 14 XF40 examples, and NGC just two pieces more (3/14). NGC ID# 25FC, PCGS# 7656

PLATINUM NIGHT

PROOF CLASSIC QUARTER EAGLE

1836 Classic Head Quarter Eagle, PR66 Ultra Cameo One of Four Known With the Second Head of 1837 Ex: Parmelee, Mills, Woodin, Eliasberg

5688 1836 PR66 Ultra Cameo NGC. Second Head of 1837, Variety 15, R.7 as a proof. The 1836 Classic Head quarter eagle is very rare in proof format. NGC and PCGS have combined to certify 12 coins in a variety of grades and die varieties (3/14), but we believe this total includes several resubmissions and crossovers. Our roster below includes just seven specimens we have been able to locate, including two in institutional collections.

No records were kept of proof mintages in the years before the Mint started its commercial proof set offerings in 1858, but the totals were always small. In the 1830s, proofs were only struck to order, the most famous instance being the 1834 diplomatic presentation proof sets requested by Secretary of State John Forsyth that included the famous Class I 1804 dollars. Dr. Robert Loewinger outlined the striking process on page three of his *Proof Gold Coinage of the United States*:

“Early proof gold was made by using the screw press, polishing pre-existing (Business Strike) dies, burnishing the planchets (coin blanks), and striking the blank at least twice. The quality of these early proof coins varied substantially depending upon the polishing of the dies and blanks, condition of the dies, and number of blows to the blank. Since these early Proof gold coins were made to order and were made by polishing the regular Business Strike dies, several dies could have been utilized to make Proofs of the same year (e.g. the Classic Head Proof 1836 quarter eagle was made with three different dies).”

The seven specimens in our roster were struck from three different die pairs, as noted by Dr. Loewinger. Two of these varieties were classified as the Head of 1834, and the Head of 1835 by Walter Breen in his *Encyclopedia of United States and Colonial Proof Coins*. Research by later numismatists, like David Akers and Mark Borckardt, resulted in several discoveries and changes in nomenclature. Breen's Head of 1834 is now classified as the Second Head of 1837, and the third variety, unknown to Breen, is called the Small Head of 1834. The coin offered here represents the Second Head of 1837 (Breen's Head of 1834), designated Variety 15 by Mark Borckardt in his work *Classic Head Quarter Eagles*. The variety is identified by the Block 8 in the date, the berry on the olive branch, and the shorter first curl above the coronet. Three other coins in the roster are from this variety, making it the most available proof variety of the date.

The present coin claims the most illustrious pedigree of any of the known specimens. It first appeared in the collection of George Seavey, and was exhibited by him at the February 4, 1869 meeting of the Boston Numismatic Society. It was later owned by famous numismatists Lorin G. Parmelee, John Mills, William H. Woodin, and Louis Eliasberg, among others. The coin possesses stunning eye appeal to complement its high technical grade. The richly frosted devices contrast boldly with the deeply mirrored fields, creating an intense cameo effect. The design elements are sharply detailed in most areas, with just a touch of softness on Liberty's hair below the coronet and the shield border. The well-preserved copper-gold surfaces show only minor signs of contact. It may be years before a comparable specimen becomes available.

Roster of 1836 Proof Quarter Eagles.

1. PR66 Ultra Cameo NGC, Second Head of 1837. George Seavey; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 553; Lorin G. Parmelee, who purchased Seavey's collection intact before the date of the sale; Parmelee Collection (New York Coin & Stamp, 6/1890), lot 1055; Harlan Page Smith; John G. Mills Collection (S.H. & H. Chapman, 4/1904), lot 550; William H. Woodin Collection (Thomas Elder, 3/1911), lot 956; John H. Clapp; purchased from the Clapp Estate in 1942 by Louis E. Eliasberg, Sr., in a blockbuster sale of the entire Clapp collection via Stack's; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 103; Harry W. Bass, Jr.; Bass Collection, Part III (Bowers and Merena, 5/2000), lot 92; A Gentleman's Collection (American Numismatic Rarities, 6/2005), lot 1007, realized \$247,250; Baltimore Auction (Stack's Bowers, 3/2012), lot 4264, realized \$287,500; **the present coin.**

2. Choice Brilliant Proof, Second Head of 1837. Col. E.H.R. Green; Jerome Kern Collection (B. Max Mehl, 5/1950), lot 26; Abe Kosoff; 55th Anniversary Sale (Stack's, 10/1990), lot 1674.

3. PR66 Deep Cameo, per Jeff Garrett and Ron Guth, Second Head of 1837. Smithsonian Institution.

4. Proof Uncertified, Second Head of 1837. Harry Osborn Cureton; purchased by the British Museum in 1845, reported by Saul Teichman and John Dannreuther.

5. PR66 Ultra Cameo NGC, Small Head of 1834. First seen in the Stone House Coin Shop, per Walter Breen; 68th Anniversary Sale (Stack's, 10/2003), lot 2072; Dr. Robert Loewinger Collection (Heritage, 1/2007), lot 3104, realized \$253,000.

6. PR64 Cameo PCGS, Small Head of 1834. World's Greatest Collection (Numismatic Gallery, 1/1946), lot 103; Memorable Collection (Numismatic Gallery, 3/1948), lot 97; John Jay Pittman Collection, Part II (David Akers, 5/1998), lot 1720; Lucien M. LaRiviere Collection, Part III (Bowers and Merena, 5/2001), lot 171; Central States Signature (Heritage, 4/2012), lot 5214, realized \$195,500.

7. PR66 ★ Ultra Cameo NGC, Head of 1835. A specimen from a complete proof set purchased directly from the Mint, preserved for generations by a Philadelphia area family; Brian Hendelson; Midwestern collector; Rarities Sale (Bowers and Merena, 7/2002), lot 577; Tacasyl Collection (Bonhams, 9/2013), lot 1002, realized \$409,500. PCGS# 7712

LIBERTY QUARTER EAGLES

1840-O Quarter Eagle, MS62 Important First-Year Issue One of the Finer-Known Examples

5689 1840-O MS62 PCGS. **Variety 2.** Christian Gobrecht's Liberty Head quarter eagle design was introduced in 1840, being produced at the mints in Philadelphia, Charlotte, Dahlonega, and New Orleans. The mintage figure from New Orleans was the highest with 33,580 examples struck, but this issue has not proven to be a common one. In fact, it should be considered rare, especially in mint condition.

This attractive piece is softly struck in the centers, as always, with pleasing luster and greenish-gold toning that turns to deeper apricot color near the borders. A group of russet specks are noted on the upper left obverse. A few wispy marks are seen on each side, mainly in the fields. Among the better-known examples, it is one of seven coins graded MS62 by PCGS, with none finer. NGC has seen five MS62 examples, while grading just one piece even finer at MS63 (3/14). NGC ID# 25GD, PCGS# 7720

1844-D Variety 5-I Quarter Eagle, MS63 Ex: Pittman Collection

5690 1844-D MS63 NGC. **Variety 5-I.** Ex: Pittman. An exceptional Select Mint State piece from the Pittman Collection, this coin is one of three MS63 examples that Doug Winter specifically lists as the finest known to him. Both sides exhibit brilliant and frosty yellow luster with hints of orange toning in the protected areas of the reverse. The strike is well above average, with bold clash marks visible on the reverse. No finer pieces have been certified at NGC or PCGS. Census: 6 in 63, 0 finer (3/14).

Ex: *Melish Collection* (Abe Kosoff, 4/1956), lot 1164; *John Jay Pittman* (David Akers, 5/1998), lot 1748. NGC ID# 25GV, PCGS# 7736

1845-D Variety 6-J Quarter Eagle, MS62 Above Average Strike

5691 1845-D MS62 PCGS. Variety 6-J. The only variety for 1845-D quarter eagles, used for the production of 19,460 coins, according to Mint records. Issued at a time of peak production for the Dahlonega Mint. That facility converted 28,000 ounces of gold into coins in 1843, and 24,000 ounces in 1845, the two highest production totals in the history of that facility.

This lovely example has a bold strike for the issue, showing weakness only over Liberty's ear and on the eagle's neck. The reflective surfaces have full yellow-gold brilliance with a hint of green. An exceptional example is one of only nine Mint State 1845-D quarter eagles that PCGS has certified. Population: 2 in 62, 2 finer (3/14). NGC ID# 25GX, PCGS# 7738

1846 Quarter Eagle, A Pleasing MS63 An Important Condition Rarity One of Three Finest Known

5692 1846 MS63 PCGS. The 1846 quarter eagle, sporting a mintage of 21,598 pieces, can be located in circulated grades with a degree of effort. Uncirculated examples, however, are a true condition rarity. The two major grading services have seen a little over 30 specimens in mint condition, none finer than MS63.

The Select piece offered in this lot is one of the three finest seen at either service. When viewed from directly overhead the partially prooflike surfaces yield a mild gold-on-black appearance. Sharply struck throughout, accentuating somewhat the field-motif contrast. The few marks are relatively light and within the parameters of the designated grade. Really a nice coin for an MS63. Population: 2 in 63, 0 finer (3/14). NGC ID# 25GZ, PCGS# 7740

1848-D Quarter Eagle, MS63 Second Finest on the Condition Census

5693 1848-D MS63 PCGS. CAC. Variety 10-O. Ex: Green Pond. Late die state with a thin crack through the M in AMERICA into the wing. The 1848-D is one of the three most obtainable Dahlonega quarter eagles. There are an estimated 275 to 325 pieces believed known with perhaps 10 to 15 pieces extant in Uncirculated.

This is one of the final Dahlonega quarter eagle issues that can be found with a good strike. This coin is very well impressed at the centers and has a fully defined hair curl above the ear of Liberty. The obverse denticles are very sharp while there is some weakness noted on the reverse denticles. The overall quality of strike is above average.

Minimally marked, rich frosty luster can be seen over both sides with a slightly granular texture. Both sides exhibit flashy orange-gold color with some splashes of lilac around the reverse border. This coin has decidedly above average eye appeal. It is well-struck and highly lustrous with pleasing color and clean surfaces. It would make a great coin for the collector who is seeking a single high grade Dahlonega quarter eagle for a type set.

Ex: Auction '80 (RARCOA's session), lot 1936, where it brought \$11,000; Dr. Arthur Montgomery Collection; George Elliot Collection / Auction '84 (Stack's session), lot 1317; Chestatee Collection / 1999 ANA Sale (Heritage, 8/1999), lot 7648, where it brought \$28,750; 1986 GNA Sale (Mid-American, 5/1986), lot 1863, unsold; Chestatee Collection; Green Pond Collection (Heritage, 1/2004), lot 1026, where it realized \$23,575. Listed in the revised Condition Census as the second finest known 1848-D quarter eagle (tied with another PCGS MS63). NGC ID# 25HC, PCGS# 7751

1850-D Variety 13-N Quarter Eagle, MS62 Tied for the Finest at PCGS

5694 1850-D MS62 PCGS. Variety 13-N. The history of American gold rushes transitioned from southeast to west at about the time this coin was struck. Georgia and the Carolinas enjoyed substantial gold production over the previous three decades, while the California gold rush was in full swing, and gold had yet to be discovered in Colorado. The Dahlonega Mint produced 12,148 quarter eagles in 1850, although most survivors are circulated. Doug Winter estimates that only three to five Mint State pieces survive.

This example appears to be a new specimen, different from any of the four pieces Winter records as the finest known to him. Typical of most, this example shows weakness at the hair line below IBER, and on the eagle's right (left facing) leg. The surfaces are bright yellow with faint field reflectivity. An exceptional example that may qualify as the finest known 1850-D quarter eagle. Population: 3 in 62, 0 finer (3/14). NGC ID# 25HJ, PCGS# 7757

**1857-D Quarter Eagle, Sharply Struck MS62
Scarce in All Grades
Ex: Duke's Creek Collection**

5695 1857-D MS62 NGC. Variety 21-N. The only known variety. Ex: Duke's Creek Collection. The 1 and 7 in the date are equally spaced between the bust and the denticles. The mintmark is high and touches the branch stem. A die crack connects the lower right side of the O in OF to the left base of the F in OF. As the low mintage of only 2,364 pieces would suggest, the 1857-D quarter eagle is very scarce in all grades. NGC and PCGS have graded fewer than 130 examples, concentrated in the About Uncirculated grade range, and 29 pieces in mint condition, none finer than MS63.

The orange-gold surfaces of this MS62 specimen are imbued with hints of reddish-rose and the design elements are sharply struck, in fact better struck than the other issues from this decade (per Winter, 2013). Only the eagle's neck, legs, and right (facing) claw are a tad soft. The scattered, minute marks do not detract in the least. Indeed, they are fewer than what might be expected for an MS62. Census: 4 in 62 (1 in 62+), 1 finer (3/14).

Ex: Dr. Arthur Montgomery Collection; Hancock and Harwell; Auction '84 (Stack's session, 8/1984), lot 1326; Hancock and Harwell; George Elliott Collection; Mid-American (5/1986), lot 1869; Leon Farmer Collection; Hancock and Harwell; Duke's Creek Collection of Dahlonega Gold, Atlanta (ANA) Signature (Heritage, 4/2006), lot 1514. This was the plate coin in the first edition of Doug Winter's book *Gold Coins of the Dahlonega Mint, 1838-1861*. NGC ID# 25JD, PCGS# 7783

PROOF LIBERTY QUARTER EAGLES

1863 Quarter Eagle, PR58 Ex: Norweb, Celebrated Proof-Only Issue

5696 1863 PR58 PCGS. From a proof-only mintage of just 30 pieces, the 1863 quarter eagle is one of the classic rarities among U.S. gold coins of any denomination. Among Liberty Head quarter eagles, only the 1841 and 1854-S emissions are considered on par with this storied date. Any offering of an 1863 quarter eagle is a noteworthy occasion for advanced collectors of this popular series.

The rarity and importance of the 1863 quarter eagle were recognized almost as soon as the coins were issued. In the sale of the John F. McCoy Collection (Woodward, 5/1864), lot 1992 featured a gold proof set of 1863. Woodward disclosed:

"1863 Proof set, with 10 Dollar Piece, and four smaller denominations. Of the Quarter Eagle of 1863, I have positive knowledge that only 30 pieces were struck; hence this coin is now one of the rarest of the series. I am also assured that the 3 Dollar Piece is scarcely less rare."

The lot realized \$72.50 to William A. Lilliendahl, a tremendous price at the time, since the coins were only minted the year before. By 1883, Harold P. Newlin estimated about the 1863 "not half a dozen of these are now known to collectors." Of course, a few more specimens have surfaced since Newlin's time. In their *Encyclopedia of U.S. Gold Coins 1795-1933*, Jeff Garrett and Ron Guth estimate a surviving population of 15-20 examples of this date in all grades. This is only the fifth time Heritage has been privileged to offer an 1863 quarter eagle in any of our auctions since 1993.

The present coin boasts an illustrious history of its own, as it was once part of the fabled Norweb Collection. Suffice it to say, inclusion in such a famous cabinet is a mark of distinction for any coin. The obviously proof fields of this specimen are only slightly dulled by handling. Some pedigree markers that link this coin to the Norweb appearance are a short horizontal scratch above 86 of the date and a few planchet voids and marks in the left and right obverse fields. Only slight friction shows on the highest points of the design, and the contact marks are consistent with a coin that has been in circulation for a short time. Population: 1 in 58, 8 finer (3/14).

Ex: Numismatic Gallery, purchased by the Norwebs on January 2, 1953; Norweb Collection Part II (Bowers and Merena, 3/1988), lot 2054, realized \$23,100; Central States Signature (Heritage, 4/2010), lot 2202, which brought \$57,500. NGC ID# 287H, PCGS# 7889

1864 Quarter Eagle, PR64 Cameo Impressively Preserved Specimen From a Scarce Civil War Issue

5697 1864 PR64 Cameo PCGS. The Civil War had a dramatic effect on coin production, and proof coins in particular may have seemed less important during those dark times. The mintage figures for proof quarter eagles between 1860 and 1865 ranged from a high of 112 pieces in 1860 to a low of just 25 coins in 1865. In 1864 50 proofs were produced, but Akers and others have speculated that many of those coins were melted as unsold.

This example is a fully-struck specimen with gorgeously deep orange-gold toning over the motifs and reddish-gold coloration in the watery fields. Expertly preserved for 150 years, this near-Gem proof is free of any obvious or distracting surface flaws. A curly lintmark, in the lower right obverse field between stars 11 and 12, may serve as a useful pedigree mark in the future. Population: 1 in 64 Cameo, 0 finer (3/14). NGC ID# 287J, PCGS# 87890

1866 Quarter Eagle, PR64 Cameo Impressive, Rare Specimen

5698 1866 PR64 Cameo NGC. CAC. This issue had a typically low proof mintage for the time of just 30 pieces, and it is likely that some of those coins went unsold and were melted. The exact number of survivors is unknown. To date, PCGS has seen eight grading events for this proof date, while NGC has recorded a total of 13 such events; including the inevitable resubmissions. Just two Cameo coins are graded finer at NGC: both of them at PR65. This is a gorgeous piece with amazing deep mirror fields and richly frosted devices. A faint pin mark behind Liberty's head may have kept this otherwise impressive example from grading even higher. Census: 4 in 64 Cameo, 2 finer (3/14). NGC ID# 287L, PCGS# 87892

1894 Quarter Eagle, PR67+ Ultra Cameo Only One Finer Coin at NGC

5699 1894 PR67+ Ultra Cameo NGC. Only 122 proof Liberty quarter eagles were struck in 1894 and probably no more than 50-70 examples survive today in all grades and conditions. Among the survivors, two are impounded in the National Numismatic Collection at the Smithsonian Institution and an unusually high percentage have been mishandled over the years.

The present coin is a magnificent Superb Gem, with razor-sharp definition on all design elements and well-preserved orange-gold surfaces that show no mentionable distractions. The frosty texture of the devices contrasts profoundly with the deeply mirrored fields to create an intense cameo effect. Eye appeal is tremendous. Census: 8 in 67 Ultra Cameo (1 in 67+ Ultra Cameo), 1 finer (3/14). NGC ID# 288H, PCGS# 97920

1907 Liberty Quarter Eagle, PR65 Cameo Final Year of the Design

5700 1907 PR65 Cameo NGC. CAC. Although saved more often than other dates by collectors because of its final-year status, still only about 100 pieces survive from an original production of 154 proofs. This glittering Gem impresses with delightful orange-gold color and nicely mirrored fields. Light mint frost covers the devices. A few delicate hairlines define the grade, although they are mostly visible only with a glass and do little to affect the strong visual appeal of this pleasing Liberty Head proof, a fitting tribute to the discontinuance of the long series. Census: 10 in 65 Cameo, 37 finer (3/14). NGC ID# 288X, PCGS# 87933

INDIAN QUARTER EAGLES

1911-D Two and a Half, MS63+ Impressive Eye Appeal

5701 1911-D MS63+ NGC. Garrett and Guth write of the 1911-D quarter eagle in the second edition of their *Gold Encyclopedia* that it is “the key to the series in every grade. It boasts not only the lowest mintage (by far), but few examples were saved at the time of issue. Most of the survivors are in lower Mint State grade, and even those often show areas of minor friction on the Indian’s cheek.” Actually, we believe that what Garrett and Guth mean here is that “most Mint State survivors are in the lower grades thereof,” as most of the survivors are actually in some grade level of AU — a level where these coins are still quite attractive and in demand by throngs of collectors. Many of the survivors are just a hair’s breadth away from Mint State, on average.

This MS63+ NGC example is far and away finer than those “average” coins, an impression that no more than a lingering glance confirms. The orange-gold surfaces are fine-grained and somewhat mattelike, well-struck throughout and showing a wire rim around the upper obverse. The Indian’s cheek and the eagle throughout are notably free of marks, although the brow of the chief shows a small mark that likely precludes an MS64. It is, however, the only singular mark on this coin, a piece with impressive eye appeal. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS64 Sharp Example of This Key Date

5702 1911-D MS64 NGC. At Heritage we are privileged to offer a range of 1911-D quarter eagles in varying grades at practically every Signature auction we conduct. This spurred our curiosity to conduct a survey concerning the total number of submissions at each service, and the average grade of those “grading events.” As of March 2014, PCGS has seen 3,204 submissions of the Strong D variety, and there are 5,066 submissions at NGC, together with an average grade of “MS58.7.” Obviously those are not all *separate coins*; the number of duplicates/resubmissions in those nearly 8,000-plus grading events is likely in the hundreds or low thousands. Even so, it becomes clear that large numbers of certified survivors cluster in the AU58 and MS62 grade levels, in particular, concordant with our own experience.

This MS64 NGC example is far finer than the usual survivor, showing original greenish-gold color throughout with the prominent wire rim around the upper obverse. The mintmark is bold and the chieftain’s cheek and brow, as well as the eagle’s forward wing area and other exposed bits, are free of mentionable contact. Both the headdress and wing feathers are well-detailed. A great example of this key date. NGC ID# 2894, PCGS# 7943

PROOF INDIAN QUARTER EAGLES

1914-D Quarter Eagle, An Exceptional MS65 The Premier Rarity in Gem and Finer Grades

5703 **1914-D MS65 NGC.** The 1914-D quarter eagle can be located without too much difficulty through near-Gem, but it is the premier rarity in the series in Gem and finer condition. NGC and PCGS have graded just 86 examples in MS65 and a solitary specimen finer (an NGC MS67). The issue is one of the most poorly struck, if not *the* worst struck, in the series. Many come with numerous marks, and many show mint-made spots.

This Gem displays coppery-gold color laced with traces of rose on its lustrous surfaces. It is much better-struck than typically seen, especially on the Indian's hair and headdress and the eagle's plumage, including that on the shoulder. The mintmark is also strong. Both sides are quite clean, lacking the marks and spots typically seen. Census: 42 in 65, 1 finer (3/14). NGC ID# 2899, PCGS# 7947

1908 Two and a Half, PR66 Needle-Sharp, Matte Finish Example

5704 **1908 PR66 NGC.** The sunken-relief details of this textured Sandblast Proof are outstanding, as are the smoothly stippled fields surrounding the deeply impressed devices. As the first year of the controversial matte finish and the Indian Head design, several high-grade proofs were saved by collectors. In general, the public disliked the new matte finish and never did embrace the format. Today, the proofs are highly valued as examples both of the date and the style.

This attractive Premium Gem is deeply toned and displays the khaki-gold coloration typical of the matte finish proof format. The surfaces are wholly unreflective and softly lustrous by design. This example appears completely free of blemishes or bright spots that would indicate any contact marks. Census: 37 in 66, 31 finer (3/14). NGC ID# 289G, PCGS# 7957

1908 Indian Quarter Eagle, PR68 Rare Matte Proof Issue Single Finest Certified Example

5705 1908 PR68 NGC. The innovative incuse Indian Head design for the quarter and half eagles made its debut in 1908, to mixed reviews. The Mint also introduced the matte proof format that year, with dark granular surfaces, much different from the reflective brilliant proofs collectors were used to. The proof mintage was large for the quarter eagle, at 236 pieces, but collectors did not like the matte format and it is likely that many sets went unsold and were melted at year's end. The issue is still the most available proof of the series, with a surviving population of 125-165 examples in all grades. The date is particularly popular as a type coin. Jeff Garrett and Ron Guth opine, "For the type collector, the 1908 Proof makes a perfect choice in terms of availability, quality, and being the first year of issue."

The 1908 proofs began appearing in auctions at an early date. A specimen in the Charles W. Cowell Collection (B. Max Mehl, 11/1911), lot 157 was described as:

"1908 The new type with large Indian head facing left, the word LIBERTY above and date below. Six stars before, and seven behind head. Reverse, Eagle standing to left. Above UNITED STATES OF AMERICA below 2 1/2 DOLLARS. E PLURIBUS UNUM in three lines in field to left of eagle, and IN GOD WE TRUST in four lines to right of eagle. The entire design is incused (stamped or sunk in). **Sand Blast Proof**, (dull finish) wire edge. Very rare."

Apparently, Mehl felt it necessary to describe the Indian Head design three years after it was launched, despite the fact that many specimens of this issue were saved by the general public for their novelty value.

The present coin displays the usual dark surfaces, with a noticeable overlay of reddish patina. A full wire rim surrounds both sides. The surfaces appear technically perfect, with none of the shiny contact spots often seen on this issue. Eye appeal is spectacular. This piece is the single finest-certified example at either of the leading grading services. Census: 1 in 68, 0 finer (3/14). NGC ID# 289G, PCGS# 7957

THREE DOLLAR GOLD PIECES

1854-D Three Dollar, AU50 Important Key Issue

5706 1854-D AU50 NGC. Variety 1-A. Ex: Richmond Collection. This Dahlonega issue has a great deal to offer. It has a tiny mintage of 1,120 coins, which would be enough in itself to ensure its perpetual desirability among collectors. But wait: this is also the sole three-dollar production from the Georgia mint. Now the even greater significance of this issue becomes evident, when it emerges as the key-date for Dahlonega type specialists.

This coin displays the usual striking softness for a Dahlonega product, with perhaps a tad better-than-average definition over the centers. Bright yellow-gold color over the obverse turns to lighter antique-gold coloration across the reverse. Superficial marks and pinscratches confirm the stint in circulation served by this important example.

Ex: *Richmond Collection I* (David Lawrence, 7/2004), lot 1260. NGC ID# 25M4, PCGS# 7970

1870 Three Dollar Gold, MS63 Pleasing, Impressive Example

5707 1870 MS63 PCGS. Although not a rare date, the 1870 is certainly challenging for the high-grade collector, as it becomes conditionally scarce any finer than MS62. The current Select Mint State example is one of just 10 such pieces at the two major services combined, and a mere five Choice Mint State examples are finer (not counting an MS65 Prooflike coin graded by NGC within the past few years).

This is a pleasing and impressive example with well-struck devices, shimmering mint frost, and lovely yellow-gold and antique-gold toning. A few small marks are noticeable, but they are not out-of-context for the grade. Population: 7 in 63 (1 in 63+), 2 finer (3/14). NGC ID# 25MS, PCGS# 7991

1880 Three Dollar, Lustrous MS64 Rich, Slightly Variegated Patina

5708 1880 MS64 PCGS. The 1880 three dollar had a mintage of 1,000 business strikes (plus 36 proofs). It is predictably among the rarest of all issues in this scarce, low-mintage series. Only 140 to 175 coins are estimated known today in mint condition, most in lower grades. This is a remarkably attractive coin whose thick mint luster serves to enhance the rich reddish patina seen overall with lilac localized over the portrait of Liberty and two vertical streaks on the reverse. Sharply struck throughout with minimal marks. Population: 57 in 64 (1 in 64+), 22 finer (3/14). NGC ID# 25N3, PCGS# 8002

1880 Three Dollar Gold, MS65 Only 1,000 Pieces Struck

5709 1880 MS65 NGC. Only 1,000 business-strike three dollar gold pieces were struck in 1880, making the date quite elusive today. Paradoxically, this issue is more difficult to locate in circulated grades than Mint State. This may be due to the efforts of Thomas Elder, Ben Green, and John A. Beck, who all took pains to preserve multiple examples in high grade. The present coin is a delightful Gem, with well-detailed design elements and vivid yellow-gold surfaces that show a mix of vibrant mint luster and prooflike reflectivity on both sides. No mentionable distractions are evident and eye appeal is outstanding. Census: 16 in 65 (1 in 65 ★), 5 finer (3/14). NGC ID# 25N3, PCGS# 8002

1885 Prooflike Three Dollar, MS64 Brightly Mirrored Fields

5710 1885 MS64 Prooflike NGC. Only 801 circulation strike 1885 threes were produced, and predictably Prooflike coins are occasionally available. It appears the obverse die for proofs from this year was then used to strike the limited run of business strikes. Some, this piece included, show faint evidence of the orange-peel texture around the margins that one would expect on proof gold from this era. The fields on this piece are remarkably deep with slightly contrasting, frosted devices. Medium orange-gold color covers each side. Marks are virtually non-existent, but there is an as-struck streak of porosity in the planchet seen on the upper-left of the reverse. Census: 6 in 64 Prooflike, 6 finer (3/14). PCGS# 78007

1889 Three Dollar, MS66 High-Grade Last-Year Series Issue

5711 1889 MS66 PCGS. The 2,300 circulation strikes for the final-year 1889 three dollar was a minuscule amount, but ample numbers were saved by contemporary numismatists who foresaw the series' demise. This makes the 1889 doubly popular for type purposes, given its last-of-series and available-in-high-grade status. This Premium Gem displays many virtues, including essentially pristine preservation, a nice, bold strike, and attractive peach-gold color on surfaces that show some tendencies toward prooflike reflectivity under the light patina. Population: 11 in 66 (1 in 66+), 2 finer (3/14). NGC ID# 25NC, PCGS# 8011

PROOF THREE DOLLAR GOLD PIECES

1859 Three Dollar, PR65 Deep Cameo
Remarkable Quality
Only Deep Cameo in Any Grade at PCGS

5712 1859 PR65 Deep Cameo PCGS Secure. Given the near-immaculate preservation and overall quality of this proof three dollar gold, a glance at the surfaces would like lead one to believe it dated to the decade of the 1880s, when the three dollar gold pieces were being struck and, more importantly, saved, in much larger quantities.

But the presence of the 1859 date on this Deep Cameo Gem proof certified by PCGS vastly increases its rarity.

Nominal totals were reportedly struck of the issue to begin with, some 15,589 business strikes complementing a proof production of 80 coins — with perhaps not all of the latter sold, a circumstance in which the Mint's normal practice was to quietly melt the coins unsold at year-end and never adjust the reported totals.

In any case, the Bowers series reference on this series estimates a proof survival of only 11 to 13 pieces. Those figures may not be far off, as this coin is, notably, the only Deep Cameo in any grade at PCGS, which has also seen the following graded: in Cameo, one PR64+, two PR65; and in non-Cameo, three PR65. NGC has seen two PR65 Ultra Cameo; in Cameo, one each in PR61, PR63, and PR65, along with two PR66, one PR66+, and one PR67; and in non-Cameo, one each in PR62 and PR64 (3/14). These 18 *grading events* may well represent as few as a dozen or so *separate coins*.

This is a coin of remarkable quality and high visual appeal. The surfaces are canary-yellow, yet the deeply reflective fields easily “fade to black” under a loupe, contrasting markedly against yellow-gold devices. The obverse die was also used in 1858 for proof strikes, both showing a diagnostic forward portion of the first plume feather missing, due to die polishing. The obverse left field shows something that appears to be field chatter to the unaided eye, but with a loupe it is clearly light planchet porosity that does not affect the technical grade or the aesthetic appeal of this top-notch piece. Population: 1 in 65 Deep Cameo, 0 finer (3/14). NGC ID# 289X, PCGS# 98022

1886 Three Dollar, PR64 Cameo Gorgeous, High-End Specimen

5713 1886 PR64 Cameo PCGS. CAC. As sometimes happens, the two major grading services combined report a higher number of coins graded from this issue than were actually produced. Currently, the *Guide Book* and Garrett/Guth's gold *Encyclopedia* both give 142 pieces as the mintage figure for this proof date, while NGC and PCGS report a combined total of 153 coins graded; merely affirming the fact that graded population figures must be taken with a grain of salt.

This is a gorgeous specimen with fully struck, sharply frosted motifs and deeply reflective, glassy fields. Surface flaws are minimal, and none are readily apparent that might explain the lack of a Gem or finer assessment by PCGS. Population: 5 in 64 Cameo, 8 finer (3/14). NGC ID# 28AV, PCGS# 88050

EARLY HALF EAGLES

1795 Small Eagle Five, BD-1, AU50 Likely the First U.S. Gold Variety Struck

5714 1795 Small Eagle AU50 NGC. BD-1, R.5. Bass-Dannreuther Die State b/a. The flag of the 5 overlies the drapery and stars 1 and 15 are embedded in the lowest curl and the bust tip, respectively. Die rust is always a feature of the obverse of BD-1, which early-gold specialist Harry Bass, Jr. (and apparently John Dannreuther as well) believed was the first of the 12 1795 Small Eagle die varieties. The reverse shows four berries in the wreath, two inside and two outside, and the palm leaves join the base of U and touch N in UNITED. This yellow-gold piece shows some chatter in the fields, evidence of light circulation, but mint luster remains around parts of the protected device edges. A rim bump appears at 6:30 on the reverse.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25ND, PCGS# 8066

1795 Five Dollar, Lustrous AU55 Small Eagle Reverse, BD-3

5715 1795 Small Eagle AU55 PCGS. BD-3, High R.3. Bass-Danneuother Die State b/b. An even dozen die pairings were used to strike the 1795 Small Eagle five dollar coins, the first gold to flow from Mint presses once various bureaucratic hurdles were jumped. (There are also three 1795 Large Eagle die pairings known, struck in 1797 or 1798.) The reported production for the first-year half eagles was only 8,707 pieces, so we may conclude that an “average die pair” — not that such a thing really exists — struck about 725 coins (ignoring the very real possibility that 1795-dated dies with a Small Eagle reverse may have been used well into 1796 or 1797). Those 12 Small Eagle die pairings were the product of matings between eight obverse and nine reverse dies. (And remember, that figure of 725 coins per average pair is *original production*, not *survival*.)

The Mint also struck 5,583 eagles, reportedly, in 1795 of all varieties; in the first years of gold coin production at the Mint, the art of perfecting and hardening steel coinage dies was in its infancy. Dies cracked, they broke, they often failed sooner rather than later, and to early Mint personnel it mattered not a whit what the date read on the die (or whether it had a Small Eagle or Heraldic Eagle reverse) — all that mattered was whether a die was *serviceable* or not, and could it be *made* so, if not.

Of those 12 Small Eagle varieties, the BD-3, while still quite scarce, is the most available of these first Mint gold coins. The date is widely spaced with the 5 overlying the drapery, star 1 points upward to the lowest hair curl, and star 11 touches both the Y in LIBERTY and star 12. The reverse has the topmost olive leaf running past the N to near the I in UNITED, and the wreath opening is between the S and O. (This was the sole use of this reverse die.)

This Choice AU PCGS example offers much luster over greenish-gold surfaces that show scattered, mostly small marks under a loupe. A few planchet adjustment marks are confined to the reverse, above TATES. Tiny die cracks run on the obverse from the rim to atop star 12, and on the reverse from the rim to E in UNITED. This piece represents an excellent opportunity for type collectors to acquire this relatively available variety of 1795 half eagle in high grade. NGC ID# 25ND, PCGS# 8066

1795 Half Eagle, Unc Details First U.S. Gold Issue, BD-3 Variety

5716 1795 Small Eagle — Obverse Repaired — NCS. Unc Details. **BD-3, High R.3.** Bass-Dannreuther Die State c/b. The Capped Bust Right, Small Eagle half eagles of 1795 were the first gold coins produced by the United States Mint. A small mintage of 8,707 pieces was struck, with 12 die varieties known for the date and type (three more varieties were struck with leftover 1795-dated dies in later years, using the Heraldic Eagle reverse). The coin offered here represents the BD-3 variety that shows star 11 joined to Y in LIBERTY and the upper leaf ending at the foot of I in UNITED. The BD-3 variety probably accounted for 2,000-3,000 pieces of the reported mintage and the surviving population numbers 175-225 examples in all grades.

The present coin exhibits well-detailed design elements that show just a touch of softness on the eagle's leg and head. The bright yellow-gold surfaces are lightly abraded, but show signs of tooling on the obverse. A few faint planchet adjustment marks are evident on the bust. A still-attractive example of our nation's earliest gold coinage. NGC ID# 25ND, PCGS# 8066

1796/5 Half Eagle, VG10 Small Eagle, BD-1 Variety

5717 1796/5 Small Eagle VG10 PCGS. **BD-1, High R.4.** Bass-Dannreuther Die State a/b. Only 6,100 Capped Bust Right half eagles were struck in 1796, with a single die variety known for the date. All the coins were struck using a leftover obverse die from 1795, with the date altered by punching a 6 over the 5. The reverse was also used previously in 1795 to strike the BD-12 variety of that date. Probably no more than 80-100 examples survive today in all grades.

The present coin is evenly worn, with some interior detail in Liberty's hair still intact. The light orange-gold surfaces show some faint planchet adjustment marks on the bust, but only minor abrasions are present. A still-attractive specimen of this scarce issue. Population: 1 in 10, 27 finer (3/14). NGC ID# 25NE, PCGS# 8067

1798 Large Eagle, Small 8 Five, AU53 Very Rare BD-6 Variety

5718 1798 Large Eagle, Small 8 AU53 PCGS. BD-6, R.6. Bass-Dannreuther Die State a/b. Normal 8. PCGS calls this Large Eagle variety "Small 8" to contrast it with the more-blatant Large 8 varieties (BD-2, BD-4, and BD-5), but in reality John Dannreuther's "Normal 8" terminology is more apt, as the 9 and 8 in the date are about the same size (and not perceptibly "small"). The top of the 8 just touches the bust (differentiating it from the other "Small 8" varieties, BD-7 and BD-8), star 1 is distant from the hair curl, and the Y in LIBERTY is free of the star. The reverse stars are in an irregular cross pattern, and the bottom-left serif of the first A in AMERICA nearly touches a wing feather.

This is a very rare variety for which John Dannreuther estimates that 30 to 40 survive today. The greenish-gold surfaces display much luster remaining, despite a sprinkling of light abrasions. Near-horizontal planchet adjustment marks appear in the central reverse, and there is a single mentionable scratch beneath TAT. Opportunities to acquire rare-variety early gold are becoming increasingly fleeting in this strong market. NGC ID# 25NP, PCGS# 8079

1799 Large Stars Five, BD-8, AU55 Very Rare Variety, Advanced Die States

5719 1799 Large Stars Reverse AU55 NGC. BD-8, R.6. Bass-Dannreuther Die State b/b (post-terminal). This piece is possibly the last coin struck from this very rare die pairing. The Narrow Date Bass-Dannreuther 4-F die pairing show the narrow date evenly spaced with all digits well-aligned, star 9 touching the Y and the 1 in the date just barely free of the curl. The Large Stars reverse of this very rare variety shows the right foot of the A touching a claw and the last S in STATES resting on a single cloud. A die crack bisects the obverse from the rim, through 7, (faintly, given its opposition to the crumbling reverse) to the L of LIBERTY. The reverse shows a die in a state past that described as terminal in Bass-Dannreuther. Not only are the three die cracks in BD as described (the third through the first T in STATES, not the second), but the area around 5:30 on the reverse shows the right side of the last A quite faint, with a weak strike and apparently some small pieces that may have begun to fall out of the die at that point. This lustrous greenish-gold piece will appeal not only to early gold specialists but also to die state students. PCGS# 98081

1800 BD-2 Five Dollar, AU58 Rich Color and Luster

1802/1 Half Eagle, AU58 'Centered Overdate' Variety, BD-2

5720 1800 AU58 NGC. BD-2, High R.3. Bass-Dannreuther Die State c/d. This fairly available (within the context of early half eagles) die marriage shows a blunt (flagless) 1 with the 1 8 in the date widely spaced. The bottom-right of the last A in AMERICA touches the eagle's claw and branch, and the upright of the E in STATES is left of a space between two clouds. On this piece a faint die crack connects IB in LIBERTY, and on the reverse faint die cracks run from the tips of each wing to the adjacent rim. Beautiful surfaces display generous luster with rich golden-yellow centers and orange-copper hues around the protected areas of the peripheries. A great example for type purposes. NGC ID# 25NW, PCGS# 8082

5721 1802/1 AU58 NGC. BD-2, High R.4. Bass-Dannreuther Die State b/b. The BD-2 is one of the three die pairings showing the Centered Overdate, the 2/1 noticeably below the bust truncation and star 13 away from the bust tip. The reverse of this variety shows the first S in STATES touching a cloud, the "ribbon loop" (bit of the ribbon normally seen in the eagle's mouth) is missing, and there is a lumpish die break before STATES at the rim. In the die state of this piece, there is a tiny, straight die crack connecting 18 in the date, with some evidence of die clashing in the vicinity. This is a gorgeous near-Mint State example with wheat-gold centers ceding to reddish-gold peripheries, minimally marked and with excellent remaining luster. No planchet adjustment marks appear on either side.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25NX, PCGS# 8083

1804 Small 8 Five Dollar, BD-2, MS62 Late-State Obverse and Reverse Dies

5722 1804 Small 8 MS62 NGC. BD-2, High R.4. Bass-Dannreuther Die State c/e (or later). This is another variety where John Dannreuther's terminology differs from the traditional Small 8, which he calls Normal 8, pointing out it "is the correct 8 punch." The round 0 in the date is quite large in comparison to the other digits, and the 4 is small. The blunt 1 is missing its flag. The reverse of this die marriage, a reuse from 1803 BD-3 and BD-4, shows the A(MERICA) touching feather 3 and, barely, feather 4. Heavy die cracks appear on the reverse: a crack from from the left shield point, upward through the left wing to the rim at 10:30; a heavy crack running horizontally from the right shield border through the top olive leaf and the E of AMERICA; and considerable die lapping at the top-left of the eagle's neck. The obverse also shows a bisecting die crack from the rim through 0 in the date and upward to the opposite rim past L. This yellow-gold piece shows much luster underneath surfaces that show field chatter and a few larger marks consistent with the MS62 grade. There are no planchet adjustment marks. NGC ID# 25P2, PCGS# 8085

1806 BD-6 Round Top 6 Half Eagle, MS64+ Choice Example, Lustrous and Attractive

5723 1806 Round Top 6, 7x6 Stars MS64+ PCGS. CAC. BD-6, R.2. Large Eagle five dollar gold presents myriad opportunities for date, variety, and type collectors. The series is full of interesting rarities by date, die state, overdates, and distinctive design changes — all of them desirable, but not always attainable. This BD-6 variety, on the other hand, is the most common variety not just for the half eagle denomination, but among all Draped Bust Large Eagle gold coins of any denomination.

The 1806 mintage was large by early gold standards — 64,093 pieces were produced, with six varieties. Although five of the varieties are the Pointed 6 half eagles, combined they represent as little as 25% of the total production. The lion's share goes to the BD-6 Round Top 6 variant such as this coin, with an estimated 35,000 to 50,000 pieces produced. It is far and away the favorite candidate for type collectors and date collectors seeking just a single example of the year.

Perhaps as many as 900 examples survive of the Round Top 6 (also called the Knobbed 6) five dollar gold. Most survivors, however, are circulated, impaired, or in low Mint State grades. The variety is particularly rare when it is a borderline Gem such as this example.

This coin is visually impressive, with excellent luster and an obverse so radiant, fully struck, and unmarked it suggests an even higher grade. The bold strike on the obverse resulted from a reversal of the die positions for this variety, where the obverse assumed the anvil position and the reverse was in the hammer position. (All of the BD-1 through BD-5, Pointed 6 varieties were in the opposite configuration, and show weakness at the central area of the obverse.)

The reverse did not suffer from the die alignment change, and it is equally sharp as the obverse and extremely lustrous, except where mint-caused adjustment marks are seen at the top margin. Two or three additional, light adjustment marks are seen across the field stars and clouds as applied by the Mint.

Only four numerically finer examples are certified by PCGS and NGC combined. PCGS Population: 36 in 64 (2 in 64+), 2 finer (3/14). NGC ID# 25P5, PCGS# 8089

**1812 Half Eagle, MS61
Wide 5D, BD-1**

5724 1812 MS61 NGC. BD-1, R.3. Wide 5D. Bass-Dannreuther Die State a/a, struck from perfect dies with no clash marks evident on either side. A single obverse die was combined with two different reverse dies for the 1812-dated half eagle coinage. BD-1, as offered here, has the denomination widely spaced, with the D. closer to the final A. BD-2 has the denomination closely spaced with the D. closer to the 5. The Wide 5 D reverse has a long curved die line through the horizontal crossbars and well into the left (facing) wing, and that feature is diagnostic.

This nicely defined Mint State piece has light yellow luster with frosty surfaces that show a hint of light green color. The surfaces are lightly marked as expected for the grade, but the eye appeal is terrific. NGC ID# 25PL, PCGS# 8112

**1818 Half Eagle, MS61
STATESOF, BD-2 Variety**

5725 1818 STATESOF MS61 NGC. BD-2, R.4. Bass-Dannreuther Die State a/a. The recorded mintage of half eagles in 1818 was 48,588 pieces, a fairly high total for an early five dollar gold piece. Three die varieties are known for the date, with this coin representing the most available BD-2 variety, characterized by the running together of the words STATESOF in the reverse legend. The BD-2 variety probably accounted for 25,000-35,000 pieces of the reported mintage and the surviving population numbers 100-125 examples in all grades. This was the only use of both dies.

The present coin is an attractive Mint State specimen, with sharply detailed design elements and lustrous antique-gold surfaces. A scattering of minor contact marks on both sides explains the grade, but none are large or distracting. Eye appeal is outstanding for an early gold coin. Census: 9 in 61, 17 finer (3/14). PCGS# 8121

5726 No Lot

1821 Capped Head Left Half Eagle, AU55 Extremely Rare BD-2 Variety Only Two Examples Traced

5727 1821 AU55 NGC, BD-2, R.8. Bass-Dannreuther Die State a/a. Only two die varieties are known for the 1821 half eagles, with an estimated combined population of only 15 to 20 pieces. The varieties are quickly distinguished by the position of Star 6. On BD-1 (Breen 3-A), star 6 points to the cap, above the headband. About 12 to 15 are known, according to John Dannreuther in *Early U.S. Gold Coin Varieties, A Study of Die States, 1795-1834*. On BD-2 (Breen 2-A), star 6 points to the headband, below the cap. Dannreuther estimates that three to five examples of the BD-2 variety are known, but we have only been able to locate two specimens. The two coins in the Smithsonian Institution were reported to be BD-2's at one time, but the images of the coins in Gillilland's *Sylloge* are definitely BD-1 examples. Walter Breen recorded a third variety, Breen 1-A. It is now known that his obverse 1 and obverse 2 are the same die, so this variety has been delisted.

1. MS61 NGC, BD-2. James Lawson before 1880; Lawson's collection was stored in a bank vault after his death until it was consigned to Abe Kosoff by Mrs. Mabel R. Sandford, presumably one of his heirs; ANA Convention Sale (Numismatic Gallery, 8/1947), lot 429; Thomas Melish Collection (Numismatic Gallery, 4/1956), lot 1947; J.F. Bell II (RARCOA, 4/1963), lot 599; 10th Anniversary Auction (Kreisberg-Schulman, 4/1967), lot 771; Davies/Niewoehner Collections (Paramount, 6/1975), lot 555; Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 127; Auction '85 (RARCOA, 7/1985), lot 435; Charles Kramer Collection (Stack's/Superior, 12/1988), lot 323; Auction '89 (Superior, 7/1989), lot 888; Michael Keston Sale (Superior, 1/1996), lot 112; Pre-Long Beach Sale (Superior, 5/2001), lot 4043. Akers plate coin.

2. AU55 NGC, BD-2. George H. Earle Collection (Henry Chapman, 6/1912), lot 2391; Waldo Newcomer, pictured on the Newcomer plates, second example; Col. E.H.R. Green; Flanagan Collection (Stack's, 3/1944), lot 1097; J.F. Bell Collection (Stack's, 12/1944), lot 343; H.R. Lee Sale (Stack's 10/1947), lot 1240; Eliasberg-Evans Collections (New Netherlands, 6/1957), lot 378; unknown intermediaries; Baltimore ANA (Heritage, 7/2008), lot 1954, realized \$155,250; **the present coin**. Note: The plates in the Flanagan, Bell, and H.R. Lee sales are all stock photos that depict the proof BD-1 example from the Newcomer/Col. Green collections.

The two collectible examples of this extreme rarity are seldom offered. This coin has been off the market for six years, and it has been 13 years since the other specimen was offered publicly. This piece has deep yellow color with considerable reddish-violet toning on both sides. Although noticeably abraded, enough luster is present to provide a high degree of aesthetic appeal.

For those whose goal is a complete set of half eagle die varieties, the present opportunity should be greeted with enthusiasm. Harry Bass only had six auction opportunities to acquire a specimen of this die marriage during his entire collecting life, and yet he was unable to add an example to his collection. The advanced student of early gold die varieties should bid accordingly. NGC ID# 25PX, PCGS# 8129

1823 BD-1 Half Eagle, MS61 Sharp and Nearly Prooflike

5728 1823 MS61 PCGS. BD-1, R.4+. All half eagles from the 1820s are rarities. The 1820 and 1823 dates are the most plentiful, although perhaps no more than 100 pieces survive of either date in all conditions. A surprisingly large number of the 1823 issue is available in Mint State, but the quantity is still not enough to satisfy the legions of type collectors and early gold specialists.

There will be heavy competition for this bright, yellow-gold example of the 1823 issue. The reflective surfaces are lustrous and nearly prooflike, with all elements sharply struck and brought up. There could hardly be a better candidate for type. Population: 5 in 61, 18 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25PY, PCGS# 8131

1823 Half Eagle, MS62 BD-1, Only Dies for the Date

5729 1823 MS62 PCGS. BD-1, High R.4. Bass-Dannreuther Die State a/a. A small mintage of 14,485 Capped Bust Left half eagles was produced in 1823, with a single die variety known for the date. This was the only use of the obverse die, but it was the fifth use of the hardy reverse, and it would be used again in 1824. The 1824 half eagle is a scarce issue with a surviving population of 80-100 pieces in all grades.

This attractive MS62 specimen features well-detailed design elements and vivid orange-gold surfaces that show only minor contact marks and hairlines. The fields exhibit prooflike reflectivity in sheltered areas. Population: 5 in 62, 13 finer (3/14). NGC ID# 25PY, PCGS# 8131

1824 Capped Head Left Five, Unc Details BD-1, Only Variety of the Date

5730 1824 — Obverse Damage — NGC Details. Unc. BD-1, High R.5. Bass-Dannreuther Die State a/b. The 1824 half eagle boasts a low mintage of 17,340 pieces, with a single die variety known for the date. This was the only use of the obverse die, but the reverse had been used to strike five different varieties in previous years, beginning in 1820. Probably no more than 30-40 examples survive in all grades and conditions.

The present coin shows some surface roughness on Liberty's cheek and a few thin scratches in the obverse fields. The design elements are sharply detailed and the antique-gold surfaces retain traces of original mint luster. A still-attractive specimen for the early gold collector.

1826 Half Eagle, MS61 Elusive Early Gold Issue Large Letters Reverse, BD-1

5731 1826 MS61 NGC. BD-1, R.5. Bass-Dannreuther Die State a/e. A modest mintage of 18,069 Capped Head Left half eagles was achieved in 1826, with two die varieties known for the date. The coin offered here represents the scarce BD-1 variety, with star 13 positioned low and large letters in the reverse legends. This was the only use of the obverse die, but the reverse had been used three times before, beginning in 1820. The BD-1 variety is rare, with an estimated surviving population of 30-40 examples in all grades. The BD-1 probably accounted for 12,500-17,500 pieces of the reported mintage, as the other variety of this date is extremely rare.

The 1826 half eagle has been avidly collected since coin collecting first became widely popular in this country. An early auction appearance was in lot 2777 of the Sixth Semi-Annual Sale (W. Elliot Woodward, 3,1865), "1826 Splendid impression, and exceedingly rare." The lot sold to Heman Ely for \$36, a good price at the time. Currently, the record price realized for any 1826 half eagle is \$763,750, realized by the magnificent MS66 PCGS BD-2 specimen in Heritage Auctions' 2014 FUN Signature, ex: David Akers.

The present coin is a well-struck example and shows the curls on Liberty's hair and the complex folded cap clearly. The reverse is similarly well-defined with the scroll and the eagle generally sharp. The bright yellow-gold surfaces show only minor signs of contact, with prooflike luster in sheltered areas. These early half eagles are true American classics. They have been widely collected since the 1870s and are considered one of the most difficult collections to complete.

Ex: Abner Kreisberg Corporation, purchased on June 21, 1983 for \$15,000 by the owner of the Beverly Hills Collection; Long Beach Signature (Heritage, 2/2005), lot 7788. NGC ID# 25R4, PCGS# 8135

1827 Capped Head Left Half Eagle, MS63 Rare Early Gold Issue, Ex: Stickney BD-1, Only Dies for the Date

5732 1827 MS63 PCGS. BD-1, R.6. Bass-Dannreuther Die State a/b. The 1827 Capped Head Left half eagle claims a mintage of 24,913 pieces, with a single die variety known for the date. This was the only use of the obverse die, but the reverse had been used previously to strike the BD-2 variety of 1826, and would be used again to strike the BD-1 variety of the 1828/7 half eagle. Die life had improved impressively since the early days of the Mint.

The 1827 half eagle is a rare issue, as PCGS and NGC have recorded only 29 separate submission events between them, including an unknown number of resubmissions and crossovers (3/14). David Akers gave an estimate of "at most 20" coins extant in all grades, and this seems reasonable when auction data is analyzed. Heritage published a detailed roster of 1827 half eagles in the January 2014 FUN Signature catalog that listed only 17 specimens, with one included in the Harry Bass Research Foundation and two more in the Smithsonian Institution.

The coin offered here has a long and illustrious pedigree that stretches back to pioneer collector Matthew Adams Stickney. Stickney began collecting around 1820, and he may have acquired this coin at the time of issue. In its first auction appearance in lot 669 of the Stickney catalog, Henry Chapman described the coin as:

"1827 Extremely fine. Excessively rare. About eight being known. See plate. The example in the Smith sale sold for \$210."

The lot sold for \$350, a strong price at the time. The record price realized for an 1827 half eagle is \$322,000, brought by the MS66 NGC specimen in Stack's Americana Sale in January 2008.

The present coin is a delightful Select example, with sharply detailed design elements that show just a trace of softness on the eagle's claws, probably due to lapping. The vivid yellow-gold surfaces display a few highlights of rose and only minimal signs of contact are evident. Eye appeal is outstanding. Population: 2 in 63, 3 finer (3/14). Ex: *Matthew Stickney Collection* (Henry Chapman, 6/1907), lot 669; *Virgil Brand*; *Sale 311* (Morgenthau, 10/1933), lot 221; *Samuel Wolfson Collection, Part I* (Stack's, 10/1962), lot 370; *Auction '82* (Paramount, 8/1982), lot 1931; *Mid-American Rare Coins* in 1985; *January-February Auction* (Superior, 1/1993), lot 1357.

NGC ID# 25R5, PCGS# 8136

1830 Half Eagle, AU Details Small D, BD-2 Variety

5733 1830 — Repaired, Improperly Cleaned — NCS. AU Details. **BD-2, High R.5.** Bass-Dannreuther Die State b/b. The 1830 Capped Head Left half eagle was produced in large numbers, but only two die varieties are known for the date. This coin represents the BD-2 variety, with a Small D in the denomination. The BD-2 is slightly more available than its BD-1 counterpart, but it is still very scarce, with a surviving population of just 30-40 examples in all grades and conditions.

This coin shows some evidence of smoothing and the surfaces have an unnatural brightness that indicates some cleaning in the past. The greenish-gold surfaces are lightly abraded, however, and the central design elements retain much of their original detail.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25RA, PCGS# 8152

1830 Capped Head Left Five, AU53 Elusive Large D, BD-1 Variety Newly Discovered Overdate

5734 1830 AU53 NGC. BD-1, R.6. Bass-Dannreuther Die State a/b. A substantial mintage of 126,351 Capped Head Left half eagles was accomplished in 1830 using just two die pairs to finish the large production run. This coin represents the BD-1 variety, easily identified by the Large D in the denomination. The BD-1 is a very scarce-to-rare variety, with a surviving population of 25-35 examples in all grades. It probably accounted for about half of the reported mintage, as the other variety of the date is also quite elusive. The obverse die was used again to coin the BD-2 variety of the date, while the reverse had been used previously to strike the rare Small Date 1829 half eagle.

John Dannreuther reports all 1830 half eagles are overdates, using an unused die from 1829. This interesting feature was not discovered until after the publication of his *Early U.S. Gold Coin Varieties* in 2006. In a December 29, 2006 email, Dannreuther noted:

"All half eagles of 1830 (only one obverse used with two reverse dies) are overdates. Both Bass examples are clear 1830/29's with the curl of the 2 visible in the bottom of the 3 and the 9 clearly visible on both the left of the 0 (know is very clear on the Bass coins) and the right (the curve of the 9 is very evident on both Bass coins). Kneass (or Eckfeldt or someone else) did an incredible job of punching the 30 exactly over the 29, making this discovery difficult ... it is just like the Bust dime 1830/29 overdates and was done with extreme care!"

The present coin is lightly circulated example, with just a touch of wear on the well-detailed design elements. The stars are a little flat and the eagle's claws show some incomplete detail, as the reverse was lapped. The pleasing antique-gold surfaces are lightly abraded and show prooflike reflectivity in sheltered areas. Eye appeal is quite strong for this early gold issue. NGC ID# 25RA, PCGS# 8152

1831 Half Eagle, MS61 Rare BD-2 Variety Fewer Than 30 Examples Extant

5735 1831 MS61 NGC. BD-2, R.6. Bass-Dannreuther Die State c/b. The 1831 Capped Bust Left half eagle has a large reported mintage of 140,594 pieces, with two die varieties known for the date. This coin represents the BD-2 variety, with a Large D in the denomination. The BD-2 is a rare variety, with a surviving population of 22-30 examples in all grades. It probably accounted for 75,000-100,000 pieces of the reported mintage, as the other variety for the date is even more elusive.

This lustrous, problem-free piece shows the beginning of the often-seen wispy obverse die break running from the rim through left of star 5 to Liberty's forelock. This coin has the Large Stars obverse, like the 1829 Large Date, with the small 1831 date featuring 1's taller than the other digits. Recutting is evident on stars 2 and 10, with some evidence of clashed dies in various locations, notably before the bust line and within ERT. The reverse has the heavy diagnostic die break from the rim above O(F), running through the F, the eagle's right (facing) wingtip, and AMERIC, before re-merging with the rim above the last A. The Large D has the period close by, the berries are stemmed, the eagle lacks a back claw, and the top arrow lacks upper feathers at the base of the shaft.

The present piece is lovely and well defined, with ample mint luster remaining. Mentionable marks include a slight scratch between the bust and date on the obverse and a second above star 5, both noticeable only with a glass. The reverse has no flaws worth noting, and both sides exhibit slight chatter in the fields consistent with the grade. Wear is confined to Liberty's cheek on the obverse and to the wingtips and feather highpoints on the reverse. The strike is bold, with star centrils apparent and excellent detailing on the eagle. The color is a consistent honey-gold throughout. This is a delightful example of one of our nation's rarest type coins, an opportunity not soon to be repeated and one sure to see spirited bidding. Census: 3 in 61, 4 finer (3/14). NGC ID# 25RD, PCGS# 8153

1832 Capped Head Left Half Eagle, AU55 Square Base 2, 13 Stars, BD-1 Rare Old-Tenor Issue

5736 1832 Square Base 2, 13 Stars AU55 PCGS. BD-1, R.5. Bass-Dannreuther Die State a/a. The weight and fineness standards for U.S. gold coins remained unchanged from 1792 until 1834. Unfortunately, economic conditions changed drastically during the intervening four decades. By the early 1820s, the price of gold had risen on the world market, to the point that the bullion value of U.S. gold coins far exceeded the face value. These conditions brought about massive hoarding and melting, with the result that gold coinage vanished from circulation after 1821.

To remedy the situation, the Coinage Act of June 28, 1834 was passed. The act introduced a new design for the gold coins, the Classic Head, by William Kneass. The act also reduced the specifications for the half eagle from 135 grains, .9167 fineness of gold to 129 grains, .8992 fineness of gold. The specifications for the other gold coins were reduced accordingly. The act took effect in August 1834, after which time gold coins began to regularly circulate in everyday commerce. While the new gold coins circulated readily, the old dates continued to be melted, because they still contained too much gold for their face value. As a result, every coin in the 1829-1834 Capped Head, Small Size type is very rare and highly prized.

BD-1 is one of only two die pairings for this date, easily recognized by the 13 obverse stars. The other marriage, BD-2, is the extremely rare 12 Stars variety. John Dannreuther estimates the initial mintage of the BD-1 variety at 125,000-150,000 pieces, but only 40-50 examples are extant today in all grades. This is a splendidly detailed Choice AU example that lacks detrimental marks and has its share of glowing semiprooflike luster. Undoubtedly destined for an outstanding collection. Population: 2 in 55, 13 finer (3/14).

Ex: Dallas Signature Auction (Heritage, 10/2008), lot 2051, realized \$52,900. NGC ID# 25RG, PCGS# 8156

**1833 Half Eagle, AU Details
Wide Large Date Variety
Rare Late Die State**

5737 1833 Large Date — Improperly Cleaned — NGC Details. AU. BD-1, High R.5. Bass-Dannreuther Die State b/c. Formerly in an AU58 SEGs holder, this rare half eagle returned from NGC with the Improperly Cleaned designation. It is the BD-1 variety, notable as the Wide Large Date variant with an estimated survival of just 35 to 45 pieces. Although somewhat more common than the Close Small Date varieties, this rarity is missing from many advanced collections.

Green-gold surfaces are attractive but show light porosity. Several areas of die rust exist on the reverse, but overall the surfaces are pleasing and virtually unabraded. A full strike shows no peripheral weakness as sometimes seen, and the portrait is smooth and bold with just minor pinprick marks. We have sold only five examples in the past 15 years. The Bass-Dannreuther reference states the ANS example is the only Late Die State obverse "b" known, but this coin displays the same diagnostic obverse die crack, as do two others we have seen.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25RJ, PCGS# 8157

**1834 Capped Head Five, AU Details
BD-2, Scarce Crosslet 4 Variety**

5738 1834 Capped Head, Crosslet 4 — Cleaned — ANACS. AU Details, Net XF40. BD-2, R.5. Bass-Dannreuther Die State b/b. One of two Crosslet 4 varieties for the Capped Head 1834 issue, although the ultra-rare BD-4 is unique, leaving the BD-2 variety as the only collectible Crosslet 4 die pair. While only 50 or so pieces survive, examples appear a few times each year at auction. Even impaired coins are eagerly sought by both series and type collectors.

This example displays strong AU Details, but the coin has been cleaned and is now a bright and glossy, yellow-gold color. A bit of orange at the rims provides some needed eye appeal. The surfaces are mostly abrasion-free, with only a small mark at Liberty's jaw-line needing mention. Despite the cleaning, this coin is well-detailed shows signs of recovery. The variety is always in demand. PCGS# 8161

PLATINUM NIGHT

PROOF EARLY HALF EAGLE

1830 Capped Head Left Half Eagle, PR63 Large D, BD-1 Variety, Rare in All Formats Possibly Unique as a Proof

5739 1830 PR63 NGC. Large D, BD-1, R.6 as a business-strike, possibly unique as a proof. Early proof gold coins are among the rarest of all United States coinage issues. Conventional wisdom holds that no true proofs were produced at the Philadelphia Mint before 1817, although some special coins of exceptional quality were struck for presentation purposes, etc., all the way back to the establishment of the Mint in 1792. The first gold proofs were struck in 1820, when a few Capped Bust Left half eagles were produced. Prior to about 1840, proofs were only minted when some influential collector or, more likely, government official, requested them. Dr. Robert Loewinger described the process of striking early proofs on page 3 of his book *Proof Gold Coinage of the United States*:

“Early proof gold was made by using the screw press, polishing pre-existing (Business Strike) dies, burnishing the planchets (coin blanks), and striking the blank at least twice. The quality of these early proof coins varied substantially depending upon the polishing of the dies and blanks, condition of the dies, and number of blows to the blank. Since these early Proof gold coins were made to order and were made by polishing the regular Business Strike dies, several dies could have been utilized to make Proofs of the same year (e.g. the Classic Head Proof 1836 quarter eagle was made with three different dies).”

When Heritage Auctions offered the only certified proof 1829 Large Date half eagle in lot 4681 of the January 2012 FUN Signature, we published a roster of just 11 confirmed proof half eagles that were struck between 1820 and 1829. Several coins in the roster were “one sided proofs” and a number were in institutional collections. Gold proofs of the 1830s are just as rare, and the present coin is the only known proof 1830 Large D half eagle. There are no meaningful prices realized for this issue, but the PR64 PCGS 1829 Large Date half eagle in the 2012 FUN sale brought \$1,380,000. Like the 1836 proof quarter eagles Dr. Loewinger mentioned, there are 1830-dated proof half eagles of more than one variety.

Walter Breen discussed the proof 1830 Large D half eagle in his *Encyclopedia of United States and Colonial Proof Coins* as follows: “One seen many years ago, but I have lost track of it. The variety is extremely rare even in business strike form.” Breen also commented on proof examples of the other 1830 variety, the Small D variety: “The proof in Omaha City Library, ex Byron Reed bequest, is believed to be this variety; one other reported, known to Wayne Raymond.” Nearly 30 years later, Jeff Garrett and Ron Guth combined both varieties into a single paragraph commentary in their *Encyclopedia of U.S. Gold Coins*:

“Only two examples of the 1830 half eagle are known to exist in Proof. One resides in the Byron Reed Collection at the Durham Western Heritage Museum in Omaha, Nebraska. The other coin, an NGC PR62, currently resides in a private Northeastern collection. Neither the Bass nor the Smithsonian collection contains an 1830 half eagle in Proof. The extreme rarity of early gold Proof coins can be attributed to their high face value and a shortage of American coin collectors at the time of their mintage.”

The coin offered here is the NGC PR62 (now PR63) piece mentioned by Garrett and Guth, and it is also the plate coin in their reference.

In addition to the pieces discussed by Breen and by Garrett and Guth, a proof example of the Small D variety appeared in the Eliasberg Collection. Thus it appears that exactly three 1830 half eagles are currently identified as proofs, with only the presently offered piece representing the Large D variety. It is our belief that this coin is unique in proof for the variety. A roster of all 1830 proof half eagles known to us is listed below.

The present coin is an undoubted Select proof with full star radials and squared off edges. Although the grade is limited by a few scuffs and hairlines in the fields, both sides of this piece have bright yellow-gold color. The fields are fully mirrored and the devices are lightly frosted, imparting a slight cameo appearance. The junction between the fields and devices is crisp and concise, with no evidence of mint frost in the fields at these locations. The letters of LIBERTY and E PLURIBUS UNUM exhibit satiny reflectivity. Slight weakness of the central design detail is noted on each side. This reverse die was first used for a limited coinage of 1829 Small Diameter half eagles, then lightly lapped for use in 1830. This example is from the lapped reverse die, but exhibits no other die defects. The often-seen die crack through NITED is not present. This coin must have been among the first 1830 half eagles coined. This piece is the only proof 1830 half eagle certified at either of the leading grading services (3/14). This lot represents a once-in-a-lifetime opportunity for the proof gold collector.

Roster of Proof 1830 Capped Head Left Half Eagles

- 1. PR63 NGC, Large D.** Northeastern Collection; FUN Signature (Heritage, 1/2007), lot 3541, **the present coin.** The Garrett and Guth plate coin.
- 2. Brilliant Proof 63, Small D.** George H. Earle Collection (Henry Chapman, June 1912), lot 2398; John H. Clapp Collection; Clapp Estate; Louis E. Eliasberg, Sr., via Stack's in 1942; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 390; Buddy Ebsen Collection (Superior, 6/1987), lot 2475.
- 3. Proof, Small D.** Byron Reed Collection; Omaha City Library; transferred to Durham Western Heritage Museum. *From The Charles G. Wright Family Collection. PCGS# 8164*

LIBERTY HALF EAGLES

**1840-C Half Eagle, MS60
Late-State Reverse Die**

5740 1840-C MS60 NGC. Variety 1. Late Die State. Faint die lines appear to the right (facing) of the eagle's right thigh, above the arrowheads. The right edge of the C mintmark is over the left edge of the E in FIVE while its left edge is over the V. The late state of this reverse die is visible, showing a bold die crack connecting the rim at 4 o'clock with the I in AMERICA, two arrowheads, and faintly to the right wing. Only 18,992 examples were struck of this date, and most are XF to AU at best. This golden-orange piece shows pale blue high points with some prooflike luster remaining under surfaces that show a peppering of small marks. Census: 2 in 60, 7 finer (3/14).

From The Philip Poier Collection. NGC ID# 25SD, PCGS# 8196

**1842-C Half Eagle, XF45
Small Date Variety
Charlotte Mint Rarity**

5741 1842-C Small Date XF45 NGC. Both Large and Small Date varieties exist for the 1842 Charlotte half eagles, with the Small Date variety struck first with in a date logotype size similar to the 1840 and 1841 Charlotte half eagles. Not only is the 1842-C half eagle the rarest Charlotte half eagle, it is also the second rarest of any Charlotte coin of any kind, surpassed only in rarity by the 1849-C Open Wreath gold dollar.

This appealing, apricot-gold example shows a medium amount of abrasions over both sides of the coin. The high-point devices are well-detailed and relatively free of marks due to wear, leaving abrasions to be most noticeable in the fields of the coin. Doug Winter estimates a mintage of just 4,595 pieces for the Small Date variant, with the balance of the total mintage of 27,432 half eagles being the Large Date type. Census: 1 in 45, 16 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25SV, PCGS# 8208

1842-D Small Date Five, MS62 Tied for Second Finest Certified

5742 1842-D Small Date MS62 NGC. Variety 7-E. Although not noted, the Small Date obverse die is actually paired with a Small Letters reverse die, as is the rare Large Date (Variety 8-G) with a Large Letters reverse. The year 1842 was among the few where Dahlonega outpaced her siblings in Philadelphia and Charlotte, striking 59,608 examples of both varieties combined, compared to roughly 27,000 each for the other mints. The 1842-D Small Date is only a median rarity among the D-mint half eagles overall, although high-grade examples are seldom seen. This MS62 NGC example is tied with quite a few other pieces at both services for second place in the Condition Census. The canary-yellow surfaces are lustrous and reflective, with scattered light marks and a nice, original appearance. The strike is pleasingly sharp. Some light die cracks on the reverse join some of the peripheral elements. Census: 3 in 62, 1 finer (3/14). NGC ID# 25SX, PCGS# 8210

1854-C Half Eagle, MS63 Among the Finest Known of This Rarity

5743 1854-C MS63 PCGS. Variety 1. The 1854-C is one of the most difficult Charlotte fives from this decade, although equal attention has often been accorded to C-mints of lesser rarity. Just 39,283 pieces were struck and the number of Mint State survivors probably tops out at half dozen or so pieces, with several of these falling under the "Weak Mintmark" category. The strength of the mintmark on this remarkable Condition Census example, although from the same reverse die as those with ill-defined mintmarks, is as bold as any we have seen.

This particular coin is sharply struck, including the often weak centers. This alone is highly unusual for this issue. Also, it is atypical in that it has bright, sparkling mint luster over each side and very few abrasions — quite unlike the heavily marked coins usually encountered. The only grade-limiting identifier is noted on the reverse; a bisecting scratch from the A in STATES down across the eagle to the E in FIVE. A couple of noticeable die cracks are also seen on the reverse. A rare opportunity for the Southern gold specialist. Population: 2 in 63, 0 finer (3/14).

Ex: Long Beach Signature (Heritage, 2/2005), lot 7819.

From The Philip Poier Collection. NGC ID# 25UH, PCGS# 8257

1857-O Half Eagle, MS63 Sole Finest Known, Ex: Ashland City A Coin of Notable Quality

5744 1857-O MS63 PCGS Secure. Variety 1. Ex: Ashland City. This is the finest certified 1857-O half eagle, the finest currently known, and likely to remain so for the foreseeable future. It is the only one certified MS63 at PCGS with none finer, and there are none its equal at NGC (3/14). It was unlisted in Douglas Winter's 1992 reference on the series, but in his 2006 revision it is listed as the finest known by two grade points. *Winter specifically cites this coin as the "undisputed finest known example."*

The New Orleans Mint half eagles of the 1850s are historic and numismatically significant pieces in their own right. The 1857-O was the last O-mint half eagle minted before the Civil War, the last produced for some 35 years until the 1892-O.

This is truly an exceptional coin. The surfaces are softly frosted with a faint glimmer of reflectivity in the fields. The devices are sharply struck, with all star centrils full and the beaded hair cord complete. A touch of softness appears on the upper hair bun and below the coronet, and on the reverse there is a bit of softness on the eagle's right (facing) claw and on the arrow fletchings. The central shield and wing feather details are extremely well-delineated. The second vertical stripe in the first pair is broken, a die diagnostic of the issue. Each side has taken on a rich accent of golden-orange patina. The surfaces are remarkably clean for a coin of this grade. A thin, straight scrape runs from behind Liberty's eye downward to her chin, useful for pedigree purposes. A memorable coin, and a must-have for Registry Set collectors or those desiring a historic high-grade example of New Orleans gold.

Ex: Ashland City Collection (Heritage, 1/2003), lot 4800, which brought \$40,250; Delaware Valley Rare Coins; Long Beach Signature (Heritage, 2/2008), lot 2536, which realized \$50,025; Tampa FUN Signature (Heritage, 1/2011), lot 5115, which brought \$48,875. NGC ID# 25V5, PCGS# 8274

1859-D Five Dollar, MS61 Scarce, Popular Late-Date D-Mint Issue

5745 1859-D Medium D MS61 PCGS. Variety 44-HH (formerly 36-CC). The more available of the two Medium D mintmark varieties. This radiant orange-gold half eagle is surprisingly free from mentionable abrasions, aside from a wispy slide mark on Liberty's cheek and a faint luster graze in the left obverse field. The strike is bold for the Dahlonega Mint five, since any weakness is minor and is generally limited to the centers. The dies are slightly rotated clockwise. Doug Winter rates this is the tenth rarest issue among D-mint Liberty half eagles. The mintage was a low 10,366 pieces, and the vast majority of survivors are in circulated grades.

Ex: Portland Signature (Heritage, 3/2004), lot 6218. NGC ID# 25VD, PCGS# 8282

1861-C Half Eagle, MS61 Late-State Reverse Die

5746 1861-C MS61 NGC. Variety 1. Die State II+. Only a single die pair was required to strike the 6,879 1861-C half eagles in the last year of coinage at the Charlotte Mint, closed forever by the Civil War: Confederate troops would seize the building in May 1861. This MS61 NGC-certified piece shows the sharp strike the issue is known for. A light die crack joins the tops of AMER, and some curious diagonal die lines protrude from the reverse denticles above RI. (Branch mint coinage guru Doug Winter notes that some believe these may be those coins struck under the Confederacy, but there is no way to know for certain.) A similar effect occurs above the T in UNITED. Numerous small and medium marks occur on each side of this lustrous yellow-gold piece, which also shows one deep scrape along Liberty's neck. This MS61 example is tied with several others in the Condition Census for second finest. NGC ID# 25VL, PCGS# 8289

1861-D Half Eagle, AU55 Lowest-Mintage Dahlonga Five

5747 1861-D AU55 NGC. Variety 46-JJ. This last-year half eagle issue from Georgia's Dahlonga Mint would comprise only 1,597 coins, making it the rarest (and by far the lowest-mintage) of all the D-mint fives. Doug Winter says the 1861-D "now ranks, along with the 1861-D dollar, as the most popular issue from this mint." This greenish-yellow piece shows good luster and scattered marks, along with some strike softness on the lower eagle's claws and fletchings on the reverse, as well as the upper stars on the obverse. The obverse denticles are especially weak from 9:30 to 12 o'clock, and around the reverse from 12 to 4. Census: 7 in 55, 15 finer (3/14). NGC ID# 25VM, PCGS# 8290

1863 Half Eagle, AU55 Rare Low-Mintage Issue

5748 1863 AU55 NGC. The half eagle mintage of just 2,442 business strikes at the Philadelphia Mint in 1863 was one of the lowest of all time. A major rarity, there have been just three examples of this issue rated in mint condition: one at PCGS and two at NGC. AU coins are slightly more available but still very rare.

This Choice AU example has pleasing eye appeal, with light antique-gold toning and faint pink-rose accents near the peripheral devices. The design motifs are well-struck, with crisp detailing seen on Liberty's central hair curls and on the eagle's talons, wings, and neck feathers. Normal scattered marks from circulation and slight high-point rub are consistent with the grade. Census: 4 in 55, 7 finer (3/14). NGC ID# 25VS, PCGS# 8294

1864-S Half Eagle, XF45 A Pleasing Example of This Great Rarity

5749 1864-S XF45 PCGS. While all of the half eagle issues produced in San Francisco in the 1860s are scarce-to-rare, the 1864-S has the lowest mintage of them all (3,888 coins) and is also the rarest. This issue ranks among the scarcest No Motto fives from any of the U.S. mint facilities, including even the 1875 with its tiny mintage of 200 pieces.

This antique-gold and rose example is softly struck on the obverse stars, as well as the eagle's talons and arrow fletchings. A V-shaped scratch is noted on Liberty's neck, and a few other moderate marks from circulation are included on both sides. The major design elements remain essentially intact and are only mildly worn. Population: 1 in 45, 4 finer (3/14). NGC ID# 25VV, PCGS# 8297

1870-CC Half Eagle, XF Details Low-Mintage First-Year Issue

5750 1870-CC — Improperly Cleaned — NCS. XF Details. Variety 1-A. The 1870-CC Liberty half eagle claims a small mintage of 7,675 pieces and few examples were saved by contemporary collectors. The coins were released into circulation during the first year of operations at the Carson City Mint and were badly needed in the regional economy. By the time numismatic demand for mintmark issues developed in the 1890s, the coins had been circulating for two decades and suffered heavy attrition. Collectors prize examples of this date in all grades and conditions.

The present coin is a lightly circulated specimen that shows slight wear on the top of the hair and below LIBERTY. The greenish-gold surfaces display an unnaturally bright sheen, but only minor abrasions are evident. A still-attractive example of this rare issue with a surviving population of 50-60 pieces in all grades.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25WA, PCGS# 8320

1870-CC Half Eagle, Net XF40 Seldom-Seen First-Year Carson City Five

5751 1870-CC — Cleaned — ANACS. AU Details, Net XF40. **Variety 1-A.** The opening half eagle salvo from the Carson City Mint was a respectable-for-the-time-and-place 7,675 pieces, a production that clearly circulated widely in the gold coin-starved Nevada economy of the time. The average *certified* survivor — certainly the top end of all extant today — grades only a bit better than VF30. This piece is far finer, showing attractive wheat-gold surfaces with a fairly sharp strike. Scattered contact marks appear on each side, but there is only light wear visible. The luster is somewhat diffuse from the noted cleaning, as expected. NGC ID# 25WA, PCGS# 8320

1875 Half Eagle, AU55 A Legendary Low-Mintage Rarity One of the Finest-Known Examples

5752 1875 AU55 NGC. Ex: Richmond Collection. The 1875 half eagle, with its meager mintage of 200 business strikes and 20 proofs, is the second-rarest of all Liberty Head fives; only the legendary 1854-S has even fewer known survivors.

Interestingly, all known 1875 half eagles have been rated between XF and AU. PCGS, who estimates that there are 9 to 10 coins extant, has seen 8 pieces: one at XF40, one more at XF45, two pieces at AU50, and four others that are tied for finest-graded at AU53. NGC has recorded just four grading events for this famous rarity: one coin has been certified XF45 and three others are tied at AU55. Unfortunately these numbers do not account for possible resubmissions, which are virtually certain to have occurred.

This coin is tied with two others for finest-known, and all three examples currently reside in NGC AU55 holders. From the noteworthy Richmond Collection, sold by David Lawrence Rare Coins between July 2004 and February 2005, this piece appeared in Part I, as lot number 1444, where it realized \$86,250.

Prior to its inclusion in the Richmond Collection, this appears to be the same coin that Heritage sold in our February 1993 Long Beach Bullet Sale, as lot number 557. Part of our description from that sale reads: "For those wishing to trace the pedigree of this important coin, there is a series of milling marks just above star 12 on the obverse, a small nick in the field just above the tip of the coronet, and another small mark above the period after D on the lower reverse. The fields are prooflike, but certainly not suggestive of a proof, nor are they diagnostically close to a proof with the left base of the 1 in the date left of the center of a dentil."

This is an undeniably gorgeous coin with lovely orange-gold, peach, and rose patina intermingled over both sides. The design motifs are sharply struck and surface marks are typical for a lightly-circulated gold coin. Census: 3 in 55, 0 finer (3/14).

Ex: Richmond Collection, Part I (David Lawrence, 07/2004), lot 1444, where it realized \$86,250. NGC ID# 25WT, PCGS# 8336

1908 Liberty Head Half Eagle, MS68 Unimprovable Quality

5753 1908 MS68 PCGS. David Akers recorded an early appearance of a 1908 Liberty half eagle in the Jenks auction, by Henry Chapman, conducted from December 7th through the 17th, 1921. A check of that amazing auction catalog and the prices realized revealed the following information about the Liberty Head half eagle design and the 1908 example in the auction: "Bare head of Liberty, with diadem inscribed LIBERTY; around 13 stars and date. R. UNITED STATES OF AMERICA. FIVE D. Eagle with shield on breast, olive branch in right talon, and three arrows in left. Scroll on reverse inscribed IN GOD WE TRUST. Lot 5781a: Head of Liberty. Last year of this design, and few coined. Uncirculated. Mint luster." The price realized in the auction was \$5.00 (face value).

Although the present 1908 Liberty half eagle is not the same coin offered in that early Jenks sale, it is interesting to see how a similar coin fares today. Our last offering of a PCGS Superb Gem, 1908 Liberty five was in 2010 at the September Long Beach Signature sale, lot 5385, which brought \$27,600.00, although it was an MS67 example. The current coin is a fantastic MS68, for which there are no auction appearances to use for comparison.

The Jenks sale of 1921 stated "few were coined" but, in truth, a healthy mintage of 421,874 pieces was accomplished as a farewell to the Liberty Head design. It would be no surprise if this coin was the single finest from the mintage, given its dazzling eye appeal. Rolling, intense mint luster illuminates orange-gold surfaces with fully struck motifs. Lime-green and rose-gold highlights intermix with the shifting luster.

PCGS has certified just two pieces in MS68, and NGC only a single example. Neither service has seen one finer (3/14). NGC ID# 25ZE, PCGS# 8418

PROOF LIBERTY HALF EAGLE

1907 Half Eagle, PR65 Cameo Exceptional Deep Mirrors

5754 1907 PR65 Cameo NGC. Business strike half eagles were struck in 1908, but 1907 was the final proof issue for the series, and it is highly prized as such. Jeff Garrett and Ron Guth estimated survival of only 30 to 35 pieces from a proof mintage of 92 pieces when writing their reference, but today PCGS estimates 60 to 75 known. This example displays light gold coloration with exceptionally deep mirrors. The devices are fully struck and lightly frosted. A few small contact marks are seen below the eagle, likely limiting this lustrous and reflective half eagle from an even higher numeric grade. Census: 6 in 65 Cameo, 10 finer (3/14). NGC ID# 28DD, PCGS# 88502

EARLY EAGLES

1795 Eagle, BD-1, AU Sharpness Important First-Year 13 Leaves Variant

5755 1795 13 Leaves — Repaired — NCS. AU Details. BD-1, High R.3. The BD-1 die marriage is by far the most frequently seen of the five known for the 1795 Small Eagle tens — four varieties with the 13 Leaves reverse and one with the very rare 9 Leaves. John Danreuther estimates that 225 to 325 examples survive of the BD-1. The variety shows a closely spaced date (closest of all 1795s) and the 1 near the curl top. The reverse shows a leaf nearly touching the U. This piece may represent a good value for some collector for whom a Mint State example of this important first-year variety is simply out of reach. The surfaces show extensive smoothing on both sides, and accordingly the luster on greenish-gold surfaces is dimmed. Nonetheless, a wealth of detail remains, making this still-pleasing coin an alluring potential acquisition.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25ZT, PCGS# 8551

1796 BD-1 Eagle, Net XF45

5756 1796 — Cleaned — AU Details, Net XF45 ANACS. BD-1, R.4. Following an array of five die marriages for the first-year of issue 1795 eagles, the Philadelphia Mint utilized a single die pair for those dated 1796. This example represents the usual die state with a vertical crack beginning in the field below the E in LIBERTY, and crossing the cap and hair to the drapery, reaching the 9 in the date. Considerable bluish-green patina visits both surfaces of this example, with delicate orange, violet, and light green peripheral toning. Myriad marks are noted on both sides.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25ZW, PCGS# 8554

PLATINUM NIGHT

1796 Ten Dollar, BD-1, MS62 16 Star Obverse, 11 Leaves Reverse Subtype

5757 1796 MS62 NGC. BD-1, R.4. Bass-Dannreuther Obverse State c / Reverse State b. It is a numismatic curiosity that there are five varieties or die marriages known among the 1795 eagles, yet only a single pairing is known for the 1796 eagles — despite recorded mintages that are within about 20% of each other, 5,583 pieces for 1795 and 4,146 for 1796. There were an even smaller number of 1797-dated Small Eagle tens struck, 3,615 in all, before the reverse design ceded to the Heraldic Eagle reverse, which lasted through the series' cessation in 1804. There is but a single known die variety for the 1797 Small Eagle tens as well.

The curiosity is easily explained. Dies remained in use as long as they were intact and serviceable, regardless of the date actually appearing on those dies. While there are no known instances of dies used in advance of their date, a common occurrence was the use of 1795-dated dies in 1796, for example. Current rarity ratings indicate that approximately 700 eagles survive of the Small Eagle type. The combined mintage was 13,344 coins, implying a survival rate of slightly more than 5%. Working backwards, the actual estimated mintages for each date (regardless of when they were struck) were 9,379 pieces dated 1795, 2,631 dated 1796, and 1,334 dated 1797.

Both the 1796 and 1797 issues are far rarer than the 1795-dated coins overall, despite the relatively similar production totals. The 1796 and 1797 issues are technically design subtypes within the series. All of the 1795 eagles, whether of the 9 Leaves or 13 Leaves reverses, have the obverse stars arranged 10 left, five right — a total of 15 stars. The 1796 tens have a 16-star obverse, with a symmetrical eight and eight star layout, and an 11 Leaves reverse. (J.W. Dannreuther notes in the Bass-Dannreuther reference that Florida coin dealer Eric Steinberg called this the “eagle on skis.”)

This piece shows a needle-sharp strike at the peripheries, but a bit of softness occurs at the centers. No adjustment marks appear on the lemon-yellow, semiprooflike fields, but a few faint file marks can be seen in the hair with the aid of a glass. This piece shows a vertical die crack through the bust and minor clash marks on the reverse. A scattering of minor contact marks explains the grade, but none of them are singular or worthy of further note. Perhaps more important than the rarity of a specific variety is the opportunity to purchase an example. Over the last 21 years since we began our auction archives, we have never offered a finer example, and have only offered an MS62 on four previous occasions, and two of those were for this same coin. Here is an extremely important buying opportunity. Census: 4 in 62, 2 finer (3/14).

Ex: ANA Signature Sale (8/2011), lot 3536; Chicago Signature Sale (8/2011), lot 7591, which realized \$149,500. NGC ID# 25ZW, PCGS# 8554

1797 Capped Bust Right Eagle, AU58+ Heraldic Eagle Reverse BD-2 Variety

5758 1797 Large Eagle AU58+ PCGS. BD-2, High R.4. Bass-Dannreuther Die State b/b. This variety marks the beginning of the Heraldic Eagle design type, part of a transitional year mintage that began with coinage of the earlier Small Eagle reverse design. The 1797 Heraldic Eagle ten claims a mintage of 10,940 pieces split between three die varieties. All 1797 Heraldic Eagle tens are from a single obverse die that has a prominent double die crack from the border through the final 7 to the bust. That crack is heavy below the 7 on this example, branches into two parallel cracks through the 7, and continues as a delicate single crack to the drapery.

The reverse of this coin features an eagle with a long thin neck, identifying the very scarce BD-2 variety. The BD-2 variety has a surviving population of 80-100 examples in all grades and probably accounted for 3,500-5,000 pieces of the reported mintage. This was the only use of this reverse die. When W. Elliot Woodward cataloged an example of the 1797 Heraldic Eagle ten in lot 846 of the Randall Collection (Woodward, 7/1885), he noted:

"1797 No. 1; reverse, large eagle; obverse with 16 large stars; proof."

The following lot was another 1797 which he called variety No. 2, distinguished by the "small stars" on the obverse. Although we realize today that the same obverse was used on all three varieties of this date and type, Harry Bass noted that the obverse stars on the other two varieties have shortened points, due to lapping. This probably accounts for Woodward's large and small stars designation on the two varieties, with the large stars corresponding to BD-2. Recent auction sales of the BD-2 include the AU58 NGC coin in lot 5177 of the FUN Signature (Heritage, 1/2011) that realized \$40,250.

A lovely and lustrous yellow-gold specimen, this example shows prooflike reflectivity in sheltered areas. The obverse exhibits the usual shallow strike characteristic of this die, while the reverse has a bold strike. Faint hairlines are hidden beneath deeper honey-gold toning. Eye appeal is quite strong for the grade. Population: 28 in 58 (1 in 58+), 38 finer (3/14).

Ex: Central States Signature (4/2013), lot 4542; Orlando Signature (7/2013), lot 3381. NGC ID# 25ZY, PCGS# 8559

1797 Ten Dollar, MS63 BD-4, Among the Finest Known of the Date

5759 1797 Large Eagle MS63 NGC. BD-4, High R.4. Bass-Dannreuther Die State d/b. Take a one dollar bill out of your pocket or purse and look at the reverse. If you are not a specialist in early gold and yet the Large Eagle design on this early eagle looks familiar, it is because both are renditions of the Great Seal of the United States. Even today the one-dollar-bill version shows a straight-sided shield attached to the eagle's breast, with outstretched wings and E PLURIBUS UNUM on a scroll. On the early eagle design, however, a heraldic mis-cue exists: The eagle clutches the olive branch of peace in the sinister, or less-honorable, claw, while the arrows of war are in his dexter, or more-honorable claw, in effect signaling "war is more honorable than peace." That heraldic snafu is rectified on the one dollar bill.

The twenty dollar double eagles were latecomers to American numismatics, making their debut in 1850 only after the discovery of vast reserves of gold in California. The Bass-Dannreuther *Early U.S. Gold Coin Varieties* (2006) makes some interesting comments regarding the majesty and impressive beauty of this largest of early U.S. gold coin denominations:

"The early eagles are some of the most prized acquisitions in all of numismatics. The Large Eagle type is full of rarities and there really are only two dates that can be considered available. Calling the 1799 and 1801 *common* is only relative, as the number of survivors of each date is probably in the high hundreds or certainly not many more than a thousand of each date. Every early eagle date is rarer than, say, an 1856 Flying Eagle cent and many times rarer than a 1909-S V.D.B. Lincoln cent. These too are great collector coins, but when one gazes upon an early eagle, there is a certain thrill in just viewing such an impressive coin."

The Small Eagle ten dollar pieces were struck with dates 1795, 1796, and 1797, but the mintage was probably produced only from September 1795 until June 1797. A single variety of 1797 Small Eagle is known, while there are three variants of the 1797 Large Eagle coins, from a single obverse die and three reverse dies. The common obverse shows a die crack running from the rim through the last 7 in the date and onward to the bust on all known specimens. The stars are arranged 10 x 6. The inner point of star 10 grows successively shorter, through lapping, when paired with each subsequent reverse.

The reverses are distinguished chiefly by the style of the eagle's neck and the arrangement of stars. On the BD-4 Large Eagle reverse, the eagle's neck is long and thick, but tapered, and the stars have an unusual cross pattern. On the BD-3 the neck is short and thick, and the stars are arranged in equidistant arcs. The BD-2 shows the long thin neck, but the stars have an even, symmetrical cross pattern. (Although not noted in Bass-Dannreuther, perhaps an easier way to distinguish BD-2 from BD-4 is to look at the position of the S in the motto compared to the eagle's breast. On BD-4 the breast intersects the scroll bearing the motto to the *left* of the S, while on BD-2 it intersects to the *right* of the S.) On BD-4 stars 1, 7, and 12 are in a straight line, as are stars 9, 10, and 11.

The present example boasts beautiful yellow-gold color and rich luster. From the last die state recorded in Bass-Dannreuther, with obverse star point 10 shortest; reverse die cracks from rim to tail; another from rim to left side of R to top leaf; and another from rim through C to leaf. Both sides are free of adjustment marks, but a couple of scrapes are noted left of the date. Beautiful and rare. Census: 3 in 63, 1 finer (3/14).

Ex: *FUN Signature* (Heritage, 1/2007), lot 3610; *Central States Signature* (Heritage, 5/2008), lot 2326. NGC ID# 25ZY, PCGS# 8559

**1798/7 Draped Bust Ten, VF30
BD-1, High R.4. Overdated Early Gold.**

5760 1798/7 9x4 Stars VF30 PCGS. BD-1, High R.4. Surprising remnants of mint luster and prooflikeness appear at the margins of this vibrant, orange-gold eagle, despite some wear and a few likely abuses along the way. The coin has detail on the devices of a coin at least 15 points higher than the assigned grade, which was likely influenced by some central granularity and discoloration near a few obverse stars.

The 9x4 Stars configuration is more common than its 7x6 counterpart, yet the BD-1 variety is scarce in its own right. The Bass-Dannreuther reference estimates not more than 80 to 100 pieces survive in all grades. While this example has some minor issues, the eye appeal and the detailed devices make it an attractive candidate for any collection. Population: 2 in 30, 29 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25ZZ, PCGS# 8560

PLATINUM NIGHT

**Important 1798/7 BD-1 Eagle, MS62
Nine Stars Left, Four Right
The Baldenhofer Specimen
Third Finest Known**

5761 1798/7 9x4 Stars MS62 PCGS. BD-1, High R.4. Not so long ago, the 1798/7 BD-1 Eagle was considered a major rarity. As recently as 1988, Walter Breen reported his belief that only 18 to 20 were known. He reported six Mint State pieces, three mutilated examples, and the rest in grades from VF to AU. That total was only slightly higher than the 17 to 18 examples he reported two decades earlier in his *United States Eagles* monograph. Today, we are aware of many more. John Dannreuther suggests that 80 to 100 examples are known in the Bass-Dannreuther reference. However, the 1798/7 BD-1 eagle remains extremely rare in Mint State grades. We have compiled the following census of eight Mint State coins:

MS63 estimated grade. Harold P. Newlin (10/1884); T. Harrison Garrett; Garrett Family Collection; Johns Hopkins University; Bowers and Ruddy (10/1980), lot 1659; Harry W. Bass, Jr.; Bass Foundation Core Collection.

MS63 NGC Heritage Auctions (8/1996), lot 8410; Heritage Auctions (7/2003), lot 10412; Heritage Auctions (1/2004), lot 2200.

MS62 PCGS Farish Baldenhofer Collection (Stack's, 11/1955), lot 1439; Bowers and Merena (8/1999), Lot 421; Superior (2/2000), lot 1176; Goldberg Coins (2/2002), Lot 2058; Heritage Auctions (1/2004), lot 3056; Goldberg Coins (9/2008), lot 1274; Goldberg Coins (2/2009), lot 1524. The present coin.

MS62 National Numismatic Collection; Smithsonian Institution.

MS61 Col. E.H.R. Green; Stack's (1945); J.K. Lilly, Jr.; Smithsonian Institution.

MS61 NGC Goldberg Coins (9/2008), lot 1275; Stack's-Bowers (1/2013), lot 13324; Bonham's (6/2013), lot 2351.

MS61 PCGS RARCOA, February 1, 1975; Harry W. Bass, Jr.; Bowers and Merena (5/2000), lot 561.

MS60 Louis E. Eliasberg, Sr.; Bowers and Ruddy (10/1982), lot 649.

For years, the mintage of this variety has been recorded as 900 coins, as that was the quantity delivered on February 17, 1798. Several days later on February 28, another 842 eagles were delivered. The next delivery of the denomination was over a year later in May 1799. However, there were four earlier deliveries that took place in January 1798 (11, 20, 23, 30). The total production of eagles for the calendar year was 7,974 coins. It is doubtful that any of the coins struck in 1799 were dated 1797 or 1798, and we can be certain that the 1798 eagles were not struck in 1797. Therefore, both varieties of 1798/7 eagles were minted in January or early February 1798.

However, we know from die state evidence that examples of 1797 BD-2 were struck after the 1798 eagles, and today we are certain that the two varieties of 1798 were included in the January deliveries, although the quantity is unknown.

This is a lovely example that shows the usual bright green-gold coloration common to early tens. The obverse has a number of very shallow, horizontal adjustment marks. Because they are so shallow they at first appear to be roller marks, but since they cover most of that side, are present on both the devices as well as in the fields, and they are not exactly parallel, they can only be adjustment marks. Needless to say, they do little to detract from the coin's overall attractiveness because they are so slightly impressed into the coin's surface; nevertheless, we feel compelled to mention them for accuracy's sake. Slightly soft in the center of each side, both obverse and reverse are well impressed elsewhere, and there are no obvious or distracting marks that one could easily use as pedigree identifiers. Population: 1 in 62, 0 finer (3/14). NGC ID# 25ZZ, PCGS# 8560

1801 BD-2 Eagle, VF25
Usual Spiked Cap Die State

1801 BD-2 Eagle, AU55
Lustrous, Choice Example

5762 1801 VF25 PCGS. BD-2, R.2. The usual die state with prominent vertical spines in the cap, resulting from an unknown accident. The source of the lines is a mystery, stemming from something falling on the die. The nine spines are evenly spaced, covering 4 mm. from the first to the last. There is no damage to the reverse die. They are clearly not clash marks as some have suggested.

Our current thought is that, early in the life of this die pairing, a very small headless screw or bolt, such as a set screw, fell out of the press and landed unnoticed on the obverse die with a planchet protecting the reverse die from damage. When the press was cycled, the screw or bolt imbedded in the obverse die, creating the vertical spines.

The spines are clearly visible on this light yellow example, showing light wear with pleasing, problem-free surfaces. Housed in a green-label PCGS holder and likely headed for an early U.S. gold type set, or a date set of early eagles. NGC ID# 2627, PCGS# 8564

5763 1801 AU55 NGC. BD-2, R.2. Bass-Dannreuther Die State a/a. Just two die pairings exist for the 1801 ten dollar. A quick and easy way to differentiate the two varieties is to look at the placement of the reverse field star closest to the eagle's beak. On the BD-1 variety, the lower beak touches the star; however, on the BD-2 variety such as this coin, the lower beak is distant from the star. Collectors are accustomed to checking the position of the upper beak relationship to the star, but in this case the lower beak is the more obvious identifier.

This Choice AU example is a bright, yellow-gold ten with sharply struck, appealing surfaces. Only a few pinprick-size abrasions dot the lustrous fields. Some well-hidden, light adjustment marks are noted on the reverse, but these are shallow and not obtrusive. High, boldly denticled rims surround the attractive elements. NGC ID# 2627, PCGS# 8564

**1801 Ten Dollar, AU58
BD-2, Near-Mint State Example**

5764 1801 AU58 NGC. BD-2, R.2. Bass-Dannreuther Die State a/a. Up to 90% or so of the 44,344 eagles dated 1801 are this BD-2 variety, easily identifiable by the large, less-chunky stars with longer, spindly tips (called the Type III stars by Bass), of which star 8 is positioned much closer to Liberty's cap than the scarcer BD-1 variety. Most of the BD-2 variety display nine vertical spines in the cap, an anomaly acquired on the obverse die early in its life judging by the number of examples that display the peculiarity.

This example is lightly abraded with a touch of wear. Nominal strike weakness exists at stars 1 and 2 on the obverse, as well as on two of the field stars on the reverse. No evidence of die clash is seen on either side of the coin. Pleasing, green-gold color shows amber accents near the rims. Remaining mint luster surrounds the obverse stars and is plentiful on the reverse, making this a nice, near-Mint selection for early gold eagle collectors and for gold type enthusiasts alike. NGC ID# 2627, PCGS# 8564

**1801 Ten Dollar, BD-2, MS62
Popular, Collectible Early Eagle Variety**

5765 1801 MS62 NGC. BD-2, R.2. Later obverse die state, with "spines" in the cap. The 1801 BD-2 early eagle is a popular and eminently collectible variety — for a price. Collectors would nonetheless do well to remember that the various rarity ratings we provide for early gold are absolute numbers; that is, they do not take into account conditional rarity, which the marketplace of course factors in quite heavily. The reported mintage for 1801 eagles (which does not necessarily correspond to the date all of the *coins bore*) was 44,344 pieces, making it the largest production since the series' inception in 1795. John Dannreuther points out that some of those pieces may have been dated 1800 or even 1799, although die evidence (and the generous survival) indicates that most of the mintage was indeed dated 1801 and of this variety.

The present MS62 NGC example is reflective and somewhat prooflike, showing a few light, insignificant marks that constitute the grade. The strike is quite sharp overall, save for minor weakness on the fletchings and left shield border at the lower reverse. A few planchet adjustment marks appear at the lower obverse in the date and lower bust area. Census: 68 in 62 (7 in 62+), 67 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 2627, PCGS# 8564

1801 BD-2 Large Eagle Ten, MS63 Tremendous Eye Appeal

5766 1801 MS63 NGC. BD-2, R.2. Bass-Dannreuther Die State a/a. Exact mintages are difficult to state with certainty for virtually all early, Large Eagle gold. Mint deliveries were not explicit about what date was delivered, and the Mint had a penchant for choosing any die that had life left for the current production, sometimes without regard to the year being coined. The result was the possibility that some quantities struck and shipped in 1801 were, in fact, either 1800-dated coins, or even some dated 1799.

The Bass-Dannreuther reference lists several examples of questionable deliveries, and most mintages are no more than approximations even though they are reported as exact numbers by the Mint. With a nod to this minor lack of accuracy, it is known that most 1801 Large Eagle tens produced were of this BD-2 variety, characterized by two points of star 8 being much closer to the cap than the scarcer BD-1 variety for the year. Perhaps as much as 90% of the reported 44,344-piece mintage was the BD-2 variety.

This is good news for type collectors and for those who collect by a single representative of each date within the series. The variety is readily available in many conditions, and possibly as many as 800 pieces survive in all grades. It becomes scarce, however, in Select Uncirculated state or finer, when it is highly sought by collectors assembling advanced type sets.

This excellent, MS63 candidate displays attractive, lustrous surfaces and tremendous eye appeal. A bold strike on both sides of the coin complements vibrant, yellow-gold color with orange and lime-green accents. The surfaces show only a few scattered abrasions wispy hairlines — none of which are significant in relation to the assigned grade. Census: 42 in 63, 25 finer (3/14). NGC ID# 2627, PCGS# 8564

1803 Small Stars Ten, AU58 Very Rare BD-4 Die Pairing

5767 1803 Small Stars Reverse AU58 PCGS. BD-4, R.6. Bass-Dannreuther Die State d/c. This BD-4 1803 eagle variety is very rare at R.6, rarer than the BD-1 and BD-3 among Small Stars varieties, and rarer than the BD-5 among the Large Stars 1803s. Only the BD-2 Small Stars and the BD-6 Large Stars, both ranked R.7, are rarer than the BD-4 among the six known for the year.

Only the single obverse die was employed to strike all of the reported 15,017 eagles for the year. The reverse of the BD-4 shows a star point equidistant between the upper and lower beaks of the eagle. Generous luster runs over each side of this lightly circulated coin, a greenish-gold example with excellent eye appeal and some reflective semiprooflike reflectivity remaining in the protected areas around the obverse periphery. A few crisscrossing planchet adjustment marks appear in the central reverse, and that side also shows more light abrasions than the obverse. The central hair area on the obverse is lightly clashed from the shield stripes on the reverse, and a light die crack connects the bottoms of ERTY. A great-looking example of this very rare variety. NGC ID# 2628, PCGS# 8565

1803 BD-5 Ten Dollar, AU50 The Dunham Coin

5768 1803 Large Stars Reverse AU50 PCGS. BD-5, R.4+. Ex: Dunham. Bass-Dannreuther Die State g/b. Two Large Star reverses exist for the 1803 eagle, one with a mysterious, small Extra Star in the last cloud (seen weakly struck on this coin), which helps identify the BD-5 die pair.

This is a pleasing example of the scarce, 14th star variety, seldom seen in AU condition, with a generous amount of remaining mint luster enlivening the medium-gold surfaces and olive overtones. It is the William Forrester Dunham coin, offered for sale in the well-known 1941 B. Max Mehl mail bid sale, and later appearing in a January 7, 2008 Stack's sale as lot 1008.

In our opinion, the "hidden star" on the last cloud is not the most interesting feature in that area of this particular coin. Rather, the more fascinating mark is a small D counterstamp — struck twice — on the cloud in proximity to the hidden, 14th star.

A much more prestigious coin — the iconic Dexter 1804 dollar — has a similar D punched on the next-to-last cloud on its reverse. It is important to note that William Dunham owned the same famous 1804 dollar from 1903 through 1939.

We believe the D on this 1803 eagle is Dunham's self-applied pedigree mark, likely from the same punch used to mark the 1804 dollar. Dunham apparently used the mark in unobtrusive locations for adding his "marker" to several of the better coins in his vast collection.

This 1803 ten dollar piece goes a long way to settling the decades-old discussion about the significance of the D on the 1804 dollar, and whether it stood for Dexter (which it likely does not) or was placed there for some other reason (most likely, it is the mark of William Forester Dunham) as confirmed by the present coin. PCGS# 98565

LIBERTY EAGLES

1839 Eagle, Type of 1838, AU58 Important Transitional-Year Type Issue

5769 1839 Type of 1838, Large Letters AU58 NGC. Although not rare, the current Type of 1838, Large Letters 1839 ten dollar issue is definitely scarce, with just 158 examples graded at NGC; and only 15 of those coins designated as Mint State. This Type of 1838 variety has proven to be important for type purposes, since it was only produced for two years. This is a version of Christian Gobrecht's Liberty Head design that was altered somewhat in 1839, the transitional year, to reflect a new hairstyle and changes to the size and shape of the bust truncation.

The current example displays bold strike definition, with just the obverse stars showing weakness. Each side exhibits a number of small-to-moderate abrasions as expected for a circulated gold coin. Census: 25 in 58, 15 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 262E, PCGS# 8576

1859 Liberty Eagle, MS62 Elusive Low-Mintage Issue Single Finest Certified at PCGS

5770 1859 MS62 PCGS. A relatively small mintage of 16,013 pieces confirms the rarity of the 1859 Liberty eagle. Few examples were saved by contemporary collectors, as collecting high denomination gold coins was too expensive for the average collector in the 19th century. The coins circulated widely in the channels of commerce, suffering considerable attrition over the years, and the majority of survivors are in Extremely Fine and About Uncirculated grades today. David Akers knew of only one Mint State example, before nine relatively high-grade coins were recovered from the wreck of the *S.S. Central America*. NGC and PCGS have seen a total of only 10 Uncirculated pieces between them, the finest a single MS63 (3/14).

Few numismatists appreciate the rarity of the 1859 Liberty eagle, as it has been overshadowed by its more famous 1858 counterpart. An early auction appearance in lot 351 of Sale 399 (J.C. Morgenthau, 5/1939) read simply, "1859 Very fine." The lot realized \$21, a reasonable price at the time, when an Uncirculated specimen cataloged for \$40. Auction prices realized for the 1859 have increased exponentially in recent years. This coin currently holds the record, as it sold for \$39,656 in Heritage Auctions' January 2014 FUN Signature auction.

The present coin is an attractive MS62 example, the single finest certified at PCGS. The partially prooflike fields display modest contrast with the motifs at various angles, especially on the reverse. All of the design elements are boldly struck, and the pleasing yellow-gold surfaces show a scattering of minor contact marks, none worthy of individual mention. This is an important opportunity for the gold specialist to acquire a Mint State example of this rare date. Population: 1 in 62, 0 finer (3/14).

Ex: *FUN Signature* (Heritage, 1/2014), lot 5488, realized \$39,656.25. NGC ID# 263Z, PCGS# 8628

1859-O Liberty Eagle, AU55 Most Elusive No Motto O-Mint Ten

5771 1859-O AU55 NGC. Variety 1. Only 2,300 Liberty eagles were struck at the New Orleans Mint in 1859, and none of them were saved for numismatic purposes. As a result, the 1859-O is the rarest No Motto Liberty eagle from the New Orleans Mint. Probably no more than 45-55 examples survive today in all grades. Most examples seen are in the VF-XF grade range and only one coin has been certified in Mint State at either of the leading grading services.

The present coin is a lightly circulated example that shows a trace of friction on the high points of the well-detailed design elements. The bright orange-gold surfaces are lightly abraded and retain traces of original mint luster. Census: 5 in 55, 2 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2642, PCGS# 8629

1860-S Ten Dollar, AU58 Ex: S.S. Republic, Condition Rarity

5772 1860-S AU58 NGC. Ex: S.S. Republic. The population reports confirm the rarity of this San Francisco eagle, with PCGS reporting no Mint State examples, and just one piece in AU58 condition; NGC lists one piece in MS62, another in MS61, and five AU58 examples (3/14). The top NGC listings may include other *S.S. Republic* survivors, because four examples of this rare date were recovered from the wreck.

The current coin is somewhat abraded, as though it was a circulated coin before the ship sank. It acquired the typical yellow-gold patina and satiny luster typical of most seawater coins, although the surfaces do not show a mattelike finish the way some recovery coins do. This high-grade ten would fit nicely within any top-shelf set. This lot includes a certificate of authenticity, informative DVD, and a custom wood presentation box. NGC ID# 2646, PCGS# 8632

**1864-S Ten Dollar, VF30
Extremely Rare S-Mint Issue
25 to 30 Pieces Known**

5773 1864-S VF30 PCGS. The 1864-S is the rarest No Motto issue, and also the rarest San Francisco ten dollar issue. Doug Winter estimates no more than 25 to 30 examples exist in all grades. Just 2,500 pieces were struck and few survive (none in Mint State).

This example is a solid coin that can fill an important spot in a collection of No Motto or Civil War-dated gold. The abrasions are minimized by moderate wear, and olive-gold surfaces display the smooth appeal of well-circulated gold. With recent prices for XF examples of this date reaching record six-figure levels, this VF30 coin may be the right candidate for an astute bidder looking to fill a troublesome hole in an advanced circulated set. Population: 4 in 30, 13 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264E, PCGS# 8640

**1876 Eagle, AU55
Low-Mintage Date
One of the Top-Rated Examples**

5774 1876 AU55 NGC. CAC. Only 687 business strikes were produced of this low-mintage rarity, and survivors are typically found in grades of Extremely Fine into the lower ranges of AU; especially AU50. At the current grade level of AU55, this example becomes one of the top-rated representatives of this Philadelphia Mint date, and one of just seven Choice AU coins at PCGS and NGC combined. Light orange-gold central toning yields to deeper peach and rose-gold peripheral accents. The surfaces are moderately marked and lightly worn on both sides. Census: 4 in 55, 5 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265C, PCGS# 8674

1878-CC Liberty Ten, AU50 Rare Carson City Issue

5775 1878-CC AU50 NGC. **Variety 1-A.** Light, yellow-gold surfaces are moderately abraded with a few areas of roughness — some of which are normal for the issue, but also some that are unique to this coin. Technically, the coin is a well-detailed AU50 with a bit of mint luster remaining around the stars and legends, although this example is somewhat monotone in appearance.

With a mintage of just 3,244 pieces, this issue is always attracts attention from both series collectors and Carson City specialists. The date is coveted by those who recognize its rarity, which is on a par with its predecessor, the 1877-CC, as well as the 1873-CC. Census: 6 in 50, 18 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265K, PCGS# 8681

1899-S Eagle, MS67 Second-Finest Certified at PCGS Extraordinary Quality

5776 1899-S MS67 PCGS Secure. The 1899-S Liberty Head eagle is one of those dates that occasionally occurs in amazing quality such as the present piece, certified MS67 PCGS Secure.

The former Eliasberg Collection example of this issue, certified MS69 NGC, is a celebrated coin even within the context of the magnificent Eliasberg holdings. It was obtained by famed collector John M. Clapp directly from the San Francisco Mint in the year of its manufacture. The coin went from John M. Clapp to John H. Clapp, and from thence to the Eliasberg Collection in 1942. When the Eliasberg Collection was sold by Bowers and Ruddy in 1982, the coin was described loosely as a “specimen.” It was later used for the cover plate coin in Jeff Garrett and Ron Guth’s *United States Coinage: A Study by Type*.

We later offered that coin — certified MS69 NGC and described as “one of the three finest of the Liberty Head eagle type,” — as lot 2218 in our FUN Signature (Heritage, 1/2010), where it brought a remarkable \$195,500. According to the current NGC *Census Report*, the Eliasberg 1899-S is the sole finest certified at NGC of the entire Liberty Head eagle series, due to apparent crossovers of two other coins to PCGS.

The present piece is certified MS67 PCGS, as mentioned, a coin that was previously featured in the noteworthy Klamath Mountain part II Collection in our FUN Signature (Heritage, 1/2014), lot 5500, and there certified as MS66 PCGS. It brought a remarkable \$47,000, the winning bidder obviously recognizing the extremely high quality of this piece. Although not quite in the same league as the Eliasberg coin, it is closer than might be imagined. It has now been upgraded to an MS67 PCGS Secure holder, in which position it is the only MS67 at that service, and bettered by a single 1899-S in MS68 PCGS (3/14). This is a grade in which we have not seen an auction offering of this issue in more than two decades.

This piece should certainly perform even better at auction in our current Platinum Night session, as its inherent quality receives even greater exposure. The strike is full throughout both sides, with wheat-gold centers ceding to a greenish-gold, more-frosted appearance toward the rims. The few contact marks that determine the grade are trivial in the extreme. Simply extraordinary quality. Population: 1 in 67, 1 finer (3/14). NGC ID# 267L, PCGS# 8744

1903-S Ten, MS67
Exquisite Example for Type
None Certified Finer

5777 1903-S MS67 PCGS. This radiant ten dollar gold piece is supremely lustrous and eye-appealing, with swirling lilac and red accents over magnificent, orange-gold surfaces. The coin displays amazingly active cartwheel luster over unblemished fields, highlighting a razor-sharp full strike. While not as common as the 1901 or 1901-S issues for type, this Superb Gem is a comparably priced alternative and is destined to be a prized acquisition for the most advanced collection or Registry Set. No example of this date is certified in a higher numeric grade by either service. Population: 3 in 67, 0 finer (3/14). NGC ID# 267X, PCGS# 8754

1906-D Eagle, MS66
One of the Finest Graded

5778 1906-D MS66 PCGS. This first-year issue from the new coining facility in Denver had a mintage of nearly 1 million pieces. It is relatively available to collectors in lower grades, becoming scarce any finer than MS62. Rare above MS65, this Premium Gem is one of the five highest-graded examples at the two services combined.

The deep orange-gold obverse toning becomes even deeper on the reverse, where it is intermingled with strong accents of rose. The surfaces are intensely lustrous, and marks are difficult to locate without the aid of a loupe on either side. Population: 3 in 66, 0 finer (3/14). NGC ID# 2685, PCGS# 8760

PLATINUM NIGHT

PROOF LIBERTY EAGLES

**1860 Liberty Eagle, PR64 Deep Cameo
Finest Deep Cameo at PCGS
Ex: Farouk, Bass**

5779 1860 PR64 Deep Cameo PCGS. The general numismatic consensus is a total population of 10 or fewer proof 1860 Liberty eagles survive in all grades today. Known pieces include two specimens in the Smithsonian Institution and one in the American Numismatic Society, reducing the available population to just over half a dozen coins. In his 1980 auction analysis of the eagles, David Akers wrote that “no more than 10 or 11 can be accounted for today.” Our current roster lists nine distinctly different examples with seven other appearances that may or may not be included in the first nine. Perhaps the final tally could reach a dozen different pieces, including three in museums.

Roster of 1860 Proof Liberty Eagles

- 1. PR64 Deep Cameo.** United States Mint; National Numismatic Collection; Smithsonian Institution, grade per Garrett and Guth.
- 2. PR64 Deep Cameo.** Smithsonian Institution duplicate, grade per Garrett and Guth.
- 3. Proof.** American Numismatic Society, probably ex: Brock, Morgan.
- 4. PR64 Deep Cameo PCGS.** King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 199; Gaston DiBello; DiBello Collection (Stack's, 5/1970), lot 1068; Harry W. Bass, Jr. (Bowers and Merena, 10/1999), lot 1473; Bristol Sale (Kingswood, 3/2001), lot 480; Internet Only Auction (Heritage, 4/2001), lot 3496; H Internet Only Auction (Heritage, 9/2001), lot 4519; American Numismatic Rarities (6/2004), lot 1470; Central States Signature (Heritage, 4/2011), lot 5435, realized \$161,000. **The present specimen.**
- 5. PR64 Deep Cameo PCGS.** Orlando Sale (Stack's, 1/2009), lot 1118.
- 6. PR64.** Heman Ely; W. Elliot Woodward; purchased by T. Harrison Garrett on 10/25/1883 as part of a large transaction including nine gold proof sets; Robert Garrett; John Work Garrett; Johns Hopkins University; Garrett Collection, Part III (Bowers and Ruddy, 10/1980), lot 1668; Worrell Family Collection (Superior 5/1989), lot 5627.
- 7. PR63 PCGS.** Rarities Sale (Bowers and Merena, 1/1997), lot 333.
- 8. PR63 NGC.** William Cutler Atwater Collection (B. Max Mehl, 6/1946), lot 1438; Amon Carter Collection (Stack's, 1/1984), lot 762; Ed Trompeter Collection.
- 9. PR60 ANACS.** L.W. Hoffecker Collection (Superior, 2/1987), lot 4195.

Additional Appearances

- A. Proof.** F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 1/1946), lot 665; Jacob Shapiro (a.k.a. J.F. Bell); Memorable Collection (Numismatic Gallery, 3/1948), lot 559.
- B. Proof.** Public Auction Sale (Kreisberg-Schulman, 2/1960), lot 2790.
- C. Proof.** Wolfson Collection (Stack's, 10/1962), lot 678.
- D. Proof.** Central States Convention Auction (Kagin's, 4/1979), lot 886.
- E. Proof.** J. F. Bell Collection (Stack's, 1944), lot 624.
- F. Brilliant Proof.** Lorin G. Parmelee; Parmelee Collection (New York Coin & Stamp, 6/1890), lot 1310.
- G. Brilliant Proof.** William H. Woodin Collection (Thomas Elder, 3/1911), lot 1224.

This coin traces its history to several famous collections, including that of King Farouk of Egypt and Harry W. Bass, Jr. When this specimen was offered in the June 2004 American Numismatic Rarities sale, they wrote that it “compares easily and favorably to Bass: 1473 (October 1999) for quality and appeal,” failing to recognize it as the same coin.

This near-Gem Deep Cameo proof is tied with one other coin for the finest that PCGS has certified (3/14). Both sides have rich orange-gold fields with lighter yellow-gold devices that exhibit full design details. Our roster shows that this piece, the other PR64 Deep Cameo PCGS coin, and the two Smithsonian coins are all approximately tied for top grade honors. NGC ID# 28EW, PCGS# 98796

1886 Eagle, PR64 Ultra Cameo Stunning Gold-on-Black Contrast

5780 1886 PR64 Ultra Cameo NGC. CAC. Wonderfully deep mirrors contrast with thickly frosted devices on this visually stunning Ultra Cameo proof. Rare in the absolute sense with only 60 pieces minted, the 1886 date is often underrated for its true rarity. Perhaps fewer than 20 pieces survive in all proof grades.

This brilliant, gold-on-black example has eye appeal suggestive of a much higher grade. Boldly struck devices float on smooth, watery surfaces. Rich, orange-gold coloration covers the surfaces, and is the essence of how proof gold should appear. Apparently, a few delicate lines define the near-Gem, numeric grade of this tantalizing proof eagle. Census: 2 in 64 Ultra Cameo, 1 finer (3/14). NGC ID# 28FR, PCGS# 98826

1887 Ten Dollar, PR65 Ultra Cameo 80 Proofs Struck Less Than 30 Pieces Remain

5781 1887 PR65 Ultra Cameo NGC. There have been 27 grading events for this rare proof issue, which is in line with the PCGS estimate of 20 to 25 survivors from an original Proof mintage of 80 pieces. Some of the submissions are likely duplications, leaving an unanswered question about what happened to the rest of the proof mintage.

According to Garrett and Guth in their *Encyclopedia of Gold Coins*, the 1887 date was the first year in which proofs were produced in response to collector demand — rather than “in anticipation” of the demand — and the first year they were sold in such a manner to the general public. With no “unsold” proofs to melt in the following year, the low survivorship remains a mystery. Perhaps many were simply spent during the turbulent financial times of the early 1890s.

This glittering proof is one of the few certified with the Ultra Cameo designation, and it is exceptionally desirable as such. Strong contrast is evident between the thickly frosted devices and deeply mirrored fields. As expected, a full strike provides bold detail for Liberty’s portrait and the eagle. This example displays brilliant, orange-gold surfaces and attractive, deeply liquid fields on both sides of the coin. A few die polishing lines exist beneath the eagle’s left (facing) wing, as made by the Mint.

All proof gold of this era is rare and eagerly sought by today’s collectors. Just two pieces of this date are graded numerically finer by NGC with Ultra Cameo surfaces, and PCGS reports only one piece in a finer numeric grade with its Deep Cameo designation. Census: 2 in 65 Ultra Cameo, 2 finer (3/14). NGC ID# 28FS, PCGS# 98827

INDIAN EAGLES

1908 Motto Indian Ten Dollar, MS66 Well-Preserved and Conditionally Scarce

5782 1908 Motto MS66 PCGS. This issue represents a new first-year type for collectors as it displays the motto IN GOD WE TRUST on the reverse, to the left of the eagle. Theodore Roosevelt objected to including this reference to God on our nation's coinage, but the motto was restored by an Act of Congress in 1908.

This example is well-defined and exceptionally well-preserved. Pleasing satiny luster embraces the clean, lightly toned surfaces. Although relatively available in lower grades, this issue is scarce at the MS66 level or finer. Population: 32 in 66, 9 finer (3/14). NGC ID# 28GJ, PCGS# 8859

1909 Ten Dollar Indian, MS66 A Remarkable, Conditionally Rare Example

5783 1909 MS66 NGC. In the third year of the Indian Head design, 184,700 business strikes were produced at the Philadelphia Mint, and most were sharply struck with radiant mint luster. According to Garrett and Guth, writing in 2008: "This date is certainly underrated, but collectors can use this to their advantage to secure a pristine example (before the true rarity of this coin is understood and it becomes properly valued)."

This is a lovely Premium Gem with softly frosted luster and pleasing antique-gold coloration. It is boldly struck overall, save for a trace amount of typical weakness over the centers. The surfaces are well-preserved and remarkably clean on both sides. Census: 4 in 66, 3 finer (3/14). NGC ID# 28GM, PCGS# 8862

**1910-D Eagle, MS66+
Top-Shelf Type Set Candidate**

5784 1910-D MS66+ PCGS. CAC. Many modern coin series have them, “miracle” dates where the stars align and the coins that fall from the presses show the most-desirable production criteria imaginable. For the Saint-Gaudens and Liberty Head double eagles, it is dates such as the 1924 and 1928, and the 1904, respectively. For Morgan dollar proofs, it is the 1896 and 1898.

For Saint-Gaudens eagles — at least, among the branch mint issues— it is the 1910-D. (The 1926 and 1932 issues must also be mentioned, among Philadelphia coins.) The 1910-D is the most widely available mintmarked issue in the series in high grades, and the nicest-looking overall. This MS66+ PCGS example certainly presents the high production values in their best light, including generous, satiny luster; a bold strike over fine-grained surfaces; excellent preservation, showing just minuscule marks; and rich color, prevailing orange-gold contrasting with tinges of pale jade that congregate near the rims. A top-shelf example for type set purposes. Population: 41 in 66 (8 in 66+), 1 finer (3/14). NGC ID# 28GS, PCGS# 8866

**1911 Indian Eagle, MS67
Ideal Type Coin**

5785 1911 MS67 NGC. The 1911 is an issue of high quality that offers the type collector a slightly unconventional but satisfactory option for the Saint-Gaudens eagle. Garrett and Guth write in their *Encyclopedia of U.S. Gold Coins*: “Aside from the 1926 and 1932 issues, this is one of the most obtainable issues.” In a relative sense, this extends even to the MS67 level, though at that point even the 1911 is a definite condition rarity. The present piece has smooth and vibrant reddish tinted, lemon-gold surfaces. The strike is particularly pleasing, adding another dimension to the eye appeal. Census: 9 in 67 (1 in 67 ★), 3 finer (3/14).

Ex: Long Beach Signature (Heritage, 5/2009), lot 1791. NGC ID# 28GT, PCGS# 8868

LIBERTY DOUBLE EAGLES

1850 Double Eagle, MS63 First Year of the Denomination An Impressive High-Grade Example

5786 1850 MS63 NGC. The 1850 double eagle is an available issue in lower grades that becomes scarce in mint condition and rare in Select Mint State or finer grades. Extremely important as the first regular issue for this new denomination, the 1850 enjoys tremendous popularity as a result, with buyers lining up to lay their money down for an attractive representative at any grade level.

This example should ideally be viewed in-hand, in order for the potential buyer to fully appreciate the impressive quality of this carefully preserved coin. Only faint surface marks are detected with the aid of a strong magnifier, and these are clearly minimal for the grade. The softly frosted sheen over each side complements the lovely yellow-gold coloration, imbued with subtle accents of pale green in the fields and pastel peach near the margins. Unlike many later dates in the series of Liberty double eagles, this issue must have been produced with a great deal of care. The design motifs are struck with exacting precision on both sides, and Liberty's hair detail in particular displays remarkably full definition. On the reverse the eagle's head, wing feathers, and shield elements are also crisply defined and seemingly complete.

Truly a beautiful coin that combines high technical merit with splendid visual appeal and conditional scarcity. The new owner of this marvelous example will take possession of an enviable prize when it crosses the auction block. Census: 9 in 63, 3 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 268F, PCGS# 8902

1851 Double Eagle, MS63 Sharply Struck Early P-Mint Issue

5787 1851 MS63 PCGS. The original high production of the 1851 double eagles, nearly 2.1 million coins, nonetheless failed to translate into good survival in high grades. Certified survivors today are apt to be well-circulated, heavily abraded, and to average only AU50 or thereabouts; Select and Choice examples are few and far between. Cartwheel luster over orange-gold surfaces that show a razor-sharp strike and minimal abrasions are among the many draws on this piece, one of 13 submissions at PCGS with but two finer (3/14). This piece would make a great acquisition for type set purposes, from the first decade of Philadelphia double eagle production.

From The Charles G. Wright Family Collection. NGC ID# 268H, PCGS# 8904

1851-O Double Eagle, MS61+ Attractive Early O-Mint Twenty

5788 1851-O MS61+ NGC. The fairly plentiful mintage of the second-year O-mint double eagle, the 1851-O, appears to have been largely subsumed in the bustling commerce of New Orleans, the largest city in the South at the time and among America's most important commercial ports. The typical 1851-O grades only Very Fine to Extremely Fine; Mint State examples such as the present MS61+ NGC example are quite rare. At first glance the greenish-gold surfaces seem to suggest a higher grade, and protected prooflike areas remain around the peripheries. The luster thins into faint field haze in the exposed fields, however, which along with a few scattered light marks accounts for the grade. Still a quite nice example of this early O-mint twenty.

From The Charles G. Wright Family Collection. NGC ID# 268J, PCGS# 8905

**1852-O Twenty Dollar, AU58
Minimally Circulated Early
New Orleans Issue**

5789 1852-O AU58 PCGS. This richly colored greenish-gold 1852-O double eagle shows remnants of a desirable semiprooflike sheen. Both the color and finish are characteristic of most extant 1852-O double eagles, but the overall bold strike is well above-average. The surfaces are minimally worn, with a smattering of mostly small, undistracting abrasions. The high points show a smoky-gray appearance, the result of bag storage for many years. The 1852-O is the most readily obtainable of the 1850-1852 O-mint double eagles in AU grades, and it is always in demand among collectors of high-grade circulated type. Population: 33 in 58 (1 in 58+), 13 finer (3/14). *Ex: Dallas Signature (Heritage, 12/2005), lot 1594.*

From The Charles G. Wright Family Collection. NGC ID# 268L, PCGS# 8907

**Elusive 1852-O Double Eagle, MS61
Attractive Semiprooflike Surfaces**

5790 1852-O MS61 NGC. Rich semiprooflike luster nestles in the protected areas of the device edges at the peripheries on each side of this 1852-O twenty, among the most readily available O-mint twenties from the first decade of double eagle production. The reflective field contrast nicely with frosty devices and the surfaces overall are attractive greenish-gold. The luster is a bit muted in the fields outside of the protected areas, however, and it, along with a scattering of light marks, accounts for the grade. An extremely attractive and well-struck coin, and an issue seldom seen in higher Mint State grades. Census: 8 in 61, 4 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 268L, PCGS# 8907

1853/2' Double Eagle, AU58 Seldom Seen Finer

5791 1853/2' AU58 NGC. FS-301. The 2014 *Guide Book* lists this twenty variety as the "3 Over 2" while both PCGS and now NGC express it as 1853/2' which could be loosely expressed as "1853 over something." PCGS also handles the ten dollar in the same way, with half quotation marks, while the *Guide Book* identifies the ten dollar without the quotation marks, apparently not doubting it. At any rate, the collectibility of the variety seems secure; the present near-Mint State NGC example certainly shows evidence of some artifact in the lower loop of the 3, although we could not say what. This apricot-gold example shows generous luster amid a scattering of mostly small and medium-sized marks, the largest a couple of scrapes on Liberty's cheek and neck. This is an attractive example of this variety, seldom seen in Mint State. Census: 39 in 58, 4 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 268M, PCGS# 8909

1853-O Double Eagle, MS61 Elusive Low-Mintage New Orleans Issue Seldom Offered So Fine

5792 1853-O MS61 NGC. Ex: Eagle Collection. The mintage was only 71,000 pieces for the 1853-O compared to 190,000 for the 1852-O, and the issue is far more elusive in high grades — not that either is particularly easy, and both are seldom seen in Mint State, the 1853-O proportionally less so. This MS61 NGC example is sharply struck, and there are only a few scattered bagmarks, less severe than might be expected for the grade. Cartwheel luster abounds throughout each side, and the attractive orange-gold coloration is accented with light jade tinges. An extremely nice example from this run of early high-grade O-mint coins. The last one in this grade that we offered, in our Denver Signature (Heritage, 8/2006), lot 5586, brought \$34,626.50. Census: 3 in 61, 1 finer (3/14).

Ex: FUN Signature (Heritage, 1/2002), lot 4009.

From The Charles G. Wright Family Collection. NGC ID# 268N, PCGS# 8910

Legendary 1854-O Twenty Dollar, AU55 Condition Census Example

5793 1854-O AU55 PCGS Secure. The Fort Worth, Texas, branch of the National Archives is home to numerous records from the New Orleans Mint and Assay Office. Among the notable records are two original gold deposit books that provide the details of individual gold deposits. The first book is the *Register of Gold Bullion Received from Depositors, and of Coins Paid at the Treasury of the Mint*. That book lists every deposit of gold from April 1, 1851, to June 9, 1853, nearly all from California. The second book is the *Register of Gold Bullion, Coins & Jewelry Received*, covering January 1, 1852, to January 28, 1861.

While the second book is less detailed, it provides extremely important data. For example, in January 1861, the Bank of Louisiana made six different deposits totaling 29,000 sovereigns. However, the earlier years are more interesting in terms of the 1854-O double eagle. While a more detailed study is planned, the number of deposits each quarter from 1852 to 1854 is most telling.

First quarter: 1852: 608 deposits; 1853: 420 deposits; 1854: 237 deposits
 Second quarter: 1852: 491 deposits; 1853: 190 deposits; 1854: 164 deposits
 Third quarter: 1852: 206 deposits; 1853: 87 deposits; 1854: 55 deposits
 Fourth quarter: 1852: 395 deposits; 1853: 217 deposits; 1854: 68 deposits

In every quarter, the number of deposits decreased each year from 1852 to 1854. That downward trend continued for the rest of the decade. While the number of deposits in any quarter was subject to a number of factors, there is no doubt that the opening of the San Francisco Mint in California was one of those factors. Lower third quarter deposits, from July to September, were probably also due in part to yellow fever and other disease in the humid metropolis.

Mint records indicate a total production of just 3,250 double eagles at New Orleans during the year 1854, and only about 1% of that total survives today, an estimated 25 to 35 coins, according to Doug Winter. Current NGC and PCGS population data, including resubmissions, totals 32 pieces in all grades at both services, including six coins certified as AU55 and four coins as AU58 (3/14). There are no Mint State pieces certified, so the present AU55 specimen ranks close to the top of the Condition Census. The certified population probably represents only about 25 different coins, or perhaps even fewer. While we don't have a roster of the finest coins, we feel that there are likely only six or seven different examples that grade AU55 or AU58.

Of course a coin of such great rarity must be examined in order to establish its authenticity. Doug Winter, writing in the second edition of his *Gold Coins of the New Orleans Mint, 1839-1909*, has identified the following die characteristics for genuine specimens, including: small digits in the date which slant up to the right, die lines in the area of TY of LIBERTY on the coronet, and a tiny, raised die lump on Liberty's neck in front of the largest curl. Typically seen striking qualities of the 1854-O are consistent on this piece, as are the aforementioned die characteristics. Slight softness is seen on the hair curls closest to Liberty's face, and on the reverse some weakness can be found on the eagle's tail feathers and the banner. As usual, the denticles are sharply defined and the peripheral stars show significant definition on the centers.

This bright greenish yellow-gold example displays prooflike tendencies in the recesses and bits of reddish patina about the peripheries. Surface marks are scattered and generally unobtrusive. Winter implies that pleasing surfaces are rarely seen: "Most 1854-O double eagles are well circulated and, as a result, they show very heavily abraded surfaces." He continues to note that a prooflike or reflective appearance is the norm for higher grade pieces such as this specimen.

Collector interest (and prices realized) for these prized O-mint rarities has escalated in recent years, as evidenced by two AU55 examples sold by Heritage over the last three years, both in excess of \$450,000. According to Winter, "there are not many 1854-O double eagles with good eye appeal and these tend to be in tightly-held collections." We expect the present specimen to soon be in strong collecting hands, where it will likely remain for a long time. A fine bidding opportunity for the serious O-mint or Southern gold collector. Population: 3 in 55, 0 finer (3/14).

Ex: The Cincinnati Collection (Heritage, 1/2005), lot 8829, where it realized \$368,000; The Pittsburgh ANA Fall National, U.S. Coins Signature (Heritage, 10/2011), lot 5099, where it realized \$431,250.

From The Charles G. Wright Family Collection. NGC ID# 268T, PCGS# 8912

1854-S Double Eagle, AU53 S.S. Central America Survivor

5794 1854-S AU53 PCGS. CAC. Variety 11C, Closed A. Ex: S.S. Central America. SSCA 6574. The San Francisco Mint opened in 1854, making the 1854-S Liberty double eagle an important issue for mintmark type collectors. The issue was very rare in high grade before several hundred examples were recovered from shipwreck finds like the S.S. Central America and the S.S. Yankee Blade. The 1854-S is known in at least three reverse varieties, Broken A, Closed A, and Open A, referring to the A in STATES. This coin represents the Closed A variety, the rarest of the three.

The present coin is a pleasing greenish-gold specimen that shows just a trace of wear on the well-detailed design elements. The lustrous surfaces show a few well-scattered minor abrasions, none worthy of individual mention. The overall presentation is quite appealing. Population: 8 in 53, 66 finer (3/14). NGC ID# 268U, PCGS# 8913

1856-O Double Eagle, AU Details From the Pittman Collection

5795 1856-O — Obverse Scratched, Cleaned — NGC Details. AU. The 1856-O is a celebrated rarity among Liberty double eagles, being also one of the most desirable of all United States gold coins. Only two other issues, the 1854-O and 1870-CC, rival this issue for rarity, aside from the extremely rare 1861 Paquet double eagle.

From a tiny original mintage of 2,250 pieces, perhaps less than two dozen coins survive in all grades. The Heritage numismatic research team has identified exactly 23 different examples of this issue. Aside from one remarkable specimen strike, all surviving examples fall in the XF and AU grade categories. Like the present piece, nearly all of the known examples have some degree of scratches and abrasions.

This example is remarkably unabraded for a heavy gold issue and the green-gold surfaces are tinged with pale orange hues. Traces of prooflike glimmer are still visible even though a light cleaning left both sides a trifle dull. A rather deep scratch angles downward from the tip of the bust into the 8 of the date. Akers reported that the Pittman specimen was purchased from Ed Bell in 1961 for \$3,000, in a private transaction. Its earlier provenance remains unknown, but the present offering is only the third time in more than 50 years that it has appeared in a public sale.

Ex: Ed Bell (11/27/1961); John Jay Pittman (David Akers, 10/1997), lot 1134; Cincinnati Collection (FUN Signature Sale, Heritage, 1/2005), lot 8831.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268Z, PCGS# 8918

**1856-S Twenty Dollar, MS63
No Serif, Spiked F Variety
From the *S.S. Central America***

**1856-S Liberty Twenty, MS64
Only Two Finer Coins at PCGS**

5796 1856-S MS63 PCGS. Variety 17-K, No Serif, Spiked F. Ex: *S.S. Central America*. SSCA 5420. This variety is certified as the 17-K variety, although we are unsure how that differs from the No Serif, Spiked F 17-F variety at PCGS, which appears to share the same characteristics. At any rate: The U in UNITED is missing its upper-left serif, and the spiked F refers to a small, raised die line running from the rim downward to the top of the F in OF. Another small die line runs downward through the middle serif of the F. This lustrous Select Mint State example shows wheat-gold areas around some of the obverse stars, brightening inward to yellow-gold in the centers with abundant eye appeal throughout both sides. The strike is uniformly sharp. A couple of small ticks on the cheek and chin are in concert with the grade. Beautiful cartwheel luster completes the allure on this better-variety *S.S. Central America* recovery coin. Population: 6 in 63, 6 finer (3/14).

From *The Charles G. Wright Family Collection*. NGC ID# 2692, PCGS# 8919

5797 1856-S MS64 PCGS. Although we cannot say for sure and this piece is not specifically provenanced to it, most 1856-S double eagles in high grade are a good bet — “better than even money,” as the saying goes — to stem from the shipwreck of the *S.S. Central America*, from whence several hundred examples were later recovered. In any case this piece displays superlative eye appeal with orange-gold, lustrous surfaces that are well-struck and free of singular marks. Type One double eagles in high grade such as this piece that appear to derive from the *S.S. Central America* are numismatic treasures of great aesthetic appeal. Population: 4 in 64 (1 in 64+), 2 finer (3/14). NGC ID# 2692, PCGS# 8919

1857-O Double Eagle, MS62 Prooflike From the *S.S. Republic*

5798 1857-O MS62 Prooflike NGC. The last couple of decades have seen a dramatic increase in the number of Type One double eagles, due to the discovery of three important gold treasures salvaged from the ocean depths. The treasures have realigned the relative rarity of the early 20-dollar gold pieces.

The *S.S. Central America* sank off the coast of North Carolina during a September 1857 hurricane in the Atlantic Ocean. The ship was carrying a massive cargo of California gold ingots and freshly minted double eagles, bound for New York. The loss triggered a financial panic.

The *S.S. Republic* was also lost during a hurricane in the Atlantic Ocean. The ship went down 100 miles off the coast of Savannah, Georgia, and carried a substantial quantity of gold and silver. The ship was sailing from New York to New Orleans.

On the other coast, the *S.S. Brother Jonathan* encountered a gale while sailing from San Francisco to Portland. The ship went down outside the harbor of Crescent City, California, on July 30, 1865, taking with it several hundred thousand dollars in gold coins, along with \$200,000 in newly printed Federal currency.

Among the several thousand double eagles recovered from the three salvage operations, only four were examples of the 1857-O double eagle, and all four were found in the *S.S. Republic* treasure. The example offered here, housed in NGC's special *S.S. Republic* holder, is a remarkable coin that probably ranks as the second or third finest known of the issue. Doug Winter recorded this piece as the third finest of seven Mint State pieces in his 2006 reference, *Gold Coins of the New Orleans Mint: 1839-1909*.

Only 30,000 double eagles were minted in New Orleans during the year, and most survivors grade only VF or XF. Certified MS62 Prooflike, this example is the second finest of just seven Mint State examples that NGC has graded. The MS63 Harry W. Bass, Jr. specimen is the only Mint State 1857-O double eagle that PCGS has examined. The data is current as of March 2014.

This boldly defined twenty has brilliant yellow surfaces with mirrored fields around bold devices, with frosty light yellow mint luster. The result is a splendid cameo appearance with extraordinary eye appeal.

From The Charles G. Wright Family Collection. PCGS# 78921

1857-S Double Eagle, MS65 ★ Reflective, Semiprooflike Fields

5799 1857-S MS65 ★ NGC. Discovery of the *S.S. Central America* yielded more than 5,000 examples of the 1857-S double eagle — most in Mint State grades. Prior to the discovery, virtually no Choice Uncirculated examples of the issue were known (and certainly no Gem quality coins). That all changed when many of the recovered double eagles were in the same state of preservation as the day they left the San Francisco Mint.

There is no notation on the NGC holder regarding the origin of this lustrous, pristine double eagle. The fields are reflective and semiprooflike (or fully prooflike in many areas), surrounding lightly frosted devices. Abrasions are at a minimum, with a small, minor reeding mark in the field beneath Liberty's chin but no other marks of any significance. Delicate lines in the fields — visible with a glass — are suggestive of die polishing just prior to striking. The coin is fully struck and a lustrous, apricot-gold in color, with eye appeal deserving of the NGC Plus designation it received. Garrett and Guth list the 1857-S twenty in their book, *100 Greatest U.S. Coins*. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS65 Lustrous and Sharply Struck

5800 1857-S MS65 NGC. CAC. The 1857-S double eagle records a production of more than 970,000 pieces, and NGC and PCGS have graded more than 7,000 examples, ranging from Very Fine to the better levels of Mint State, with the highest concentration in the Choice Extremely Fine to near-Gem range. Most of the pieces in mint condition came from the hoard of 1857-S twenties recovered from the wreck of the *S.S. Central America* in the late-1980s.

Whether or not the Gem in this lot was part of the above hoard is conjectural, but no designation is given on the NGC holder. In any event, its yellow-gold lustrous surfaces are fringed with whispers of orange at the margins. The design features are sharply struck throughout, a major attribute of this issue. Small contact marks and grazes on the obverse are the only factors that may well preclude an even finer grade.

From The Northern Lights Collection. NGC ID# 2696, PCGS# 8922

1858 Double Eagle, High-End MS62 Condition Rarity, Remarkable Eye Appeal

5801 1858 MS62 NGC. The moderate mintage of the 1858 double eagle exceeded 211,000 coins, but today the issue is a condition rarity. Most examples are well-circulated, and certified survivors average only AU50 or thereabouts. Any appearance of a Mint State example is a noteworthy occurrence. This MS62 NGC specimen shows radiant cartwheel luster running over orange-gold surfaces that are fairly prooflike on both sides, seemingly an early strike from a fresh die pair. A smattering of light marks determines the grade, but this is a coin with remarkable eye appeal and an extremely high collectibility quotient. Probably underrated in the market right now, given how infrequently examples at this level appear. Census: 7 in 62, 1 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 2697, PCGS# 8923

1859-S Twenty, MS61 Attractive and Conditionally Scarce

5802 1859-S MS61 PCGS. The ample San Francisco mintage of 636,445 pieces was much larger than either the Philadelphia Mint production of 43,597 coins or the tiny New Orleans output of 9,100 examples. Garrett and Guth (2008) comment, regarding this issue that: "Examples may be found in grades of Very Fine to About Uncirculated without too much difficulty. Most of these will be heavily marked, as the production for the year was widely circulated."

The surfaces of this Mint State specimen are lustrous and mildly marked, with pleasing rose-gold and light-orange toning intermingled over both sides. A conditionally scarce example that should draw considerable attention when it crosses the auction block. Population: 16 in 61, 15 finer (3/14). NGC ID# 269C, PCGS# 8928

1860 Double Eagle, MS64 Elusive Condition Rarity Tied for the Finest at NGC

5803 1860 MS64 NGC. Although the mintage for the 1860 double eagles was a healthy 577,000-plus pieces, the issue is a conditional rarity, like so many early Liberty Head twenties from all mints. A considerable number were found aboard the *S.S. Republic*, which sank in 1865 in the Atlantic Ocean off the coast of Georgia, but most of those coins were in lower Mint State grades, with only a handful at the MS64 level or finer. The 1860 is rarely mentioned in discussions of important double eagles as it should be. Consider the holdings of the Smithsonian Institution that include just two 1860 double eagles, each grading just XF. Jeff Garrett and Ron Guth report an average certified grade of AU53, and an average auction grade just below MS60.

Gorgeous, flowing cartwheel luster is the calling card of this near-Gem NGC-certified 1860 double eagle, a coin of near-impeccable preservation and extremely high eye appeal. The greenish-gold surfaces are well-frosted and virtually free of contact. Even under a loupe, only a pair of tiny ticks appear on Liberty's cheek, which are nonetheless quite inconsequential. The impressive strike is razor-sharp throughout both sides; we are tempted to call it full, save for perhaps a couple of strands of hair on the obverse, the deepest parts of the dies. NGC has seen only six submissions in this grade with but a single MS65 finer (3/14). This coin is not specifically provenanced to the *S.S. Republic* or any other shipwreck recovery, but in any case it is a coin of noteworthy quality. Census: 4 in 64, 0 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 269D, PCGS# 8929

1860-O Double Eagle, AU53 Condition Rarity in About Uncirculated

5804 1860-O AU53 PCGS. While the New Orleans Mint concentrated on silver dollars and small change in 1860, the Philadelphia Mint and the San Francisco Mint were kicking out double eagles willy-nilly. The Philadelphia production alone for the combined years 1860 and 1861 was more than 3.5 million double eagles. The San Francisco Mint accomplished more than 1.1 million twenty dollar gold pieces in 1859 and 1860 combined. Yet a meager mintage of just 6,600 double eagles represented the New Orleans output in 1860.

In truth, all New Orleans double eagles are scarce-to-rare in one sense or another, with a total mintage of the entire 13-year series totaling 831,516 pieces (1850 to 1861 plus 1879). Most of that production is comes from the “common” dates — 1850-O, through 1853-O — but in reality, no O-Mint twenty is common.

The 1860-O date is considered in the top half of the New Orleans series in rarity with only 85 to 100 survivors. Until recently, the issue was unknown in Mint State. A single MS60 example was certified by NGC not long ago, but the condition rarity of the 1860-O twenty in AU condition remains.

The present example retains prooflike surfaces in protected areas and displays original, orange-gold coloration. While several abrasions are seen on the coin, the cumulative effect of their presence is less than normally seen on the issue. Golden luster remains vibrant in many areas of the coin, complemented by prooflike flash at the margins and around the devices. Nice detail remains on the motifs. Pleasing and attractive, this is a far above-average example for the grade and a rare O-Mint date sure to attract bidder attention. Population: 9 in 53, 10 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 269E, PCGS# 8930

1861-O Double Eagle, AU55 Complete Date

5805 1861-O AU55 PCGS. The New Orleans Mint gold deposit books (preserved at the Fort Worth, Texas branch of the National Archives) record 24 deposits of gold dated January 2 through January 28. Major depositors were Citizen's Bank (seven deposits, 6,661 ounces), Bank of Louisiana (three deposits, 3,588 ounces), and Cramer & Co. (three deposits, 3,402 ounces). During that period, 11 other depositor from eight individuals accounted for 261 ounces of gold. Among items from those depositors were 29,000 sovereigns, South American and Mexican "doubloons," jewelry, and mixed bullion. Deposits totaled 13,912 ounces of gold.

The total mintage of 1861-O double eagles is recorded as 17,741 pieces, struck under three authorities, the Union, the State of Louisiana, and the Confederacy. That production indicates that additional unrecorded gold deposits occurred after January 28. In *Gold Coins of the New Orleans Mint: 1839-1909*, Doug Winter suggests that 5,000 were struck by the United States government through January 26, 9,750 were struck by the State of Louisiana from January 26 to March 31, and 2,991 were struck by the Confederate government in April 1861.

The 1861-O double eagle is known with a full date, or with a weak date having the lower parts of each digit nearly or entirely absent. This example has a complete date, with the lower loops of the 8 and 6 weaker than the balance. There is no trace of the obverse die crack from the rim over the second star that appears on some examples. The dies and die states of the 1861-O twenties require continued study.

This Choice AU example has an above average strike with hints of greenish color on its somewhat reflective surfaces, showing strong luster. The surfaces have a few trivial marks, although this piece lacks the deep marks that Doug Winter says are typical. He writes: "There are a few relatively clean pieces known and these are extremely desirable." One of those is the highly appealing example offered here that will likely enjoy intense bidding activity. Population: 16 in 55, 6 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269J, PCGS# 8934

1861-O Double Eagle, AU55 Important Civil War O-Mint Rarity

5806 1861-O AU55 PCGS. Strong Date, die crack from rim near star 2 to obverse field. The Civil War would in effect close the New Orleans Mint to coinage after 1861, when the facility was alternatively held by three entities — the U.S. government, the State of Louisiana, and the Confederate States of America. Confederate troops would occupy the New Orleans Mint in April 1861. There is no accurate way of determining which double eagles were struck under which authorities, but only 17,741 examples in total were produced. After closing for coinage, it would be nearly 20 years, until 1879, before the New Orleans Mint would strike more coins, namely silver dollars, eagles, and double eagles.

This Choice AU 1861-O twenty certified by PCGS shows much semiprooflike reflectivity remaining under a layer of small but extensive contact marks, well in concert with the grade. The golden-yellow surfaces still show generous luster and bold eye appeal. This coin is one of the Strong Date coins with a die crack running inward from the rim, just above star 2, into the obverse field before the profile of Liberty. These are the coins (approximately 17% of the total production) that Doug Winter posits were likely struck under the Confederacy.

Most survivors of this issue are heavily worn and abraded, many being cleaned or having other problems that prevent them from being certified. The average grade of certified pieces is a tad more than XF45. This AU55 example is one of 16 such submissions at PCGS, and only six are finer (3/14). The finest graded at PCGS are two submissions in MS60. This coin represents an important opportunity to acquire this important Southern issue, an example that would be quite difficult to improve upon.

From The Charles G. Wright Family Collection. NGC ID# 269J, PCGS# 8934

1861-S Paquet Reverse Double Eagle, AU58 Legendary 19th Century Issue, Tied for Finest Known

5807 1861-S Paquet AU58 PCGS. The Paquet reverse double eagle is one of the great “story” coins in American numismatics. Late in 1860, Anthony C. Paquet, assistant engraver at the Mint, designed a new reverse die for the double eagle. The new reverse followed the basic pattern of Longacre’s classic design, but it differed in several important respects. Paquet used a new set of letter punches for the legend and denomination in the design. The new letters were taller and thinner, and the spacing between the letters was tighter. The oval of stars was located below the rays on the Paquet reverse, instead of mingling with them, as seen on the old design. Most important, Paquet’s design featured an extremely narrow rim, in order to leave room for the taller letters. This narrow rim had unforeseen consequences for the production of double eagles in 1861. Four pairs of the new double eagle dies were sent to San Francisco in November 1860 and three pairs were sent to New Orleans.

When coinage began in Philadelphia on January 5, 1861, the coiners noticed problems with the new reverse die. Because the planchets for the double eagles had their edges upset before striking, and the edges were upset to accommodate the width of the old rims, the new narrow rims on the dies did not match up well with the upset rims on the planchets. This seems to have caused excessive wear and breakage of the dies. The coiners also felt the new narrow rims would wear down quickly in normal use. When these issues were brought to the attention of Mint Director James Ross Snowden, he ordered a halt to production with the new dies.

Snowden also sent telegrams to the Mints at New Orleans and San Francisco to halt production at those facilities. The message reached New Orleans in good time, and no coins of this type were minted there. The notification of the Mint at San Francisco could not be accomplished so readily. The telegraph lines had only been completed as far as St. Joseph, Missouri. Beyond this point, the message had to be hand carried overland to California. When Snowden’s directive reached San Francisco on February 2, 1861, production of double eagles had been underway for some time. Superintendent Charles Hempstead replied on February 9, 1861, “I have the honor to acknowledge the receipt of your favor of the 5th, ‘overland,’ which however did not come to hand until the 2nd. I was, therefore, unable to prevent the striking and issuing of a large number of double eagles, coined with the new dies. The amount issued was \$385,000.” This mintage had been accomplished using two of the new reverse dies shipped to San Francisco.

A total of 19,250 Paquet Reverse double eagles was coined before the order to halt production was received. The entire mintage was released into circulation, with the result that there are no Mint State examples of this issue known today. The coins circulated extensively at the time, and some were sent overseas, to be discovered in European holdings many years later. The difference in the reverse design does not seem to have been much noticed by the general public at the time of issue. In time, the coins became scarce and the story of this remarkable design was little known or remembered.

The numismatic community was surprised and delighted when the San Francisco Mint Paquet Reverse double eagle was rediscovered in 1937. An example found under an old barn in Hull, Texas re-ignited interest in this issue, which had been completely forgotten in the interval. With new awareness of the issue, more specimens were found in old-time collections and European hoards. Today, perhaps 200 specimens are known, making the issue the rarest double eagle from the San Francisco Mint.

The present coin is one of the finest surviving specimens of this interesting design. While there are no known Mint State examples of this issue, this specimen only misses by a whisker. Only the slightest friction is evident on the highest points of the design. Most of the original mint luster remains, and the vibrant orange-yellow color is still undimmed. Overall eye appeal is excellent, and this coin is worthy of a place in the most advanced U.S. gold collection. Population: 2 in 58, 0 finer (3/14).

Ex: FUN Signature (Heritage, 1/2009), lot 4145.

1862-S Twenty, MS62
Sharp and Lustrous, From the S.S. Republic

5808 1862-S MS62 NGC. CAC. Ex: *S.S. Republic*. The sidewheel steamer *S.S. Republic* sank in an October hurricane off the coast of Georgia in 1865, carrying \$400,000 worth of Seated halves, eagles, and double eagles in excellent condition. Among the recoveries from the doomed vessel were many Liberty Head twenties, mostly S-mint coins dated 1861-S through 1865-S, many in quite nice condition. This 1862-S shows bright yellow-gold surfaces with good luster, a bold strike, and scattered reeding marks that constitute the grade. This piece would make a great addition to a collection of shipwreck gold. Census: 5 in 62 (1 in 62+), 4 finer (3/14).

From *The Charles G. Wright Family Collection*. NGC ID# 269N, PCGS# 8938

1863 Double Eagle, AU58
Attractive Survivor of This
Low-Mintage Issue

5809 1863 AU58 NGC. The Philadelphia Mint in 1863 struck low totals of every denomination; due to the raging Civil War, hoarding of all coins was the order of the day, and large mintages would have been pointless. The 1863 double eagles saw a production of 142,790 coins, most of which nonetheless did circulate to some extent — our guess would be in the West, which operated by its own rules and kept its own counsel. The average certified survivor of the issue is a tad better than AU50, and only three dozen were recovered aboard the *S.S. Republic*, which sank in 1865. The golden-orange surfaces of this attractive near-Mint piece show generous luster and a light overlay of field chatter and scattered small marks that constitute the grade. Census: 36 in 58, 22 finer (3/14).

From *The Charles G. Wright Family Collection*. NGC ID# 269P, PCGS# 8939

1863-S Double Eagle, MS63
Small S, Ex: *S.S. Republic*

5810 1863-S MS63 NGC. Ex: *S.S. Republic*. Small S. The plentiful mintage of nearly 1 million coins for the 1863-S double eagles ensured that plenty of low-grade examples survived — these coins were the fodder for commerce in the Old West — but rare in high grade before the recoveries of the *S.S. Brother Jonathan* and *S.S. Republic*. Today the 1863-S is available up to the Select grade of the present coin and occasionally beyond, although only a handful grade MS64 at NGC and PCGS combined. The surfaces are largely canary-yellow with beaming luster and scattered field marks that determine the grade. Some interesting clash marks appear on the reverse of this appealing shipwreck piece. Census: 10 in 63, 2 finer (3/14).
From The Charles G. Wright Family Collection.

1864 Liberty Double Eagle, MS63 Elusive Philadelphia Issue Only One Finer Coin at NGC

5811 1864 MS63 NGC. A large mintage of nearly 3 million double eagles was accomplished at the Philadelphia Mint in 1861, and these coins evidently satisfied the needs of the economy in the eastern United States for several years to come. Mintages of twenty dollar coins were quite small at the Philadelphia facility in 1862 and 1863, although the San Francisco Mint continued to produce double eagles in large numbers. A more substantial, but still comparatively small, mintage of 204,235 pieces was struck in 1864. Unfortunately for present-day collectors, the survival rate for these coins was unusually low. The 1864 Liberty double eagle is scarce in all grades today, and Mint State examples are rare.

Collecting large denomination gold coins was not popular in this country in the 19th century, as the high face value of each coin represented a significant sum to the average person in those times. A single coin would represent more than the average man's weekly earnings, even if it was obtained from circulation, with no dealer fees or other charges (the average weekly wage was \$16 in 1864). Clearly, systematically collecting date runs of double eagles was an extravagance the average collector could not afford, and it is unlikely that any business-strike pieces were saved for numismatic purposes. A few wealthy collectors, like R.C.W. Brock, George Seavey, and Heman Ely did collect double eagles in the mid-19th century, but they just ordered gold proof sets from the Philadelphia Mint to update their collections every year. Even the National Numismatic Collection at the Smithsonian Institution lacks a business-strike example of the 1864 double eagle.

Like most Type One double eagles, the majority of the coins were released into circulation and suffered heavy attrition over the years. The issue is usually seen in circulated grades and, prior to the recovery of the *S.S. Republic*, Mint State examples were extremely rare. The supply of high grade coins was augmented by 42 specimens recovered from that shipwreck find, but the 1864 Liberty twenty is still elusive in all Mint State grades. PCGS and NGC have combined to certify 55 coins in all Mint State grades, including an unknown number of resubmissions and crossovers (3/14).

Collecting double eagles only became popular in the late 1930s and early 1940s, after the Gold Recall of 1933 made it illegal to own gold in most forms in this country. Astute numismatists like Louis Eliasberg and Dr. Charles W. Green realized that collecting large denomination gold coins was one of the few legal ways to invest in gold, adding an important practical advantage to the coin's numismatic value. An early auction appearance of the 1864 double eagle was in lot 733 of the Dr. Charles W. Green Collection (B. Max Mehl, 4/1949):

"1864 Very fine. Scarce date. Catalogs \$65."

The lot realized \$72.50, a strong price in those days. The current record price realized for an 1864 double eagle is \$207,000, brought by the MS64+ NGC specimen in lot 7651 of the Chicago Signature (Heritage, 8/2011).

The present coin is an attractive MS63 example, tied with one other coin for second-finest certified at NGC. The design elements are sharply detailed and the well-preserved surfaces show only minor signs of contact. The pleasing greenish-gold surfaces show a few hints of rose, with vibrant mint luster on both sides. Eye appeal is terrific. This coin should find a home in the finest collection or Registry Set. Census: 2 in 63, 1 finer (3/14). NGC ID# 269S, PCGS# 8941

1864 Liberty Double Eagle, MS65 Rare Type One Issue, Finest Known Example

5812 1864 MS65 PCGS Secure. High-grade 1864 double eagles are always in demand, as Type One twenties from the Civil War era are eagerly sought by series specialists and type collectors alike. Unfortunately, the 1864 is rarely seen in any Mint State grade, and attractive Select or Choice specimens are virtually unobtainable. The coin offered here is the only Gem to be certified by either of the leading grading services and it claims the title of “Finest Known” 1864 Liberty double eagle, with no serious contender.

Mint records indicate that 204,285 double eagles were struck at the Philadelphia Mint in 1864, but the coins were released into circulation, and probably none were saved for numismatic purposes. Contemporary collectors had little interest in collecting double eagles for several reasons. First, the denomination had only been in use since 1850, and the coins were considered common and uninteresting from both historic and artistic points of view. Second, the high face value of each coin made even one example a significant investment for the average collector, and a systematic date/mintmark collection would be wildly extravagant. The few well-heeled collectors that could afford to collect the denomination preferred to order a proof from the Mint every year, rather than seek out a high-grade business-strike example. By the time numismatists became seriously interested in the big gold coins, the early dates had circulated for decades, and finding a high quality example was virtually impossible. Writing in 1982, David Akers summarized the then-current state of the market for the 1864:

“I have never personally examined a true mint state piece and, despite the rather numerous auction records, have seen relatively few that could even be graded AU by today’s standards. Virtually all known examples of this date grade only VF or EF and a proof 1864 is more likely to be encountered than a mint state or choice AU business strike.”

Fortunately for present-day numismatists, an unsuspected and fruitful source for high-grade Liberty double eagles would be discovered shortly after Akers published his important study of gold coins. Modern technology made the recovery of relics from famous shipwrecks possible by the end of the 20th century, and numismatists were thrilled by the treasures salvaged from the wrecks of ships like the *S.S. Central America* and *Brother Jonathan*. The discovery of the *S.S. Republic* was of special importance to collectors seeking an 1864 double eagle.

The *S.S. Republic* sailed from New York City on October 18, 1865, carrying a varied cargo, including \$400,000 in U.S. coins, mostly eagles and double eagles. The ship was bound for New Orleans, where the coins were desperately needed to help the economic recovery of the South after the Civil War. Unfortunately, the ship encountered a hurricane off the coast of Georgia on the fifth day of the voyage and quickly sank. The wreck was discovered and salvaged by the Odyssey Republic Expedition in 2003, after 12 years of searching. A total of 51,000 coins were eventually recovered, and conserved and graded by NCS and NGC.

The impact of the *S.S. Republic* find on the supply of 1864 double eagles was discussed by Jeff Garrett and Ron Guth in their 2006 *Encyclopedia*:

“Until the discovery of the *S.S. Republic* hoard, the 1864 issue was extremely rare in full Mint State. There were a few coins at that level known, but most were marginally so, only qualifying in recent years. There were 42 examples of the 1864 Philadelphia issue on board the *S.S. Republic*, but this is very small in comparison to the large number of double eagle collectors.”

An MS64 1864 double eagle, graded by NGC, sold in our August Signature in 2011 for \$207,000. This PCGS MS65 piece previously sold in our Chicago Signature Auction in April 2012 for \$280,000.

We have not been able to definitively trace the present coin to the *S.S. Republic*, but chances are overwhelmingly likely that it does come from the famous shipwreck. After a diligent search of auction records and dealer references, we can find no mention of a business-strike coin of this quality in the literature, prior to the ship’s discovery. It’s closest rivals are a pair of PCGS-graded MS63 coins and an MS64 NGC piece, all of which may originate with the *S.S. Republic* as well.

As for the coin itself, warm apricot-gold luster sweeps across each side. The color makes occasional variations into pale canary-gold and light peach, especially in parts of the fields. The strike is solid, particularly on the obverse stars, though Liberty’s hair is not so razor-sharp as sometimes seen on later issues. A cloudy, coppery streak descends from Liberty’s cheek into her falling hair, with a shorter echo below the I in LIBERTY on her coronet. Both sides are impressively preserved, and an interesting network of die cracks is evident on both sides. The importance of this offering cannot be overstated for gold specialists and Registry Set collectors. The opportunity to acquire the finest known example of this famous issue may not come again for decades. Population: 1 in 65, 0 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 2695, PCGS# 8941

**1865 Twenty, Flashy MS62
P-Mint Recovered From the
*S.S. Brother Jonathan***

5813 1865 MS62 NGC. Ex: *Brother Jonathan*. The *Brother Jonathan* was one of two famous American shipwrecks in 1865, along with the *S.S. Republic*. Carrying hundreds of freshly struck 1865-S double eagles and bound northward for Portland from San Francisco, the *Brother Jonathan* sank off the California coast near Crescent City on Sunday, July 30, 1865. Survivors of the unknown cargo, recovered in the 1990s, mostly included 1865-S double eagles. The *S.S. Republic* sank two months later, in October.

This 1862 Philadelphia double eagle is unusual, in that it managed to make it from the Philadelphia Mint within the few months after its striking to be included among the *Brother Jonathan's* cargo. (Most of the Mint State 1862 Philadelphia twenties surviving today came from the *S.S. Republic*, which sank off of the East Coast in 1865.) The golden-orange surfaces of this MS62 NGC example show abundant eye appeal and semiprooflike flash under a light layer of field chatter but no mentionable marks. NGC ID# 269U, PCGS# 8943

**1865 Double Eagle, MS63 ★
Beaming Luster and Minimal Marks
Ex: *S.S. Republic***

5814 1865 MS63 ★ NGC. CAC. Ex: *S.S. Republic*. The *S.S. Republic* sank on October 18, 1865, and was the most recent major shipwreck recovery of U.S. gold coins. Previous hoards emerged from the *S.S. Yankee Blade* (1854), *S.S. Brother Jonathan* (1865), and the *S.S. Central America* (1857). The 1865 twenty was the primary haul from the *S.S. Republic*, but the extraordinary demand for attractive Type One double eagles has quickly removed most examples from the marketplace. This Select Mint State NGC example has justly earned the coveted Star designation for superlative eye appeal. Both sides show beaming luster and minimal marks on engaging yellow-gold surfaces that are quite well-struck. This piece is one of only two at NGC in MS63 ★, and there are four Star coins finer (3/14).

Ex: *Summer FUN Signature* (Heritage, 7/2007), lot 2871.

From *The Charles G. Wright Family Collection*. NGC ID# 269U, PCGS# 8943

1865-S Double Eagle, Well Struck MS63

Ex: *Brother Jonathan*, # 734

5815 1865-S MS63 PCGS. Ex: *Brother Jonathan*, Number 734. Small S. The 1865-S double eagle saw a mintage exceeding 1 million pieces. This issue was rare in mint condition before the discovery of the *S.S. Brother Jonathan* and the *S.S. Republic* wrecks. More than 500 were found on the former wreck alone. These finds greatly increased the certified population figures to more than 900 Uncirculated coins. Orange-gold coloration dominates this Select specimen framed by hints of violet at the margins. The devices are well-struck, and there are no more marks than what would be expected for the designated grade.

From *The Northern Lights Collection*. NGC ID# 269V, PCGS# 8944

1865-S Twenty Dollar, MS63

Ex: *Brother Jonathan*, Late-State Reverse

5816 1865-S MS63 PCGS. Ex: *Brother Jonathan*. *Brother Jonathan* 771. The *Brother Jonathan* plied the Pacific Ocean waters between Portland, Oregon, and San Francisco during the years from 1863 to 1865, often laden with freshly mined gold from strikes in Oregon, Idaho, and other areas far north of San Francisco, the only federal mint realistically accessible. The gold would make its way overland, then down the Columbia River to the Dalles, then to Portland for shipment to and coinage in San Francisco. The newly struck double eagle would be shipped back northward via the same route.

The 1999 marketing of the *Brother Jonathan* double eagles included hundreds of examples of the 1865-S twenty, an issue that was formerly quite rare. This Select example offers super eye appeal via frosty, well-struck orange-gold surfaces that show minimal marks. A rather bold die crack on the lower reverse connects the rim at two places with the bottoms of ENTY. NGC ID# 269V, PCGS# 8944

1866-S No Motto Double Eagle, XF45 **One of the Rarest Type One Issues**

5817 1866-S No Motto XF40 PCGS. From the final year of the type, the 1866-S No Motto is also one of the rarest Type One double eagles. Bowers rates it the second-rarest San Francisco twenty dollar issue, behind the 1861-S Paquet Reverse, in his *A Guide Book of Double Eagle Gold Coins*. There are probably fewer than 200 coins remaining, from an estimated mintage of 120,000 pieces, and many of those coins are either heavily marked or heavily worn. This XF example is moderately abraded and evenly worn across the design's high points. Pleasing light coloration is evenly distributed across both sides. NGC ID# 269W, PCGS# 8945

1866-S No Motto Twenty, AU53 Seldom-Seen Type One Rarity

5818 1866-S No Motto AU53 PCGS. In this day of near-instantaneous communication around much of the globe, and as we watch via TV the sad, unfolding tragedy of a missing Malaysian 777 jetliner, it is difficult to conceive of a time nearly 150 years ago when communications were primitive and messages (and coinage dies) could take weeks, or months, to deliver.

Two S-mint double eagle issues of the Type One design both owe their origins to slow communications between the Mother Mint in Philadelphia and her far-flung child on the West Coast — the 1861-S Paquet Reverse twenty and the 1866-S No Motto. In both cases the dies arrived late in San Francisco, after the Philadelphia Mint had moved to another later design.

The surge in religious fervor that accompanied the horrific Civil War resulted in the introduction of IN GOD WE TRUST on the two cent piece in 1864, continuing through all the larger-denomination silver and gold coinage with sufficient canvas space to accommodate the motto.

The 120,000 1866-S No Motto double eagles were struck in the interim between the time the Philadelphia Mint die shop produced the new With Motto reverse dies with S mintmark and the time they arrived in San Francisco.

The 1866-S No Motto is accordingly the rarest of the Type One S-mint coins, save for the odd, stilted 1861-S Paquet Reverse coins. This AU53 PCGS example is one of 11 submissions in this grade, with 11 finer (3/14). Generous luster remains on surfaces that are yellow-gold in the centers, ceding to wheat-gold around portions of the rims. A scattering of small- to medium-sized marks is almost a given on these coins at the AU level, but this coin retains a high quotient of collectibility as well as eye appeal.

From The Charles G. Wright Family Collection. NGC ID# 269W, PCGS# 8945

1866-S No Motto Double Eagle, AU55 Transitional San Francisco Issue

5819 1866-S No Motto AU55 NGC. The famous 1866-S No Motto double eagle had a recorded mintage of 120,000 coins, although many specialists believe that a substantial number of those coins were melted, with a net production of far less than 100,000 pieces. Consider that NGC and PCGS have certified 67,352 Type Two double eagles dated from 1866 to 1876, representing one certification event for 240 examples minted during that span. With 282 examples of the 1866-S No Motto certified, the constant implies a net mintage of 67,664 coins. We chose Type Two double eagles as our sample since that type is unaffected by unusual hoards or treasures that alter the Type One data.

The 1866-S No Motto was coined from left over reverse dies of the previous year. Once the new With Motto dies arrived in San Francisco, the old dies were retired. This AU55 NGC-certified coin shows good eye appeal on medium yellow-orange surfaces. The strike is a bit soft on a few of the stars ringing the obverse periphery. A scattering of mostly light marks from circulation is fairly extensive throughout both sides but more pronounced on the obverse, where it thins the luster. Such an effect is almost a given on these coins that appear to have quietly slipped into circulation, for the most part. Considerable semiprooflike reflectivity remains on the reverse, most visible in the protected areas around the shield ornaments and the peripheral lettering. Among the few larger-sized marks is a moderate dig in the field between D and S in UNITED STATES. Census: 20 in 55, 12 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 269W, PCGS# 8945

PLATINUM NIGHT

1870-CC Double Eagle, XF45 Historic First Year of Issue From Carson City

5820 1870-CC XF45 NGC. Variety 1-A. The 1870-CC double eagle combines many of the characteristics that collectors find most desirable in U.S. coinage. It combines the desired and legendary CC mintmark with the largest classic coinage denomination ever issued for circulation, and adds the historic first year of production for the historic Carson City Mint. In 1870 the double eagle denomination had been in existence only 20 years, owing its origin to the Fields of Gold found in nearby California. In that year the Carson City Mint was opened to produce local coinage from the precious gold and silver gleaned from the Comstock Lode discovered in 1859, obviating an overland or rail trip to transport metal to California for coinage.

According to *The Mint on Carson Street* author Rusty Goe, Abraham Curry, founder of the town of Carson City and superintendent of the eponymous mint, was especially proud of the large, heavy twenty dollar gold pieces flowing from the facility. The recorded mintage of double eagles from the first year was 3,789 pieces, although only a few dozen are known today.

By whatever route, most of them circulated heavily. The average certified survivor “only” grades “XF41” — but into that must be factored the fact that not a single true Mint State example is known. Although Goe quotes Q. David Bowers as once reporting that he had handled a Mint State coin at one time, it is unknown today. Goe comments: “If this piece were ever to hit the market, the sky would be the limit as far as price was concerned.” So, for every AU50 coin known, another only grades VF20. When Goe published his reference in 2003, the highest-graded pieces were a handful of coins in AU — two at NGC, four at PCGS. Since then NGC has certified two pieces in AU53, one coin in AU55, and one AU58. The highest-graded example at PCGS is a single AU53. Pieces in XF condition, much less Choice XF, the condition of the present piece, are still considered high-end, and possibly within the Condition Census, as some of the above citations are almost certainly reappearances of the same coin.

The present Choice XF example shows the heavy abrasions on both sides that are typical of, literally, every known example. These soft and heavy coins circulated in the rough-and-tumble West until the survivors were plucked from the channels of commerce, and that has taken its toll. However, this piece offers the twin blessings of good original color and considerable luster remaining for the XF45 grade, qualities that most survivors lack. The surfaces are mellow orange-gold, with considerable reflectivity and even some faint prooflikeness remaining in some of the protected areas. The strike is somewhat soft around portions of the peripheries, although most of the stars display some detail to the centrils. The TAT in STATES is noticeably weak. Goe aptly paraphrases the nonetheless obvious appeal of this coin when he states, “More often than not all of these deficiencies are excused due to the date and mintmark combination, by ‘CC’ gold specialists who are able to pay the hefty price tag to own an 1870-CC double eagle, as there is no equal as far as they are concerned.” Census: 9 in 45 (1 in 45+), 8 finer (3/14).

Ex: Baltimore Signature (Heritage, 3/2009), lot 3270.

From The Charles G. Wright Family Collection. NGC ID# 26A8, PCGS# 8958

1870-CC Liberty Double Eagle, AU50, First and Rarest Carson City Twenty Winter Condition Census Example

5821 1870-CC AU50 PCGS, Variety 1-A. Among regular-issue Liberty double eagles, the rarity of the 1870-CC is surpassed only by the ultra-rare 1861 Paquet Reverse, the famous 1856-O, and the low-mintage 1882 and 1886 issues. It is by far the rarest twenty dollar gold piece from the fabled Carson City Mint. Heritage Auctions is pleased to offer this attractive AU50 specimen, a Condition Census example, and one of the most important lots in this sale.

The discovery of the Comstock Lode in 1859 spurred the development of the region around Carson City, a settlement founded the year before by New York native Abraham Curry. The Comstock Lode was one of the greatest finds of silver and gold ever discovered in the United States, and miners flocked to the area in great numbers from 1859 until the late 1870s, during its years of greatest production. The United States established a mint in Carson City in 1870, with Abraham Curry as Superintendent, to take advantage of that settlement's proximity to the mines.

As is usually the case with new branch mints, operations did not run smoothly the first few years and mintages were quite small. Only 3,789 Liberty double eagles were struck at Carson City in 1870, with two die varieties known for the date. The present coin represents Variety 1-A, with the mintmark centered over the right upright of the N in TWENTY. The coins were released into circulation at the time of issue and none were saved for numismatic purposes. As a result, no Mint State specimens are known to collectors today.

In later times, when the proliferation of numismatic references made mintage statistics common knowledge, collectors would cull low-mintage issues from circulation shortly after their release. No such references existed in 1870, and collectors generally considered mintmark issues unimportant at the time. The usual practice was to complete a date run of a particular series, saving just one specimen of each date, without regard to the mint of issue. It was only after 1893, when Augustus Heaton published his landmark treatise on mintmarks, that collecting coins by date and mintmark varieties became popular. Until the rarity and importance of many mintmark issues became public knowledge, most collectors simply updated their collections every year by ordering proof sets from the Philadelphia Mint.

In the case of the double eagle denomination, the high face value of each coin also mitigated against forming an extensive date and mintmark collection. To the average person, twenty dollars was a great deal of money in 1870. Tying up so much money in the pursuit of a hobby was not practical or desirable. After all, the double eagle denomination was only 20 years old in 1870. The denomination had experienced only one change in design at that point, the addition of the motto IN GOD WE TRUST in 1866. The Liberty double eagles seemed commonplace and numismatically uninteresting to collectors of the 1870s, like Roosevelt dimes of the 1990s would be to collectors today, but with a much higher economic outlay required to collect them. Even after collecting mintmarks became popular, only a few wealthy collectors, like Virgil Brand and John M. Clapp, could afford to systematically collect double eagles.

Ironically, it was Franklin Roosevelt's Gold Recall of 1933 that finally made collecting large denomination gold coins popular in this country. Astute collectors, like Louis Eliasberg and Dr. Charles W. Green, realized that collecting gold coins was one of the few legal ways to stockpile a significant amount of gold in the United States, and double eagles were the best option for such an investment. By the mid-1940s, double eagles were established as a popular collecting discipline among wealthy numismatists. Unfortunately, all examples of the 1870-CC Liberty twenty had been circulating for 70 years by then, and the small mintage had been nearly wiped out by attrition.

One of the earliest auction appearances of the 1870-CC was in lot 688 of the Charles W. Cowell Collection (B. Max Mehl, 11/1911). Cowell was a resident of Denver, and he accumulated many coins from the Western mints, including a full set of Carson City ten dollar coins and an impressive collection of Territorial gold pieces. Like most collectors of the time, he did not systematically collect double eagles, and had only three Carson City twenties in his collection, including the 1870-CC piece in lot 688:

"1870 First \$20.00 gold piece of this mint. Fine. Rare."

Cowell had been collecting for forty years at the time his collection was sold. He probably rescued the 1870-CC double eagle in his collection from circulation near the time of issue and saved it for its novelty value. It was only through circumstances such as these that any 1870-CC double eagles survived at all over the years. The issue is quite rare today, as PCGS and NGC have combined to certify only 67 coins in all grades between them (3/14). The population data is skewed by resubmissions and crossovers, as well. Experts estimate the surviving population of the 1870-CC double eagle at 35-50 examples in all grades and conditions.

The present coin is one of the finest survivors. When Doug Winter published his *Gold Coins of the Carson City Mint* in 2001, this coin was tied with two other specimens for the number one spot in his Condition Census. A number of high-quality coins have been certified since then, but this piece still qualifies as one of the nicest available examples. Our roster below lists all the high-grade specimens we are aware of. The design elements of this coin are well-detailed, with a touch of softness on the hair and obverse stars, as always seen on this issue. The vivid orange-gold surfaces show highlights of red and green, with prooflike luster in sheltered areas. The expected number of minor abrasions are present, including two short parallel scratches in the left obverse field that act as pedigree markers. Altogether, the coin offered here is one of the most attractive specimens of this historically important issue.

Roster of High-Grade 1870-CC Double Eagles

- AU58 NGC.** The finest-known specimen, recently discovered and stolen during a Brinks transport soon afterward.
- AU55 NGC.** Baltimore Auction (Bowers and Merena, 3/2009), lot 3909, realized \$414,000.
- AU53 PCGS.** Doug Winter; Nevada collection; Universal Coin and Bullion; Isaac Edmunds Collection (Bowers and Merena, 6/2002), lot 2371; FUN Signature (Heritage, 1/2004), lot 3129, realized \$368,000; Bently Collection (Heritage, 3/2014), lot 30435.
- AU53 NGC.** Denver Signature (Heritage, 8/2006), lot 5645, realized \$359,375; Philadelphia ANA Sale (Stack's Bowers, 8/2012), lot 11039, realized \$345,000.
- AU53 NGC.** Long Beach Signature (Heritage, 9/2003), lot 8296; Pre-Long Beach Sale (Ira and Larry Goldberg, 5/2010), lot 1712; Chicago ANA Sale (Stack's Bowers, 8/2011), lot 7762.
- AU50 PCGS.** Lee Minshull and Casey Noxon; James E. Haldan Collection (Sotheby's, 6/1996), lot 146; Universal Coin & Bullion; private collection; **the present coin.**
- AU50 PCGS.** FUN Signature (Heritage, 1/2014), lot 5541, realized \$329,000.
- AU50 PCGS.** Classics Sale (American Numismatic Rarities, 1/2004), lot 546.
- AU50 NGC.** Richmond Collection (David Lawrence, 7/2004), lot 2288.
- AU50 Cleaned, Uncertified.** Baltimore Auction (Bowers and Merena, 2/2008), lot 2749.
- AU50 Details ANACS.** New York Signature (Heritage, 2/2014), lot 5418, realized \$164,500.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26A8, PCGS# 8958

**1871-CC Twenty Dollar, XF45
Scarce Carson City Issue
Pleasing Orange-Gold Example**

5822 1871-CC XF45 NGC. **Variety 2-A.** Lightly abraded surfaces show no singularly large marks, and appealing orange-gold color covers both sides of the coin. This issue is almost always found heavily circulated and bagmarked. It is also the second-rarest issue of the Carson City double eagle series (behind its big brother, the incomparable 1870-CC). While numerous ticks, nicks, and digs are softened by 15 points of wear, the overall impression of this coin is smooth and appealing. A shallow rim bruise at 9 o'clock on the obverse is mentioned for accuracy but does not detract from the appeal. Mint luster remains at the margins and glows among the devices. Only 17,387 pieces were minted of this scarce issue. It is the Variety 2-A die pair, seldom seen, with the date a tiny bit lower than the normally seen 1-A variety.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AB, PCGS# 8961

**1871-CC Liberty Twenty, AU Details
Pleasing Color Remains**

5823 1871-CC — Improperly Cleaned — NGC Details. **AU. Variety 1-A.** The arms-length appeal of this double eagle is good, although too many swirling hairlines are visible at close range to suit NGC, which properly identified the cleaning. Otherwise, the surfaces are smoothly appealing and toned a pleasant orange-gold. Some red highlights appear across surfaces that retain a bit of mint luster.

Relatively few 1871-CC double eagles survive with the detail exhibited by this twenty. In truth, the cleaning is no more bothersome than the frequent abrasions often found on this rare issue. This well-detailed example may be a smart acquisition for a sharp-eyed bidder despite the cleaning.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AB, PCGS# 8961

**1873-CC Twenty, XF45
Original Appeal**

5824 1873-CC XF45 PCGS. CAC. **Variety 1-A.** Some examples of this issue have a misplaced digit in the denticles between the 73, but this is the variety with a normal date area. Struck in a time of financial uproar and fiscal panic, this Carson City twenty had a low production of just 22,410 pieces — most of which circulated in the West. Few were exported or saved by collectors, resulting in Uncirculated survivors being rare in all grades. Attractive circulated examples (such as this coin) are highly valued and popular as the only readily collectible representatives of the date. This pleasing, XF45 example is Choice in all regards. Orange-gold mint luster remains surprisingly visible over the appealing surfaces. Light wear from circulation softens the abrasions, so the coin appears visually smooth and minimally marked. Excellent detail remains. This coin received the CAC-Approval sticker and is housed in an older, green-label holder.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AJ, PCGS# 8968

**1873-CC Double Eagle
Lustrous, Near-Mint Example**

5825 1873-CC AU58 NGC. **Variety 1-A.** This 1873-CC double eagle was minted as the United States slipped into a prolonged period of economic crisis. The Coinage Act of 1873 (labeled “The Crime of ‘73” by Western mining interests) depressed silver prices, which had a ripple effect throughout the economy. Silver was demonetized and gold became, in effect, the sole metallic standard in the United States.

Unlike subsequent years when double eagles would be used primarily for foreign trade, most 1873-CC twenties circulated domestically in the West. This AU58 example saw brief circulation, although the luster and sharp devices show little evidence of wear. As expected, numerous abrasions dot the lustrous, yellow-gold surfaces. The coin is a viable, near-Mint candidate for collectors who are either unable to find an Uncirculated example, or want to avoid the large price tag for a Mint State piece.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AJ, PCGS# 8968

1874-CC Twenty Dollar, AU58 Popular Collector Grade

5826 1874-CC AU58 NGC. *Variety 1-A*. The second-largest mintage of the entire Carson City double eagle series with 115,085 pieces produced, only the 1876-CC twenty had a larger production. The mintage was hard-used, since even those pieces returning from Europe and South America were well-circulated. Mint State examples of the issue are rare in all conditions.

This appealing, near-Mint twenty is lustrous with attractive, medium-gold surfaces. The abrasions are perhaps no more or less than frequently encountered, and most are of the minor variety, with perhaps a scrape hidden in Liberty's hair the largest mark (but not one that is easily noticed). High-point rub is seen on the devices.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AP, PCGS# 8971

1874-CC Double Eagle, MS62 One of Two Known in This Grade

5827 1874-CC MS62 NGC. *CAC. Variety 4-A*. The 4 in the date is slightly farther from the dentils and a die lump appears on Liberty's neck on this obverse die. The 1874-CC double eagles were struck in plentiful numbers for a Carson City issue, some 115,085 coins, but they circulated far and wide, most grading Very Fine to Extremely Fine today. An MS62 example such as the present piece — or any Mint State example, for that matter — is a remarkable prize. This piece is the *sole finest certified of the issue at NGC*, and it is tied with one other submission in the same grade at PCGS (3/14). This marks the first time Heritage has been privileged to offer an example of the 1874-CC in this grade; in fact, we find no previous auction appearances in this grade at any firm. An MS61 PCGS example brought \$27,600 in a Stack's auction (8/2012), lot 11043.

Well-struck golden-orange surfaces greet the viewer of this delightful coin, beaming with mint luster. The surfaces are semiproof-like under a light layer of field chatter and scattered minor marks, more prevalent on the reverse. A tiny bit of what is apparently struck-in die grease appears only at D in GOD, the star above, and the last T in TRUST below.

This piece represents an important opportunity for Registry Set collectors or Western gold specialists to acquire an example of one of the finest known examples of this early Carson City issue. Census: 1 in 62, 0 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 26AP, PCGS# 8971

1875-CC Mint State, Type Two Twenty Excellent Eye Appeal

5828 1875-CC MS61 NGC. CAC. **Variety 1-B.** Many Carson City dates are extremely challenging to find in Mint State, but the 1875-CC issue is refreshingly available in Uncirculated conditions. This attractive, apricot-gold example is lustrous and appealing, with a thick measure of mint frost over the devices. All the design elements are well-represented, although the strike is less than bold where Liberty's hair detail is a source of weakness. The expected abrasions are seen — primarily on the obverse — and all are shallow marks, accounting for the grade. This coin is struck from the scarcer Variety 1-B die pair, which features the mintmark shifted right so it is almost over the left serif of T in TWENTY, and a prominent die line exists in the denticles above UNITED. An excellent, CAC-Approved candidate for type.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, MS62 Scarce This Nice

5829 1875-CC MS62 PCGS. **Variety 2-A.** Scarce in MS62 and rare any finer, the 1875-CC twenty is a favorite selection for type collectors and Carson City gold specialists. This example appears Mint-fresh and awash in lustrous originality. Orange-gold surfaces display frosted devices and full Mint State brilliance. Scattered abrasions, as expected, are distributed over the surfaces but are not excessive. A couple of scrapes appear on the reverse, which is especially brilliant and lustrous and otherwise unabraded. The obverse is more patinated in luscious-orange hues amid sun-gold luster, with slight weakness on Liberty's hair curls but all details strong elsewhere. NGC ID# 26AT, PCGS# 8974

1875-CC Twenty Dollar, MS63 Seldom Seen Finer

5830 1875-CC MS63 NGC. CAC. Variety 2-B. The reverse of this variety shows the second C aligned with the left edge of the T in TWENTY. The date on the obverse is far to the right, the right end of the flag on the 5 about even with the low point of the lowest curl. Confirmation is provided by the curving die lines on the base of Liberty's neck. The mintage of the 1875-CC double eagle was fairly plentiful at 111,151 coins, but the Select Mint State level of the current NGC-certified coin is about as good as it gets for the issue: Both NGC and PCGS have seen only one submission each in numerically finer grades, both MS64 (3/14). Radiant cartwheel luster complements the deep, rich peach-orange color, and scattered, trivial marks are consistent with the grade. Census: 25 in 63 (1 in 63+), 1 finer (3/14). *From The Charles G. Wright Family Collection.* NGC ID# 26AT, PCGS# 8974

1875-S Liberty Double Eagle, MS63 Among the Finest Known

5831 1875-S MS63 PCGS. Exceedingly lustrous and frosty surfaces set this gleaming, Select Uncirculated double eagle apart from all others. The coin displays captivating overtones of copper-red, lime-green, and olive-gold over richly flowing, orange-gold luster. Only scattered, minor abrasions touch the satin-smooth surfaces. An area of alloy toning on the reverse above the eagle's head as well as a small accent by star 5 on the obverse add interest to the lush toning characteristics.

The 1875-S issue belies its 1.2 million-piece mintage with the availability of Uncirculated examples abruptly ending at the MS62 level. Most collections (including many of the finest) lack a Select example of this date. Just seven pieces are certified numerically finer by both services combined. Population: 10 in 63, 5 finer (3/14). NGC ID# 26AU, PCGS# 8975

1876 Double Eagle, MS64 Elusive Type Two Condition Rarity

5832 1876 MS64 PCGS. CAC. Heavy Motto. Of the three major designs for the Liberty double eagle, the shortest-lived was the Type Two struck between 1866 and 1876. The Type Two added the motto IN GOD WE TRUST to the oval glory of stars above the eagle on the reverse; later, the Type Two's denomination would be expanded from TWENTY D. to TWENTY DOLLARS, creating the Type Three design that would carry the Liberty double eagle from 1877 to its end three decades later.

The Type Two twenties are the most elusive of the three in high grades. The Type One double eagles have benefited from the treasures of several ships — the *S.S. Central America*, *S.S. Republic*, and *S.S. Brother Jonathan*, among others — that sank while carrying large quantities of Type One double eagles that since have been recovered. Type Three double eagles were sent *en masse* overseas for international transactions, particularly to Europe, and type issues such as the 1904 are abundant even in Gem condition. Type Two issues fell through the cracks, though, and only a few dates, such as 1873, 1875, 1876, and 1876-S, are suitable for Mint State type purposes.

Even the 1876, though, is a condition rarity in MS64, the grade seen here, and unknown in Gem condition. The obverse presents even better than near-Gem with its broad cartwheel luster, pale yellow interiors, and sun-gold margins. The reverse, however, has two significant digs to the right of the eagle accounting for the grade. Overall the piece displays beautifully, though, and as a “double-green” coin (green PCGS and CAC labels), this high-end example is sure to attract serious bidding attention. Population: 12 in 64 (1 in 64+), 0 finer (3/14). NGC ID# 26AV, PCGS# 8976

1876-CC Twenty Dollar, MS62 Centennial Issue, Tied for Finest

5833 1876-CC MS62 PCGS. Variety 3-A. The 1876 Centennial date and the widely pursued Carson City mintmark makes this issue a collector favorite, struck in the generous amount of 138,441 coins. The number of coins struck likely had nothing to do with the Centennial save indirectly, as the Carson City Mint struck their gold coins according to the deposits they received and to the depositors' specifications — although it is conceivable that double eagles might have been *especially popular* for the Centennial. This MS62 PCGS example offers beaming luster with light field chatter, along with a couple of larger contact marks and dark flecks — either struck-in die grease or a planchet impurity, as made — on Liberty's cheek and neck. Population: 51 in 62, 0 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 26AW, PCGS# 8977

1877-CC Twenty, Near-Mint State Rare This Nice, Attractive

5834 1877-CC AU58 PCGS. Variety 1-A. Popular as the first Type Three double eagle with TWENTY DOLLARS spelled out, this Carson City issue is more widely sought than its Philadelphia and San Francisco counterparts not only for its low mintage, but also for the allure of the CC mintmark as a symbol of the Old West during the great Westward expansion.

Properly graded AU58 double eagles are few and far between, but this appealing, original twenty is a fantastic example. The deep, orange-gold hue — seldom seen anymore on Carson City gold — was not dipped out, but remains rich and vibrant over the once-prooflike fields. To be sure, there are abrasions, but they are much less frequent and less severe than normally seen. The reverse shows very few marks and retains nearly full-prooflike flash. A bold strike is untempered by wear. Population: 48 in 58, 29 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AZ, PCGS# 8983

1878-CC Twenty Dollar, AU58 Low-Mintage Issue of 13,180 Coins

5835 1878-CC AU58 PCGS. The only dies known. The 1878-CC twenty dollar — struck to the paltry extent of 13,180 pieces — is a scarce low-mintage issue that sees perpetual demand from advanced gold collectors and Carson City specialists alike. Perhaps fewer than a dozen Uncirculated pieces survive, imparting added importance to those approaching Mint State. This bright, shimmering AU58 representative is modestly abraded for the grade and mintmark, showing only the slightest interruption of luster on the high points of the obverse. The strike is sharp throughout both sides, and attractive orange-gold color adds to the appeal. Population: 9 in 58, 6 finer (3/14).

Ex: FUN Signature (Heritage, 1/2007), lot 3732; Dallas Signature (Heritage, 10/2008), lot 3082; FUN Signature (Heritage, 1/2009), lot 4152.

1879-O Liberty Twenty, AU53
Last New Orleans Mint Double Eagle
Only O-Mint Type Three Issue

5836 1879-O AU53 NGC. Variety 1. The New Orleans Mint was seized by the Confederacy at the beginning of the Civil War in 1861. A number of half dollars were struck there in the first year of the war, using dies and planchets that were already prepared, and four half dollars with a Confederate reverse were also coined, but the Confederacy did not have a reliable source of silver and soon abandoned any serious attempt at coinage. After the war, the federal government did not think it advisable to reopen the aging facility until 1879.

Tasked with producing enormous numbers of silver dollars under the terms of the Bland-Allison Act, the Bureau of the Mint decided to reopen the New Orleans facility in 1879, primarily to strike Morgan dollars, but a small output of gold ten and twenty dollar coins was also produced. A meager mintage of 2,325 Liberty double eagles was achieved, the second-lowest mintage of any New Orleans Mint double eagle. The 1879-O was the final double eagle struck in the New Orleans facility and the only twenty dollar coin from that mint to feature the Type Three reverse, important considerations for type purposes.

The coins circulated widely in the 19th century, before numismatic interest in mintmarks became widespread in the 1890s. As a result, the issue suffered heavy attrition, and probably no more than 75-85 examples survive today in all grades. The 1879-O is especially elusive in high-grade. An early auction appearance of the 1879-O was in lot 814 of the Dr. Charles W. Green Collection (B. Max Mehl, 4/1949):

"1879 O. Last year of issue of Double Eagles at this Mint. Uncirculated with beautiful mint luster. Rare in any condition, but especially so so choice. Only 2,325 minted. Catalogs \$150.00 and certainly worth it. The great Atwater Collection did not have a specimen nearly as choice. A similar specimen brought \$160.00 in 1944 when the coin cataloged for much less."

The coin realized \$150, about what Mehl expected at the time. The record price realized for an 1879-O double eagle is \$135,125, brought by the MS60 NGC coin in lot 5548 of the FUN Signature (Heritage, 1/2014).

The present coin is an attractive AU53 example, with just a touch of wear on the hair and coronet. The pleasing green and orange-gold surfaces are lightly abraded for the grade and retain much of their original mint luster. This lot represents an important opportunity for the Southern gold collector. Census: 6 in 53, 34 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B8, PCGS# 8990

1881 Double Eagle, MS61 Mint State Rarity None Certified Finer by PCGS or NGC

5837 1881 MS61 PCGS. There was no emphasis on double eagles at the Philadelphia Mint in 1881 or in any the succeeding six years. Silver dollars were the focus, with the Bland-Allison Act driving mintages to record levels from 1879 to 1889. Millions upon millions of Morgans piled up in the Treasury vaults and at the Branch Mints.

The San Francisco Mint handled most of the double eagle production in 1881, with a robust mintage of 727,000 pieces. On the other hand, just 2,199 circulation strikes were produced in Philadelphia. It was the start of a challenging series of low double eagle mintages by the Mint, culminating with the rare, proof-only 1887 issue.

Because so few examples of the 1881 twenty exist, it is unusual to have more than one auction appearance of the date in a year. Often multiple years can pass without an offering. We have not listed a Mint State 1881 double eagle since 2009, although an AU58 example sold at our Orlando FUN Signature sale in January, 2014 as lot 5550 for \$111,625.00.

A total of six Uncirculated 1881 twenties are reported by PCGS and NGC combined, but we are aware of at least one duplication, so the total is most likely five coins certified in Mint State, with the highest grade shared by four examples at MS61 (3/14). Fewer than 50 pieces are known in all grades.

Numerous small and medium sized contact marks litter the lustrous surfaces of the present MS61 example, and these are the grade-limiting factors. Perhaps the most noticeable mark is a sequential series of small digs from Liberty's temple area to the cheekbone. The surfaces of this piece are unquestionably original, with a bit of the "dirty gold" appearance seen on so many double eagles from this era.

The coin is sharply struck, although possibly from a later state of the dies, because there are only small areas of prooflike finish in the fields — a trait seen on all Twenties of this issue. The surfaces on this coin are predominantly brilliant and frosty. Rich, orange-gold color with lemon-gold margins display red-gold accents amid the brilliant luster. This rare double eagle is a very special opportunity for the advanced U.S. gold enthusiast.

NGC ID# 26BC, PCGS# 8994

1882-CC Liberty Double Eagle, MS61 Scarce in Mint State, Few Finer

5838 1882-CC MS61 NGC. **Variety 1-B.** Although repatriated imports have padded the population reports in recent years, relatively few new certifications are seen above the MS61 grade of this coin (which itself may have returned from a trip abroad). MS62 coins are rare, and only two MS63 coins are reported by PCGS and NGC combined with none finer (3/14).

Light, frosty yellow-gold surfaces of this example are peppered with pinprick marks and tiny luster grazes, but toward the margins the fields become less-busy and smooth. A sharp strike emboldens the devices, while lustrous cartwheels flash over the brilliant surfaces. Few examples are certified finer by NGC: Census: 26 in 61, 11 finer (3/14). NGC ID# 26BF, PCGS# 8997

1885-CC Twenty Dollar, AU55 Scarce, Low-Mintage Issue

5839 1885-CC AU55 NGC. **Variety 1-A.** Although small quantities of this key issue make their way back to the United States from foreign hands, it is doubtful any large amounts are awaiting discovery, in part because of the low mintage of just 9,450 pieces. Most of the production must have circulated, judging from the comparatively large number of survivors in lower circulated grades.

This Carson City date becomes scarce in Choice About Uncirculated or finer grades, and it is uncommon in any Uncirculated grade, although a number of MS60 coins have been certified. This AU55 example will outshine many of those. Lustrous and only mildly abraded, the sun-gold surfaces are extremely attractive and smooth. Only a few pinprick marks are seen under magnification on Liberty's portrait, and the hair detail is complete save for the most minor touch of rub. Remaining mint luster appears nearly complete over brilliant, lightly frosted fields. A single tiny copper-alloy mark is on the denticles above the T in UNITED. This high-end example is extra-nice for the grade.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BN, PCGS# 9004

1885-CC Liberty Double Eagle, AU58 Rarest CC-Mint Twenty of the Decade

5840 1885-CC AU58 NGC. Variety 1-A. The 1885-CC Liberty double eagle boasts a low mintage of just 9,450 pieces. All of the coins were released into circulation near the time of issue and circulated freely for years before enough numismatic interest in the series developed to make it worthwhile to save specimens for collecting purposes. As a result, the 1885-CC is the rarest double eagle of the 1880s from the Carson City Mint.

The present coin is an attractive near-Mint example, with just a trace of wear on the high points of the well-detailed design elements. The lightly abraded orange-gold surfaces radiate vibrant mint luster and eye appeal is outstanding. This coin should find a home in a fine collection of Western gold. Census: 57 in 58, 17 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BN, PCGS# 9004

1886 Twenty Dollar, VF35 Few Survive in Any Condition

5841 1886 VF35 PCGS. The seven-year run of rare Philadelphia double eagles from 1881 to 1887 saw either extremely limited production of circulation strikes or no circulation coinage at all (as in the case of the proof-only issues of 1883, 1884, and 1887). The business strike dates of 1881, 1882, 1885, and 1886 are all extreme rarities, rivaling the traditional classics of the series including the 1854-O, 1856-O, and the 1870-CC twenties.

Estimates range from 40 to 50 survivors from an original mintage of 1,000 business strikes for the 1886 twenty. The availability of an additional 20 to 25 surviving Proof strikings helps mask the true elusiveness of business strike specimens. The present offering is an appealing example with little wear considering the assigned grade, and surfaces that still exhibit bold flashes of lustrous, orange-gold originality in protected areas. The coin is moderately bagmarked, although the abrasions do little to limit the piece's eye appeal. Overall, this is a sharp, flashy example that would fit well as one of the cornerstone holdings in any Liberty double eagle date collection. Housed in an older, green-labeled PCGS holder. Population: 1 in 35, 24 finer (2/14).

Ex: Portland, OR Signature (Heritage, 3/2004), lot 6453.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BR, PCGS# 9006

1891 Twenty Dollar, AU55 Absolute Rarity, Only 1390 Pieces Minted

5842 1891 AU55 PCGS. The San Francisco Mint carried the burden of double eagle production in 1891, with the Philadelphia Mint and Carson City Mint focused on other things (mainly, silver dollar production as encouraged by the Sherman Silver Purchase Act of 1890). Only a token mintage of 1,390 double eagles occurred in Philadelphia, plus 52 proofs. Carson City managed a 5,000-piece production.

The 1891 double eagle was an unheralded rarity for many years. At first, it was unwanted because most collectors had a proof, and didn't need a business strike. Later, the issue was an afterthought, with collectors still coping with many better-known Philadelphia rarities from the 1880s.

The issue started to realize its potential only within the past 15 years or so. It is estimated fewer than 100 examples survive — and if the population reports are any indication, quite a few under 100 pieces exist once the multiple submissions are taken into account. Almost every coin of the issue is Prooflike, or partially so, because every coin minted was an early strike. There were no late strikes with such a small mintage.

The current example is perhaps more abraded than wished for, but the chatter is shallow with no heavy marks, and representative of the grade. The busy fields and portrait are balanced by original, pleasing orange-gold color and excellent remaining luster. Prooflike-ness remains, particularly on the reverse. A bit of softness on Liberty's hair is a combination of light wear and minor weakness of strike at the center. The peripheral strike is excellent, with sharp stars and a high, bold rim, although a minor bruise is noted at 4 o'clock on the obverse. Population: 11 in 55, 12 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26C2, PCGS# 9016

1892-CC Double Eagle, MS62+ Deeply Reflective, Eminently Collectible

5843 1892-CC MS62+ NGC. Variety 1-A. This marvelous consignment of Carson City double eagles continues with this penultimate-year CC-mint issue, struck to the extent of 27,265 pieces. The peak production years for the fabled Comstock Lode, the fuel that kept Carson City's fires burning, were 1876 through 1878, when about \$36 million worth of gold and silver per year was extracted from the Nevada earth. But by the 1890s the lode had largely played out, and Carson City would close its door to coinage operations in 1893. Given the small mintage, it is understandable that only a single die pair was required to make the 1892-CC twenties. It is also understandable, but nonetheless a joy to behold, that this piece shows much prooflike tendencies under a light overlay of field chatter. Deep field reflectivity and radiant cartwheel luster enhance the surfaces, which further offer attractive orange-gold color. A marvelous late-series Carson City twenty. Census: 40 in 62 (1 in 62+), 5 finer (3/14). *From The Charles G. Wright Family Collection. NGC ID# 26C6, PCGS# 9020*

1893-CC Twenty in Mint State Final-Year Carson City Favorite

5844 1893-CC MS61 NGC. Variety 2-A. The final-year of Carson City coinage operations delivered a modest mintage of 18,402 double eagles, most of which were exported for foreign obligations. Many repatriated coins have since made their way into collector's hands, making this formerly rare date much more available than it once was.

This flax-gold example displays a crisp strike and glimpses of prooflikeness, enhanced by cartwheel luster. The fields are a bit too busy for the next higher grade, yet none of the abrasions are deep or troublesome in the context of an MS61 coin. Lightly frosted devices show sharp detail on Liberty's hair strands and on the eagle's head, tail, and arrow fletchings. Overall, the coin is above average for its Uncirculated grade and quite appealing — always a favorite issue for Carson City gold collectors.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26C9, PCGS# 9023

PROOF LIBERTY DOUBLE EAGLES

**Extremely Rare 1862 Double Eagle, PR65 Cameo
The Finest Cameo Proof
The Eliasberg Specimen**

5845 1862 PR65 Cameo NGC. The Baltimore financier, Louis E. Eliasberg, Sr. (1896-1976) formed the only complete collection of United States coins ever assembled. Eliasberg initially began collecting coins as a means of gold possession following the 1933 gold recall. Collectors were still allowed to own gold coins so long as the dates and mintmarks were different. Soon, he caught the numismatic affliction, and formed a world-class cabinet. His collection ranks among the finest ever sold. Eliasberg, Norweb, and Garrett are the three most famous in numismatics, and advanced numismatists are always excited to acquire coins with those names as part of the provenance.

Eliasberg actually owned two 1862 proof double eagles. His duplicate appeared in the H.R. Lee Collection sale offered by Stack's in October 1947, stating that the coin was from their sale of the Bell Collection three years earlier. Lee was an acronym using Eliasberg's initials, preceded by his mother's initials. She was Hortense Rosalind Eliasberg. The present piece is apparently the Clapp coin, earlier from the collection of Major William B. Wetmore, although the Chapman brothers described that coin as "slightly hair-marked."

The Philadelphia Mint coined 35 proof 1862 double eagles. Perhaps 12 to 15 of those pieces survive today. A roster of known pieces would be a worthwhile pursuit. NGC has certified five proof 1862 double eagles (3/14) as PR63 Cameo, PR64 Cameo (3), PR65 Cameo, and PR65 Ultra Cameo. PCGS has certified six examples as PR62, PR64, PR64 Cameo, PR64 Deep Cameo (2), and PR65 Deep Cameo. There is likely some overlap in the census figures for those 11 coins. For example, the present piece is illustrated at PCGS Coin Facts with the grade of PR64 Deep Cameo PCGS, and also appears on the NGC Coin Explorer at its present grade of PR65 Cameo NGC. Among known examples are two deeply contrasted proofs in the Smithsonian Institution.

An impressive double eagle, this piece displays deep field-to-device contrast, with brilliant and lustrous yellow-gold devices that appear to float over deeply mirrored orange-gold fields. The surfaces show a few minuscule contact marks that serve to identify this coin as the Eliasberg specimen.

Ex: Louis E. Eliasberg, Sr. Collection; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 907; Heritage (1/2013), lot 5940. Believed earlier from the W.B. Wetmore Collection (Chapman Brothers, 6/1906); John H. Clapp Collection; and the Clapp Estate.

From The Charles G. Wright Family Collection. NGC ID# 26DD, PCGS# 89074

1864 Twenty Dollar Seldom-Seen PR64 Cameo Likely Fewer Than a Dozen Examples Survive

5846 1864 PR64 Cameo NGC. The 1864 double eagle is a curiously *unavailable* date in proof format. PCGS shows two grading events in PR64, four PR64 Cameo and one PR64+ Cameo, and none in Deep Cameo. NGC shows one PR63 Cameo and four PR64 Cameo, along with two each in PR64 and PR65 Ultra Cameo. These 10 grading events are the same as when this piece, an old friend, made its last appearance with us more than eight years ago, realizing \$132,250. (Estimates of surviving populations based on certification data are always tricky; we see another example of this issue in the same grade where the certified population at NGC appeared to have been temporarily inflated by resubmissions, and those now seem to have been removed. Nonetheless, Ron Guth writes on PCGS' Coin-Facts website that "the number of surviving examples is probably less than a dozen.")

The original mintage of the issue was 50 proof pieces, so, discounting any institutional holdings or uncertified coins, this represents a survival rate of no more than 20% — and that assumes that all 10 grading events are, indeed, *separate coins*.

This splendid, deeply mirrored near-Gem proof exhibits considerable mint frost over the devices on each side, providing a noticeable degree of contrast on each side. The surfaces are attractive medium-gold, offering remarkable eye appeal in addition to its obviously high quotient of collectibility. A loupe reveals light, undistracting hairlines on each side. The most prominent pedigree identifiers on this important proof include an S-shaped lint mark from Liberty's throat into the field below, and a couple of light alloy spots in the lower reverse field. In our last offering of this coin, we noted: "From an old-time estate, this piece has been off the market for several decades."

As given in the *Breen Proof Encyclopedia*, the 1864 date shows the date slanting downward slightly from left to right, with the 4 closer to the dentils than the 1. The largest space is between 86 and then between 18, with the 64 quite close together. The left serif of the 1 is slightly right of the center of a dentil, and the right base of the 4 is nearly to the right edge of a dentil. Scattered die rust marks near the eye, the brow, and below LIBER. The reverse die is a reuse from 1863, showing largish unpolished areas around the arrows and the lower tail feathers where they join the terminal volutes of the shield ornaments.

Although we steer clear of making price predictions, we cannot help but notice Ron Guth's other comment on CoinFacts concerning this issue: "The price history for this date in Proof condition is quite impressive, advancing almost ten-fold since the mid-1980s." We note another example that we offered a couple of years after this piece's last appearance with us. Lot 3749 in our FUN Signature (Heritage, 1/2007), an example also graded PR64 Cameo NGC, realized \$184,000 — impressive indeed, the result of competition among seven different bidders. This piece certainly should perform well when it crosses the auction block a few weeks from now.

Ex: Long Beach Signature (Heritage, 9/2005), lot 5207.

From The Charles G. Wright Family Collection. NGC ID# 26DF, PCGS# 89076

PLATINUM NIGHT

1865 Double Eagle, PR66 Ultra Cameo Finest of Seven Known Only Five in Private Hands

5847 1865 PR66 Ultra Cameo NGC. The Mint recorded a proof mintage of 25 double eagles in 1865, and about one-third of those coins survive today, including two examples in the Smithsonian Institution. The present example is the finest known from a total population of seven coins, with just five available to collectors. This is only the second time that we have offered a proof in any of our auctions over the last 20 years. We sold a PR64 Cameo example from the Henry Miller Collection in our auction of January 2011. A dozen grading events have been processed by NGC and PCGS (3/14): PR66 Ultra Cameo NGC, PR66 Cameo NGC, PR65 Deep Cameo PCGS, PR65 Cameo NGC (2), PR65 PCGS, PR64 Cameo NGC (3), and PR64 PCGS (3).

The obverse die of these proofs was also used for the 1865 With Motto transitional pattern, actually struck many years later for sale as a collector's item. That piece combined this obverse die with a reverse die used for Type Two proofs. The first appearance of that reverse die is unknown.

In his auction analysis of the double eagles, published three decades ago in 1982, David Akers estimated that only seven or eight examples survived from the 25 coin mintage. Careful study of auction catalogs and other appearances yields the following census of seven different examples:

PR66 Ultra Cameo NGC. Stack's (5/1974), lot 522; Allison Park Collection (American Numismatic Rarities, 8/2004), lot 1102. **The present coin and the finest known.**

PR65 NGC. James Ten Eyck (B. Max Mehl, 5/1922); John H. Clapp; Clapp Estate; Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 913; Ed Trompeter Collection; Heritage Auctions, privately.

PR64 Uncertified. Garrett Collection; Johns Hopkins University (Bowers and Ruddy, 3/1980), lot 790.

PR64 Cameo NGC. Auction '90 (Superior, 8/1990), lot 1375.

PR64 Cameo NGC. T. Henry Allen Collection (Stack's, 2/1977), lot 1011; Henry Miller Collection (Heritage, 1/2011), lot 5279

PR64 Deep Cameo. Smithsonian Institution.

PR63 Deep Cameo. Smithsonian Institution.

The roster includes auction appearances from the last 40 years.

Earlier Auction Appearances

Jerome Kern (B. Max Mehl, 5/1950), lot 601 unplated.

Memorable Collection (Numismatic Gallery, 3/1948), lot 690, plated but unmatched.

William C. Atwater Collection (B. Max Mehl, 6/1946), lot 1257, unplated.

Boyd Collection (World's Greatest Collection, Numismatic Gallery, 1/1946), lot 868, unplated.

Roach Collection (B. Max Mehl, 2/1944), lot 144 unplated.

The coloration of this piece is the first trait that grabs the viewer's attention, although the marvelous contrast comes up a moment later. We would describe the color as simply orange, not yet veering lighter towards yellow or gold, not yet deeper towards reddish. It is a trifle lighter here or deeper there, but the color is a beautiful and remarkably consistent attribute. The even color and the depth of the mirrors in the fields complement the thick mint frost that appears on the central devices of each side. The frost is deeper on the obverse peripheral stars than on the reverse peripheral lettering, but this is a minor quibble on a coin of such high quality and excellent preservation. A couple of tiny contact marks in the obverse field, out from Liberty's nose, are minuscule in the extreme but are the only visible signs of contact on the obverse. The reverse shows a small nick above the T in TWENTY and a light graze beneath the D of UNITED. The proof strike is full throughout both sides, showing no visible weakness.

NGC and PCGS have graded 81 Type One proof double eagles dated from 1859 to 1865. Among those coins are 16 Deep or Ultra Cameo proofs. The best ones are 1861 and 1864 double eagles certified PR67 Ultra Cameo, and this 1865 graded PR66 Ultra Cameo. There are also four different PR66 Cameo examples, dated 1859, 1860, 1863, and 1865. The type collector, double eagle aficionado, or proof gold specialist will do well to pursue this exceptional Premium Gem Ultra Cameo proof.

From The Charles G. Wright Family Collection. NGC ID# 26DG, PCGS# 99077

1883 Double Eagle, PR65 Deep Cameo Top-Quality Proof-Only Issue

5848 1883 PR65 Deep Cameo PCGS. The 1883 is the first of three proof-only Liberty Head double eagle issues, struck during a period when the demand for gold and silver coinage was at an all-time low for the second half of the 19th century. The 1883, 1884, and 1887 double eagle issues, each proof-only, were struck in reported amounts of 92, 71, and 121 pieces, respectively.

The present Gem Deep Cameo proof 1883 twenty dollar, certified by PCGS, is among the few finest survivors of the issue, regardless of contrast level. PCGS shows eight Deep Cameo submissions of the 1883 (likely including duplicates): two each in PR64 and PR65 (one of which is the present piece), one PR65+, and three PR66. NGC's population data show seven Ultra Cameo grading events for the issue, the finest of which are four in PR66. Again, there is likely some overlap between these 15 Deep/Ultra Cameo certified pieces. Walter Breen's *Proof Encyclopedia* comments that "there may be as many as 20 survivors," of course including all contrast levels (non-Cameo and Cameo as well as Deep-Ultra). More recently, the second edition of Jeff Garrett and Ron Guth's *Gold Encyclopedia* provides these clues:

"The 1883 double eagle was struck only in Proof format. Of the reported mintage of 92 coins, it is nearly certain that not this many were released. There are about 20 examples known in all levels of preservation. These include two examples in the Smithsonian and others placed in museum collections. The 1883 double eagle is one of the classic rarities of the series. The demand for this Proof-only issue has always been high. In recent years interest in the issue has surged. ..."

The authors conclude by citing a 2006 auction record of \$212,750 for a PR65 Cameo NGC example, undoubtedly from our FUN Signature (Heritage, 1/2006), lot 3580. We find no later auction offerings of Cameo examples, but with the Deep Cameo contrast of the present PCGS example, we find a more-recent sighting in the same grade and service as this piece. Lot 5566 in our FUN Signature (Heritage, 1/2014), was a PR65 Deep Cameo PCGS example that brought a healthy \$282,000 — a coin of comparable quality to the present piece.

As the old sayings goes, "There are lies, damned lies, and statistics," and nowhere else does this apply more so than in the rarefied realms of top-quality U.S. numismatic items — and proof gold in particular, the Beluga caviar of collecting. Despite estimates of how many were struck of a given issue or exactly how many might survive today, the fact is, auction offerings of proof Liberty Head double eagles of this caliber are infrequent indeed, and there are far more collectors who desire one than the forthright bidder who will actually obtain this piece.

Perusal of this coin without a loupe reveals consistent, deep sunset-orange coloration in the highly reflective fields, producing extreme contrast with the frosted devices which were the deepest, unpolished parts of the proof die. A loupe shows a tiny touch of hazel on the lower neck at JBL for a pedigree marker, along with a tiny glossy area on a tail feather above the D(OLLAR), apparently a small planchet flaw, as made. There are small unfinished areas at the bottom of some of the vertical shield stripes. There are simply no distractions on this immaculate coin. Population: 3 in 65 (1 in 65+) Deep Cameo, 3 finer (3/14).

1884 Twenty Dollar, PR66 Cameo Proof-Only Issue Tied for Numerically Finest Certified

5849 1884 PR66 Cameo NGC. This 1884 double eagle is a proof-only issue, struck in the meager amount of 71 coins, and it is among the few finest survivors of the issue, numerically tied with two other examples in PR66 Cameo at NGC. None are finer.

Shortly after the horrid, protracted Civil War began, Americans began hoarding first gold coins, then silver, and finally copper coins down to the cent (and the occasional half cent that might still be found in circulation). On Dec. 18 (some sources say the 28th), 1861, New York banks suspended specie payments; that is, they would no longer pay out gold coins for deposits of paper currency or silver.

From then until Dec. 17, 1878, gold coins scarcely circulated, if at all, in the East or Midwest, and when found they traded at a premium or were exported, soon to be melted.

During the 1870s the Comstock Lode silver (it consisted primarily of silver, although much gold was also mined) continued to flood into the domestic economy, lowering the price of silver. By 1876 banks resumed specie payments of silver, and in that same year the U.S. Treasury released a long-held store of millions of silver coins. By 1879, it was anticipated that “parity” (no premium or extra demand) would finally be achieved between gold, silver, and paper currency, for the first time since the Civil War. The long-sought parity was actually achieved, as noted above, two weeks early, on Dec. 17, 1878.

For the first time in the memory of many younger Americans, they could finally go to the bank, present paper currency or silver, and demand gold, or paper currency backed by gold deposits. Even though the Treasury made sure to produce extra gold coinage during 1878, the anticipated demand failed to materialize.

What happened? As had occurred previously in history when told they could have all they wanted of a commodity that was previously scarce, Americans opted for convenience instead of the formerly scarce item. Rather than choosing bulky gold coins, they opted to go with paper money, which was, given the prevailing parity conditions, interexchangeable with gold or silver at any bank. In 1878, the Philadelphia Mint struck some 543,625 double eagles. In 1879, Philadelphia produced only 207,600 examples of the denomination. (We exclude the Carson City and San Francisco double eagles quite purposefully from this discussion; the Western economy was based on a longstanding “hard money” economy, as it had since the Gold Rush, and it operated according to rules of its own, including continuous circulation of gold and silver coinage.)

From there, things went downhill rapidly. The Philadelphia Mint business strike double eagle production totals for the early 1880s were these:

1880: 51,420

1881: 2,199

1882: 571

1883: none (proof only)

1884: none (proof only)

1885: 751

1886: 1,000

1887: none (proof only)

All of the preceding helps to explain why the Philadelphia Mint produced three proof-only double eagle issues, the 1883, 1884, and 1887. There was simply no demand for large amounts of new gold coinage in the East (the same explanation applies to Seated silver coinage, by the way). Those three issues saw 92, 71, and 121 proofs struck, respectively. Of the three, we believe that the 1884 is the rarest today, and the present PR66 Cameo NGC piece is, as mentioned, at a minimum tied for numerically finest graded of the issue. The finest at PCGS is one PR64 Cameo. The canary-yellow surfaces of this piece are perceptibly contrasted and the fields deeply reflective, but it is the overall excellent preservation that is the calling card of this example. A couple of marks are on the slab, not on the coin, which shows only one faint tick on Liberty’s cheek and one above OL in DOLLAR on the reverse. The bold proof strike has brought up all details to maximum advantage, save for the rightmost pale gules which are thinned out from die polishing. This is simply an incredible coin that should perk up proceedings when it crosses the block. Census: 2 in 66 Cameo (1 in 66 ★ Cameo), 0 finer (3/14).

1904 Twenty, Gleaming PR64 Cameo Ideal Cameo Proof Type Selection

5850 1904 PR64 Cameo NGC. Mintages of proof double eagles whipsawed wildly at the beginning of the 1900s, from 124 pieces in 1900 to 96, 114, 158, and 98 in following years. To make matters even more confusing, the 1904 issue—which corresponds to the 98 figure—is the one Jeff Garrett considers “the most common issue of the type in Proof,” according to the *Encyclopedia of U.S. Gold Coins*. Of course, resubmissions are in play with this issue, as they are in so many others; as far back as 2006, the year the first edition of the *Encyclopedia* came out, there were already more certification events (100) than coins already minted.

Proof gold always poses a challenge, even if the 1904 proof twenty, like its famously abundant business strike counterpart, is the ideal type coin for its series. Compounding the difficulty for collectors who prefer the 19th century frosted-device look to the uniformly brilliant trend of 20th century Liberty gold is the lack of contrast on 1904 examples; Garrett and Guth write that “[m]ost of the examples seen also have very little, if any, cameo surfaces.”

Counter to the trend toward brilliance, this coin is undeniably contrasted on both obverse and reverse. Neither side shows the thick and deliberate frostiness of years past, but the creamy texture of the portrait is rewarding in its own right. Sharply struck devices are nearly fault-free, though a horizontal contact is noted in the right reverse field, just to the left of the I in AMERICA. Census: 15 in 64 Cameo, 6 finer (3/14). NGC ID# 26ES, PCGS# 89120

HIGH RELIEF DOUBLE EAGLES

1907 Wire Rim Twenty, MS61

Lower-Grade but Still Impressive High Relief

5851 1907 High Relief, Wire Rim MS61 NGC. The wire rim is only partially visible on each side, an indication that this may have been among the final coins struck. Mint Director Frank Leach thought the wire rim was an important impediment to striking and production of the High Relief twenties, and he instructed the dies and collar be adjusted to eliminate it. Mint personnel were able to reduce it, but rarely did they actually eliminate it. The wire rim on the obverse shows a tiny dent near 2 o'clock. Otherwise, the surfaces are lackluster for a High Relief, but the strike details are complete throughout and there are no other mentionable marks. NGC ID# 26F2, PCGS# 9135

1907 Saint Gaudens Double Eagle, MS63 High Relief, Wire Rim Variant

5852 1907 High Relief, Wire Rim MS63 PCGS. In describing the Ultra High Relief Saint-Gaudens double eagle, Dr. Robert J. Loewinger, in his reference on proof gold coins, says, in part:

"Liberty's skirt shows two folds on the side of her right leg (left field); the underside of the skirt's oval is very large; the Capitol building in the background is very small. Thirteen rays appear in the field to the left and 13 to the right, all emanating from behind the figure of Liberty. The MCMVII is distant from the drapery."

In characterizing the business-strike "Regular High Relief," as he calls it, Loewinger points out a few differences with the design:

"Note the MCMVII lettering is close to the drapery. The Capitol is large; there are 3 narrower folds in the skirt just beyond the left leg; there is a small oval section in the underside of the skirt; there are 13 rays in the sunburst and a softness of detail in the device and lettering."

While of course the vastly different height of the relief is the chief and most easily noticed variation, the marked inequality in the Capitol, and in the size of the "ovals" beneath the skirt; the variance in the number of skirt folds to the left of Liberty; and the different positioning of the date are also quite obvious when one views the coins, or photos of them, side by side.

This piece displays a tiny rim tick at 3 o'clock and a couple of hair-thin marks in the fields that prevent an even finer grade, but much eye appeal remains on the pleasing orange-gold surfaces. There are no singular abrasions. Traces of the wire rim appear, as usual, over much of both sides. NGC ID# 26F2, PCGS# 9135

1907 High Relief, Wire Rim Twenty, MS64 Beautiful First-Year Example

5853 1907 High Relief, Wire Rim MS64 PCGS. The Saint-Gaudens double eagles are among the most beautiful of all American coins, and many have opined that they are *the most beautiful*. Such an opinion is, of course, subjective in nature and impossible to verify. It is easy to see why one would hold such an opinion, however, simply by viewing one of these marvelous coins.

The present offering represents a near-Gem representative of the High Relief version of Saint-Gaudens' artistically superior design; one of the examples showing a partial Wire Rim. The splendid orange-gold toning and uniform satiny finish are attributes that maximize the visual appeal of this well-preserved specimen. The motifs are sharply struck, save for a bit of the sometimes-seen weakness across the tops of STATES OF AM on the upper reverse, with just a few small marks and grazes that keep it from an even finer grade. NGC ID# 26F2, PCGS# 9135

1907 High Relief Twenty, MS64 Exceptional Wire Rim Example

5854 1907 High Relief, Wire Rim MS64 PCGS Secure. The sculptural appearance of the High Relief twenty was derived from several previous commissions completed by Augustus Saint-Gaudens. The original inspiration came from the Nike of Samothrace in the Louvre, as is widely known. The general striding figure was also used, with alterations, on The Puritan (1883-1886), the Albright Caryatids (1906-1908), and of course, The Sherman Monument (1892-1903). It was this latter monument that served as the most direct influence on the obverse of the double eagle. This is a bright, satiny example with a light accent of reddish patina over the otherwise green-gold coloration of the coin. Only a loupe can reveal the tiniest contact marks. NGC ID# 26F2, PCGS# 9135

MCMVII High Relief Twenty, MS65 Wire Rim Variant

5855 1907 High Relief, Wire Rim MS65 PCGS. The High Relief double eagle is one of the most popular and unquestionably beautiful coins ever produced by the U.S. Mint. It was the culmination of a process that began in 1905 at a White House dinner with President Theodore Roosevelt and noted sculptor Augustus Saint-Gaudens. Both men admired the artistic accomplishments of the Greek coins struck around the time of Alexander the Great and the high relief these pieces were struck in. Both assumed since the Greeks could produce such coins with artistic merit 2,200 ago, surely the United States Mint could also. What both men failed to recognize, however, was the ancient Greeks were not in a hurry to mass produce their coinage.

The United States Mint was in a hurry, and had deadlines to meet for each series produced in each mint. This was something Charles Barber knew. Barber had artistic differences with Saint-Gaudens going back to 1892, but that aside, he knew that the models Henry Hering delivered to the Mint in 1907 were impossible to produce with a single strike from a steam press. Tests were conducted and a singly struck coin could not be fully brought up — it lacked complete details and was especially lacking in the area of the torch on the obverse. Seven blows from a hydraulic press for medals (not the normal coining press for coins), were required to fully bring up all the details Saint-Gaudens engraved in the models he sent to the Mint.

The High Relief twenties, such as the one seen in this lot, are a compromise on the part of Augustus Saint-Gaudens and Henry Hering. Their original concept was the Ultra High Relief for circulating coinage — a splendid idea but one that was completely impractical from the standpoint of mass production. After 11,000 or so strikings of the High Relief (as seen here) the project was abandoned, the original design lowered to practical levels, and large production commenced with the Arabic Numerals 1907 issue. The High Relief twenties remain, however, a testament to what could have been if time and money were no object in the production of coinage. This particular piece has finely granular surfaces with an overlay of satiny mint luster. The green-gold surfaces display just a bit of reddish patina, and there are no reportable contact marks on either side.

Ex: Long Beach Signature (Heritage, 6/2005), lot 8166. NGC ID# 26F2, PCGS# 9135

1907 High Relief, Wire Rim Twenty, MS66
"A Glory to its Own Age
and a Firm Foundation
for the Generations to Come"

5856 1907 High Relief, Wire Rim MS66 NGC. Augustus Saint-Gaudens worked in a period that was perfect for his talents as well as his approach to sculpture. According to his son, Homer, when Augustus was a young man, the artistic sensibilities in America were "irresponsible and unshaped." As he developed as a sculptor after training in the École des Beaux-Arts, his approach was termed "naturalism" and was easily understood by a large public audience. It did not require a Classical education that was needed to understand Neoclassicism, and no guesswork or interpretation was needed as with the sculptors that followed him, such as Giacometti, Brancusi, or Moore. Homer expressed his father's approach to sculpture (and thus his placement in time in art history) as: "From Saint-Gaudens' point of view this was lucky, for he felt that the greatest art was to show to the world the truth of this condition [actual life] by a representation of life filled with these ideals." The result he summed up as "an art dealing with the life of the day after the manner of the day, a glory to its own age and a firm foundation for the generations to come." (Emphasis ours.) The creation of the High Relief twenty dollar can certainly be included in Homer's statement of the contemporary and enduring nature of his father's work. The High Relief was immediately embraced by numismatists of the day as well as the general public and art critics as well. It is one of the few American coins that can truly be called artistic. And as Homer said, its popularity has endured through the generations.

This is a magnificent example of Saint-Gaudens' High Relief twenty. The surfaces are bright and satiny with just a hint of the usually seen light reddish patina. As one would expect from an MS66, there are no obvious contact marks on either side.

From The Charles G. Wright Family Collection. NGC ID# 26F2, PCGS# 9135

**1907 Double Eagle, MS65
Flat Rim High Relief
Warm, Satiny Mint Luster**

5857 1907 High Relief, Flat Rim MS65 NGC. Augustus Saint-Gaudens is universally considered the greatest American sculptor of the 19th and early 20th centuries. But work did not come easy in his early years. His son Homer recounts that after his father returned to New York after his first residency in Rome, it was with "great persistence" that he obtained commissions in those early years. As examples of Saint-Gaudens' need for work in the early 1870s he mentions two commissions:

"One of these commissions for a large semi-circular panel for the Adams Express Company Building in Chicago, represented a bull-dog, with revolvers and bowie knives to assist him, guarding a couple of safes. Another, for a silver candelabra, which Tiffany was to place in the Gordon Bennett yacht *Mohawk*, was a figure of an Indian dancing with knife and scalp."

Even though commissions were difficult to come by in these early years and caused him "intense nervous stress" Saint-Gaudens made time to teach his brother Louis and three others how to cut cameos, a craft he had learned beginning at age 13. His skill as a cameo cutter acquainted him with some of the demands of sculpting, especially when working in a small area, a skill that would serve him well when he was later called upon to redesign the nation's coinage.

By the time he was called upon by President Roosevelt to redesign the ten and twenty dollar gold pieces, he was certainly more secure in commissions than in his early years. However, Saint-Gaudens had difficulty turning down commissions throughout his life, even when completion was years away. His previous experience as a cameo cutter and sculptor are abundantly evident in the design of the High Relief twenty dollar. This particular coin shows an almost completely flat rim around each side, just a trace of extruded metal can be seen on the reverse. The surfaces exude a warm, satiny mint luster that is lightly accented by light reddish patina, and there are no obvious contact marks on either side.

From The Northern Lights Collection. PCGS# 9136

SAINT-GAUDENS DOUBLE EAGLES

1911 Double Eagle, MS65 Lovely, Conditionally Scarce Example

5858 1911 MS65 PCGS. The 1911 double eagle had a mintage of 197,250 business strikes, and examples are reasonably available through the Select and Choice Mint State grade levels. Gems are scarce, however, and the two major services have only seen a combined total of 86 MS65 pieces, with a mere 26 coins graded even higher.

This is a lovely coin with strong eye appeal. Vibrant luster and smooth, mattelike surfaces are seen on each side. Fully struck, with complete definition on the Capitol building, Liberty's hair tresses and fingers, and the eagle's breast feathers. Population: 40 in 65, 11 finer (3/14). NGC ID# 26FJ, PCGS# 9157

1926-D Saint-Gaudens Twenty, MS63 Elusive Mintmarked Issue

5859 1926-D MS63 PCGS. With only a few hundred examples known to exist, this Denver twenty is elusive in Select Uncirculated condition and rare any finer. Most were melted in the mid-1930s during the Gold Recall. Unlike many other dates, the issue was most likely retained in the United States and not exported to any extent, although a few coins were found overseas. This lustrous example has excellent eye appeal. Lustrous, orange-gold surfaces display olive-green accents over the frosted fields and devices. Too many minor abrasions limit the grade, but none of the marks are too severe or distracting. A sharp strike shows a touch of weakness on Liberty's torch hand and the Capitol dome. Population: 55 in 63, 27 finer (3/14). NGC ID# 26GE, PCGS# 9184

1929 Saint-Gaudens Double Eagle, MS64+ Elusive Late-Series Issue

5860 1929 MS64+ NGC. CAC. The 1929 Saint-Gaudens double eagle claims a mintage of nearly 1.8 million pieces, but only a tiny fraction of that impressive total survives today. Most of the coins were held in banks or Treasury vaults to act as currency reserves, and only about 25,000 examples were actually released into circulation before the Gold Recall of 1933. Once that Presidential Order took effect, the coins in storage were easily gathered up and turned in. Later, the coins were melted and stored as gold bars at the Gold Bullion Repository at Fort Knox. This fate was a common one for the later issues in the Saint-Gaudens series, and all the issues struck after 1929 are rare today.

While the 1929 is not as rare in an absolute sense as the later issues in the series, it is more difficult to locate than such acclaimed dates as the 1931 and 1932 in higher Mint State grades. This indicates that some of the 25,000 coins released into circulation in 1929 survived, while almost no examples of the later dates ever escaped from government control. A few high-quality coins were saved by contemporary collectors, providing the small supply of high grade specimens we know about today. David Akers estimates 175-230 examples survive in all Mint State grades. NGC has certified a total of 130 pieces in all grades, while PCGS has graded 182 all-told (3/14). The population data include an unknown number of resubmissions and crossovers. Whatever the true population of the 1929 double eagle is, it is definitely not adequate to supply all the collectors who want one.

The present coin is a high-end Choice example, with well-preserved yellow and rose-gold surfaces. Vibrant mint luster radiates from both sides and the design elements are sharply detailed. Eye appeal is outstanding. Census: 65 in 64 (2 in 64+), 6 finer (3/14). NGC ID# 26GL, PCGS# 9190

COMMEMORATIVE SILVER

1900 Lafayette Dollar, MS67 Intensely Toned and Nearly Perfect

5861 1900 Lafayette Dollar MS67 NGC. DuVall 2-C. This exquisitely preserved Lafayette dollar exhibits above-average detail and powerful luster beneath distinctive and variegated patina. An outer ring of pale emerald surrounds an ocean-blue and amethyst center laced with thin streaks of orange, while the reverse is predominantly sky-blue with splashes of russet-violet at the rims and the horse's head. Aside from a fingerprint in the right reverse field, the surfaces are practically flawless, with none of the abrasions found so often on the portraits or the statue. A wonderful example that is worthy of the finest collection. One of just nine examples graded MS67 by NGC, with only five certified at that level by PCGS, and no coins finer at either service (3/14). NGC ID# 28N8, PCGS# 9222

1938 New Rochelle Half Dollar, SP66 Rare Specimen Striking

5862 1938 New Rochelle SP66 NGC. CAC. A total of 50 special or "Specimen" strikings of the New Rochelle half dollar were distributed to important members of that community, along with those on the related Coinage Committee and certain individuals connected to the Westchester County Coin Club. While a number of prooflike pieces are known for the issue, this coin sets itself apart for its detail. While most examples have an extremely blurry on the petal midrib of the iris, this piece is sharper there, if not complete on the uppermost element. Extensive die polish lines descend through the flower, a clue to the source of this coin's reflectivity. Census: 6 in SP66, 5 finer (3/14). NGC ID# 28KU, PCGS# 9335

1926 Sesquicentennial Half Dollar, MS66 Among the Finest Certified

5863 1926 Sesquicentennial MS66 PCGS. Both the low-relief design and the subsequent preservation of the 1926 Sesquicentennial half dollar issue are largely to blame for the paucity of survivors today at this Premium Gem level, where PCGS has seen only eight submissions with none finer (3/14). Mint chief engraver John Sinnock created designs for the half dollar which were deemed unsatisfactory, and a committee ended up specifying that the final coins be struck in low relief. Predictably, they struck up poorly. This piece shows beautiful color, gold and amber tinges with deeper copper hues on both sides. Marks are minimal and mostly confined to the lower portrait areas. Eye appeal is outstanding. NGC ID# 28LM, PCGS# 9374

COMMEMORATIVE GOLD

1915-S Panama-Pacific Fifty Dollar Round Bright, Lustrous AU58

5864 1915-S Panama-Pacific 50 Dollar Round AU58 NGC. The series of four coin designs in five shapes and sizes that commemorated the Panama-Pacific Exposition necessitated some unusual moves on the part of Mint personnel and equipment, as described in the June 1915 issue of *The Numismatist*:

"Governed by the information received from Washington, Philadelphia and San Francisco, the series of special commemorative coins for the Panama-Pacific Exposition may be expected ready for delivery very soon. Considering that this series of five special coins was not authorized until January, and that, due to doubts as to the passage of the bill providing so many different denominations, no advance preparation was made — not even ideas for designs considered. If the coins are issued during the coming month it will have been a very prompt production, particularly since a new shape — octagonal — and two denominations not regularly coined, \$1 and \$50, have made necessary the production of special tools and press fittings. A new series of regular coins are usually many months in development ...

"A special hydraulic press used for medal stamping at the Philadelphia Mint was received at the San Francisco Mint during the month. This press, which weighs 14 tons and has a striking power of 450 tons, is for use in striking the 3,000 \$50 gold pieces, and is to be returned to the Philadelphia Mint just as soon as the coinage has been completed."

The coinage was indeed completed "very soon," as a photograph from the August 1915 issue of *The Numismatist* depicts the striking of the first fifty dollar pieces in the hydraulic medal press. The "double face value" price did indeed serve to dampen sales, as of the 3,000 fifty dollar coins authorized, the net distributions ended up at 483 round and 645 octagonal pieces, the remainder melted as unsold.

Both the round and octagonal 1915-S Panama-Pacific coins remain today as the most prized representatives in the entire commemorative series. The magnificent design of the Pan-Pac fifty is fully evident on this near-Mint example. Just a slight bit of friction is seen on each side, the surfaces are otherwise unaffected by the handling marks one would normally expect. The surfaces are bright yellow-gold with just a hint of reddish patina. NGC ID# 26HM, PCGS# 7451

1915-S Panama-Pacific Fifty Dollar Octagonal, MS61

5865 1915-S Panama-Pacific 50 Dollar Octagonal MS61 PCGS. Between their sheer size and overall scarcity, the fifty dollar Panama-Pacific commemoratives of both shapes have been collectors' favorites for decades. Swiatek-Breen (1981) described the two types as "the caviar and truffles of numismatics," though one needs not be the coin world's version of a gourmet to appreciate their majesty. The heaviest non-territorial federal issues ever struck, they also had the highest face value for a U.S. coin until the Mint's platinum American Eagle series began in 1997. The symbolic portraits of Minerva and her owl, stamped in gold, have a timeless appeal.

The distinctive shape of the octagonal variant gives it even more cachet, and it is unsurprising that the eight-sided version outsold its round counterpart. Purchasers acquired 645 representatives of the octagonal form, compared to just 483 examples of the round type. Though a slight difference appears between them, the two Panama-Pacific fifties remain first and second in the pantheon of classic American commemoratives and doubtless will remain so in the future.

Not every purchaser of these distinctive pieces was a collector. Bowers (1991) writes that "most of the approximately 300 sets [of Panama-Pacific pieces] eventually sold seem to have gone to wealthy citizens of the San Francisco area, convention officials, bankers ... and members of the general public." The overall survival rate is high (Bowers gives a figure of 80%, as do other scholars), though a number of the coins are impaired. While not pristine, the example offered here is unworn and has strong visual appeal. Well-defined and lustrous, its surfaces are amber-gold with strong orange overtones. Two small copper spots are present on the obverse and a number of wispy marks account for the grade, but the piece's general appearance is pleasing. A strong candidate that would make an impressive addition to one's commemorative collection. NGC ID# 26HN, PCGS# 7452

1915-S Panama-Pacific Octagonal Fifty, MS67 A Monumental Coin of Remarkable Quality Tied for Finest Graded

Memento of Two Great American Achievements

5866 1915-S Panama-Pacific 50 Dollar Octagonal MS67 NGC. This remarkable fifty dollar Panama-Pacific 1915-S octagonal gold coin is, unsurprisingly, tied for the finest we have ever offered at Heritage, as well as tied for the finest certified at NGC and PCGS combined. NGC shows three other submissions in MS67 (perhaps a number that includes duplicates), and the finest graded at PCGS are two in MS66 (3/14).

While this admirable coin was being shown around among the Heritage cataloging staff, one cataloger remarked, “Who was this struck for, the King of Siam?”

While we will almost certainly never know the exact circumstances of its production, the undoubted fact is that it is a coin of remarkable quality and pristine preservation, certainly a piece that shows many of the characteristics of a specimen coin. It appears to have seen special care taken in both its production and preservation — a nearly mark-free, essentially perfect survivor of this largest and most impressive gold commemorative issue.

The Panama Canal

A clever, well-known palindrome — a phrase that reads the same backward and forward — describes President Theodore Roosevelt: “A man, a plan, a canal, Panama.”

The 1915-S Panama-Pacific round and octagonal gold coins are monumental tributes — as was the American exposition for which they are named — to the most ambitious engineering project ever undertaken by America.

The completion of the Panama Canal in 1914 represented a triumph of American will over the implacable elements, a series of giant hydraulic locks that enabled giant oceangoing vessels to, in effect, climb the Cordillera mountain range of Central America. In his espousal and fierce support of the project, President Roosevelt created a new Central American nation, enabled the rise of America as a world superpower, and presided over innumerable triumphs of engineering, science, medicine — and the human will.

The Present Coin

The present MS67 NGC octagonal Panama-Pacific fifty dollar must be considered one of the most desirable commemorative coins ever to be produced by the United States. Its net production of only 645 survivors places it as the second-lowest-mintage issue in the entire “classic commemorative series” running from 1892 to 1926. Interestingly, the current NGC population data show four submissions each of the round and octagonal versions in the top grade of MS67. One simply cannot say too much about the impeccable nature of this coin. To mention any of the minuscule marks that appear — only under a loupe! — would be to overemphasize their importance.

The coloration is among the most attractive we have ever seen on this issue, not yellow-gold but rather an orange-gold with the emphasis more on orange. The surfaces are satiny rather than frosty, and radiate cartwheel luster throughout both sides — also a feature that we have not seen before on an example of this issue.

The Plan: French Failure

The plan to link the Pacific and Atlantic oceans via a Central American waterway had been a dream for hundreds of years, as an alternative to months-long treacherous voyages around South America’s Cape Horn. When gold was discovered in vast quantities in California in the 1840s, it reinforced the need for a shorter, faster way to connect those destinations.

The Panama Canal started out as a colossal failure of a project undertaken first by the French in 1881. The mastermind of the 1869 Egyptian Suez Canal completion, Ferdinand de Lesseps, was put in charge of the Panama Canal project by the French government. It turned out that building canals through arid desert in Egypt and through tropical jungles and mountain ranges in Panama were quite different endeavors. Among de Lesseps’ fatal errors was to visit Panama only once, and that *during the dry season*, when the raging Chagres River was at its tame.

After years of disastrous floods, mudslides, and thousands of deaths from malaria and other tropical diseases, the Compagnie Universelle du Canal Interocéanique failed in December 1888. More than 100,000 French investors lost their funds with the collapse of the French venture. Ferdinand de Lesseps was at one time known as *le Grand Français* (the Great Frenchman) to his compatriots, yet he went from being a revered hero in France to narrowly escaping prison, a man essentially driven mad in the last years of his life by the vastness of the colossal failure.

The strategic importance of a water passage through Central America was driven home yet again in 1898 during the Spanish-American war, when the United States was unable to get the battleship *Oregon* to the Atlantic Ocean without the lengthy journey around Latin America's southern tip.

The Man: President Theodore Roosevelt

President Theodore Roosevelt, who had served with the First U.S. Volunteer Cavalry Regiment — the “Rough Riders” — during the Spanish-American war, assumed the office of President in September 1901 upon the death of the assassinated President William McKinley.

Shortly afterward, Roosevelt addressed Congress about the need to complete the Panama Canal:

“No single great material work which remains to be undertaken on this continent is as of such consequence to the American people.”

The Plan: American Success

In 1902 the United States acquired the rights to the French canal land and equipment for a maximum of \$40 million. Panama was at that time a province of Colombia, although many of the Panamanian business elite desired independence from Colombia. The United States, via Roosevelt and his envoys, began negotiating to acquire Panama from Colombia. When the negotiations stalled, Roosevelt acted with his typical impetuosity, scheming with Panamanian business leaders for a revolution — and at the same time bribing Colombian soldiers to lay down their arms. The near-bloodless revolution, abetted by the sudden appearance of an American warship, lasted mere hours. The new nation of Panama was born in November 1903, and the Panama Canal Treaty was signed days later. It would be 11 more years before the Panama Canal was officially completed, however, at a continuing enormous cost of lives and money.

The successful canal completion represented the rise of what has been called the “American century.” The Americans succeeded where the French had failed — disastrously. It was a time of American engineering triumphs: The Transcontinental Railroad, the Brooklyn Bridge, and the Panama Canal were all victories against impossible odds, projects whose completion was believed unattainable.

The Panama Canal, at the time called the “13th Labor of Hercules,” signified America's rise as a dominant world superpower — although the world scarcely noticed the actual completion, due to the drumbeats of World War I already echoing in Europe. The combination of notable advances in railroad and hydroelectric engineering, managerial organization, public health and disease control, and the triumph of sheer American determination over implacable Nature put the Panama Canal project on a scale never before seen.

One visitor memorably called the canal “the greatest liberty ever taken with nature.”

The Panama-Pacific Exposition

The huge 1915-S Panama-Pacific round and octagonal fifty dollar gold coins were a fitting tribute in their artistry and size to the most immense undertaking of America prior to World Wars I and II, the largest single federal expenditure to date. They commemorated the completion of the Panama Canal and the joining of the Atlantic and Pacific oceans, an impossible dream hundreds of years in the making. In addition, the siting of the Panama-Pacific International Exposition and the coining of the various numismatic issues in San Francisco provided an enormous showcase for that city. The beautiful exposition, the last great world's fair, helped the city rise phoenix-like from the ashes, only nine years after the disastrous 1906 Great Earthquake and Fire.

Two and one-half times as large as the High Relief double eagles, the 1915-S Panama-Pacific fifties have assumed high honors in the nearly 100 years since their creation, as among the most-pursued issues in American numismatics. The octagonal variants, as represented by the present MS67 NGC-certified piece, are the single most-memorable issue of all the classic commemorative issues. This is a monumental coin of immense historic and numismatic importance. Census: 4 in 67, 0 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 26HN, PCGS# 7452

PROOF COMMEMORATIVE GOLD

1903 McKinley Gold Dollar, PR66 Cameo Rare Proof Issue, Top-Notch Example

5867 1903 McKinley PR66 Cameo PCGS. CAC. One hundred proof examples each of the Louisiana Purchase-McKinley and Jefferson obverse gold dollars were struck, far fewer than the net distribution of 17,500 each of the “circulation strike” coins. The squared-off wire rims, fully reflective fields, and sharp details throughout each side mark this as an unquestioned proof. There is thick mint frost on the devices, but none in the fields, giving the Cameo designation ample credibility. Note how well-detailed President McKinley’s hair, bowtie, collar, and coat are. This piece shows about half of the denticles missing around the upper obverse, while the denticles are full on the remainder of the obverse and throughout the reverse. This is clearly an anomaly that we have not seen before, likely due to uneven strike pressure — but neither we (nor PCGS, obviously) have any difficulty in pronouncing this a proof coin, and one of great beauty, to boot. The canary-yellow surfaces show a couple of small lint marks on the reverse, as made. Population: 3 in 66 (1 in 66+) Cameo, 0 finer (3/14). PCGS# 87483

MODERN BULLION COINS

1995-W One Ounce Eagle PR70 Ultra Cameo ‘King of the Silver Eagles’

5868 1995-W Silver Eagle PR70 Ultra Cameo NGC. The 1995-W American Eagle silver proof claims a small mintage of only 30,125 pieces, making it the key to the series. The coins could only be purchased as part of a five-piece 10th Anniversary set of bullion coins, four gold pieces in the traditional tenth ounce, quarter ounce, half ounce, and one ounce formats, and the silver one ounce Walking Liberty dollar. The issue price of the set was \$999, a discouragingly high price for most collectors, creating a modern rarity.

The present coin is a technically perfect example, with fully struck frosty design elements that contrast profoundly with the deeply mirrored fields. The impeccably preserved surfaces are completely brilliant and eye appeal is extraordinary. NGC ID# 28WZ, PCGS# 9887

1995-W Silver Eagle, PR70 Deep Cameo “King of the Silver Eagles”

5869 1995-W Silver Eagle PR70 Deep Cameo PCGS. Truly an exceptional example, this technically perfect specimen displays a white-on-black appearance due to the deeply frosted devices and strongly mirrored fields. The eye appeal is extraordinary on both sides. A few extremely tiny as-made strike-throughs are present when examined closely, but they do not detract from the strong desirability this piece possesses.

The only way to obtain these 1995-W pieces was to purchase a set containing all four denominations of the 1995 American Gold Eagle, with the West Point-produced Silver Eagle included as the fifth coin. The 1995 Silver Eagle mintage at West Point consisted of only 30,125 specimens. With an issue price of \$999 for the set, many collectors opted to purchase a 1995-P Proof Silver Eagle at a cost of \$23 instead, catapulting the 1995-W issue to the title of the “king of the Silver Eagles,” and earning them the number four spot on the list of the *100 Greatest U.S. Modern Coins*. NGC ID# 28WZ, PCGS# 9887

1995-W Silver Eagle, PR70 Ultra Cameo Key to This Popular Series

5870 1995-W Silver Eagle PR70 Ultra Cameo NGC. The 1995-W American Silver Eagle was a one-off that took collectors by surprise and the market by storm, an issue that has become the key to the modern series. It was, however, a contrarian play that only in the rear-view mirror made sense — for collectors to buy a high-priced four-piece set of American Gold Eagles to get a thrown-in Silver Eagle that very much seemed like an afterthought at the time. Only 30,125 sets were produced, and NGC and PCGS combined have certified only a few hundred at the ultimate PR70 Deep/Ultra Cameo grade. This piece is perfection personified, midnight-black fields contrasting against thickly frosted silver-white devices. NGC ID# 28WZ, PCGS# 9887

COINS OF HAWAII

1881 Hawaii Five Cents, MS64 Rare Pattern Issue, Medcalf 2CN-1, KM-2

5871 1881 Hawaii Five Cents MS64 PCGS Secure. Medcalf 2CN-1, KM-2. The obverse of this rare pattern issue features a bust left of King Kalakaua, similar to the bust right seen on the more-familiar 1883 coinage. The obverse legend contains an error, referring to Kalakaua as the KING OF SANDWICH ISLANDS instead of Hawaii. The Sandwich Islands was the European name for Hawaii. HAWAII appeared on the 1847 cent and on the 1883 coins.

Although 200 1881 patterns were struck, few made it into numismatic holdings. According to Medcalf, "many of the coins became pocket pieces or were fashioned into jewelry."

Sharply struck, the satiny surfaces display pleasing olive-tan coloration and few marks. Population: 8 in 64 (1 in 64+), 4 finer (3/14). PCGS# 10975

1883 Hawaii Eighth Dollar, PR63 Cameo Extremely Rare Odd-Denomination Issue Proof-Only Issue, 20 Struck Sole Cameo at PCGS

5872 1883 Hawaii Eighth Dollar PR63 Cameo PCGS Secure. KM-4, Medcalf-Russell 2CS-2, R.7. The Kingdom of Hawaii coinage is quite popular today with collectors, one of the many series of coins from other nations that were struck at a branch of the United States Mint (San Francisco, in this case, with no S mintmark). A complete PCGS Registry Set of the foreign coins struck at U.S. mints comprises several hundred pieces (817, at last count) and would likely be the work of a lifetime to complete — a tempting and incredibly challenging proposition.

Getting back to Hawaii, Heritage Auctions has been privileged over the years to offer many beautiful examples of this distinctive coinage, and each one brings a waft of the cool sea breezes from the Hawaiian Islands along with it. Collectors vie eagerly for such coins, and PCGS currently shows 23 different collectors attempting to complete the Hawaii, Circulation Strikes (1847-1883) Registry Set, which includes the 1847 copper cent plus the four well-known silver denominations dated 1883, dime, quarter, half dollar, and dollar.

All of those coins, however, are circulation strikes. The incredibly rare proof coins are another matter entirely.

Three coins in the present consignment form a remarkable constellation, the proof-only “hapawalu” or one-eighth of a dollar coin, along with proof examples of the half dollar and silver dollar offered elsewhere in this Platinum Night session. The one-eighth of a dollar coin is strictly a pattern issue, never struck for circulation, as the U.S. Mint decided before production began to replace the denomination with a standard dime denomination of the same size, conforming to U.S. measures.

The standard reference for the coinage of the Kingdom of Hawaii is *Hawaiian Money: Standard Catalog* by Donald Medcalf and Ronald Russell. The second edition, published in 1991, informs the reader thusly:

“Six silver proof sets without the eighth dollar were struck in September, 1883. A year later 20 sets with the eighth dollar (5 coin set) were struck in silver proof. 18 of the sets were struck in 4 denominations, the eighth, quarter, half and one dollar in pattern copper pieces, identical to the silver and struck from the same dies.”

Although PCGS has a five-piece Registry Set collection for the proof coinage of Hawaii, no current collectors are making the attempt. Famed collector John Jay Pittman owned an example of the proof-only one-eighth dollar Hawaiian coin, as well as proof examples of the dime, quarter dollar, and half dollar. The Pittman coin was graded Choice Proof by David Akers (Akers Numismatics, Part I, 10/1997), lot 828, where he estimated that “10 to 15 pieces” exist today. The Akers piece realized \$24,200.

This Select Cameo proof certified by PCGS marks only the fourth time we have offered examples of this pattern striking. A PR63 Cameo NGC example brought \$43,125 in our Central States Signature (Heritage, 4/2011), lot 5562. A PR66 PCGS example in our FUN Signature (Heritage, 1/2009), lot 4237, realized \$92,000. A PR63 PCGS example from a 2001 Heritage Exclusively Internet auction went unsold.

This piece is certified in a PCGS Secure holder and shows remarkable eye appeal and contrast, not merely an extremely rare coin but an extremely rare and gorgeous coin. The devices are coated with lavish mint frost on both sides, contrasting against deeply reflective fields. The obverse is mostly silver-white with accents of copper-gold near the rims, while the reverse displays deeper amber-gold and cobalt-blue patina against the silvery center.

These rare proof Hawaiian silver coins, and the present piece in particular, pose an extraordinary opportunity for lovers of Hawaiian coinage. Population: 1 in 63 Cameo, 0 finer (3/14). PCGS# 810985

1883 Hawaii Quarter, PR63 Cameo Ex: Forsythe Collection

5873 1883 Hawaii PR63 Cameo PCGS. CAC. Ex: Forsythe Collection. A total of 26 proof sets were struck in 1883 and 1884 containing the four 1883-dated silver Hawaiian denominations, the dime, quarter, half dollar, and silver dollar, of which only 20 contained the rare pattern-only eighth dollar issue. Most examples of all of the 1883-dated silver denominations are found in circulation-strike format; any proof is a great rarity. This Select Cameo proof quarter is even more so, one of only three Cameos of the issue certified at PCGS. The silver-gold surfaces in the centers of each side blend into lovely copper-russet and pale-blue tinges on each side, with much reflectivity and well-frosted devices. A great-looking example with a bold proof strike, as expected. Population: 1 in 63, 2 finer (3/14). PCGS# 810989

1883 Hawaii Half Dollar, PR63 Extremely Rare and Reflective

5874 1883 Hawaii Half Dollar PR63 PCGS Secure. Ex: Forsythe Collection. This Select proof PCGS-certified 1883 Hawaii half dollar is one of three remarkable proof rarities from the former island kingdom in the present Platinum Night session. Reliable references give the proof mintage of the silver dime, quarter, half dollar, and dollar at 26 pieces each in proof sets, along with 20 examples of the one-eighth dollar pattern, a coin that was replaced with the dime and never saw production. Proof examples of the one-eighth dollar, half dollar, and silver dollar are all offered as part of the current remarkable consignment. The present Select proof half dollar retains considerable reflectivity throughout each side, underneath light layers of pinkish-gold and pastel-blue patina. A few contact marks and light field hairlines determine the grade, but this is a coin of noteworthy rarity and good eye appeal. Population: 3 in 63, 1 finer (3/14). PCGS# 10993

1883 Hawaii Dollar, MS64+ Splendid Toning, Full Strike

5875 1883 Hawaii Dollar MS64+ PCGS. CAC. Ocean-blue tones with sunset-orange accents glow over cartwheel luster on this attractive, semiprooflike Hawaii dollar. A full strike on Kalakaua's portrait presides over the abrasion-free obverse, with the reverse devices boldly brought up and frosted.

The Hawaii dollar was part of the official coinage of Hawaii until the islands became a Territory of the United States in 1900 and the coinage was recalled for melting. U.S. coinage replaced the Hawaiian issues. Walter Breen indicated that of the 500,000 Hawaiian dollars struck, over 450,000 were melted, and survivors are rare in high grades such as this borderline Gem example. Population: 22 in 64 (2 in 64+), 16 finer (3/14). PCGS# 10995

1883 Hawaii Dollar, PR63 Cameo One Finer Cameo at PCGS

5876 1883 Hawaii Dollar PR63 Cameo PCGS Secure. CAC. The 1883 Kingdom of Hawaii coins feature a handsome portrait of a bearded King Kalakaua I, who was also known as David Kalakaua. He was sometimes called "The Merrie Monarch" and reigning from 1874 until his death in 1891. Among his most lasting contributions was the construction of Hawaii's Iolani Palace for the sum of \$300,000, an unheard-of expense at the time. The beautiful palace stands today in Honolulu, the only royal palace on American shores.

The great majority of the Kingdom of Hawaii coinage seen at Heritage or any other auction company is coins struck for circulation, usually the four 1883-dated silver denominations: dime, quarter, half dollar, and silver dollar. The quarter, in particular, is relatively available in high grades, PCGS alone having seen more than 1,800 submissions from MS60 through MS67+. Examples are plentiful even up to Gem condition, with the PCGS population thinning out from there. Although the dime, half dollar, and silver dollar in MS65 are seen far less frequently, even in that grade PCGS shows at least 10 submissions for each denomination.

The *proof* coins of Hawaii dated 1883, however, are great rarities. Only 26 examples of each denomination were reportedly struck (20 of the pattern-only one-eighth dollar). This PR63 Cameo PCGS example is one of two proof 1883 Hawaiian silver dollars that Heritage is privileged to offer in the current Platinum Night session.

The present PR63 Cameo PCGS-certified silver dollar is one of only 11 certified in all grades combined at PCGS. Cameo submissions are three, one each in PR62, PR63 (this piece), and PR64 (3/14). The surfaces on each side show attractive dusky orange-gold patina with the expected bold proof strike and only minor signs of contact, in the fields on each side and away from the focal points. A great-looking example of this largest Hawaiian proof denomination. PCGS# 415929

PATTERNS

**1836 Cap and Rays Gold Dollar Pattern
Judd-67, Gorgeous PR64**

5877 1836 Gold Dollar, Judd-67, Pollock-70, R.5, PR64 NGC. The obverse is modeled after the Cap and Rays design seen on contemporary Mexican coins. The reverse has a beautifully engraved palm frond encircling the inner denomination 1/D., outside the palm frond is UNITED STATES OF AMERICA. Struck in gold with a plain edge. Coin alignment with no die cracking, indicating this is an original strike. These intriguing pieces are one of the few gold patterns that are relatively affordable and occasionally available. This example is finished in bright yellow-gold with deeply mirrored fields behind lustrous devices, presenting light contrast despite the lack of a designation. A glass is required to see the trivial lines and flaws that prevent a higher grade. Census: 7 in 64, 5 finer (3/14). PCGS# 11260

1836 Cap and Rays Gold Dollar Pattern From the Original Striking Period Judd-67, PR66

5878 1836 Gold Dollar, Judd-67, Pollock-70, R.5, PR66 PCGS.

Christian Gobrecht both designed and engraved the dies for this gold dollar pattern. The influence of Mexican coinage is clearly seen on the obverse design showing a Liberty cap surrounded by rays of glory. The reverse features the denomination 1 D. within a coiled palm frond, with the date below and UNITED STATES OF AMERICA above. Struck in coin gold with a 10% copper alloy and a plain edge. Original 1836 patterns were struck prior to March 14 of that year, as established by Walter Breen based on the date Mint Director Patterson sent a gold pattern to Secretary of the Treasury Levi Woodbury.

Judd-67 is the first gold dollar pattern struck in anticipation of future coinage (which did not materialize until 13 years later). It is also one of the few patterns, actually struck in gold that can be obtained at a somewhat reasonable price.

Both originals and restrikes exist for Judd-67. Originals, such as this piece, have a coin turn and are alloyed with 10% copper. According to Akers, restrikes from January of 1844 are alloyed with the same percentage of silver and have a medallion turn. However, there are exceptions, with some restrikes showing a coin turn. A second restriking period during the 1860s is indicated by a gold example overstruck on an 1859 gold dollar. That piece is featured on the US-Patterns.com website. Gobrecht's design was also restruck in silver, copper, and either oroide or copper-nickel.

This magnificent example displays deeply reflective proof fields. Set against the mirrors is noticeable mint frost over the devices, which yields a moderate cameo contrast. The surfaces are extraordinarily clean; the only interruptions are three tiny planchet voids on the reverse. Even reddish-gold color covers each side. Only two other pieces have been so graded by PCGS, and none are certified finer (1/14). This is the most eye-appealing, original example that this cataloger has seen.

From The Riverboat Collection. PCGS# 11260

1863 Motto Seated Dollar Pattern Struck in Copper, Judd-346 Incredible PR66 ★ Red Cameo

5879 1863 Dollar, Judd-346, Pollock-418, R.7, PR66 ★ Red Cameo NGC. This is a so-called transitional issue. This pattern uses the dies of the regular Seated Liberty dollar of the year, but it bears the addition of the motto IN GOD WE TRUST on a swirling scroll on the reverse, of the type introduced on regular-issue coinage in 1866. Struck in copper with a reeded edge. As stated on the USPatterns.com website, "These and the other 'with motto' patterns of this date and also 1864 and possibly 1865 are actually restrikes made circa 1869 and into the early 1870s and were offered with restrikes of the other denominations in complete sets."

The silver and copper strikes are of about equal rarity "with about a dozen known" stated on the website. The metallic rarity in this issue is the aluminum variant, with only four estimated known, one of which is housed permanently in the ANS. However, of even greater rarity is the copper strike designated Red and Cameo, and here with the added Star for superior eye appeal. This is the only Red Cameo coin, and understandably there is no price history for this pattern with Red surfaces. The only PR66 Red and Brown Cameo sold in recent years is the Queller coin (also with Star designation, Heritage, 1/2009), lot 1613, which brought \$46,000.

The surfaces show rich cherry-red color and no mentionable variation in hue. The cameo contrast is profound with thick mint frost over the devices on each side against the deeply mirrored proof fields. By way of identification, there is a lilac-gray accent of color over Liberty's face and a thornlike projection in the planchet on the top left of the O in DOL. We note one curiosity about the designation of this coin. The NGC website notes no Cameo coins, but there is a PR66 ★ Ultra Cameo. Obviously this is a mechanical error, but is the error on the insert or on the website? We could easily see this coin being called an Ultra Cameo.

Ex: Chicago Signature (Heritage, 8/2011), lot 7734, which brought \$27,600. PCGS# 80508

Pattern 1864-L Cent, PR63 Red and Brown Judd-357 Struck in Copper Three or Four Known

5880 1864-L Judd-357, Pollock-Unlisted, R.8, PR63 Red and Brown NGC. Die 2. The regular dies for the 1864-L proof Indian cent were used to strike these extremely rare patterns, struck in copper with a reeded edge. Die varieties exist. This PR63 Red and Brown NGC-certified example shows the date shifted right, 1 in date beneath the forward bust tip (rather than aligned with it) of Liberty, and a prominent raised die line runs along Liberty's jawline under the ear. The USPatterns.com website notes that this is the variety featured in Walter Breen's *Proof Encyclopedia* for the bronze 1864-L proof cents. The later (1722-1989) edition describes the obverse thusly:

"Obverse die is distinctive among the 18 or more known to have been used for 1864 L cents. Date is about centered, peak of 1 nearly even with bust point (unusual), left base of 1 above space between denticles, r. base of 4 above center of denticle. Spine slants down to left, above 1.5mm in length, from curl below ear into neck. Doubling on much of legend. Rev.: Spine to left from a round leaf tip at very top of r. branch."

All of the above diagnostics are visible on this piece; specifically, the die doubling appears most prominently at UNITED STAT, although it occurs throughout the legend. Much mint red remains on the surfaces of this piece, which is held back from a higher grade by a V-shaped scrape in the left obverse field below the D in UNITED. USPatterns.com opines that there were proof novodels created circa 1869-71 for inclusion in sets. A nice, problem-free example, far more red than brown, and certified in an NGC old-style "no-line fatty" holder. Census: 1

1864-L Pattern Cent, Judd-357, PR63 Red Struck in Copper, Three or Four Known

5881 1864-L Judd-357, Pollock-Unlisted, R.8, PR63 Red NGC. Die 1. The regular dies for the 1864-L proof Indian cent were used to strike these extremely rare patterns, struck in copper with a reeded edge. Die varieties exist. This PR63 Red example shows the date shifted left, with the forward bust point aligned with the tip of the 1 in the date.

NGC has certified four of these copper 1864-L proof pattern cents, PCGS none (3/14). We leave the Low R.8 rarity ranking because we are unsure that there are four *separate* examples. There are certainly three. We are offering, remarkably, two different examples in the present Platinum Night session, the present PR63 Red NGC piece and a PR63 Red and Brown NGC coin. The PR65 Brown NGC piece that we offered in our FUN Signature (Heritage, 1/2014), lot 5637, brought a strong \$76,375.

The 1864-L cents struck in proof are great rarities in U.S. numismatics, avidly sought by the many collectors who specialize in Indian Head cents. The present Die 1 variety is apparently that used on the original proof strikes from 1864, and as such a coin of immense historical and numismatic importance. USPatterns.com opines that the Die 2 varieties (see the PR63 Red and Brown NGC offering herein) were novodels, created a few years later. We note further than the reverse die of the present piece lacks the noticeable die spine on the reverse from the topmost leaf that is visible on the Die 2 example.

This is a great-looking orange-red example that would grade higher were it not for a single dark spot on the feathers above the B in LIBERTY, as elsewhere there are only a few scattered, insignificant flyspecks, and the color is well within the Red context throughout. This piece is certified in an NGC old-style "no-line fatty" holder. Census: 1 in 63 Red, 1 finer (3/14).

1871 Three Dollar, PR64 Red and Brown Judd-1167, Struck in Copper

5882 1871 Three Dollar, Judd-1167, Pollock-1309, High R.7, PR64 Red and Brown PCGS. CAC. The Judd-1167 three dollar pattern was struck using the regular dies for the year 1871, but struck on a copper planchet with reeded edge. This pattern issue certainly was struck as trade bait or as delicacies for collectors, as there was no absolutely no reason to consider a copper version of the three dollar coin, especially midway through the series — and absolutely no chance that such a design would be adopted for circulation. www.USPatterns.com comments laconically of these and many other 1871 off-metal strikes, “These may have been deliberately struck for sale to collectors in sets.” Fewer than half a dozen are known. This piece shows lustrous orange-brown surfaces with a few light flecks and good luster in the protected areas. Population: 2 in 65 Red and Brown, 0 finer (3/14). PCGS# 71429

1872 'Indian Princess' Commercial Dollar Judd-1212, Vividly Toned PR66

5883 1872 Commercial Dollar, Judd-1212, Pollock-1352, Low R.6, PR66 PCGS. James B. Longacre's obverse Indian Princess design was previously used on the Standard Silver coins of 1870-71, an outstanding seated Liberty in bold, medallion relief. The Indian princess holds a Liberty pole and cap, wearing a feather headdress, stars and stripes behind, and a globe at her left hand with LIBERTY across. The reverse displays the Commercial dollar design, first executed in the previous year and weighing 420 grains, the predecessor to the adopted Trade dollar. Struck in silver with a reeded edge. This reflective piece shows deep cobalt-blue and aubergine shades, the latter on half of the reverse, a beautiful high-grade and splendidly preserved example. Population: 1 in 66, 1 finer (3/14). PCGS# 61483

1942 Experimental Alloy 1942 Cent Judd-2079, Struck in Aluminum, PR66

5884 1942 Lincoln Cent, Judd-2079, R.8 PR66 PCGS. Regular die trial issue but struck in aluminum with a plain edge. Struck on a planchet that is almost twice as thick as a regular cent, although this is not evident in the PCGS encasement.

The pattern cents from 1942 are divided into two groups, those of the regular issue design as this piece and those modeled after the Colombian two centavo. The regular design patterns are far rarer as a group but limited to only three compositions: aluminum, zinc-coated steel, and white metal. Those modeled after the two centavo are far more available as a group and seen in a wide variety of compositions, but some are equally as rare as the regular issue die trials.

The Judd book (10th edition) makes an interesting comment about these pieces: "Regular 1942 Lincoln cent dies are said to have been used to strike coins in pure zinc, copper and zinc, zinc-coated steel, aluminum, copperweld, antimony, white metal, and lead, among other materials." If this is accurate, then there are many other experimental alloy cents that remain to be discovered, as only three alloys are known today.

An interesting story is related in Andrew Pollock's pattern reference on page 390: "**2076. Aluminum. Plain Edge.** Rarity-8. Reportedly, an example was received in change by an ice dealer in the Annapolis, Maryland area, presumably in the 1940s." We cannot say for certain if this is that particular experimental striking, but we doubt it since the surfaces of this piece are so free from problems or contact marks. This is an extraordinary piece. Each side is bright, and there are no signs of oxidation. The fields have a pronounced mirrorlike appearance, and there are light flow lines evident on the reverse. The obverse is slightly convex, and the reverse slightly concave. This is essentially a perfect coin with no observable marks on either side.

PCGS had this coin tested several years ago and the results showed that it was aluminum. The weight of the piece is 1.563 gm, about half the normal 3.11 gm. When the coin was resubmitted to PCGS and analyzed, its composition came back: aluminum 98.0%, silicon 0.7%, iron 0.6%, silver 0.5%, magnesium 0.4%. In July of last year Roger Burdette hypothesized:

"The assay: Al 98; Si 0.7; Fe 0.6; Ag 0.5 and Mg 0.4 is very significant. Although most of the piece is aluminum, the other elements are not impurities. Someone was making a deliberate attempt to test a harder, more durable alloy than plain aluminum. Aluminum-silver alloys can be extremely hard [although they are also extremely difficult to produce and usually require an atmosphere free of oxygen] and the quantity of silver necessary is small. The US Mint experimented with them as far back as the early 1860s, and James Ross Snowden conducted other experiments in about 1885. This assay suggests we will eventually identify many other experimental alloys, currently unknown, based on aluminum."

Burdette went on to state that even though the assay totals 100.2%, implying there is a 0.2% rounding error, "the important thing is that silver should not be present [unless the Mint were purposely trying to produce this difficult alloy], even if the cheapest aluminum scrap were used for experiments. (Fe [iron] and Si [silicon] are common impurities.)"

This is one of the most fascinating experimental pieces to enter the market in several years. The pattern coinage of 1942-1943 is definitely an underresearched area of 20th century U.S. numismatics. This problem will be resolved, but not for several years, when Burdette completes his research on a book he is writing on the subject.

Ex: Long Beach Signature (Heritage, 5/2009), lot 1448, which realized \$126,500.

SESSION SIX

COMMEMORATIVE SILVER

- 5885 1893 Isabella Quarter MS65 NGC.** An exceptional Gem example of the United States' first commemorative quarter. Vibrant royal-blue and violet peripheries frame light golden centers. Fully struck in every respect with nice luster and beautifully preserved surfaces. NGC ID# 28HR, PCGS# 9220

1893 Isabella, MS65 Prooflike Concentrically Toned

- 5886 1893 Isabella Quarter MS65 Prooflike NGC.** Carefully preserved from their release at the 1893 World's Columbian Exposition, Isabella commemorative quarters are usually obtainable in higher Mint State grades, though Prooflike examples are truly scarce, and are not currently differentiated by PCGS. This example displays deeply mirrored fields with concentric rings of violet, blue, green-gold, and amber on the obverse, and blended blue and champagne-green over the reverse. The strike is razor-sharp, and the surfaces reveal only a few insignificant imperfections. A visually exceptional representative. NGC ID# 28HR, PCGS# 9220

1893 Isabella Quarter Lustrous, Boldly Struck Premium Gem

- 5887 1893 Isabella Quarter MS66 NGC.** This gleaming Premium Gem is fully struck and displays satiny, silver luster with amber-gold overtones. Championed by Susan B. Anthony and brought to market by the Board of Lady Managers of the World Columbian Exposition, the Isabella is the first (and only) commemorative quarter dollar. Mark-free surfaces of this example offer excellent eye appeal, perfect for an advanced collection of classic commemoratives. NGC ID# 28HR, PCGS# 9220
- 5888 1900 Lafayette Dollar MS63 PCGS. DuVall 1-B.** Struck to honor French nobleman, Marquis de Lafayette, for his selfless Revolutionary War exploits, this well-preserved, satiny dollar displays pale violet peripheral toning around light golden centers. The strike is sharp and the surfaces are void of any significant abrasions. An attractive example of this first United States silver dollar commemorative. NGC ID# 28N8, PCGS# 9222

1900 Lafayette Dollar, MS64 Frosty Cartwheel Luster

- 5889 1900 Lafayette Dollar MS64 PCGS. DuVall 2-C.** This is a common variety with the second S in STATES repunched. A Choice Mint State example, this commemorative was actually minted in December 1899; the date on the coin, 1900, more accurately refers to when the depicted monument of General Lafayette on horseback was erected in Paris, France. Both sides are frosty and lustrous, with brilliant silver surfaces beneath champagne toning and splashes of gold and pale lavender around the borders. NGC ID# 28N8, PCGS# 9222

1900 Lafayette Dollar, MS64 Boldly Struck

- 5890 1900 Lafayette Dollar MS64 PCGS. CAC. DuVall 2-C.** Struck to honor Frenchman, General Lafayette, for his aid in the American Revolution, this commemorative silver dollar displays a light golden hue over both sides, with boldly detailed design elements. Strong cartwheel luster and a lack of any significant surface abrasions give this CAC-approved near-Gem a pleasing level of eye appeal. NGC ID# 28N8, PCGS# 9222

1900 Lafayette Dollar, MS65
Lustrous and Attractively Toned

5891 1900 Lafayette Dollar MS65 PCGS. CAC. Duvall 2-C. The Lafayette dollar was not a sell-out success at the time of issue, and it would prove to be the last commemorative silver dollar minted for the United States until 1983. Of the estimated 36,000 pieces issued, many of them were significantly abraded or otherwise troubled before they ever left the mint, due to poor production quality and unintentional ill-treatment. This immensely lustrous Gem is better-preserved than most. Rich green-gold and emerald shadings embrace each side. Well struck with only a few light flaws on Washington's cheek that are consistent with the grade assigned. Housed in a green label holder. NGC ID# 28N8, PCGS# 9222

5892 1921 Alabama MS66 PCGS. CAC. Light wheat-gold toning graces this lustrous statehood centennial Premium Gem. A loupe reveals only infrequent and unobtrusive contact. The minor incompleteness of strike on the eagle's leg is usual for the "Plain" Alabama variety. *From The Northern Lights Collection.* NGC ID# 28HT, PCGS# 9224

5893 1921 Alabama 2x2 MS65 NGC. A lustrous, sharply struck example of this Alabama centennial half dollar, one of the scarcer issues among early commemoratives. Just a blush of light golden patina enhances the well-preserved surfaces. A high-end Gem representative. NGC ID# 28HS, PCGS# 9225

5894 1921 Alabama 2x2 MS65 NGC. Iridescent lavender-gray, ocean-blue, and autumn-gold toning graces this lustrous and nicely struck Gem. The 2x2 symbol signifies Alabama as the 22nd state, and follows the convention of a similar symbol on a variety of the Missouri centennial commemorative. NGC ID# 28HS, PCGS# 9225

5895 1921 Alabama 2x2 MS66 PCGS. Only a hint of golden patina visits this lustrous and intricately struck key variety commemorative. The fields are devoid of contact. The 2x2 variant has a mintage of just 6,006 pieces. NGC ID# 28HS, PCGS# 9225

5896 1937 Antietam MS67 NGC. A beautifully preserved Superb Gem. Gleaming luster shines through blended hues of sky-blue, lavender, greenish-gold, and pale amber. Fully struck with nearly undisturbed surfaces and significant eye appeal. NGC ID# 28HV, PCGS# 9229

5897 1937 Antietam MS67+ NGC. CAC. Pastel lime and rose-red visit this coruscating and well-preserved Civil War commemorative. An outstanding example that would be a highlight of any advanced cabinet. NGC has graded only 20 numerically finer examples (2/14).
Ex: Stamford Coinfest Signature (Heritage, 10/2010), lot 4362. NGC ID# 28HV, PCGS# 9229

1937 Antietam Half Dollar, MS68
Vibrant Luster, Attractive Toning

5898 1937 Antietam MS68 PCGS. This Civil War commemorative was struck in commemoration of the bloodiest day in American history. Also known as the Battle of Sharpsburg to those in the South, there were 22,720 casualties, including 3,650 soldiers killed. This is a nearly perfectly preserved example of this important commemorative half. The conjoined busts of McClellan and Grant are almost flawless. The mint luster is softly frosted and each side has gentle pale golden and lilac accents of color. Population: 17 in 68 (3 in 68+), 0 finer (3/14). NGC ID# 28HV, PCGS# 9229

1935 Arkansas Half Dollar, MS67
Condition Rarity

5899 1935 Arkansas MS67 PCGS. Struck to mark the 100th anniversary of Arkansas' statehood, Arkansas Centennial half dollars are well-known as condition rarities, as most examples are plagued by heavy abrasions on the conjoined busts on the obverse. This is a remarkably well-preserved example with frosty, virtually perfect surfaces. The centers are nearly brilliant, while the rims are outlined in deep russet and green-gold patina. PCGS has certified just 18 examples in this lofty grade, with none numerically finer (3/14). NGC ID# 28HW, PCGS# 9233

5900 1935-D Arkansas MS67 PCGS. Faint pastel hues accent heavily frosted, virtually pristine surfaces on this Superb Gem Arkansas Centennial. Boldly struck, with exceptional visual appeal, this example will please the most discerning specialist. Population: 49 in 67 (6 in 67+), 1 finer (3/14). NGC ID# 28HX, PCGS# 9234

5901 1935-D Arkansas MS67 PCGS. From a small mintage of only 5,505 coins, this Superb Gem Arkansas Centennial half dollar showcases beautifully preserved surfaces and well-struck design elements. Blended hues of violet, amber, green-gold, and powder-blue blanket both sides, with satiny underlying luster. PCGS has graded just one numerically finer example (3/14). NGC ID# 28HX, PCGS# 9234

**1936 Arkansas Centennial Half Dollar, MS67
Splendidly Preserved and Visually Appealing**

- 5902 1936 Arkansas MS67 PCGS.** Rarely seen this nice, this Superb Gem example of the Arkansas commemorative half dollar was the only one of the five issues, released in P-D-S sets, to be produced and dated in the actual year of the Arkansas Centennial. This is a lovely piece with smooth, satiny surfaces that are splendidly preserved. A slight band of orange-gold, red, and olive-gold peripheral toning enhances the appearance of the obverse. Population: 13 in 67, 0 finer (2/14). NGC ID# 28HZ, PCGS# 9237

**1936 Arkansas Half, MS67
Excellent Preservation**

- 5903 1936 Arkansas MS67 PCGS.** Deep plum and emerald iridescence appears at the obverse rims of this Superb Gem Arkansas half, with pinkish, copper, and silver-gray notes in the center. The reverse is silver-white with copper accents. Neither side shows any singular contact, in keeping with the grade. Population: 13 in 67, 0 finer (3/14). NGC ID# 28HZ, PCGS# 9237
- 5904 1936-D Arkansas MS67 PCGS.** Attractive ruby-red, golden-brown, and aquamarine toning fills the peripheries of this coruscating and crisply struck Superb Gem. Pristine aside from a solitary graze on the neck of Liberty. NGC ID# 28J2, PCGS# 9238
- 5905 1936-D Arkansas MS67 PCGS.** Cream-gray and peach patina adorns the obverse. The reverse exhibits pumpkin-gold and gunmetal-gray toning, along with a band of lime-green near the rim. A well struck and minimally marked Superb Gem. NGC ID# 28J2, PCGS# 9238
- 5906 1936-D Arkansas MS67 PCGS.** Beautiful peripheral bands of golden-brown and jade-green cede to cream-gray centers. Lustrous and boldly struck with only incidental contact. Population: 31 in 67 (1 in 67+), 1 finer (3/14). NGC ID# 28J2, PCGS# 9238
- 5907 1937-S Arkansas MS66+ PCGS. CAC.** Delicate tan toning overlies satiny slate surfaces. A crisply struck and minimally abraded high grade representative of the Arkansas state centennial type. Population: 66 in 66 (2 in 66+), 4 finer (3/14). NGC ID# 28J6, PCGS# 9243

**1938-D Arkansas Half, MS67
Tied for Numeric Finest**

- 5908 1938-D Arkansas MS67 PCGS.** This Superb Gem is tied for finest of this small-distribution issue of 3,155 pieces. Both of the profiles on the obverse are essentially free of contact, and the surfaces are well-preserved throughout with just the barest hint of amber-copper color near the rims. Population: 23 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 28J8, PCGS# 9246

- 5909 1939 Arkansas MS66 NGC.** Powder-blue and chestnut-gold endow this lustrous and essentially pristine silver commemorative. By the final year of the Arkansas type, mintages had dwindled to 2,100 PDS sets, plus a few additional coins destined for assay. Census: 28 in 66 (1 in 66+), 1 finer (3/14). NGC ID# 28JA, PCGS# 9249

**1939-S Arkansas Half, MS67
Low-Mintage Commemorative
Tied for Numeric Finest**

- 5910 1939-S Arkansas MS67 PCGS.** The frosty silver surfaces on this Superb Gem 1939-S are undisturbed by mentionable marks and show just the slightest hint of grayish-ochre color under a loupe. At 2,105 pieces each, the 1939-PDS Arkansas issues are among the lowest mintage of the silver commemorative series. Population: 10 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 28JC, PCGS# 9251
- 5911 1936-S Bay Bridge MS67 ★ NGC.** Struck as a souvenir for the opening of the San Francisco Bay Bridge, this outstanding Superb Gem displays bold coppery-red peripheral toning, fading to light golden centers. Awarded the Star designation by NGC, this satiny coin comes with a high degree of eye appeal. NGC ID# 28JD, PCGS# 9254
- 5912 1936-S Bay Bridge MS67 PCGS. CAC.** Often confused with the Golden Gate Bridge, the Bay Bridge allows ready passage between San Francisco and Oakland. The present fully struck and lustrous Superb Gem displays substantial peach-gold, fire-red, forest-green, electric-blue, and violet toning. NGC ID# 28JD, PCGS# 9254

**1935-D Boone Half, MS67
Excellent Strike and Preservation**

5913 1935-D Boone MS67 PCGS. The Boone halves are quite popular and this coin should be quite popular with its next buyer, a Superb Gem boasting light gold and iridescent patina with satiny luster and meticulous preservation front and back. The strike and preservation are far better than normally seen. Population: 13 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 28JG, PCGS# 9259

5914 1937-D Boone MS67 NGC. CAC. An exceptional Superb Gem, this piece displays ivory mint frost with peripheral iridescent toning that frames the sharply struck design motifs. Census: 28 in 67 (1 in 67 ★), 1 finer (2/14).
Ex: *Dallas Signature* (Heritage, 10/2009), lot 1148. NGC ID# 28JS, PCGS# 9271

5915 1937 Boone PDS Set MS66 to MS67 PCGS. CAC. The set includes: 1937 MS66 CAC, medium olive-golden toning over satiny surfaces; 1937-D MS67 CAC, rich green-gold and amber hues over vibrant luster; 1937-S MS66 CAC, iridescent green-gold patina overall. The sharply struck coins are housed in individual holders with consecutive serial numbers. (Total: 3 coins) PCGS# 9273

5916 1936 Bridgeport MS67 PCGS. Phineas T. Barnum was born in 1810 in Bethel, Connecticut, and died in 1891, 45 years before this Bridgeport commemorative was coined, but as a showman and master of hoaxes he would probably approve anyway. This example boasts silver-blue dominating both sides with glints of amber at the rims. No visible distractions appear on the satiny surfaces, even under a loupe. Population: 72 in 67 (4 in 67+), 0 finer (2/14).
Ex: *November Signature* (Heritage, 11/2003), lot 9043; *Central States Signature* (Heritage, 4/2010), lot 1465. NGC ID# 28JX, PCGS# 9279

5917 1925-S California MS66 PCGS. CAC. Struck to mark the 75th anniversary of California's statehood, this Superb Gem commemorative half dollar showcases vivid pastel toning over both sides, with significant mint luster shining through. A razor-sharp strike further adds to the eye appeal of this popular issue. NGC ID# 28JY, PCGS# 9281

5918 1925-S California MS66 PCGS. CAC. A boldly detailed representative of this California Diamond Jubilee half dollar, commemorating the 75th anniversary of California's statehood. Softly blended rainbow hues encompass the obverse and surround a light golden center on the reverse, with satiny underlying mint luster. A lack of any noticeable surface abrasions adds to the visual appeal of this Premium Gem. NGC ID# 28JY, PCGS# 9281

5919 1925-S California MS67 NGC. Swirls of lime-green, violet-blue, and gold patina grace the strongly lustrous surfaces of this California commemorative. The strike is solid, and the visual appeal is strong. This was one of the first issues to recruit local talent for this time, in this case the noted sculptor Jo Mora. NGC has graded only 14 numerically finer pieces (2/14).
Ex: *Long Beach Signature* (Heritage, 5/2007), lot 1784; *Long Beach Signature* (Heritage, 9/2007), lot 2086. NGC ID# 28JY, PCGS# 9281

5920 1925-S California MS67 NGC. Magnificent ocean-blue, rose-red, and sun-gold toning invigorates the margins of this highly lustrous and well struck Superb Gem. An outstanding representative of the California Diamond Jubilee type. NGC ID# 28JY, PCGS# 9281

5921 1936-D Cincinnati MS67 NGC. Delicate sun-gold and powder-blue shadings drape this coruscating and undisturbed Superb Gem. The Cincinnati ranks among the more elusive types of the classic commemorative series, as only 5,000 PDS sets were issued. Census: 33 in 67 (5 in 67 ★), 3 finer (2/14).
Ex: *Dallas Signature* (Heritage, 10/2009), lot 1150. NGC ID# 28K2, PCGS# 9284

5922 1936-D Cincinnati MS67 PCGS. This Superb Gem example displays better-than-usual definition on Stephen Foster's eye and hair detail, and the legends and mottoes seem sharper than average, as well. Shimmering satin luster shows off the clean fields and devices to full advantage, while lovely rainbows of iridescent coloration adorn the peripheries on each side. Population: 42 in 67 (4 in 67+), 1 finer (2/14). NGC ID# 28K2, PCGS# 9284

5923 1936 Cleveland MS67 PCGS. A pleasing Superb Gem. Creamy-smooth, light golden surfaces are softly patinated with deeper splashes of golden-orange and magenta toning about the margins. Population: 68 in 67 (8 in 67+), 1 finer (2/14).
Ex: *New York Signature* (Heritage, 11/2003), lot 9073. NGC ID# 28K4, PCGS# 9288

**1892 Columbian Half, PR64
Elusive Proof Issue**

5924 1892 Columbian PR64 NGC. Approximately 100 proof Columbian half dollars were struck in 1892, and the issue is rare and desirable today. This sharply detailed Choice specimen exhibits pinpoint definition on all design elements and the brightly reflective surfaces show hints of lavender and champagne-gold toning. Census: 20 in 64, 10 finer (3/14). PCGS# 9295

5925 1893 Columbian MS66+ PCGS. CAC. Rare any finer, this high-end Premium Gem is patinated in attractive shades of lavender-gray, pale blue, and gold. The design elements are sharply detailed and surfaces display vibrant mint luster. PCGS has graded only 16 numerically finer examples, and only a few at this MS66 level with the Plus designation (3/14). NGC ID# 26H6, PCGS# 9297

5926 1935 Connecticut MS67 PCGS. The modernistic eagle design on the Connecticut half, designed by Henry Kreis, is not to every collector's taste, but this Superb Gem displays both it and the Charter Oak on the other side to full advantage. The lustrous, remarkably frosted surfaces show just a touch of gold in the exergue of the tercentenary date side, with silvery-gray, beautifully preserved surfaces elsewhere. Population: 63 in 67 (6 in 67+), 1 finer (3/14). NGC ID# 28K8, PCGS# 9299

5927 1935 Connecticut MS67 ★ NGC. CAC. Bold, swirling luster filters through the rich patina that covers each side. Silver-gray to gold-gray elements are most prominent in the centers, while the margins develop a measure of rich orange. A simply beautiful Superb Gem. NGC has graded just one numerically finer example (2/14). NGC ID# 28K8, PCGS# 9299

5928 1936 Elgin MS67 NGC. CAC. Violet, russet, and charcoal shadings grace the margins, while the frosty centers offer an even silver-gray appearance. Well-struck for the issue and practically immaculate surfaces. NGC has graded eight numerically finer representatives (2/14).
Ex: *FUN Signature* (Heritage, 1/2008), lot 2321. NGC ID# 28KA, PCGS# 9303

5929 1936 Elgin MS67 PCGS. CAC. Thick mint frost covers both sides of this CAC-approved Superb Gem. A thin ribbon of orange-gold peripheral toning surrounds mainly brilliant centers, with nearly undisturbed underlying surfaces. Well-struck and visually attractive. PCGS has certified just five numerically finer examples (3/14). NGC ID# 28KA, PCGS# 9303

5930 1936 Gettysburg MS66 PCGS. A lustrous, Premium Gem example of the Gettysburg Anniversary half dollar. Just a blush of light golden toning warms the well-preserved surfaces, complementing sharply struck design elements. NGC ID# 28KB, PCGS# 9305

5931 1936 Gettysburg MS66 NGC. The predominantly stone-gray surfaces are overlaid with freckles of walnut-brown. An essentially immaculate Premium Gem that boasts sweeping luster and a crisp strike.
From The Northern Lights Collection. NGC ID# 28KB, PCGS# 9305

5932 1936 Gettysburg MS66 NGC. Struck to commemorate the 75th anniversary of the Battle of Gettysburg, this Premium Gem Gettysburg half dollar displays exceptional surface preservation and softly frosted luster. Faint amber hues near the peripheries surround light golden centers, delivering the visual appeal of an even finer grade. NGC ID# 28KB, PCGS# 9305

5933 1922 Grant With Star MS62 NGC. A pleasing lower-Mint State example of the scarcer of the two Grant Memorial half dollar varieties. A blush of light golden toning warms both sides, while the satiny surfaces are largely free of noticeable abrasions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 28KC, PCGS# 9307

5934 1922 Grant With Star MS62 PCGS. Light rose-gold toning accents satiny luster on this With Star Grant Memorial half dollar. The surfaces exhibit only minor imperfections, with pleasing overall eye appeal and a sharp strike. Housed in a green label holder. NGC ID# 28KC, PCGS# 9307

5935 1922 Grant With Star MS64 PCGS. A satiny, lightly toned, and boldly struck near-Gem that displays only minimal marks. The fields appear immaculate. The obverse is mildly prooflike and the fields are striated, as made and as usually seen for this low mintage issue. Encased in an old green label holder.
Ex: Houston Signature (Heritage, 11/2007), lot 61344, which realized \$2,760. NGC ID# 28KC, PCGS# 9307

**1922 Grant Memorial With Star Half Dollar, MS65
Low-Mintage Early Silver Commemorative Issue**

5936 1922 Grant With Star MS65 PCGS. The Grant Memorial With Star issue is considerably scarcer than its Without Star counterpart of the same date and type, which had a much higher mintage. Creamy-smooth surfaces with exceptional cartwheel luster and great color makes this a highly desirable piece for either a date set or as a type example.
Ex: Long Beach Signature (Heritage, 6/2004), lot 3860. NGC ID# 28KC, PCGS# 9307

5937 1928 Hawaiian — Improperly Cleaned — NGC Details. AU. Smooth, silvery-white surfaces show the signs of light cleaning, but retain pleasing visual appeal. Slight rub is detectable on the high points of the design, but the overall sharpness is nearly full.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

5938 1928 Hawaiian — Improperly Cleaned — NGC Details. UNC. Despite evidence of past cleaning, this Uncirculated Hawaiian Sesquicentennial displays tinges of light olive toning on both sides, complementing the silver-gray surfaces. A well-detailed example of this popular commemorative.

5939 1928 Hawaiian MS61 NGC. A sharply struck Mint State example of this popular commemorative. Light golden toning blankets both sides, with small accents of blue, violet, and green-gold intermixed. The surfaces reveal minimal abrasions for the grade and deliver a pleasing, satiny appearance. NGC ID# 28KE, PCGS# 9309

5940 1928 Hawaiian MS63 NGC. Rose-gold peripheries surround light golden centers on this satiny Hawaiian Sesquicentennial half dollar. The details are sharply impressed and the surfaces reveal no major imperfections. A pleasing example of this popular and scarce commemorative. NGC ID# 28KE, PCGS# 9309

5941 1928 Hawaiian MS63 PCGS. Medium caramel-gold and pearl-gray toning embrace satiny and smooth surfaces. A well struck Select example of this coveted sesquicentennial of discovery issue. Key to the 50-piece silver commemorative type set.
Ex: Dallas Signature (Heritage, 11/2005), lot 5312, which realized \$2,817.50. NGC ID# 28KE, PCGS# 9309

**1928 Hawaiian Half Dollar, MS64
Highly Lustrous**

5942 1928 Hawaiian MS64 PCGS. The issuance of the low-mintage (less than 10,000 coins) Hawaiian Sesquicentennial half dollars was met with strong demand, and the commemorative remains highly sought-after today. This near-Gem representative displays soft, blended hues of light champagne-green and ice-blue toning over both sides, with strong, satiny luster shining through. The surfaces reveal remarkably few abrasions for the grade, with strong visual appeal. A sharply struck example of this scarce commemorative. NGC ID# 28KE, PCGS# 9309

**1928 Hawaiian Half Dollar, MS65
Scarce Any Finer**

5943 1928 Hawaiian MS65 PCGS. Struck to mark the 150th anniversary of Captain James Cook's arrival on the Hawaiian Islands, Hawaiian Sesquicentennial half dollars were produced to a limit of 10,000 pieces (plus eight examples for assay purposes), the lowest silver commemorative mintage to that point. Immediately popular, high-end examples remain scarce and are widely sought by collectors. This Gem representative displays a light golden tint over satiny mint luster. Beautifully preserved surfaces and sharply struck design elements offer excellent visual appeal. Housed in an old green label holder. NGC ID# 28KE, PCGS# 9309

1928 Hawaiian Sesquicentennial Half Dollar
Elusive, Lightly Toned Gem

- 5944 1928 Hawaiian MS65 NGC.** A successful strategy for marketing the mintage of 10,008 Hawaiian half dollars (including 50 sandblast proofs) resulted in a complete sellout of the issue. Most of the coins were purchased by individuals in Hawaii and relatively few were preserved by collectors and dealers either locally or on the mainland. As a result, the issue is considered the scarcest U.S. commemorative in Gem condition or finer. This sharply struck example shimmers with translucent, light-gold toning over lustrous silver surfaces. A few minimal abrasions do not detract from the smooth and glowing surfaces. Glimpses of lime-green and peach coloration accent the margins. NGC ID# 28KE, PCGS# 9309

1928 Hawaiian Sesquicentennial, MS65
Pleasing and Impressive

- 5945 1928 Hawaiian MS65 PCGS.** The Hawaiian Sesquicentennial half dollar is often referred to as a key issue in the early silver commemorative series. It is a low-mintage type that is relatively scarce at the MS65 grade level. This coin is well-struck and beautifully preserved, with undisturbed surfaces that display satiny mint luster and lovely intermingled shades of pastel coloration. A pleasing and impressive specimen. NGC ID# 28KE, PCGS# 9309

1928 Hawaiian Half, MS66
Low-Distribution Commemorative Key

- 5946 1928 Hawaiian MS65 PCGS.** Famous British explorer Captain James Cook (1728-79), was also a navigator, cartographer, and Royal Navy captain. A fight with Hawaiians during his third voyage to the Pacific resulted in his death. Commemorating Hawaii's sesquicentennial, these pieces include a likeness of Cook on the obverse, and are the scarcest of the classic commemoratives. This Gem specimen exhibits the yellowish tint that original, undipped examples are known for. Strong luster and only minuscule marks, none worthy of individual mention, are additional attributes of this piece. NGC ID# 28KE, PCGS# 9309

1928 Hawaiian Half, MS66
Two-Sided Toning

- 5947 1928 Hawaiian MS66 PCGS.** This Premium Gem shows no singular contact marks on either side. The reverse is pale gold to pinkish-gray with scattered accents of ochre. The obverse shows iridescent hues scattered about and contending with ochre, charcoal-gray, and crimson-orange areas, luster emanating from beneath. Seldom seen finer. Population: 90 in 66 (9 in 66+), 2 finer (3/14). NGC ID# 28KE, PCGS# 9309

- 5948 1935 Hudson MS65 NGC.** Depicting both Henry Hudson's flagship, the *Half Moon*, and the seal of the city of Hudson, this Hudson, New York, Sesquicentennial half dollar exhibits a faint golden tint over soft, satiny luster. A well-preserved Gem example, from a mintage of only 10,008 coins. NGC ID# 28KE, PCGS# 9312

- 5949 1935 Hudson MS66 PCGS.** An attractive Premium Gem example of this fanciful design, frosty silver-pink in the centers with thin arcs of iridescence near the rims on each side. Well-struck and relatively mark-free save for a few ticks on the sails. PCGS has seen 11 numerically finer (3/14). NGC ID# 28KE, PCGS# 9312

- 5950 1935 Hudson MS66 PCGS.** Yellow-gold peripheral toning imbued with traces of mint-green frames grayish-gold centers. Lustrous surfaces exhibit well-struck devices and reveal just a few minor reverse marks.
Ex: Summer FUN Signature (Heritage, 7/2009), lot 1116. NGC ID# 28KE, PCGS# 9312

1935 Hudson Half Dollar, MS66+
Rare in Finer Grades

- 5951 1935 Hudson MS66+ PCGS.** With a total distribution of 10,008 pieces, the 1935 Hudson commemorative half dollar is conditionally rare above the MS66 level. This high-end Premium Gem exhibits sharply detailed design elements and vibrant mint luster. The well-preserved surfaces show a few hints of greenish-gold toning. The 2014 Professional Edition *Guide Book* notes: "Carefully graded MS65 coins are scarce, and anything higher is very rare." PCGS has graded 11 numerically finer examples (3/14). NGC ID# 28KE, PCGS# 9312

- 5952 1946 Iowa MS68 NGC.** This 1946 Iowa half dollar is a virtually perfect specimen, with sharply detailed devices and bright satiny mint luster. The surfaces are accented by traces of pale gold and darker amber toning. Census: 59 in 68 (20 in 68 ★, 1 in 68+★), 2 finer (2/14). NGC ID# 28KJ, PCGS# 9316

**1936 Long Island Half Dollar, MS67
A Memorable High-Grade Example**

- 5953 1936 Long Island MS67 NGC.** This impressive example displays vibrant satiny mint luster and a lavish array of green, red, amber and lavender hues that are blended across each side. Fully struck and flawlessly preserved, this is a memorable representative of the Long Island half dollar that will please even the most demanding specialist in the early silver commemorative series. Census: 78 in 67 (2 in 67+, 20 in 67 ★, 3 in 67+★), 4 finer (3/14). NGC ID# 28KL, PCGS# 9322

**1936 Long Island Half, MS67
Meticulous Preservation**

- 5954 1936 Long Island MS67 NGC.** Plum, gold, emerald, burgundy, and copper tones alternate with untuned silver areas on this frosty and meticulously preserved 1936 Long Island half. Note how well-preserved and nearly mark-free are the obverse portraits and the sails of the ship on the reverse. Census: 78 in 67 (2 in 67+, 20 in 67 ★, 3 in 67+★), 4 finer (3/14). NGC ID# 28KL, PCGS# 9322
- 5955 1920 Maine MS66+ PCGS. CAC.** Splendid sea-green, wheat-gold, and lilac toning graces this lustrous, well preserved, and boldly struck Premium Gem. Anthony de Francisci served as engraver, the year prior to his more famous efforts on the Peace dollar. NGC ID# 28KN, PCGS# 9326
- 5956 1920 Maine MS66+ PCGS. CAC.** This great-looking half dollar will certainly help collectors “remember the Maine,” an MS66+ PCGS-certified piece with pale pastel iridescent toning that deepens at the rim to intense amber-gold. Contact marks are trivial, while the eye appeal of this piece is anything but. Population: 18 in 66+, 34 finer (3/14). NGC ID# 28KN, PCGS# 9326

**1921 Missouri Centennial, MS66
Attractive, Conditionally Scarce Example**

- 5957 1921 Missouri MS66 PCGS.** An attractive, conditionally scarce representative of this early silver commemorative type. Although a relatively high number are certified as Gems, MS66 coins like this one are few in number at both of the major grading companies, and none have been rated at MS67. A boldly struck and well-preserved specimen showing slight blushes of champagne color across the centers, and speckled charcoal-russet and olive patina near the borders. Population: 37 in 66, 0 finer (3/14). NGC ID# 28KS, PCGS# 9330

**1921 Missouri Half, MS66
Lightly Toned, Boldly Struck**

- 5958 1921 Missouri MS66 PCGS. Ex: Gutttag Family.** This Premium Gem Missouri commemorative half is tied for the finest certified at PCGS — which has never certified a numerically higher example of this issue — with about three dozen other submissions (3/14). Pale lilac patina is accented in the centers of each side by amber-gold and iridescent colors. Contact marks are inconsequential on this boldly struck piece. NGC ID# 28KS, PCGS# 9330
- 5959 1921 Missouri 2x4 MS63+ NGC.** Struck to mark the 100th anniversary of Missouri’s statehood, this sharply detailed commemorative displays rich, satiny luster beneath warm golden toning. Only a few minor abrasions preclude a higher grade. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 28KR, PCGS# 9331
- 5960 1921 Missouri 2x4 MS65 NGC.** The scarcer of the two Missouri half dollar varieties. This boldly struck Gem exhibits a beautiful multicolor obverse periphery, blending to a pale silver-gray center, while the reverse displays warm champagne margins around a light golden center. Well-preserved and satiny with a high degree of eye appeal. NGC ID# 28KR, PCGS# 9331
- 5961 1921 Missouri 2x4 MS65 PCGS.** Pastel aquamarine, chestnut-brown, and stone-gray toning embraces this lustrous and carefully preserved Gem. The strike is good though incomplete on the shoulder strap, as nearly always seen. A low mintage and semikey variety. NGC ID# 28KR, PCGS# 9331
- 5962 1921 Missouri 2x4 MS65 PCGS.** Delicate apple-green and tan-gold toning endows this coruscating Gem. A loupe is required to locate minor marks. The strike is bold aside from the upper portion of the shoulder strap. NGC ID# 28KR, PCGS# 9331
- 5963 1923-S Monroe MS65 PCGS. CAC.** Multicolor peripheral toning surrounds pale rose-gold centers on this Gem Monroe Doctrine Centennial. Satiny luster exhibits pleasing surfaces, while the devices display well-defined details. NGC ID# 28KT, PCGS# 9333

**1923-S Monroe Commemorative Half, MS66+
Above-Average Design Detail**

5964 1923-S Monroe MS66+ NGC. This commemorative celebrated the 100th anniversary of the Monroe Doctrine. Many of the nearly 275,000 pieces minted were placed in circulation. The lustrous surfaces of this high-end Premium Gem display gunmetal-blue and lavender toning which is slightly deeper on the reverse. While this issue has the dubious distinction of being one of the most poorly struck commemoratives, the current offering exhibits considerably better-than-average design detail. Both sides are nicely preserved. Census: 57 in 66 (3 in 66+, 1 in 66 ★, 1 in 66+★), 8 finer (3/14). NGC ID# 28KT, PCGS# 9333

5965 1938 New Rochelle MS67 NGC. A Superb Gem example. Heavy violet, gold, and turquoise toning encircles both sides with light golden centers, brought on by long-term storage in the original cardboard distribution holder. Satiny with a sharp strike. Ex: *FUN Signature (Heritage, 1/2001)*, lot 9141; *FUN Signature (Heritage, 1/2002)*, lot 8815; *FUN Signature (Heritage, 1/2003)*, lot 9732. NGC ID# 28KU, PCGS# 9335

5966 1938 New Rochelle MS67 PCGS. CAC. A sharply detailed Superb Gem, this brilliant half dollar displays vibrant mint luster and subtle hints of gold and lavender toning. No visible distractions are noted. The New Rochelle ranks among the lower mintage silver types. NGC ID# 28KU, PCGS# 9335

5967 1936 Norfolk MS67+ NGC. CAC. Rich olive-golden toning from the original distribution cardboard accents the satiny surfaces of this nearly perfectly preserved Norfolk half dollar. The boldly struck design elements have an almost high relief appearance when rotated under a light. A highly attractive representative. NGC ID# 28KV, PCGS# 9337

5968 1936 Norfolk MS68 NGC. Attractive, reddish-yellow and violet accents grace the right-hand borders, while the rest of the surfaces display just a hint of golden toning. Flashy luster complements the razor-sharp design elements. NGC has graded only one numerically finer example (2/14). Ex: *Los Angeles Signature (Heritage, 8/2009)*, lot 2147. NGC ID# 28KV, PCGS# 9337

5969 1936 Norfolk MS68 NGC. CAC. The Norfolk issue commemorates the 300th anniversary of the original Norfolk land grant, and the 200th anniversary of the establishment of the borough. This specimen yields tremendous eye appeal, with its lustrous surfaces displaying light gray-blue centers framed by reddish-gold, crimson, lime-green and yellow-gold toning along portions of the borders. The design elements are sharply struck throughout, and the surfaces are immaculately preserved. Ex: *Dallas Signature (Heritage, 12/2005)*, lot 2914. NGC ID# 28KV, PCGS# 9337

5970 1933-D Oregon MS67+ PCGS. CAC. One of the low-mintage dates in the Oregon Trail half dollar production run (only 5,008 coined). This Plus-graded Superb Gem example displays frosty amber and green-gold peripheral toning, lightening toward the centers. The surfaces are nearly perfect and exhibit fully struck design elements. PCGS and NGC combined have graded just three numerically finer examples (3/14). NGC ID# 28KZ, PCGS# 9343

5971 1934-D Oregon MS67 NGC. The long Oregon Trail commemorative series has an odd mintage pattern: The 1928, 1933-D, 1934-D, and 1937-D were each one-offs, but the series concludes with two complete PDS trios, from 1938 and 1939. The 1934-D distribution was 7,006 pieces. This Superb Gem NGC coin is among the few dozen finest survivors at both services, showing impeccable preservation on satiny silver-white surfaces with light accents of cinnamon near the rims. Census: 24 in 67 (2 in 67+), 0 finer (3/14). NGC ID# 28L2, PCGS# 9344

5972 1936 Oregon MS66 PCGS. CAC. Hints of almond-gold toning grace satiny surfaces. A fully struck and virtually mark-free Premium Gem. Ex: *Schaumburg Central States Signature (Heritage, 4/2012)*, lot 11852. NGC ID# 28L3, PCGS# 9345

5973 1936 Oregon MS67 PCGS. CAC. A boldly struck representative of this Oregon Trail Memorial half dollar, with iridescent lavender-gold hues over both sides. Virtually perfect surfaces complement satiny luster on this CAC-approved Superb Gem. Only four examples have graded numerically finer at PCGS (3/14). NGC ID# 28L3, PCGS# 9345

5974 1936-S Oregon MS66 PCGS. Frosty mint luster and a bold strike give this Premium Gem a high degree of eye appeal. Just a blush of light golden toning warms both sides, while the surfaces exhibit excellent preservation overall. NGC ID# 28L4, PCGS# 9346

5975 1936-S Oregon MS67 NGC. The 1936-S is one of the lower-mintage issues in the Oregon Trail half dollar production run, with only 5,000 coins produced. This sharply struck example exhibits satiny silver-white luster with a faint golden tint around the rims. A high-end representative, with virtually perfect surfaces. NGC has certified only 13 numerically finer pieces (3/14). NGC ID# 28L4, PCGS# 9346

5976 1937-D Oregon MS67 PCGS. Struck in commemoration of the Oregon Trail and the pioneers who traveled it, this Superb Gem Oregon Trail Memorial half dollar exhibits soft, satiny luster and nearly pristine surfaces. Deep golden peripheral hues fade to silver-gold centers on this sharply struck D-mint example. NGC ID# 28L5, PCGS# 9347

5977 1937-D Oregon MS67 PCGS. CAC. Faint gold and plum-mauve toning visits this satiny and pristine Superb Gem. The strike is good although the back of the wagon is incompletely impressed. Ex: *Orlando FUN Signature (Heritage, 1/2004)*, lot 9551; *Schaumburg Central States (Heritage, 4/2012)*, lot 11861. NGC ID# 28L5, PCGS# 9347

5978 1938 Oregon MS66 PCGS. CAC. Exceptionally well-preserved surfaces and strong, satiny luster are among this Premium Gem's pleasing attributes. Fully struck, with deep olive-gold peripheral toning that fades to light golden centers. An attractive example of this popular commemorative. Ex: *Long Beach Signature (Heritage, 10/2001)*, lot 9170. NGC ID# 28L6, PCGS# 9348

5979 1938 Oregon MS67 NGC. Only 6,000 Oregon Trail half dollars were struck at Philadelphia in 1838 (plus six for assay purposes), and few survive in Superb Gem condition. This beautifully preserved example exhibits sharply struck design elements and thick, satiny luster. Mainly brilliant, with a thin ribbon of light golden toning around the peripheries. NGC has certified only four numerically finer representatives (3/14). NGC ID# 28L6, PCGS# 9348

5980 1938 Oregon MS67+ NGC. CAC. From a mintage of only 6,000 coins (plus six pieces for assay purposes), this Plus-graded Superb Gem delivers exceptional visual appeal with green-gold peripheral toning fading to light golden centers. The satiny surfaces are virtually perfect, and the design elements are razor-sharp. NGC has seen only four numerically finer examples (3/14). NGC ID# 28L6, PCGS# 9348

**1938-S Oregon Trail Half, MS68
None Numerically Finer by PCGS or NGC**

5981 1938-S Oregon MS68 NGC. The on-again, off-again San Francisco Mint contribution to the Oregon Trail half dollar saga was “on” again in 1938, the penultimate year of the long-running series. As a result, this example of the popular design found its way into an NGC holder with the lofty MS68 grade — numerically unsurpassed by any examples of the issue seen by PCGS or NGC (2/14). This Superb Gem shows a bold strike on the high points of the Conestoga wagon and the Indian, with strong rims and abrasion-free, satiny surfaces. Lemon-gold toning alternates with lilac, rose, and orange accents over lustrous fields and devices for incredible eye appeal. NGC ID# 28L8, PCGS# 9350

5982 1938 Oregon PDS Set PCGS. CAC. The three coins are separately housed in holders with consecutive certification IDs. The coins are satiny, pristine, and similarly toned with light golden-gray centers and rich russet-brown borders. The set includes: **1938 MS66+ PCGS, CAC**, well struck except on the back of the ox; **1938-D MS67 PCGS, CAC**, minor incompleteness of strike on the back of the wagon; and a **1938-S MS67 PCGS, CAC**, fully struck. (Total: 3 coins) PCGS# 9351

**1915-S Panama-Pacific Half, MS66
Sharp and Appealing**

5983 1915-S Panama-Pacific MS66 NGC. The net distribution of 27,134 pieces yields few Premium Gem examples as nice as this sharp and appealing half dollar. Strong breast feathers on the eagle and delightful, concentric pastel toning on both sides of the coin complement clean, smooth fields and the lightly textured figure of Columbia. Satin luster glistens beneath robins-egg blue, lilac, and gold pearlescent surfaces. NGC ID# 26H7, PCGS# 9357

**1915-S Pan-Pac Half Dollar, MS66
Attractively Toned**

5984 1915-S Panama-Pacific MS66 NGC. The only nongold commemorative from the Panama-Pacific Exposition, held in San Francisco in 1915 to celebrate the opening of the Panama Canal. This Superb Gem example displays original surfaces with satiny luster and well-struck design elements. Light golden toning warms both sides, with tinges of blue, teal, and amber in the margins. A visually appealing, high-end representative. NGC ID# 26H7, PCGS# 9357

1920 Pilgrim Half Dollar, Sharply Struck MS67

5985 1920 Pilgrim MS67 PCGS. The 1920 Pilgrim half dollar is readily available through Premium Gem condition. MS67s are very scarce and the issue is extremely rare any finer. Vibrant luster issues from the untoned surfaces of this Superb Gem and the strike is strong throughout. An impeccably preserved example. Population: 41 in 67 (5 in 67+), 1 finer (3/14). NGC ID# 28LC, PCGS# 9359

5986 1921 Pilgrim MS66+ PCGS. CAC. A nearly immaculate example of the second-year Pilgrim issue. Aquamarine, powder-blue, and butter-gold toning confirms the originality. The strike is intricate at the centers although peripheral letters exhibit minor incompleteness. NGC ID# 28LD, PCGS# 9360

5987 1936 Rhode Island MS67 NGC. Struck to commemorate the founding of Providence, Rhode Island, this well-preserved, satiny Superb Gem displays just a blush of golden toning, with a halo of amber around the obverse periphery. Only one example has graded numerically finer at NGC and PCGS combined (2/14). NGC ID# 28LE, PCGS# 9363

5988 1936 Robinson MS67 PCGS. CAC. An attractive, Superb Gem representative of the second Arkansas centennial half dollar depicting Senator Joseph T. Robinson. Nearly pristine surfaces deliver just a tint of ice-blue toning with warm amber at the peripheries. Population: 67 in 67 (1 in 67+), 2 finer (2/14). NGC ID# 28LJ, PCGS# 9369

**1935-S San Diego Half, MS67+
Robert Aitken's 'Minerva' Revisit**

- 5989 1935-S San Diego MS67+ PCGS. CAC.** The seated figure of Minerva on the obverse is by Robert I. Aitken, a revisitation of a theme he explored in his 1915-S Panama-Pacific fifty dollar gold coins. The obverse is silver with gold tinges and iridescence near the lower rims. The reverse is gold in the center with pale pastel iridescent tones of varying colors. A nice and lustrous example. Population: 15 in 67+, 3 finer (3/14). NGC ID# 28LK, PCGS# 9371

**1936-D San Diego Half, MS67+
Among the Finest at PCGS**

- 5990 1936-D San Diego MS67+ PCGS. CAC.** Gorgeous toning and a combination of satin and frosty luster provide both sides of this high-end Superb Gem specimen with strong and immediate eye appeal. The colors include fuchsia, rich yellow-gold, violet, sea-green, lemon-lime, sky blue, cherry-red, and orange. These commemoratives are also known as the California-Pacific Exposition half dollars. Population: 11 in 67+, 0 finer (3/14). NGC ID# 28LL, PCGS# 9372

- 5991 1926 Sesquicentennial MS65 PCGS. Ex:** Troy Wiseman Collection. A lightly toned silver-gold example of this elusive issue in Gem condition, with a much bolder strike than normally encountered. Most of the legends on the Liberty Bell are readable, and the bell lines at the bottom are full. There is a curious die crack that runs horizontally along the bottom of the bell. PCGS has graded just eight pieces finer (2/14).
Ex: Long Beach Signature (Heritage, 9/2006), lot 2833; Central States Signature (Heritage, 4/2009), lot 3404. NGC ID# 28LM, PCGS# 9374

- 5992 1926 Sesquicentennial MS65 PCGS.** Struck to mark the 150th anniversary of the signing of the Declaration of Independence, this Gem Sesquicentennial half dollar exhibits softly frosted mint luster with light, blended hues of green-gold and ice-blue over both sides. A sharply struck example, housed in an old green label holder. PCGS seen only eight numerically finer representatives (3/14). NGC ID# 28LM, PCGS# 9374

- 5993 1935 Spanish Trail MS64 NGC.** A brilliant Choice example that has a pristine reverse and only minor obverse grazes. Sharply struck and satiny. Tied with the Hawaiian and Hudson as the lowest mintage silver commemorative type. NGC ID# 28LN, PCGS# 9376

- 5994 1935 Spanish Trail MS65 NGC.** A blush of light golden toning warms both sides of this Gem representative, with hints of pale amber on the obverse. The satiny surfaces are beautifully preserved and exhibit sharply detailed design elements. NGC ID# 28LN, PCGS# 9376

- 5995 1935 Spanish Trail MS66 NGC.** This Premium Gem Spanish Trail half dollar displays a light golden tint on both sides, with faint lavender and amber blended on the obverse. Well-preserved surfaces boast a sharp strike on this satiny commemorative. NGC ID# 28LN, PCGS# 9376

- 5996 1935 Spanish Trail MS66 NGC.** Sharply struck with pleasing mint luster showing through light, silver-gray surfaces. A couple tiny ticks at 4 o'clock in the obverse field are all that keep this Premium Gem from a higher grade. NGC ID# 28LN, PCGS# 9376

**1935 Texas Half Dollar, MS68
Outstanding Registry Set Candidate**

- 5997 1935 Texas MS68 NGC.** The 1935 Texas half dollar claims a small distribution figure of 9,996 pieces. This magnificent MS68 specimen offers virtually perfect surfaces, with vibrant mint luster and attractive shades of lavender and greenish-gold toning. The design elements are sharply rendered and eye appeal is terrific. Census: 14 in 68, 0 finer (3/14). NGC ID# 28LR, PCGS# 9382

1935 Texas Half, Frosty MS68

- 5998 1935 Texas MS68 NGC.** Frosty silver luster in the centers complements a rim band of iridescent patina on each side of this piece. The preservation is remarkable; the only mentionable contact is a sole reeding mark on the left upper arm of the angel on the reverse. A top-notch example, tied for finest certified. Census: 14 in 68, 0 finer (3/14). NGC ID# 28LR, PCGS# 9382

- 5999 1937 Texas MS67+ PCGS. CAC.** A boldly struck representative of this highly popular Texas Independence Centennial, with blended ice-blue and light golden toning overall. The unaided eye fails to detect even minor surface faults, while the overall visual appeal is excellent. Only three coins have graded numerically finer at PCGS (3/14). NGC ID# 28LX, PCGS# 9390

- 6000 1938-S Texas MS67+ NGC. CAC.** An arc of lemon-gold toning dominates the upper obverse margin, but most of this lustrous Superb Gem is almond-gold and pearl-gray. Boldly struck and unabraded. A superior example of this low mintage issue. Census: 86 in 67 (3 in 67+, 1 in 67 ★), 13 finer (3/14). NGC ID# 28M4, PCGS# 9396

- 6001 1938 Texas PDS Set PCGS. CAC.** The set includes: 1938 MS66 PCGS, CAC, well struck, pastel silver-gray and straw-gold toning; 1938-D MS67+ PCGS, CAC, sharply struck, similar golden-gray patina, immaculate; and a 1938-S MS66 PCGS, CAC, boldly struck, glimpses of rich orange-gold, rose-red, and aquamarine visit the margins. Accompanied by a trio of old collector envelopes. (Total: 3 coins) PCGS# 9397

6002 1925 Vancouver MS66 NGC. This Fort Vancouver half dollar's bright, shimmering mint luster still retains much of its original brilliance with deep golden-rose and royal-blue toning scattered over much of each side. A Premium Gem example of this scarcer commemorative half.
Ex: *FUN Signature (Heritage, 1/2004)*, lot 9685. NGC ID# 28M5, PCGS# 9399

6003 1925 Vancouver MS66 PCGS. CAC. Struck at the San Francisco mint, but with the mintmark omitted, Fort Vancouver Centennial half dollars were produced in limited quantities (less than 15,000 coins). This Premium Gem example displays pale golden and lavender-green toning over both sides, with satiny underlying mint luster, while sharply struck design elements further complement the nearly perfect surfaces. NGC ID# 28M5, PCGS# 9399

**1925 Fort Vancouver Half, MS67
Lustrous, Wonderful Patina**

6004 1925 Vancouver MS67 NGC. The design of this half dollar invited trouble when released to the public, with the high points vulnerable to abrasions and wear. No such problems with this Superb Gem, however, with a full strike and not a mark to be seen on the lustrous surfaces. A wonderful aqua and amber-gold patina envelops both sides of this appealing Vancouver half. Just two pieces are graded numerically higher — one by PCGS, the other by NGC (3/14). NGC ID# 28M5, PCGS# 9399

**1927 Vermont Half Dollar, MS67
Well-Struck and Well-Preserved**

6005 1927 Vermont MS67 PCGS. CAC. Delicate silver-gray and pastel golden toning embraces both sides, with remarkably smooth underlying surfaces. Although Ira Allen's portrait has high relief, it is well-struck, as is catamount on the reverse. A solitary milling mark adjacent to Ira Allen's eye might prove useful for future pedigree purposes. Population: 30 in 67 (2 in 67+), 1 finer (3/14).
Ex: *FUN Signature (Heritage, 1/2007)*, lot 7857. NGC ID# 28M6, PCGS# 9401

6006 1946-D Booker T. Washington MS67 PCGS. CAC. A shining Superb Gem with outstanding, borderline outlandish toning. Crazy-quilt patterns of reddish-orange, gold, forest-green, and magenta-violet appear on each side, as do localized hints of additional colors. Tied for the finest certified by PCGS (2/14), and as such a Registry collector essential.
Ex: *Long Beach Signature Sale (Heritage, 2/2010)*, lot 852. NGC ID# 28M8, PCGS# 9405

6007 1946-D Booker T. Washington MS67 PCGS. CAC. Magnificent forest-green and cherry-red toning alternates across this lustrous and exemplary Superb Gem. Surprisingly rare in the present grade despite a robust mintage. NGC ID# 28M8, PCGS# 9405

6008 1947-S Booker T. Washington MS66 Deep Prooflike NGC. As of (3/14), the present lot is the only 1947-S Booker T. Washington half dollar certified as Deep Prooflike, and is one of only two NGC-certified Deep Prooflike examples of the type (the other is a 1951-S). Brilliant and well struck with mirrored fields. The cheek displays planchet striae, as made, and one tick is noted on the Hall of Fame. PCGS# 89410

**1948 Booker T. Washington Half, MS67
Tied for Finest Graded**

6009 1948 Booker T. Washington MS67 PCGS. This Superb Gem Booker T. Washington half shows frosty surfaces that are silver with a light tinge of gold. The surfaces are free of any mentionable marks, making this one of the few of this issue to achieve the ultimate (to date) MS67 grade. Population: 6 in 67, 0 finer (3/14). NGC ID# 28MD, PCGS# 9412

6010 1949-D Booker T. Washington MS67 NGC. Delicate ice-blue and straw-gold shades deny full brilliance. Potent luster sweeps immaculate surfaces. The strike is precise, although the lower cheek retains planchet striae, usual for the type. A scant 6,004 pieces were struck. NGC ID# 28MH, PCGS# 9417

6011 1949-D Booker T. Washington MS67 NGC. This stone-white example of the Booker T. Washington Memorial half dollar is sharply struck and impressively preserved. Gleaming satiny luster enhances the eye appeal of this conditionally rare Superb Gem. Census: 23 in 67 (1 in 67 ★), 0 finer (3/14). NGC ID# 28MH, PCGS# 9417

**1950-D Booker T. Washington Half, MS67
Pale Pastel Toning on Each Side**

6012 1950-D Booker T. Washington MS67 PCGS. CAC. A pale wash of pastel saffron and jade covers each side of this stunning Superb Gem Booker T. half, one of the few in this top grade. Tiny marks that appear only under a loupe are seen on Washington's portrait, none singular enough to downgrade this impeccable coin. Population: 13 in 67, 0 finer (3/14). NGC ID# 28ML, PCGS# 9421

6013 1950-S Booker T. Washington MS67 PCGS. A nearly perfect Superb Gem. Rich pastel toning adorns both sides, with amber-rose accents near the borders. The strike is sharp and the visual appeal is exceptional. None have graded numerically finer at PCGS or NGC (2/14). NGC ID# 28MM, PCGS# 9422

6014 1950-S Booker T. Washington MS67+ PCGS. A fully struck Superb Gem example of this relatively available Booker T. Washington issue, with a plentiful mintage of 512,091 pieces. The highly lustrous surfaces are impeccably preserved, and show lovely deep accents of blue-green, gold, red, and purple-lavender toning on the left side of the obverse and around the reverse peripheries. Population: 43 in 67 (3 in 67+), 0 finer (3/14). NGC ID# 28MM, PCGS# 9422

6015 1950-S Booker T. Washington MS67 PCGS. CAC. Olive-golden peripheral toning encircles brilliant centers on this satiny Booker T. Washington Memorial half dollar. The strike is boldly impressed, while the surfaces are virtually free of imperfections. None have graded numerically finer at PCGS or NGC (3/14). NGC ID# 28MM, PCGS# 9422

**1951-S Washington-Carver Half, MS67
Rim-Toned, Top-Notch Example**

6016 1951-S Washington-Carver MS67 PCGS. CAC. The net distribution of this issue was a hair more than 10,000 pieces, but nonetheless this piece is one of only four in this top numeric MS67 grade at PCGS. Pale pastel rainbow iridescence appears on the right margins of each side, with pale silver-gold centers and top-notch preservation throughout. Population: 3 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 28MU, PCGS# 9432

**1952 Washington-Carver Half, MS67
Mottled Patina**

6017 1952 Washington-Carver MS67 PCGS. The Washington-Carver type was a successor to the Booker T. Washington halves, many of which were later melted to make the Washington-Carver pieces. The 1952 saw the largest net distribution of the series by far, at about 1.1 million coins. This Superb Gem shows softly lustrous surfaces with mottled patina in attractive shades of pinkish-gray, jade, and ice-blue. Both sides are notably free of mentionable contact. Population: 15 in 67 (2 in 67+), 1 finer (3/14). NGC ID# 28MV, PCGS# 9434

6018 1953 Washington-Carver MS66+ PCGS. The obverse includes intermingled shades of gold with pink, lilac, and blue. The reverse reveals toning accents of orange, gold, yellow, pink, and red in varying intensities. A couple small marks are present on Carver's portrait. Population: 85 in 66 (4 in 66+), 5 finer (3/14). NGC ID# 28MY, PCGS# 9438

6019 1953-S Washington-Carver MS67 NGC. This beautiful commemorative half dollar displays an array of light to medium intensity, multicolor toning over highly lustrous surfaces. Sharply struck throughout with nicely preserved surfaces. Census: 15 in 67 (3 in 67 ★, 1 in 67+★), 0 finer (2/14).
Ex: Long Beach Signature (Heritage, 2/2009), lot 2166. NGC ID# 28N2, PCGS# 9440

**1954-S Washington-Carver Half, MS67
Tied for Numerically Finest Graded**

6020 1954-S Washington-Carver MS67 NGC. A tale of two sides. The reverse shows a pinkish-gold centers with untuned silver areas and pale blue rim patina. The obverse appears pale jade-blue, but a loupe reveals mottled pale rose, gold, and aqua in addition. Both sides are lustrous, frosty, and the only singular mark straddles the Minnesota-Iowa border on the reverse. Census: 6 in 67 (2 in 67 ★), 0 finer (3/14). NGC ID# 28N5, PCGS# 9444

**1936 Wisconsin Half, MS68
Pale Toning, Among the Finest**

6021 1936 Wisconsin MS68 NGC. Olive, orange, and mustard-gold peripheral tints give way to silver-gray centers on this smooth, gleaming Wisconsin half. Slight rounding on the leaves close to the badger, as usually seen, are indicative of the difficult strike required by the design, but the miner's hand is strong and this is an impressively preserved coin overall. Tied for numerically finest in the combined certified population by PCGS and NGC (2/14). NGC ID# 28N6, PCGS# 9447

**1936 Wisconsin Half, MS68
Exceptional Visual Appeal**

6022 1936 Wisconsin MS68 PCGS. Not surprisingly at this grade level, this coin displays exceptional visual appeal. Although the obverse is the side with the badger, these coins are dated on the reverse and are encapsulated displaying that side. This MS68 specimen exhibits pale pearl hues overall, with areas of iridescent blue-green and lavender present along with splashes of golden brown. Population: 31 in 68 (4 in 68+), 0 finer (2/14). NGC ID# 28N6, PCGS# 9447

COMMEMORATIVE GOLD

6023 1903 Louisiana Purchase/Jefferson MS66 NGC. The Jefferson variant of two commemorative gold dollar types struck for the Louisiana Purchase Exposition, held in St. Louis in 1904, this boldly struck representative displays vibrant original mint luster and virtually perfect surface preservation. A tiny alloy spot is noted at 6 o'clock on the reverse, but hardly detracts from the visual appeal of this piece. NGC ID# 26HA, PCGS# 7443

6024 1903 Louisiana Purchase/Jefferson MS66 PCGS. CAC. Aquamarine borders encompass pumpkin-gold centers. Lustrous and exceptionally smooth. The devices are well struck, although portions of the reverse dentils are incompletely brought up. Housed in a green label holder. NGC ID# 26HA, PCGS# 7443

6025 1903 Louisiana Purchase/McKinley MS67 NGC. The McKinley variant of the Louisiana Purchase commemorative gold dollar, this highly lustrous Superb Gem displays vibrant yellow-gold luster and sharp design elements. Only five examples have graded numerically finer at NGC (3/14). NGC ID# 26HB, PCGS# 7444

6026 1904 Lewis and Clark MS62 NGC. Designed by Charles Barber, this Lewis and Clark Exposition gold dollar exhibits few surface abrasions for the grade, with bright green-gold luster and faint orange-gold overtones. Some minor planchet irregularity is seen near the borders, but only adds character to this early United States gold commemorative. NGC ID# 26HC, PCGS# 7447

1904 Lewis and Clark Gold Dollar, MS66 Lustrous, Technically Superior Example

6027 1904 Lewis and Clark MS66 PCGS. Strike quality and eye appeal are splendid for this lustrous, Premium Gem Lewis and Clark dollar. Surprisingly little roughness exists along the margins as normally seen on the issue. Honey-gold fields and devices display mint frost and radiantly lustrous surfaces. Just 10,025 pieces were actually distributed from a production of 25,000 pieces, with the unsold coins melted. NGC ID# 26HC, PCGS# 7447

1904 Lewis and Clark Gold Dollar, MS66 Beautiful, Impressively Preserved Example

6028 1904 Lewis and Clark MS66 PCGS. This commemorative issue is not absolutely scarce, despite its small production of 10,025 pieces, but it is conditionally scarce at the Premium Gem level, and rare any finer. This beautiful coin exhibits luminous green-gold and peach surfaces. The strike definition across each side is exceptionally sharp, and the surfaces are pristine. NGC ID# 26HC, PCGS# 7447

1904 Lewis and Clark Exposition Gold Dollar Richly Toned Premium Gem

6029 1904 Lewis and Clark MS66 NGC. CAC. Lilac and peach-gold highlights visit the rich, yellow-gold surfaces of this vibrantly appealing Premium Gem dollar. Aside from a microscopic mark on William Clark's jawline, the fields and devices are pristine. Smoothly lustrous surfaces show none of the handling marks that sometimes plague this commemorative issue. Scarce in Gem condition and rare any finer, it will be difficult to exceed the attractive qualities of this smoothly radiant, MS66 coin. NGC ID# 26HC, PCGS# 7447

6030 1905 Lewis and Clark MS62 NGC. Struck as a souvenir of the Lewis and Clark Centennial Exposition held in Portland, Oregon, in 1905, this commemorative gold dollar displays well-struck devices and rich green-gold luster overall. The surfaces are free of any detracting abrasions, though some minor planchet irregularity is noted near the borders. NGC ID# 26HD, PCGS# 7448

1915-S Panama-Pacific Gold Dollar, Lustrous MS67 A Highly Popular Commemorative Issue

6031 1915-S Panama-Pacific Gold Dollar MS67 PCGS. The 1915-S Panama-Pacific gold dollar is available through Premium Gem. Superb Gems are more challenging. None are finer than the present coin. Radiant luster exudes from both sides of this Superb Gem each of which exhibits sharply struck design details. An impeccably preserved example of this highly popular commemorative. Population: 60 in 67, 0 finer (3/14). NGC ID# 26HE, PCGS# 7449

**1915-S Panama-Pacific Quarter Eagle, MS64
Upper-End for the Grade**

- 6032 1915-S Panama-Pacific Quarter Eagle MS64 NGC.** Lovely honey-gold toning is evenly distributed across both sides of this well-preserved example. Boldly struck and free of distractions. Struck in conjunction with the Panama-Pacific Exposition in San Francisco, with an attractive design by Charles Barber and George Morgan. NGC ID# 26HK, PCGS# 7450

**1915-S Pan-Pac Quarter Eagle, MS66
Excellent Eye Appeal**

- 6033 1915-S Panama-Pacific Quarter Eagle MS66 NGC. CAC.** The vibrantly lustrous, yellow-gold surfaces of this Premium Gem show excellent eye appeal amid the typical swirling die polishing lines that usually appear on the issue. There are few mentionable signs of contact even under a loupe, and a small patch of hazy gray in the right reverse field does not distract from the visual impact of this scarce commemorative quarter eagle.

Ex: *Orlando FUN Signature (Heritage, 7/2012)*, lot 4580. NGC ID# 26HK, PCGS# 7450

- 6034 1916 McKinley MS65 NGC.** Sharp design definition and rich golden luster provide this Gem McKinley Memorial gold dollar with exceptional visual appeal. The surfaces are nearly undisturbed, giving this piece the overall appearance of a higher grade. NGC ID# 26HF, PCGS# 7454

- 6035 1917 McKinley MS65 PCGS. CAC.** An orange-gold Gem with pristine fields and only a few minor grazes on the portrait. The strike is good although slight blending is noted on the statue and peripheral letters. Certified in a gold label holder. NGC ID# 26HG, PCGS# 7455

- 6036 1917 McKinley MS66 PCGS.** This satiny McKinley Memorial gold dollar displays a sharp strike and nearly pristine surfaces. Pale rose-gold swirls complement mainly yellow-gold luster on this Premium Gem. Scarcely encountered finer. NGC ID# 26HG, PCGS# 7455

- 6037 1917 McKinley MS66 PCGS. CAC.** Medium yellow-gold luster adorns both sides of this satiny Premium Gem. The details are essentially well-struck, though just a touch of softness is noted in the center of the reverse. The surfaces are largely free of even minor abrasions. A high-end McKinley Memorial dollar. NGC ID# 26HG, PCGS# 7455

1917 McKinley Gold Dollar, Lustrous MS67

- 6038 1917 McKinley MS67 PCGS.** The McKinley dollars are popular as a necessary part of a commemorative gold collection. Fewer 1917-dated coins were distributed than 1916 pieces, and are more difficult to locate. Lustrous yellow-gold surfaces exhibit well-struck design features and are nicely preserved. Population: 65 in 67, 0 finer (3/14). NGC ID# 26HG, PCGS# 7455

- 6039 1922 Grant No Star MS65 NGC.** The small incused star was removed from the right obverse field partway through 1922, creating this second type for collectors to seek. Rich green-gold luster accents bold design definition on both sides of this well-preserved Grant Memorial dollar. A small, faint alloy spot is noted at the top of Grant's head, but is hardly detracting to the unaided eye. NGC ID# 26HJ, PCGS# 7458

**1922 Grant No Star Gold Dollar, MS67
Exceptional Eye Appeal**

- 6040 1922 Grant No Star MS67 PCGS.** Rich yellow-gold color and pleasing luster are among the attributes this Superb Gem specimen possesses. The 1922 Grant No Star gold dollar issue consisted of a net distribution of only 5,000 pieces. PCGS has not awarded a higher numeric grade to a single example (2/14). NGC ID# 26HJ, PCGS# 7458

- 6041 1922 Grant With Star MS66 NGC.** This is the first of two types for the Grant Memorial gold dollar, featuring a small incused star in the right obverse field. Frosty green-gold luster graces virtually pristine surfaces on this high-end Premium Gem, while a strong strike only adds to the immense visual appeal. NGC ID# 26HH, PCGS# 7459

- 6042 1922 Grant With Star MS66 PCGS.** Exhibiting the artistry of Laura Gardin Fraser, this Premium Gem Grant Memorial delivers exceptional visual appeal with rich, lemon-orange luster and bold design elements. The surface preservation is outstanding, only adding to the appeal of this piece. NGC ID# 26HH, PCGS# 7459

**1922 Grant Gold Dollar, MS66+
Gorgeous Example of the Popular With Star Variant**

- 6043** 1922 Grant With Star MS66+ PCGS. Potent luster and honey-gold surfaces combine to provide this high-end Premium Gem with strong visual appeal. Adding to the appeal, the strike is sharp. The same designs were used for both the half dollar and gold dollar Grant pieces, the only time that was the case during the classic commemorative era. NGC ID# 26HH, PCGS# 7459

1922 Grant With Star Gold Dollar, Toned MS66

- 6044** 1922 Grant With Star MS66 PCGS. CAC. Grant gold dollars are readily available through Superb Gem; higher-grade pieces are virtually non-extant. The obverse of the present MS66 offering is yellow-gold with hints of apricot, while the reverse displays deeper shades of wheat-gold and lavender. The design elements are well-struck and both sides are well-preserved. NGC ID# 26HH, PCGS# 7459

**1922 Grant With Star Gold Dollar, MS67+
Superlative Visual Appeal**

- 6045** 1922 Grant With Star MS67+ PCGS. CAC. Potent luster and lemon-gold color provide this high-end Superb Gem specimen with extraordinary visual appeal. The sharply struck surfaces shimmer on this splendid piece and are virtually free of any signs of contact. A few tiny alloy spots are present. Population: 5 in 67+, 1 finer (3/14). NGC ID# 26HH, PCGS# 7459

- 6046** 1926 Sesquicentennial MS65+ NGC. The 150th anniversary of the signing of the Declaration of Independence was marked in part by the issuance of two special commemoratives, a half dollar and a quarter eagle. This Gem representative of the latter displays frosty, pale green-gold luster and excellent overall preservation. A well-detailed piece, despite the shallow relief of the designs. NGC ID# 26HL, PCGS# 7466

**1926 Sesquicentennial, MS65
Rich, Frosty Luster**

- 6047** 1926 Sesquicentennial MS65 PCGS. CAC. With designs symbolic of Liberty and Independence, this special quarter eagle was struck to commemorate the 150th anniversary of the signing of the Declaration of Independence. Frosty green-gold luster complements sharply struck devices on both sides, giving this CAC-approved Gem exceptional visual appeal. Beautifully preserved and housed in an old green label holder. NGC ID# 26HL, PCGS# 7466

PATTERNS

**1850 Three Cent Silver Pattern, PR65
Struck in Silver, Judd-125, Lustrous Gem**

- 6048** 1850 Three Cent Silver, Judd-125 Original, Pollock-147, R.4, PR65 NGC. A Liberty cap dominates the obverse, surrounded by rays. LIBERTY is near the cap base; the date 1850 appears below. On the reverse, UNITED STATES OF AMERICA frames a circular palm branch that encloses the Roman numeral III. Struck in silver with a plain edge. This Gem proof offers great eye appeal, the surfaces showing generous luster underneath a layer of dusky golden-gray patina. Census: 7 in 65, 1 finer (3/14). PCGS# 11536

1855 Cent, PR64 Red and Brown
Hooked-Neck Flying Eagle, Judd-167

- 6049** 1855 Flying Eagle Cent, Judd-167 Original, Pollock-193, R.5, PR64 Red and Brown NGC. 99.1 gn. A large cent-sized Flying Eagle pattern featuring a hooked-neck eagle, slanting 5s on the obverse, and ONE CENT in the center of the reverse surrounded by a thick laurel wreath similar to that of a Coronet cent. Struck in 100% pure copper with a plain edge. This clashed and fully struck Choice pattern has steel-blue fields but mint red clings to design elements. A lens reveals minor peripheral carbon and a couple of handling marks above the eagle's head.
Ex: Los Angeles Signature (Heritage, 8/2009), lot 2249, which realized \$3,737.50. PCGS# 11710

1855 Flying Eagle Cent, PR55
Judd-168 Original

- 6050** 1855 Flying Eagle Cent, Judd-168 Original, Pollock-193, R.4, PR55 PCGS. Similar to the 1854 Judd-165b cent pattern from the previous year, which also features a hooked-neck eagle and stars on the obverse. The reverse has four leaves on the wreath below the E in CENT, unlike the closely designed Judd-172 and Judd-173. Struck in bronze with a plain edge. Showing light rub over the highpoints, the surfaces have lovely mahogany brown color. Somewhat irregularly struck
From The Dale Hopkins Collection. PCGS# 11720

1855 Flying Eagle Cent, PR63 Brown
Judd-168 Original

- 6051** 1855 Flying Eagle Cent, Judd-168 Original, Pollock-193, R.4, PR63 Brown PCGS. A Flying Eagle cent pattern in a large format, featuring a hooked-neck eagle, slanting 5s on the obverse, and ONE CENT in the center of the reverse surrounded by a thick laurel wreath similar its counterpart on the large cent. Struck with a plain edge in an alloy of 97% copper, 2% tin, and 1% zinc, per the PCGS insert. A nicely struck mahogany-brown and forest-green specimen that displays incidental minute contact. An early die state, since the sometimes seen clash marks are absent.
From The Dale Hopkins Collection. PCGS# 11720

1855 Flying Eagle Cent, XF40
Judd-171a, German-Silver Alloy

- 6052** 1855 Flying Eagle Cent, Judd-171a, Pollock-196, Low R.7, XF40 NGC. 7.5 gm/ An eagle flying left dominates the obverse. 13 stars surround, and the date is below. On the reverse, the denomination ONE CENT is centered within a laurel wreath, UNITED STATES OF AMERICA is at the border. Struck with a plain edge in a German-silver alloy of 63% copper, 19% nickel, and 17% zinc. Actual circulation wear is much less than the XF40 grade implies, but the strike is uncommonly soft, especially on the eagle. Marks are absent, though we note a retained lamination streak through the C in AMERICA. PCGS# 11737

1856 Judd-177 Half Cent, PR63
Regular Dies in Copper-Nickel

- 6053** 1856 Half Cent, Judd-177, Pollock-205, R.5, PR63 PCGS. CAC. Regular dies for the Braided Hair half cent, struck in copper-nickel with a plain edge. These metallurgical trial strikes were produced in anticipation of the Flying Eagle small cents that began production the same year. This example is a lovely Select proof with lightly mirrored, golden-tan surfaces. A few hairlines and contact marks are insignificant.
From The Dale Hopkins Collection. PCGS# 11777

1858 Flying Eagle Cent, PR63, Judd-192, Pollock-235
Scarce Small Letters Pattern

- 6054** 1858 Flying Eagle Cent, Judd-192, Pollock-235, R.5, PR63 NGC. The obverse is the familiar Small Letters 1858 cent. The pattern reverse generally resembles the 1860 regular issue reverse, but there is no shield at the top and the wreath is closed. Struck in copper-nickel with a plain edge. Satiny, moderately reflective fields lack the deeply mirrored appearance of most proofs, the result of a challenging composition to work. Attractive light tan with a few reverse spots.

Ex: West Palm Beach Florida Signature Sale (Summer Fun), (Heritage, 7/2009), lot 1231. PCGS# 11842

1858 Small Flying Eagle Cent, PR62
Judd-202, Five-Leaf Cluster Variant

- 6055** 1858 Flying Eagle Cent, Judd-202, Pollock-245, Snow-PT19, R.5, PR62 PCGS. The obverse resembles the contemporary Flying Eagle cent, but the eagle is smaller in scale. The reverse is close to the issued 1859 Indian cent. The five leaf cluster Pollock variant of this popular pattern. "About 75 pieces struck," according to Snow. Struck in copper-nickel with a plain edge. Dusky walnut-brown and olive-green toning blends throughout satiny, smooth, and well struck surfaces. Housed in an old green label holder.

From The Dale Hopkins Collection. PCGS# 11867

1858 Flying Eagle Cent, PR64
Judd-202, Pollock-245-246

- 6056** 1858 Flying Eagle Cent, Judd-202, Pollock-245-246, R.5, PR64 NGC. Snow-PT20, R.7. The Small Eagle obverse with open claws and raised wings. The tall, thin obverse letters represent Paquet's style. The reverse is similar to the regular issue 1859 Indian cent, in this case with leaves in clusters of six. Struck in copper-nickel with a plain edge. Fully mirrored gold surfaces are visible through splendid orange and iridescent toning.

Ex: West Palm Beach Florida Signature Sale (Summer Fun), (Heritage 7/2009), lot 1233. PCGS# 11867

Transitional 1858 Indian Cent Pattern
Judd-208, Proof, Unc. Details

- 6057** 1858 Indian Cent, Judd-208, Pollock-259, R.1 — Spot Removed — PCGS Genuine. Proof, Unc. Details. Although the transitional pattern Judd-180 1856 Flying Eagle cent has been adopted by the hobby as a regular issue, the transitional Judd-208 and Judd-228 Indian cents are currently collected primarily by pattern specialists. Judd-208 has the same designs as the issued 1859 cent except dated 1858. Struck in copper-nickel with a plain edge. Well struck and satiny with peach and gold tints. Spots on the dentils beneath the date are accompanied by a patch of hairlines. PCGS# 11885

1858 Pattern Indian Cent, PR63
Nice Judd-212, Pollock-262 Centered Date

- 6058** 1858 Indian Cent, Judd-212, Pollock-262, R.5, PR63 NGC. Similar to the Indian cent design as issued in 1860, but with a broad, ornamented shield at the top of the reverse. Struck in copper-nickel with a plain edge. There are two Pollock variants of the Judd-212; this one is Pollock-262 showing a centered date. This piece is well-struck on both sides, medium chocolate-brown, showing a few small flecks only under a loupe but still quite nice for the grade.

From The Dale Hopkins Collection. PCGS# 11895

1858 Indian Cent Pattern, PR64
Judd-212, Pollock 256, 263

6059 1858 Indian Cent, Judd-212, Pollock-256, 263, R.4, PR64 PCGS. Snow-PT25. The obverse is similar to the adopted design, while reverse shows a slightly modified wreath and a heavy ornamental shield at the top. Struck in copper-nickel with a plain edge.

This gold-tan example is well-struck and displays shallow mirrors in the fields. Both sides are nicely preserved and only show trivial, nearly microscopic marks. Population: 45 in 64 (1 in 64+), 13 finer (3/14). PCGS# 11895

1858 Indian Cent, Choice Proof
Judd-212, Ornamented Shield Reverse

6060 1858 Indian Cent, Judd-212, Pollock-263, Snow-PT25, R.4, PR64 PCGS. The obverse design is the same as the issued 1859 cent, but the reverse exhibits a broad ornamented shield unlike that on any regular issue Indian cent. Struck in copper-nickel with a plain edge. The Pollock subvariety with a broad bust point and a centered date. This well struck near-Gem has a lavender, jade-green, and peach-gold obverse. The reverse is mostly orange though the border is olive-green.

From The Dale Hopkins Collection. PCGS# 11895

6061 1859 Indian Cent, Judd-228, Pollock-272, R.1, MS64 PCGS. This transitional pattern combines the standard Indian Head cent obverse with the adopted shield reverse design of 1860. Struck in copper-nickel with a plain edge. Soft, satiny luster complements even bronze patina overall, with sharply struck design elements. The surfaces are void of any noticeable imperfections, and deliver excellent eye appeal. PCGS# 11932

Transitional 1859 Indian Cent, MS65
Judd-228, Shield Reverse

6062 1859 Indian Cent, Judd-228, Pollock-272, Snow-PT4, R.1, MS65 PCGS. This is a transitional pattern that combines the standard Indian Head cent obverse with the adopted reverse design of 1860. Struck in copper-nickel with a plain edge. This pattern exists in both business strike and proof formats. This particular piece is a business strike, and shows satiny cartwheel luster on both sides. The strike is bold aside from the top of the shield. Minor left obverse carbon determines the grade.

Ex: Long Beach Signature (Heritage, 6/2012), lot 4662.

From The Dale Hopkins Collection. PCGS# 11932

1859 Indian Cent Pattern, Judd-228, MS66
Great-Looking Transitional Example

6063 1859 Indian Cent, Judd-228, Pollock-272, R.1, MS66 PCGS. CAC. This transitional pattern combines the standard Indian Head cent obverse with the adopted Shield Reverse design of 1860. Struck in copper-nickel with a plain edge. This is a great-looking orange-red example with a few scattered brownish accents under a loupe, showing generous luster and good eye appeal. PCGS# 11932

1862 Liberty Eagle, PR65 Brown
GOD OUR TRUST, Judd-297

6064 1862 Ten Dollar, Judd-297, Pollock-355, Low R.6, PR65 Brown PCGS. The obverse is of the regular eagle dies for 1862. The reverse is similar to the regular dies design but adds the motto GOD OUR TRUST on a scroll above the eagle. Low date, bulging bun Pollock subvariety. Struck in copper with a reeded edge. This is a pinpoint-sharp and glossy mahogany-brown specimen that can be identified by a nearly straight lintmark between star 1 and the date.

Ex: Long Beach Signature (Heritage, 6/2004), lot 9573; Long Beach Signature (Heritage, 5/2009), lot 1410. PCGS# 60447

1863 Two Cents Pattern, PR63 Brown
Judd-305, Pollock-370

- 6065** 1863 Two Cents, Judd-305, Pollock-370, R.4, PR63 Brown NGC. Obverse: Portrait of Washington facing right, GOD AND OUR COUNTRY around, date and two stars below. Reverse: Denomination 2 CENTS within wheat wreath, UNITED STATES OF AMERICA around. CENTS is curved dramatically. Struck in copper with a plain edge. Glimmers of copper-orange are present at the obverse margins, but the rest of this piece is deep chocolate-brown. Well-defined with faint hairlines present in the fields.
Ex: Houston Money Show Signature Sale (Heritage, 12/2008), lot 1766. PCGS# 60460

1863 Judd-319 Three Cent, PR65 Brown
Mature Head Obverse

- 6066** 1863 Three Cents, Judd-319, Pollock-384, R.5, PR65 Brown NGC. The obverse is similar to the Mature Head large cent design discontinued in 1857, only with the substitution of a curved and markedly smaller date. The reverse displays 3 CENTS in the center surrounded by a laurel wreath with UNITED STATES OF AMERICA about the border. Struck in either bronze with a plain edge. This is a razor-sharp Gem with mahogany-brown patina that yields to emerald-green accents around the devices.
Ex: Los Angeles Signature (Heritage, 8/2009), lot 2259, which realized \$3,220. PCGS# 60476

1863 Judd-340 Half Dollar, PR62
'GOD OUR TRUST' Plain Letters Style
No Scroll

- 6067** 1863 Half Dollar, Judd-340, Pollock-412, Low R.6, PR62 PCGS. Silver with Reeded Edge. A sharply struck and nicely patinated example of the experimental model started in the series of 1861, also struck in 1862. This is the variety with no scroll or banner for the Motto, which is depicted in a curved display of small, plain letters. Some areas of deeper patination on the obverse, as well as a rough spot with surrounding cloudiness in the right obverse field, limit the grade of this otherwise attractive, popular pattern. Population: 4 in 62, 14 finer (3/14).
From The Dale Hopkins Collection. PCGS# 60502

1865 Three Cent Nickel, PR65 Brown
Judd-413, Pollock-484

- 6068** 1865 Three Cent Nickel, Judd-413, Pollock-484, R.5, PR65 Brown NGC. This regular dies trial piece shares the same obverse die as the scarce proof 1865 three cent nickel, since the date exhibits similar broad recutting. Struck in copper with a plain edge. A gorgeous fully struck Gem that reveals golden-brown, fire-red, sky-blue, and lilac shades when rotated beneath a light.
Ex: Los Angeles California U.S. Coin Auction (Heritage, 8/2009), lot 2260. PCGS# 60594

1866 Shield Nickel Pattern, Judd-489
PR60 Details

- 6069** 1866 Shield Five Cents, Judd-489, Pollock-577, Low R.6 — Corroded, Cleaned — PR60 ANACS Details. The obverse has a shield design similar to that adopted for the regular issue Shield nickel, except that the motto IN GOD WE TRUST is expressed in smaller letters and the date is divided by a ball at the base of the shield. On the reverse, the numeral 5 is surrounded by a laurel wreath, with the legend UNITED STATES OF AMERICA around the rim. Struck in nickel with a plain edge. Well struck and blemish-free with dusky olive-green, rose-red, and autumn-brown toning. Light corrosion is noted near 8 o'clock on the obverse, but there is little obvious evidence of the improper cleaning mentioned by ANACS.
Ex: Dallas Signature (Heritage, 11/2006), lot 1841, which realized \$1,265. PCGS# 60685

1866 Seated Dollar Pattern, PR64 Brown
Judd-541 Struck in Copper, Mint Delicacy

- 6070** 1866 Seated Dollar, Judd-541, Pollock-606, Low R.6, PR64 Brown PCGS. The familiar Liberty Seated design, with the scroll and motto IN GOD WE TRUST added to the reverse. Both obverse and reverse designs were adopted to coin regular-issue 1866 silver dollars. Struck in copper with a reeded edge. These “copper dollars” were almost certainly struck for collectors during a period when such practices were rampant at the Philadelphia Mint. The obverse is medium copper-gold, the reverse deeper reddish-orange, but muted luster emanates from each side. A small contact mark appears near the Liberty cap at the rim. In the same grade as the Lemus-Queller example (Heritage, 1/2009), lot 1666, which brought \$5,750. Population: 4 in 64 Brown, 0 finer (3/14). PCGS# 60739

1868 Three Cent Nickel, PR62
Judd-621, Struck in Aluminum

- 6071** 1868 Three Cent Nickel, Judd-621, Pollock-690, Low R.7, PR62 PCGS. Struck from regular issue dies with a plain edge, but in aluminum. Complete denomination sets were struck in that alloy in 1868 to “show how easily aluminum coined,” according to USPatterns.com. Precisely struck, flashy, and brilliant. A lens reveals minor retained laminations (as made) on the reverse field. Certified in a green label holder. PCGS# 60838

1869 Judd-687 Shield Nickel in Copper
PR64 Red and Brown

- 6072** 1869 Shield Nickel, Judd-687, Pollock-768, R.7, PR64 Red and Brown PCGS. The regular dies Shield nickel design, struck in copper with a plain edge. This is a rare copper pattern, with less than a dozen examples known today. Satiny, reflective surfaces exhibit deep orange mint color with bluish-brown toning primarily on the devices. A few small toning spots include a corrosion spot on the obverse. PCGS# 70912

1869 Aluminum Half Dime, Judd-693
Finest Certified PR67 Ultra Cameo
Dramatic Rotated Double Strike

- 6073** 1869 Half Dime, Judd-693, Pollock-772, High R.7, PR67 Ultra Cameo NGC. An impression from the regular issues dies in aluminum with a reeded edge. This piece is dramatically double struck with about 10 degrees of separation. Only five or six examples of this pattern variety are known, and it is doubtful that any others are double struck like this piece. NGC has certified only one other example, a PR63 Cameo, and PCGS has graded three non-Cameo pieces as PR63, PR65, and PR66. The Newman example is double struck, numerically the finest, and the only certified Ultra Cameo specimen: an unbeatable combination.

The rotated double strike is dramatic and is equaled by the quality of this Superb Gem. Both sides have heavy field-to-device contrast on the light gray aluminum surfaces with deeply mirrored fields. A few lint marks and other Mint-made imperfections on each side are entirely as struck; otherwise, pristine surfaces and exceptional eye appeal.

Ex: “Colonel” E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$20; Eric P. Newman Numismatic Education Society; Newman Collection / Central States Signature (Heritage, 4/2013), lot 3973. PCGS# 60918

**1869 Standard Silver Dime, Judd-703, PR67
Sole Finest Certified**

- 6074** 1869 Standard Silver Ten Cents, Judd-703, Pollock-782, High R.6, PR67 NGC. Standard Silver design: head of Liberty facing right with a diadem in her hair, motto below, and UNITED STATES OF AMERICA above. The reverse shows 10 CENTS in the center, surrounded by a wreath of oak and laurel, STANDARD SILVER 1869 around the margin. Struck in silver with a plain edge. Lovely aqua and pinkish tones complement pristine preservation on this beautiful Superb Gem proof, the sole finest graded. The Lemus-Queller example (Heritage, 1/2009, lot 1693) was only a PR64 NGC. Census: 1 in 67, 0 finer (3/14). PCGS# 60928

**1869 Standard Silver Quarter, PR66+ Cameo
Struck in Silver, Judd-734**

- 6075** 1869 Standard Silver Quarter, Judd-734, Pollock-815, High R.6, PR66+ Cameo PCGS. CAC. Liberty, wearing a headband inscribed with LIBERTY in raised letters and a star at the front, faces right. A plain ribbon gracefully flows through Liberty's hair and across her shoulders. UNITED STATES OF AMERICA is at the upper rim, with IN GOD WE TRUST in a ribbon below. The reverse features 25 / CENTS within an oak and laurel wreath, with STANDARD SILVER above and the date, 1869, below. Struck in silver with a plain edge. Deeply mirrored fields contrast nicely with the lustrous devices of this lovely Premium Gem that exhibits violet, gold, and blue toning on the obverse, and vibrant sea-green on the reverse. PCGS# 800188

**1869 Standard Silver Quarter, PR64 Cameo
Judd-738, Aluminum**

- 6076** 1869 Standard Silver Quarter Dollar, Judd-738, Pollock-819, Low R.7, PR64 Cameo NGC. The bust of Liberty faces right, wearing a headband with LIBERTY on it. The peripheral legend is UNITED STATES OF AMERICA, with IN GOD WE TRUST on a scroll in exergue. On the reverse, an oak and laurel wreath surrounds 25 CENTS, and with STANDARD SILVER 1869 around the rim. Struck in aluminum with a plain edge. An untoned specimen that boasts a sharp strike and pleasing white-on-black contrast. Moderate retained laminations on the field below the chin are of mint origin. We cannot locate any prior Heritage auction appearances of Judd-738. Although Judd-738 is listed as "Low Rarity 7" in the 10th Edition of Judd, we instead concur with USPatterns.com, which states "less than a half dozen are known." PCGS# 60965

**1869 Standard Silver Half, PR64 Brown
Copper, Plain Edge, Judd-745**

- 6077** 1869 Standard Silver Half Dollar, Judd-745, Pollock-826, Low R.7, PR64 Brown PCGS. Liberty faces right, and wears a cap ornamented by two stars. The reverse features a wreath of oak and laurel leaves, with 50 CENTS tightly fit within the wreath and the date depicted below. The borders exhibit the usual legends for the Standard Silver series. Repunching is noted on the initial B, the L in LIBERTY, and the lower left reverse star. Struck in copper with a plain edge. The rich ruby-red, ocean-blue, and orange toning is comprehensive aside from a brown obverse spot at 4 o'clock. From The Dale Hopkins Collection. PCGS# 60973

**1869 Standard Silver Half, Judd-752, PR64
Struck in Aluminum, Sole Finest at NGC**

- 6078** 1869 Standard Silver Half Dollar, Judd-752, Pollock-835, Low R.7, PR64 NGC. Standard Silver design: Liberty wears a diadem, and the scroll below the bust bears IN GOD WE TRUST. The reverse shows STANDARD SILVER 1869 around the rim with 50 CENTS in the center of an oak and olive wreath. Struck in aluminum with a reeded edge. This is a well-preserved example for the aluminum patterns of the day, showing a couple of minor planchet flaws and a die crack running diagonally through the reverse. Census: 1 in 64, 0 finer (3/14).
From The Dale Hopkins Collection. PCGS# 60981

**Aluminum 1869 Standard Silver Half
Judd-753, PR62**

- 6079** 1869 Standard Silver Half Dollar, Judd-753, Pollock-836, High R.7, PR62 NGC. CAC. A bust of Liberty faces right on the obverse. The legend UNITED STATES OF AMERICA is around, IN GOD WE TRUST is on a scroll below. The denomination 50 CENTS is centered within a wreath of laurel and oak on the reverse. STANDARD SILVER is above, and the date 1869 is below. Struck in aluminum with a plain edge. Subdued proof surfaces appear on both sides of this pleasing light gray proof. The reverse hosts a few darker toning streaks at the top of the wreath.
From The Dale Hopkins Collection. PCGS# 60982

**1870 Standard Silver Dime in Silver, PR67
Judd-837, Among the Finest-Certified**

- 6080** 1870 Standard Silver Ten Cents, Judd-837, Pollock-928, R.5, PR67 NGC. The obverse features a bust of Liberty right with UNITED STATES OF AMERICA around and a scroll with IN GOD WE TRUST below. Liberty wears a cap ornamented with three stars. On the reverse, the denomination 10 CENTS and the date 1870 are crowded inside a wreath of cotton and corn, with the inscription STANDARD above. Struck in silver with a reeded edge. Intermingled amber, violet, and royal-blue hues melt into the mirrored fields of this sharply struck Superb Gem. Beautifully preserved, with exceptional eye appeal. PCGS# 61081

**1870 Standard Silver Dime in Copper
Judd-840, PR65 Red and Brown**

- 6081** 1870 Standard Silver Ten Cents, Judd-840, Pollock-931, R.7, PR65 Red and Brown PCGS. Ex: Denali Collection. A capped bust of Liberty faces right with UNITED STATES OF AMERICA around and IN GOD WE TRUST on a scroll below. On the reverse 10 CENTS and 1870 are within a wreath of cotton and corn with STANDARD above. Struck in copper with a plain edge. Less than a half dozen pieces are believed known of this pattern. This sharply struck Gem is patinated in blended lavender-red and lime-green shades. Void of detractions and highly desirable for both its condition and extreme rarity.
Ex: FUN Signature (Heritage, 1/2012), lot 6011; Central States Signature (Heritage, 4/2012), lot 6274. PCGS# 71084

1870 Judd-854 Pattern Dime, PR65 Cameo

- 6082** 1870 Standard Silver Ten Cents, Judd-854, Pollock-962, High R.7, PR65 Cameo PCGS. CAC. A bust of Liberty faces right on the obverse. The legend UNITED STATES OF AMERICA is around the periphery and the motto IN GOD WE TRUST is on a scroll below. On the reverse one can see the denomination 10 CENTS and the date 1870 within a wreath of cotton and corn. The word STANDARD is at the top. Struck in aluminum with a plain edge. These Standard Silver issues were sold in sets with other designs and denominations by the Mint for \$15. The present fully struck Gem provides mirrored fields and luminous motifs. Hairlines are absent, and only minute carbon limits the grade.
Ex: Rosemont Signature (Heritage, 8/2013), lot 4907. PCGS# 61098

1870 Standard Silver Dime, PR66 Cameo
Aluminum, Judd-859

- 6083** 1870 Standard Silver Dime, Judd-859, Pollock-940, High R.7, PR66 Cameo PCGS. CAC. Ex: Denali Collection. An exceedingly scarce Standard Silver pattern, the obverse design depicts Liberty, facing right, wearing a cap that is ornamented with three stars. The reverse has 10 CENTS in the center, surrounded by an oak and laurel wreath with STANDARD SILVER 1870 at the margin. Struck in aluminum with a reeded edge. Brilliant and deeply mirrored with bright, flashy proof mirrors on each side.
Ex: Long Beach Signature (Heritage, 9/2002), lot 9472. PCGS# 61103

1870 Standard Silver Dime in Silver
Judd-862, Richly Toned PR66

- 6084** 1870 Standard Silver Ten Cents, Judd-862, Pollock-950, High R.7, PR66 PCGS. CAC. Ex: Denali Collection. A bust of Liberty faces right wearing a diadem, and her hair is tied in a bun. A scroll beneath her bears the inscription IN GOD WE TRUST, while UNITED STATES OF AMERICA fills the remainder of the periphery. The D in GOD is widely recut. The reverse has a wreath of corn and cotton, with STANDARD above, 1870 below, and 10/CENTS in the center. Struck in silver with a plain edge. About a dozen pieces are known of this pattern. This is one of the finest. The fields are bright and reflective, the mirroring is more evident on the reverse because of the depth of toning on each side. Purplish-gray and emerald-green are seen on each side but in differing proportions.
Ex: Chicago Signature (Heritage, 8/2011), lot 5265. PCGS# 61106

1870 Judd-883, Pollock-981 Quarter, PR64 Cameo
Barber's Seated Liberty Obverse

- 6085** 1870 Quarter Dollar, Judd-883, Pollock-981, Low R.7, PR64 Cameo PCGS. The obverse depicts William Barber's seated figure of Liberty facing left, with 13 stars around and the date below. Liberty supports a shield and holds an olive branch. Liberty pole stands behind her arm. The reverse is the regular Seated Liberty quarter. Struck in silver with a plain edge. This intricately struck near-Gem exhibits mirrored fields and frosty designs. The reverse field displays traces of die rust, as made, but post-strike hairlines are minimal.
Ex: Rosemont Signature (Heritage, 8/2013), lot 4910. PCGS# 61127

**1870 Standard Silver Quarter, PR66+
Judd-889, Plain Edge, Silver Alloy**

- 6086** 1870 Standard Silver Quarter Dollar, Judd-889, Pollock-988, Low R.7, PR66+ NGC. A bust of Liberty wearing a cap ornamented with three stars facing right, the legend UNITED STATES OF AMERICA surrounds the figure, and a scroll with IN GOD WE TRUST is below. The reverse reads 25 CENTS 1870 in the center and is surrounded by a wreath of cotton and corn. Struck in silver with a plain edge. According to USPatterns.com about a dozen examples are known of this design with a plain edge and struck in silver. The virtually perfect surfaces showcase violet, amber, and ocean-blue hues over deeply mirrored fields. Boldly struck motifs add to the exceptional eye appeal of this Plus-graded representative. PCGS# 61133

**1870 Standard Silver Quarter, PR65 Cameo
Judd-910, Aluminum**

- 6087** 1870 Standard Silver Quarter, Judd-910, Pollock-999, High R.7, PR65 Cameo PCGS. CAC. Ex: Denali Collection. The Standard Silver design depicts a bust of Liberty that faces right on the obverse with a cap ornamented with three stars and a ribbon inscribed LIBERTY running through the lower hair, the motto IN GOD WE TRUST on a scroll at the lower periphery. The reverse depicts the denomination within a wreath of oak and laurel with STANDARD SILVER above and the date below. Struck in aluminum with a reeded edge. A beautiful radiant, and sharply contrasted example of this extremely rare pattern. This piece is two grade points finer than the non-Cameo Lemus-Queller Collection example. Ex: FUN Signature (*Heritage*, 1/2012), lot 6017; New York Signature (*Heritage*, 3/2012), lot 3902. PCGS# 61154

**1870 Standard Silver Half, PR63 Brown
Judd-930, Struck in Copper**

- 6088** 1870 Standard Silver Half Dollar, Judd-930, Pollock-1035, High R.7, PR63 Brown PCGS. This William Barber design features Liberty seated and facing left, surrounded by 13 stars. She steadies a shield with her right hand, while her left hand holds an olive branch. A Liberty pole is partly concealed behind the shield. A scroll crossing the shield features a raised inscription of LIBERTY. The date is centered below. The reverse has a wreath of corn and cotton, with 50 CENTS inside and STANDARD above. This muling of pattern Seated and Standard Silver dies led to the absence of UNITED STATES OF AMERICA. Struck in copper with a plain edge. Although a few faint hairlines limit the grade, this Select proof exhibits impressive gold, violet, and blue toning on its light brown surfaces. A solitary toning spot near stars 7 and 8 will aid identification of this example.

From The Dale Hopkins Collection. PCGS# 61176

**1870 Judd-936 Half Dollar, PR65 Red and Brown
Barber's Seated Liberty Design**

- 6089** 1870 Half Dollar, Judd-936, Pollock-1042, R.7, PR65 Red and Brown PCGS. William Barber's seated figure of Liberty faces left on the obverse. Thirteen stars surround Liberty with the date below. Liberty supports a shield with her right hand and holds an olive branch in her left. A Liberty pole is behind the shield, and a scroll crosses the shield, inscribed LIBERTY in raised letters. The reverse is the type used for regular issue Seated halves. Struck in copper with a plain edge. Slightly more than a dozen examples of this pattern variety are known, although only a small number of those will equal or exceed this lovely Gem. Both sides are fully mirrored with delicate bluish-violet toning over the deep orange mint surfaces.

From The Dale Hopkins Collection. PCGS# 71182

1870 Judd-938 Half Dollar, PR65 Cameo
From the Denali Pattern Collection

- 6090** 1870 Half Dollar, Judd-938, Pollock-1045, High R.7, PR65 Cameo PCGS. CAC. Ex: Denali Collection. The obverse die has a William Barber portrait of seated Liberty, the word LIBERTY in raised letters on a ribbon falling across the shield, thirteen stars around, date below. The reverse die is the regular design. Struck in aluminum with a plain edge. Doubtless sold as part of an exotic-metal set, this aluminum Gem Cameo proof has excellent remaining luster and distinct contrast. While a touch of hazy patina has settled over the obverse fields, the reverse with its blue-tinged gleam is clearer in both reflectivity and contrast.
Ex: Rosemont Signature (Heritage, 8/2013), lot 5963. PCGS# 61184

1870 Aluminum Half Dollar, PR64 Cameo
Standard Silver Series
Judd-943, Pollock-1071

- 6091** 1870 Standard Silver Half Dollar, Judd-943, Pollock-1071, R.7, PR64 Cameo PCGS. Ex: Denali Collection. The obverse displays a bust of Liberty facing right and wearing a cap ornamented with two stars. A ribbon crosses Liberty's shoulder with the word LIBERTY inscribed in incuse letters. The legend UNITED STATES OF AMERICA is around the periphery, and the motto IN GOD WE TRUST is inscribed on a scroll below. The reverse depicts the denomination 50 CENTS and the date 1870 within a wreath of corn and cotton. The word STANDARD is at the top. Struck in aluminum with a reeded edge. Only two or three pieces are believed known of this pattern. Both sides have brilliant light gray surfaces with fully mirrored fields that contrast noticeably with the lustrous devices. Minor planchet bubbles appear on the obverse with a line-like reverse planchet defect.
Ex: FUN Signature (Heritage, 1/2012), lot 6020; Central States Signature (Heritage, 4/2012), lot 6287. PCGS# 61189

1870 Judd-951 Standard Silver Half, PR66
Reeded Edge, Struck in Silver

- 6092** 1870 Standard Silver Half Dollar, Judd-951, Pollock-1094, R.5, PR66 PCGS. CAC. Ex: Denali Collection. The bust of Liberty faces right on the obverse with UNITED STATES OF AMERICA around and the motto IN GOD WE TRUST on a scroll below. Liberty's hair is tied in a bun. On the reverse, the denomination 50 CENTS and date 1870 are in a wreath of cotton and corn with the inscription STANDARD above. Struck in silver with a reeded edge. This is an immaculate specimen with deep golden-brown, lavender-red, sun-gold, and cobalt-blue toning. Slight incompleteness of strike is noted near the E in LIBERTY and opposite near CENTS, where glimpses of the planchet surface remain.
Ex: Orlando FUN Signature (Heritage, 1/2012), lot 6021; Rosemont Signature (Heritage, 8/2013), lot 4915; FUN Signature (Heritage, 1/2014), lot 6333. PCGS# 61197

**Aluminum 1870 Standard Silver Half
Judd-955, PR65**

- 6093** 1870 Standard Silver Half Dollar, Judd-955, Pollock-1099, High R.7, PR65 PCGS. CAC. Ex: Denali Collection. A bust of Liberty faces right wearing a LIBERTY-inscribed diadem, and her hair is tightly bound with a ribbon. IN GOD WE TRUST is placed within a scroll below, while UNITED STATES OF AMERICA surrounds the portrait. The reverse has a wreath of corn and cotton with 50 / CENTS / 1870 inside and STANDARD centered above. Struck in aluminum with a reeded edge. Less than half a dozen reeded edge pieces are known. The aluminum is slightly streaky and porosity is localized to the center of the reverse. Bright with nice cameo contrast.
Ex: New York Signature (Heritage, 3/2012), lot 3905. PCGS# 61201

**1870 Judd-956 Pattern Half, PR66 Cameo
From the Denali Collection**

- 6094** 1870 Standard Silver Half Dollar, Judd-956, Pollock-1100, High R.7, PR66 Cameo PCGS. CAC. Ex: Denali Collection. A Standard Silver design with Liberty wearing a diadem. The date is in small digits within the wreath, STANDARD centered above. The N in IN and the E in WE are lightly repunched within the motto, which resides in a scroll below the bust. Struck in aluminum with a plain edge. This high-quality specimen's obverse has little patina, crisp contrast, and only a few surface irregularities in the right obverse field. The reverse shows a light layer of toning, but the contrast is clear save at a small rough patch in the center. A sizable piece, yet impressively light in the hand. PCGS# 61202

**1870 Standard Silver Half, PR62 Cameo
Judd-957, Silver, Reeded Edge**

- 6095** 1870 Standard Silver Half Dollar, Judd-957, Pollock-1108, R.5, PR62 Cameo PCGS. A bust of Liberty faces right and is surrounded by UNITED STATES OF AMERICA. She wears a headband inscribed LIBERTY, and has a large star on her forehead. IN GOD WE TRUST is below on a banner. The reverse features 50/CENTS/1870 within a wreath of cotton and corn. STANDARD is centered above the wreath. Struck in silver with a reeded edge. Mostly brilliant, but the borders exhibit sea-green and lavender tints. Minor inexactness of strike is noted near the B in LIBERTY and above the 1 in the date.
From The Dale Hopkins Collection. PCGS# 61203

**1870 Standard Silver Half, PR64 Brown
Judd-959, Copper, Reeded Edge**

- 6096** 1870 Standard Silver Half Dollar, Judd-959, Pollock-1110, High R.7, PR64 Brown PCGS. A standard Silver design showing Liberty wearing a coronet inscribed LIBERTY in raised letters. The reverse reads 50 CENTS 1870 in the center and is surrounded by a wreath of cotton and corn. Struck in copper with a reeded edge. This design is known in silver, copper, and aluminum and each are known with plain and reeded edges. Less than half a dozen are believed known of this variant. The present well struck near-Gem appears undisturbed by contact beneath a rich blanket of jade-green, peach-gold, and lavender toning.
From The Dale Hopkins Collection. PCGS# 61205

**1870 Standard Silver Half in Copper
Judd-959, PR65 Brown**

- 6097** 1870 Standard Silver Half Dollar, Judd-959, Pollock-1110, High R.7, PR65 Brown PCGS. CAC. Ex: Denali Collection. Standard Silver design showing Liberty wearing a coronet inscribed LIBERTY in raised letters. The reverse reads 50 CENTS 1870 in the center and is surrounded by a wreath of cotton and corn. Struck in copper with a reeded edge. This design is known in silver, copper, and aluminum and each are known with plain and reeded edges. Less than half a dozen are believed known of this variant. The surfaces are termed Brown, but there is a significant underlying presence of red just below the brown patina. The strike is crisp throughout and there are no mentionable contact marks. Population: 1 in 65 Brown, 0 finer (3/14).

Ex: New York Signature (Heritage, 3/2012), lot 3907; FUN Signature (Heritage, 1/2014), lot 6334. PCGS# 61205

**1870 Standard Silver Half, Judd-971
PR64 Red and Brown**

- 6098** 1870 Standard Silver Half Dollar, Judd-971, Pollock-1082, R.8, PR64 Red and Brown PCGS. CAC. Ex: Denali Collection. This Standard Silver design shows Liberty wearing a cap with two visible stars, UNITED STATES OF AMERICA surrounds most of the obverse, and IN GOD WE TRUST is placed on a scroll below. The reverse has 50 CENTS in the center, surrounded by a wreath, STANDARD SILVER 1870 around the margin. Struck in copper with a reeded edge. A boldly struck Choice pattern with a predominantly orange-gold and fire-red obverse. The reverse has peach, rose, and electric-blue toning along with a hint of apple-green. No carbon or hairlines are evident.

Judd-971 is extremely rare. We are able to locate only three different specimens that have appeared at auction in recent decades: 1) PR65 Red NGC, Orlando FUN Signature (Heritage, 1/2009), lot 1771. 2) the present coin, Somerset Collection (Bowers and Merena, 5/1992), lot 1748; Orlando FUN Signature (Heritage, 1/2012), lot 6023; Rosemont Signature (Heritage, 8/2013), lot 4917. 3) PR63 Uncertified, Edmonton Sale (Bowers and Merena, 3/1993), lot 1519. PCGS# 71217

**1870 Standard Silver Half, PR64+ Cameo
Beautiful Border Toning**

- 6099** 1870 Standard Silver Half Dollar, Judd-981, Pollock-1101, High R.6, PR64+ Cameo PCGS. Liberty faces right, her hair tied in a bun, wearing a starless diadem inscribed LIBERTY. IN GOD WE TRUST is on a scroll at the bottom rim, with UNITED STATES OF AMERICA around. On the reverse a wreath of corn and cotton encloses 50 / CENTS, the latter in an upcurving arc, with STANDARD at the upper rim and the date 1870 inside the wreath. Struck in silver with a reeded edge. A fully struck Choice proof with brilliant centers and exquisite peripheral golden-brown patina. The few delicate hairlines are confined to the right obverse field. From The Dale Hopkins Collection. PCGS# 61227

**1870 Standard Silver Half, Judd-983
PR65 Red and Brown**

- 6100** 1870 Standard Silver Half Dollar, Judd-983, Pollock-1103, R.7, PR65 Red and Brown PCGS. CAC. Ex: Denali Collection. Liberty faces right, hair tied in a bun, wearing a starless diadem inscribed LIBERTY. IN GOD WE TRUST is on a scroll at the bottom rim, with UNITED STATES OF AMERICA around. On the reverse, a wreath of corn and cotton encloses 50 / CENTS, the latter in an upcurving arc, with STANDARD at the upper rim and the date 1870 inside the wreath. Struck in copper with a reeded edge. Faded peach-gold and lilac-red adorn the obverse while the slightly deeper toning on the reverse adds powder-blue and aquamarine to the rose and gold shades. A well struck and exemplary Gem. The sole CAC specimen among the five or so examples known.

Ex: Baltimore Auction (Superior, 7/1993), lot 678; Rosemont Signature (Heritage, 8/2013), lot 4918. PCGS# 71229

**1870 Standard Silver Half, PR63
Judd-988, Plain Edge, Silver**

- 6101 1870 Standard Silver Half Dollar, Judd-988, Pollock-1117, High R.7, PR63 PCGS.** Ex: Simpson. The obverse features a bust of Liberty facing right. She wears a headband inscribed LIBERTY, which is decorated in the center with a star. Her hair is tied up in a bun. IN GOD WE TRUST is beneath within a scroll, UNITED STATES OF AMERICA is centered above her. The reverse exhibits a wreath of cotton and corn, with 50 CENTS crowded inside the wreath. STANDARD SILVER is centered above the wreath, and 1870 is beneath the wreath. Struck in silver with a plain edge. Iridescent powder-blue, pumpkin-orange, and mauve-red toning adorns this flashy and fully struck specimen. Delicate obverse field hairlines are strictly assessed by PCGS.
Ex: Long Beach Signature (Heritage, 2/1990), lot 1799; Frank O. Fredericks Collection, Part III (Heritage, 1/2004), lot 8482; Tampa FUN Signature (Heritage, 1/2011), lot 6617; New York Signature (Heritage (12/2011), lot 4345; Rosemont Signature (Heritage, 8/2013), lot 4919. PCGS# 61234

Judd-1005 1870 Silver Dollar, PR63 Brown

- 6102 1870 Silver Dollar, Judd-1005, Pollock-1137, Low R.6, PR63 Brown PCGS. CAC.** Ex: Simpson. The obverse portrays a seated figure of Liberty with shield and olive branch. A scroll is draped over the shield with the word LIBERTY inscribed and a Liberty pole stands behind the shield. Regular issue Seated dollar reverse. Struck in copper with a plain edge. Rich apple-green, golden-brown, and ruby-red toning enriches the well struck and unblemished surfaces. An impressive example of this collectible silver dollar pattern.
Ex: FUN Signature Sale (Heritage, 1/2011), lot 6620. PCGS# 61252

**1870 Indian Princess Dollar, PR65 Brown
Judd-1016, Struck in Copper**

- 6103 1870 Silver Dollar, Judd-1016, Pollock-1150, Low R.7, PR65 Brown NGC.** A multitude of patterns was created in 1870, but none more popular than the Indian Princess dollar designs that were the work of the late James B. Longacre, whose posthumous signature is featured beneath the obverse motif in the lower right obverse field. An off-metal striking in copper, this reeded-edge pattern utilizes the regular Seated dollar reverse paired with Longacre's appealing obverse concept. Deeply reflective fields surround the fully struck Princess, where they display liquid pools of aqua and rose toning. A thin tracing of rich burgundy color emboldens the central devices against the mirrored fields. The reverse is equally reflective and well-struck, with vivid purple and magenta accents floating on olive-gold surfaces. Census: 1 in 65 Brown, 2 finer (2/14). PCGS# 61264

1871 Five Cent Pattern, PR65 Brown
Longacre Head, Judd-1054

- 6104 1871 Five Cents, Judd-1054, Pollock-1189, High R.6, PR65 Brown PCGS. CAC. Longacre's three cent nickel Liberty motif is adapted here for the five cent piece, although the arrangement of the denomination and wreath is more reminiscent of the two cent piece. Struck in copper with a plain edge. Examples of this design were struck in both copper and nickel. Toned predominantly forest-green but lilac-red lingers in design crevices. Well struck and devoid of contact. Encapsulated in an old green label holder. From The Dale Hopkins Collection. PCGS# 61313

Red Gem Proof Judd-1270
Copper 1873 Seated Quarter

- 6105 1873 Quarter Dollar, Judd-1270, Pollock-1412, R.7, PR65 Red PCGS. The Judd-1270 is struck from the regular-issue Closed 3, No Arrows dies for the Seated quarter, but in copper with a reeded edge. Probably fewer than a half-dozen survive in any grade. Rather than die trials, these pieces were probably part of a long list of patterns sold over decades from Mint personnel as delicacies to the well-connected, a practice that peaked under the two Mint directorships of Henry R. Linderman (1867-69, 1873-78) but continued through 1885. This is a stunning orange-red and lilac Gem proof with considerable contrast between the devices and reflective, bright fields. Carbon is limited to a few flecks near the UA in QUAR. Ex: Long Beach Signature (Heritage, 5/2012), lot 4709; Philadelphia Signature (Heritage, 8/2012), lot 4364. PCGS# 81555

PR66 Red Judd-1400
1875 Twenty Cent Pattern
Only Certified Full Red Specimen

- 6106 1875 Twenty Cents, Judd-1400, Pollock-1543, R.7, PR66 Red PCGS. Ex: Denali Collection. The obverse represents Liberty seated at the seashore, with an "illogical steamship" (Judd)—sails billowing before, steam blowing behind. The reverse is similar to the adopted twenty cent design of 1875, with several minor positional differences. Struck in copper with a plain edge. The present lot is the only example of Judd-1400 certified as full Red by either NGC or PCGS. The orange-gold and rose-red fields are radiant and free from contact marks. The strike is needle-sharp. Minor gray spots on the breast and the E in STATES will identify any future auction appearances. Ex: FUN Signature (Heritage, 1/2013), lot 6730. PCGS# 81707

**1875 Judd-1407 Twenty Cent, PR63+
Silver, Plain Edge, Fraction Reverse**

- 6107 1875 Twenty Cents, Judd-1407, Pollock-1550, Low R.6, PR63+ PCGS. CAC.** The obverse is similar to the adopted die, although LIBERTY is incused rather than raised as on the regular issue coins. The unadopted pattern reverse expresses the denomination twice, TWENTY CENTS and 1/5 OF A DOLLAR. The verbose legend forces a simple wreath motif, similar to that of the issued three cent nickel. Struck in silver with a plain edge. This design combination is known in silver, copper, aluminum, and nickel. Only a dozen or so silver examples are believed known. This is a bright piece with deeply mirrored fields. The devices are almost frosted enough to warrant a Cameo designation. Minor hairlines determine the grade.

From The Dale Hopkins Collection. PCGS# 61714

**1879 Pattern Morgan Dollar, PR64 Brown
Judd-1612, Pollock-1808, Low R.7**

- 6108 1879 Morgan Dollar, Judd-1612, Pollock-1808, Low R.7, PR64 Brown NGC.** This issue features the adopted Morgan dollar obverse, but offers an alternative reverse with a large perched eagle holding an olive branch (with seven leaves) and three arrows. Around the reverse border are the legends: UNITED STATES OF AMERICA / ONE DOLLAR. Struck in copper with a reeded edge.

Apparently some observers had called the eagle on the adopted reverse "scrawny."

This is a lovely example with satiny reddish-tan surfaces that show razor-sharp design definition and impressive preservation. The mildly reflective fields reveal iridescent shades of blue, violet, and gold when rotated beneath a lamp. Census: 1 in 64 Brown, 0 finer (3/14). PCGS# 61990

**1880 Goloid Metric Dollar, PR66 Red and Brown
Judd-1652, Pollock-1852**

- 6109 1880 Goloid Metric Dollar, Judd-1652, Pollock-1852, R.6-7, PR66 Red and Brown PCGS. CAC.** On the obverse the head of Liberty faces left with E PLURIBUS UNUM above and the date below. The reverse has the statutory requirements for a goloid dollar in the center, surrounded by a circle of 38 stars. Outside the circle of stars is GOLOID METRIC DOLLAR DEO EST GLORIA, which is in turn surrounded by UNITED STATES OF AMERICA 100 CENTS. Struck in copper with a reeded edge. This is the same design that was used in 1879 for the Goloid Metric patterns of that year, and this pattern was also a part of a goloid set sold by the Mint. Slightly over a dozen pieces are known of this design in copper. This is a magnificent pattern that shows lovely blue-green iridescence intermixed with significant portions of original, blazing mint red luster. Identifiable by three tiny carbon spots around the end of the ribbon that ties Liberty's hair. Rarely offered. Certified in an old green label holder. Population: 5 in 66 Red and Brown, 0 finer (2/14).

Ex: Baltimore, MD A.N.A. U.S. Coins Signature Auction (Heritage, July-August 2008), lot 2163.

Ex: Long Beach, CA Signature Sale (Heritage, 2/2009), lot 2334. PCGS# 72037

**1942 Brown Plastic Pattern Cent, MS61
Precursor to 1943 Steel Cent, Judd-2060**

- 6110 1942 Cent, Judd-2060, Pollock-4035, Low R.7, MS61 NGC.** 5.02 gm. Part of the World War II effort to divert copper from the U.S. cent, this design was tried in various unusual materials, including red fiber and Bakelite. The obverse Liberty bust right design is based on the KM-198 Columbia two centavos. The wreath and legend reverse borrows from a Baker-155 Washington medalet. Struck in brown plastic with a plain edge. Generally deep lavender-brown with selected walnut-brown areas, particularly on the right half of the wreath. The surfaces are microgranular, as made. PCGS# 12215

- 6111 "1759" Martha Washington "Quarter," Judd-2116, Pollock-2082, Low R.7 — Waffle Cancelled — MS60 ANACS; and a "1759" Martha Washington "Half Dollar," Judd-2132, Pollock-2083, R.7 — Waffle Cancelled — MS60 ANACS.** For each pattern, the obverse has a bust of Martha Washington with the date 1759, while the reverse shows Mount Vernon. The Mint calls these "nonsense dies" because they lack reference to the current date and the denomination. The two patterns were each struck with a reeded edge in multilateral cupronickel-copper (i.e. "clad") composition, and eventually "waffle cancelled" by the Mint via a pass through destructive machinery. (Total: 2 coins)

GOLD DOLLARS

1849-D Gold Dollar, MS62 First Year of Issue

- 6112 1849-D MS62 NGC. Variety 1-B.** Attributed by a heavy rim-to-rim die crack on each side of the mintmark. This first-year issue was apparently saved as a souvenir, accounting for its common status. The yellow-gold surfaces of this MS62 example exhibit well-struck design elements. The few light marks are within the confines of the grade designation. Census: 26 in 62, 22 finer (3/14). NGC ID# 25BD, PCGS# 7507

1849-O Open Wreath Gold Dollar, MS63 Bold Strike, Frosty Luster

- 6113 1849-O Open Wreath MS63 NGC. Variety 2.** Low mintmark. The Open Wreath type, as are all examples of the 1849-O gold dollar. This coin exhibits an uncharacteristically strong strike, particularly on the reverse, with deep orange-gold patina over the frosty mint luster. Only a few faint surface grazes preclude a finer grade, while the overall visual appeal is excellent. Census: 53 in 63, 33 finer (3/14).
Ex: FUN Signature (Heritage, 1/2008), lot 3645. NGC ID# 25BE, PCGS# 7508

1851-D Gold Dollar, Well-Struck MS61+ Nice for the Issue and Grade

- 6114 1851-D MS61+ NGC. Variety 3-D.** Attributed by the point of the first leaf right of the bow just right of the center of the second 1 of the date. This issue is one of the more available gold dollars from the Dahlonega Mint, though Uncirculated coins finer than MS62 are extremely rare. Copper-gold hues show on this MS61+ example that exhibits well-struck design elements. Clashmarks are visible over both sides, as is usual on this date. A nice coin for the issue and the designated grade. Census: 20 in 61 (1 in 61+), 30 finer (3/14). NGC ID# 25BM, PCGS# 7515

1852-C Gold Dollar, Scarce MS61

- 6115 1852-C MS61 NGC. Variety 2.** A repunched 1 and die rust attribute the variety. Mostly seen in Very Fine through About Uncirculated. Mint State pieces are scarce through MS63 and rare any finer. The yellow-gold surfaces exhibit fairly strong obverse design detail but the reverse is weak in the centers. Census: 15 in 61, 44 finer (3/14). NGC ID# 25BR, PCGS# 7518

- 6116 1853 MS64 NGC.** The 1853 gold dollar mintage consisted of 4,076,051 pieces, the highest mintage of any issue of the denomination, making these the most common gold dollars today. A lovely near-Gem specimen, this coin displays several hues of gold, primarily a vibrant yellow-gold. Frosty luster adds to the appeal. A number of wispy die cracks extend through many of the stars on the obverse, particularly at left. A tiny alloy spot appears below the tip of the bust. NGC ID# 25BU, PCGS# 7521

- 6117 1853 MS64 NGC. CAC.** Sea-green margins frame the orange-gold centers of this razor-sharp near-Gem. Faint field grazes are all that limit the grade. 1853 was the peak of gold dollar production, since the denomination was needed in commerce to replace widely hoarded Seated coinage. NGC ID# 25BU, PCGS# 7521

- 6118 1853 MS64 PCGS. CAC.** This Choice Mint State type coin is well-struck and intensely lustrous, with light honey-gold coloration and pleasing intermingled accents of rose on both sides. A few trivial marks are noted that keep this attractive piece from a Gem grade, including one just beneath obverse star 10. NGC ID# 25BU, PCGS# 7521

1853 Gold Dollar, MS66 Stellar Example With Great Appeal

- 6119 1853 MS66 PCGS.** According to Jeff Garrett and Ron Guth (2008): "The 1853 is by far the most common U.S. gold dollar. Examples can be found with ease in nearly every grade. Thousands of examples have been graded in Mint State, and almost twice as many coins of this date have been graded as the next most populous issue."

That said, it should be noted that the certified population drops off dramatically above MS65, at both services. Only 71 pieces have been rated at MS66, and a mere 19 coins are graded MS67, at PCGS and NGC combined.

This is a stellar example with bright yellow-gold surfaces drenched in frosty mint luster. The devices are sharply defined and both sides are distraction-free. Several tiny, raised die lumps on Liberty's neck and jaw may be clash marks from the reverse wreath. Population: 32 in 66 (1 in 66+), 11 finer (3/14). NGC ID# 25BU, PCGS# 7521

**1853 Gold Dollar, MS66+
Excellent Type One Example**

- 6120 1853 MS66+ PCGS. CAC.** Although the 1853 gold dollar is by far the most commonly available representative of the Type One, small-diameter Longacre design, it is scarce in this high-end Premium Gem grade and rare any finer. This glittering example displays a bold strike and surfaces alive with Mint bloom. Brilliant, frosted fields and devices exude remarkable yellow-gold appeal. A few tiny orange alloy spots surround Liberty's lowest curls. Significantly, this is the only MS66 example to receive the PCGS Plus designation. Population: 32 in 66 (1 in 66+), 11 finer (3/14). NGC ID# 25BU, PCGS# 7521

**1854-D Gold Dollar, AU58
A Low-Mintage Issue**

- 6121 1854-D AU58 NGC. Variety 6-H.** The only known variety. The yellow-gold surfaces of this near-Mint State example display luster in the recessed areas and exhibit the usual weak strike on Liberty's curls as well as softness on the lower-left part of the reverse wreath. Numerous raised die scratches (as made) confined to the lower portion of the reverse are diagnostic of the 1854-D. A mere 2,935 gold dollars were produced this year at the Dahlonega Mint, continuing a preference for the half eagle denomination at the Georgia facility. Fewer than 125 pieces are believed to survive today. Census: 25 in 58, 24 finer (2/14).
Ex: San Francisco (ANA) Signature (Heritage, 7/2005), lot 7288. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25BZ, PCGS# 7526

- 6122 1854 Type Two MS61 NGC. FS-101, DDO.** Satiny green-gold luster adorns both sides of this Type Two representative. Moderate doubling is seen in most obverse lettering, while heavy clash marks are noted on the reverse. An interesting, minimally abraded example. NGC ID# 25C3, PCGS# 7531

- 6123 1854 Type Two MS61 NGC.** A popular issue among type collectors. This piece showcases medium orange-gold luster, while relatively few noticeable abrasions are present. Moderate clash marks are noted, primarily on the reverse, commonly seen on this short-lived type. NGC ID# 25C3, PCGS# 7531

**1854 Gold Dollar, MS62
First Type Two Issue**

- 6124 1854 Type Two MS62 PCGS.** As the first Type Two issue of the series, the 1854 three dollar gold piece is avidly sought by type collectors and series enthusiasts alike. This well-detailed MS62 example displays antique-gold surfaces with satiny mint luster and a few well-scattered minor contact marks. NGC ID# 25C3, PCGS# 7531

**1854 Type Two Gold Dollar, MS63
Above-Average Strike**

- 6125 1854 Type Two MS63 PCGS.** The 1854 Type Two gold dollar, from a mintage approaching 800,000 pieces, are in strong demand for inclusion in type sets. The lustrous yellow-gold surfaces of this Select example exhibit better-struck design elements than typically seen, though the hair at Liberty's temple and forehead is weak. Well preserved, even for an MS63. NGC ID# 25C3, PCGS# 7531

**1854 Gold Dollar, MS63
Short-Lived Type Two Design**

- 6126 1854 Type Two MS63 PCGS.** Always in demand as a representative of the short-lived Type Two design, the 1854 gold dollar is an available issue in most grades, from a mintage of 783,943 pieces. This attractive Select specimen exhibits well-detailed design elements and some interesting clash marks on the reverse. The lustrous yellow-gold surfaces show only minor contact marks and eye appeal is outstanding. NGC ID# 25C3, PCGS# 7531

- 6127 1855 MS61 NGC.** This issue is known for areas of weak strikes and clash marks, as is the case with this MS61 example, though neither poses a distraction. The surfaces reveal yellow and green-gold shades. Scattered marks are present, including a couple near the A in STATES, but they are minuscule. NGC ID# 25C4, PCGS# 7532

**1855 Gold Dollar, MS63
Well-Struck Type Two**

- 6128 1855 MS63 PCGS.** The 1855 gold dollar, sporting a mintage exceeding 700,000 pieces, is a plentiful issue through near-Gem. Gems are scarce and higher-grade pieces are rare. The lustrous yellow-gold surfaces of this Select specimen exhibit better design detail than typically encountered for this date. In particular, the centers, usually weak, are well-defined. Scattered marks determine the grade. NGC ID# 25C4, PCGS# 7532

**1855 Gold Dollar, MS64
Excellent Type Representative**

- 6129 1855 MS64 PCGS.** Produced as a quick fix for the tiny, easily lost Type One gold dollar, the Type Two variant, introduced in 1854, exhibited a slightly larger diameter and modified designs. The higher relief of the new coins, however, resulted in poor strikes and limited durability, which ultimately led to yet another design change just three years later, in 1856. This Choice Uncirculated 1855 example displays frosty, orange-gold luster over both sides, with above-average definition on the central devices. The surfaces are well-preserved, though close examination reveals several light adjustment marks on each side. A pleasing example of this short-lived type. NGC ID# 25C4, PCGS# 7532

**1855-C One Dollar Gold, VF35
Rare Charlotte Small Head Dollar**

- 6130 1855-C VF35 ANACS.** The transition from the Type One Liberty Head gold dollars to the Type Two Indian Princess Head dollars was a difficult one. The new design was nearly impossible to produce on the tiny gold planchets, even though the diameter of Type Two dollars was a sixteenth of an inch larger than the previous Liberty Head design. This Charlotte example is both weakly struck at the centers and well-worn from circulation. Prominent die clashing shows a complete outline of the Princess on the reverse within the wreath. The branch-mint, Type Two dollars are always sought by date and type collectors in all conditions. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25C5, PCGS# 7533

**1856-S Gold Dollar, MS61
Final Type Two Issue**

- 6131 1856-S Type Two MS61 NGC.** The 1856-S gold dollar is the final Type Two issue, an important consideration for type purposes. Only 24,600 examples were struck, and few were saved by contemporary collectors. This lustrous Mint State example displays well-detailed design elements and several interesting clash marks and die cracks. Census: 16 in 61, 11 finer (3/14). NGC ID# 25C8, PCGS# 7536

1856-S Type Two Gold Dollar, MS62
Low Population, Few Are Finer

6132 1856-S Type Two MS62 PCGS. While the other mints transitioned to the Type Three Large Head design as of January 1, 1856, the San Francisco Mint proceeded with Small Head dies it either had on hand, or received without the design changes early in the year. As a result, 24,600 Type Two gold dollars were the sole S-Mint production for the year and the final representatives of the problematic Small Head variety from any mint.

This example is surprisingly well-produced for the issue, with exceptional orange-gold surfaces and brilliant luster. The obverse presents a bold strike with a good deal of prooflike flash throughout the fields. A network of fine die cracks converge on Liberty's portrait and headdress. The reverse displays fully struck, brilliant and frosted surfaces with a widely doubled mintmark (as normally seen). A total of 13 numerically finer pieces are certified by PCGS and NGC combined (3/14). NGC ID# 25C8, PCGS# 7536

1857-C Dollar, AU50
Above-Average Strike

6133 1857-C AU50 PCGS. Variety 1. The only known variety. The date is placed low in the field and slants downward. The mintmark is positioned high near the bowknot. This is the first year of production of the Type Three gold dollar at the Charlotte Mint. Unfortunately, the typical example is poorly struck with numerous planchet flaws. The wheat-gold surfaces of this AU example exhibit somewhat better definition than ordinarily encountered. The letters in LIBERTY for example are clear, and the peripheral lettering and reverse wreath are relatively strong. The O in DOLLAR and 18 in the date are weak, however. Laminations are visible in the upper-left and lower obverse fields. NGC ID# 25CE, PCGS# 7545

1859-C Gold Dollar, AU55
Original Patina

6134 1859-C AU55 NGC. Variety 1. The final gold dollar produced at the Charlotte mint, the 1859-C also boasts the lowest individual mintage of the series (just 5,200 coins), with only 150 to 250 examples believed extant. This piece displays original green-gold coloration overall, with faint orange-gold overtones in the recesses. The strike is soft, as on most examples of this issue, though the surfaces are free of any noticeable abrasions and only light wear is seen over the high points. A small planchet chip in the central reverse is mint-made and not uncommon for this issue. Census: 14 in 55, 50 finer (3/14). NGC ID# 25CM, PCGS# 7552

**1859-C Branch Mint Gold Dollar, MS62
Mint State Rarity**

- 6135 1859-C MS62 NGC.** The final year for gold dollars at the North Carolina facility, with a series-low Charlotte mintage of just 5,235 pieces. The issue is notorious for shoddy production and strike-related problems, but this example is perhaps better than most with above-average obverse detail. The reverse is weak at the date. Both sides show numerous die striations across the bright, yellow-gold surfaces and weakness at the borders. A rarity in Mint State with none finer by NGC. Census: 10 in 62, 0 finer (2/14). NGC ID# 25CM, PCGS# 7552

**1868 Gold Dollar, MS66
Bold Cameo Contrast**

- 6136 1868 MS66 PCGS. CAC.** A lower-mintage issue (10,525 coins), the 1868 gold dollar becomes truly rare beyond the MS64 grade level, with only a handful of examples certified in each succeeding grade. This beautifully preserved Premium Gem showcases heavily frosted devices and deep prooflike mirroring in the fields. A bold strike and lustrous yellow-gold patina provide this high-end piece with exceptional visual appeal. Population: 5 in 66, 6 finer (3/14). NGC ID# 25D4, PCGS# 7567

1874 Gold Dollar, Conditionally Scarce MS67

- 6137 1874 MS67 PCGS.** The 1874 gold dollar, from a mintage of 198,800 pieces, is one of the most common gold dollar coins. PCGS and NGC have graded about 7,000 examples, making the date available with little difficulty through near-Gem. MS65 and MS66 pieces can be located with diligent searching, but higher grade specimens are scarce to rare. The yellow-gold surfaces of this Superb Gem offering exhibit pleasing luster and are nicely preserved. The design elements are well-struck, except that only parts of the LI in LIBERTY show, a common characteristic of the date resulting from die or hub deterioration. A toning spot near the rim between the AM in AMERICA will help to identify the coin. Population: 33 in 67 (1 in 67+), 1 finer (3/14). NGC ID# 25DC, PCGS# 7575

- 6138 1880 MS66 NGC.** Lustrous butter-gold surfaces provide this Premium Gem with strong visual appeal. Very few marks appear on the obverse while the reverse reveals just a few very minor hairlines. The reverse of this gorgeous piece exhibits a slight counter-clockwise rotation.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25DJ, PCGS# 7581

**1880 Type Three Gold Dollar
Ex: Bass, Glittering Superb Gem**

- 6139 1880 MS67 PCGS. Ex: Bass.** This popular issue is one of the anomalies of the series and it is, in many ways, uncommon in all of numismatics. The tiny mintage of 1,600 business strikes and a reported 36 proofs has all the earmarks of an extreme rarity, yet virtually all of the mintage survived. No more than a handful ever circulated, making legitimately worn examples the true rarities, while Gem and finer coins are nearly as common as, for example, the 1881 gold dollar with a mintage six times that of the 1880 date. This glittering example has prooflike tendencies with the devices sharply struck and heavily frosted. A minuscule copper alloy spot in the left obverse field is visible with a glass, but is the only interruption seen on the pristine orange-tinged, yellow-gold surfaces. NGC ID# 25DJ, PCGS# 7581

- 6140 1881 MS66 NGC.** Potent luster and intermingled shades of gold, orange, and green combine to provide this Premium Gem specimen with immediate eye appeal. Closer examination reveals a sharp strike aside from some portions of the dentils. The surfaces are virtually pristine, with a couple of extremely tiny as-made strike-throughs appearing on the reverse. NGC ID# 25DK, PCGS# 7582

**1881 Gold Dollar
Superb Gem Business Strike**

- 6141 1881 MS67 PCGS.** The small mintage of just 7,620 business strikes offered many examples with prooflike surfaces so deep and reflective they were mistaken for proofs, fooling collectors and dealers alike. This remarkable Superb Gem is an unmistakable circulation strike, although areas of prooflikeness exist among the brilliant, frosted surfaces. Attractive, orange-gold toning covers the fields and devices, revealing lemon-gold margins and lilac accents. Abrasion-free surfaces display a full strike. There are no copper stains, die polish lines, or evidence of die clashing that are so often found on gold dollars of the 1880s. This gleaming dollar offers exceptional eye appeal, and is a great example for the type. NGC ID# 25DK, PCGS# 7582

**1882 Gold Dollar, MS67
Supremely Lustrous, Partially Prooflike**

6142 1882 MS67 PCGS. A technically superior Superb Gem example, with gleaming, partially prooflike fields and bold, frosted motifs. Bursts of orange-gold and lime-green color provide lovely interplay with intense mint luster over rich, medium-gold patina. Scarce in this condition, there are few auction appearances of this issue at such a high grade level. The coin is fully struck, with no marks or distractions whatsoever on the supremely lustrous surfaces. Population: 30 in 67 (1 in 67+), 10 finer (3/14). NGC ID# 25DL, PCGS# 7583

6143 1885 MS65 NGC. CAC. From a mintage of scarcely more than 11,000 coins, this Gem Type Three gold dollar displays medium green-gold luster with light orange-gold accents. The devices are sharply struck, and the lightly frosted surfaces reveal no detracting abrasions. NGC ID# 25DP, PCGS# 7586

**1885 Indian Head Gold Dollar, MS67
Fantastic for Type**

6144 1885 MS67 NGC. The mintage of 11,100 pieces is a small number, but not in comparison with other rare Philadelphia issues from the early 1880s. Speculators were able to put aside several high-grade examples of the date. This orange and lemon-gold dollar is a great candidate for type collectors seeking a Superb Gem, Type Three representative. Thick mint frost covers fully struck devices, which contrast with brightly lustrous, prooflike fields. There are no marks or other distractions for fantastic eye appeal. PCGS and NGC combined have certified just five numerically finer 1885 gold dollars (3/14). NGC ID# 25DP, PCGS# 7586

6145 1889 MS64 NGC. A near-Gem specimen, this coin displays gold, peach, orange, and red hues. Strong luster is an additional attribute. The strike is sharp, including the dentils. The reverse reveals thin wispy die cracks, primarily at the outer left portion. NGC ID# 25DU, PCGS# 7590

6146 1889 MS66 PCGS. CAC. Peach and green hues along with potent luster provide this Premium Gem with exceptional visual appeal. The coin exhibits a sharp strike aside from portions of the dentils on the reverse and reveals very few signs of contact, all minuscule, aside from a small mark between the T and E in STATES. A couple of thin wispy die cracks are present on the outer reverse. NGC ID# 25DU, PCGS# 7590

PROOF GOLD DOLLAR

1881 Gold Dollar, PR64 Deep Cameo

6147 1881 PR64 Deep Cameo PCGS. CAC. The 1881 is a low-mintage date as opposed to later dates of gold dollars from the 1880s, with only 87 proofs produced in 1881. There is only one published diagnostic to distinguish proofs from prooflike business strikes, a small unfinished area in the die between the lower left part of the D and the wreath. This near-Gem includes deeply mirrored fields providing a strong background contrast against the heavily frosted devices. A curious strike-through is present on this piece, which should aid as a pedigree identifier. An oval-shaped, nearly perfect O appears to the right of the second S in STATES. Population: 6 in 64 Deep Cameo, 7 finer (3/14). NGC ID# 25ER, PCGS# 97631

CLASSIC QUARTER EAGLES

**1834 Classic Head Quarter Eagle, MS62
Small Head, Variety 1**

6148 1834 MS62 NGC. Breen-6138, Variety 1, R.1. A beautiful straw-gold first year Small Head Classic quarter eagle. The mildly prooflike fields are refreshingly unmarked, and the strike is needle-sharp on the eagle and the obverse stars. Liberty's curves on the top of her head are less prominent than on the Large Head subtype. The Classic Head design was produced through 1839, but the Small Head portrait was only struck from one 1834-dated die pair. Ex: Jules Reiver Collection (Heritage, 1/2006), lot 21687, which realized \$4,312.50. NGC ID# 25FS, PCGS# 7692

1834 Quarter Eagle, MS62
Small Head, Regency Holder
Decidedly Prooflike

- 6149** 1834 MS62 PCGS. Breen-6138, Variety 1, R.1. Housed in an oversized circa-1994 Regency holder with the insert notation "Struck from 'Proof dies, Breen II-1.' The die variety is the Small Head, the first Classic quarter eagle marriage. Proofs were struck from these dies, including lot 5333 in our January 2011 FUN Signature, and lot 5535 from our October 2012 Dallas Signature. Business strikes were also made in quantity. The present piece is certified as a business strike but has reflective fields and an above average strike. Primarily canary-gold although the borders display hints of lilac patina. NGC ID# 25FS, PCGS# 7692

1836 Quarter Eagle, MS61
Breen-6144, Block 8, Head of 1837

- 6150** 1836 Block 8 MS61 PCGS. Breen-6144, Variety 15, R.2. Considerably scarcer than the Script 8 varieties, this Block 8, Classic Head quarter eagle is lustrous and appealing. Auction appearances are normally limited to a few appearances each year for the Block 8 type. While this elusive, lemon-gold example has the technical quality and eye appeal of a finer coin, a few pinscratches in the left obverse field limit it from achieving an even higher grade. Population: 10 in 61, 35 finer (3/14). PCGS# 97694

1839 Classic Head Quarter Eagle, AU55
Seldom Encountered in Mint State

- 6151** 1839 AU55 PCGS. Breen-6148, Variety 21, R.3. Despite a mintage of just over 27,000 coins, this is an underrated issue in all grades, with surviving examples proving more challenging to locate than the production figures would suggest. This issue was produced with a single set of dies, so all of the 1839 quarter eagles were struck with a defective numeral punch, causing the 9 in the date to appear to be a 9 over 8. Intermingled hues of orange and yellow-gold appear on this sharply struck Choice AU representative. Population: 18 in 55, 10 finer (2/14). NGC ID# 25G2, PCGS# 7698

LIBERTY QUARTER EAGLES

1844-D Quarter Eagle, AU55
Original Patina

- 6152** 1844-D AU55 NGC. Variety 5-I. The 1844-D is one of the more easily obtainable quarter eagles from the Dahlonega mint, with 275 to 325 believed known in all grades, though few retain fully original coloration. This Choice AU example displays subtle remnants of mint luster beneath original green-gold patina. Softness of strike is seen on the central devices as is typical of this issue, though the overall appearance remains pleasing. The surfaces are pleasantly free of any noticeable abrasions. NGC ID# 25GV, PCGS# 7736

1846 Quarter Eagle, MS61
Repunched Date, Breen-6181

- 6153** 1846 MS61 NGC. Breen-6181. Repunched Date. The 1846 is surprisingly scarce, especially in Mint State. This bright yellow-gold example is peppered with numerous small abrasions on each side, but the fields are bright and semireflective, adding an extra element of appeal. The strike is sharper than usually seen, showing minor softness on the eagle's plumage. Census: 15 in 61, 3 finer (3/14). NGC ID# 25GZ, PCGS# 7740

**1846-C Quarter Eagle, Well-Struck MS62
Rare in All Grades**

6154 1846-C MS62 NGC. Variety 1. A fire in July, 1844 closed the Charlotte Mint until 1846, limiting coin production. The 1846-C quarter eagle, from a sparse mintage of 4,808 pieces, is therefore rare in all grades. The fire is also presumably responsible for the extensive die rust seen on each side of all surviving 1846-C quarter eagles, as the unused dies accumulated rust on their surfaces, which of course transferred to each of the coins struck from these dies.

NGC and PCGS have seen 130 pieces in all grades, only 11 of which are in mint condition, the single finest being MS64. The present coin is one of four MS62s, with just three finer, two MS63s and an MS64. The striking details are not complete but better than one might imagine given the state of the dies used. The surfaces are bright overall with lighter green-gold color that shows an attractive intermingling of orange. A pinscratch above star 12 pedigrees the coin. Census: 2 in 62, 1 finer (3/14).

Ex: Long Beach Signature (Heritage, 2/2001), lot 6859, where it brought \$23,575; Orlando (FUN) Signature (Heritage, 1/2003), lot 4675; Long Beach Signature (Heritage, 9/2008), lot 3269; Long Beach Signature (Heritage, 2/2009), lot 2469; Los Angeles Signature (Heritage, 8/2009), lot 1222. NGC ID# 25H2, PCGS# 7741

**1847-C Quarter Eagle, Well-Defined AU50
Only Dies for the Issue**

6155 1847-C AU50 PCGS. Variety 1. The only known die pair. The 1847-C quarter eagle is available through About Uncirculated grades, while Mint State pieces are rare. The honey-gold surfaces of this AU specimen display traces of luster in the recessed areas and all design features are well brought up. Both sides reveal only light marks. Population: 36 in 50, 91 finer (3/14). NGC ID# 25H6, PCGS# 7745

6156 1847-C — Cleaned — ANACS. AU58 Details. Variety 1. This remarkably well-struck Charlotte quarter eagle is virtually free of any indication of highpoint wear, but exhibits a finely granular surface texture which slightly subdues the luster. With sharp definition in all design elements, this piece will interest many Charlotte gold specialists.

Ex: ANA Signature (Heritage, 3/2007), lot 1705. NGC ID# 25H6, PCGS# 7745

**1847-O Quarter Eagle, MS61
Elusive in Mint State**

6157 1847-O MS61 NGC. CAC. Variety 3. The 1847-O quarter eagle is scarcely seen in Mint State, and is truly rare finer than MS61. Flashy semiprooflike fields complement lustrous yellow-gold patina over both sides of this example. The strike is weak at the central reverse, as is normally seen on this issue, though only minuscule surface abrasions are detected upon close examination. An important offering for the New Orleans quarter eagle specialist.

Ex: Los Angeles Signature (Heritage, 8/2009), lot 2365. NGC ID# 25H8, PCGS# 7747

**1848-C Quarter Eagle, AU50
Well-Defined and Minimally Marked**

- 6158 1848-C AU50 NGC. Variety 1.** The second 8 in the date is closer to the denticles than to the bust, attributing the variety. The wheat-gold surfaces of this AU specimen display traces of luster in the protected areas. Relatively strong definition shows on the design features and both sides reveal fewer and less severe marks than ordinarily seen on this normally heavily abraded issue. Census: 16 in 50, 81 finer (3/14). NGC ID# 25HB, PCGS# 7750

**1848-D Two and a Half, AU50
Variety 10-N, High Mintmark**

- 6159 1848-D AU50 NGC. Variety 10-N (formerly 10-M).** A moderate mintage of 13,771 makes this Dahlonega date one of the more available issues for branch mint specialists and quarter eagle date collectors. A nice amount of remaining mint luster flows across bright, yellow-gold surfaces of this sharp example. A touch of weakness on the eagle's head and neck exists, but everything else is bold including the star centrils. The 10-N variety is the more common of two die pairs for the issue, with the mintmark high and touching the olive branch. NGC ID# 25HC, PCGS# 7751

- 6160 1852 MS64 NGC. CAC.** Easily obtainable in lower grades, the 1852 quarter eagle becomes elusive in Choice Uncirculated condition, and rare any finer. This CAC-approved near-Gem displays bright yellow-gold luster and frosty surfaces. All design elements are sharply struck, with an overall high degree of eye appeal. NGC has graded just eight numerically finer examples (3/14). NGC ID# 25HR, PCGS# 7763

**1852-O Liberty Quarter Eagle, MS61
Underrated New Orleans Issue**

- 6161 1852-O MS61 NGC. CAC. Variety One.** The 1852-O Liberty quarter eagle is an underrated date, much more difficult to locate than its mintage of 140,000 pieces would indicate. Mint State examples are quite rare. The present coin is an appealing MS61 example with lustrous, greenish-gold surfaces. It displays an unusually bold strike on the obverse, with typical New Orleans Mint weakness on the eagle's forward leg and neck feathers. The position of the mintmark above the fraction bar indicates this is the scarcer of two die pairs known for the issue. Census: 15 in 61, 11 finer (2/14). Ex: *Long Beach Signature* (Heritage, 6/2011), lot 4485, which brought \$5,175.00. NGC ID# 25HU, PCGS# 7766

- 6162 1854-O MS61 PCGS. Variety 3.** Date low, mintmark left. A smooth canary-gold New Orleans example. Luster dominates the margins. The motifs show incompleteness of strike but peripheral elements are sharp. Population: 9 in 61, 13 finer (3/14). Ex: *Milwaukee ANA Signature* (Heritage, 8/2007), lot 2861, which realized \$2,530. NGC ID# 25J2, PCGS# 7772

- 6163 1856-S AU58 NGC.** The 1856-S quarter eagle is much scarcer than its mintage of over 72,000 coins suggests, and is particularly elusive in Mint State. This nearly Uncirculated representative displays original green-gold luster and strong detail; better visual appeal than many low-grade Mint State examples. Census: 43 in 58, 25 finer (3/14). NGC ID# 25JB, PCGS# 7781

- 6164 1857-O AU55 PCGS. Variety 1.** Ex: Stecher Collection. A butter-gold representative with ample luster and typical field abrasions. Purchased in the 1930s at face value by Karl Stecher Sr. from coins turned in by the public following President Roosevelt's March 9, 1933 directive. Ex: *Stecher Collection* (Heritage, 3/2007), lot 1731, which realized \$1,380. NGC ID# 25JE, PCGS# 7784

**1857-O Two and a Half, MS62
Condition Rarity, Final-Year New Orleans Issue**

- 6165 1857-O MS62 PCGS.** The modest mintage of 34,000 pieces was quickly placed into circulation while the New Orleans Mint turned its attention to other coinage, with collectors of the day not really interested in saving examples by mintmark. It was the last time the New Orleans Mint would strike quarter eagles. As a result, few Uncirculated examples of the issue remain. This lightly abraded and highly lustrous example is bold except for minor weakness on the eagle's neck and leg. There are no singularly important distractions on the glittering, medium-gold surfaces. Population: 12 in 62, 3 finer (2/14). NGC ID# 25JE, PCGS# 7784

1859-S Quarter Eagle, MS61
Scarce, Low-Mintage Issue

- 6166** 1859-S MS61 PCGS. This low-mintage issue of 15,200 pieces had a poor survival rate, like many of its West Coast counterparts, due to heavy circulation. This example displays vibrant mint luster and pleasing coloration that ranges from yellow-gold to peach to terra cotta. Minimal surface marks are noted for the grade. Population: 5 in 61, 5 finer (3/14). NGC ID# 25JN, PCGS# 7790

1860-C Variety 1 Quarter Eagle, AU58
Last Charlotte Quarter Eagle Issue

- 6167** 1860-C AU58 NGC. Variety 1. The only known dies for the 1860-C quarter eagle were retired after a small mintage of 7,469 coins. They were the last pieces of that denomination struck before the Charlotte Mint closed at the beginning of the Civil War. This lustrous light yellow-gold example has a few scattered marks on both sides, with a trace of wear on the high points. Census: 23 in 58, 11 finer (3/14). NGC ID# 25JT, PCGS# 7792

1866 Quarter Eagle, AU50
Low-Mintage Rarity

- 6168** 1866 AU50 PCGS. This important post-Civil War quarter eagle is housed in a green-label PCGS holder. Both sides have excellent luster with sharp details and bright yellow surfaces. Only a few examples survive from the 3,080 coin mintage. Population: 4 in 50, 12 finer (3/14). NGC ID# 25K7, PCGS# 7803

- 6169** 1868 — Cleaned — ANACS. MS60 Details. With only 3,625 coins produced, the 1868 quarter eagle is scarce in any grade. This piece displays fully prooflike fields framing sharply struck central devices. Lightly cleaned in the past, the surfaces have since retuned warm orange-gold overall.
Ex: Dallas Signature (Heritage, 3/2007), lot 8865. NGC ID# 25KB, PCGS# 7807

1868-S Quarter Eagle, MS62
Rarely Seen in Mint State

- 6170** 1868-S MS62 NGC. Only 34,000 quarter eagles were struck at San Francisco in 1868, and most saw heavy circulation. The resulting rarity of Mint State pieces makes them highly sought-after by 19th century gold specialists. This sharply struck representative exhibits frosty green-gold luster over both sides. Close examination reveals few surface abrasions for the grade, with overall excellent visual appeal. Census: 2 in 62, 2 finer (3/14). NGC ID# 25KC, PCGS# 7808

1869-S Quarter Eagle, MS61
Lovely Orange Luster

- 6171** 1869-S MS61 PCGS. While gold coins were hoarded along the East Coast, the S-Mint issues entered local circulation and were valuable to the California economy. Probably only a few hundred examples survive from the 29,500 coins mintage of this issue. A lovely Mint State piece, this 1869-S has typical central weakness. The surfaces are fully brilliant with rich orange-gold luster. Population: 8 in 61, 8 finer (3/14). NGC ID# 25KE, PCGS# 7810

1871 Quarter Eagle, MS64
Pleasing, Conditionally Rare Example

- 6172** 1871 MS64 NGC. Quarter eagles were obviously not a high priority type at the Philadelphia Mint between 1864 and 1872, as all of those dates saw low-mintage issues. In 1871, a mere 5,350 quarter eagles were struck, and survivors are rare in mint condition. This attractive near-Gem displays shimmering surfaces adorned in pleasing shades of antique-gold, honey-gold, and rose. The design motifs are crisply defined, and the clean surfaces are distraction-free. Census: 4 in 64, 1 finer (3/14). NGC ID# 25KH, PCGS# 7813

1872-S Quarter Eagle, MS64
One of the Finest Known

6173 1872-S MS64 NGC. This low-mintage issue was heavily circulated, like all of its contemporaries from the mint in San Francisco. Gold coins were not being saved from circulation by collectors at that time. Currently, this coin is tied with two others for finest-graded at NGC. PCGS has rated just one piece at MS64, with none finer.

The strike definition is only incomplete in a few select areas on this example, including the hair detail just above Liberty's forehead and the eagle's neck feathers and left facing leg feathers. The vibrant mint luster is flashy and abundant. A lovely yellow-gold quarter eagle with a handful of wispy field marks that are only detected under a glass. Census: 3 in 64, 0 finer (3/14). NGC ID# 25KL, PCGS# 7816

6174 1877 AU58 NGC. A pinpoint-sharp quarter eagle with considerable semi-prooflike luster. Free from noticeable marks, and housed in a prior generation holder. The 1877 has a tiny emission of 1,632 pieces, and is rare regardless of grade. Census: 38 in 58, 28 finer (3/14). Ex: Steve Glenn Collection (Heritage, 4/2006), lot 2431, which realized \$1,840. NGC ID# 25KW, PCGS# 7826

1877 Quarter Eagle, MS62
Lovely Prooflike Example

6175 1877 MS62 PCGS. Paradoxically, the 1877 quarter eagle is always in demand from series enthusiasts, but the coin seems to be undervalued at current price levels. The prooflike, orange and greenish-gold surfaces of this attractive MS62 example are what might be expected of an issue with a mintage of just 1,632 pieces. All design elements are sharply rendered and only minor abrasions are evident in the fields. Population: 6 in 62, 6 finer (3/14).

Ex: Stamford Coinfest Signature (Heritage, 10/2010), lot 4645. NGC ID# 25KW, PCGS# 7826

6176 1878 MS65 PCGS. Potent luster and vivid rich yellow-gold color provide this Gem with immediate visual appeal. Splashes of orange are also present, primarily on the obverse. The strike is sharp overall, with the eagle's left talon displaying minor weakness. The few marks present are minuscule and do not detract from the appearance of this desirable piece. Population: 37 in 65 (1 in 65+), 7 finer (3/14). NGC ID# 25KY, PCGS# 7828

1878-S Quarter Eagle, Lustrous MS64
Only Four Pieces Finer

6177 1878-S MS64 NGC. Sharply struck and fully lustrous with pinkish tinged, yellow-gold color. The fields are slightly reflective. This is a classic condition rarity, abundant in lower grades including the lowest Mint State grades, but quite rare in higher quality. This example is impressive for its overall aesthetic appeal. Only four other examples have received a higher grade, three at NGC and one at PCGS. Census: 15 in 64, 3 finer (3/14).

Ex: New York Signature (Heritage, 6/2005), lot 6342. NGC ID# 25KZ, PCGS# 7829

6178 1880 MS62 PCGS. A pleasing orange-gold example with good luster, uncommonly smooth surfaces, and an intricate strike. 1880 marked a return to the low mintage years that prevailed between 1863 and 1872. Only 2,960 quarter eagles were struck in 1880, and production remained at very low levels until the end of the 19th century. Population: 8 in 62, 21 finer (3/14).

Ex: Stamford Coinfest (Heritage, 10/2010), lot 4648, which realized \$1,840. NGC ID# 25L4, PCGS# 7832

1883 Quarter Eagle, AU55
Only 1,920 Pieces Struck

- 6179 1883 AU55 NGC.** With only 1,920 coins produced, the 1883 quarter eagle is scarcely seen in any grade and rare in Mint State. The present example boasts virtually complete detail, with just a brush of friction over the high points. Fully prooflike fields deliver substantial visual appeal when tilted under a light, while medium orange-gold peripheries surround original yellow-gold centers. Scattered surface abrasions are present, but hardly detract from the overall appearance. In a prior generation holder. Census: 10 in 55, 52 finer (3/14). NGC ID# 25L7, PCGS# 7835

1887 Quarter Eagle, MS64
Low-Mintage Issue

- 6180 1887 MS64 PCGS.** Struck in limited quantities (only 6,160 coins), the 1887 quarter eagle is scarcely seen in any condition and is rare finer than MS63, with Gem survivors virtually unobtainable. This near-Gem example displays lightly frosted yellow-gold luster with faint orange-gold overtones. The surfaces are well-preserved, with only a few insignificant disturbances seen upon close examination. A well-struck representative of this elusive issue. Population: 18 in 64, 1 finer (3/14). NGC ID# 25LB, PCGS# 7839

1888 Liberty Quarter Eagle, MS65
None Finer at PCGS

- 6181 1888 MS65 PCGS.** From a mintage of 16,001 pieces, the 1888 Liberty quarter eagle is a prime condition rarity in grades above the MS65 level. This delightful Gem exhibits well-detailed design elements and vibrant mint luster on both sides. The pleasing peach-gold surfaces show few signs of contact. Population: 18 in 65, 0 finer (3/14). NGC ID# 25LC, PCGS# 7840

1888 Quarter Eagle, MS65
Conditionally Rare

- 6182 1888 MS65 NGC. CAC.** While more available than many P-mint quarter eagles of this period, the 1888 is nevertheless rarely encountered in Gem condition. This sharply struck, frosty representative displays original yellow-gold luster overall, with a high degree of eye appeal. Close examination reveals just a few faint surface grazes, but they are virtually undetectable to the unaided eye. Census: 28 in 65 (2 in 65+), 6 finer (3/14). NGC ID# 25LC, PCGS# 7840

- 6183 1896 MS65 NGC.** An eye-appealing example, the frosty green-gold peripheries surround fiery-orange centers. The surfaces are well-preserved and showcase a needle-sharp strike on both sides. Scarce at the Gem grade level. Census: 58 in 65 (1 in 65+, 1 in 65 ★), 35 finer (2/14). NGC ID# 25LL, PCGS# 7848

1897 Quarter Eagle, MS67
Impressive and Conditionally Scarce

- 6184 1897 MS67 NGC.** Free of even the most trifling surface flaw, this Superb Gem is an impressive coin that should satisfy the needs of even the most demanding specialist. The design motifs display nearly full definition, and only the hair detail adjacent to Liberty's forehead reveals the slightest degree of softness. The luminous surfaces exhibit lovely pale green and red-peach coloration, along with impeccable preservation. Census: 18 in 67 (1 in 67 ★, 1 in 67+★), 2 finer (3/14). NGC ID# 25LM, PCGS# 7849

1898 Quarter Eagle, MS66+

- 6185 1898 MS66+ NGC.** An impressive Premium Gem, this 1898 quarter eagle survives from a smallish mintage of just 24,000 coins, the fourth *highest* mintage of the two decades from 1880 to 1899. This beauty has brilliant light yellow-gold luster with pristine surfaces. Census: 50 in 66 (3 in 66+, 1 in 66+★), 36 finer (3/14). *From The Northern Lights Collection.* NGC ID# 25LN, PCGS# 7850

**1899 Quarter Eagle, MS66
Only Seven Finer at NGC**

- 6186 1899 MS66 NGC.** The three highest mintage quarter eagles from the 1880 to 1899 period were the 1893 (30,000), 1897 (29,768), and 1899 (27,200) issues. This 1899 has impressive yellow-gold luster and bold design motifs. An important example for the connoisseur. Census: 35 in 66, 7 finer (3/14).
From The Northern Lights Collection. NGC ID# 25LP, PCGS# 7851

**1901 Quarter Eagle, MS67
Beautifully Preserved**

- 6187 1901 MS67 PCGS.** A Superb coin for the type or date collector seeking exceptional quality. The surfaces are essentially undisturbed with virtually no handling marks aside from the faintest ticks detected with a strong loupe. Blazing orange-gold mint luster is seen throughout, with fully struck design elements as is typical for this period. PCGS has certified only 12 examples in this high grade, with a single numerically finer specimen (3/14).
Ex: Long Beach Signature (Heritage, 2/2005), lot 7642. NGC ID# 25LS, PCGS# 7853
- 6188 1902 MS66 PCGS.** Sharply struck, this Premium Gem also exhibits lovely yellow-gold color with hints of green present. The scattered marks appearing are minor in nature, including a tiny mark at the top of Liberty's head and a hair thin mark between the TE of STATES. NGC ID# 25LT, PCGS# 7854
- 6189 1902 MS66+ NGC. CAC.** Rich gold color and appealing luster contribute to the strong eye appeal this high-end Premium Gem specimen possesses. The design elements exhibit strong definition, further adding to the attractiveness. Aside from a few hair thin marks on the reverse near 9 o'clock, there are no signs of contact worthy of mention. NGC ID# 25LT, PCGS# 7854

**1903 Liberty Quarter Eagle, MS67
Ideal Type Coin**

- 6190 1903 MS67 PCGS.** From a mintage of 201,060 pieces, the 1903 Liberty quarter eagle is an available date and a popular choice of type collectors. This spectacular Superb Gem displays sharply detailed design elements and vibrant mint luster on both sides. The well-preserved lemon-yellow surfaces are free of visible distractions. Population: 64 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 25LU, PCGS# 7855

-
- 6191 1904 MS66 PCGS.** Lustrous surfaces provide this Premium Gem specimen with immediate eye appeal. A sharp strike is an additional attribute this coin possesses. Areas of orange and khaki-green color are present. Aside from a mark on Liberty's forehead, very few signs of contact appear. Only 46 examples have achieved higher numeric grades from PCGS (2/14). NGC ID# 25LV, PCGS# 7856

**1905 Quarter Eagle
Superb Gem Type Coin**

- 6192 1905 MS67 NGC.** No distractions of any kind are visible on this Superb Gem quarter eagle. While most examples of this Philadelphia issue are well-produced, few reach the level of this coin with just seven examples certified numerically finer by PCGS and NGC combined (3/14). Intense luster rolls across rich, golden surfaces. A full strike appears on all the devices, and there are no copper discolorations or significant abrasions on the pristine surfaces. Perfect for type. NGC ID# 25LW, PCGS# 7857
-
- 6193 1907 MS66 PCGS.** A Premium Gem example of the final Liberty Head quarter eagle. Original, frosted mint luster adorns both sides, revealing no detracting abrasions. Perfect for type purposes, with a razor-sharp strike and a high degree of eye appeal. NGC ID# 25LY, PCGS# 7859

1907 Quarter Eagle, MS67
Impressively Preserved

- 6194 1907 MS67 NGC.** This is one of those impressive, near-perfect Liberty Head quarter eagles from the last year of their production. The strike is full throughout both sides, and the glowing orange-gold luster takes on an occasional reddish hue near the rims. A small indentation on the lower neck is the only mentionable flaw. NGC has seen only five in numerically finer grades (3/14). NGC ID# 25LY, PCGS# 7859

PROOF LIBERTY QUARTER EAGLE

1900 Quarter Eagle, PR63 Cameo

- 6195 1900 PR63 Cameo PCGS.** An exceptional greenish-gold Select Cameo proof, this piece has deeply mirrored proof surfaces with exceptional field-to-device contrast. Both sides have boldly defined, satin devices. A highly appealing example, and rarely seen in any grade. Population: 7 in 63 Cameo, 11 finer (3/14). NGC ID# 288P, PCGS# 87926

INDIAN QUARTER EAGLES

1908 Two and a Half, MS65

- 6196 1908 MS65 PCGS.** Even with the natural inclination to save the first issue of a new design, Gem 1908 quarter eagles are elusive. The present lot is well struck and has a hint of sea-green across the otherwise yellow-orange fields. Satiny and attractive with only minimal contact.
Ex: Orlando FUN Signature (Heritage, 1/2007), lot 5518, which realized \$4,600. NGC ID# 288Y, PCGS# 7939

1908 Two and a Half, MS65
First-Year Pratt Design

- 6197 1908 MS65 PCGS.** Generous luster proceeds from each side of this Gem 1908 quarter eagle, the first year of the new Bela Lyon Pratt design. This example shows deep orange-gold color with full luster and a strike that is a tad soft on the front portion of the eagle's wing. A couple of thin scrapes appear under ER of LIBERTY on the obverse. NGC ID# 288Y, PCGS# 7939

1908 Quarter Eagle, MS65
Beautifully Preserved

- 6198 1908 MS65 PCGS. CAC.** The 1908 quarter eagle was saved in ample numbers as a first-year issue, resulting in many high-grade survivors, however, it is nevertheless highly sought in Gem condition as a type representative. The present piece displays nearly undisturbed green-gold luster with a softly frosted texture overall. Some soft definition is seen on the eagle's wing feathers, as is encountered on all examples of this issue, while all other elements are bold. Housed in an old green label holder. NGC ID# 288Y, PCGS# 7939

1908 Indian Head Quarter Eagle, MS65
Popular First Year of Issue

- 6199 1908 MS65 NGC. CAC.** This is the first year of the Indian Head design on the quarter eagle, and is extremely popular as such, evidenced by the very large number of certified pieces through MS65. The population tapers off significantly any finer. Lustrous honey-gold surfaces display well-struck devices except for weakness on the eagle's shoulder. Some minute marks limit the grade. NGC ID# 288Y, PCGS# 7939

**1908 Indian Head Quarter Eagle
First-Year Premium Gem**

- 6200 1908 MS66 PCGS.** First-year production issues faced the new Indian Head design when the Philadelphia Mint struck 564,800 quarter eagles. Improper die preparation resulted in some softness on the eagle's shoulder and wing. This Premium Gem demonstrates the weakness on the wing, but is sharply struck otherwise and the sunken design elements are sharp and attractive. Peach gold surfaces display frosted luster and orange accents over the multilevel devices. Seldom seen any finer, with just five examples in a higher numeric grade by PCGS and NGC combined (2/14). NGC ID# 288Y, PCGS# 7939

**1908 Indian Two and a Half, MS66
Scarce Any Finer**

- 6201 1908 MS66 PCGS.** The attractive yellow-gold surfaces of this Premium Gem reveal areas of deeper gold color, particularly on the reverse, adding to the eye appeal. The strike is sharp and the few marks present are minuscule. Housed in a green label holder. Only two examples have achieved higher numeric grades from PCGS (3/14). NGC ID# 288Y, PCGS# 7939

**1908 Indian Quarter Eagle, MS66
Ideal First-Year Type Coin**

- 6202 1908 MS66 PCGS. CAC.** Bela Lyon-Pratt's innovative incuse Indian design made its debut on the quarter eagle denomination in 1908, with a substantial mintage of 564,800 pieces. The date is prized by series enthusiasts and first-year type collectors alike. This delightful Premium Gem exhibits sharply detailed design elements and well-preserved yellow and rose-gold surfaces, with satiny mint luster and few signs of contact. Visual appeal is outstanding and the 1908 is a prime condition rarity in higher grades. Housed in a green label holder. PCGS has graded two numerically finer examples (3/14). NGC ID# 288Y, PCGS# 7939

- 6203 1909 MS63 NGC.** Medium yellow-gold luster covers both sides, with orange-gold overtones. The surfaces show only a few minor abrasions, with sharp detail in the design elements. Upper-end for the grade. NGC ID# 288Z, PCGS# 7940

- 6204 1909 MS64 NGC.** A beautifully preserved near-Gem, this satiny quarter eagle exhibits surprisingly few abrasions for the grade, with the raised fields and the Indian's cheek particularly clean. The strike is razor-sharp, with soft green-gold luster on both sides. An incredible coin for the grade. NGC ID# 288Z, PCGS# 7940

- 6205 1909 MS64 NGC.** Hues of gold, yellow, and green combine to provide this near-Gem example with a lovely appearance. The strike is sharp, adding to the appeal. Relatively few marks are present and they are minuscule. A pleasing piece from an underrated issue. NGC ID# 288Z, PCGS# 7940

**1909 Quarter Eagle, MS65
Rarely Seen Finer**

- 6206 1909 MS65 PCGS.** Easily obtainable in lower grades, the 1909 quarter eagle becomes much more elusive at the Gem grade level, and is rare finer than MS65. This Gem example displays softly frosted luster beneath fiery apricot-gold patina with tiny rose accents in the crevices. The beautifully preserved surfaces exhibit none of the unsightly scratches that typically plague this issue, and the strike is razor-sharp overall. An outstanding representative, housed in an old green label holder. PCGS has certified only 17 numerically finer examples (3/14). NGC ID# 288Z, PCGS# 7940

**1909 Quarter Eagle, MS65
Far Above Average**

- 6207 1909 MS65 PCGS.** This gorgeous second-year Indian quarter eagle has brilliant and satiny yellow luster with impressive green and rose overtones on each side. The 1909 is plentiful in lower grades, and it is an ideal date or type collection coin, having an average certified grade of 61. Gem specimens are seen with some frequency, but rarely with the eye appeal of this piece. PCGS has only certified 17 finer submissions (3/14). NGC ID# 288Z, PCGS# 7940

1909 Indian Quarter Eagle, MS65
Seldom Encountered Any Finer

6208 1909 MS65 NGC. CAC. An attractive Gem specimen of this early series date, with needle-sharp definition on all design elements and strong satiny mint luster. The pleasing orange-gold surfaces show highlights of rose and yellow, with no mentionable distractions. Eye appeal is outstanding. NGC has certified 23 numerically finer examples (3/14). NGC ID# 288Z, PCGS# 7940

6209 1910 MS63 NGC. A fully struck, pleasing example. Satiny yellow-gold luster and peach-gold overtones cover both sides. The surfaces exhibit minimal abrasions, with the obverse particularly clean. NGC ID# 2892, PCGS# 7941

1910 Indian Quarter Eagle, MS65
Seldom Encountered in Higher Grades

6210 1910 MS65 PCGS. A pleasing Gem, this coin exhibits attractive color and strong detail. The 1910 Indian quarter eagle production consisted of 492,000 pieces, but the date is scarce at the MS65 level, with few coins achieving higher numeric grades. None of the scattered marks is worthy of individual mention. NGC ID# 2892, PCGS# 7941

6211 1911 MS64+ PCGS. CAC. Lovely honey-gold color is present on this high-end near-Gem, with areas of orange appearing on the reverse. The strike is sharp and the few marks present are minor. Despite production of 704,000 1911 quarter eagles, surviving examples are surprisingly elusive at the upper grade levels, with the number dropping drastically at the Gem level. NGC ID# 2893, PCGS# 7942

1911 Quarter Eagle, MS65
Rarely Encountered Finer

6212 1911 MS65 NGC. A lack of significant surface abrasions earns this lustrous quarter eagle a Gem-level numeric grade, and well-struck design elements only add to the visual appeal. Pale green-gold patina blankets both sides, delivering a pleasing level of eye appeal. NGC has certified only seven numerically finer examples (3/14). NGC ID# 2893, PCGS# 7942

Gem 1911 Quarter Eagle
Only One Numerically Finer at PCGS

6213 1911 MS65 PCGS. Despite its moderate mintage of 704,000 pieces, the 1911 quarter eagle becomes elusive at the Gem grade level, and is rarely seen finer. This example is sharply struck and displays softly frosted luster beneath light orange and green-gold hues. The surfaces are beautifully preserved, providing this coin with a high degree of eye appeal. Only one piece has graded numerically finer at PCGS (3/14). NGC ID# 2893, PCGS# 7942

1911 Indian Quarter Eagle, MS65
Conditionally Rare in Finer Grades

6214 1911 MS65 NGC. The 1911 Indian quarter eagle is a scarce issue at the Gem level, and a prime condition rarity in finer grades. This delightful Gem exhibits razor-sharp definition on all design elements and the lustrous greenish-gold surfaces show no mentionable distractions. NGC has graded seven numerically finer examples (3/14). NGC ID# 2893, PCGS# 7942

1911-D Indian Head Quarter Eagle
AU Details

6215 1911-D — Improperly Cleaned — NGC Details. AU. A bit of russet color covers the obverse fields of this lightly hairlined quarter eagle. Although not obvious, the cleaning described by NGC is visible with a loupe. Most of the design elements are sharp on the coin, but the mintmark is not bold. Even so, the crucial D is completely outlined and the interior space of the D is defined. For those needing the key date of the series, this example with AU Details is an opportunity.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, AU58
Highly Attractive Key-Date Example

6216 1911-D AU58 NGC. This highly attractive example displays a bold D mintmark. Well-struck with surprisingly few surface marks, this coin does not show any obvious signs of circulation. The lovely light antique-gold coloration is another important attribute, further increasing the eye appeal of this near-Mint key issue. NGC ID# 2894, PCGS# 7943

1911-D Indian Quarter Eagle, AU58
Bold Mintmark

6217 1911-D AU58 PCGS. This attractive near-Mint example shows just a trace of wear on the well-detailed design elements and the all-important mintmark is boldly impressed. The lustrous orange-gold surfaces display a few highlights of green and rose, and abrasions are minimal for the grade. An attractive specimen of this sought-after issue. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS60
The 'Strong D' Variety

6218 1911-D MS60 NGC. Strong D. With the lowest mintage of the series (only 55,600 coins), the 1911-D is the most sought-after Indian quarter eagle. Two varieties are known, differentiated by the clarity of the mintmark, and while the Weak D variety is scarcer, the Strong D variety is more desirable among date collectors. This example exhibits well-struck devices and even yellow-gold patina. Scattered abrasions define the grade, but none are individually distracting. NGC ID# 2894, PCGS# 7943

1911-D Two and a Half
Uncirculated Details
Bold D Mintmark

6219 1911-D — Improperly Cleaned — NGC Details. Unc. A bold Denver mintmark and an above average strike combine with coruscant luster to ensure the eye appeal. Although designated as cleaned by NGC, no hairlines are readily evident, and the wheat-gold surfaces lack mentionable marks. The 1911-D has less than one-fourth the mintage of the 1914, the next-rarest issue of the series. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS61
Popular Series Key

6220 1911-D MS61 NGC. A desirable Mint State bold D specimen, this coin exhibits a sharp strike and light khaki-gold surfaces. Although a few tiny scattered marks are present, there are none worthy of individual mention on this lovely piece representing the key date 1911-D quarter eagle. The 1911-D mintage consisted of a mere 55,680 coins.

From The Philip Poier Collection. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS62+
Strong D

6221 1911-D MS62+ PCGS. From a series-low mintage of 55,600 pieces, the 1911-D is the acknowledged key to the Indian quarter eagle series. Most examples seen are in lower Mint State grades and the issue is scarce at the MS63 level, making this high-end MS62 specimen a good balance of quality and value. The design elements are sharply detailed and the important D mintmark is quite bold and well-formed. The light orange-gold surfaces radiate vibrant mint luster, with a few highlights of green, and only minor signs of contact are evident. Eye appeal is quite strong for this issue, which is sometimes lackluster and weakly struck on the mintmark. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS63
Lovely Orange-Gold Example

6222 1911-D MS63 NGC. The purchaser of this Select 1911-D quarter eagle will be well on his/her way to completion of a complete Indian Head set of the denomination, as the 1911-D is the sole key to the series, both an absolute and conditional rarity. Struck to the extent of only 55,600 pieces, the 1911-D was a rarity virtually from the day it was struck. This Select Mint State example will benefit any set in which it resides, showing glowing orange-gold coloration with a bold strike and mintmark (especially important). A tiny tick under the chieftain's eye and two small reeding marks on the reverse are the only mentionable signs of contact. NGC ID# 2894, PCGS# 7943

1911-D Quarter Eagle, MS63
Well-Preserved Key Date Example

6223 1911-D MS63 NGC. The 1911-D Indian Head quarter eagle is a curiosity, in that it is a mintmarked issue that is the sole key (irrespective of conditional rarity) to the series. While many examples show a bold D mintmark (and are thus valued by the collectors who own them), others have mintmarks that are weak to the point of being indistinguishable.

This boldly mintmarked example displays smooth surfaces and lovely antique-gold coloration. The overall strike definition is noticeably stronger-than-average for the issue, and not only on the mintmark. The eagle's neck feathers, shoulder area, and talons are likewise more crisply rendered than usual. The satiny surfaces are nearly mark-free. NGC ID# 2894, PCGS# 7943

6224 1912 MS63 NGC. A pleasing, satiny example. Razor-sharp detail is present in the Indian's headdress and the eagle feathers, with medium orange-gold luster overall. The surfaces are well-preserved, with minimal abrasions in the fields. NGC ID# 2896, PCGS# 7944

6225 1912 MS63+ PCGS. CAC. Availability of the 1912 quarter eagle begins a gradual descent in MS63, with Gem examples highly elusive. This Plus-graded piece displays remarkably clean fields with sharply impressed design elements. Faint orange-gold overtones accent softly frosted green-gold luster overall, delivering a high degree of eye appeal. NGC ID# 2896, PCGS# 7944

1912 Quarter Eagle, MS64
Scarcely Seen Finer

6226 1912 MS64 PCGS. Softly frosted luster complements pale orange-gold patina on both sides of this near-Gem representative. The strike is razor-sharp and the surfaces reveal only a few minuscule abrasions, with none worthy of individual mention. An overall pleasing example with above-average visual appeal for the issue. NGC ID# 2896, PCGS# 7944

1912 Quarter Eagle, MS65
Conditionally Scarce

6227 1912 MS65 PCGS. CAC. Although the 1912 mintage of Indian quarter eagles consisted of 616,000 pieces, the third highest mintage in the series, the number of certified examples graded Gem and finer is surprisingly small. PCGS and NGC have each assigned the MS65 grade to just over five dozen specimens. A wonderful representative, this Gem possesses strong eye appeal, due in part to attractive caramel-gold color, a sharp strike, and minimal marks. Rich luster is an additional attribute. PCGS has awarded higher numeric grades to only 5 examples, while NGC has assigned higher grades to only 2 pieces (3/14). NGC ID# 2896, PCGS# 7944

6228 1913 MS64 PCGS. Boasting the highest mintage figure of the series, the 1913 quarter eagle is nevertheless elusive in Gem condition. This softly frosted near-Gem exhibits sharply struck devices and remarkably clean surfaces, with the overall appearance of a higher grade. NGC ID# 2897, PCGS# 7945

6229 1913 MS64 PCGS. Although both sides of this near-Gem are attractive, the reverse is arguably the more appealing side due to the richness of the pumpkin-gold color present. A rich red alloy spot appears above the designer's initials on the obverse. A few scattered marks are present, but they pose minimal distraction, if any. NGC ID# 2897, PCGS# 7945

1913 Two and a Half, MS65 Few Finer

6230 1913 MS65 PCGS. A lovely piece, this Gem displays almond-gold color along with hints of green. The design elements exhibit a pleasing degree of definition and the surfaces reveal few abrasions, all minuscule. A couple of tiny pinpoint flecks appear on the obverse. Only 7 examples have exceeded the Gem level at PCGS (3/14). NGC ID# 2897, PCGS# 7945

6231 1914 MS62 PCGS. With the second-lowest mintage figure of the series, the 1914 Indian quarter eagle is highly sought-after in pleasing Mint State condition. This minimally abraded piece delivers excellent visual appeal with medium olive-gold patina overall, and faint orange and rose overtones throughout. A well-detail, satiny representative. NGC ID# 2898, PCGS# 7946

6232 1914 MS62 NGC. A better date in Mint State with a mintage of only 240,000 pieces. This example displays medium yellow-gold luster with a satiny appearance. Sharply detailed motifs deliver exceptional visual appeal for the grade, with only light abrasions in the raised fields.
From The Philip Poier Collection. NGC ID# 2898, PCGS# 7946

6233 1914 MS62 NGC. Ex: Seminole Collection. With the second-lowest mintage of the series (240,000 coins), the 1914 quarter eagle becomes increasingly scarce finer than MS62. Dusky green-gold coloration covers both sides of this representative, with no outwardly distracting surface faults. Well-struck motifs and satiny luster add to the appeal of this piece.
Ex: Dallas Signature (Heritage, 11/2007), lot 1647. NGC ID# 2898, PCGS# 7946

1914 Indian Head Quarter Eagle, MS63 Exceptional Color, Rich Luster

6234 1914 MS63 NGC. Emphasis is on the word "select" for this Select Uncirculated quarter eagle, which is exceptionally toned in blaze-orange hues with rich, underlying luster and violet overtones. A bold strike provides sharp detail for the sunken design elements. Some isolated, delicate hairlines and a few light abrasions on the high fields limit the technical grade, but this low-mintage Philadelphia issue has eye appeal suggestive of an even higher grade. NGC ID# 2898, PCGS# 7946

Select 1914 Quarter Eagle Low-Production Year

6235 1914 MS63 PCGS. Usually available in lower grades, availability of the 1914 quarter eagle progressively drops finer than MS62, and the date is rarely encountered at the Gem grade level. This softly frosted example exhibits sharp central devices and rich orange-gold patina over both sides. The surfaces are free of any outwardly detracting abrasions, and deliver pleasing visual appeal overall. NGC ID# 2898, PCGS# 7946

1914 Quarter Eagle, MS63 Bold Strike

6236 1914 MS63 PCGS. CAC. With the second lowest mintage of the series (240,000 coins), the 1914 quarter eagle stands as one of the scarcest issues in Mint State. The present example displays above-average luster for the issue, with pleasing yellow-gold color overall. Bold details complement minimally abraded surfaces on this CAC-approved representative. NGC ID# 2898, PCGS# 7946

**1914 Quarter Eagle, MS64+
Second Lowest Indian Head Mintage**

- 6237 1914 MS64+ PCGS.** The mintage of 240,000 quarter eagles in 1914 was the second lowest production behind the key 1911-D. Examples are plentiful in grades up to MS64, and elusive in finer grades. Even MS64+ examples rarely appear in the market place. One of those is the present satiny example with brilliant and lustrous wheat-gold surfaces, bold design motifs, and minimal marks. PCGS has only certified 56 finer examples (3/14). NGC ID# 2898, PCGS# 7946

**1914 Quarter Eagle, MS64+
Conditionally Scarce Low-Mintage Date**

- 6238 1914 MS64+ PCGS. CAC.** Long regarded as a noteworthy rarity in the Indian quarter eagle series at the Gem grade level or finer, the 1914 also has the second-lowest mintage of the entire series. This lovely near-Gem displays radiant mint luster undiminished since the day that it was struck, and pleasing light coloration. A few surface marks are detected with the aid of a loupe, but they are all minuscule. NGC ID# 2898, PCGS# 7946
- 6239 1914-D MS63 NGC.** Fiery orange-gold luster illuminates both sides of this flashy quarter eagle. The strike is full with noticeably strong definition in the headdress and the upper edge of the eagle's left wing. The surfaces exhibit minimal abrasions and outstanding eye appeal. NGC ID# 2899, PCGS# 7947

**1914-D Indian Quarter Eagle, MS64
Challenging Issue in Higher Grades**

- 6240 1914-D MS64 NGC. CAC.** Lovely caramel-gold color and attractive luster add to the appeal of this near-Gem example. The coin exhibits a pleasing degree of design detail. The number of certified examples drops dramatically above the MS64 level, with NGC having awarded higher numeric grades to only 43 examples (3/14). NGC ID# 2899, PCGS# 7947

- 6241 1915 MS63 NGC.** This satiny, fully struck quarter eagle displays a high degree of eye appeal with deep orange-gold patina on both sides. The surfaces reveal minimal abrasions for the grade, with none readily noticeable. NGC ID# 289A, PCGS# 7948

**1915 Quarter Eagle, MS65
Rarely Found Finer**

- 6242 1915 MS65 PCGS.** The rich caramel-gold surfaces of this Gem exhibit splashes of deep orange on the obverse. Adding to the eye appeal, the strike is sharp and the coin is minimally abraded. A pleasing degree of luster is also present. Only 4 examples have surpassed the MS65 level at PCGS (3/14). NGC ID# 289A, PCGS# 7948

- 6243 1925-D MS65 NGC.** One of the more available Indian quarter eagles in higher grades, the 1925-D is popular among type collectors. This frosty representative displays rich apricot-gold coloration on both sides, with well-defined central details. Close examination reveals only a few light surface faults, none of which preclude full Gem status. NGC ID# 289B, PCGS# 7949

- 6244 1926 MS65 NGC.** Well-detailed devices and excellent surface preservation are among the pleasing attributes this softly frosted Gem has to offer, while pale orange-gold luster further aids the outstanding visual appeal. NGC has seen just 19 numerically finer pieces (3/14). NGC ID# 289C, PCGS# 7950

- 6245 1926 MS65 PCGS. CAC.** A lovely olive-gold type coin. Luster sweeps lightly abraded fields and motifs. The strike is unusually bold, even on lowest headdress feathers. Encased in a green label holder. NGC ID# 289C, PCGS# 7950

- 6246 1927 MS64 PCGS.** Deep orange-gold luster covers lightly frosted surfaces on this boldly struck, near-Gem type representative. The surface preservation is reminiscent of a finer grade, save for a faint pinscratch in the left obverse field which precludes such a designation. NGC ID# 289D, PCGS# 7951

- 6247 1927 MS64+ NGC.** Gold and khaki-green surfaces add to the eye appeal of this high-end near-Gem representative. The obverse fields reveal a number of hair thin marks, though they pose only a minor distraction, if that.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 289D, PCGS# 7951

- 6248 1927 MS65 NGC.** Generally well-made, the 1927 quarter eagle is an ideal candidate for type purposes. This boldly struck Gem example displays rich green-gold luster overall, with deep orange-gold overtones on both sides, while only a few faint surface scratches in E PLURIBUS preclude an even higher grade. NGC has certified just 10 numerically finer representatives (3/14). NGC ID# 289D, PCGS# 7951

- 6249 1928 MS65 PCGS.** Praiseworthy for the issue, this coin is free of bothersome striking incompleteness with an overall bold impression, save for the lowest feather on the headdress. Both sides are richly colored in reddish-gold hues with intact luster and a pleasingly frosted sheen. In terms of total number of coins known, the 1928 is similar in rarity to the 1927. The former issue, however, is more challenging to locate than the 1927 (as well as the 1926) with surfaces that are as smooth as those of the present Gem. Housed in a green label holder.
Ex: Long Beach Signature (Heritage, 6/2004), lot 8805, which realized \$3,565. NGC ID# 289E, PCGS# 7952

6250 1928 MS65 NGC. Softly frosted green and orange-gold hues cover each side of this Gem type representative. Sharply struck design elements and a lack of any noticeable abrasions only add to the visual appeal. Just 17 specimens have graded numerically finer at NGC (3/14). NGC ID# 289E, PCGS# 7952

**1929 Indian Quarter Eagle, MS65
Only Three Finer Coins at PCGS**

6251 1929 MS65 PCGS. No quarter eagles were struck after 1929, making the date an especially important one for type purposes. This attractive Gem exhibits well-detailed design elements and well-preserved yellow-gold surfaces that show a few highlights of red. No mentionable distractions are evident. PCGS has graded three numerically finer examples (3/14). NGC ID# 289F, PCGS# 7953

THREE DOLLAR GOLD PIECES

6252 1854 AU50 NGC. A well-defined example with smooth surfaces and lovely khaki-gold toning. This first-year issue had the highest mintage of the entire three-dollar series, making it one of the best choices for a type coin. NGC ID# 25M3, PCGS# 7969

6253 1854 AU58 PCGS. A lovely butter-gold and lime-green Borderline Uncirculated example of the single-year small DOLLARS subtype. Devoid of remotely relevant marks, but the grade is limited by slight friction on the high points of Liberty's curls. NGC ID# 25M3, PCGS# 7969

**1854 Three Dollar, MS62
Lustrous First-Year Example**

6254 1854 MS62 PCGS. An optimistic mintage of 138,618 pieces turned out to be the only year when production exceeded 100,000 coins for the three dollar gold series. This brilliant example is Mint-fresh and attractive, with exceptionally strong luster over apricot-gold surfaces with olive-green highlights. A sharp strike is seen everywhere but the highest points of Liberty's hair strands. Scattered small abrasions and minor marks determine the assigned grade. NGC ID# 25M3, PCGS# 7969

**1854-O Three Dollar, AU58
Only O-Mint Three**

6255 1854-O AU58 NGC. The near-Mint State grade of the present 1854-O three dollar puts it in the small minority of survivors, as most certified examples grade no better than Choice XF. This piece is one of 89 submissions in this grade at NGC, including a sure but unknown number of duplications, and there are 20 finer (3/14). The sandy-gold surfaces on this piece are still quite lustrous, and the strike is bold overall, save for the lapped bow on the wreath that signifies the commoner Variety 2, actually a die state. A few stray obverse marks are strictly in concert with the grade. Despite the moderate mintage of 24,000 coins, the New Orleans Mint would never follow up with a second O-mint three dollar issue. This is a lovely high-end example for the grade. NGC ID# 25M5, PCGS# 7971

1857 Three Dollar Gold, MS63
Few Are Certified Finer

- 6256 1857 MS63 PCGS.** A brilliant, yellow-gold example, with prooflike flash surrounding frosted devices. The portrait displays an especially bold strike. Die striations are common on this Philadelphia issue, and they are seen on this coin near the margins of both the obverse and the reverse. Relatively few abrasions have nowhere to hide on the reflective fields, yet a single, small scrape beneath Liberty's bust truncation is the most obvious mark. Population: 20 in 63, 5 finer (2/14). NGC ID# 25MA, PCGS# 7976

1858 Three Dollar Gold, AU55
Sought-After Low-Mintage Issue

- 6257 1858 AU55 PCGS. CAC.** The 1858 three dollar gold piece claims a tiny mintage of 2,133 pieces, and few examples were saved by contemporary collectors, making the date the rarest issue of the 1850s. This Choice AU specimen offers lightly abraded yellow-gold surfaces that show traces of prooflike reflectivity in sheltered areas. Population: 18 in 55, 22 finer (3/14). NGC ID# 25MC, PCGS# 7978

1859 Three Dollar, MS63
Early Series Type Coin

- 6258 1859 MS63 NGC.** The business-strike 1859 three dollar gold piece claims a mintage of 15,558 pieces, extremely small by modern standards, but relatively generous in the context of the series. This well-detailed Select example offers antique-gold surfaces with satiny mint luster and a few minor contact marks on both sides. Census: 9 in 63 (1 in 63+), 23 finer (3/14). NGC ID# 25MD, PCGS# 7979

- 6259 1860-S XF40 NGC.** This is the final and second-rarest of five San Francisco three dollar gold issues. From a low mintage of 7,000 coins, most were heavily circulated and many survivors are either impaired or in low grades. This is a smooth-looking piece with light khaki color and a somewhat subdued appearance. NGC ID# 25MF, PCGS# 7981

- 6260 1863 — Obverse Improperly Cleaned — NGC Details. AU.** Despite NGC's findings to the contrary, this Civil War-era three dollar piece does not exhibit the typical look of a cleaned coin. Both sides display medium green-gold coloration with orange-gold overtones. A visually attractive representative with a bold strike and only light wear on the high points of the devices. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

- 6261 1866 — Improperly Cleaned — NGC Details. AU.** With a scant mintage of only 4,000 pieces, the 1866 is among the more elusive issues in the three dollar gold series. The present representative exhibits signs of light cleaning, but retains a pleasing green-gold patina and strong detail. The surfaces are virtually free of noticeable abrasions. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25MM, PCGS# 7987

1868 Three Dollar Gold, MS61
Lustrous Colorful Surfaces

- 6262 1868 MS61 NGC.** The surfaces are primarily orange-gold, but glints of lilac appear in the protected interstices, for example the recesses around LIBERTY and within the 3 on the reverse. Scattered extensive marks are small but numerous, accounting for the grade. The mintage was 4,850 circulation strikes. Census: 44 in 61, 35 finer (3/14). NGC ID# 25MP, PCGS# 7989

- 6263 1869 AU58 NGC.** One of just 2,500 coins struck, this near-mint three dollar piece exhibits only slight friction over the high points of the design. The surfaces display lustrous green-gold patina with orange-gold overtones, while remnants of prooflike mirroring are seen in the protected regions. Census: 46 in 58, 25 finer (3/14). NGC ID# 25MR, PCGS# 7990

- 6264 1870 — Improperly Cleaned — NGC Details. AU.** From a low mintage of only 3,500 pieces, this still-attractive three dollar piece displays strong detail, with no major surface abrasions. Lightly cleaned long ago, both sides have long since retoned a medium orange-gold patina. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25MS, PCGS# 7991

**1870 Three Dollar, Sharply Struck MS61
Decent for Designated Grade**

6265 1870 MS61 PCGS. Despite the numerous tiny marks and light hairlines in the fields, this three dollar piece still displays some prooflikeness that is characteristic of this issue. In other words, the fields still accentuate the semifrosted motifs, especially on the obverse. All design elements are sharply impressed. A shallow scratch in the field between the date and LLA in DOLLARS will help to identify the coin. All in all, this is a rather nice coin for an MS61 that will fit comfortably in a three dollar gold collection or serve as a type representative.. Population: 9 in 61, 24 finer (3/14). NGC ID# 25MS, PCGS# 7991

6266 1874 AU55 NGC. One of the more obtainable issues from the series, the 1874 three dollar piece is an attractive prospect for type purposes. The present example displays mainly green-gold surfaces, with remnants of yellow-gold luster in the protected areas. Well-detailed, with no major surface faults.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25MX, PCGS# 7998

6267 1874 MS61 NGC. Bright yellow-gold color and strong luster provide this piece with a lovely appearance. A number of contact marks limited the grade of this piece, including several hair thin marks, primarily on the upper obverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25MX, PCGS# 7998

**1874 Three Dollar Gold, MS63
Visually Attractive Example**

6268 1874 MS63 PCGS. With excellent eye appeal for the Select Uncirculated level, this sharp three dollar gold is vibrantly lustrous beneath an attractive, orange-gold patina. Lilac accents appear amid shifting luster as the coin rotates under light. A bold strike adds to the appeal. Only a few abrasions dot the clean fields and are visible with a loupe, including a cluster of tiny marks on Liberty's cheek that define the grade. NGC ID# 25MX, PCGS# 7998

**1874 Three Dollar Gold, MS64
Favorite Type Issue**

6269 1874 MS64 PCGS. CAC. The 1874 three dollar gold piece claims a large business-strike mintage of 41,800 pieces, making it an available date and a favorite choice of type collectors. This attractive Choice specimen is well-detailed and lightly marked, with vibrant mint luster and traces of prooflike reflectivity in selected areas. Population: 93 in 64 (5 in 64+), 16 finer (3/14). NGC ID# 25MX, PCGS# 7998

6270 1878 AU50 NGC. Intermingled shades of sun-gold and peach are present on this lightly circulated specimen. Areas of dirt appear in the protected areas of this piece, particularly on the obverse, attesting to the originality of this example. A mark on Liberty's cheek poses minimal distraction.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25MZ, PCGS# 8000

6271 1878 AU58 NGC. Sun-gold color, along with areas of peach, adds to the attractiveness of this near-Mint representative. None of the marks present are worthy of individual mention, adding to the appeal of this lightly circulated piece.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25MZ, PCGS# 8000

6272 1878 MS61 NGC. One of the more available and eye-appealing issues in the three dollar gold series, the 1878 is ideal for type purposes. The present example displays glowing orange-gold luster overall, with pale rose-gold in the crevices. No outwardly distracting abrasions are present. NGC ID# 25MZ, PCGS# 8000

1878 Three Dollar, Well-Struck MS62

6273 1878 MS62 NGC. The 1878 three dollar gold piece, sporting a mintage of more than 82,000 pieces, is the most common date of the series. NGC and PCGS have graded several thousand examples through MS65. The yellow-gold surfaces of this MS62 coin exhibit well-struck design elements. A few minute marks are consistent with the designated grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25MZ, PCGS# 8000

**1878 Three Dollar Gold, MS64
Popular Type Coin**

6274 1878 MS64 NGC. The large mintage of 82,304 business-strike three dollar gold pieces in 1878 makes the date an available one, and a favorite choice of type collectors. This attractive Choice example displays well-detailed design elements and vibrant satiny mint luster. The orange and rose-gold surfaces show only minor contact marks and eye appeal is outstanding. NGC ID# 25MZ, PCGS# 8000

6275 1883 — Improperly Cleaned — NGC Details. Unc. A surprisingly available date despite its low mintage of 900 coins. This example is sharply struck on all elements, and seems free of wear on both sides. A few wispy marks are noted, along with faint hairlines from improper cleaning. NGC ID# 25N6, PCGS# 8005

**1883 Three Dollar Gold Piece, MS62
Only 900 Business Strikes Minted**

6276 1883 MS62 PCGS. This is one of few regular issue U.S. gold coins that had a three-digit business strike mintage, just 900 coins. Even with the additional 89 proofs, the total production was less than 1,000 coins. The example offered here is an attractive Mint State piece with the reflective yellow-gold surfaces typical of nearly every survivor. Faint hairlines and minuscule marks define the grade. Population: 36 in 62, 57 finer (3/14). NGC ID# 25N6, PCGS# 8005

**1883 Three Dollar Gold, MS62
Challenging Date**

6277 1883 MS62 PCGS. The 1883 three dollar gold issue consisted of a mere 900 coins. This Mint State survivor displays butter-gold surfaces and a sharp strike. Strong luster remains, adding to the appeal of this minimally marked specimen. A desirable example of one of several challenging late dates for series collectors. Population: 36 in 62, 55 finer (2/14). NGC ID# 25N6, PCGS# 8005

**1883 Three Dollar Gold, MS63
Scarcer Low-Mintage Issue**

6278 1883 MS63 PCGS. CAC. In the later years of the three-dollar gold series, some of the business strike mintages were small enough to sound like proof mintages. This date is a good example of that trend, as a mere 900 business strikes were produced. Boldly struck with intense, shimmering mint luster and pleasing antique-gold toning accompanied by faint accents of rose and peach coloration on both sides. Population: 27 in 63, 29 finer (3/14). NGC ID# 25N6, PCGS# 8005

6279 1884 — Repaired — ANACS. MS60 Details. With a scant 1,000 coins struck, the 1884 three dollar piece poses a significant challenge for the date collector. This example displays well-struck devices and pleasing orange-gold patina overall. Extensive smoothing in fields delivers a near-prooflike reflection to the unaided eye, though low-power magnification reveals the true nature of the mirroring. A still-attractive representative of this sought-after issue.
Ex: Dallas Signature (Heritage, 7/2006), lot 1149. NGC ID# 25N7, PCGS# 8006

6280 1886 — Improperly Cleaned — NCS. Unc. Details. With a scant mintage of only 1,000 coins, the 1886 three dollar piece is highly sought after, especially in Mint State condition. This unworn example boasts strong details on the central devices and no noticeable abrasions. The surfaces exhibit unnatural luster due to past cleaning, but display pleasing, pale orange-gold color overall. NGC ID# 25N9, PCGS# 8008

6281 1888 AU58 NGC. From a mintage of just 5,000 coins, this high-end AU three dollar piece displays pleasing field-motif contrast, and is sharply struck except for minor softness in the leaves left of the bowknot. Reddish-gold patina blankets both sides, each of which reveals ample luster and just a few minor circulation marks. Very pleasing in all respects.
Ex: Long Beach Signature (Heritage, 9/2007), lot 3358. NGC ID# 25NB, PCGS# 8010

**1888 Three Dollar Gold, AU58
Low-Mintage, Late-Series Date**

6282 1888 AU58 PCGS. CAC. A near-Mint representative, this coin displays gold and frosty peach shades, providing the piece with a lovely appearance. The strike is pleasing and includes the typical doubling on UNITED. Light wear is present on the high points of the designs. The scattered marks appearing are minuscule. NGC ID# 25NB, PCGS# 8010

6283 1888 — Damaged — NGC Details. Unc. From one of the final years of the series, this highly lustrous three dollar piece displays pleasing yellow-gold luster overall, with orange-gold accents and sharply detail design elements. Several small patches of etching are noted, primarily on the reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

6284 1888 — Tooled — ANACS. MS60 Details. From a low-mintage of only 5,000 business strikes, this unworn 1888 three dollar piece displays radiant yellow-gold mint luster and sharply defined design elements. A small patch of light tool marks is seen in the field around the first T in STATES and a smaller patch is noted on Liberty's cheek, but they are faint and do not detract from the outstanding visual appeal.
Ex: Dallas Signature (Heritage, 11/2006), lot 2141. NGC ID# 25NB, PCGS# 8010

1888 Three Dollar, MS62 Popular Low-Mintage Date

6285 1888 MS62 NGC. Despite a mintage consisting of only 5,000 coins, the 1888 three dollar issue has a high survival rate. Shimmering butter-gold surfaces provide this piece with immediate eye appeal. Portions of the protected areas reveal faint peach color. A few tiny alloy spots and as-made struck-in grease are present. They are tiny though and are not distracting, nor are the few minuscule marks.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25NB, PCGS# 8010

1888 Three Dollar Gold Piece, MS64

6286 1888 MS64 PCGS. The penultimate three dollar gold piece, the 1888 had a small mintage of just 5,000 business strikes. However, these coins did not circulate, and today, the average grade of survivors is MS61. PCGS and NGC have certified nearly one-quarter of the mintage. Only a small number of those coins equal the present piece, and fewer grade higher. This example has excellent eye appeal that results from the bold strike and frosty orange-gold luster. NGC ID# 25NB, PCGS# 8010

1888 Three Dollar, MS64+

6287 1888 MS64+ PCGS. CAC. A frosty and highly lustrous example with brilliant mint bloom, this Choice Mint State three dollar gold piece has minimal surface marks that prevent a Gem grade assignment. Both sides exhibit a sharp strike with bright yellow surfaces. An exceptional coin for the type collector or specialist. NGC ID# 25NB, PCGS# 8010

1888 Three Dollar Gold, MS65 Impressive and Highly Attractive

6288 1888 MS65 PCGS. Only 5,000 business strikes of this date were coined, and nearly all known survivors are in Mint State, although a number of lightly circulated pieces were retrieved from circulation by collectors in the early 20th century. This Gem example is highly attractive with frosty honey-gold luster and traces of sunset-orange color. The surfaces are near-pristine with no significant blemishes. All business strikes are apparently from the same obverse die, with the tops of the words UNITED slightly doubled.
Ex: Dallas Signature (Heritage, 10/2006), lot 2682. NGC ID# 25NB, PCGS# 8010

- 6289** 1889 — Harshly Cleaned — NGC Details. Unc. From the final year of the series, this well-detailed three dollar piece displays intermixed pale green and orange-gold hues. Moderate hairlines in the fields evidence old cleaning, though the surfaces retain an overall pleasing appearance.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25NC, PCGS# 8011

**1889 Three Dollar Gold, MS64+
In-Demand Final Date**

- 6290** 1889 MS64+ PCGS. Gleaming straw-gold surfaces and rich luster provide this high-end near-Gem with exceptional eye appeal. Closer examination reveals subtle peach and orange hues. A couple of tiny alloy spots appear near 12 o'clock on the reverse. A small mark extends from Liberty's eye to her cheek. A number of tiny as-made strike-throughs are present, almost all of them on the reverse. Population: 2 in 64+, 42 finer (3/14). NGC ID# 25NC, PCGS# 8011

PROOF THREE DOLLAR GOLD PIECE

**1885 Three Dollar Gold Piece
PR62 Cameo**

- 6291** 1885 PR62 Cameo PCGS. The 1885 three-dollar gold piece is a rare issue from a mintage of 801 business strikes and 109 proofs. Examples enjoy strong demand in all grades, and are usually only found in Mint State or proof. Circulated coins are extremely rare. This lovely Cameo proof has fully mirrored yellow-gold surfaces with satin, boldly detailed devices. A highly appealing example despite faint hairlines and minuscule contact marks. Population: 1 in 62 Cameo, 17 finer (3/14). NGC ID# 28AU, PCGS# 88049

EARLY HALF EAGLES

**1798 Large Eagle Half Eagle, XF Details
Large 8, 13 Star Reverse, BD-4**

- 6292** 1798 Large Eagle, Large 8, 13 Star Reverse — Mount Removed — NCS Details. XF. BD-4, High R.4. Bass-Dannreuther Die State d/e. Large die cuds at the upper reverse rim onto ES and O, respectively, help to identify this late die state of the Large 8, 13 Star reverse type. This is a light green-gold example of this variety, the most plentiful from 1798. Minimal evidence of the removed mount is evident. The surfaces show wispy hairlines but are free of noteworthy abrasions. NGC ID# 25NN, PCGS# 8078

1800 BD-5 Half Eagle, Unc Details

- 6293** 1800 — Smoothed — PCGS Genuine. Unc Details. BD-5, R.3. Bass-Dannreuther Die State d/b, with several reverse die cracks. Although extensive tooling or smooth appears in the fields, especially on the obverse, this remains a pleasing greenish-yellow gold example with good overall eye appeal. NGC ID# 25NW, PCGS# 8082

1802/1 Half Eagle, BD-8, AU Details
The 'High Overdate' Variety

6294 1802/1 — Rim Filing — NGC Details. AU. BD-8, R.4. Bass-Dannreuther Die State c/b. BD-8 is the most available of the eight known varieties for this issue, with 150 to 200 examples believed known. Clashing on both sides and a thin die crack through UNI of UNITED confirm the die state. The present piece is evenly struck with nearly complete detail. The surfaces display pleasing yellow-green patina with substantial mint luster remaining in the protected areas. Light rim filing is seen at 3 o'clock on the obverse, likely performed by a jeweler to test the gold content of the metal, but hardly detracts from the overall visual appeal of this piece.

1803/2 Half Eagle, BD-4, R.4, AU Details
Semiprooflike Fields

6295 1803/2 — Mount Removed, Improperly Cleaned — NCS. AU Details. BD-4, R.4. Bass-Dannreuther Die State, b/c. The sole Bass-Dannreuther variety for this date and denomination with a perfect T in LIBERTY. This example is hairlined in the fields, but large or individually distracting marks are absent on both sides. The fields are semiprooflike, with their reflectivity only slightly diminished by the effects of an old cleaning. A well-struck piece with attractive, evenly distributed olive-gold toning. NGC ID# 25NY, PCGS# 8084

1803/2 BD-3 Half Eagle, AU53
Late Die State

6296 1803/2 AU53 PCGS. CAC. BD-3, R.4. Bass-Dannreuther Die State f/b. The obverse has the late state die crack through the top of the R in LIBERTY. Diagnostics for this variety include a missing right foot to the T of LIBERTY, and a doubled T in UNITED. That combination is unique to the BD-3 die pair. This example, housed in a green-label PCGS holder, is highly attractive with rich orange-gold surface and considerable luster for the grade. Both sides exhibit myriad surface marks that are only visible with a glass. BD-3 is, by a slim margin, the most plentiful of four 1803/2 half eagle varieties. An excellent date or type collection piece. NGC ID# 25NY, PCGS# 8084

**1804 Small 8 Half Eagle, XF45
Scarce BD-3 Variety**

- 6297** 1804 Small 8 XF45 PCGS. CAC. BD-3, R.5. Bass-Dannreuther Die State d/i. The BD-3 variety is scarce in relation to other varieties of this series, with about 50 examples believed known. This piece exhibits numerous prominent obverse cracks, as expected for this die state. The reverse shows clash marks throughout with a bisecting die crack from the E in AMERICA through the eagle's right wing tip. The surfaces are void of any noticeable abrasions, consistent with only slight wear over the high points of the devices. Strong definition on all design elements complements medium green-gold patina overall. NGC ID# 25P2, PCGS# 8085

**1804 Small 8 Over Large 8 Five, AU53
Very Scarce BD-7 Variety, Late Reverse Die State**

- 6298** 1804 Small 8 Over Large 8 AU53 PCGS. BD-7, R.4. Bass-Dannreuther Die State c/c. The repunched 1, the small 8 over large 8, and the terminal die state of the reverse, with clashing visible (on both sides) and several intersecting die cracks, make this piece an interesting variety in an interesting die state. This coin shows perceptible luster remaining on caramel-gold surfaces that deepen around parts of the rim to lilac. A few vertical planchet adjustment marks run through the central obverse but are well-hidden in the hair. NGC ID# 25NZ, PCGS# 8086

**1805 Half Eagle, BD-2, AU Details
Well-Detailed**

- 6299** 1805 Close Date — Repaired — NGC Details. AU. BD-2, R.4. Bass-Dannreuther Die State g/d. BD-2 is the second most available variety of the 1805 half eagle, with 100 to 150 examples believed known. An impressive seven specimens were represented in the Bass collection. This piece exhibits prominent clash marks and multiple obverse die cracks, consistent with the die state. Bright yellow-gold patina blankets both sides, while strong detail is present on the devices. The reverse fields around the eagle as well as the obverse border above Liberty's head exhibit repaired surface damage, though the overall visual appeal is not overly affected.

**1806 Half Eagle, BD-6, AU Details
The 'Knobbed 6' Variety**

- 6300** 1806 Round Top 6, 7x6 Stars — Improperly Cleaned — NCS. AU Details. BD-6, R.2. Bass-Dannreuther Die State b/c. Easily attributed by a knobbed 6 in the date, BD-6 is by far the most available 1806 half eagle variety, with 600 to 900 examples believed to survive. Likely the final variety produced in 1806, as suggested by the orientation of the stars (7+6 instead of the normal 8+5) which was continued in 1807.

This piece is evenly struck with virtually complete detail. Lightly cleaned, the surfaces have since acquired pale green-gold patina overall, with remnants of mint luster in the protected regions. A pleasing representative of this early Draped Bust type. NGC ID# 25P5, PCGS# 8089

**1807 BD-3 Half Eagle, XF40
Draped Bust Facing Right**

- 6301** 1807 Bust Right XF40 PCGS. BD-3, R.5. Bass-Dannreuther Die State b/c, with clash marks and a minor reverse die crack. This is the latest die state recorded in that reference. An attractive example with light yellow-gold surfaces and light hairlines on each side that prevent a higher grade. NGC ID# 25P8, PCGS# 8092

1807 Capped Bust Five, AU Details
The Popular BD-8 Variety

- 6302** 1807 Bust Left — Improperly Cleaned — NGC Details. AU. BD-8, R.2. Bass-Dannreuther Die State c/a. The design of the half eagle was changed in 1807 to a remodeled, left-facing bust and a more natural-looking eagle. Of the two known varieties for the Capped Bust variant, BD-8 is the more available; it also stands among the most available varieties of all early United States gold coins, with 500 to 750 examples believed to survive.

Lightly cleaned in the past, the present piece retains medium green-gold patina overall, with remnants of mint luster in the protected regions. Just a brush of friction is seen over the design elements, while the surfaces exhibit pleasing overall eye appeal.

1807 Capped Bust Left Ten Dollar, BD-8, AU58
A Lustrous, Highly Attractive Type Coin

- 6303** 1807 Bust Left AU58 NGC. BD-8, R.2. Bass-Dannreuther Die State c/a. A lustrous example that has the arm's-length appearance of an Uncirculated coin. The flashy green-gold surfaces show a few superficial marks and faint hairlines. A well-struck example of this variety, easily the more available of the two Bust Left die marriages for this date.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25P9, PCGS# 8101

1808 Half Eagle, BD-4, AU58
Significant Remaining Mint Luster

- 6304** 1808 AU58 NGC. BD-4, High R.3. Wide 5D. Bass-Dannreuther Die State c/a. The only die state known for this variety. Variety BD-4 is the most easily obtainable variant of the 1808 half eagle, with 175 to 225 examples believed known. This piece exhibits substantial mint luster in the recesses, with just a trace of friction over the high points of the design. No significant abrasions are seen under close examination, while the surfaces display excellent visual appeal. All United States gold coins from this period are highly sought-after, as many were melted in the 1830s due to the rising price of gold. NGC ID# 25PA, PCGS# 8102

1809/8 Half Eagle, BD-1, AU Details
The Only Known Variety

- 6305** 1809/8 — Damaged — NGC Details. AU. BD-1, High R.3. Bass-Dannreuther Die State a/b. Traditionally referred to as 1809/8, the overdate status of this issue is questioned by John Dannreuther and other specialists who suggest the underdigit may actually be a mispunched 9. Whatever the case, BD-1 is the only known variety for this issue, making it essential for the date collector. As a date, the 1809/8 half eagle is the scarcest issue of the early (1807 to 1812) Capped Bust type, with only 250 to 325 examples known in all grades.

This well-detailed representative exhibits original yellow-gold patina overall, with substantial mint luster in the recessed regions. The obverse border and stars from 8 to 12 o'clock exhibit mild bruising, but the damage is light and does not overly affect the visual appeal of this piece.

1810 Large Date, Large 5 Half Eagle, BD-4, AU Details

- 6306** 1810 Large Date, Large 5 — Reverse Damage, Improperly Cleaned — NCS Details. AU. BD-4, R.2. Bass-Dannreuther Die State a/a, unclashed. If not for the caveats noted on the NCS holder, it would not be immediately apparent that this coin is in impaired condition. The reverse damage alluded to is slight, and includes a minor puncture mark above the eagle's head. There are some wispy hairlines on each side, indicative of improper cleaning, but they are certainly not a major distraction. The design motifs are well-defined, and peach border accents complement the pale greenish-gold coloration. NGC ID# 25PG, PCGS# 8108

1811 BD-2 Half Eagle, AU Details
Small 5

- 6307** 1811 Small 5 — Obverse Rim Filed — NGC Details. AU. BD-2, R.3. Bass-Dannreuther Die State d/a. There are no apparent clash marks or die cracks on either side, those from the earlier appearance now lapped away. This pleasing piece has lustrous lemon-yellow surfaces with minor handling marks and minor filing on the obverse rim. NGC ID# 25PH, PCGS# 8109

1811 Small 5 Half Eagle, BD-2, AU50
Excellent Type Representative

- 6308** 1811 Small 5 AU50 PCGS. BD-2, R.3. Bass-Dannreuther Die State d/a. As a date, the 1811 half eagle is among the more available early United States gold issues, making the date ideal for collectors seeking a single type representative. Of the two known varieties, BD-2 is the slightly more available, with 225 to 300 examples believed known in all grades.

This Almost Uncirculated representative displays original yellow-gold patina with softly frosted luster remaining in the protected regions. Consistent with the die state, the surfaces are void of clash marks, and exhibit only a few scattered abrasions, with none readily noticeable to unaided eye. NGC ID# 25PH, PCGS# 8109

1811 Capped Bust Half Eagle, AU53
Small 5, BD-2, Olive-Gold Surfaces

- 6309** 1811 Small 5 AU53 PCGS. BD-2, R.3. Bass-Dannreuther Die State d/a. No discernible evidence of die clashing or visible die cracks define the die state for this BD-2, Small 5 half eagle. Appealing olive-gold patina retains a glimpse of mint luster at the margins, and wear is minimal over boldly struck devices. The only mentionable abrasions are a group of minor marks on the scroll near the B of PLURIBUS — some of which extend toward the rim — suggesting these may be Mint-made adjustment marks. NGC ID# 25PH, PCGS# 8109

1812 Half Eagle, BD-1, AU Details
Early Die State

- 6310** 1812 — Damaged — NGC Details. AU. BD-1, R.3. Wide 5D. Bass-Dannreuther Die State a/a. Of the two known varieties for the 1812 half eagle, BD-1 is the more available, with 300 to 450 pieces believed to survive, and as such is often chosen for type purposes. A curious characteristic of this variety is a curved die line that runs through the horizontal shield lines and ends in the eagle's right wing.

This piece exhibits medium yellow-gold color overall with nearly complete detail. Artificially altered surfaces exhibit fine roughness over much of each side, likely an attempt to erase scattered abrasions, though original mint luster remains in the protected areas. NGC ID# 25PL, PCGS# 8112

**1813 Half Eagle, BD-1, AU Details
First-Year Type Representative**

6311 1813 — Improperly Cleaned — NCS. AU Details. BD-1, R.2. Bass-Dannreuther Die State b/b. The half eagle design was modified in 1813 to a shortened, reworked bust; examples of the second type were more heavily melted for their gold content than those of the previous type, and are generally rarer in all grades. BD-1 is perhaps the only exception. Not only is this variety the most available of the two varieties for this issue, it is also the most easily obtainable variety for the modified Capped Bust type, as 450 to 650 survivors are believed known in all grades. As such, it is ideal for collectors seeking a single type representative.

This piece exhibits strong detail, with only slight wear over the high points. NCS notes signs of old cleaning, though the coin has since acquired pleasing green-gold patina with faint orange-gold overtones. A pleasing example of this sought-after type. NGC ID# 25PM, PCGS# 8116

**1813 Half Eagle, MS60, BD-1
Impressive Piece, In-Demand Issue**

6312 1813 MS60 NGC. BD-1, R.2. An impressive piece with excellent green-gold luster and faint splashes of pale orange toning. This piece represents the first year of issue for the slightly modified design by John Reich, patterned after his previous Capped Head design. Mint State examples of this date are common enough in the lower grades, but are difficult to find in higher grades. Many circulated pieces also survive from the 95,428 coin-mintage. As a first-year type coin, the 1813 Capped Head five is always in demand by type and date collectors.

Ex: *Long Beach Signature (Heritage, 9/2007)*, Lot 3381. NGC ID# 25PM, PCGS# 8116

**1814/3 Half Eagle, BD-1, AU Details
Popular Overdate**

6313 1814/3 — Improperly Cleaned — NCS. AU Details. BD-1, High R.4. Bass-Dannreuther Die State b/c. All 1814 half eagles are overdates, as only one variety is known. The issue is popular among early gold specialists as the underdigit is clearly discernable with low-power magnification, and with only 80 to 100 pieces believed to survive, examples are scarcely seen in any condition.

This representative is a rare early die state, with no clash marks seen behind Liberty's ear. Cleaned, the surfaces exhibit an unnatural luster, but display medium green-gold patina overall. Only light wear is seen over the high points of the design, though some weakness of strike is noted on the eagle's right wing. NGC ID# 25PN, PCGS# 8117

**1820 Square Base 2 Half Eagle
AU Details, BD-2
Substantial Remaining Mint Luster**

6314 1820 Square Base 2, Large Letters — Obverse Improperly Cleaned — NCS. AU Details. BD-2, High R.5. Bass-Dannreuther Die State a/a. Readily attributed by the missing rear talon of the eagle's right foot, BD-2 is one of the rarer varieties for this issue, with only 20 to 25 pieces believed known. As a date, the 1820 half eagle is rare in all grades, but is still more obtainable than all other half eagles from the decade, speaking to the rarity of this type in general.

The present piece is sharply struck with virtually complete detail. NCS notes signs of cleaning on the obverse, though it is not readily detectable. Both sides display pleasing green-gold patina with remnants of mint luster in the protected regions. The surfaces are free of any detracting abrasions, giving this piece excellent visual appeal. NGC ID# 25PT, PCGS# 8125

**1825/4/1 Five Dollar, AU Details, Net VF30
BD-1; Rare, Intriguing Overdated Issue**

- 6315 1825/1 — Repaired, Whizzed — ANACS. AU Details, Net VF30. BD-1, R.5+.** One of the most discussed rarities of the American gold series, this overdated 1825 half eagle is indisputably rare and undeniably intriguing. Various known as the 1825/1 or the 1825, 5 Over Partial 4 — or most recently, the 1825/4/1 issue — this is the BD-1 variety as described in the Bass-Dannreuther reference.

In total, there are three Bass-Dannreuther varieties of the 1825 date: the BD-1, with 20 to 25 pieces known, the BD-2 (1825, 5 Over 4, of which just two pieces are known) and the BD-3, which is the most recent discovery with just one piece known to date. BD-1 and BD-2 share a common reverse die. BD-3 shares the BD-1 obverse with a different reverse die.

The current 1825/4/1 date descriptor is the result of research by Saul Teichman, who explained how the original die was a leftover 1821 obverse that was overdated in 1824 but not used in that year. The die was overdated again in 1825 (with the 4 partially effaced), resulting in 1825/4/1 obverse used to strike the BD-1 variety.

This BD-1 example shows suspected repair and smoothing near star 11 and perhaps beneath Liberty's chin, although the full extent of repair is unknown. A light whizzing of the obverse brightens the olive-green surface. The reverse appears less disturbed, with natural olive-gold toning and red-gold accents. Despite the problems, the coin retains considerable eye appeal and bold detail.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25R2, PCGS# 8133

**1825/4/1 Half Eagle, BD-1, AU Details
Rare Overdate**

- 6316 1825/1 — Reverse Repaired, Improperly Cleaned — NCS. AU Details. BD-1, High R.5.** Bass-Dannreuther Die State a/a. As a date, the 1825 half eagle is among the rarest and most intriguing early United States gold issues. Three varieties compose the surviving population, all overdates; BD-1 comprises the majority, with 25 to 30 examples believed known, while BD-2 is represented by just two coins; the recently discovered BD-3 variety features a different reverse than the former two, and is represented by a single specimen. Sometimes certified as 1825/1, the BD-1 variety is rather thought to be an 1825/Partial 4, and is more recently called an 1825/4/1.

The reverse fields of this example exhibit moderate brushing, likely to remove abrasions and/or clash marks. The bold design details are unaffected, however, and both sides displays pleasing visual appeal, despite old, light cleaning. A still-pleasing example of this highly sought-after rarity. NGC ID# 25R2, PCGS# 8133

CLASSIC HALF EAGLES

- 6317 1834 Plain 4 AU55 PCGS. Second Head, Breen-6502, McCloskey 2-A, R.1.** A sharply detailed first-year Classic half eagle with just a touch of wear over the high points. Rich orange-gold patina warms both sides. The semiprooflike fields retain significant portions of mint luster in the protected areas. The surfaces are original and show no outwardly detracting abrasions. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25RR, PCGS# 8171*

- 6318 1834 Plain 4 AU55 NGC. First Head, Breen-6501, McCloskey 3-B, R.1.** A Choice About Uncirculated example of this Classic Head type. Bright green-gold patina covers each side, with prooflike mirroring remaining in the protected areas of the fields. A boldly struck type representative. NGC ID# 25RR, PCGS# 8171

**1834 Classic Head Five, AU Details
Desirable Crosslet 4 Version**

- 6319 1834 Crosslet 4 — Improperly Cleaned — NCS Details. AU. Breen-6503, McCloskey 5-D, R.4.** Second Head. A scarce example of the Crosslet 4 Classic Head design, several times rarer than the Plain 4 version. Hazy olive-gold surfaces on this example are the result of a light cleaning. Frost-covered fields show few abrasions (none of any consequence) and the devices retain strong detail. The demand for rare, early-date gold varieties continues and this issue is at the top of many want lists. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 8172*

**1834 Half Eagle, Crosslet 4, AU Details
Rare Classic Head Key Issue**

- 6320 1834 Crosslet 4 — Improperly Cleaned — NCS. AU Details. Breen-6503, McCloskey 5-D, R.4.** According to Garrett and Guth, the 1834 Classic Head five with a Crosslet 4 in the date is approximately ten times scarcer than its Plain 4 counterpart from the same year. This example, while designated as improperly cleaned by NGC, retains good eye appeal; with uniform green-gold toning and smooth surfaces that are free of distracting marks. PCGS# 8172

**1835 Half Eagle, MS61
First Head, Block 8**

- 6321** 1835 MS61 PCGS. Breen-6504, McCloskey 1-A, R.2. Block 8, First Head. A green-gold representative of the popular Classic type. The strike is bold, and the borders and motifs teem with luster. Free from any remotely noticeable marks. Four different reverse dies were paired with the First Head obverse die. McCloskey 1-A can be attributed by the die line from the upper point of the lowest arrowhead. NGC ID# 25RV, PCGS# 8173

- 6322** 1836 AU50 PCGS. Second Head, Large Date, Breen-6509, McCloskey 4-D, R.2. This well-detailed Classic Head half eagle displays fully original, light reddish-gold patina with tiny remnants of luster hidden within the hair curls. No obtrusive surface abrasions are present, though a few dark russet freckles are noted on the upper reverse border. NGC ID# 25RY, PCGS# 8174

- 6323** 1837 AU53 NGC. Breen-6512, McCloskey 2-B, R.2. Large Date, Block 8. The 1837 half eagle boasts the lowest Philadelphia mintage of this type by a healthy margin (just slightly more than 200,000 coins produced). The present survivor displays original green-gold patina with subtle remnants of mint luster in the recessed regions around the borders. The devices are boldly struck with only slight wear over the high points. NGC ID# 25RZ, PCGS# 8175

**1838-C Half Eagle, AU Details
First Charlotte Half Eagle**

- 6324** 1838-C — Environmental Damage — NCS. AU Details. Breen-6517, Variety 1, R.4. Normal 5. Highly sought-after by specialists as the first half eagle produced at the Charlotte facility, the 1838-C is also scarce in all grades, with only 200 to 250 examples believed extant. This virtually unworn example displays strong detail and deep orange-gold color over both sides. The surfaces exhibit a slightly granular texture which subdues the luster, but does not outwardly impair the visual appeal. NGC ID# 25S5, PCGS# 8177

**1838-D Liberty Five, AU Details
Dahlonega Mint Rarity**

- 6325** 1838-D — Improperly Cleaned — NCS Details. AU. McCloskey 1-A, R.3. Both the 1838 Dahlonega Mint half eagle and its Charlotte Mint counterpart are rare, and they trail only the 1834 Crosslet 4 in scarcity for the Classic Head series. This D-Mint five is smooth and appealing, although cleaned at one time and lusterless as a result. A short mark on Liberty's jawline is the only notable mark. Bold design elements remain despite brief circulation. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25S6, PCGS# 8178

**1838-D Half Eagle, AU50
A Popular Dahlonega Type Coin**

- 6326** 1838-D AU50 PCGS. Variety 1-A, R.3. The only known die variety, and the first year of coin production at the Dahlonega Mint. This, along with the only Classic Head, Obverse Mintmark five dollar at this mint makes it extremely popular. Orange-gold hues with coppery overtones adorn this well-struck AU offering. Scattered marks are less serious than usually encountered on this date. Population: 16 in 50, 65 finer (3/14). NGC ID# 25S6, PCGS# 8178

LIBERTY HALF EAGLES

- 6327 1839 AU53 NGC.** Considered by many to be a one-year type, the obverse design of the 1839 half eagle is slightly different than those of subsequent years, the most notable difference seen in the curvature of Liberty's neck. This Almost Uncirculated example displays original orange-gold color over both sides, with nearly complete detail. A visually appealing example of this first-year issue. NGC ID# 25S7, PCGS# 8191

1839-C Half Eagle, AU Details One-Year Subtype

- 6328 1839-C — Salt Water Damage — PCGS Genuine. AU Details. Variety 1.** As a one-year, obverse mintmark subtype of the long-running Liberty Head design, the 1839-C half eagle is highly sought-after by specialists. The present piece displays virtually complete detail, with some softness of strike seen on the eagle's talons and select stars. Prolonged exposure to salt water has left the surfaces with a finely granular texture which slightly subdues the luster, though both sides are only minimally abraded and exhibit pleasing yellow-gold color overall. NGC ID# 25S8, PCGS# 8192

1839-D Half Eagle, AU Details One-Year Type

- 6329 1839-D — Improperly Cleaned — NCS. AU Details. Variety 1-A.** The scarce Variety 1-A. Widely sought-after by specialists as a one-year type, the obverse mintmark, Liberty Head Dahlonaga half eagle is scarce in all grades, with only 200 to 225 examples believed known. This piece exhibits an outstanding strike for a D-mint issue, with only light wear seen over the design elements. The surfaces are unnaturally bright, but the sharpness in the central devices balances the visual appeal. NGC ID# 25S9, PCGS# 8193

- 6330 1840 Narrow Mill AU58 NGC.** Moderately available in lower grades, the 1840 half eagle becomes highly elusive at the Mint State level. This nearly Uncirculated example exhibits a sharp strike with only slight friction over the high points of the design. The surfaces are original, with substantial mint luster in the recessed regions and medium orange-gold patina overall. Census: 56 in 58, 28 finer (3/14). NGC ID# 25SA, PCGS# 8194

1840-C Five Dollar, AU58 Well-Struck and Minimally Marked

- 6331 1840-C AU58 PCGS. Variety 2.** The C mintmark is almost over VE in FIVE, and there are parallel die lines on each side of the eagle's legs. This date was widely circulated resulting in it having a low survival rate. The apricot-gold surfaces of this AU58 example display orange-gold toning along with mint luster in the recessed areas. While the majority of 1840-C fives are poorly struck, the design elements of this specimen exhibit above-average definition on most of Liberty's hair and the star centrals and the eagle's plumage, though the neck feathers are a tad soft. Moreover, the lightly abraded surfaces reveal less serious marks than typically seen on this issue. Population: 7 in 58, 5 finer (3/14). NGC ID# 25SD, PCGS# 8196

- 6332 1840-D Tall D — Improperly Cleaned — NCS. AU Details. Variety 3-B.** One of the scarcer half eagles from this mint, with 150 to 175 examples believed known in all grades. The present example shows good definition in the central devices as well as the denticles. Deep green-gold patina nearly masks the signs of old, light cleaning, with minimal abrasions on the surfaces. NGC ID# 25SG, PCGS# 8198

1840-D Tall D Half Eagle, AU55 Pleasing Survivor from a Low-Mintage Issue

- 6333 1840-D Tall D AU55 NGC. Variety 3-B.** A Choice AU example of the more common variety, this lightly circulated piece displays lemon-gold color. The strike is sharp and the designs reveal only light wear. Although scattered marks are present as expected at this grade level, none is worthy of individual mention. Census: 12 in 55, 18 finer (3/14). NGC ID# 25SG, PCGS# 8198

**1840-O Variety 3 Half Eagle, MS61
Narrow Mill**

6334 1840-O Narrow Mill MS61 NGC. Variety 3. The New Orleans Mint began coinage production in 1838, but the 40,120 half eagles struck there in 1840 were the first of that denomination minted in Louisiana. Two major varieties are known as the Broad Mill and Narrow Mill. This example is the smaller diameter Narrow Mill, although the difference is less than 1 mm. An impressive Mint State piece, and one of only 26 such pieces certified at NGC and PCGS combined. In all grades, the two services have seen 250 examples of this issue, with an average grade of just 48. This Mint State piece has exceptional eye appeal with myriad but trivial marks and excellent design definition. Census: 9 in 61, 7 finer (3/14). NGC ID# 25SK, PCGS# 8200

6335 1841 XF45 PCGS. An underrated, low-mintage early Philadelphia issue (only 15,800 pieces struck). This Choice XF example displays original green-gold patina with faint remnants of underlying mint luster. Boldly struck, with no significant surface abrasions present. Population: 7 in 45, 32 finer (3/14). NGC ID# 25SN, PCGS# 8202

**1841-C Half Eagle, AU58
Scarce Example In This High Grade**

6336 1841-C AU58 NGC. Variety 1. With a mintage of 21,467 pieces, the 1841-C is one of the more available early C-mint half eagles. This well-detailed near-Mint specimen displays green-gold surfaces with only minor abrasions and glints of original luster near the devices. Census: 14 in 58, 7 finer (3/14). NGC ID# 25SP, PCGS# 8203

**1841-C Half Eagle, AU58
Only 21,467 Pieces Struck**

6337 1841-C AU58 NGC. Variety 1. An example of the only known variety, this piece displays lovely antique-gold color overall, with closer examination of this near-Mint example revealing intermingled shades of orange, gold, and yellow. The 1841 Charlotte mintage of half eagles consisted of 21,400 coins. Census: 14 in 58, 7 finer (3/14).
From The Philip Poier Collection. NGC ID# 25SP, PCGS# 8203

6338 1841-D Small D — Tooled, Cleaned — ANACS. AU Details, Net XF40. Variety 5-D. A well-struck example of this early Dahlonega half eagle, with good definition around the borders and on the central devices. The surfaces have been cleaned, with a bright, yellow-green patina overall, while some tooling marks are seen near the rim at 12 o'clock. A late die state example with a bisecting die crack running from 12 to 6 o'clock. NGC ID# 25SR, PCGS# 8204

**1842 Large letters Half Eagle, AU55
Rarer of the Two Date Variants**

6339 1842 Large Letters AU55 NGC. The Large Letters variety (so indicated on the holder) is attributed by the tops of the V in FIVE touching the top serifs of the I and E, and is rarer than the Small Letters variety. Indeed, NGC and PCGS have graded only 33 Large Letter pieces and 57 Small Letter coins. This Choice AU displays yellow-gold surfaces, well-struck devices, except for softness in the eagle's neck feathers, and distributed light marks. This is a great find for the collector of Liberty Head five dollar gold pieces. Census: 4 in 55, 4 finer (3/14). NGC ID# 25SU, PCGS# 8206

6340 1842-C Large Date — Cleaning — PCGS Genuine. XF Details. Variety 1. Pleasing green-gold patina with faint orange-gold overtones nearly masks the signs of old, light cleaning. The design elements show above-average definition, with the only notable weakness seen on the eagle's neck and on stars one and two. A still-attractive example of this scarce issue. NGC ID# 25SW, PCGS# 8209

6341 1842-C Large Date — Cleaned — ANACS. AU Details, Net XF40. Variety 1. Often overshadowed by its Small Date counterpart, the 1842-C Large Date is a rarity in its own right, with only 110 to 140 pieces believed known in all grades. Lightly cleaned in the past, this example has retuned a medium green-gold with faint orange-gold overtones. The strike is exceptional for the issue, with strong definition on the eagle's neck, legs, and talons, and on the hair curls around Liberty's face, while the surfaces reveal remarkably few of the unsightly abrasions that typically plague this issue. NGC ID# 25SW, PCGS# 8209

6342 1842-D Large Date — Improperly Cleaned — NCS. XF Details. Variety 8-G. The 1842-D Large Date is the second rarest half eagle from this mint in terms of overall population, with a scant 100 to 125 examples believed known in all grades. This representative displays strong detail on the central devices and few of the unsightly abrasions that typically plague this issue. The surfaces show signs of old, light cleaning, but display a pleasing, medium green-gold patina. NGC ID# 25SY, PCGS# 8211

1842-O Half Eagle, Minimally Marked XF45

6343 1842-O XF45 PCGS. Variety 1. The sole variety known. The 1842-O, from a small mintage of 16,400 coins, is the second rarest New Orleans half eagle, trailing only the 1847-O. The PCGS website estimates less than 100 pieces are known of the former date and 50 to 60 of the latter. Choice XF examples of the 1842-O are scarce and rare any finer. The current offering display greenish-gold hues, and aside from the typical softness seen in the hair at Liberty's temple and the eagle's neck the devices are well-impressed. Moreover, the scattered marks are well within the parameters of the designated grade and are far fewer than the deep abrasions nearly always seen on this issue. Population: 13 in 45, 8 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25SZ, PCGS# 8212

1842-O Half Eagle, Unc. Details Rare New Orleans Issue

6344 1842-O — Obverse Scratched, Improperly Cleaned — NCS. Unc. Details. Variety 1. The 1842-O is one of the rarest half eagles from this mint, with only 50 to 60 examples believed to survive. In Mint State, the date is virtually unobtainable and stands among the rarest of all Liberty Head half eagles. This unworn representative exhibits strong definition on most design elements, with just a touch of softness on the eagle's neck and the hair curls around Liberty's face. Old cleaning slightly subdues the luster, though the surfaces display pleasing green-gold patina overall. A group of light scratches in the left obverse field is not overly detracting. NGC ID# 25SZ, PCGS# 8212

6345 1843-C — Cleaned — ANACS. AU Details, Net XF45. Variety 1. Lightly cleaned with a bright, green-gold patina. The strike is pleasing, with good definition around the denticles, stars, and across most central details, though some minor softness is noted on the eagle's neck and the hair curls around Liberty's face. NGC ID# 25T3, PCGS# 8214

6346 1843-D Medium D VF30 NGC. Variety 10-G. Hues of gold and orange provide this circulated example with nice eye appeal. Although the high points exhibit wear, a pleasing degree of design detail remains. A couple of rim nicks on the obverse pose minimal distraction, if any. The 1843-D five dollar is an ideal type coin, with a mintage of 98,452 pieces. NGC ID# 25T4, PCGS# 8215

6347 1843-D Medium D XF45 NGC. Variety 10-G (formerly 10-H). A wheat-gold Dahlonega half eagle with plentiful pockets of luster, particularly along the reverse periphery. The strike is typical on the curls. Inspection beneath a loupe fails to locate any consequential marks. NGC ID# 25T4, PCGS# 8215

1843-D Liberty Five, MS61 Medium D, Mint State Scarcity

6348 1843-D Medium D MS61 NGC. Variety 10-G. Although not a rare issue with nearly 100,000 pieces produced, all Dahlonega Mint half eagles are scarce (or rare) in Uncirculated condition. This lemon-gold example is sharply detailed on all the devices, with tangerine-gold accents on the rims and on the high points of the motifs. The reflective fields are lightly abraded to determine the assigned grade, but the eye appeal is excellent for this lustrous, D-Mint five. Census: 8 in 61, 7 finer (2/14). NGC ID# 25T4, PCGS# 8215

- 6349 1843-D Small D XF45 NGC. Variety 9-F.** Popular among type specialists, the 1843-D is one of the more available early Dahlonega half eagles with 450 to 550 examples believed known in all grades. The present Choice XF representative displays deep green-gold patina overall, with faint orange-gold tints intermixed. The strike is bold, with significant detail remaining on the central devices, while the surfaces exhibit none of the deep abrasions typically seen on this issue. PCGS# 98215

**1843-O Small Letters Half Eagle, AU53
A Remarkably Clean Example**

- 6350 1843-O Small Letters AU53 PCGS. Variety 2.** This variety is attributed by the 1 in the date centered over a dentil, the small O mintmark, and the top serifs of IVE spaced apart. This piece is Die State I with "crisp upper stars." This is the first of the two varieties of half eagles produced at the New Orleans Mint, and is scarcer than the Large Letters variety; PCGS has seen only 40 of the former and 81 of the latter variety. Liberty's hair curls are better-struck than typically seen on this date, while the eagle's neck feathers and the arrow feathers are soft as usually seen. Both sides are remarkably only lightly marked, a significant attribute for this particular coin; most are very heavily abraded and show blackish scuff marks (per Douglas Winter, 2006). Population: 4 in 53, 9 finer (3/14). NGC ID# 25T5, PCGS# 8217

**1844-C Half Eagle, XF45
Scarce Charlotte Mint Gold**

- 6351 1844-C XF45 PCGS. Variety 7-D.** Variety 7-D. This appears to be an earlier die state without evidence of any die cracks, clash marks, or other die defects on either side. The surfaces have light scratches and minor abrasions, with characteristic peripheral roughness on both sides. Mostly green-gold with splashes of pale orange color near the borders and a fair amount of remaining mint luster. Population: 17 in 45, 41 finer (2/14).
Ex: Long Beach Signature (Heritage, 2/2006), lot 2877, which realized \$4,887.50. NGC ID# 25T8, PCGS# 8220

- 6352 1844-C — Improperly Cleaned — NGC Details. AU. Variety 1.** An attractive example of this moderately scarce issue that is not overly impaired by a past cleaning. Other than the faintest of hairlines, the surfaces are essentially undisturbed. A pleasing specimen with light green-gold toning and a few faint accents of peach color on the design's highest points. NGC ID# 25T8, PCGS# 8220

**1844-C Half Eagle, AU50
A Later Die State**

- 6353 1844-C AU50 PCGS. Variety 1.** Die State II, displaying a reverse crack from the first A in AMERICA through the wing to the eagle's neck. A smaller crack has developed from the rim to the left (facing) wing tip. The 1844-C is one of the scarcest half eagles from the Charlotte Mint. A fire in the mint on July 27, 1844 resulted in no half eagles being produced at this facility in 1845. Consequently, 1844 coins saw extensive circulation. When seen, the typical 1844-C is likely to grade VF to XF.

About Uncirculated examples, such as the present offering, are very scarce and finer specimens are rare. Yellow-gold surfaces are tinged with violet, and display orange-gold at the reverse margin. The design elements are relatively well-struck, save for the usual softness in the hair atop Liberty's head and the bun, and the arrow feathers and adjacent claw. Distributed marks are in concert with a lightly circulated coin, but these are much less significant than the detracting abrasions usually encountered on this issue. Population: 10 in 50, 31 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25T8, PCGS# 8220

**1844-C Five Dollar, AU53
Attractive, Conditionally Scarce Example**

- 6354 1844-C AU53 NGC. Variety 1.** Die State II. From a low mintage of 23,631 pieces, with an estimated 125 to 175 survivors, this is a solidly struck piece with vibrant apricot-orange highlights that are prominent near the borders and surrounding the green-gold fields and design motifs. Two or three small marks are noted on each side of the piece, but they are too trivial to detract from the eye appeal of this conditionally scarce example. Census: 10 in 53, 24 finer (3/14). NGC ID# 25T8, PCGS# 8220

- 6355 1844-D — Improperly Cleaned — NGC Details. AU. Variety 11-G.** The 1844-D Liberty half eagle is one of the more available issues from the Dahlonega Mint, with a surviving population of 400-500 examples in all grades. This lightly circulated specimen shows a trace of wear on the well-detailed design elements and the lightly abraded orange and rose-gold surfaces show an unnatural sheen from a light cleaning in previous years. NGC ID# 25T9, PCGS# 8221

6356 1844-D AU53 ANACS. Variety 12-G. The rare Variety 12-G, with the date positioned slightly to the left. As a date, the 1844-D is among the more available Dahlonega issues, with 400 to 500 examples believed known, but is also one of the more well-made. The present representative displays vibrant, original lemon-orange patina and strong visual appeal. The strike is bold, with only light wear seen over the high points. The surfaces exhibit only a few insignificant abrasions, with none readily noticeable to the unaided eye. NGC ID# 25T9, PCGS# 8221

6357 1844-O — Cleaning — PCGS Genuine. Unc. Details. Variety 4. As a date, the 1844-O is the most available No Motto half eagle from this mint, but it becomes scarce in Mint State condition. The present example shows complete detail with virtually no distracting abrasions seen on the surfaces. Light cleaning has slightly subdued the luster, but this piece retains pleasing overall eye appeal. NGC ID# 25TA, PCGS# 8222

6358 1845-D — Improperly Cleaned — NCS. XF Details. Variety 13-H. One of the more easily obtainable Dahlonega half eagles and also one of the better-made issues. The present piece displays a bold strike, with notable strength on the denticles, stars, and the eagle's feathers. Lightly cleaned in the past, the surfaces have long since developed rich green-gold patina overall, with pleasing visual appeal. NGC ID# 25TC, PCGS# 8224

6359 1845-D — Reverse Rim Filed — NCS. AU Details. Variety 13-H. One of the more available Dahlonega half eagles from this decade, the 1845-D is ideal for type purposes. This piece displays medium green-gold patina overall, with substantial mint luster in the recesses. The strike is exceptionally sharp, with notable definition on the eagle feathers, the stars, and Liberty's hair curls. Mild rim filing is not readily obvious, though low-power magnification reveals a small groove above the E in STATES. NGC ID# 25TC, PCGS# 8224

**1845-O Five Dollar, Well-Struck AU58
Very Elusive Any Finer**

6360 1845-O AU58 NGC. Variety 1. The only known die pair, with the 18 in the date repunched, as seen on all known examples. Near-Mint State, the grade of the present offering, is likely to be the finest condition encountered by most collectors as Uncirculated coins are elusive, and are only infrequently offered in the lower levels of Mint State. Apricot-gold surfaces display ample luster and well-struck devices. The few minute circulation marks do not detract. Census: 29 in 58, 17 finer (3/14). NGC ID# 25TD, PCGS# 8225

**1846 Large Date Half Eagle, MS64
One of the Finest Graded**

6361 1846 Large Date MS64 NGC. According to Jeff Garrett and Ron Guth (2008): "The 1846 half eagle is fairly scarce in all grades. Most examples seen range from Very Fine to Extremely Fine. In Mint State, this issue is quite rare with fewer than two dozen coins graded at that level."

This is an exceptional near-Gem with lovely yellow-gold and pale green-gold surfaces that display glassy, semiprooflike fields. The strike definition is uniformly crisp and complete on both sides. Tiny field lines are noted with the aid of a magnifier, many of which appear to be faint remnants of die polish. There are no distracting abrasions to be found. Census: 7 in 64 (2 in 64 ★), 0 finer (3/14). NGC ID# 28BG, PCGS# 8226

1846-C Half Eagle, AU58
Above-Average Strike

- 6362 1846-C AU58 PCGS. Variety 1.** Repunching is visible beneath the 1 in the date and within the loop of the 4. Only 12,995 half eagles were struck in Charlotte in 1846, and since just a handful of pieces have survived in mint condition, near-Mint examples are important to the specialist. This partly lustrous and moderately marked piece has a decidedly above-average strike, especially on the hair curls around the face and ear, although the definition is not quite full on the shield or eagle's neck feathers. Population: 4 in 58, 7 finer (3/14).
Ex: *Long Beach Signature* (Heritage, 9/2005), lot 4582; *CSNS Signature* (Heritage, 4/2006), lot 2656. NGC ID# 25TG, PCGS# 8227

1846-D Half Eagle, AU50
A Scarce Dahlonge Issue

- 6363 1846-D AU50 NGC. Normal Mintmark. Variety 15-H.** The upright of the D mintmark is centered over the V in FIVE, attributing the variety. The Normal Mintmark is one of the scarcest issues in the series and is especially elusive in Mint State. The yellow-gold surfaces of this AU specimen display relatively well-struck devices, though portions of Liberty's hair and the eagle's neck feathers are soft. Minute marks are within the confines of a coin having seen light circulation. Census: 10 in 50, 50 finer (3/14). NGC ID# 25TH, PCGS# 8228

1846-D/D Five Dollar, AU53

- 6364 1846-D/D AU53 NGC. Variety 17-J.** The mintmark is widely repunched north. The variety is sufficiently dramatic to secure a separate listing in the *Guide Book*. This is the Centered Date variant; a Low Date variant (Variety 16-J) is also known. The present richly detailed example is only lightly abraded and displays attractive and delicate green-gold toning. PCGS# 8229

1846-O Half Eagle, Well-Defined AU53
Very Rare in Mint State

- 6365 1846-O AU53 NGC. Variety 1.** The mintmark is low and positioned over the VE in FIVE. The 1846-O half eagle is scarce in circulated grades and very rare in Mint State, where the finest known is a single NGC MS63. The honey-gold surfaces of this AU53 specimen exhibit an above-average strike on the hair curls around Liberty's face. Save for softness in star 2, the star centers are also well-defined. On the reverse, only the eagle's neck and arrow feathers reveal the usual softness. While this issue is known for numerous distracting abrasions, the scattered marks on the present coin are fewer and much less severe than ordinarily encountered. The spike in the population figures for AU55 and AU58 coins is likely from resubmissions. Census: 12 in 53, 51 finer (2/14).
From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 25TK, PCGS# 8230

1846-O Half Eagle, MS60 Details
Sharply Detailed

- 6366 1846-O — Sea Salvaged — ANACS. MS60 Details. Variety 1.** Despite a mintage of 58,000 coins, only 75 to 85 1846-O half eagles are believed to survive, with Mint State specimens especially rare. This unworn example exhibits an above-average strike for an O-mint No Motto five, with only a hint of softness on the lovelock, fletchings, and talons. Microscopic granularity in the fields slightly subdues the luster, though pale orange-gold patina delivers pleasing eye appeal.
Ex: *Dallas Signature* (Heritage, 11/2007), lot 1709; *FUN Signature* (Heritage, 1/2008), lot 4213. NGC ID# 25TK, PCGS# 8230

**1847-C Half Eagle, Well-Defined AU50
The Highest-Mintage Charlotte Five**

6367 1847-C AU50 PCGS. Variety 1. The 7 in the date firmly touches the bust truncation. The 1847-C has the highest mintage of any half eagle produced at the Charlotte Mint (84,151 pieces), and as might be expected, is one of the most common issues from that mint. Indeed, PCGS and NGC have certified 460 examples in all grades.

This AU offering displays honey-gold surfaces that are moderately abraded on the obverse, a typical characteristic of this issue. The hair curls around Liberty's face are better-defined than usually seen, as are the reverse features, save for minor softness on the neck feathers. Population: 23 in 50, 43 finer (3/14). NGC ID# 25TN, PCGS# 8233

**1847-C Five Dollar, AU58
Popular as a Charlotte Type Coin**

6368 1847-C AU58 NGC. Variety 1. Despite a mintage of over 84,000 half eagles for the 1847 Charlotte issue, all of the coins were struck from a single pair of dies, with the obverse showing the right top of the 7 touching the bust, the 1 close to the left-side bust. This near-Mint specimen displays scattered marks, with a few posing minimal distraction, if any. Census: 32 in 58 (2 in 58+), 16 finer (3/14). *From The Philip Poier Collection.* NGC ID# 25TN, PCGS# 8233

6369 1847-D — Improperly Cleaned — NCS. XF Details. Variety 19-1. Despite the designation on the holder, this lightly circulated Dahlonga half eagle does not have the typical appearance of a cleaned coin. The surfaces display rich green-gold patina with small amounts of verdigris still clinging to the crevices. Bold definition is seen around the denticles and on the central devices, delivering substantial visual appeal. No outwardly detracting abrasions are present. NGC ID# 25TP, PCGS# 8234

**1847-O Half Eagle, AU Details
Lightly Marked**

6370 1847-O — Reverse Scratched — NGC Details. AU. Variety 1. The only known variety. The date is large and high with the top of the 1 touching the bust truncation. The coppery-gold surfaces of this AU Details example display traces of luster in the protected areas. The hair atop Liberty's head, the hair bun, star centers, eagle's neck, and the arrow feathers are weak as usual, but the hair curls around Liberty's face are very much better delineated than typically seen. The NGC disclaimer refers to a vertical pinscratch in the upper-right reverse field and a shallow scratch that obscures the lower-left portion of the mintmark. The remaining surfaces are relatively lightly marked.

**1847-O Half Eagle, AU50
Rare in All Grades**

6371 1847-O AU50 NGC. Variety 1. The only known variety. The 1847-O half eagle, from a mintage of 12,000 pieces, is rare in all grades. The PCGS website indicates that 50 to 60 pieces are known, and NGC and PCGS have graded fewer than 90 coins in all levels of preservation, a number of which are likely resubmissions. This AU offering displays sharply struck design elements, including Liberty's hair, which is usually found weak, and neither side reveals the heavy abrasions that are typically seen on this date. Nice overall eye appeal. Census: 5 in 50, 19 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25TR, PCGS# 8235

1848-C Five Dollar, AU53
Well-Defined and Minimally Marked

- 6372 1848-C AU53 NGC. Variety 1.** The only variety known, with the 1 in the date very close to the denticles. The 1848-C is scarcer than its relatively high mintage of nearly 65,000 pieces would suggest, especially in the higher AU and Mint State grades. Only 10 Uncirculated specimens have been seen by NGC and PCGS, all in the lower levels.

The design features of this AU53 piece are better-defined than usually encountered, especially the curls around Liberty's face and ear, areas typically very weak. Distributed small marks are visible, more so on the obverse, but these are less severe than usually encountered on what Douglas Winter (2008) contends to be a "noticeably abraded" date. Census: 27 in 53, 55 finer (3/14). NGC ID# 25TT, PCGS# 8237

- 6373 1848-D VF35 PCGS. CAC. Unlisted Variety.** The third edition of Douglas Winter's Dahlenega gold book lists six different die varieties for the 1848-D half eagle, despite a mintage of just 47,465 pieces. However, this lot is a seventh variety, previously unseen by the present cataloger, with an unlisted obverse and reverse. The 1 is partly left of the bust tip. The mintmark is entered low and left. A bold crack extends across FIVE D, and may be the cause of the die marriage's rarity. A moderately abraded wheat-gold example with traces of luster inside the shield. NGC ID# 25TU, PCGS# 8238

1848-D Half Eagle, Sharply Struck AU55
A Rare Variety

- 6374 1848-D AU55 PCGS. Variety 21-N.** This rare variety is attributed by: a large high date entered to the left, the 1 centered between denticles, the 4 centered over a dentil, the second 8 equidistant between denticles and bust, and the upright of the D mintmark centered over that of the E in FIVE, and die lines extend through the shafts of the arrow heads to the eagle's leg.

The orange-gold surfaces of this Choice AU specimen display luster in the recessed areas. Stronger definition is apparent on the design elements than ordinarily seen on this issue that tends to be very poorly struck, though the neck curls reveal the usual softness. Most 1848-D examples have numerous abrasions, and the date is one of the most difficult Dahlenega fives to locate with clean fields. This coin deviates from that profile as both sides are remarkably devoid of significant marks. A check-shaped mark in the field below the O in OF will help to pedigree the piece. Population: 13 in 55, 15 finer (3/14). NGC ID# 25TU, PCGS# 8238

- 6375 1849 AU58 NGC.** The 1849 half eagle is much more elusive in pleasing condition than its mintage of more than 133,000 coins suggests. This near-mint representative displays well-struck devices with just a brush of friction over the high points. The surfaces reveal substantial mint luster in the recessed regions, with complementary yellow-gold color overall. Census: 38 in 58, 31 finer (3/14). NGC ID# 25TV, PCGS# 8240

- 6376 1849-C — Scratched — ANACS. AU Details, Net XF45. Variety 1.** The 1849-C is among the more available and well-made half eagles from this mint. The present piece displays original green-gold patina with faint orange overtones. The strike is strong around the borders, stars, and most central elements, with some minor weakness present on the eagle's right leg. The surfaces are nearly free of noticeable faults, though a horizontal cut is noted in the reverse field left of the eagle. NGC ID# 25TW, PCGS# 8241

- 6377 1849-D XF40 NGC. Variety 25-S.** The 1849-D is a scarcer issue from this mint, with only 150 to 200 survivors believed known in all grades. The present piece displays medium green-gold patina overall, with complementary orange-gold overtones in the protected regions. An attractive, lightly worn example, with strong detail remaining on the central devices. NGC ID# 25TX, PCGS# 8242

- 6378 1849-D — Corroded, Cleaned — ANACS. AU58 Details. Variety 25-S.** The 1849-D is among the scarcer half eagles from this mint, with only 150 to 200 examples believed to survive in all grades. Better-struck than the typical Dahlenega half eagle, this piece displays virtually complete detail in the central devices. The surfaces exhibit a matte-like appearance, perhaps from a combination of environmental exposure and light cleaning, which slightly diminishes the luster, though the overall eye appeal remains pleasing.
Ex: ANA Signature (Heritage, 3/2007), lot 1942. NGC ID# 25TX, PCGS# 8242

- 6379 1850 AU55 NGC.** An underrated date, the 1850 half eagle is actually scarcer than many branch mint issues of the era, and is remarkably rare in Mint State. This Choice About Uncirculated specimen displays original orange-gold patina and substantial mint luster in the protected regions. Boldly struck with only light wear over the high points. Census: 19 in 55, 32 finer (3/14). NGC ID# 25TY, PCGS# 8243

- 6380 1850-C AU53 ANACS. Variety 4. Weak C.** The 1850-C is one of the more easily obtainable half eagles from this mint, with a mintage of 63,500 coins. The present example displays bright, yellow-green patina and is well-struck on the central devices, though the stars show some weakness. Most Charlotte half eagles of this year exhibit weak mintmarks, as the mintmark was lightly punched into the working die. NGC ID# 25TZ, PCGS# 8244

1850-C Half Eagle, MS61
Variety 1

- 6381 1850-C MS61 NGC. Variety 1.** The reverse of this late die state piece has a radial die crack from the border to the leaves, grazing the left serif of the U in UNITED. This pleasing Mint State piece has reflective fields and sharp design details with brilliant yellow surfaces and excellent eye appeal. Census: 11 in 61, 4 finer (3/14). NGC ID# 25TZ, PCGS# 8244

**1850-D Half Eagle, AU53
Well-Struck and Minimally Marked**

6382 1850-D AU53 NGC. Variety 28-U. The 1 in the date is centered over a denticle on this variety, and the upright of the mintmark is over the right serif of the right diagonal of the V in FIVE. The lower half of the mintmark is lightly impressed, and is sometimes certified as a Weak D. The yellow-gold surfaces of this AU53 specimen are well-struck except for the usual softness on the eagle's neck feathers. Minute marks are visible over both sides, but these are fewer and less severe than the heavy abrasions ordinarily found plaguing this date. NGC and PCGS have graded only seven Mint State coins, none finer than MS61. Census: 16 in 53, 45 finer (3/14). NGC ID# 25U3, PCGS# 8245

6383 1851-C — Improperly Cleaned — NCS. AU. Variety 1. The so-called "earring" variety, with a mint-made punchmark on Liberty's ear lobe. The surfaces exhibit an unnaturally bright, green-gold patina due to old cleaning, but are balanced by an above-average strike for the issue. Good definition is seen on the stars, Liberty's hair curls, and the horizontal shield lines, with the only notable softness present on the eagle's neck feathers and the arrows. NGC ID# 25U6, PCGS# 8247

6384 1851-D VF25 PCGS. Variety 31-W. Scarce in all grades, this Dahlonega half eagle sports a bold mintmark and exhibits outstanding detail for the grade, revealing the remnants of an uncharacteristically sharp strike. Only 135 to 185 examples are believed known in all grades. The surfaces showcase a rarely found old-time "crust" of deep orange-gold on both sides, while a light scratch above the eagle and a single cut on Liberty's cheek are the only notable imperfections. In an old green label holder. NGC ID# 25U7, PCGS# 8248

6385 1851-D — Whizzed — NGC Details. AU. Variety 31-W. Lightly whizzed in the pasted, this Dahlonega half eagle exhibits unnatural luster, but retains satisfactory overall visual appeal. The strike is uncharacteristically sharp, with virtually full details in the shield and the eagle's legs and talons. A pleasing example of this scarce issue. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

6386 1851-D Weak D AU53 NGC. Variety 31-U. The 1851-D is among the scarcer half eagles from the Dahlonega mint, with a total of 135 to 185 examples believed to exist in all grades. This piece displays rich, old-time green-gold patina, with only light wear over the devices. Significant detail remains, with no areas of notable weakness, while the surfaces are nearly free of the deep abrasions typically seen on this issue. Census: 20 in 53, 53 finer (3/14). NGC ID# 25U7, PCGS# 8248

6387 1851-O XF45 NGC. Variety 2. Despite a production of 41,000 coins, the 1851-O half eagle is scarce and underrated in all grades. Bright yellow-gold patina blankets both sides of this example. Some minor weakness is seen on the central devices, though the overall visual appeal remains good. NGC ID# 25U9, PCGS# 8249

1852-C Half Eagle, Exceptional MS61

6388 1852-C MS61 NGC. Variety 1. The more frequently seen of the two varieties for this year with the 1 in the date touching Liberty's bust and the 2 very close to it. From a relatively high mintage of more than 75,000 pieces, the 1852-C five dollar is often offered in circulated grades through About Uncirculated. This date was once very rare in Mint State until the discovery of two small hoards of about nine coins in Select and near-Gem since 1986 (per Douglas Winter, 2008). Gems are still exceedingly rare.

The orange-gold surfaces of this MS61 example exhibit better-struck design elements than ordinarily seen, including the hair curls around Liberty's face; which are weak on most specimens. Only the eagle's neck feathers and the top of the shield show the usual softness. Distributed small marks determine the grade, but these are a far cry from the deep and detracting abrasions usually encountered on this issue. In fact, these marks are fewer and less severe than what might be expected for an MS61. Census: 10 in 61, 26 finer (2/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25UB, PCGS# 8251

**1852-C Half Eagle, MS61
Lustrous, Pleasing Type Coin**

6389 1852-C MS61 NGC. Variety 1. The 1852-C half eagle is a relatively available issue and a popular type coin, due in part to its relatively high mintage of 72,574 coins. This piece is well-struck, especially for a product from the Charlotte mint, and its lustrous surfaces reveal a pleasing mixture of green-gold and yellow-gold toning. Small marks on each side are commensurate with the MS61 grade. Census: 10 in 61, 26 finer (3/14). NGC ID# 25UB, PCGS# 8251

6390 1852-D — Obverse Scratched — NGC Details. AU. Variety 32-V. The 1852-D half eagle was the first of several weakly struck issues at the Dahlonega mint. This piece exhibits characteristic softness on the arrows, the eagle's neck, the hair curls around Liberty's face, and around the borders. The surfaces are pleasantly void of the heavy abrasions that typically abound on this issue, though a few faint scratches are seen in the right obverse field. A pleasing example with rich green-orange patina. NGC ID# 25UC, PCGS# 8252

6391 1853 MS61 NGC. Despite a mintage in excess of 300,000 coins, the 1853 half eagle is surprisingly scarce in pleasing Mint State condition. The present piece displays satiny orange-gold luster and sharp definition in all design elements. The surfaces reveal scattered, minor abrasions, as the grade suggests, but are not detracting to the unaided eye. NGC ID# 25UD, PCGS# 8253

**1853-C Five Dollar, AU58
Lovely Near-Mint Specimen**

- 6392 1853-C AU58 NGC. Variety 1.** Areas of mint luster remain on this appealing near-Mint example displaying attractive yellow-gold color. The strike is pleasing and the high points of the design exhibit only light wear. Though scattered marks are present, as expected, none is worthy of individual mention. Census: 28 in 58, 25 finer (3/14). *From The Philip Poier Collection.* NGC ID# 25UE, PCGS# 8254

**1853-C Half Eagle, AU58
Variety 1**

- 6393 1853-C AU58 PCGS. Variety 1.** This boldly defined Charlotte half eagle features a sharp mintmark. The lightly marked surfaces exhibit green-gold with reflective fields and moderate contrast with lustrous devices. Although a plentiful Charlotte half eagle issue, few survive in Mint State grades. Population: 11 in 58, 10 finer (3/14). NGC ID# 25UE, PCGS# 8254

**1853-C Half Eagle, MS60
Rare Weak C Variety**

- 6394 1853-C MS60 NGC. Variety 3.** The rare die variety for this issue with a weak C mintmark positioned high and over the E in FIVE. A light yellow-green representative with bright luster. The strike definition is good overall for a Charlotte Mint product, if incomplete on BE and the adjacent hair detail. Census: 7 in 60 (1 in 60+), 18 finer (3/14). NGC ID# 25UE, PCGS# 8254

**1853-C Half Eagle, MS60
An Available Charlotte Type Coin**

- 6395 1853-C MS60 NGC. Variety 1.** The 1853 eagle production at the Charlotte Mint consisted of 65,571 coins. Areas of attractive luster remain on this Mint State representative. Shades of pale-yellow gold are present, along with a few subtle hints of orange. Scattered marks appear, but pose minimal distraction, if any. Census: 7 in 60 (1 in 60+), 18 finer (3/14). *From The Philip Poier Collection.* NGC ID# 25UE, PCGS# 8254

- 6396 1853-D Large D — Obverse Scratched, Improperly Cleaned — NCS. AU Details. Variety 35-X.** The most available half eagle from this mint, popular among type specialists. Cleaned in the past, the present example shows still-pleasing, light green-gold patina. The strike is atypical, with weakness on the top of Liberty's head, surrounding stars, and the corresponding portion of the reverse. A pair of short, thin scratches are noted on the obverse near star one. NGC ID# 25UF, PCGS# 8255

**1853-D Large D Half Eagle, AU50
Well-Defined and Minimally Abraded**

- 6397 1853-D Large D AU50 NGC. Variety 35-AA.** The mintmark touches the stem and the arrow feathers. The 1853-D is the most common half eagle from the Dahlonega Mint. It is available through About Uncirculated but rare in Mint State. The wheat-gold surfaces of this AU example are imbued with hints of red on the reverse, and the design elements are well-defined save for some of the eagle's plumage. There are fewer and less severe marks than usually seen on this issue. NGC ID# 25UF, PCGS# 8255

1854-C Half Eagle, AU55
Above-Average Strike and Surface Quality

- 6398 1854-C AU55 NGC. Variety 2.** The mintmark is lightly entered and placed over the E in FIVE. The 1854-C is one of the scarcest of the later-date Charlotte half eagles, and is most often seen in Very Fine through lower About Uncirculated grades. Uncirculated pieces are very rare and unknown above near-Gem. The present Choice AU offering displays above-average strike definition and surface quality. Specifically, the star centers are sharp as is most of Liberty's hair; these areas frequently show weakness. Additionally, neither side reveals the planchet imperfections (striations and laminations) or heavy abrasions often found on this issue. Nice overall eye appeal. Census: 16 in 55, 23 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25UH, PCGS# 8257

1854-C Half Eagle, Sharply Impressed AU58
Extremely Rare in Mint State

- 6399 1854-C AU58 NGC. Variety 1.** The mintmark is bold and its right edge is placed over the the center of the V in FIVE, its left edge is over the upright of the I in FIVE, the serif is very close to the feather tip and its upper loop close to the talon. The 1854-C is scarce in circulated grades and extremely rare in mint condition. Both sides of this near-Mint example are sharply impressed save for the curls over Liberty's temple along with the arrow feathers. The surfaces are a bright yellow-gold with only scattered, relatively light abrasions. Census: 16 in 58, 7 finer (3/14).
Ex: New York Signature (Heritage, 11/2003), lot 7494. NGC ID# 25UH, PCGS# 8257

1854-D Large D Half Eagle, AU53
Fewer Marks Than Usually Encountered

- 6400 1854-D Large D AU53 NGC. Variety 36-AA.** The 1 in the date is very close to the bust truncation and its upright centered between denticles, and the Large D mintmark, slightly repunched south, is entered high and touches both the feather and the branch, attributing the variety. The design elements are well-defined save for minor softness on the hair at Liberty's temple and the eagle's neck feathers. About one-half of the dentilation is weak or does not show, a typical characteristic for the majority of examples. Unlike many surviving specimens that show distracting abrasions, the reddish-gold surfaces are devoid of significant marks. NGC ID# 25UK, PCGS# 8258

1854-D Large D Half Eagle, AU55
Lustrous Dahlonega Type Coin

- 6401 1854-D Large D AU55 PCGS. Variety 37-BB,** the normal Large D mintmark, not the repunched Variety 36-AA. The mintage of this issue was plentiful by Dahlonega standards at 56,413 pieces, making it a great choice for type purposes or for assembling the popular half eagle mintmark set. The issue is readily available for a price, even into the Mint State levels. This reddish-tinged yellow-gold Choice AU example shows a few scattered marks and weakness around the rims typical of the issue, but the centers are well-struck. Generous luster remains on each side. A small V-shaped scratch appears in the right reverse field. Population: 24 in 55, 52 finer (3/14). NGC ID# 25UK, PCGS# 8258

1854-O Half Eagle, Well-Struck AU58

- 6402 1854-O AU58 NGC. Variety 2.** The mintmark is centered over the upright of the E in FIVE, attributing the variety. Coming from a mintage of 46,000 pieces, the 1854-O half eagle is shown by the population figures to be available through About Uncirculated condition but rare in Mint State, where all grade mostly MS60 to MS62. The yellow-gold surfaces of this near-Mint example are imbued with traces of red and show luster in the recessed areas. The design elements are well-struck and both sides are free of significant marks. Census: 32 in 58, 10 finer (3/14). NGC ID# 25UM, PCGS# 8259

- 6403 1855-C XF45 PCGS. Variety 1.** This yellow-gold half eagle is from a relatively high Charlotte mintage of 39,788 pieces. Examples are scarce at this Choice XF grade level, and increasingly scarce any finer. A boldly struck piece with softness noted only on the obverse stars and the eagle's arrow fletchings. Numerous minor marks and a few noticeable abrasions are reported, as expected for a gold coin that saw moderate circulation. NGC ID# 25UR, PCGS# 8262

- 6404 1855-C — Improperly Cleaned — NCS. AU Details. Variety 1.** A scarce issue, with only 175 to 225 pieces believed known in all grades. This example displays a bold strike in most areas, with notable definition among the border denticles and the curls around Liberty's face, but exhibits some typical softness on the eagle's head and neck. Very lightly cleaned in the past, the surfaces retain a deep green-gold patina, with tiny bits of verdigris still clinging to the crevices. NGC ID# 25UR, PCGS# 8262

- 6405 1855-D Medium D — Improperly Cleaned — NCS. AU Details. Variety 38-CC.** The scarcer of the two known varieties, differentiated by the size and placement of the mintmark. As a date, the 1855-D half eagle is among the scarcer issues from this mint, with only 125-150 examples believed known in all grades. The present piece shows evidence of cleaning, but retains a pleasing overall appearance. Strong definition is seen across the denticles and stars, though some typical weakness is noted on the centers. NGC ID# 25US, PCGS# 8263

1855-Medium D Half Eagle, AU55 Fewer Marks Than Usually Seen

- 6406 1855-D Medium D AU55 NGC. Variety 38-CC (formerly 32-W).** The mintage for the 1855-D half eagle (22,432 pieces) dropped significantly from the previous few years of coinage at the Dahlonega Mint. The yellow-gold surfaces of this Choice AU specimen display traces of luster in the recessed areas. The design elements are typically struck, in that Liberty's hair and the eagle's plumage are weak in spots. Significantly, both sides reveal fewer and less severe marks than usually seen on the majority of pieces, making the coin highly desirable. Census for the issue: 17 in 55, 24 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 98263

1855-O Half Eagle, AU50 Scarce, Low-Mintage Issue

- 6407 1855-O AU50 NGC. Variety 1.** This low-mintage New Orleans issue is scarce at any level of preservation, and high-grade coins are rare. This example is boldly detailed overall, but the arrowheads, talons, and fletchings are softly struck. Peach accents on the high points complement the pleasing lime-green coloration across both sides. Free of singular distractions, with excellent eye appeal for the grade and type. Census: 6 in 50, 30 finer (3/14). NGC ID# 25UT, PCGS# 8264

- 6408 1855-S XF45 NGC.** Scarce in all grades and incredibly rare in Mint State, the 1855-S half eagle is elusive in pleasing condition. This Choice XF example boasts original, medium orange-gold patina with significant mint luster remaining in the protected areas. Light wear is seen over the high points of the design, but strong detail remains overall, particularly on the eagle feathers. NGC ID# 25UU, PCGS# 8265

1856-C Five Dollar, Unc Details Rare in Uncirculated Grades

- 6409 1856-C — Reverse Repaired — NCS. Unc Details.** This rare Charlotte issue is often found damaged or otherwise impaired, but usually in lower circulated grades. This Mint State example has an area of repair on the reverse identifiable by surface smoothing in the field above the eagle's head. Pleasing otherwise, the coin displays honey-gold color and attractive luster except where the repair was made, where the luster is muted with a tinge of olive-green.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25UW, PCGS# 8267

1856-C Five Dollar, MS61
One of the Few Uncirculated Pieces Known

- 6410 1856-C MS61 PCGS. Variety 1.** While a fairly common issue by Charlotte Mint standards, the 1856-C is underrated and generally never found above AU. Few pieces are known known in Uncirculated condition and this is not the plate coin (also an MS61) photographed in Winter's reference on this series. The 1856-C is better known for numerous, deep abrasions than granular surfaces. This coin, however, is minimally abraded but does have extensive granularity in the fields, most especially on the reverse. Very sharply struck, and atypical for the issue, the hair curls around Liberty's face are crisp and the eagle's plumage is almost completely brought up. The bright mint luster is overlaid by a light accent of rose colored patina. All in all a very attractive example of this rare issue and easily one of the top examples known.
Ex: Central States Signature (Heritage, 4/2002), lot 7000. NGC ID# 25UW, PCGS# 8267

1856-D Half Eagle, Lightly Marked AU58

- 6411 1856-D AU58 NGC. Variety 39-FF (formerly 33-BB).** The only known die pair. The 1 in the date is centered over a denticle, and the upright of the mintmark is centered over the center of the right serif of the V in FIVE. The left edge of the mintmark is over the center of the V, while the right edge is over the right edge of the upright of the E.

The yellow-gold surfaces of this near-Mint State offering display ample luster in the recessed areas, and the design elements are well-struck save for softness in portions of Liberty's hair. Both sides are only lightly marked, which is unusual for this date that is usually heavily abraded. What appears to be an inordinately high number of AU58 examples in the NGC census (14 pieces) may well result from resubmissions in the hope of attaining a Mint State designation. Census: 14 in 58, 13 finer (3/14). NGC ID# 25UX, PCGS# 8268

1856-O Half Eagle, Unc Details
Scarce Low-Mintage Issue

- 6412 1856-O — Polished — NGC Details. Unc. Variety 2.** Light recutting is evident on the flag of 1 in the date. A scarce low-mintage New Orleans issue that is seldom seen at any grade level. This is a well-struck example with a slightly bright appearance from polishing, and lightly toned surfaces that display a few wispy hairlines on each side.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

1856-O Half Eagle, MS60
One Of The Finest-Known Examples

- 6413 1856-O MS60 NGC. Variety Two.** The 1852-O and 1856-O half eagles, at 10,000 coins each, are tied for the lowest mintage among O-mint half eagles. Although several Mint State examples of the 1856-O have surfaced since Douglas Winter wrote his reference work, the number of surviving examples is still minuscule. The present example shows beautiful antique-gold surfaces, beneath which much luster shines forth. The strike is actually fairly bold: all but stars 1 and 2 show some central detail, and there is a bit of flatness on the coronet tip, but elsewhere little weakness is noted. Were it not for some extremely light pinscratches through Liberty's cheek and out into the field nearby, this piece might garner a higher grade. Census: 2 in 60, 3 finer (3/14).
Ex: Central States Signature (Heritage, 4/2006), lot 2735. NGC ID# 25UY, PCGS# 8269

- 6414 1856-S AU50 NGC. Medium S.** A well-struck example of this early San Francisco issue, with only a touch of wear seen over the surfaces. Significant mint luster shines through original orange-gold color on both sides, delivering exceptional visual appeal. A russet surface mark is noted near star two, but is not overly detracting. NGC ID# 25UZ, PCGS# 8270

1857-C Half Eagle, AU58
Popular Type Issue

- 6415 1857-C AU58 NGC. Variety 1.** Light khaki-green toning adorns the lightly-worn surfaces of this pleasing near-Mint example. Boldly struck with a number of tiny, superficial marks noted on each side. This issue is considered to be a common date among Charlotte Mint half eagles, but relatively few coins are known at AU58, and an even smaller number have been graded in Mint State. Census: 40 in 58, 27 finer (3/14). NGC ID# 25V3, PCGS# 8272

- 6416 1857-D — Improperly Cleaned — NCS. AU Details. Variety 41-HH.** One of the scarcest late-date issues from the Dahlonega mint. This piece exhibits medium green-gold color over lightly cleaned surfaces, with few noticeable abrasions. Some lightness of strike is seen around the denticles and the stars, though pleasing definition is present on the central devices. NGC ID# 25V4, PCGS# 8273

1857-O Half Eagle, Conditionally Scarce AU58

- 6417 1857-O AU58 NGC. Variety 1.** The only known variety. The 1857-O was the last half eagle produced at New Orleans prior to the Civil War, struck to the tune of 13,000 pieces. The present AU58 is the finest most collectors are likely to encounter as this date is extremely rare in mint condition. And even AU58s will require diligent searching. The star centers and hair curls about Liberty's face are strong, an unusual trait for this date. The hair atop the head and the bun reveal the usual softness, as do the eagle's neck feathers and arrow feathers. Honey-gold surfaces exhibit luster in the recesses and are lightly to moderately abraded. A milling mark on Liberty's cheek and another on the lower neck will help to identify the coin. Census: 10 in 58, 4 finer (3/14). NGC ID# 25V5, PCGS# 8274

- 6418 1857-S AU53 NGC.** Despite a mintage of 87,000 coins, the 1857-S half eagle is remarkably scarce in all grades, and rare in Mint State. The present example exhibits good definition over most design elements, with just a touch of softness noted on the eagle's neck feathers. The surfaces display pleasing yellow-gold patina with subtle remnants of luster visible in the recessed areas. Light, scattered abrasions are noted, as are normal at this grade level. Census: 11 in 53, 41 finer (3/14). NGC ID# 25V6, PCGS# 8275

- 6419 1858-C — Scratched — ANACS. AU Details, Net XF45. Variety 1.** A well-made Charlotte issue, popular with type collectors. This sharply detailed example displays original, medium orange-gold color over both sides, with pleasing eye appeal. The surfaces exhibit some scattered abrasions, typical of this issue, the most notable being a pair of crisscrossing scratches at the base of STATES on the reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25V8, PCGS# 8277

- 6420 1858-C — Improperly Cleaned — NCS. AU Details. Variety 1.** Among the more available and well-made half eagles from the Charlotte mint, the 1858-C is popular among type collectors. The present example exhibits boldly struck design elements, with above-average definition on the eagle's neck and the hair curls around Liberty's face. Lightly cleaned with minor roughness in the reverse fields, but retaining an overall pleasing appearance. NGC ID# 25V8, PCGS# 8277

1858-C Five Dollar Gold, AU58
Popular Type Coin from the Charlotte Mint

6421 1858-C AU58 NGC. Variety 1. A lightly circulated example of the more common of the two varieties for this issue, this piece displays attractive yellow-gold color, with areas of original mint luster remaining. The strike is sharp overall, with portions of the dentils on both sides revealing blending. Census: 39 in 58 (1 in 58+), 21 finer (3/14).

From The Philip Poier Collection. NGC ID# 25V8, PCGS# 8277

6422 1858-D PCGS Genuine. Variety 43-II (formerly 35-DD). The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an AU specimen that has been smoothed. The orange and lemon surfaces are nonetheless attractive, and there is little if any circulation wear. Only 15,362 pieces were issued. NGC ID# 25V9, PCGS# 8278

1858-D Five Dollar, AU58
Scarce Any Finer

6423 1858-D AU58 NGC. Variety 43-HH. This issue is one of the more affordable Dahlonega half eagles, although less so than some of the larger-mintage, early 1850s D-Mint dates. Just 15,362 pieces were produced of the current example. Attractive, orange-gold surfaces remain lustrous and sharp. Abrasions are not too noticeable or frequent for the near-Mint grade, making this an excellent alternative to a lower-end Uncirculated piece that might double the price. Census: 44 in 58, 10 finer (3/14). NGC ID# 25V9, PCGS# 8278

1858-D Half Eagle, Exceptional AU58
Conditionally Scarce in This Grade

6424 1858-D AU58 PCGS. Variety 43-HH. This variety is attributed by the placement of the upright of the D mintmark over VE of FIVE. Several factors make this scarce near-Mint five dollar an exceptional find. First, its design elements are sharply struck, whereas most specimens are weak in the centers. Second, its orange-gold surfaces retain ample luster and are remarkably clean, revealing just a few unobtrusive, minuscule marks. This contrasts with Douglas Winter's (2013) observation that: "The 1858-D half eagle is difficult to locate with clean surfaces. Even higher grade examples show numerous abrasions." Finally, the current offering exhibits pleasing eye appeal, much better than seen on the typical example. This is an excellent choice for the collector of Dahlonega gold. Population: 24 in 58, 9 finer (3/14). NGC ID# 25V9, PCGS# 8278

6425 1858-S — Improperly Cleaned — NGC Details. AU. From a mintage of only 18,600 coins, this early San Francisco half eagle displays well-defined details and pale green-gold patina. Old, light cleaning is noted, though the overall visual appeal remains good. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

6426 1859 AU55 NGC. With a low mintage of only 16,700 coins, the 1859 half eagle is actually scarcer than many branch mint issues of the era, and is particularly rare in Mint State condition. This Choice Almost Uncirculated piece displays light orange-gold color overall, with remnants of mint luster in the recesses near the borders. The motifs are well-struck, with only light wear seen over the high points. Census: 11 in 55, 20 finer (3/14). NGC ID# 25VB, PCGS# 8280

6427 1859-C — Improperly Cleaned — NGC Details. AU. Variety 1. A curious characteristic of the 1859-C half eagle is that all known examples exhibit weak, blurry definition on the reverse, particularly on the eagle, likely due to an improperly annealed die. This representative exhibits lightly cleaned surfaces, but retains strong detail on the obverse and pale green-gold color overall. NGC ID# 25VC, PCGS# 8281

1859-C Half Eagle, Minimally Abraded AU58

- 6428 1859-C AU58 NGC. Variety 1.** The only known variety. The 1859-C half eagle is readily available through XF. AU coins are scarce and Mint State pieces are quite rare. As pointed out by Douglas Winter (2008), this issue, along with the 1860-C, has the most distinctive strike pattern for any coin produced at the Charlotte Mint, namely the reverse is very weak. Suggested reasons for this are that the reverse was improperly annealed, the die became clogged, or that it may only have been hubbed once instead of twice. Whatever the reason, “every known example has extremely weak and ‘fuzzy’ detail,” especially the eagle’s neck, top of the shield, the right (facing) wing and claw, and the arrow feathers.

The present AU58 example, of course, reveals this reverse weakness. The obverse, on the other hand, is well-defined, including Liberty’s hair and the star centrils. Both sides show just a few minor ticks. This is a significant attribute because the typical 1859-C is heavily abraded with deep, detracting marks. Census: 30 in 58, 12 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25VC, PCGS# 8281

- 6429 1859-S — Improperly Cleaned — NCS. AU Details.** With a limited mintage of scarcely more than 13,000 coins, the 1859-S half eagle is rare in all grades and prohibitively rare in Mint State. Very lightly cleaned in the past, the present representative displays medium green-gold patina with subtle remnants of original luster remaining in the protected areas. The strike is sharp, with only slight friction seen over the high points. NGC ID# 25VE, PCGS# 8283

- 6430 1860 AU50 ANACS.** With a mintage of just 19,700 coins, the 1860 half eagle is scarce in all grades, and rare in Mint State. This Almost Uncirculated example exhibits pleasing yellow-gold patina with substantial mint luster in the recessions. The strike is bold, with only light wear over the high points of the devices. An attractive example of this sought-after issue. NGC ID# 25VE, PCGS# 8284

1860 Half Eagle, AU58
A Low-Mintage, Rare Issue

- 6431 1860 AU58 PCGS.** Most 1860 half eagles, with a mintage of fewer than 20,000 pieces, entered circulation. Present-day survivors are primarily seen in Extremely Fine and About Uncirculated grades. PCGS and NGC have graded only 10 Uncirculated pieces, mostly in the lower levels. The pinkish-gold surfaces of this near-Mint State example display considerable luster and well-struck devices and are minimally abraded. Population: 6 in 58, 2 finer (3/14). NGC ID# 25VF, PCGS# 8284

- 6432 1860-C VF30 NGC. Variety 1.** From the only known dies, this coin hails from a mintage of only 14,813 half eagles minted at Charlotte in 1860. The number of surviving examples is low, adding to the desirability of this piece. Rich gold color and the absence of any mentionable marks are among the attributes this specimen possesses.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25VG, PCGS# 8285

1860-C Half Eagle, AU50
Variety 1, The Only Dies

- 6433 1860-C AU50 PCGS. Variety 1.** Displaying the typical indistinct detail of the eagle, due to the use of an improperly annealed reverse die, this lightly circulated piece displays deep yellow-gold color overall. Closer examination reveals hues of orange, red, lavender, and ice-blue. Population: 15 in 50, 45 finer (2/14). NGC ID# 25VG, PCGS# 8285
-

1860-C Half Eagle, AU55
Sharply Struck on the Obverse

- 6434 1860-C AU55 NGC. **Variety 1.** The only die pair, which shows small numerals in the date that are much closer to the denticles than to the bust truncation. The orange-gold surfaces of this Choice AU specimen are imbued with whispers of soft red and rose. Strong design detail is apparent on the obverse, a typical characteristic of this date. Only the neck curl displays the usual softness. The reverse is another matter. As known examples illustrate, extensive weakness is noted on the eagle's neck and legs, the shield, and the arrow feathers. Winter (2008) attributes this weakness to an improperly hubbed reverse, thus resulting in an "incomplete" appearance. On the plus side, both obverse and reverse are lightly marked, a far cry from the deep, distracting marks plaguing most examples. NGC ID# 25VG, PCGS# 8285

1860-C Half Eagle, AU58
Low-Mintage Charlotte Issue

- 6435 1860-C AU58 NGC. **Variety 1.** A representative from the only die pair identified for the nearly 15,000 half eagles coined at Charlotte in 1860, this lightly circulated coin exhibits rich golden-orange color. The reverse reveals a few tiny alloy spots. Wear is present on the high points of the design, with the central design revealing a weakness of strike, as this issue is known for. An improperly annealed reverse die led to a lack of definition for the eagle. Census: 26 in 58 (2 in 58+), 20 finer (3/14).
From The Philip Poier Collection. NGC ID# 25VG, PCGS# 8285

1860-D Large D Five Dollar, Patinated AU58

- 6436 1860-D Large D AU58 PCGS. **Variety 46-EE.** The PCGS insert (at present) states this is a Medium D variety, but it is actually a Large D (we plan to have the coin reholdered as such before the auction), and a much scarcer variant of the large size mintmark. The top left of the upper serif of the D mintmark is very close to the pointed branch tip just above it. The 1860-D five is not as scarce as its relatively low mintage of 14,635 pieces would suggest, possibly due to a few small hoards. Nearly 50 Uncirculated pieces have been graded by PCGS and NGC, although they are concentrated in the MS60 to MS62 range.

The present near-Mint State offering displays orange-gold coloration laced with lavender, violet, and rose. The design elements reveal the strike variations usually seen on this date. Specifically, the stars along the right border are sharp while those at the left are weak, the hair curls at the temple and neck are flat while most of the remainder is strong, and the eagle's neck and feathers on the right (facing) leg are indistinct while the remaining plumage shows clearly. Neither side reveals the numerous deep abrasions or grease stains that are often seen on surviving examples. Population: 20 in 58, 30 finer (3/14). PCGS# 98286

1860-S Five Dollar, AU55
Rare, Seldom-Seen Issue

- 6437 1860-S AU55 NGC. This is a rare issue with a low mintage of 21,200 coins. NGC has graded just 50 examples, while PCGS has seen even fewer, with 36 pieces listed in their Population data. This Choice AU representative displays smooth surfaces with lovely, even coloration. Census: 8 in 55, 7 finer (3/14). NGC ID# 25VJ, PCGS# 8287

1860-S Half Eagle, AU58
One of the Finest Known

6438 1860-S AU58 PCGS. An individual collector seeking a complete collection of Liberty Head half eagles would find the issues of the late 1850s and the early 1860s to be among the most challenging to locate in any condition. If high-grade status is included, then the stakes become even higher.

This issue has a low mintage of 21,200 coins, but that number is not the lowest among half eagles out of San Francisco during the Civil War era, and it was higher than those of the 1861, 1862, 1863, and 1864 S-mint half eagles. All of those issues are rare, as half eagles were the favored denomination on the West Coast during the early 1860s and circulated heavily.

This example is among the finest known survivors from this date and mint, and displays remarkably clean surfaces with little indication of casual handling. Both sides of the piece are virtually mark-free, and minimal wear is found on any of the high points. A well-struck piece showing light green-gold toning, and peach-red luster remnants around the devices. Population: 2 in 58, 1 finer (3/14). NGC ID# 25VJ, PCGS# 8287

1861-S Half Eagle, XF45
Rare Low-Mintage Issue

6439 1861-S XF45 NGC. The small population numbers for this early S-mint issue, at both major services, confirm that it is indeed a rare date with a tiny percentage of survivors from the low mintage of 18,000 coins. Choice XF is a fairly advanced level for this heavily circulated issue, with no examples currently known in mint condition. This is an appealing example with sharply struck motifs and modest wear on the high points. The reverse is especially clean and smooth-looking, for the grade. Census: 6 in 45, 22 finer (3/14). NGC ID# 25VN, PCGS# 8291

1862 Half Eagle, Sharply Defined AU53
Rare in All Grades

6440 1862 AU53 NGC. By 1862, at the height of the Civil War, the Federal government no longer paid out gold coins, accounting for the dramatically low mintage of gold eagles (4,430 pieces). As might be expected, the 1862 five dollar is rare in all grades. In fact, the PCGS website estimates fewer than 100 coins are known in all levels of preservation. NGC and PCGS have seen a mere 74 specimens, only three of which are in Mint State.

The reddish-gold surfaces of this AU53 example are imbued with wisps of yellow-gold and a solid strike has left strong definition on all design elements. Neither side is severely abraded. The pattern of minute marks (some of which are single milling marks) on Liberty's cheek and upper neck will help to identify this coin. The new owner of this Civil War-era rarity will be highly pleased with this acquisition. Census: 6 in 53, 18 finer (3/14). NGC ID# 25VP, PCGS# 8292

1862-S Half Eagle, XF45
Outstanding Visual Appeal

- 6441 1862-S XF45 NGC.** The absolute rarity of this low-mintage issue is indisputable, and easily verified by a cursory examination of NGC and PCGS population data. NGC has graded a mere 41 pieces, while PCGS has seen just 39 examples. Keep in mind that these minuscule numbers may include resubmissions. This XF45 coin has outstanding visual appeal with smooth, barely-marked surfaces and lovely antique-gold toning accented by hints of lilac and peach on each side. Census: 8 in 45, 19 finer (3/14). NGC ID# 25VR, PCGS# 8293

1863-S Five, AU53
Pleasing Rare Date Example

- 6442 1863-S AU53 NGC.** A low mintage of only 17,000 coins combines with the usual heavy circulation for gold coins from this era in San Francisco to guarantee the absolute and conditional scarcity of this issue. It is nearly as rare as the more famous 1863 Philadelphia Mint issue. This is an attractive coin with even reddish-gold patina and few surface blemishes, including one just below the eagle's right (facing) wing. Census: 4 in 53, 16 finer (3/14). NGC ID# 25VT, PCGS# 8295

1864 Half Eagle, Sharply Defined AU53
A Low-Mintage, Rare Issue

- 6443 1864 AU53 NGC.** Post-1861 half eagle mintages continued to be low through this decade, especially Philadelphia issues. The 1864 five saw a production of only 4,170 pieces. It is therefore not surprising that this date is rare in all grades. The PCGS website estimates only 75 to 100 examples are extant, and the two major services have certified a total of 90 pieces, only six of which are in Mint State, none finer than MS61.

This AU53 offering displays orange-gold surfaces with traces of luster in the protected areas. The design elements are sharply defined throughout even after accounting for high-point wear. Moreover, the few minuscule marks are undistracting. The most noticeable mark, a shallow scrape beneath OF, is singled out solely for pedigree purposes. Census: 6 in 53, 24 finer (3/14). NGC ID# 25VU, PCGS# 8296

-
- 6444 1865 — Cleaned — ANACS. XF40 Details.** With a minuscule mintage of only 1,295 coins, the 1865 half eagle is among the scarcest Civil War-era Philadelphia issues and is highly sought-after. Lightly cleaned long ago, the present example has long-since retuned a warm orange-gold overall, with significant detail remaining. Some minor surfaces abrasions are noted, but in no way detract from the pleasing eye appeal.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25VW, PCGS# 8298

1865 Five Dollar, AU50
Sought-After, Elusive Date

- 6445 1865 AU50 NGC.** The paltry coinage of 1,270 business-strike half eagles produced in 1865, many of which were apparently melted, translates into this issue being a major rarity. This is evidenced by the meager population of 48 examples certified by NGC and PCGS in all grades combined. Only five of these were assigned a Mint State designation, and none are finer than MS61. Reddish-gold patination cascades over both sides of this AU50 example, each of which exhibits well-struck design features. Only the leg feathers and the arrow feathers are a tad ill-defined. Distributed small marks are visible on the obverse. Census: 3 in 50, 18 finer (3/14). NGC ID# 25VW, PCGS# 8298

-
- 6446 1865-S — Altered Surface — NCS. AU Details.** The 1865-S stands among the scarcest issues from this mint, especially in higher grades. The present representative displays good definition on most design elements, with some typical weakness seen around the arrows on the reverse and on the hair curls around Liberty's face. The surfaces exhibit muted, pale yellow-gold patina, but remain pleasing overall. NGC ID# 25VX, PCGS# 8299

6447 1866-S No Motto — Improperly Cleaned — NCS. XF Details. With a mintage of only 9,000 coins, the No Motto 1866-S half eagle is scarce in all grades and currently unknown in Mint State. The present example displays pleasing detail and minimal surface abrasions. Lightly cleaned, with pale yellow-gold color overall. NGC ID# 25VY, PCGS# 8300

**1867 Half Eagle, Sharply Struck AU55
A Conditionally Rare Issue**

6448 1867 AU55 NGC. NGC and PCGS have graded only 91 half eagles from the Philadelphia Mint bearing the date 1867 that came from a mintage of 6,870 pieces. The majority of these grade from Very Fine to the lower levels of About Uncirculated. AU55 and AU58 pieces account for 19 pieces in the population, and a mere two Uncirculated pieces are known. The reddish-gold surfaces of this Choice AU offering display traces of luster in the recesses, and the design elements are uniformly sharply struck, with just the eagle showing minor softness. The few minute marks are unobtrusive and undistracting. This piece yields great overall eye appeal. Census: 7 in 55, 8 finer (3/14). NGC ID# 25W3, PCGS# 8313

6449 1868 AU50 NGC. Like many Philadelphia issues from this period, the 1868 half eagle was produced in limited quantities (only 5,700 pieces), and as such is scarcely seen in any grade. This About Uncirculated example shows sharply struck design elements, with only light wear present over the high points. Remnants of prooflike mirroring are seen in the protected areas of the fields, with orange-gold patina overall. Census: 6 in 50, 43 finer (3/14). NGC ID# 25W5, PCGS# 8315

6450 1868-S — Improperly Cleaned — NCS. AU Details. Lightly cleaned in the past, this well-detailed San Francisco half eagle retains pleasing eye appeal with pale green-gold surfaces. A few light, scattered abrasions are present, primarily on the obverse, but are not outwardly detracting. NGC ID# 25W6, PCGS# 8316

**1869 Half Eagle, Sharply Struck AU55
Low Mintage and Rare in All Grades**

6451 1869 AU55 PCGS. The 1869 has one of the lowest mintages of the Liberty Head half eagle series. With only 1,760 circulation strikes, the 1869 is very rare in any grade. The PCGS website contends fewer than 100 pieces are known. PCGS and NGC have seen fewer than 70 specimens in all grades, a mere four of which are Uncirculated. The yellow-gold surfaces of this Choice AU example retain luster in the recessed areas and exhibit sharply struck motifs, though the eagle's neck feathers are soft. A few minuscule marks do not detract from the coin's pleasing eye appeal. Population: 4 in 55, 2 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25W7, PCGS# 8317

**1869 Half Eagle, Patinated AU58
Semireflective Surfaces**

6452 1869 AU58 NGC. A predictably elusive With Motto five, the 1869 is just as rare as its mintage of 1,785 pieces implies. As usual for this issue, the fields retain considerable semireflective qualities despite numerous tiny abrasions. The features are well struck throughout with only slight softness noted over the eagle's neck feathers. An original piece, the surfaces have taken on a subtle overlay of reddish-golden patina. Census: 7 in 58, 2 finer (3/14).
Ex: FUN Signature (Heritage, 1/2001), lot 8211. NGC ID# 25W7, PCGS# 8317

1869-S Half Eagle, Conditionally Scarce AU53

6453 1869-S AU53 NGC. The 1869-S five dollar circulated extensively in the channels of commerce, consequently most surviving examples are well worn. The issue becomes scarce in About Uncirculated and is extremely rare in mint condition, where NGC and PCGS have graded a paltry three pieces, none finer than MS62. The wheat-gold surfaces of this AU53 example display traces of luster in the recessed areas, and the design elements are well-impressed except for minor softness on the hair bun, eagle's neck, upper shield, and arrow feathers. Faint pin scratches in the form of a small "x" in the right reverse field will help to identify the coin. Census: 8 in 53, 24 finer (3/14). NGC ID# 25W8, PCGS# 8318

**1870 Half Eagle, Well-Struck AU58
An Important Philadelphia Rarity**

- 6454 1870 AU58 NGC.** Coming from a minuscule mintage of 4,000 circulation strikes, the 1870 half eagle is unsurprisingly rare in all grades. The PCGS website estimates less than 100 specimens are known, and NGC and PCGS combined have graded just 95 examples in all levels of preservation. These include a mere two Uncirculated pieces, both PCGS MS61s. Rich orange-gold coloration is joined by whispers of lavender on the reverse, and both sides display luster in the protected areas. The design elements are well-struck save for minor softness on the eagle's neck and the arrow feathers. The few scattered minute marks do not distract. Census: 12 in 58, 0 finer (3/14). NGC ID# 25W9, PCGS# 8319

**1870-CC Half Eagle, VG Details
Variety 1-A**

- 6455 1870-CC — Rim Filing — NGC Details. VG. Variety 1-A.** The only die pair identified among survivors of the 7,675 coin mintage. This piece has greenish-gold surfaces with extensive wear. Light surface marks and hairlines are evident, with heavy rim filing at the top of the reverse. NGC ID# 25WA, PCGS# 8320

**1870-S Half Eagle, Well-Defined AU55
Rare in All Grades**

- 6456 1870-S AU55 NGC.** The 1870-S five dollar is much rarer than even its fairly small mintage of 17,000 pieces would indicate. The issue circulated widely in the channels of commerce, consequently the 160 or so specimens graded by NGC and PCGS are concentrated in the Good to About Uncirculated 53 range. Even these are difficult to locate, let alone Choice and near-Mint AUs. Mint State coins are unknown. Honey-gold patina runs over both sides of this AU55 offering and strong design detail shows on each, though the eagle's neck feathers are soft. Scattered light marks are within the parameters of a briefly circulated coin and do not disturb. Census: 13 in 55, 2 finer (3/14). NGC ID# 25WB, PCGS# 8321

- 6457 1871 — Improperly Cleaned — NCS. AU Details.** A rare issue in all grades, with a scant mintage of only 3,230 coins and a proportionally low survival rate. The present example displays well-detailed design elements with only light rub over the high points. Lightly cleaned long ago, the surfaces have since acquired a medium orange-gold patina and deliver pleasing overall eye appeal. NGC ID# 25WC, PCGS# 8322

- 6458 1871-CC VG10 NGC. Variety 1-A.** A well-circulated example of the more common of the two known varieties, this piece displays antique brass color. Even wear and the absence of any mentionable marks add to the appeal of this survivor.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25WD, PCGS# 8323

- 6459 1871-CC Fine 12 NGC. Variety 1-A.** A mintage of just 20,700 pieces ensures the rarity of this early Carson City half eagle. The present apricot-gold representative is surprisingly free from abrasions but was softly struck on the portrait and portions of the eagle. NGC ID# 25WD, PCGS# 8323

- 6460 1871-CC — Obverse Damage — NGC Details. VF. Variety 1-A.** Half eagles from the second year of production at the Carson City mint are scarce in all grades, with a mintage of just 20,770 coins. The present piece displays pale green-gold patina overall, with strong detail remaining for the grade. Several old, light scratches are seen on the obverse, with a small patch noted in the field near star five. NGC ID# 25WD, PCGS# 8323

**1871-S Half Eagle, Breen-6678, AU53
Repunched Date**

- 6461 1871-S AU53 NGC. Breen-6678, Double-Punched Date.** Breen (1988) writes: "Very rare. Date first entered low, then corrected higher (about central)." Garrett and Guth (2006), on the other hand, contend that: "The variety is probably not that rare, as the Harry W. Bass Jr. Collection had three examples in one sale." In any event, it is an interesting variety; remnants of the underdigit are clear below the tops of each serif in the 1s, below the upper loop of the 8, and beneath the upper crossbar of the 7.

The 1871-S five is very scarce in circulated grades and extremely rare in Mint State where only four have been certified, all MS61. The wheat-gold surfaces of this AU53 piece retain traces of luster in the recessed areas. The devices are well-struck save for localized softness in Liberty's hair, the eagle's neck and leg feathers, and the arrow feathers. A few scattered marks are insignificant. A small indent to the upper right of star 1 will help to pedigree the coin. Census: 10 in 53, 38 finer (3/14). NGC ID# 25WE, PCGS# 8324

**1872 Half Eagle, Pleasing AU58
A Low-Mintage, Rare Issue**

6462 1872 AU58 NGC. The 1872 half eagle saw a minuscule production of just 1,660 business strikes, making it one of the lowest mintages of any Liberty head five. A meager 50 to 65 pieces are known, according to the PCGS website, and the two major services have graded just 50 examples, nine of which are in Mint State, none finer than MS64.

Traces of mint luster reside in the recessed areas of this orange-gold AU58 piece that is visited by whispers of rose. The design elements are well-impressed except for minor softness in the hair at Liberty's temple and on the eagle's neck feathers. A shallow linear abrasion between the eagle's beak and the left (facing) wing will aid in the identification of this particular coin. Low mintage, low survival rate in all grades, and pleasing technical quality and aesthetic appeal combine to make this an infrequent opportunity for the half eagle collector. Census: 6 in 58, 4 finer (3/14). NGC ID# 25WF, PCGS# 8325

**1872-CC Five, VF30
Low-Mintage Carson City Date**

6463 1872-CC VF30 PCGS. **Variety 1-B.** A pleasing circulated example of the more common of the two varieties for this issue, this coin displays deep yellow-gold color. Only 16,980 five dollar gold pieces were struck for the 1872 Carson City Mint issue and there are few surviving examples. Population: 10 in 30, 43 finer (2/14). NGC ID# 25WG, PCGS# 8326

**1872-CC Half Eagle, Unc. Details
Unknown in Mint State**

6464 1872-CC — **Damage** — PCGS **Genuine. Unc. Details. Variety 1-B.** The 1872-CC half eagle circulated heavily and few examples survive in any grade. Almost Uncirculated representatives trade at a premium and no Mint State survivors are known. This example displays complete detail, but was not granted a numeric Mint State grade due to several minor scuffs on the obverse and a single reverse cut overlapping the eagle's head. Soft, medium green-gold luster blankets both sides, balancing the visual appeal. The details are sharply struck in nearly all areas, though some usual weakness is noted on the eagle's neck. An unworn example of this scarce Carson City issue. NGC ID# 25WG, PCGS# 8326

**1873-CC Half Eagle, XF Details
Strong Detail**

6465 1873-CC — **Cleaning** — PCGS **Genuine. XF Details. Variety 2-A.** With a small mintage of only 7,416 coins, the 1873-CC half eagle is rare in any condition. Most survivors are in the low to middle-circulated grade range, with only a handful of AU and Mint State representatives currently known. This lightly circulated example exhibits boldly struck design elements with only slight wear over the high points. Lightly cleaned, the surfaces retain pleasing green-gold patina with faint remnants of luster remaining on the reverse. NGC ID# 25WL, PCGS# 8331

6466 1873-S AU50 NGC. Despite a mintage of 31,000 coins, the 1873-S half eagle is highly elusive in any condition, and just one example is currently known in Mint State. This Almost Uncirculated representative displays strong detail with only slight wear over the high points. Small remnants of mint luster remain beneath deep orange-gold patina. Census: 14 in 50, 30 finer (3/14). NGC ID# 25WM, PCGS# 8332

**1874 Half Eagle, Well-Struck AU58
Low Mintage and Few Survivors**

- 6467 1874 AU58 NGC.** Produced from a small mintage of only 3,488 pieces, the 1874 five dollar claims relatively few survivors. Indeed, NGC and PCGS have certified about 100 examples, only nine of which are in Mint State. The bright golden-orange surfaces of this near-Mint State specimen display luster in the protected areas and are well-struck. Only the eagle's neck feathers are a tad soft. Distributed light marks affirm the coin's brief circulation. Census: 17 in 58, 4 finer (2/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25WN, PCGS# 8333

1874 Half Eagle, Conditionally Rare AU58

- 6468 1874 AU58 NGC.** Slightly more than 100 1874 half eagles are known, mostly in Very Fine and Extremely Fine grades. About uncirculated examples are seen infrequently, especially in the high-end range as the present offering. NGC and PCGS have graded only nine Mint State pieces, none finer than near-Gem. According to Garrett and Guth (2006) the Smithsonian lacks a circulation-strike specimen of this date, attesting to its rarity.

This AU58 example exhibits sharply struck design features, with only the eagle's neck and arrow feathers showing the slightest softness. Ample luster resides in the protected areas of both sides, each of which reveal only a few minute marks that would be expected for a coin having experienced brief circulation. This is an excellent find for the specialist in half eagle gold coinage. The 17 coins graded AU58 by NGC most likely include resubmissions hoping for a Mint State designation. Census: 17 in 58, 4 finer (3/14). NGC ID# 25WN, PCGS# 8333

- 6469 1874-CC VF30 NGC. Variety 1-B.** The Carson City half eagle production consisted of 21,198 pieces in 1874, with seven different die varieties identified. The known varieties were produced from various combinations of two obverse dies and five reverse dies. This circulated survivor displays several pleasing shades of gold and orange. Clash marks are present on the reverse.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25WP, PCGS# 8334

1874-CC Half Eagle, Minimally Abraded XF45

- 6470 1874-CC XF45 ANACS. Variety 2-C.** The base of the 7 in the date centered between denticles and the two Cs of the mintmark being level attribute the grade. Perusal of the Heritage database that lists major auctions over the past 20 or so years indicates that the 1874-CC half eagle is available in grades from Good through high-end About Uncirculated, with an especially high concentration in the XF40 to AU58 range. Uncirculated specimens, however, are few and far between; only four have made auction appearances, none finer than MS62 (we note that some coins in the database may have appeared in more than one auction sale).

Soft wheat-gold coloration takes on slightly deeper hues on the obverse of this Choice XF offering. Traces of luster reside in the recesses and the design elements are well-defined, including the star centers and most of the eagle's plumage. Occasional softness is visible in Liberty's hair. Both sides are remarkably clean for a gold coin having seen some circulation. Great overall eye appeal. NGC ID# 25WP, PCGS# 8334

- 6471 1875-CC — Improperly Cleaned — NCS. XF Details. Variety 2-C.** A scarce Carson City issue with a total production of less than 12,000 coins. The present piece exhibits significant softness on the central devices, but this is due more to a weak strike than to actual wear. Old, light cleaning is not outwardly detracting, as the surfaces display medium green-gold patina with faint remnants of underlying luster. NGC ID# 25WU, PCGS# 8337

**1876 Half Eagle, Minimally Marked AU53
A Popular, Low-Mintage Date**

- 6472 1876 AU53 NGC.** The 1876 five dollar gold piece is one of the most popular dates in the Liberty Head half eagle series due to its low mintage of 1,432 business strikes. The population data show only 45 certified pieces, with an unusually high concentration (26 pieces) in the Choice AU and better Mint State levels. Perhaps these were saved as souvenirs from the 1876 Centennial celebration. This AU53 specimen displays yellow-gold patina imbued with hints of apricot, rose, and red. Sharp design detail is apparent on the star centers, the dentilation, and the eagle's wing feathers, while Liberty's hair, the leg feathers, and arrow feathers reveal touches of weakness. Distributed minuscule marks are insignificant. Census: 4 in 53, 15 finer (3/14). NGC ID# 25WW, PCGS# 8339

**1876-CC Half Eagle, Well-Defined XF45
The Lowest CC Half Eagle Mintage**

- 6473 1876-CC XF45 NGC. Variety 1-A.** The only known die variety, with the date low and level and the point of the arrow feather pointing to the top serif of the first C of the mintmark. The mintage of 6,887 pieces was the lowest production for any half eagle from the Carson City Mint. This issue can be located from Very Fine through About Uncirculated with patience and searching. Coins in mint condition, however, are extremely rare, only two having been certified. The reddish-gold surfaces of this Choice XF example exhibit well-defined design detail, above average for the designated grade. The few minute marks are unobtrusive. Census: 13 in 45, 29 finer (3/14). NGC ID# 25WX, PCGS# 8340

**1876-CC Half Eagle, AU Details
Popular Carson City Issue**

- 6474 1876-CC — Tooled — PCGS Genuine. AU Details. Variety 1-A.** The sole dies known for the variety. The meager mintage was less than 7,000 coins for this popular Centennial Carson City issue. This example shows golden-yellow surfaces with good remaining luster, but there is a noticeable patch of tooling behind the eagle's head. NGC ID# 25WX, PCGS# 8340

**1876-S Half Eagle, AU53
Infrequently Seen**

- 6475 1876-S AU53 PCGS.** The 1876-S five dollar, from a mintage of only 4,000 pieces, is rare in all grades. PCGS and NGC have seen a total of 51 pieces, including a solitary Mint State example, an NGC MS65 that was once part of the Garrett Collection. The rarity of this issue is apparent from its infrequent auction appearance. Indeed, we have offered this date at auction only 20 times over the past 21 years.

Apricot-gold and reddish patination cascades over both sides of this AU53 example that displays traces of luster in the protected areas. The design elements are well-defined except for minor strike softness on portions of Liberty's hair and the eagle's neck feathers. Neither side reveals significant abrasions. Population: 2 in 53, 4 finer (3/14). NGC ID# 25WY, PCGS# 8341

**1877 Half Eagle, Sharply Defined AU58
Second-Lowest Mintage Liberty Five**

- 6476 1877 AU58 NGC.** With only 1,132 pieces produced, the 1877 has the second-lowest mintage of the Liberty Head series, behind the 1872 issue with a tiny production of 200 coins. NGC and PCGS have graded just 66 examples, 10 of which are in mint condition and none finer than MS62. A spike at the AU58 level in the reports of both services may well result from resubmitted coins

Whispers of red visit the orange-gold surfaces of this near-Mint specimen that retain ample luster in the protected areas. Sharp detail is apparent on the design elements with the exception of minor softness in the eagle's neck feathers and the arrow feathers. The few minute marks over each side take nothing from the coin's eye appeal. Census: 10 in 58, 6 finer (3/14). NGC ID# 25WZ, PCGS# 8342

**1877-CC Five Dollar, XF40
Pleasing Eye Appeal**

- 6477 1877-CC XF40 NGC. CAC. Variety 1-B.** Winter (2001) lists two varieties, but 1-A may not exist. Variety 1-B displays a high mintmark, both Cs of which are level, with the second C centered over the VE of FIVE. The 1877-CC half eagle is scarce in all circulated grades and can be located in Very Fine through Choice AU with diligent searching. Only two Uncirculated examples are known, a PCGS MS60 and MS62.

Orange-gold and lavender patina is seen over both sides of this XF piece, each of which exhibits well-defined design features. These attributes along with nice, clean surfaces add up to pleasing eye appeal, appropriately recognized by CAC. Census: 12 in 40, 51 finer (3/14). NGC ID# 25X2, PCGS# 8343

**1878-CC Half Eagle, Lightly Marked XF40
Rare in All Grades**

6478 1878-CC XF40 PCGS. Variety 1-A. The sole variety known. The edge of the arrow feather is located over the right side of the first C in the mintmark. The meager 118 examples of the 1878-CC five dollar piece certified by the two major grading services testifies to the rarity of this date. A mere two Uncirculated specimens are known, both NGC MS63s. The orange-gold surfaces of this XF piece displays rose overtones and are lightly marked, a real plus for this coin as most exhibit heavy, deep abrasions. The hair around Liberty's face and ear is better-defined than usual on this issue, as are the star centers. NGC ID# 25X5, PCGS# 8346

6479 1879-CC VF20 NGC. Variety 1-A. The overall brassy-gold surfaces reveal a few splashes of orange on this piece. With a mintage of only 17,281, the number of survivors is small from this Carson City half eagle issue, adding to the desirability of examples in any grade. Importantly, there are no mentionable marks on this piece. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25X8, PCGS# 8349

6480 1879-CC — Improperly Cleaned — NGC Details. AU. Variety 2-A. From a mintage of scarcely more than 17,000 coins, this lightly circulated Carson City half eagle retains strong detail in the devices and exhibits only minimal surface abrasions. Old light cleaning slightly subdues the luster, but hardly detracts from the overall visual appeal. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

**1879-CC Half Eagle, AU50
Variety 1-A**

6481 1879-CC AU50 PCGS. Variety 1-A. A splendid AU example, this half eagle exhibits pleasing yellow-gold surfaces with traces of luster remaining in the protected areas. Faint hairlines and handling marks prevent a higher grade. Two varieties are known from combinations of two obverse dies and one reverse die. Population: 13 in 50, 45 finer (3/14). NGC ID# 25X8, PCGS# 8349

**1879-CC Half Eagle, AU53
Relatively Clean Surfaces**

6482 1879-CC AU53 NGC. Variety 1-A. This variety is confirmed by the lack of a die line through the bottom-right serif of the E in LIBERTY. The 1879-CC is the most available Carson City half eagle from the 1870s, and most often found in grades of Fine through About Uncirculated. Of the 13 pieces in mint condition, none grade finer than MS62. The design elements of this AU53 coin are well-defined except for softness on portions of Liberty's hair and the eagle's neck feathers, a relatively common characteristic of Carson City fives. Neither side reveals the deep abrasions or "scuffy" appearance seen on most specimens. Census: 17 in 53, 51 finer (3/14). NGC ID# 25X8, PCGS# 8349

**1879-S Half Eagle, MS64+
Tied for Finest at NGC**

6483 1879-S MS64+ NGC. The "modern era" of 19th century gold coinage can be thought to begin in the late 1870s, as mintages of many issues reached impressive levels. For example, the 1879-S half eagle had a mintage of 426,200 coins, the seventh highest in the history of the denomination up to that point in time. However, survivors generally tended toward lower Mint State grades at that time. This impressive Choice Mint State piece is tied for the finest that NGC has certified, with only one finer example at PCGS. This piece has a bold strike and brilliant yellow-gold luster with a few trivial marks. Census: 10 in 64 (4 in 64+), 0 finer (3/14). NGC ID# 25X9, PCGS# 8350

6484 1880 MS64 PCGS. Peach-gold luster takes on hints of light green on the reverse. Crisply defined, and revealing a scattering of grade-limiting marks, more so on the obverse. A die crack appears at the lower right reverse. Population: 90 in 64 (10 in 64+), 15 finer (2/14). NGC ID# 25XA, PCGS# 8351

**1880 Liberty Half Eagle, MS65+
Only One Numerically Finer at NGC**

6485 1880 MS65+ NGC. Rich yellow-gold color with areas of peach adds to the eye appeal of this lustrous high-end Gem specimen, with a sharp strike serving as an additional attribute. A tiny alloy spot appears in the corner of Liberty's eye. The reverse reveals die cracks through much of the legends. Census: 33 in 65 (4 in 65+, 2 in 65 ★), 1 finer (3/14). NGC ID# 25XA, PCGS# 8351

6486 1880-CC XF45 NGC. Variety 1-A. A die lump appears on Liberty's forehead as a diagnostic for this variety, the most commonly encountered of the three varieties. A Choice XF example, this coin displays attractive yellow-gold color and exhibits no marks worthy of mention.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25XB, PCGS# 8352

**1880-CC Half Eagle, Minimally Abraded AU55
Rare Beyond About Uncirculated**

6487 1880-CC AU55 NGC. Variety 1-A. The variety is identified by the second C in the mintmark aligned with the feather tip and a die lump on Liberty's forehead aligned with the space between the LI of LIBERTY. The mintage of Carson City half eagles spiked to more than 50,000 pieces in 1880, making the issue fairly available through About Uncirculated. Mint State pieces are rare and found no better than MS63. This issue is among the better-struck half eagles from Carson City, and the present Choice AU offering is no exception. The star centers are sharp as are most of Liberty's curls and the eagle's plumage. Orange-gold surfaces retain luster in the protected areas and a handful of minuscule marks are fewer and much less severe than the extensive, deep abrasions that usually plague this issue. Census: 47 in 55, 65 finer (3/14). NGC ID# 25XB, PCGS# 8352

6488 1880-S MS64+ PCGS. CAC. A lustrous peach-gold near-Gem that has an intricate strike and impressive preservation. The '80-S has a fairly high mintage, but most Uncirculated examples are decidedly more bagmarked than the present lot. Population: 88 in 64 (11 in 64+), 2 finer (3/14). NGC ID# 25XC, PCGS# 8353

6489 1881/0 MS62 PCGS. FS-301. A pleasing, well-struck example of this scarce overdate. Medium orange-gold luster blankets both sides with an overall frosty texture. The surfaces exhibit some scattered abrasions, as the grade suggests, but none are particularly notable. Population: 17 in 62, 13 finer (2/14). NGC ID# 25XD, PCGS# 8355

6490 1881/0 MS62 PCGS. CAC. FS-301. The base of a prior 0 is clearly evident below the second 1 in the date. A well-struck piece with shimmering luster and light orange-gold and rose toning. Trivial abrasions restrict the grade. The 1881 half eagle had an enormous mintage of 5.7 million pieces and is a common date, but this overdate type is scarce. Population: 17 in 62, 13 finer (3/14). NGC ID# 25XD, PCGS# 8355

**1881-CC Half Eagle, Elusive AU55
An Above-Average Strike**

6491 1881-CC AU55 PCGS. Variety 1-A. Only one die variety is known for the 1881-CC. All known examples have a diagonal die scratch through the ER in LIBERTY. Beginning this year, the mintmark has a different size and shape than on previous Carson City fives. The tall, narrow CC is placed over the V in FIVE with the second C slightly higher. The 1881-CC is one of the rarest Carson City half eagles from the 1880s. Very Fine to lower level About Uncirculated can be located with patience and searching but higher-end AUs are elusive. PCGS and NGC have graded nine pieces in mint condition, mainly MS63 and lower.

Orange-gold patination runs over both sides of this Choice AU example and traces of luster reside in the recessed areas. An above-average strike leaves strong definition on the design features, particularly the hair around Liberty's face and neck, the star centers, and the eagle's wing feathers, all areas that tend to show weakness on most surviving specimens. No mentionable abrasions are apparent, nor are mint-made surface depressions or grease stains that are seen on many examples. A faint, shallow horizontal pinscratch on the cheek only shows at certain angles under a light source. Population: 9 in 55, 10 finer (3/14). NGC ID# 25XE, PCGS# 8356

6492 1881-S MS64 NGC. CAC. Rare numerically finer. This near-Gem half eagle displays medium yellow-gold luster and a sharp strike. A few minor obverse abrasions confirm the grade, but do not detract from the overall eye appeal. NGC has graded only 22 numerically finer examples (3/14). NGC ID# 25XF, PCGS# 8357

6493 1882-CC AU53 NGC. Variety 1-A. A lightly circulated example of the only known variety, this coin displays areas of golden-peach color. A few hair thin marks on the obverse pose minimal distraction. The 1882-CC five dollar is an available date in the series, hailing from a mintage of 82,817 pieces.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25XH, PCGS# 8359

**1882-CC Half Eagle, Well-Struck AU55
A High-Mintage, More Available Issue**

- 6494 1882-CC AU55 PCGS.** The mintage figure for Carson City half eagles increased to its highest level (82,817 pieces) since the mint opened in 1870, making it the most available pre-1890 five from this facility in terms of its overall rarity. The two major services have graded nearly 900 examples through About Uncirculated. The 43 Mint State pieces certified are primarily in MS60 and MS61 grades, and none are finer than MS63. The orange-gold surfaces of this AU55 coin exhibit well-struck design elements save for softness on the eagle's neck and arrow feathers. Scattered minute marks are not serious. Population: 50 in 55, 81 finer (3/14). NGC ID# 25XH, PCGS# 8359

**1882-CC Half Eagle, Unc Details
Variety 1-A, the Only Dies**

- 6495 1882-CC — Damage — PCGS Genuine. Unc Details. Variety 1-A.** The only known die pair lasted for an impressive 82,817 cycles of the massive hydraulic coin press that operated at the Carson City Mint. This example has Mint State details with scattered marks on each side. The reverse has a dent in the horizontal shield lines, apparently the source of the PCGS Damage designation. NGC ID# 25XH, PCGS# 8359

**1882-CC Half Eagle, MS61
Sharp, Lustrous Conditional Rarity**

- 6496 1882-CC MS61 NGC. Variety 1-A.** From a mintage of 82,817 pieces, the 1882-CC Liberty half eagle is an available date in the series, with perhaps 350-400 examples surviving in all grades. However, the issue is quite rare in MS61 condition. This attractive Mint State example is well-detailed and lustrous, showing surprisingly few contact marks for the grade. Census: 17 in 61, 6 finer (3/14). NGC ID# 25XH, PCGS# 8359

**1883-CC Half Eagle, AU58
Above-Average Strike and Surface Condition**

- 6497 1883-CC AU58 NGC. Variety 1-A.** The only variety known. The mintmark is small and round, unlike the tall one initiated in 1881. Both Breen (1988) and Winter (2001) presume this punch is from a leftover die of 1880 or before. The 1883-CC five dollar, coming from a mintage less than 13,000 pieces, can be located through low-level AU with a bit of patience and searching. Higher-end AUs will be much more difficult to locate, especially since the population figures for AU55 and AU58 may well be inflated by resubmissions. Uncirculated pieces are very rare; the eight certified examples are mainly MS60 and MS61.

This near-Mint offering displays ample luster residing on the orange-gold surfaces that are imbued with traces of reddish-rose. The design elements are well-struck, including the star centers and most of Liberty's hair. Significantly, the eagle's neck and leg feathers and the arrow feathers are sharp, unlike the weakness often seen in these areas on most Carson City issues. Finally, the minute marks on Liberty's cheek and the reverse shield do not unduly distract, especially since, "Nearly every known example shows heavily abraded surfaces as a result of heavy commercial use" (per Winter). Census: 20 in 58, 5 finer (3/14). NGC ID# 25XL, PCGS# 8362

**1883-CC Half Eagle, AU58
Very Scarce in Mint State**

- 6498 1883-CC AU58 PCGS. CAC. Variety 1-A.** Ex: Nevada Collection. Shimmering light honey-gold surfaces provide this near-Mint specimen of the only known variety with immediate eye appeal. The scattered marks and grazes present are minuscule and are not distracting on this lightly circulated piece. A small area of as-made struck-in grease appears in the left reverse field. Population: 16 in 58, 3 finer (2/14). NGC ID# 25XL, PCGS# 8362

**1883-CC Half Eagle, Unc Details
Low-Mintage Issue**

- 6499 1883-CC — Burnished — NCS. Unc Details. Variety 1-A.** With a mintage of little more than 12,000 coins, the 1883-CC half eagle is scarce in any condition and highly sought-after. Most examples encountered are in the mid-circulated grade range, and the issue becomes progressively rarer in finer grades. The handful of surviving Mint State specimens are heavily abraded, with just one example currently known finer than MS61.

The present piece exhibits full detail and pale orange-gold color overall. Light burnishing removed most of the scattered abrasions that plagued the surfaces, slightly dulling the luster, but left the details largely undisturbed. The resulting coin retains a pleasing degree of eye appeal and would fit nicely into many collections of Carson City half eagles.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25XL, PCGS# 8362

- 6500 1884-CC — Cleaning — PCGS Genuine. AU Details. Variety 1-A.** Lightly cleaned, with yellow-gold patina, this Carson City half eagle retains pleasing visual appeal. Well-detailed, with smooth, distraction-free surfaces. Only slight friction is seen over the high points of the design. NGC ID# 25XP, PCGS# 8365

**1884-CC Half Eagle, AU55
Underrated Branch Mint Issue**

- 6501 1884-CC AU55 NGC. CAC.** The 1884-CC Liberty half eagle is an underrated issue from a mintage of 16,402 pieces. The coin offered here is an attractive Choice AU specimen, with just a touch of wear on the well-detailed design elements and lightly abraded surfaces that show traces of original mint luster. Census: 43 in 55, 39 finer (3/14). NGC ID# 25XP, PCGS# 8365

- 6502 1885-S MS65 PCGS.** Despite a mintage in excess of 1.2 million coins, the 1885-S half eagle is scarce in MS65 and rare any finer. The present survivor displays pale rose-gold hues over soft green-gold luster. Well-preserved, lightly frosted surfaces complement sharply struck design elements on this pleasing Gem-graded half eagle. Population: 48 in 65 (1 in 65+), 4 finer (2/14). NGC ID# 25XT, PCGS# 8368

- 6503 1889 MS62 PCGS.** Mintages of gold coins at Philadelphia were surprisingly low in 1889. Only 4,440 business strike eagles were coined, and the half eagle mintage (7,520 pieces) was only moderately higher. This is an orange-gold example with lightly abraded fields and a few unobtrusive marks near the chin. Population: 14 in 62, 6 finer (3/14). NGC ID# 25XZ, PCGS# 8374

- 6504 1890-CC AU58 PCGS. Variety 1-A.** An excellent, near-mint type representative from the historic Carson City mint. Significant mint luster complements original green-gold patina with faint orange overtones. The design elements are boldly struck, with only light friction seen over the high points. NGC ID# 25Y3, PCGS# 8376

- 6505 1891-CC AU53 NGC. Variety 1-A.** A lightly circulated example, this piece displays areas of peach and faint orange-gold color that add to the attractiveness. The high points of the design reveal light wear. A few rim ticks are present, but none of the signs of contact poses a significant distraction.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25Y5, PCGS# 8378

- 6506 1891-CC AU58 NGC. Variety 1-A.** The obverse die crack left of the bust is among the diagnostics for this variety. A lovely near-Mint example, this piece displays appealing shades of yellow-gold and khaki-green. The coin exhibits a pleasing degree of design detail and the scattered marks present are not overly distracting.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25Y5, PCGS# 8378

- 6507 1891-CC MS61 PCGS. Variety 2-A.** Original, frosty mint luster blankets both sides of this sharply struck Carson City half eagle. Light, scattered abrasions define the grade, though none are outwardly detracting. A pleasing type representative. NGC ID# 25Y5, PCGS# 8378

- 6508 1891-CC MS62 NGC. Variety 2-A.** The scarcer of the two die marriages for this popular Carson City type issue. A well struck sun-gold representative that has good luster and the expected number of small abrasions. NGC ID# 25Y5, PCGS# 8378

- 6509 1892-CC AU55 ANACS. Variety 1-A.** This Choice About Uncirculated Carson City half eagle showcases substantial mint luster with prooflike reflection in the protected regions of the fields. The strike is sharp, with only a hint of friction over the highest surfaces. A visually appealing representative. NGC ID# 25Y7, PCGS# 8380

- 6510 1892-CC AU58 NGC. Variety 1-A.** A near-Mint example of the single known variety, this specimen displays areas of rich orange, red, and deep sage green shades, particularly in the protected areas. The strike is sharp, adding to the appeal. Scattered marks are present, including a few hair thin marks on the obverse.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 25Y7, PCGS# 8380

- 6511 1892-O AU50 NGC. Variety 1.** With a mintage of only 10,000 pieces, the 1892-O half eagle is scarce in all grades. This About Uncirculated example displays well-defined details with just a touch of wear visible over the high points. Light, scattered abrasions are well-concealed by rich orange-gold patina on both sides. Census: 4 in 50, 38 finer (3/14). NGC ID# 25Y8, PCGS# 8381

- 6512 1893 MS64+ PCGS. CAC.** An attractive near-Gem representative, this piece displays a tint of light rose-gold on both sides, with light underlying mint frost. The surfaces are minimally abraded and exhibit sharply struck design elements. Elusive in higher grades. NGC ID# 25YA, PCGS# 8383

**1893 Liberty Five, MS66
Only Two Graded Finer**

6513 1893 MS66 NGC. An amazing Premium Gem, this 1893 half eagle challenges the finest certified examples, with the combined NGC and PCGS population data showing 13 graded MS66, and only three pieces that are finer (3/14). This beauty has rich orange-gold luster with mostly bold details showing slight weakness at the first three stars. Exceptional eye appeal. Census: 8 in 66, 2 finer (3/14). NGC ID# 25YA, PCGS# 8383

6514 1893-CC AU55 ANACS. Variety 2-A. From the final year of production at the Carson City mint, this Choice About Uncirculated half eagle exhibits a bold strike with only a trace of friction seen over the high points of the devices. Substantial mint luster remains beneath deep yellow-gold patina. NGC ID# 25YB, PCGS# 8384

**1893-CC Half Eagle, MS62
High Eye Appeal**

6515 1893-CC MS62 NGC. CAC. Variety 1-A. Spike from a dentil below star 1, centered date, second C in mintmark higher than first. A sharply struck survivor of this mintage of 60,000 pieces, the last from Carson City. Golden-yellow surfaces show a scattering of minor marks in concert with the grade, but none are blatant, and the eye appeal is quite high. Census: 62 in 62, 28 finer (3/14). NGC ID# 25YB, PCGS# 8384

**1893-CC Five Dollar, MS63
Desirable Low-Mintage Example**

6516 1893-CC MS63 PCGS. Variety 1-A. A dull spike extends from a dentil to the lower right of star 1 as one of the diagnostics for this variety. This Select example displays lustrous surfaces that include shades of orange and khaki-green. The obverse reveals a number of thin die cracks. Population: 10 in 63, 4 finer (2/14). NGC ID# 25YB, PCGS# 8384

6517 1893-O MS62 NGC. Variety 1. Rarely encountered finer, this New Orleans-issued half eagle exhibits well-struck devices and highly lustrous original surfaces. Only minor abrasions are seen across both sides, with none worthy of individual mention. NGC has seen only 19 numerically finer examples (3/14). NGC ID# 25YC, PCGS# 8385

6518 1893-S MS64 NGC. A sharply struck and well preserved example of this conditionally challenging branch mint issue. Apple-green borders outline caramel-gold fields and motifs. Census: 24 in 64, 5 finer (3/14). NGC ID# 25YD, PCGS# 8386

**1894 Half Eagle, MS66
Finest-Graded Example at NGC**

6519 1894 MS66 NGC. With a high mintage of 957,800 pieces, the 1894 half eagle is a common date in all grades up to and including MS63. At MS64, this issue becomes scarce and coins graded at MS65 are rare. This Premium Gem is the single finest-known example at NGC. PCGS has likewise rated one example at MS66, and a single MS67 coin finer.

The strike definition is bold, and intense mint luster radiates from the near-flawless surfaces of this gorgeous half eagle. Lovely honey-gold toning is evenly distributed across both sides. A beautiful coin and a singular bidding opportunity that is unlikely to be repeated in the near future. Census: 1 in 66, 0 finer (3/14). NGC ID# 25YE, PCGS# 8387

1894 Liberty Half Eagle, MS66
Sensational Condition Census Specimen

- 6520 1894 MS66 PCGS.** More than 1,200 Mint State 1894 half eagles have garnered a grade of MS60 or finer at PCGS, but only 42 of those submissions are better than MS63 (3/14). In Gem grades, the rarity is dramatic, as the California grading company has examined two that grade MS65, one in MS66 (offered here), and one other in MS67. This piece is clearly the second finest known example, and marks an incredible opportunity for the advanced Liberty half eagle collector. Both sides exhibit pristine surfaces and bold details, with frosty yellow luster, and delicate green toning at the borders. The surfaces are nearly perfect, with little to separate this piece from the higher MS67 grade. NGC ID# 25YE, PCGS# 8387

- 6521 1901/0-S MS64+ PCGS. CAC. FS-301.** A near-Gem example of this clearly visible overdate. Frosty lemon-yellow luster blankets both sides, while sharply detailed devices add to the overall eye appeal of this CAC-approved representative. PCGS has graded just 19 numerically finer examples (2/14).
Ex: Denver Signature (Heritage, 8/2006), lot 1433. NGC ID# 25YX, PCGS# 8403

1902 Liberty Half Eagle, MS66
Attractive Condition Rarity

- 6522 1902 MS66 PCGS. CAC.** The mintage of Philadelphia Mint half eagles declined dramatically in 1902 to 172,400 pieces, making high-grade specimens rare in today's market. This magnificent Premium Gem is sharply detailed throughout with vibrant mint luster and unmarked rose-gold surfaces. Two tiny copper spots in the denticles frame star 1. A superlative type set acquisition. Population: 7 in 66 (1 in 66+), 1 finer (2/14).
Ex: New York Signature (Heritage, 12/2011), lot 4609; Long Beach Signature (Heritage, 5/2012), lot 5065. NGC ID# 25YY, PCGS# 8405
- 6523 1902-S MS64 PCGS.** Sea-green borders encompass pumpkin-gold centers. Fully struck and lustrous with lightly marked surfaces. An attractive Liberty half eagle type coin. Encapsulated in a green label holder. NGC ID# 25YZ, PCGS# 8406
- 6524 1904 MS65 PCGS Secure.** A sharply struck peach-gold Gem that exhibits dynamic luster and only minor field and portrait grazes. One small spot noted at the U in UNITED. Population: 64 in 65 (1 in 65+), 22 finer (3/14).
Ex: Long Beach Signature (Heritage, 2/2012), lot 4816, which realized \$2,530.
From The Northern Lights Collection. NGC ID# 25Z4, PCGS# 8409
- 6525 1904-S MS62 NGC.** Scarce in Mint State, and rare finer than MS62. This pleasing 1904-S half eagle displays a sharp strike and frosty original mint luster. Very few abrasions are present for the grade, delivering an unusually high degree of eye appeal. A conservatively graded example of this sought-after issue. Census: 43 in 62, 17 finer (2/14). NGC ID# 25Z5, PCGS# 8410

1904-S Half Eagle, Conditionally Rare MS64

6526 1904-S MS64 PCGS. The mintage of the 1904-S half eagle (97,000 pieces) dropped precipitously from issues of the previous few years at the San Francisco Mint. Uncirculated coins are infrequently seen, and near-Gems such as the present example are very rare. The design elements of this honey-gold MS64 example are boldly struck and both sides display pleasing luster. A few minute marks preclude Gem classification. Population: 6 in 64, 5 finer (3/14). NGC ID# 25Z5, PCGS# 8410

6527 1907-D MS65+ PCGS. Ideal for type purposes, this Plus-graded Gem half eagle displays vibrant original mint frost and sharply struck design elements. Close examination reveals only a few trivial surface imperfections, with exceptional overall visual appeal. PCGS has certified only 16 numerically finer examples (3/14). NGC ID# 25ZD, PCGS# 8417

6528 1908 MS65 NGC. The 1908 half eagle was the last stand of Christian Gobrecht's Liberty design, which had ruled the denomination since 1839. Examples are readily obtained in AU58 to MS64 grades but full Gems are comparatively scarce. This well struck and lustrous Gem has smooth surfaces and rich jade-green and peach toning. NGC ID# 25ZE, PCGS# 8418

PROOF LIBERTY HALF EAGLE

1887 Half Eagle, Impaired Proof Rare Proof-Only Issue

6529 1887 — Rim Damage, Mount Removed — NCS. Proof Details. The sole proof-only date in the Liberty half eagle series, this issue was produced to the extent of just 87 pieces, and fewer than half of those coins are still known to exist. PCGS estimates the surviving population at 35 to 40 coins. This example displays smooth green-gold surfaces and mere traces of rim damage, near 3 o'clock on the obverse, from having a mount removed. Well-struck and unworn on the high points, this piece has better-than-expected eye appeal for an impaired example. NGC ID# 28CR, PCGS# 8482

INDIAN HALF EAGLES

1908 Indian Half Eagle, MS64 Excellent Type Representative

6530 1908 MS64 NGC. Sharply struck with exceptional eye appeal, this near-Gem, first-year Indian half eagle offers an excellent opportunity for the type specialist. Beautifully preserved, the surfaces reveal only a few scarcely visible grazes that preclude full Gem status, but are virtually undetectable to the unaided eye. Radiant, satiny mint luster blankets both sides with rich green-gold patina. NGC ID# 28DE, PCGS# 8510

1908 Indian Half Eagle, MS64+ Popular First-Year Type Coin

6531 1908 MS64+ PCGS. CAC. As the Plus designation indicates, this near-Gem displays exceptional eye appeal. The coin is yellow-gold in color overall, with hints of green. Areas of rich orange color are present near the right and bottom edges on the reverse. A sharp strike is an additional attribute. The presence of a few scattered minuscule marks is not distracting. NGC ID# 28DE, PCGS# 8510

1908-D Half Eagle, MS64+ First-Year Denver Issue

6532 1908-D MS64+ PCGS. CAC. With only 11 examples graded numerically finer at PCGS (3/14), this Plus-graded near-Gem provides an excellent opportunity for the date collector. Bright, peach-green luster encompasses both sides, while only minor grazes are seen periodically across the surfaces. Some minor softness is noted on the eagle's wing feathers, though the strike is otherwise sharp. A pleasing example of this first D-mint Indian Head half eagle. NGC ID# 28DF, PCGS# 8511

**1909 Indian Half Eagle, MS64+
Strong Eye Appeal**

6533 1909 MS64+ PCGS. Gleaming yellow-gold surfaces are among the attributes this high-end near-Gem possesses. Areas of green-gold and orange also appear on this lustrous specimen. A few as-made lintmarks are present, including a long one at the band of the headdress. The surfaces reveal a few scattered marks, including a rim nick on the obverse near 10 o'clock. NGC ID# 28DH, PCGS# 8513

6534 1909-D MS64 PCGS. CAC. A well-made issue, ideal for type purposes. The present example displays frosty green-gold surfaces, with hints of pale rose-gold in the protected areas. The devices are fully struck, with only minimal abrasions in the fields. NGC ID# 28DJ, PCGS# 8514

**1909-D Indian Half Eagle, MS64+
Sharply Detailed and Lustrous**

6535 1909-D MS64+ PCGS. CAC. From a large mintage of 3.4 million pieces, the 1909-D Indian half eagle is one of the more available issues of the series and a favorite choice of mintmark type collectors. This high-end Choice example offers sharply detailed design elements and vibrant mint luster, with reddish-gold surfaces that show only minor signs of contact. NGC ID# 28DJ, PCGS# 8514

**1909-O Half Eagle, AU Details
Scarce, Important Key Issue**

6536 1909-O — Reverse Planchet Flaw — NCS. AU Details. The scant mintage of 34,200 pieces for this O-mint product is easily the lowest in the series, making it a contested key date at any grade level. In addition, it is the sole Indian Head issue from the New Orleans mint facility, further increasing its importance to collectors. This example is well-detailed with smooth surfaces and a pleasing overall appearance. A planchet lamination on the reverse extends from the rim through the left side of M in AMERICA and diagonally down into the field just above the eagle's right (facing) wing. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 25ZK, PCGS# 8515

**1909-O Half Eagle, AU Details
Only 34,200 Struck**

6537 1909-O — Cleaning — PCGS Genuine. AU Details. The final half eagle produced at the New Orleans mint, the 1909-O is among the most sought-after issues in the Indian Head half eagle series. This boldly detailed example boasts nearly complete sharpness on both sides, with no significant abrasions. The surfaces exhibit signs of cleaning, but the overall visual appeal remains pleasing. NGC ID# 25ZK, PCGS# 8515

**1909-O Half Eagle, AU Details
Sought-After Key Date**

6538 1909-O — Cleaned — ANACS. AU50 Details. The 1909-O half eagle not only boasts the lowest mintage of the series (34,200 coins), it is also the only Indian half eagle struck at the New Orleans facility. Pale green-gold color blankets both sides of this example, with only slight wear seen over the high points. ANACS notes old cleaning, though the visual appeal remains pleasing. NGC ID# 25ZK, PCGS# 8515

**1909-O Half Eagle, AU Details
Final O-Mint Half Eagle**

- 6539 1909-O — Improperly Cleaned — NGC Details. AU.** Following a 14-year silence, half eagle production at the New Orleans mint boasted one final issuance in 1909, in the amount of only 34,200 coins, before coining operations at that facility permanently ceased in April of that year. This 1909-O half eagle exhibits boldly struck design elements, with just a brush of wear seen over the high points. The surfaces show signs of cleaning, though a pleasing bronze-gold patina balances the visual appeal. NGC ID# 25ZK, PCGS# 8515

**1910 Indian Five, MS64
Seldom Encountered in Higher Grades**

- 6540 1910 MS64 NGC.** The 1910 Indian half eagle claims a mintage of 604,250 pieces and the date is not too difficult to locate in grades up to the MS64 level. Gem examples are very scarce, however, and finer grades are rare. This attractive Choice example exhibits sharply detailed design elements and vibrant mint luster, with well-preserved yellow-gold surfaces. NGC has graded 33 numerically finer examples (3/14). NGC ID# 28DK, PCGS# 8517

**1910-S Half Eagle, MS62
Elusive in Mint State**

- 6541 1910-S MS62 PCGS.** Although the 1910 Indian half eagle issue minted in San Francisco consisted of 770,200 coins, surviving examples are more elusive than its production figure might imply. The issue is very scarce even in lower Mint State grades, with PCGS having awarded MS63 grades and above to only 47 examples (3/14). This MS62 specimen displays a strong strike and originality, as witnessed by the scattered areas of dirt present. Although contact marks appear, none poses a significant distraction. NGC ID# 28DM, PCGS# 8519

**1910-S Half Eagle, MS62
Rare Any Finer**

- 6542 1910-S MS62 PCGS. CAC.** The 1910-S half eagle is not as available in Mint State as its mintage of more than 770,000 coins suggests, and most examples are heavily bagmarked. As such, examples grading finer than MS62 are rarely encountered. This CAC-approved example exhibits remarkably clean surfaces, with the overall appearance of a higher grade. Satiny underlying mint luster complements soft green-orange patina on both sides. A sharply struck example of this sought-after Denver issue. NGC ID# 28DM, PCGS# 8519

**1911-D Half Eagle, AU58
Low-Mintage Issue**

- 6543 1911-D AU58 NGC.** With the second lowest mintage of the series (only 72,500 coins), the 1911-D half eagle remains one of the keys to the set. This example displays above-average eye appeal for the issue, with only a brush of friction seen over the high points of the sharply struck design elements. Pale green-gold patina covers both sides, with faint bronze-gold overtones seen on the obverse. A near-Mint example of this sought-after issue. NGC ID# 28DR, PCGS# 8521

**1911-S Indian Five, MS62
Conditionally Rare Issue**

- 6544 1911-S MS62 PCGS.** Areas of dirt, seen primarily along the outer edges, attest to the originality of this pleasing yellow-gold MS62 specimen. The coin exhibits a strong level of design detail overall, though the mintmark is not distinctive. Even though the mintage consisted of 1.4 million pieces, surviving examples are a challenge to locate at the upper grade levels. NGC ID# 25ZM, PCGS# 8522

1911-S Indian Half Eagle, MS62
Elusive Issue in High Grade

6545 1911-S MS62 PCGS. Although the 1911-S has one of the highest mintages in the series, relatively few have survived in higher grades. Shades of yellow-gold and khaki-gold, along with a few hints of orange, add to the eye appeal of this Mint State representative displaying a pleasing degree of design detail. NGC ID# 25ZM, PCGS# 8522

1911-S Half Eagle, Well-Struck MS63
A High-Mintage, Scarce Issue

6546 1911-S MS63 PCGS. CAC. The 1911-S has the second highest mintage (1.416 million pieces) in the Indian Head half eagle series. That said, the date is still scarce enough to suggest a number were melted (Fuljenz, 2010). MS63, the grade of the present offering, may well be the finest that most collectors are likely to encounter. The two principal grading services have certified fewer than 50 pieces finer (3/14). Coppery-gold color resides on the lustrous surfaces that exhibit well-struck design elements. Only the two lowest feathers of the headdress reveal the usually seen minor softness. A few minute marks on the raised, open fields of the reverse limit the grade. NGC ID# 25ZM, PCGS# 8522

1912 Indian Half Eagle, MS64
Exceptional Luster and Appeal

6547 1912 MS64 PCGS. A sometimes-difficult issue to locate with eye appeal, this near-Gem half eagle is attractive and bold. Rich and appealing orange-gold toning covers the surfaces — a refreshing departure from the normally seen yellow-gold or green-gold examples. A sharp strike renders strong detail on the high points of the Indian's bonnet, with complete feather detail on the headdress and a bold eagle on the coin's reverse. A few light abrasions over the fields determine the grade, but do not detract from the unusually abundant luster and vibrant orange coloration. The visual impression is one suggestive of an even higher Mint State coin. NGC ID# 28DS, PCGS# 8523

1913 Half Eagle, MS64
Lustrous and Appealing

6548 1913 MS64 PCGS. This is a popular type issue that is readily available at the current grade level, but it does become scarce and expensive any finer. This lustrous near-Gem example exhibits pleasing orange-gold, peach, and steel-green coloration in a variegated arrangement across both sides. It is well-struck and carefully preserved, showing just a few unimportant tick marks on the reverse that are difficult to see without a magnifier. Encapsulated in an early green label holder. NGC ID# 28DT, PCGS# 8525

6549 No lot.

**1914-D Indian Five, MS64+
Elusive in Higher Grades**

6550 1914-D MS64+ PCGS. Lustrous green-gold surfaces provide this high-end near-Gem with strong visual appeal. This is a desirable 1914-D example from the last Denver issue of the half eagle series. The marks present are minor, with none posing a distraction. The certified population drops dramatically at the Gem level, with this piece one of only 12 in 64+, with 17 finer at PCGS (3/14). NGC ID# 28DV, PCGS# 8528

**1914-D Indian Head Five, MS64+
Rare Any Finer, Attractive**

6551 1914-D MS64+ NGC. CAC. Strong eye appeal is the calling card of this borderline Gem Indian five. The issue is rare in full Gem condition, and the price makes a huge leap between MS64 and MS65, making this near-Gem example an attractive candidate for any half eagle specialist. The strike is bold, although influenced by die buckling at the mintmark and through UNITED. Gleaming orange-gold surfaces are brightly lustrous and attractive. PCGS and NGC combined have assigned just 32 pieces a numerically higher grade (3/14). NGC ID# 28DV, PCGS# 8528

**1914-S Indian Half Eagle, MS61
Challenging Date in Mint State**

6552 1914-S MS61 PCGS. Even a one point difference in the Mint State grade makes a huge difference in value for this challenging San Francisco issue. Each rung of the grading ladder sees an exponential increase in rarity, where Select Uncirculated coins are extremely scarce, near-Gems are absolutely rare, and Gem or finer coins are nearly non-existent. This MS61 example is a notch above the lowest Mint State grade, and rightfully so. Light marks exist on the lustrous, lemon-gold surfaces to determine the grade. The strike is above average for the issue, with a readable mintmark — but some blending is seen on the Indian's bonnet. NGC ID# 28DW, PCGS# 8529

**1914-S Half Eagle, MS62
Scarcely Seen Finer**

6553 1914-S MS62 PCGS. With a significant percentage of the 263,000-coin mintage likely placed into circulation, pleasing Mint State 1914-S half eagles are highly sought-after. This piece is sharply struck, with satiny luster over both sides. Scattered abrasions define the grade, and some small areas of verdigris are seen periodically over both sides, though collectively, they are not overly detracting. PCGS has certified only 54 numerically finer examples (3/14). NGC ID# 28DW, PCGS# 8529

**1914-S Indian Five, MS62
Seldom Encountered in Finer Grades**

6554 1914-S MS62 PCGS. CAC. Attractive luster along with yellow and green-gold surfaces provide this piece with a lovely appearance. Hints of blue and orange also appear. The design elements are well defined. Aside from a mark to the left of GOD on the reverse, none of the marks present is distracting. The number of certified examples drops drastically above the MS62 level, with PCGS having awarded higher grades to only 53 examples (3/14). NGC ID# 28DW, PCGS# 8529

1915 Half Eagle, Sharply Struck MS64

6555 1915 MS64 PCGS. From a substantial mintage of 588,000 pieces, the 1915 Indian half eagle is reasonably available in grades up to the MS64 level, but Gems are scarce and no examples have been certified finer than MS65. This attractive Choice specimen is sharply detailed and lustrous, with greenish-gold surfaces that show only a few minor contact marks. NGC ID# 28DX, PCGS# 8530

6556 1916-S MS61 NGC. A pleasing lower-grade Mint State example of the final half eagle produced at the San Francisco mint. Medium green-gold luster blankets both sides, complementing well-struck design elements. Scattered abrasions define the grade, but are not overly distracting when viewed collectively. NGC ID# 28DY, PCGS# 8532

6557 1916-S MS61 PCGS. From the final production run of half eagle's at the San Francisco mint, this boldly struck Mint State representative exhibits medium green-gold patina overall, with frosty rose-gold accents in the recesses. Light, scattered abrasions define the grade, but leave this piece with a pleasing level of eye appeal. NGC ID# 28DY, PCGS# 8532

**1916-S Indian Half Eagle, MS62
Colorful and Lustrous**

6558 1916-S MS62 PCGS. CAC. Thanks to a small hoard that surfaced in the mid-1980s, the 1916-S Indian half eagle is not too difficult to locate in lower Mint State grades. This well-detailed MS62 example shows the bold, but indistinct, mintmark typical of the issue. The lustrous orange-gold surfaces show a few minor contact marks on each side. NGC ID# 28DY, PCGS# 8532

**1916-S Half Eagle, MS64
Final S-Mint Half Eagle**

6559 1916-S MS64 PCGS. CAC. Despite the discovery of a significant hoard in El Salvador in the late 1970s, the 1916-S half eagle remains elusive in higher Mint State grades, and is highly sought-after as the only half eagle produced in 1916. Rich orange-gold luster blankets this near-Gem representative, with subtle silver-green overtones seen intermixed over both sides. The surfaces reveal only a few insignificant grade-defining grazes, with excellent overall visual appeal. The details are sharply struck, though some minor softness is noted on the back of the eagle's neck. Housed in an old green label holder. PCGS has seen only 14 numerically finer submissions (3/14). NGC ID# 28DY, PCGS# 8532

End of Session Six

SESSION SEVEN

EARLY EAGLES

1799 Eagle, Small Stars Obverse
AU Details, BD-7

- 6560** 1799 Small Stars Obverse — Polished — Genuine PCGS. AU Details. BD-7, R.3. Bass-Dannreuther Die State d/d. Early United States gold coins saw substantial melting in the early 1830s when their bullion value rose above their face value. The resulting rarity of such pieces, coupled with their historical significance, makes them highly sought-after numismatic artifacts.

The present example represents the rarer of the two major 1799 gold eagle varieties, differentiated by the size of the obverse stars. The surfaces exhibit an unnatural yellow sheen due to past polishing, however the details are virtually complete, providing a pleasing representation of this early American artistry.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. PCGS# 98562

1799 Large Stars Ten, BD-10, AU Sharpness

- 6561** 1799 Large Stars Obverse — Damage — PCGS Genuine. AU Details. BD-10, R.3. Bass-Dannreuther Die State a/a. Fine microporosity occurs on each side of this piece, but there are no mentionable marks and the eye appeal is considerable, the yellow-gold surfaces reflective on each side underneath what mostly appears to be light field chatter. A hazy slate-gray bit of patina appears around stars 6-8 at the rim on the obverse. The reverse shows less of the fine porosity. This piece may pose a great opportunity for type collectors. NGC ID# 2623, PCGS# 8562

1799 BD-10 Eagle, AU55 Details
Large Stars Obverse

- 6562** 1799 Large Stars Obverse — Scratched, Cleaned — ANACS. AU55 Details. BD-10, R.3. A yellow-gold example, bright from dipping and untuned, but not harshly cleaned, with a few light pinscratches on both the obverse and reverse, the most objectionable one traveling from the field near Liberty's forelock across the nose, cheek, and neck.

From an early state of the dies without cracks, die clashing, or die lapping. This is a nicely detailed early eagle with little actual wear, and a coin that will improve if given a chance to naturally recover. Some peripheral luster remains. Housed in an earlier generation ANACS holder. NGC ID# 2623, PCGS# 8562

From "History of The First United States Mint" by Frank Stewart.

1800 BD-1 Eagle, AU50
Late Die State

- 6563** 1800 AU50 ANACS. BD-1, High R.3. Bass-Dannreuther Die State c/e. This late die state piece has a reverse die that saw service in 1799, 1800, and 1801. The obverse has die cracks through the tops of most letters in LIBERTY, with a branch over the right curve of the B to the border. The reverse has a crack from below the R through the branch, to the tail feathers, with a branch from the stem to the rim. This 1800 eagle has die cracks that do not appear on the 1801 tens, proving that this piece was struck in 1801, despite the 1800 date. This pleasing piece has light wear on the high points, with lightly marked but attractive yellow-gold surfaces. NGC ID# 2626, PCGS# 8563

1801 Eagle, BD-2, AU Details
A Lovely Example of the Type

- 6564** 1801 — Smoothed — PCGS Genuine. AU Details. BD-2, R.2. Bass-Dannreuther Die State a/a. The most available early eagle variety, as the large majority of the total mintage (44,344 coins) seems to have been for this die marriage rather than the scarcer BD-1. This is a lovely coin with fully struck motifs and even green-gold toning across both sides. The obverse fields have been smoothed, giving that side of the piece a faintly granular appearance. The surfaces are abrasion-free.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2627, PCGS# 8564

1801 BD-2 Eagle, AU Details

- 6565** 1801 — Cleaning — PCGS Genuine. AU Details. BD-2, R.2. This plentiful eagle variety is seen more frequently than any other early eagle, and it makes an ideal date or type coin. Both sides show light hairlines from cleaning, but retain excellent eye appeal. Scattered surface marks are magnified in the reflective fields. NGC ID# 2627, PCGS# 8564

1801 BD-2 Eagle, Unc Details

- 6566** 1801 — Improperly Cleaned — NGC Details. Unc. BD-2, R.2. This is the usual variety encountered for 1801 eagles, and it is the most plentiful variety of the early eagles struck from 1795 to 1804. It is the variety chosen more often for type collections than any other, due to its availability. The usual die state with spines in Liberty's cap from die damage that was likely caused when a small set screw fell from the press and landed on the die as a coin was struck. This example has frosty peripheral luster with cleaning lines that are most obvious on the obverse. Minuscule obverse rim nicks are noted at 12:30. NGC ID# 2627, PCGS# 8564
-

LIBERTY EAGLES

1838 Eagle, Nicely Detailed VF35 A Rare, Low-Mintage Date

- 6567** 1838 VF35 PCGS. This year is the first of the Liberty Head eagles, appearing after a hiatus of 34 years. Its low mintage of 7,200 pieces ensures its rarity. The PCGS website claims only 80 to 100 coins are known. This Choice VF specimen exhibits nice design detail and is minimally abraded for a gold coin having seen light to moderate circulation. This is an excellent opportunity to acquire a low-mintage, low-survival ten dollar piece with strong detail. Population: 5 in 35, 55 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 262D, PCGS# 8575
-

1838 Ten Dollar, AU50 Details Challenging Date and Type

- 6568** 1838 — Ex-Jewelry — ANACS. AU50 Details. A bold, green-gold example of this rare, first-year issue. Just 7,200 pieces were struck, and the 1838 is the rarer date of the two-year "Covered Ear" or Large Letters type. This piece is thickly hairlined and has a few small smoothed areas. Portions of the right rims are discolored and lightly filed. Still, the issue is extremely challenging and a necessary representative of the initial Gobrecht Liberty Head design for type collectors. Perhaps only 80 to 100 pieces are known.
Ex: Dallas Signature (Heritage, 7/2006), lot 1389, where it realized \$6,900.00.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 262D, PCGS# 8575
-

1839 Type of 1838 Eagle, XF45
One of Only Four Pieces Recovered
From the S.S. *Republic*

- 6569** 1839 Type of 1838, Large Letters XF45 NGC. Ex: S.S. *Republic*. Both of the varieties for this transitional year (the current Type of 1838 and the Type of 1840) are scarce, and both are made additionally popular as *Guide Book* entries. This example is one of four coins recovered from the S.S. *Republic* shipwreck. It is a well-detailed piece with greenish-yellow surfaces that are somewhat bright from long-term immersion in seawater. Neither side of the coin reveals any large or detracting abrasions. NGC ID# 262E, PCGS# 8576

1839 Ten Dollar, Unc Details
An Attractive Example of This Brief Type

- 6570** 1839 Type of 1838, Large Letters — Obverse Planchet Flaw — NGC Details. Unc. Large Letters was the previous nickname for this subtype, which is now designated as the Type of 1838. Most of the known examples are overdates, as is this example, showing remnants of an 8 beneath the 9 in the date. This is a highly attractive coin showing obvious attributes of an Uncirculated piece, including unimpeded luster and a lack of high-point wear. A deep mark on the lower obverse, directly below star 13, is classified as a planchet flaw by NGC. There is no evidence of metal being moved in this area. From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation.

1841-O Eagle, Minimally Marked XF45
A Low-Mintage, Popular Issue

- 6571** 1841-O XF45 NGC. **Variety 1.** The only known variety. The 1841-O ten dollar, from a meager mintage of 2,500 pieces, was the first date of this denomination struck in New Orleans. This first-year status, along with its extremely low mintage, overall rarity, and lack of high-grade survivors make this a highly popular date. The PCGS website estimates only 50 to 75 coins are known in all grades. NGC and PCGS have seen a mere 100 specimens, the finest being two AU58s.

The orange-gold surfaces of this Choice XF offering are imbued with hints of red. The devices are relatively well-defined despite high-point friction, including most of Liberty's hair and the star centrils. Light distributed marks are fewer and much less severe than typically encountered on this date, most examples are excessively abraded with deep, distracting marks. A nice, lightly circulated example. Census: 15 in 45, 20 finer (3/14).

From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 262J, PCGS# 8583

- 6572** 1843-O XF45 NGC. **Variety 2.** A late die state example, this piece reveals die cracks through STATES. This Choice XF specimen exhibits originality, with the protected areas displaying areas of dirt. There are no marks worthy of mention on this lovely representative.

From *The Collection of Donald E. Bently*, sold for the benefit of the Bently Foundation. NGC ID# 262R, PCGS# 8589

- 6573** 1843-O AU55 NGC. **Variety 1.** A well struck honey-gold Choice AU No Motto New Orleans ten. Luster peers from the peripheries and motifs. Moderate marks are distributed but none merit singular mention.

Ex: *Long Beach Signature* (Heritage, 9/2008), lot 3847, which realized \$2,185. NGC ID# 262R, PCGS# 8589

1845-O Liberty Eagle, AU53
Seldom Seen in Finer Grades

- 6574** 1845-O AU53 PCGS. From a smallish mintage of 47,500 pieces, the 1845-O Liberty eagle is seldom encountered in high grade today. This attractive AU53 example shows a touch of friction on the well-detailed design elements and the pleasing peach-gold surfaces show the expected number of minor contact marks for the grade, with prooflike reflectivity in sheltered areas. Housed in a green label holder. Population: 13 in 53, 14 finer (3/14). NGC ID# 262V, PCGS# 8593

6575 1847 — Harshly Cleaned — NGC Details. AU. This No Motto type coin displays a pleasing level of eye appeal and good central detail. Vigorously cleaned surfaces exhibit unnatural luster in most regions, however remnants of original reddish-gold patina remain in the protected areas.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

6576 1847 AU58 NGC. The 1847 is among the more available No Motto eagles, ideal for type purposes. This near-Mint example displays sharply struck design elements, with notable definition on the stars and the eagle's talons. Only light friction is seen over the high points.
Ex: Milwaukee Signature (Heritage, 8/2007), lot 9526. NGC ID# 262Z, PCGS# 8597

**1847 Eagle, MS61
Well-Struck and Lustrous**

6577 1847 MS61 NGC. This early eagle is well-struck and lustrous with yellow-gold surfaces and hints of jade in the recesses of the coronet, quite reflective under the scattered abrasions that pepper each side. The reverse is better-preserved overall than the obverse, but there is copious eye appeal throughout. Census: 30 in 61 (1 in 61+, 1 in 61 ★), 13 finer (3/14). NGC ID# 262Z, PCGS# 8597

**1847 No Motto Eagle, MS61
A Conditionally Scarce Example**

6578 1847 MS61 NGC. Mint State No Motto eagles are scarce, and despite a plentiful mintage (862,258 pieces), the 1847 is difficult to locate in Uncirculated, as a look at the population data shows. This lovely yellow-gold piece displays ample luster. Myriad marks on each side are typical for the grade and issue. Although the stars and tips of the eagle's wings are soft, the rest of the details are boldly struck. An excellent No Motto type coin. Census: 30 in 61 (1 in 61+, 1 in 61 ★), 13 finer (3/14).
Ex: Long Beach Signature (9/2008), lot 3860. NGC ID# 262Z, PCGS# 8597

6579 1847-O AU55 NGC. Variety 6. A honey-gold No Motto piece from New Orleans. The dentils and stars are sharp, though the centers exhibit some typical softness. Remnants of luster remain among the legends and devices, with no heavy marks in the surfaces.
Ex: Long Beach Signature (Heritage, 9/2006), lot 3744. NGC ID# 2632, PCGS# 8598

6580 1847-O AU55 NGC. Variety 7. Sharply struck except for the shield and arrow feathers. Smooth aside from a couple of hair-thin marks on the upper reverse field. The surfaces are faintly granular. A scarce issue in Choice AU condition.
Ex: Long Beach Signature (Heritage, 9/2002), lot 8330. NGC ID# 2632, PCGS# 8598

6581 1848 AU58 NGC. This yellow-gold Near-Mint No Motto ten is only moderately abraded and the legends exhibit bright luster. The strike shows minor blending on the stars and the eagle's claws. Census: 46 in 58 (1 in 58 ★), 26 finer (3/14). NGC ID# 2633, PCGS# 8599

6582 1849 AU50 NGC. One of the more available and well-made No Motto eagles, ideal for type purposes. The present example displays largely green-gold color overall with medium orange-gold overtones. Sharply detailed, with remnants of mint luster in the protected areas and no notable surface imperfections. NGC ID# 2635, PCGS# 8601

6583 1849 Repunched Date AU58 NGC. Breen-6887. All four date digits are repunched, most prominently on the upper loops of the 8 and 9. Prooflike luster outlines design elements of this well defined and moderately abraded Borderline Uncirculated No Motto type coin. NGC ID# 2635, PCGS# 8601

6584 1849-O XF40 PCGS. Variety 3. The rarer of the two confirmed die marriages, identified by a mintmark located near the feathertip, and a shield ring atop the second vertical stripe. The more available Variety 2 does not exhibit a shield ring. The present rare date New Orleans ten displays golden-tan toning in protected areas, while the fields and high points are lime-green. Population: 15 in 40, 45 finer (3/14). NGC ID# 2636, PCGS# 8602

6585 1850 Large Date AU58 PCGS. CAC. A near-Mint example of the Large Date variety, this coin displays straw-gold color. A thin die break extends from the obverse rim to star 9 and a small cud is present on the reverse rim near 12 o'clock. Surviving examples are rarely encountered in Mint State, adding to the appeal of lightly circulated specimens such as this. Population: 7 in 58, 11 finer (3/14). NGC ID# 2637, PCGS# 8603

6586 1850 Small Date XF45 PCGS. A fully original example of this scarce and under-appreciated small date variety. Light orange-gold color and tiny amounts of verdigris in the protected areas give this piece a pleasing, old-time patina. Lightly circulated, with a few medium-sized abrasions noted on the obverse. Population: 24 in 45, 37 finer (2/14). NGC ID# 2638, PCGS# 8604

6587 1851 AU58 NGC. CAC. Although the 1851 eagle had a mintage of 176,328 pieces, there are few surviving examples in high grade, with NGC and PCGS combined having assigned the AU58 grade to only 34 examples, with a mere 27 coins achieving the Mint State level (3/14). Hues of gold and peach combine to provide this near-Mint example with nice eye appeal. A few minor rim nicks appear on each side. NGC ID# 263A, PCGS# 8606

6588 1852 AU53 NGC. Deep pumpkin-gold color provides this lightly circulated example with strong visual appeal. The coin exhibits a sharp strike, with the high points of the design revealing light wear. Scattered marks appear throughout, as expected at this grade level, with the obverse rim displaying a few minor nicks. None of the marks poses a serious distraction. NGC ID# 263C, PCGS# 8608

6589 1853 AU58 NGC. Warm orange-gold patina reveals significant mint luster remaining in the protected regions. The strike is sharp, with only light wear over the high points of the design. Moderate abrasions are present, the most notable being a cut in the field next to the eagle's left wing.
Ex: Dallas Signature (Heritage, 7/2006), lot 1404. NGC ID# 263E, PCGS# 8610

1854 Eagle, AU58
Only Six Finer at PCGS

6590 1854 AU58 PCGS. Butter-gold in color, this near-Mint representative of this better date No Motto ten displays hints of rose along with areas of lemon hues at the extreme outer edges. Only 54,250 pieces were produced. The majority of the surface marks appear in the fields, with a few horizontal marks present near Liberty's neck. Population: 12 in 58, 6 finer (3/14). NGC ID# 263G, PCGS# 8613

6591 1854-S AU50 NGC. A visually appealing About Uncirculated example of the first gold eagle produced at San Francisco. Pale orange-gold patina blankets both sides, with only slight wear seen over the well-struck devices.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 263K, PCGS# 8615

1854-S Eagle, AU58
First San Francisco Issue

6592 1854-S AU58 NGC. CAC. In the first year of operation, the San Francisco Mint coined five different gold denominations, although only the eagle and double eagle are regularly seen today. The gold dollar is scarce, while the quarter eagle and half eagle issues are major rarities. This example has considerable luster on its greenish-yellow surfaces with slight wear on the high points. Census: 55 in 58, 4 finer (3/14). NGC ID# 263K, PCGS# 8615

6593 1855 AU58 NGC. CAC. A lovely near-Mint example, this 1855 eagle displays hues of yellow-gold, gold, and orange providing the piece with a pleasing appearance. The high points of the design exhibit light wear and scattered marks are present, as expected at this grade level. Census: 137 in 58 (2 in 58+), 42 finer (3/14). NGC ID# 263L, PCGS# 8616

6594 1856 AU58 PCGS. Strong luster emanates from the minimally marked, yellow-gold surfaces. The stars are nearly flat, but the central details are razor-sharp. A handsome example of this scarce issue. Population: 23 in 58, 19 finer (3/14).
Ex: Long Beach Signature (Heritage, 9/2008), lot 3880, which realized \$2,300. NGC ID# 263P, PCGS# 8619

6595 1856-S AU53 NGC. CAC. Medium S. An example of the more frequently encountered mintmark variety, this piece displays caramel-gold color. Areas of dirt at the protected areas attest to the originality of this specimen. Relatively few marks are present and they pose little if any distraction. This is a pleasing coin in many respects. NGC ID# 263S, PCGS# 8621

1856-S Ten Dollar, Solidly Struck MS61
An Important Condition Rarity

6596 1856-S MS61 PCGS. Large S, which is centered beneath the juncture of the arrow feathers and the branch stem. The two Medium S varieties show the mintmark positioned to the left of the arrow feathers. Breen (1988) suggests the Large S variety is "Very rare. Possibly the last of the 3 deliveries," which was apparently about 2,500 coins.

The 1856-S is a scarce date in circulated grades (irrespective of mintmark variety), where the population reports show it to be concentrated in Extremely Fine and About Uncirculated. Mint State pieces are very rare with 10 examples certified, only one finer than MS62 (a PCGS MS63).

The lustrous surfaces of the present MS61 offering display yellow-gold coloration imbued with traces of red, and a solid strike resulted in strong definition on all design elements. Scattered, minute surface and rim marks limit the grade, yet these do not appear too be all that significant for an MS61. A couple of vertically aligned marks left of Liberty's lips and a graze above the EN of TEN may help to identify the coin. Population: 2 in 61, 4 finer (3/14). NGC ID# 263S, PCGS# 8621

1857 Eagle, Conditionally Rare AU58

6597 1857 AU58 PCGS. The production of eagles at the Philadelphia Mint saw a dramatic reduction (16,606 pieces) not seen since 1844 when 6,361 coins were minted at that facility. Although a fair number of these coins survived, most circulated extensively. As shown in the population reports, most are in the Extremely Fine to lower levels of About Uncirculated. AU58 and finer examples are rare.

This near-Mint State example displays yellow-gold surfaces laced with whispers of reddish-rose, and the design features are well-delineated. An ample amount of luster still shows in the protected areas, and the small marks scattered about do not significantly detract. Population: 4 in 58, 1 finer (3/14). NGC ID# 263T, PCGS# 8622

Choice AU 1857-O Eagle
Elusive in All Grades

6598 1857-O AU55 NGC. Variety 1. With a scant mintage of only 5,500 coins, the 1857-O is among the scarcest No Motto eagles from this mint. Only 70 to 80 examples are believed known in all grades, with no Mint State examples currently certified by either NGC or PCGS. This fully original piece exhibits remnants of prooflike luster in the protected regions of the fields, while faint orange-gold overtones complement medium green-gold patina overall. Just a touch of wear is seen over the high points of the design, with otherwise strong definition. A Choice example of this challenging issue. Census: 14 in 55, 9 finer (3/14). NGC ID# 263U, PCGS# 8623

1858-O Ten Dollar Gold, AU55
Only 20,000 Pieces Struck

6599 1858-O AU55 NGC. Variety 1. An example of the only known variety, this Choice AU piece displays brassy gold surfaces, with areas of dark orange on the obverse along portions of the right side. Other than a rim nick appearing near 6 o'clock on the reverse, there are no marks worthy of mention. Census: 40 in 55 (1 in 55+★), 42 finer (3/14). NGC ID# 263X, PCGS# 8626

1858-O Liberty Eagle, AU55
High Grade for an O-Mint Type Coin

6600 1858-O AU55 NGC. Areas of vibrant orange color appear on the green-gold surfaces of this piece, primarily along the outer obverse designs. The strike is sharp on this Choice AU example, with the high points exhibiting light wear. Aside from a mark on the shield, none of the scattered marks is worthy of individual mention. Census: 41 in 55 (1 in 55+★), 42 finer (3/14). NGC ID# 263X, PCGS# 8626

1858-O Eagle, AU55
Low-Mintage Issue of 20,000 Coins

6601 1858-O AU55 NGC. Highly lustrous yellow-gold surfaces exhibit a hint of wear with faint traces of orange patina. The surfaces are quite pleasing and the overall appearance is appealing. The 1858-O is the most easily obtained eagle of the year, as its P-mint and S-mint counterparts are great rarities. Census: 41 in 55 (1 in 55+★), 42 finer (3/14).
Ex: *Houston Signature* (Heritage, 12/2008), lot 2127. NGC ID# 263X, PCGS# 8626

1858-O Eagle, AU58
Seldom Available Finer

6602 1858-O AU58 NGC. CAC. Examples of this issue are seldom found in grades above AU or so, and Mint State pieces are exceedingly elusive. This near-Mint State specimen displays remnants of semiprooflikeness over untroubled surfaces. In combination with the attractive greenish-gold coloration they create *eye appeal*, that most elusive and indefinable of all numismatic qualities. While both sides show numerous small abrasions in the fields, the only one that requires singular mention is a small, metal-moving scrape on the reverse under ED of UNITED, and none of them dampen one's enthusiasm for this lovely and conditionally scarce piece. Census: 38 in 58, 4 finer (3/14). NGC ID# 263X, PCGS# 8626

6603 1860 AU50 NGC. Bulging Bun subtype. Although the 1860 eagle mintage consisted of 15,055 coins, there are two different design subtypes, the Rounded Bun and Bulging Bun. This lightly circulated piece exhibits light wear on the well-struck surfaces. Census: 17 in 50, 68 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2644, PCGS# 8631

6604 1860 — Improperly Cleaned — NGC Details. Unc. The 1860 eagle is scarce in all grades and rare in Mint State. The present example is sharply detailed, with medium orange-gold luster on both sides. Close examination reveals faint hairlines in the fields, but the surfaces retain substantial original mint luster.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

6605 1860-O — Cleaning — PCGS Genuine. XF Details. Variety 2. The final No Motto New Orleans issue has a scant mintage of 11,100 pieces. It had been 19 years since the first O-mint issue, the 1841-O, and it would be another 19 years until the next O-mint issue, the 1879-O. The present olive-green example is minimally abraded but the surfaces are subdued and faintly hairlined. NGC ID# 2645, PCGS# 98631

**1860-O Eagle, AU58
Low-Mintage Pre-Civil War Issue**

6606 1860-O AU58 NGC. This New Orleans issue had a low mintage of 11,100 coins, and was the last eagle production at that mint for many years, due to the intervention of the Civil War. The average grade for survivors is XF45 to AU50, according to Jeff Garrett and Ron Guth. This near-Mint example is well-struck and prooflike, with green-gold surfaces that display mostly trivial marks and minimal rub on the high points.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2645, PCGS# 98631

**1862 Ten Dollar, AU53
Scarce Low-Mintage Issue**

6607 1862 AU53 NGC. This issue is a scarce date, especially in AU and Mint State grades, from a small mintage of 10,960 business strikes. This example displays virtually full strike definition, with softness noted only on the hair detail just above the ear, and on the eagle's arrowheads. The coin shows khaki-green toning and small, scattered abrasions. Census: 17 in 53, 29 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2649, PCGS# 8635

**1862 Eagle, AU55
Lovely, Conditionally Scarce Coin**

6608 1862 AU55 PCGS. This is a challenging issue in grades above XF. AU coins are highly scarce and Uncirculated examples are rare. This is a lovely Choice AU example with bright yellow-gold surfaces that display numerous small abrasions but none that are excessive or individually distracting. Population: 15 in 55, 5 finer (3/14). NGC ID# 2649, PCGS# 8635

6609 1862-S — Improperly Cleaned — NGC Details. XF. A lightly circulated example of this scarcely seen Civil War-era San Francisco issue. The surfaces exhibit an unnatural reflectivity due to cleaning, though good detail remains in the central devices.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1863-S Eagle, AU Details
An Affordable Example of This Rare Issue**

6610 1863-S — Improperly Cleaned — NGC Details. AU. This issue is a great low-mintage rarity, as is its Philadelphia Mint counterpart from the same date, making 1863 a very challenging year indeed for the date collector. The current example is a suitable choice for such a collector, made more affordable, but not significantly less attractive by its history of improper cleaning. Well-struck overall, if a trifle weak on the obverse stars, with pleasing apricot-tan coloration and minimally marked surfaces. Evidence of an old cleaning is chiefly seen by a somewhat subdued appearance.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

6611 1866 Motto — Smoothed — PCGS Genuine. AU Details. With a minuscule mintage of just 3,780 coins, the 1866 eagle is rare in any condition. The present survivor has been carefully smoothed in the past, with most surface abrasions removed, though the sharp details remain well-defined. A pleasing example of this rarely encountered gold issue.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264J, PCGS# 8649

1866-S Motto Eagle, Rare AU50

- 6612 1866-S Motto AU50 NGC.** Traces of luster reside in the protected areas of this S-mint ten dollar piece and the design elements are sharply struck, though the star centers are a tad soft as sometimes seen on this date. The few minute marks scattered about do not distract. The two major services have seen just 65 coins in all grades. AUs are rare and Mint State pieces are unknown. Census: 8 in 50, 14 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264K, PCGS# 8650

- 6613 1867 — Improperly Cleaned — NGC Details. XF.** The 1867 is a scarce With Motto issue with a production of only 3,140 coins. This example exhibits cleaning over both sides, but small areas of verdigris remain in the deepest recesses of the design. Ample detail and minimally marked surfaces are among the pleasing attributes this piece has to offer.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

- 6614 1867 — Repaired, Polished — NGC Details. AU.** Very lightly polished, with a pale greenish-orange patina. NGC notes the coin has been repaired, though no faults are readily noticeable. An overall pleasing example of this seldom-encountered issue.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264L, PCGS# 8651

- 6615 1868 AU53 NGC.** Areas of luster remain on this lightly circulated example. The surfaces are yellow-gold overall, with hints of deeper gold and khaki-gold also present. The coin displays a strong strike, with light wear on the high points. Areas of dirt, particularly on the obverse attest to the originality of this piece. A few of the marks on the obverse pose minimal distraction, if any. Census: 21 in 53, 55 finer (2/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264N, PCGS# 8653

1868 Liberty Ten, AU55
Vivid Color, Partially Prooflike

- 6616 1868 AU55 PCGS.** A scarce coin in all grades with an original mintage of only 10,655 pieces. The 1868 becomes a significant collector item at the AU grade level with very few coins known above AU 50. The vivid orange-gold surfaces retain considerable prooflike luster, and reveal numerous scattered minute marks, none of which are singularly noteworthy. Generally sharply struck, though the hair above Liberty's ear is a touch soft. Housed in a green label holder. Population: 12 in 55, 12 finer (3/14).

From the collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264N, PCGS# 8653

1868 Eagle, AU58
Only Three Numerically Finer at NGC

- 6617 1868 AU58 NGC.** Shimmering orange-gold surfaces are present on this near-Mint representative. The coin exhibits a sharp strike, with the high points of the design revealing light wear. As expected at this grade level, a number of scattered marks are present, with a mark on Liberty's cheek and marks below UNI of UNITED on the reverse being the most noticeable. Census: 31 in 58 (1 in 58+), 3 finer (3/14). NGC ID# 264N, PCGS# 8653

1868 Eagle, AU58
Reflective Example of This Low-Mintage Date

- 6618 1868 AU58 NGC.** Much prooflike patina remains underneath the orange-gold surfaces, an unsurprising phenomenon, given the low mintage of only 10,665 circulation strikes. Light field chatter combines with a few larger marks on each side, but this is an extremely appealing coin. Mint State examples appear seldom. Census: 31 in 58 (1 in 58+), 3 finer (3/14). NGC ID# 264N, PCGS# 8653

- 6619 1869 — Improperly Cleaned — NGC Details. AU.** The 1869 eagle is notably scarce in any condition, as only 1,855 examples were struck. The present survivor displays slightly subdued luster due to old cleaning, but has fully retuned a pleasing orange-gold patina. Moderate light surface abrasions are present, but none are individually noteworthy.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264R, PCGS# 8655

1869-S Eagle, AU50
Rare Low-Mintage Issue

- 6620 1869-S AU50 NGC.** According to Garrett and Guth, this San Francisco issue is "every bit as rare as the lower mintage 1869 eagle." This well-struck example displays more remaining detail than the average AU50 coin. One small abrasion is noted in the upper left obverse field, and another resides just below the eagle's beak. Census: 3 in 50, 17 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264S, PCGS# 8656

1870 Eagle, AU53
Rare in All Grades

- 6621 1870 AU53 NGC.** With a mintage of only 3,990 coins, the 1870 eagle is rare and highly sought-after in all grades, with only a single piece certified as Mint State (an NGC MS60). This Almost Uncirculated example displays substantial prooflike luster beneath original orange-gold patina. Only light wear is seen over the high points of the design, with strong definition overall. Light, scattered abrasions are noted, but none are outwardly distracting. A pleasing representative of this challenging issue. Census: 8 in 53, 21 finer (3/14). NGC ID# 264T, PCGS# 8657

1870 Eagle, Well-Struck AU55
Only 3,990 Pieces Produced

- 6622 1870 AU55 NGC.** The 1870 ten dollar saw a minuscule mintage of 3,990 business strikes and is very difficult to locate in any condition. Most examples seen are Very Fine and Extremely Fine. About Uncirculated coins are rare and a solitary Mint State piece is known, an NGC MS61. The bright yellow-gold surfaces of this Choice AU example display traces of luster in the recessed areas and are well-struck throughout. Distributed marks are in concert with a lightly circulated coin. Census: 12 in 55, 9 finer (3/14). *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 264T, PCGS# 8657

1870-S Eagle, XF45
Rare Low-Mintage Issue

- 6623 1870-S XF45 PCGS.** Writing in their *Encyclopedia of U.S. Gold Coins*, Garrett and Guth are obviously impressed with this San Francisco issue, comparing it favorably to the 1870-CC: one of the most valuable of all Liberty Head eagles. This is a remarkable Choice XF example, showing excellent details and noticeable wear only on Liberty's hair, the tops of the obverse stars, and the high points of the eagle on the reverse. The green-gold coloration is pleasing, and coppery-orange luster remnants are substantial on both sides. Population: 11 in 45, 16 finer (3/14). NGC ID# 264V, PCGS# 8659

1871-CC Ten Dollar, AU Details
Rare Carson City Issue

- 6624 1871-CC — Improperly Cleaned — NCS. AU Details. Variety 1-A.** Probably fewer than 100 examples are known — mostly in lower circulated grades — from a mintage of 8,085 pieces. Doug Winter reports few 1871-CC eagles survive with original surfaces. As indicated by NCS, this coin is overly bright from cleaning. Many tiny marks are distributed over both sides of the coin, but most obviously on the obverse. Variety 1-A is characterized by a level date with two denticles between the bust tip and the first 1 in the date. Although Walter Breen noted the existence of a doubled reverse, such a variety is no longer thought to exist. Rather, the 1-A die pair often displays machine doubling as demonstrated by this well-detailed coin, seen on the eagle's left (facing) wing and the outermost olive leaves.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264X, PCGS# 8661

1872 Eagle, AU50
Great Low-Mintage Rarity

- 6625 1872 AU50 NGC.** This Philadelphia Mint issue had a remarkably low mintage of 1,620 business strikes, and Garrett and Guth state that: "The 1872 eagle is a great low-mintage rarity with a well-established reputation in a series that is replete with some of the greatest condition rarities in all of American numismatics." This AU example has a pleasing, well-balanced appearance with evenly distributed light coloration and only minuscule surface marks. Census: 3 in 50, 12 finer (3/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 264Z, PCGS# 8663

1872 Eagle, AU55
Rarely Seen in Any Grade

- 6626 1872 AU55 NGC.** With only 1,650 pieces struck, the 1872 eagle is a great rarity in all grades and presents a great challenge for date collectors. Jeff Garrett and Ron Guth write of the issue:

"The 1872 eagle is a low-mintage rarity with a well-established reputation in a series that is replete with some of the greatest condition rarities in all of American Numismatics. ... Surely, it means something that the Smithsonian does not have a circulation-strike 1872 eagle."

This Choice About Uncirculated survivor displays original, medium orange-gold patina over both sides, with substantial prooflike luster remaining in the protected regions of the fields. The motifs are sharply struck, with only a touch of wear seen over the high points. A lustrous, minimally abraded example of this highly sought-after rarity. Census: 8 in 55, 2 finer (3/14). NGC ID# 264Z, PCGS# 8663

1873-CC Eagle, VF30
Elusive Early Issue

- 6627 1873-CC VF30 NGC.** Just 4,543 examples of this early Carson City issue were produced, making it comparable to its immediate predecessor the 1872-CC which had a similar mintage of 4,600 pieces. NGC has graded 51 examples of the earlier date, and just 34 Carson City eagles from 1873; obviously making this a scarce date in the series. It is also unknown in Uncirculated condition. This example shows moderate rub, but the wear pattern is even and all of the major devices remain clearly evident. There are no heavy abrasions on either side of the coin.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2655, PCGS# 8667

- 6628 1873-S VF25 NGC.** From a mintage of only 12,000 coins, this attractive mid-grade circulated example displays old-time, honey-gold patina and good detail for the grade. The surfaces are largely smooth, with only a few insignificant abrasions present.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2656, PCGS# 8668

- 6629 1874-CC Fine 12 NGC. Variety 1-A.** Though well circulated, this coin retains strong appeal. The honey-gold surfaces reveal hints of peach. The wear is even, and importantly, there are no marks worthy of mention. This piece displays lovely eye appeal for the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2658, PCGS# 8670

- 6630 1874-S VF20 NGC.** The number of surviving examples is small from the 1874 San Francisco eagle issue. Only 10,000 pieces were struck. Lovely antique gold color adds to the appeal of this circulated piece, with areas of orange, red, blue, and lavender seen at portions of the outer edges surrounding the designs. Census: 5 in 20, 81 finer (2/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2659, PCGS# 8671

1874-S Eagle, AU55
Unknown in Mint State

- 6631 1874-S AU55 NGC.** With a mintage of only 10,000 coins, most 1874-S eagles survive in the VF to XF grade range; AU examples are rare, and the date is unknown in Uncirculated condition. This Choice Almost Uncirculated example exhibits pleasing yellow-gold patina overall, with substantial mint luster in the protected regions. Scattered, light surface abrasions are consistent with just a brush of wear over the high points. A sharply struck example of this conditionally rare issue. Census: 11 in 55, 3 finer (3/14).
Ex: Los Angeles Signature (Heritage, 8/2009), lot 2596. NGC ID# 2659, PCGS# 8671

1876-S Eagle, AU50
Attractive Example
Scarce, Low-Mintage Issue

- 6632 1876-S AU50 NGC.** The tiny mintage of 5,000 pieces (second-lowest from the mint in San Francisco) makes this issue extremely popular among collectors. The average survivor is at the lower range of Extremely Fine, and none have been certified in mint condition at either of the major services. This pleasing example has smooth surfaces that are evenly worn and free of large or distracting abrasions. Light, natural coloration is distributed across both sides. Census: 7 in 50, 14 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265E, PCGS# 8676

1877-CC Eagle, Minimally Marked XF45
Rare in All Grades

- 6633 1877-CC XF45 NGC. Variety 1-A.** The date is slightly closer to the denticles than to the base of Liberty's neck. The 1877-CC ten dollar is rare in all grades. NGC and PCGS combined have certified only 82 examples, none of which are in Mint State. The coppery-gold surfaces of this Choice XF specimen display a slightly lighter hue on the reverse. The design features are generally well-defined save for minor strike softness on Liberty's hair curls, the eagle's neck feathers, and the arrow feathers. The few small marks fall well short of the heavy abrasions typically found on this date. Census: 11 in 45, 10 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265G, PCGS# 8678

- 6634 1878-S AU55 NGC.** Scarce in all grades, the 1878-S eagle is rare in Mint State, which makes pleasing AU examples highly sought-after. This Choice About Uncirculated representative is sharply struck with just a touch of wear over the high points. The surfaces display a pale orange-gold color, with no detracting abrasions. Census: 37 in 55 (2 in 55+★), 27 finer (2/14). NGC ID# 265L, PCGS# 8682

1879-CC Ten Dollar, XF Details, Net VF30
Undervalued Carson City Rarity

- 6635 1879-CC — Scratched — ANACS. XF Details, Net VF30. Variety 1-A.** Overall abrasions are fewer than expected on this rare issue, but some are significant enough to warrant the ANACS "Scratched" designation. A small dig appears above the date, and scratches on the reverse in the left field under the eagle's wing account for the net grade. Otherwise, this well-detailed ten dollar displays an appealing, natural look with olive-gold surfaces and reddish accents. A low mintage of just 1,762 pieces — and few survivors — makes the issue equally as rare as the highly-priced 1870-CC eagle, yet it seems undervalued in today's market and provides an excellent opportunity for the perceptive bidder.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265N, PCGS# 8684

1879-CC Ten Dollar, XF Details
Lowest-Mintage Carson City Issue
45 to 60 Pieces Known

- 6636 1879-CC — Improperly Cleaned — NGC. XF Details. Variety 1-A.** There are some who believe (Doug Winter is one) that the 1879-CC eagle is underrated, and that it rivals the famous 1870-CC eagle in most measures of rarity. Both dates have a similar estimate of surviving pieces and comparable populations reported by the services. This olive-gold example was cleaned at one time and shows rather subdued surfaces, although the overall appearance of the coin is reasonable. The rims are strong and unmarked, and the extreme rarity makes even a coin with some "issues" desirable.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265N, PCGS# 8684

- 6637 1880-CC XF45 NGC. Variety 1-B.** A visually appealing example of this Carson City issue. Medium green-gold patina covers both sides, with remnants of orange-gold luster in the protected areas. Strong detail remains, with no outwardly detracting surface abrasions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265T, PCGS# 8688

- 6638 1880-CC — Improperly Cleaned — NGC Details. AU. Variety 1-A.** A pleasing example of this Carson City issue. NGC notes very light cleaning, though the surfaces retain substantial original mint luster in the recessed regions. Significant detail is also present, adding to this piece's strong visual appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

6639 1880-S MS63 NGC. Breen-7000. Tall S. Potent luster sweeps the radiant apricot-gold surfaces of this well struck and unobtrusive abraded example. The '80-S is more available than prior San Francisco issues but is nonetheless scarce at the Select level. Census: 41 in 63, 4 finer (3/14).
Ex: Chicago Signature (Heritage, 8/2011), lot 5652. NGC ID# 265V, PCGS# 8690

6640 1881 MS64 NGC. The 1881 eagle had an extraordinary mintage of nearly 4 million coins, but few of those survive in better Mint State grades. The combined NGC and PCGS population of this issue is 45 pieces graded MS64, and just three finer. This near-Gem has a bold strike and frosty yellow luster with lovely peripheral lime-green toning. Census: 28 in 64 (1 in 64+), 2 finer (3/14).
Ex: Stack's (4/1971), lot 860. NGC ID# 265W, PCGS# 8691

6641 1881-CC AU55 NGC. Variety 1-A. Medium orange-gold patina blankets both sides of this Choice About Uncirculated representative. Remnants of mint luster in the recessed areas complement nearly complete details, with minimally abraded surfaces.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 265X, PCGS# 8692

6642 1882 MS64 PCGS. Lustrous yellow-gold surfaces, with hints of peach and green, provide this near-Gem specimen with lovely eye appeal. The strike is sharp overall, with minor incompleteness at the eagle's claws. A small as-made strike-through appears near the first 8 in the date. Population: 39 in 64 (1 in 64+), 1 finer (3/14). NGC ID# 2662, PCGS# 8695

6643 1882-CC — Improperly Cleaned — NGC Details. AU. Variety 2-A. From a low mintage of only 6,764 coins, this lemon-gold Carson City eagle offers strong detail and pleasing eye appeal. Lightly cleaned in the past, but with subtle remnants of original luster in the recessions around the borders.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2663, PCGS# 8696

**1882-CC Ten Dollar, AU53
Scarce, Low-Mintage Issue**

6644 1882-CC AU53 NGC. This low-mintage issue is elusive in XF condition, scarce at AU, and rare in Mint State. This is a boldly struck example with pale green-gold toning and vibrant glimmers of coppery-gold luster that cling to the peripheral devices. The motifs show modest rub on the high points, and both sides of the coin exhibit scattered wispy marks. Census: 26 in 53, 74 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2663, PCGS# 8696

**1882-S Liberty Eagle, MS64
Only One Finer**

6645 1882-S MS64 PCGS. Vibrant pumpkin-gold surfaces and a sharp strike are among the attributes this near-Gem possesses. Very few signs of contact are present and they are minuscule. A number of alloy spots appear below the portrait on the obverse along with a few faint spots on the reverse. Population: 2 in 64, 1 finer (3/14). NGC ID# 2665, PCGS# 8698

**1884-CC Ten Dollar, AU53
Appealing, Conditionally Scarce Example**

6646 1884-CC AU53 NGC. The 1884-CC eagle is a low-mintage Carson City issue that becomes increasingly scarce moving from XF into the AU grade levels. In mint condition, it is prohibitively rare and out of reach for the average collector. This piece shows wispy hairlines in the fields that are not overly distracting, and noticeable blemishes or abrasions are practically nonexistent. Census: 27 in 53, 71 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266B, PCGS# 8704

**1884-CC Eagle, AU58
Impressive High-Grade Example**

6647 1884-CC AU58 NGC. This lovely yellow-gold example of the scarce 1884-CC eagle is near the top-of-the-line as far as certified examples of this low-mintage issue are concerned. In fact, just 14 coins have been rated in mint condition to date: eight pieces at NGC and just six examples at PCGS; none of which have been graded higher than MS63. Minimally worn and still showing a great deal of original mint luster, this coin has terrific eye appeal and seems tantalizingly close to Mint State. Census: 28 in 58, 8 finer (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266B, PCGS# 8704

1886 Eagle, MS63
Reflective and Boldly Struck

6648 1886 MS63 NGC. Considerable prooflike reflectiveness radiates from the golden-yellow surfaces on each side of this Select 1886 ten. A few light field scuffs on the obverse account for the grade, but they detract from neither the solid, bold strike nor the top-drawer eye appeal. Seldom seen in finer grades. Census: 27 in 63, 5 finer (3/14). NGC ID# 266F, PCGS# 8708

6649 1887 MS62 NGC. Even though 53,600 pieces were struck of the 1887 ten, surprisingly few have survived in mint condition. This coin is generally sharp in strike with the only noticeable areas of weakness being on stars 12 and 13. Deep golden-orange color is seen over each side and moderate abrasions are present. Census: 18 in 62, 3 finer (3/14).

Ex: Portland Signature (Heritage, 3/2004), lot 6306; Pre-Long Beach (Ira & Larry Goldberg, 9/2008), lot 1534, which realized \$2,013. NGC ID# 266H, PCGS# 8710

6650 1888-O MS62 NGC. CAC. Variety 1. This low mintage New Orleans ten displays butter-gold luster and is well struck. The reverse is well preserved while the obverse field exhibits expected marks. A noteworthy strike-through, as coined, is on the dentils above OF. NGC ID# 266L, PCGS# 8713

6651 1889 AU58 PCGS. Of the Liberty eagle issues struck after 1883, the 1889 has the lowest mintage. Only 4,440 pieces were produced. The present crisply struck peach-gold Borderline Uncirculated example has prevalent pockets of luster along with distributed minor abrasions. Housed in a green label holder. NGC ID# 266N, PCGS# 8715

6652 1891-CC VF30 NGC. Variety 2-B. Among the diagnostics for the 2-B variety is a die line inside the R of LIBERTY as this example exhibits. Scattered areas of orange, red-orange, and blue toning appear at portions of the outer edges of this circulated representative. A few small marks on the portrait pose limited distraction, if any.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266U, PCGS# 8720

6653 1891-CC AU55 NGC. Variety 4-C, FS-501. Medium peach-gold patina accents both sides of this Choice About Uncirculated example. Clear repunching can be seen in the mintmark, while the devices retain strong detail. Substantial mint luster remains in the protected regions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266U, PCGS# 8720

6654 1891-CC AU58 NGC. Variety 4-C, FS-501. A nearly mint representative of this popular Carson City type coin exhibiting a repunched mintmark. Pleasing honey-gold luster graces both sides, while the design elements show virtually complete detail. Light, scattered surface abrasions are noted, but are not particularly detracting.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266U, PCGS# 8720

6655 1891-CC AU58 NGC. Variety 2-B. An attractive Carson City "slider" that boasts ample luster and lightly marked straw-gold surfaces. Minor wear is present on the wingtips and the hair above the ear. NGC ID# 266U, PCGS# 8720

6656 1891-CC AU58 NGC. CAC. Variety 2-B. Wide CC. An originally toned green-gold Borderline Uncirculated Carson City type coin. Well struck, partially lustrous, and devoid of mentionable marks. NGC ID# 266U, PCGS# 8720

6657 1891-CC MS61 NGC. Variety 3-C, FS-501. The 1891-CC is by far the most available issue from this mint, perfect for type purposes. The present representative displays lustrous, yellow-gold mint frost and well-struck design elements. Repunching is seen on the mintmark with low-power magnification. Scattered abrasions define the grade.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266U, PCGS# 8720

6658 1892 MS64 NGC. A frosty and sharply struck example of this conditionally rare issue, featuring highly lustrous lemon-yellow surfaces with exceptional eye appeal. Census: 29 in 64, 14 finer (3/14).

Ex: Houston Signature (Heritage, 12/2008), lot 9417. NGC ID# 266V, PCGS# 8721

6659 1892-CC XF45 NGC. Variety 1-A. All of the 1892 Carson City eagles were struck from the same reverse die, with die tripling of IN GOD WE TRUST. A Choice XF survivor, this specimen displays pleasing yellow-gold color, with areas of luster remaining. Scattered marks are present, including a few on Liberty's face.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 266W, PCGS# 8722

6660 1892-CC AU55 NGC. Variety 1-A. Sea-green and orange-gold toning confirm the originality of this lightly circulated and well struck Carson City ten. Small marks are noted near the profile and a thin mark is above the 92 in the date. Much scarcer than its 1891-CC predecessor, since a mere 40,000 pieces were struck. NGC ID# 266W, PCGS# 8722

6661 1892-CC AU58 NGC. Variety 1-A. Luster is extensive for the grade, and the absence of relevant marks confirms the quality. The upper reverse is nicely die doubled north. Only 40,000 pieces were struck, and survivors are challenging across all grades.

Ex: Columbus Central States Signature (Heritage, 4/2006), lot 4028, which realized \$1,955. NGC ID# 266W, PCGS# 8722

6662 1892-O MS62 NGC. CAC. Variety 1. An important conditional rarity in the Motto New Orleans series, the '92-O has a mintage of just 28,688 pieces. NGC has certified only a single coin above the MS62 level. This caramel-gold representative has good luster and scattered small marks. NGC ID# 266X, PCGS# 8723

6663 1892-S MS63 PCGS. Decisively struck with powerful luster on each side, that of the obverse slightly satiny and that of the reverse flashy. Generally yellow-gold surfaces exhibit occasional undercurrents of orange in the fields. Population: 68 in 63 (2 in 63+), 2 finer (3/14).

Ex: Dallas Signature (Heritage, 10/2008), lot 2258, which realized \$3,220. NGC ID# 266Y, PCGS# 8724

6664 1892-S MS63 NGC. An exceptional Select Mint State S-Mint eagle from a limited mintage of only 115,500 pieces, this piece has deep honey-gold surfaces with flashy fields that exhibit satin luster. Census: 20 in 63, 1 finer (3/14).

Ex: Pre-Long Beach Auction (Superior, 9/2008), lot 520. NGC ID# 266Y, PCGS# 8724

6665 1893-CC XF45 NGC. Variety 1-A. A Choice XF example of the only known die variety, this piece displays yellow-gold color overall, with splashes of orange-red color appearing in some of the protected areas. None of the scattered marks present poses significant distraction.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2672, PCGS# 8726

6666 1893-O MS61 NGC. Variety 1. An uncirculated specimen, this piece displays lovely honey-gold color and pleasing luster. An alloy spot appears in the obverse field near 12 o'clock. As expected at this grade level, scattered marks are present. However, none is overly distracting.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2673, PCGS# 8727

6667 1894-O MS61 NGC. Variety 2. Prooflike fields accent sharply struck devices on this highly attractive O-mint eagle. Faint orange-gold overtones complement medium green-gold patina. Light, scattered abrasions contribute to the grade, though none are outwardly detracting.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2676, PCGS# 8730

**1894-O Eagle, MS63
Rare in This Grade Level**

6668 1894-O MS63 NGC. Variety 3. The 1894-O eagle can be found in the lower Mint State grades without much difficulty, but it quickly becomes rare in MS63 and prohibitively rare any finer. This lustrous representative exhibits softly frosted green-gold luster with faint orange-gold overtones. Bold definition is seen over all design elements, and the surfaces reveal minimal faint, grade-defining grazes, with overall excellent visual appeal. Census: 13 in 63, 3 finer (3/14).

Ex: Long Beach Signature (Heritage, 9/2007), lot 3653. NGC ID# 2676, PCGS# 8730

6669 1895-O MS62 PCGS. Variety 1. Lovely apricot and lime-gold toning adorns the satiny surfaces. Boldly struck with a couple of faint marks on Liberty's cheek and a few trivial field blemishes on each side. Very scarce any finer.

Ex: Dallas Signature (Heritage, 10/2006), lot 2994, which realized \$1,380; Santa Clara (Superior, 11/2007), lot 509. NGC ID# 2679, PCGS# 8733

6670 1897 MS64 PCGS. Displaying attractive honey-gold color overall, closer examination reveals intermingled shades of gold, orange, peach, and green on this specimen. The strike is sharp, adding to the appeal. A number of thin wispy die cracks are present, primarily on the obverse. The number of certified examples drops drastically above the near-Gem level, with PCGS having assigned higher grades to only 11 examples (3/14). NGC ID# 267D, PCGS# 8737

6671 1898 MS64 NGC. More than 800,000 1898 eagles were struck, and a large number of those coins survive today, although the typical example is clearly inferior to this Choice Mint State piece. Both sides display frosty green-gold patina with delicate peripheral rose highlights. NGC ID# 267G, PCGS# 8740

**1898 Ten Dollar, MS65
Rarely Seen Gem Example**

6672 1898 MS65 PCGS. Easily obtainable in lower grades, availability of the 1898 eagle significantly drops in MS64 and the date becomes rare in full Gem condition. This sharply struck representative displays luminous orange-gold patina over frosty underlying mint luster. A few faint grazes in the fields preclude an even finer grade, while the overall visual appeal is excellent. PCGS has certified only eight examples at this grade level, with just one numerically finer (3/14). NGC ID# 267G, PCGS# 8740

6673 1899 MS64 NGC. Rich original sea-green and russet toning embraces the borders of this lustrous Liberty type coin. The centers are orange-gold. Minor grazes on the field and portrait characterize the grade. NGC ID# 267J, PCGS# 8742

6674 1899 MS65 PCGS. Apricot-gold color adds to the eye appeal of this Gem representative. A sharp strike is an additional attribute. The surfaces are relatively free of marks and those present are minuscule. A few tiny areas of as-made struck-in grease appear. Population: 34 in 65 (3 in 65+), 5 finer (3/14). NGC ID# 267J, PCGS# 8742

6675 1899-O MS62 PCGS. The 1899-O eagle is an elusive issue in pleasing Mint State condition. It is scarce in MS62, and rare any finer. The present survivor displays a sharp strike with frosty, yellow-gold luster overall. Scattered abrasions are present, as the grade suggests, but none are particularly detracting. Population: 48 in 62 (1 in 62+), 17 finer (2/14). NGC ID# 267K, PCGS# 8743

6676 1901 MS64+ PCGS. CAC. As the Plus designation indicates, this near-Gem possesses strong eye appeal. Hues of gold, green, and peach are present and the surfaces exude frosty luster. Minute flecks of as-made struck-in grease appear on both sides. The few marks appearing pose minimal distraction, if any. NGC ID# 267P, PCGS# 8747

**1901 Eagle, MS66+
Sharply Struck and Well-Preserved**

6677 1901 MS66+ PCGS. The 1901 Liberty eagle was produced in large numbers, and the date is reasonably available in high grade today, making it a favorite with type collectors. The population thins out dramatically above the Gem level, however, and Premium Gems, such the present coin, are quite rare. The design elements are sharply detailed and the well-preserved peach-gold surfaces radiate vibrant mint luster. Population: 31 in 66 (1 in 66+), 1 finer (3/14). NGC ID# 267P, PCGS# 8747

1901-O Ten, MS63
Top-Notch Example of This Late O-Mint

6678 1901-O MS63 PCGS. Among the four O-mint Liberty Head eagle issues of the early 20th century, the 1901-O had the smallest mintage, 72,041 pieces. This Select example is far finer than the norm for survivors. A bold strike complements orange-gold surfaces with glowing luster and some prooflike reflectivity perceptible on the reverse. A great-looking coin. NGC ID# 267R, PCGS# 8748

6679 1901-S MS65 PCGS. Lustrous yellow-gold surfaces are among the attributes this Gem possesses. The design elements exhibit a strong level of detail aside from a couple of the stars at the upper obverse. A tiny alloy spot appears between Liberty's eye and her hair. The 1901-S eagle mintage consisted of just over 2.8 million coins. From *The Northern Lights Collection*. NGC ID# 267S, PCGS# 8749

1901-S Ten Dollar, MS66
Two-Toned and Fully Struck

6680 1901-S MS66 PCGS. Greenish-gold and orange-gold tones compete for space on this frosty Premium Gem 1901-S ten dollar, a coin available in this grade but virtually nonexistent any finer. The full strike and excellent preservation make this S-mint eagle a keeper. Population: 5 in 66+, 2 finer (3/14). NGC ID# 267S, PCGS# 8749

1902 Ten Dollar, MS64

6681 1902 MS64 PCGS. Much rarer than its 1901 predecessor, the 1902 has a mintage of just 82,400 pieces. Choice examples are challenging to secure. A precisely struck green-gold representative with potent luster and a few unimportant field grazes. Encased in a green label holder. Population: 19 in 64 (2 in 64+), 3 finer (3/14). NGC ID# 267T, PCGS# 8750

6682 1902 MS64 PCGS. The lower mintage 1902 ten is collectible in MS61 through MS63 but becomes rare at the MS64 level. The present lustrous and well struck peach-gold near-Gem displays a few inconspicuous marks on the left obverse. Population: 19 in 64 (2 in 64+), 3 finer (3/14).
Ex: Baltimore Signature (Heritage, 7/2003), lot 10497; Long Beach Signature (Heritage, 6/2010), lot 1769. NGC ID# 267T, PCGS# 8750

6683 1903-O MS63 NGC. Variety 1. Sea-green margins frame peach-gold fields and devices. A lustrous and precisely struck Select New Orleans type coin with a smattering of small marks on the obverse field. NGC ID# 267W, PCGS# 8753

1903-O Eagle, MS64
Only One Finer at PCGS

6684 1903-O MS64 PCGS. Variety 1. Shimmering yellow-gold surfaces and a sharp strike are among the desirable characteristics this near-Gem exhibits. Although scattered marks and tiny strike-throughs are present, they are minuscule. Despite production of only 112,771 coins, the 1903-O is one of the more available eagles from the New Orleans Mint. Population: 17 in 64, 1 finer (3/14). NGC ID# 267W, PCGS# 8753

1903-O Eagle, Conditionally Rare MS64

6685 1903-O MS64 PCGS. Variety 2. The 1 in the date centered between denticles attributes this variety. The 1903-O ten dollar, from a production of 112,771 pieces, is the most common New Orleans eagle. PCGS has graded 300 pieces in About Uncirculated and over 700 specimens in Mint State, mainly through MS63. The population drops significantly at the near-Gem level where the date becomes rare, and is virtually unobtainable any higher.

Intense luster radiates from both sides of this MS64 specimen, each of which displays soft yellow-gold and rose patination. All design elements are well brought up, further enhancing the coin's pleasing eye appeal. A few minuscule marks preclude Gem classification. A shallow linear abrasion to the left of star 13 and two small indents on the adjacent bust truncation are mentioned only as possible pedigree markers. Population: 17 in 64, 1 finer (3/14). NGC ID# 267W, PCGS# 8753

6686 1904-O MS61 PCGS. Warm, orange-gold luster covers both sides of this satiny O-mint ten dollar. The strike is sharp, with all design elements well-defined. Surprisingly few abrasions are present, given the grade. Housed in a green label holder. NGC ID# 267Z, PCGS# 8756

**1906 Eagle, MS64+
Bright and Well-Struck**

6687 1906 MS64+ PCGS. This bright, well-struck orange-gold MS64+ eagle shows a touch of greenish-gold patina near the rims on each side. These Liberty Head tens from the last few years of production sometimes come quite nice, and this piece is certainly one such. Population: 33 in 64 (1 in 64+), 11 finer (3/14). NGC ID# 2684, PCGS# 8759

6688 1906-D MS64 PCGS. The Denver Mint finally opened in 1906, several decades after the Federal government purchased the Denver coinage facility of Clark, Gruber, & Co. Half eagles, eagles, and double eagles were struck in both 1906 and 1907 in sufficient quantity for Colorado collectors to own quality examples of the three Liberty gold types. The 1906-D ten is relatively available, but the present piece is especially nice. It is well struck and lustrous with clean surfaces and consistent sun-gold color.
Ex: Houston Signature (Heritage, 12/2008), lot 2196, which realized \$1,955. NGC ID# 2685, PCGS# 8760

**1906-S Eagle, MS64
Conditionally Elusive**

6689 1906-S MS64 PCGS. CAC. Lustrous apricot-gold surfaces provide this sharply struck near-Gem with strong visual appeal. Very few signs of contact appear. An as-made strike-through is present in the right obverse field and a few tiny alloy spots are seen. Housed in an old green label holder. Population: 4 in 64, 5 finer (3/14). NGC ID# 2687, PCGS# 8762

PROOF LIBERTY EAGLE

6690 1893 — Polished — PCGS Genuine. Proof, Unc. Details. Just 55 proofs were struck, and PCGS estimates that 25 to 35 pieces have survived. The present is bright and glossy from a vigorous cleaning and displays small marks associated with loose storage in a keepsake box. NGC ID# 28FY, PCGS# 8833

INDIAN EAGLES

6691 1907 No Periods MS62 PCGS. Rich russet, plum-red, and forest-green toning endows the margins of this unmarked, lustrous, and well struck first-year Indian ten. Exceptionally attractive for the MS62 level.
Ex: Columbus Central States Signature (Heritage, 4/2006), lot 4095, which realized \$2,990. NGC ID# 28GF, PCGS# 8852

**1907 No Periods Ten, MS64
Well-Produced, First-Year Issue**

6692 1907 No Periods MS64 NGC. Mint Engraver Charles Barber insisted on changes to the original Saint-Gaudens design of the 1907 ten dollar gold piece, including removal of the triangular stops (periods) that flanked the lettering, and also reworking the olive branch and Indian headdress feathers. The result was a mostly well-produced production of 239,400 pieces. This vibrantly lustrous example is boldly struck except at the feather tips and some of the vanes. Satin-gold surfaces display smooth fields and unmarked devices. A thoroughly pleasing, near-Gem ten. NGC ID# 28GF, PCGS# 8852

**1907 No Periods Ten Dollar, MS64
Lustrous, Beautiful Type Coin**

6693 1907 No Periods MS64 PCGS. A great first-year type coin, the 1907 No Periods eagle had a reasonably substantial mintage of 239,400 pieces, and enough of those coins were saved in order to ensure the availability of this issue to future collectors. This near-Gem shows bold satiny luster and lovely, even coloration over both sides. It is well-preserved with only the most trivial marks detected under low magnification. NGC ID# 28GF, PCGS# 8852

**1907 No Periods Ten, MS65
Generous Luster, Bold Eye Appeal**

6694 1907 No Periods MS65 PCGS. The short-lived No Motto type endured only two years, 1907 and 1908. The generous luster that piece offers would not be out of place on a high-grade Morgan dollar. Beautiful caramel-gold color, a decent strike, and a paucity of mentionable marks complete the bold eye appeal.
From The Northern Lights Collection. NGC ID# 28GF, PCGS# 8852

**1907 No Periods Eagle, MS66
Outstanding Visual Appeal**

- 6695 1907 No Periods MS66 NGC.** An outstanding example from the first year of the Indian Head eagle series, this Premium Gem represents the No Periods variety, which consisted of a mintage of 239,406 coins. The series was struck consistently from 1907 to 1916, with infrequent issues during the 1920s and early 1930s. The motto, IN GOD WE TRUST, was added mid-1918. Shimmering, lustrous yellow-gold surfaces provide this specimen with strong eye appeal. Closer examination reveals scattered splashes of deep gold color on both sides. A tiny alloy spot is present below the N in UNITED. The few scattered marks appearing are minuscule, including a tiny abrasion on the tip of the nose on the obverse. NGC ID# 28GF, PCGS# 8852

**1908 No Motto Ten Dollar, MS63
Low-Mintage, Final Year Without Motto**

- 6696 1908 No Motto MS63 NGC.** Less than 9% of the 1908 Philadelphia Mint gold eagle production was of the No Motto design, joining the Denver Mint production as the last examples of the short-lived type without the Congressionally mandated IN GOD WE TRUST. Scarce in Select Uncirculated and finer grades, the 1908 No Motto eagle is perhaps underappreciated for its importance. This example is softly lustrous and original, with satiny apricot-gold surfaces and sharp devices. Some minor abrasions on Liberty's portrait and a shallow scrape in the left obverse field define the grade. NGC ID# 28GG, PCGS# 8853

- 6697 1908 Motto MS63 NGC.** A pleasing example of the With Motto variant of this Indian Head ten dollar. The surfaces are minimally abraded and display mainly yellow-gold luster with tinges of rose-gold at the central reverse. Sharply detailed design elements add to the overall eye appeal. NGC ID# 28GJ, PCGS# 8859

- 6698 1908 Motto MS63 PCGS. CAC.** This satiny Select Mint State Indian eagle exhibits highly lustrous yellow-gold surfaces with hints of brilliant orange overtones on each side. The strike is excellent and the eye appeal is outstanding. NGC ID# 28GJ, PCGS# 8859

1908 Motto Ten, Wheat-Gold MS64

- 6699 1908 Motto MS64 NGC.** The fine-grained surfaces are somewhat mattelike on this wheat-gold With Motto ten, from the first year of production for the later subtype. A stray mark or two on each side are in concert with the grade, none of them of any consequence. Excellent eye appeal for this type-coin issue. NGC ID# 28GJ, PCGS# 8859

**1908 Motto Ten, MS64
Top-Notch Two-Toned Example**

- 6700 1908 Motto MS64 PCGS. CAC.** Greenish-gold and orange-gold colors compete for territory on this lovely near-Gem 1908 Motto ten. Only a small tick near the corner of Liberty's eye, where a bit of grayish patina has developed, appears to hold this coin back from an even finer grade. The eye appeal is nonetheless top-notch. NGC ID# 28GJ, PCGS# 8859

**1908 Indian Ten, MS65
With Motto**

- 6701 1908 Motto MS65 NGC.** This lovely Gem With Motto eagle marks the transitional year when the motto IN GOD WE TRUST was restored to the reverse over the objections of President Theodore Roosevelt. This brilliant yellow example has lustrous surfaces with inconsequential marks. NGC ID# 28GJ, PCGS# 8859
- 6702 1908-D Motto AU58 NGC.** Highly lustrous with pale rose-gold hues. The devices are sharply detailed and careful examination is needed to detect any signs of wear. Only a few scattered light abrasions interrupt the luster.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 28GK, PCGS# 8860

**1910 Eagle, MS64
Preferred Issue for Type**

- 6703 1910 MS64 NGC. CAC.** David Akers aptly described the variance of surfaces seen on 1910 eagles, ranging from brilliantly frosty, orange-gold examples to light yellow-gold, satiny pieces. This softly lustrous ten is the latter, with a satiny texture to the surfaces. A bold strike displays excellent detail on the elements, with only a couple of tiny abrasions and luster grazes in evidence anywhere on the coin. An affordable and frequently available issue — great for type — and CAC-Approved for quality. NGC ID# 28GR, PCGS# 8865

1910 Indian Ten, MS64+

- 6704 1910 MS64+ NGC. CAC.** Beautifully struck, this high-end near-Gem displays lovely eye appeal with brilliant yellow color, hints of deep gold, and lustrous surfaces that are largely free of abrasions. NGC has awarded the Plus designation to a mere 15 Choice Mint State 1910 Indian eagles (3/14). NGC ID# 28GR, PCGS# 8865
- 6705 1910-D MS64 PCGS.** Straw-gold color adds to the eye appeal of this near-Gem representative. A pleasing strike and the absence of any marks worthy of individual mention add to the appeal of this piece exhibiting frosty luster. NGC ID# 28GS, PCGS# 8866

**1910-D Eagle, MS66
Rarely Encountered Finer**

6706 1910-D MS66 PCGS. The 1910-D Indian Head eagle had a substantial mintage in excess of 2.3 million coins, but fell victim to heavy melting during the gold recall of the early 1930s. Still, the date remains the most available branch mint issue of the series overall, but it does become scarce in Premium Gem condition and is rarely encountered finer.

This example exhibits radiant, lightly frosted luster under vibrant orange-gold hues. Boldly struck overall, with notable definition on the stars, date, and border lettering, areas that are commonly weak on this issue, likely due to improper collar alignment or heavily worn dies. The surfaces are virtually undisturbed, with only a few faint grazes seen under close examination. PCGS has certified only one numerically finer specimen (3/14). NGC ID# 28GS, PCGS# 8866

6707 1911 MS64 NGC. A well-made issue, ideal for type purposes. This lustrous near-Gem example displays satiny yellow-gold luster and sharply detailed design elements. The surfaces are void of any significant abrasions, giving this piece a high degree of eye appeal. NGC ID# 28GT, PCGS# 8868

6708 1911 MS64 PCGS. Most of the trivial surface marks on each side of this Choice Mint State piece are hidden in the sharply defined design elements. A frosty and fully brilliant lemon-yellow Indian eagle. NGC ID# 28GT, PCGS# 8868

**1911 Ten Dollar, MS65
Well-Struck and Highly Attractive**

6709 1911 MS65 NGC. Shimmering yellow-gold luster and unusually full strike definition are some attributes of this pleasing Gem example, along with clean, undisturbed surfaces. Only the bottom portions of TEN DOLLARS, along the lower reverse, reveal softness along with mint-made die roughness. Regarded as a common date in this challenging series, the 1911 is suitable for type purposes. NGC ID# 28GT, PCGS# 8868

**1911-D Indian Eagle, AU58
Elusive Issue in High Grade**

6710 1911-D AU58 PCGS. The 1911-D Indian eagle claims a low mintage of 30,100 pieces and the issue is a prime condition rarity in high grade. This impressive near-Mint specimen exhibits well-detailed design elements with just a trace of wear on the high points, and lightly abraded yellow-gold surfaces that retain most of their original mint luster. NGC ID# 28GU, PCGS# 8869

**1911-D Ten Dollar, MS60 Details
Lowest Mintage of the Series**

6711 1911-D — Cleaned — ANACS. MS60 Details. Boasting a low mintage of just 30,100 coins, the 1911-D is the undisputed key to the Indian eagle series in Mint State condition, and even draws strong demand in circulated grades. This well-detailed, unworn example displays lustrous golden surfaces, with no major abrasions present. Old, light cleaning has not deprived this piece of any amount of eye appeal, making it a very pleasing example of this sought-after issue.

Ex: *Dallas Signature (Heritage, 7/2006)*, lot 1569. NGC ID# 28GU, PCGS# 8869

- 6712 1912 MS64 NGC.** Strong luster and rich butter-gold color provide this near-Gem specimen with strong eye appeal. Minor marks limited the grade of this attractive piece, but do not pose a significant distraction. Only 72 examples have achieved higher numeric grades from NGC (2/14).

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 28GW, PCGS# 8871

**1913-S Ten Dollar, AU58
Elusive Key Date**

- 6713 1913-S AU58 ANACS.** The 1913-S eagle is one of the scarcest issues in the Indian Head series, second only to the 1911-D in high grades. Fuljenz writes of the issue: "This date overall ranks in the top third of all Indian Eagles but shoulder still be considered very, very scarce in any grade."

This near-Mint example exhibits soft golden luster and remarkably clean surfaces. Only a brush of friction is detected over the high points of the sharply struck design elements, giving this piece an excellent amount of visual appeal. NGC ID# 28GZ, PCGS# 8874

**1913-S Ten Dollar, AU58
Low-Mintage Date**

- 6714 1913-S AU58 NGC.** In their *Encyclopedia of U.S. Gold Coins*, Jeff Garrett and Ron Guth write of the 1913-S ten dollar that it "has been nudged out of top place [in the Indian Head series] by the 1911-D issue." Surviving high-grade specimens are still elusive, however. This high-end AU example exhibits attractive brass-gold color and ample luster, while the design elements are generally well-impressed. Smooth surfaces are the rule, save for a shallow curving mark in the left reverse field.

Ex: ANA Signature (Heritage, 3/2007), lot 2128. NGC ID# 28GZ, PCGS# 8874

**1913-S Eagle, AU58
Low-Mintage Issue**

- 6715 1913-S AU58 NGC.** Straw-gold color and matte luster provide this near-Mint example with a lovely appearance. The strike is pleasing; with the high points of the designs exhibiting light wear. The 1913-S Indian Head eagle is a popular, low-mintage San Francisco Mint issue within the series, due in part to its low mintage of only 66,000 coins. NGC ID# 28GZ, PCGS# 8874

- 6716 1914-S MS60 PCGS.** Frosty green-gold luster and sharply struck devices are among this coin's pleasing attributes. Moderate, grade-defining abrasions are present, but are not overly detracting when viewed collectively. NGC ID# 28H4, PCGS# 8877

**1916-S Ten Dollar, MS62
Pleasing Example, Scarcer Issue**

- 6717 1916-S MS62 NGC. CAC.** Sharply struck, but perhaps a bit lackluster, this example might yet serve admirably for a San Francisco type or an Indian eagle date collector. The graded population numbers for this issue indicate that it is among the Top Ten issues in terms of overall scarcity, making it a challenge. This example displays a slight degree of scuffiness, but seems a pleasing and respectable example for the grade overall. NGC ID# 28H7, PCGS# 8880

- 6718 1926 MS65 NGC.** The 1926 Indian ten is the only plentiful issue of that decade in the eagle series. This example has satiny yellow luster with delicate blue and orange overtones. Trivial marks prevent a higher grade.

From The Northern Lights Collection. NGC ID# 28H9, PCGS# 8882

- 6719 1926 MS65 NGC.** Quarter eagles and eagles were struck at Philadelphia in 1926, for the first time at the facility since 1915. Double eagles were the denomination of choice after World War I, when gold coins were primarily struck as backing for gold certificates. This is a well struck apricot-gold Gem with sweeping luster and no noticeable abrasions. NGC ID# 28H9, PCGS# 8882

- 6720 1932 MS64 PCGS.** Rich fire-red and orange toning endows this lustrous and precisely struck Indian gold type coin. Well preserved aside from marks near the chin. Certified in a green label holder. NGC ID# 28HB, PCGS# 8884

6721 1932 MS64 NGC. The 1932 is a well-made issue, ideal for type purposes. This fully struck near-Gem displays pale rose-gold hues blended with green-gold luster overall. The heavily frosted surfaces reveal minimal abrasions and exhibit pleasing eye appeal.

Ex: Baltimore Signature (Heritage, 7/2008), lot 10062. NGC ID# 28HB, PCGS# 8884

6722 1932 MS64+ PCGS. CAC. Pleasing luster and gorgeous yellow-gold color provide this high-end near-Gem with lovely visual appeal. Nicely detailed, this coin reveals a few scattered marks, but they do not pose a serious distraction. The well-produced 1932 ten dollar issue consisted of a large mintage of 4.463 million pieces, making it a popular issue with type collectors. NGC ID# 28HB, PCGS# 8884

6723 1932 MS64+ PCGS. CAC. A frosty and fully brilliant light yellow-gold example, this plentiful Indian ten is the only readily available U.S. Mint gold piece from the 1930s, a popular issue for type collectors. This piece has the usual grade-limiting marks associated with international transport and storage. NGC ID# 28HB, PCGS# 8884

6724 1932 MS64+ PCGS. CAC. Scattered surface marks are evident at the lower obverse and across the reverse of this frosty Choice Mint State piece. Most of the marks are inconsequential and lost in the brilliant light yellow-gold luster. NGC ID# 28HB, PCGS# 8884

**1932 Eagle, MS65+
High-End for the Grade**

6725 1932 MS65+ NGC. Orange and lemon-gold overall, with glimpses of peach and rose within the upper reaches of the headdress. This highly lustrous type coin is nicely struck and has a gorgeously smooth obverse field. Faint marks are limited to the area near the top of the eagle's breast. A wonderful series representative, without any copper alloy spots that sometimes befall this popular issue, and close to the next highest grade as indicated by the NGC Plus designation.

Ex: Stamford Coinfest Signature (Heritage, 10/2010), lot 4980. NGC ID# 28HB, PCGS# 8884

LIBERTY DOUBLE EAGLES

1850 Liberty Twenty, XF40

6726 1850 XF40 PCGS. The first year of issue for the Liberty double eagle, the denomination that was authorized as a direct result of the California gold rush. This wheat-gold example has moderate wear on the high points, and scattered marks that are consistent with the grade. NGC ID# 268F, PCGS# 8902

**1850 Double Eagle, AU50
Popular as the First Year of Issue**

6727 1850 AU50 NGC. The 1850 twenty dollar gold piece is very popular as the first year of the regular issue for the denomination and the type. As might be expected, a fairly large number of coins are extant, especially through About Uncirculated. Mint State pieces are more difficult to obtain, and when seen are mostly in MS60 to MS62. The present AU offering displays traces of luster in the recesses of the design elements. Scattered light marks are within the confines of a coin having seen brief circulation. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268F, PCGS# 8902*

**1850 Double Eagle, AU53
Perennially Popular Debut Issue**

6728 1850 AU53 NGC. A lustrous and slightly prooflike representative of the first collectible issue of the series, this coin is sharp for the grade, with a complete E PLURIBUS UNUM and bold wingtips on the eagle. Scattered marks are present, including one below Liberty's lower curls and a couple on her cheek. *Ex: Long Beach Signature (Heritage, 9/2002), lot 8611. NGC ID# 268F, PCGS# 8902*

1850 Liberty Double Eagle, AU58
Near-Mint Shipwreck Find

- 6729 1850 AU58 NGC.** Ex: *S.S. Republic*. A lightly abraded, lightly toned example of the first-year, Philadelphia double eagle production. The *S.S. Republic* yielded 2,675 double eagles to the treasure hunters, of which 55 pieces were the 1850 Philadelphia twenty. Every date and mintmark of the double eagle series through 1865 was represented by at least one example from the wreck, except the 1856-O. NGC ID# 268F, PCGS# 8902

1850-O Liberty Twenty Dollar, XF45
Affordable New Orleans Issue

- 6730 1850-O XF45 PCGS.** The first branch-mint twenty, and the first year of issue for double eagles as a denomination. Many New Orleans double eagles are out of reach for most collectors, with just a few of the early dates providing the only viable alternatives. This yellow-gold example is a moderately worn piece with a clean, smooth cheek on Liberty. Wear, handling, and a bit of strike weakness are accounted for by the grade. NGC ID# 268G, PCGS# 8903

- 6731 1851 XF45 NGC.** Yellow and khaki-gold shades are present on this specimen. Scattered marks cover both sides of this piece, though none of the marks provides serious distraction. The reverse reveals a counter-clockwise rotation.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268H, PCGS# 8904

- 6732 1851 XF45 ANACS.** The 1851 double eagle is not as common as its mintage of more than 2 million coins suggests, and is scarcely seen in Mint State. This Choice XF example retains significant mint luster in the protected regions, with deep orange-gold patina overall. Only light wear is seen over the high points of the design, and the surfaces are free of any distracting imperfections.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 1997. NGC ID# 268H, PCGS# 8904

1851 Liberty Twenty, AU50

- 6733 1851 AU50 NGC.** The California gold rush was in full force when this piece was coined in 1851. This example has brilliant yellow surfaces with excellent luster and eye appeal for the grade. Both sides show the usual grade-consistent, trivial surface marks. A tiny rim nick is noted at 12:30 on the reverse. NGC ID# 268H, PCGS# 8904

1851 Double Eagle, AU55
A High-Mintage Issue

- 6734 1851 AU55 NGC.** The 1851 double eagle production soared to nearly 2.1 million pieces as a result of the influx of gold from California. The majority of survivors are in circulated grades, and the extant Mint State specimens are in the lower level. Traces of luster reside in the protected areas of this honey-gold Choice AU example. This is a well-defined and lightly abraded coin.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268H, PCGS# 8904

1851 Double Eagle, AU58
Heavily Frosted Mint Luster

- 6735 1851 AU58 NGC.** Of the more than 2 million 1851 double eagles struck, few survive that are not heavily worn or abraded. This near-Mint piece exhibits heavily frosted, beautifully preserved surfaces, with muted green-gold luster over both sides. The strike is bold and the details are virtually complete, giving this coin the visual appeal of a low-grade Uncirculated example.
Ex: Long Beach Signature (Heritage, 9/2002), lot 8615. NGC ID# 268H, PCGS# 8904

**1851 Double Eagle, AU58
Boldly Detailed**

- 6736 1851 AU58 NGC.** Flashy lemon-green luster covers each side of this sharply detailed near-Mint Type One representative. Highpoint wear is negligible, and abrasions seem virtually non-existent, though some wispy hairlines are evident in the obverse and reverse fields. The 1851 is among the more affordable Type One issues, but it is not as available as its mintage of more than 2 million coins suggests. *Ex: Long Beach Signature (Heritage, 2/2006), lot 3226. NGC ID# 268H, PCGS# 8904*

**1851-O \$20, AU Details
Popular Type Issue**

- 6737 1851-O — Obverse Graffiti — NGC Details. AU.** This second-year date from the mint in New Orleans has a moderate mintage of 315,000 pieces, and Garrett and Guth comment that it is a widely popular issue with many auction appearances noted. This green-gold example is well-struck, and the motifs display high-point wear suggestive of an AU grade. Someone carved an X onto Liberty's cheek, but this feature is faint and does not affect the coin's appearance overly much. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268J, PCGS# 8905*

**1851-O Twenty, AU50
An Appealing Example**

- 6738 1851-O AU50 NGC.** Despite a reasonably high mintage of 315,000 coins, this New Orleans issue is "scarce in About Uncirculated and very rare in full Mint State," according to Garrett and Guth. The AU example offered here is appealing despite a profusion of small surface marks and a slightly subdued appearance. Only minor high-point wear is seen under low magnification, and the design elements retain strong detail for the grade. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268J, PCGS# 8905*

- 6739 1852 XF45 PCGS.** Luster glimmers from the stars, legends, and crevices of the devices. Moderately abraded, as generally encountered, but still attractive for the grade. *Ex: Long Beach Signature (Heritage, 9/2002), lot 8621. NGC ID# 268K, PCGS# 8906*

**1852 Double Eagle, AU50
Popular Type One Issue**

- 6740 1852 AU50 NGC.** A large mintage of more than 2 million Liberty double eagles was accomplished at the Philadelphia Mint in 1852, and a number of these coins were recovered from recent shipwreck finds, making the 1852 a relatively available Type One issue. This lightly circulated piece exhibits lustrous yellow-gold surfaces with a grade-consistent scattering of minor contact marks on both sides. *NGC ID# 268K, PCGS# 8906*

**1852 Type One Twenty, AU55
Smooth, Attractive Surfaces**

- 6741 1852 AU55 NGC.** More than 2 million pieces were produced by the Philadelphia Mint, capping off a three-year mintage of more than 5 million double eagles from 1850 to 1852. Virtually the entire production circulated heavily and utilized the vast influx of gold from the California gold fields. This attractive example is minimally abraded with especially nice, smooth fields. Soft orange luster glows beneath olive-tinged surfaces. A bit of high-point wear touches the sharp motifs. The only mentionable distraction is a small rim bump beneath the 1 in the date of this appealing twenty. *NGC ID# 268K, PCGS# 8906*

**1852 Double Eagle, AU58
An Excellent Type One Representative**

- 6742 1852 AU58 NGC.** As the mintage over 2 million pieces might suggest the 1852 is one of the more common Type One double eagles. Nearly 130 examples were discovered in the wrecks of the *S.S. Central America* and the *S.S. Republic*. This near-Mint State piece retains ample luster in its recessed areas and possesses relatively good design detail. A few light contact marks do not detract. An excellent type coin choice. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268K, PCGS# 8906*

1852/1852 Double Eagle, MS61
Popular FS-301 Overdate

- 6743 1852 MS61 NGC. FS-301. The date is repunched north, with prior traces of all four digits evident. This green-gold Type One double eagle exhibits sweeping luster and an exemplary strike. A few moderate marks are scattered but are less detrimental than expected for the MS61 level. Census: 43 in 61, 35 finer (3/14). NGC ID# 268K, PCGS# 8906

1852 Double Eagle, MS62
Lovely, Conditionally Scarce Example

- 6744 1852 MS62 NGC. Garrett and Guth (2008) describe this issue as "one of the more common Type 1 double eagles." While true in absolute terms, this statement does not reflect the conditional scarcity of this early date in high grades. At NGC, for example, more than 1,500 examples of this date have been graded, but just 111 of those coins have been designated in Mint State. This is a lovely piece with impressively full strike definition and satiny surfaces that exhibit light antique-gold coloration with deeper peach peripheral accents. A few minor surface marks are consistent with the grade. Census: 26 in 62, 9 finer (3/14). From The Charles G. Wright Family Collection. NGC ID# 268K, PCGS# 8906

1852-O Twenty Dollar, AU50
Attractive, O-Mint Type

- 6745 1852-O AU50 PCGS. Although no New Orleans double eagle from the 1850s is common in an absolute sense, the first three years of the series (1850 through 1852) are the most available dates for O-Mint collectors. This reflective, lightly circulated example is a rich-gold color with only a few light abrasions. The devices remain bold. An attractive, early New Orleans issue, desirable for type. NGC ID# 268L, PCGS# 8907

1852-O Double Eagle, AU53
Bright Orange-Gold Surfaces

- 6746 1852-O AU53 NGC. Variety 1. The sole variety known. The 1852-O is one of the most available double eagles from the New Orleans Mint. It is somewhat scarce in the higher AU grades and becomes rare in Mint State. There were 20 examples in the S.S. Republic hoard, only one of which was Uncirculated. The apricot-gold surfaces of this AU53 specimen are imbued with hints of tan, yellow-gold, and lavender and the devices are relatively well-defined. The few scattered marks are considerably less severe than the heavy abrasions typically seen on this date. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268L, PCGS# 8907
- 6747 1853 XF45 NGC. Despite a mintage consisting of more than 1.2 million pieces, relatively few 1853 double eagle survivors are found beyond the VF or XF range. This Choice XF example exhibits pleasing honey-gold color and has a nice appearance. A mark at the lower portion of Liberty's chin and a few nicks on the reverse rim provide minimal distraction, if any. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268M, PCGS# 8908

1853 Twenty Dollar, AU53
Lustrous, Well-Struck

6748 1853 AU53 NGC. The upper loop of the 8 in the date has a prominent die chip. A bold example with abundant luster that is without heavy abrasions, although each side has several wispy slide marks. A readily available issue that would serve well for type purposes. Ex: *Long Beach Signature* (Heritage, 9/2002), lot 8627. NGC ID# 268M, PCGS# 8908

1853 Liberty Twenty, AU53
Elusive in High Grade

6749 1853 AU53 NGC. CAC. A lightly circulated example, this piece exhibits areas of mint luster. Lovely yellow-gold color adds to the appeal. A few of the scattered marks pose minor distraction when viewed closely. Surviving representatives from this issue are rarely encountered in Mint State grades, adding to the desirability of light circulated pieces. NGC ID# 268M, PCGS# 8908

1853 Double Eagle, AU55
Remarkably Smooth Surfaces

6750 1853 AU55 ANACS. FS-301. The underdigit is faint on this piece, with just a remnant of the lower stroke of the 2 visible inside the bottom loop of the 3. However, the variety is easily confirmed by a small die lump below the R in LIBERTY, and a broken A in STATES. Boldly struck, with substantial remaining mint luster around the devices. Warm orange-gold patina blankets both sides, displaying a lack of any significant abrasions. Ex: *Dallas Signature* (Heritage, 10/2006), lot 3167. NGC ID# 268M, PCGS# 8908

1853 Double Eagle, AU55

6751 1853 AU55 PCGS. CAC. A highly lustrous Choice AU example with brilliant yellow surfaces, traces of orange color, and minimal surface marks. Minor strike doubling is noted inside the 3, in no way related to a repunched date or other die variety. This is an exceptional example for the grade. NGC ID# 268M, PCGS# 8908

1853 Double Eagle, AU58
Lustrous, Close to Mint State

6752 1853 AU58 NGC. Although not struck in the greater numbers of the 1851 and 1852 issues, the 1853 did see a total production well in excess of 1 million coins, and examples are numerous at the current grade level. This straw-gold piece is lustrous and close to Mint State. Minor friction on Liberty's hair bun and the eagle's wingtips combine with plentiful small abrasions to limit the grade. Ex: *West Palm Beach FL Signature* (Heritage, 7/2009), lot 1948. NGC ID# 268M, PCGS# 8908

1853 Double Eagle, AU58
Scarcely Seen Finer

- 6753 1853 AU58 NGC.** Frosty orange-gold luster blankets both sides of this well-struck Type One double eagle, with substantial mint luster shining through the patina. Just a brush of friction is seen over the high points of the design, with minimal surface abrasions present. A highly attractive, nearly Uncirculated example of this early Philadelphia issue. NGC has graded only 49 numerically finer pieces (3/14).

Ex: Long Beach Signature (Heritage, 2/2000), lot 6841. NGC ID# 268M, PCGS# 8908

1853/2' Double Eagle, AU55
Popular Guide Book Variety

- 6754 1853/2' AU55 NGC. FS-301.** Terminology varies between the *Guide Book* and *Cherrypickers'*, but this variety, diagnosed by the something beneath the 3 and the large die lump below the R in LIBERTY, has long been collected as the only overdate in the Liberty twenty series. This Choice AU example shows scattered small- to medium-sized marks with much luster and eye appeal present on yellow-gold surfaces. Census: 29 in 55, 43 finer (3/14). NGC ID# 268M, PCGS# 8909

1853-O Double Eagle, AU Details
Attractive Low-Mintage Example

- 6755 1853-O — Improperly Cleaned — NGC Details. AU.** Although not a great rarity like the three New Orleans twenty dollar issues to follow, the 1853-O is nonetheless a low-mintage date that is relatively scarce in grades higher than XF. This example is well-struck and shows bright green-gold surfaces with few marks and only faint hairlines from an old cleaning.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268N, PCGS# 8910

1854 Small Date Double Eagle, AU58
Lovely Visual Appeal

- 6756 1854 Small Date AU58 NGC.** Two different date sizes have been identified for the coinage of double eagles in 1854. The Small Date variety appears to be considerably more plentiful. Bowers suggested that this variety should be called a "Medium Date" variety; however, Small Date seems to be a more appropriate term, unless another variety is later discovered with an even smaller sized date logotype. Double eagle mintages in Philadelphia dropped considerably beginning in 1853, and especially in 1854, once the San Francisco Mint began operations. It was no longer necessary or cost effective to ship gold from California to Philadelphia for coinage. More about this will be discussed at length below, in the description of the 1854-O rarity.

This is a lovely example with brilliant yellow-gold surfaces and frosty luster, highlighted by traces of pink color. Although some minor hairlines are visible on each side, the surfaces are relatively mark-free and the overall aesthetic appeal is excellent. A small alloy spot is present near the N in UNITED. Both sides are sharply struck as usual for this issue.

Ex: Wyoming Collection (Heritage, 8/2006), lot 5588.. NGC ID# 268P, PCGS# 8911

- 6757 1855 XF45 PCGS.** A Choice XF type representative, this 1855 double eagle exhibits only light wear overall, with few consequential surface abrasions. Pale orange-gold patina covers both sides, with tiny remnants of mint luster in the crevices.

Ex: Long Beach Signature (Heritage, 9/2002), lot 8635. NGC ID# 268V, PCGS# 8914

1855 Twenty Dollar
Uncirculated Sharpness

- 6758 1855 — Sea Salvage — NCS. Unc. Details.** A fully detailed example with minimal marks, but the luster is subdued and the surfaces are evenly granular from exposure to sea water. Nonetheless rare with the present sharpness, unlike certain other Type One issues (especially the 1857-S) recovered in volume from shipwrecks. NGC ID# 268V, PCGS# 8914

1855-S Liberty Twenty, AU53
Few Abrasions, Nice Luster Remains

6759 1855-S AU53 NGC. Medium S. Relatively few abrasions mark the surfaces of this desirable Type One double eagle from the fledgling San Francisco Mint. A moderately circulated example from the second year of production, this twenty displays original-looking surfaces with glowing, apricot-gold toning and attractive red-gold highlights. The strike is a bit soft at the centers as often seen of this issue, but stronger than many of the date. Perhaps 360 representatives (or so) of the date were recovered primarily from the S.S. *Central America* and the S.S. *Republic*, but the rich, natural gold color and obvious signs of circulation suggest this example is not one of those salvaged.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268X, PCGS# 8916

1855-S Double Eagle, AU55
Ex: S.S. Republic

6760 1855-S AU55 NGC. Ex: S.S. *Republic*. Small or Medium S. The A in STATES is broken but E is complete. An attractive antique-gold example with a shimmering appearance which may be explained partly by the so-called "shipwreck effect," which also imparts a faintly granular texture to the coin's surfaces. A few marks from prior circulation are noted. According to Garrett and Guth (2008), there were 57 examples of this issue recovered from the S.S. *Republic* shipwreck.

From The Charles G. Wright Family Collection. NGC ID# 268X, PCGS# 8916

1855-S Double Eagle, AU58
Lovely High-End Example

6761 1855-S AU58 NGC. The high mintage of this early San Francisco issue was nearly 900,000 pieces, and survivors are mostly seen in Very Fine or Extremely Fine condition. Previously rare in Uncirculated condition, more than 350 coins were recovered from the SS *Central America* and SS *Republic* shipwrecks combined; many of them in mint condition. This is a well-struck example with only trace amounts of wear detected on Liberty's hair bun and on the eagle's wingtips.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 268X, PCGS# 8916

1856 Twenty Dollar, AU55
Scarce, Challenging Issue
Ex: S.S. Republic

6762 1856 AU55 NGC. Ex: S.S. *Republic*. An extremely challenging issue, and one with a moderate mintage that does not accurately reflect the absolute scarcity of this Philadelphia Mint date. This is one of the few coins recovered from the S.S. *Republic* shipwreck. It is a pleasing Choice AU example showing modest wear on the design's high-points, and scattered abrasions that are more noticeable on the obverse. Census: 58 in 55, 65 finer (3/14).

From The Charles G. Wright Family Collection. NGC ID# 268Y, PCGS# 8917

1856 Double Eagle, AU55
Original Patina, Boldly Struck

6763 1856 AU55 NGC. CAC. As a date, the 1856 double eagle is among the scarcer Philadelphia issues from the period, but it does not become truly rare until the Mint State level. This CAC-approved, Choice Almost Uncirculated example displays nearly complete detail on the central motifs, with no outwardly detracting surface disruptions. Significant mint luster remains beneath the medium orange-gold patina on this sharply struck representative. NGC ID# 268Y, PCGS# 8917

1856 Double Eagle, AU58
Appealing, Premium Quality Example

- 6764 1856 AU58 NGC.** Minimally marked for the grade, the design motifs are sharply struck and only display faint wear on the high points. Copper-gold in appearance, the technical quality of this coin is well above that of the typically encountered example. Census: 48 in 58, 17 finer (3/14).
Ex: Long Beach Signature (Heritage, 6/2006), lot 3690. NGC ID# 268Y, PCGS# 8917

1856-S Double Eagle, AU50
Flashy and Attractive

- 6765 1856-S AU50 NGC.** Sharply struck with much original mint luster still intact. The right obverse field has a noticeable scratch below Liberty's hair bun, but there are no other singularly mentionable abrasions. Perhaps recovered from the shipwreck of the S.S. *Central America*, but not identified as such on the NGC holder.
Ex: Long Beach Signature (Heritage, 9/2002), lot 8642. NGC ID# 2692, PCGS# 8919

1856-S Double Eagle, AU55
Lustrous Type One Representative

- 6766 1856-S AU55 NGC.** With the discovery of the S.S. *Central America*, availability of higher grade 1856-S double eagles dramatically increased, making the date a prime candidate for type purposes. This Choice About Uncirculated representative retains substantial mint luster beneath medium orange-gold patina overall. Only slight wear is seen over the high points, with few consequential surface abrasions. NGC ID# 2692, PCGS# 8919
- 6767 1856-S — Sea Salvaged — ANACS. AU58 Details.** The orange-gold surfaces of this early San Francisco double eagle exhibit the fine granularity associated with long-term saltwater immersion. Just a hint of friction is seen over the high points of the design, with minimal surface abrasions present. An intriguing Type One double eagle.
Ex: Dallas Signature (Heritage, 10/2006), lot 3174. NGC ID# 2692, PCGS# 8919

1857 Double Eagle, AU55
Clean, Attractive Example

- 6768 1857 AU55 NGC.** Jeff Garrett and Ron Guth describe this Philadelphia Mint issue as a “relatively readily available issue ... found in Very Fine or Extremely Fine condition without too much difficulty, and for not a large premium above melt value.” This situation changes in AU and Uncirculated grades, however, where this date becomes a formidable rarity; especially in mint condition. This Choice AU coin exhibits clean surfaces that show light greenish-gold color and only modest rub on the design's high points.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2693, PCGS# 8920

1857 Liberty Double Eagle, MS61
Vivid Color, Frosty Luster

- 6769 1857 MS61 NGC.** From a mintage of 439,375 pieces, the 1857 Liberty double eagle is an elusive issue in Mint State grades. Only two examples of this date were recovered from the wreck of the S.S. *Central America*, and 26 coins were salvaged from the S.S. *Republic*. This attractive MS61 example exhibits well-detailed design elements and vivid orange-gold surfaces, with a scattering of minor contact marks on both sides. Census: 13 in 61, 14 finer (3/14).
From The Charles G. Wright Family Collection. NGC ID# 2693, PCGS# 8920

1857 Double Eagle, MS62
Only Three Finer at NGC

- 6770 1857 MS62 NGC.** A coin with lovely eye appeal for the grade, this Mint State example exhibits strike doubling of most of the stars. Very few marks or grazes are present and they are minuscule. Hues of peach, yellow, and green-gold appear along with frosty luster. Census: 11 in 62, 3 finer (3/14). NGC ID# 2693, PCGS# 8920

1857-S Double Eagle, AU53
Attractive Example for Type Purposes

- 6771 1857-S AU53 NGC.** As a type coin, the 1857-S double eagle is now a viable selection, since the discovery of more than 5,000 examples aboard the shipwreck *S.S. Central America*. Many of those coins were found in mint condition, however, and uncirculated pieces are still much more costly than AU coins such as this one. A boldly struck piece with pale greenish-gold toning complemented by strong peach accents near the devices.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2696, PCGS# 8922

1857-S Liberty Head Double Eagle, AU55

- 6772 1857-S AU55 NGC.** Shades of yellow and orange are present on this Choice AU piece retaining mint luster in portions of the protected areas. The strike is pleasing. Although numerous marks are present as expected at this grade level, none is overly distracting.
Ex: Robert Post Collection (Heritage, 9/2002), lot 8653. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS61
Attractive, Pleasingly Toned Example

- 6773 1857-S MS61 NGC.** A lustrous, well-struck coin with shimmering mint luster and strong rose overtones that complement the lighter yellow-gold toning. Surface marks are minimal for the MS61 grade assessment. This may have been one of the 5,000+ examples extracted from the wreck of the *S.S. Central America*, but it is not designated as such on the NGC holder.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS62
Gorgeous Relic from the S.S. Central America

- 6774 1857-S MS62 NGC.** *Ex: S.S. Central America.* A well struck Double Eagle that is lustrous and clean for the grade. A couple of minor marks on Liberty's face and a reeding mark left of the mintmark pose minimal distraction, if any. There is a hint of tan patina above the final A in AMERICA, and a tiny speck of grease visits the lower curve of the 5 in the date. The 1857-S is one of the final issues in the series to have a recut Y in LIBERTY, which was finally corrected with a new hub in 1859.
Ex: Long Beach Signature (Heritage, 9/2002), lot 8654. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS63
Popular Treasure Date

- 6775 1857-S MS63 PCGS.** The issue made famous by the *S.S. Central America* treasure, although there is no indication of the provenance of this coin on the PCGS label. This frosty Select Mint State piece has rich orange-gold luster, tending toward greenish-orange on the rims. An attractive example. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS64
Ex: SS Central America

- 6776 1857-S MS64 PCGS.** *Ex: S.S. Central America. SSCA 3542. Spiked Shield.* This is an intensely frosty example from the hoard of 1857-S double eagles that were recovered from the wreck of the *S.S. Central America*. Fully struck with intermingled hues of peach, orange-gold, and mint-green, with splashes of reddish patina on the lower right of the obverse. The obverse also shows a few trivial marks while the reverse is clean. NGC ID# 2696, PCGS# 8922

1857-S Double Eagle, MS66
Ex: S.S. Central America

6777 1857-S MS66 NGC. Satin-smooth surfaces are brightly lustrous on this remarkable twenty. Only a few of the high-grade recovery coins display frosted fields and devices this nice. The coin is virtually unabraded and pristine, with the exception of a single short, reverse reeding mark above the Y in TWENTY. An outstanding full strike and exceptional, cartwheel luster account for the high numeric grade, which is exceeded by just four NGC examples and none by PCGS. While not every collector is enthralled with the idea of a shipwreck coin, it would be hard to remain unimpressed by this glittering, technically and visually appealing Premium Gem. Census: 28 in 66 (1 in 66 ★), 4 finer (3/14). NGC ID# 2696, PCGS# 8922

6778 1858-SXF45 NGC. Pockets of bright luster emerge from the caramel-gold and lime-green surfaces. Attractive despite a small reverse rim ding at 10:30 and a pair of moderate marks on the lower obverse. Ex: Long Beach Signature (Heritage, 9/2002), lot 8659. NGC ID# 2699, PCGS# 8925

1858-S Double Eagle, AU55
Nice Eye Appeal for the Issue

6779 1858-S AU55 NGC. The 1858-S twenty dollar saw heavy commercial use. Consequently, most seen are in circulated grades and heavily abraded. Yellow-gold and orange-gold converge on this Choice AU example that displays traces of luster in the recesses. Distributed marks are not as deep or distracting as ordinarily seen. Well struck with minor wear and solid eye appeal for the issue. A great example of this early San Francisco date. Ex: Houston Signature (Heritage, 11/2007), lot 61786. From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 2699, PCGS# 8925

1858-S Liberty Twenty, AU55
High Mintage, Low Survival

6780 1858-S AU55 NGC. Surviving examples of the 1858-S double eagle are easily obtained through the XF level, but become a challenge to obtain in AU grades or finer. Although 846,710 coins were struck, most experienced heavy circulation. This Choice AU specimen is a happy exception. Census: 201 in 55, 139 finer (3/14). NGC ID# 2699, PCGS# 8925

1859 Double Eagle, AU53
Low-Mintage Rarity

6781 1859 AU53 PCGS. This date saw the lowest business strike mintage of any Philadelphia Mint issue from the 1850s, at just 43,597 pieces. Not saved in any appreciable quantity by collectors, it is an absolutely and conditionally scarce date that becomes rare in Mint State. This is a sharply struck example which is somewhat heavily marked from obvious circulation. Both sides are prooflike, and the coloration ranges from deeper reddish-gold to lighter green-gold in the fields. Population: 13 in 53, 38 finer (3/14). From The Charles G. Wright Family Collection. NGC ID# 269A, PCGS# 8926

6782 1859-S XF45 NGC. Portions of the protected areas reveal lovely orange-peach color on this Choice XF example. Wear is evident on the high points of the design. Adding to the eye appeal, this pleasing example offers considerable luster for the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269C, PCGS# 8928

6783 1859-S AU50 NGC. FS-101. Although not designated as such on the holder, this lightly circulated piece is an example of the variety with the letters in LIBERTY exhibiting die doubling, with the spread increasing from left to right. Portions of the portrait also display doubling. Khaki-gold color appears on this lovely specimen.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269C, PCGS# 8928

**1859-S Double Eagle, MS61
Rare in Mint Condition**

6784 1859-S MS61 NGC. Examination of our Auction Archives indicates a high frequency of 1859-S double eagle appearances over the past twenty or so years. The vast majority of these grade from Very Fine to high-end About Uncirculated. Uncirculated pieces are another matter. Indeed, the Archives show that only about 30 of the few hundred 1859-S twenty dollar appearances grade Mint State. The present MS61 offering thus represents an infrequent opportunity to acquire this conditionally rare date. Attractive wheat- and peach-gold coloration with whispers of red graces both sides, each of which displays ample luster. A solid strike further enhances the coin's appeal. The scattered grade-determining marks are light and unobtrusive. A couple of minute milling marks in the field left of Liberty's nose and eye, and two or three in the field to the upper-right of the D. in the denomination will help to pedigree the coin. Census: 9 in 61, 6 finer (3/14).
*Ex: Chicago Central States Signature (Heritage, 4/2013), lot 4573.
From The Charles G. Wright Family Collection. NGC ID# 269C, PCGS# 8928*

**1860 Double Eagle, AU58
Underrated P-Mint Issue**

6785 1860 AU58 PCGS. This important date has a trace of wear on the high points, with nearly full luster. The surfaces show only a few inconsequential marks. The mintage was slightly more than 577,000 coins, and the average grade of survivors is 52. Here is an important opportunity for the specialist. NGC ID# 269D, PCGS# 8929

**1860 Double Eagle, AU58
Pleasing, Conditionally Scarce Example**

6786 1860 AU58 NGC. With a considerable amount of mint luster still remaining, this coin is pleasing for the grade with nice eye appeal. The bright yellow and green-gold surfaces exhibit a few shallow marks and trivial hairlines. This issue is difficult to locate in near-Mint condition, and very scarce in Mint State.
*Ex: Baltimore ANA Auction (Heritage, July-August/2008), lot 3270.
NGC ID# 269D, PCGS# 8929*

**1860 Double Eagle, AU58
Significant Mint Luster Remains**

6787 1860 AU58 NGC. CAC. Shades of orange, gold, and peach appear on this near-Mint specimen retaining an attractive degree of mint luster. Scattered marks are present, the more prominent of them appearing under portions of STATES. Only 52 examples have achieved higher numeric grades from NGC (3/14). NGC ID# 269D, PCGS# 8929

**1860-O Double Eagle, XF Details
Rare Low-Mintage Issue**

- 6788 1860-O — Tooled — PCGS Genuine. XF Details. Variety 1.** Examples of this low-mintage (only 6,600 pieces produced) New Orleans issue are rare in any condition. This example is well-struck and most of the original design details remain clearly evident. The green-gold surfaces display evidence of tooling, or smoothing, and have a somewhat muted appearance as a result.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269E, PCGS# 8930

- 6789 1860-S XF45 NGC.** The 1860 San Francisco double eagle experienced heavy circulation. The honey-gold surfaces of this Choice XF representative reveal light wear on the high points. The majority of the scattered marks are minor on this piece.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269F, PCGS# 8931

**1860-S Liberty Twenty, AU58
Lustrous Near-Mint Example**

- 6790 1860-S AU58 NGC.** The 1860-S Liberty twenty was produced in large numbers, but the issue was widely circulated at the time of issue and few coins were saved for numismatic purposes. This attractive near-Mint specimen offers well-detailed design elements and vibrant mint luster throughout. The bright yellow-gold surfaces show many grade-consistent minor contact marks on both sides. NGC has graded 21 numerically finer examples (3/14).
From The Charles G. Wright Family Collection. NGC ID# 269F, PCGS# 8931

**1860-S Liberty Twenty, AU58
Type One**

- 6791 1860-S AU58 PCGS.** Mint luster is essentially complete, and friction is generally limited to the eagle's wingtips, Liberty's eyebrow, and the occasional highpoint within the hair. Both sides are refreshingly smooth. The 8 is lightly repunched south. A small spot beneath the TE in STATES is mentioned for pedigree purposes. Population: 36 in 58, 30 finer (3/14). NGC ID# 269F, PCGS# 8931

- 6792 1861 VF35 ANACS.** A Choice lower-grade example with green-gold, old-time patina. Strong detail remains, with full radial lines in the obverse stars. A few minor surface nicks are noted on the obverse, as can be expected at this grade level.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

- 6793 1861 XF40 PCGS.** Small remnants of luster remain in the crevices, with otherwise green-gold patina overall. Strong detail is present and the fields are remarkably free of major nicks and scratches. Upper-end for the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

- 6794 (10) 1861 XF45 NGC.** All ten 1861 double eagles are individually housed in mid-generation small hologram NGC slabs, with a common numeric grade of XF45. The color mainly ranges from yellow to green-gold, with several coins displaying pale rose-gold accents. Moderate mint luster remains in the protected regions of most examples, while all pieces exhibit minor abrasions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. (Total: 10 coins) NGC ID# 269G, PCGS# 8932

- 6795 1861 AU50 ANACS.** Significant mint luster remains in the protected regions of this Type One double eagle, with only slight wear over the high points. The surfaces display only minor abrasions, though a small area of planchet lamination is noted in STATES on the reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

- 6796 1861 AU50 NGC.** Pleasing detail remains on this Type One representative. Deep yellow-gold blankets both sides, with hints of luster in the protected regions. Scattered abrasions are present, primarily on the obverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

- 6797 1861 AU50 NGC.** This Civil War type coin has lightly abraded and mildly subdued almond-gold surfaces. A trace of struck-in grease is near the nose. Luster is plentiful for the AU50 level, especially on the reverse.
Ex: Long Beach Signature (Heritage, 9/2002), lot 8669. NGC ID# 269G, PCGS# 8932

- 6798 1861 AU53 NGC.** Medium yellow-gold surfaces remain pleasingly lustrous on this About Uncirculated double eagle. Light, scattered abrasions are noted, but are not overly distracting.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

- 6799 1861 AU53 NGC.** Medium apricot-gold layers both sides of this Type One double eagle, with remnants of mint luster in the recessed areas. Numerous, scattered abrasions are present, particularly on the obverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

**1861 Type One Twenty, AU53
First Year of the Civil War**

- 6800 1861 AU53 PCGS.** Struck during the first year of the Civil War, the coins from this issue were struck with gold that included melted down Type I gold dollars. A lightly circulated survivor, this piece reveals shades of yellow-gold, peach, and green-gold. Scattered marks held this coin from a higher grade. NGC ID# 269G, PCGS# 8932

- 6801 1861 AU53 ANACS.** Significant mint luster remains beneath original orange-gold patina on this lightly circulated Type One representative. Scattered abrasions are present, though none are individually detracting.
Ex: Long Beach Signature (Heritage, 6/2002), lot 6901; Long Beach Signature (Heritage, 9/2002), lot 8670. NGC ID# 269G, PCGS# 8932

**1861 Double Eagle, Choice AU
Popular Civil War Date**

- 6802 1861 AU55 NGC.** Highly lustrous with original lemon-yellow coloration on both sides. Pleasing detail is present, though numerous obverse abrasions limit the eye appeal. Among the more available Type One issues.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269G, PCGS# 8932

**1861 Type One Twenty, AU55
High Mintage, Favorite for Type**

- 6803 1861 AU55 NGC.** A Philadelphia mintage of nearly 3 million pieces makes this one of the preferred dates for type collectors in all grades. Virtually all examples circulated, although some were exported and many were hoarded. This apricot-gold example retains much of its original mint luster. Light abrasions are too numerous for individual mention, but none are overly severe for the grade, and they are less obvious than those found on most Choice AU coins. Strong strike detail adds to the appeal. NGC ID# 269G, PCGS# 8932

**1861 Liberty Twenty, AU55
Popular Type One Issue**

- 6804 1861 AU55 NGC.** An excellent example of the plentiful date marking the beginning of the Civil War, with a production of almost 3 million coins. This Choice AU example has pale orange patina on the high points, with brilliant yellow surfaces, lacking anything beyond trivial marks. NGC ID# 269G, PCGS# 8932

**1861 Type One Twenty, AU55
Workhorse Date**

- 6805 1861 AU55 NGC.** Nearly 3 million coins were produced for this high-mintage double eagle, many of which entered commerce and provided much-needed hard money during the turbulent times. This example saw a relatively brief time in circulation before being set aside, perhaps in the personal hoard of a nervous citizen. Traces of prooflike surface remain around the stars and eagle. Abrasions on the yellow-gold surfaces are somewhat muted by wear and are less numerous than expected for the grade. NGC ID# 269G, PCGS# 8932

**1861 Double Eagle, AU58
Appealing Color and Luster**

- 6806 1861 AU58 PCGS.** Bright yellow-gold surfaces and flashy luster are among the attributes this near-Mint example possesses. As is generally the case at this grade level, numerous marks are present. However, aside from a few hair thin marks at the upper reverse, there are none worthy of individual mention. NGC ID# 269G, PCGS# 8932

**1861 Double Eagle, AU58
Lustrous, Attractive Example**

- 6807 1861 AU58 NGC.** *Ex: S.S. Republic.* A total of 459 Philadelphia Mint 1861 double eagles were recovered from the S.S. Republic, which was lost on October 25, 1865 off the coast of Georgia en route to New Orleans. The present coin is an attractive representative of the shipwreck find. Few abrasions are seen on the surfaces (as is typical for recovery coins from this vessel), and the coin remains lustrous with appealing, orange-gold surfaces and cartwheel flash. The bold strike shows little — if any — wear. NGC ID# 269G, PCGS# 8932

1861 Double Eagle, Patinated AU58

6808 1861 AU58 PCGS. The huge mintage approaching 3 million pieces is the largest for any 19th century double eagle. This along with the hoarding due to the uncertainty of the outcome of the Civil War accounts for the large number of mint condition specimens extant today. PCGS and NGC have graded more than 1,000 Uncirculated 1861 twenties, mostly through MS62 (3/14).

A medley of orange, violet, yellow-gold, and lavender patination runs over both sides of this near-Mint State example, each of which retains ample luster in the protected areas. The design features are well-struck, though not quite as sharp as the 1850 to 1858 issues (especially on Liberty's hair), resulting from the use of a new obverse hub beginning in 1859 (per Bowers, 2004). Minimally abraded surfaces contribute significantly to the eye appeal of this attractive coin. NGC ID# 269G, PCGS# 8932

1861 Type One Twenty, AU58
Minimally Abraded

6809 1861 AU58 NGC. Flashy luster remains on this near-Mint piece, particularly on the reverse. Attractive honey-gold color adds to the appeal. A die chip is present below the B in LIBERTY. The coin displays minimal abrasions for the grade. Due to a high mintage of almost 3 million coins, this issue is popular with type collectors. NGC ID# 269G, PCGS# 8932

6810 1861 — Obverse Improperly Cleaned — NGC Details. Unc. Careful rotation reveals delicate hairlines, mostly limited to the left obverse field. However, cartwheel luster is prominent and the reverse is well preserved. The cheek exhibits moderate marks. The butter-gold surfaces are well struck. NGC ID# 269G, PCGS# 8932

1861 Double Eagle, MS62
Lustrous, Excellent Type Coin

6811 1861 MS62 NGC. The hefty mintage of 2.9 million coins was the second-highest Philadelphia production for the Liberty Head double eagle series, exceeded only by the 1904 issue of 6.25 million pieces. This is a lustrous yellow-gold example with excellent strike definition and just a few wispy marks on the reverse that limit the grade. Census: 67 in 62, 49 finer (3/14).
From The Charles G. Wright Family Collection. NGC ID# 269G, PCGS# 8932

6812 1861-S XF40 NGC. Although this piece shows considerable evidence of circulation, traces of luster remain in the protected areas on the straw-gold surfaces. Handling marks are grade-consistent and inconsequential. NGC ID# 269K, PCGS# 8935

6813 1861-S XF45 NGC. Peach, yellow, orange, and khaki-gold shades add to the visual appeal of this Choice XF representative. Scattered marks near 12 o'clock on the obverse and on Liberty's cheek pose minor distraction.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269K, PCGS# 8935

1862-S Double Eagle, Well-Defined AU50
A Large-Mintage Issue

6814 1862-S AU50 PCGS. The 1862-S double eagle saw a large mintage exceeding 850,000 pieces, and is available from Very Fine through About Uncirculated condition. AUs were elusive until the recovery of nearly 200 pieces from shipwreck hoards. Uncirculated examples are rare with fewer than 60 specimens certified, the majority in MS60 to MS62. In this regard, the suspiciously high number of MS60 and MS61 coins in the NGC population may well be resubmissions (3/14).

The orange-gold surfaces of this AU offering displays ample luster in the protected areas. The design elements are fairly well-defined, showing just minor wear on the high points. Distributed small marks are visible over both sides. The lower reverse legends are lightly strike doubled.

Ex: Robert Post Collection (Heritage, 9/2002), lot 8675. NGC ID# 269N, PCGS# 8938

1862-S Double Eagle, AU50

- 6815 1862-S AU50 PCGS. CAC. This S-Mint double eagle is typical of most surviving examples, with myriad surface marks. However, there are no heavy bag marks or other blemishes. Hints of rose color reside in the protected areas with traces of luster on the greenish-gold surfaces. NGC ID# 269N, PCGS# 8938

1862-S Twenty Dollar, AU58
Bold Strike and Luster

- 6816 1862-S AU58 NGC. Ex: *S.S. Republic*. Aside from the shipwreck coins, few near-Mint examples of this San Francisco date are available to collectors. This lustrous example displays pale, yellow-gold color over satinlike, frosted surfaces. Few abrasions are seen, with the most noticeable one being a tiny mark in the obverse field near Liberty's mouth. Overall, this is a sharply struck and appealing representative of the 127 double eagles dated 1862-S that were recovered from the wreck. NGC ID# 269N, PCGS# 8938

1863-S Double Eagle, AU58
Surprisingly Scarce

- 6817 1863-S AU58 NGC. Numerous seawater survivors surfaced from the *S.S. Brother Jonathan* and *S.S. Republic*, yet this San Francisco date remains scarce in near-Mint and Uncirculated grades. This flax-gold example is brightly lustrous and sharply struck, and if it is a shipwreck coin the origin is not described on the NGC insert. Numerous abrasions dot the surfaces, although some are merely grazes of the frosted surfaces. One or two orange, copper-alloy spots are minor and do not distract. NGC ID# 269R, PCGS# 8940

1863-S Liberty Twenty, AU58
Lightly Circulated S-Mint Type One

- 6818 1863-S AU58 PCGS. CAC. Lustrous yellow-gold surfaces add to the visual appeal of this near-Mint representative. Hues of peach appear on the reverse. The high portions of the well-struck designs reveal light wear. A few tiny flecks of as-made struck-in grease are present on the obverse. Population: 61 in 58, 50 finer (3/14). NGC ID# 269R, PCGS# 8940

- 6819 1864-S XF40 NGC. A bright example with a minor reverse rim ding at 12 o'clock. The fields are typically abraded. Faint die clash marks (as struck) are noted near the ear and behind the portrait. Ex: *Long Beach Signature* (*Heritage*, 9/2002), lot 8681. NGC ID# 269T, PCGS# 8942

1864-S Twenty Dollar, AU55
Challenging Issue

- 6820 1864-S AU55 NGC. Bright overall with almost complete mint luster on the reverse, the surfaces of this Choice AU specimen display a couple of pale alloy spots on the lower obverse. Clash marks appear near Liberty's ear. A few of the contact marks pose a minor distraction when the coin is viewed closely. Ex: *Robert Post Collection* (*Heritage*, 9/2002), lot 8683. NGC ID# 269T, PCGS# 8942

1864-S Liberty Double Eagle, AU58
Scarce This Nice

- 6821 1864-S AU58 PCGS. Shipwreck finds from the *S.S. Brother Jonathan* and the *S.S. Republic* brought hundreds of relatively high grade examples of this San Francisco date on board with the grading services. Populations increased, yet natural-looking, amber-gold examples such as this near-Mint twenty remain the real jewels in the eyes of collectors. The small abrasions from coin-to-coin contact and minimal circulation are distributed over the surfaces, but none are overly numerous or of great concern. Exceptional luster remains. NGC ID# 269T, PCGS# 8942

1864-S Double Eagle, MS61
Important, Conditionally Rare Example

- 6822 1864-S MS61 PCGS.** Well struck and lustrous, with beautiful, albeit rather granular surfaces that have a distinctly matte-like texture, lovely pink and green-gold accents against a straw-gold background, and a few scattered, superficial blemishes. The overall appearance is somewhat suggestive of a shipwreck coin, though no such provenance has attached itself to the piece. Population: 20 in 61, 15 finer (3/14).
Ex: Central States Signature (Heritage, 5/2004), lot 9998; Orlando FUN Signature (Heritage, 1/2007), lot 6287.
From The Charles G. Wright Family Collection. NGC ID# 269T, PCGS# 8942

1865 Twenty, AU58
Sharp, Nearly Mint State

- 6823 1865 AU58 PCGS.** Very scarce in strict Uncirculated condition, this 1865 twenty is close to Mint State with most of the original mint luster still intact. Sharply defined, the surfaces are lightly abraded with the most obvious flaw being a milling mark in the upper left obverse field. Population: 27 in 58, 44 finer (3/14).
Ex: Long Beach Signature (Heritage, 9/2002), lot 8685. NGC ID# 269U, PCGS# 8943

- 6824 1865-S XF45 NGC.** Small S. This pleasing Choice XF 1865-S double eagle displays peach-gold patination with traces of slightly deeper reddish-gold in the rim areas. Residual luster is visible in the recessed areas, especially on the obverse. Well defined throughout.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 2021. NGC ID# 269V, PCGS# 8944

1865-S Double Eagle, Choice AU
Well-Preserved and Attractive

- 6825 1865-S AU55 NGC.** Small S. Rich, honey-gold color with olive-gold highlights prevail over the few small abrasions that are widely separated on smooth, frosted surfaces. A bit of orange-gold color covers the rims. An especially large quantity of this formerly-rare San Francisco date was salvaged from the *S.S. Brother Jonathan* and the *S.S. Republic* (most survivors were in a similar grade to this attractive coin). Whatever the origin, the natural look of this glowing, lustrous example is refreshing. NGC ID# 269V, PCGS# 8944

1865-S Liberty Twenty, AU55
Areas of Attractive Toning

- 6826 1865-S AU55 NGC.** A golden-brown Double Eagle that has unusual rainbow-style patina in pastel shades of green, yellow, pink, and red at the lower left obverse and more noticeably below TED in UNITED. Aside from a couple of tiny marks near Liberty's eye, none of the signs of contact are worthy of mention.
Ex: Robert Post Collection (Heritage, 9/2002), lot 8686. NGC ID# 269V, PCGS# 8944

1865-S Twenty, AU58
CAC-Approved for Quality and Appeal

- 6827 1865-S AU58 NGC. CAC.** *Ex: S.S. Central America.* Small S. With only a few tiny abrasions and lightly textured, satin surfaces that display soft luster, this San Francisco twenty was nearly new when it went down with the ship. More than a century beneath the waves did little to disturb its appeal or technical quality. Perhaps a touch of wear exists or perhaps not, with NGC assigning the near-Mint grade in part due to softness in the strike at stars 3 through 7. NGC ID# 269V, PCGS# 8944

1865-S Double Eagle, MS62
Lustrous Example From the S.S. *Republic*

- 6828** 1865-S MS62 NGC. Ex: S.S. *Republic*. Large S. The recovery of coins from sunken treasure ships has profoundly impacted the availability of several previously rare issues. One of those is the 1865-S double eagle, which had a combined total of around 750 examples salvaged from the S.S. *Brother Jonathan* and S.S. *Republic* shipwrecks. This is an intensely lustrous coin showing beautiful honey-gold toning and a radiant frosty sheen. Scattered superficial marks limit the grade. NGC ID# 269V, PCGS# 8944

1866-S No Motto Double Eagle, XF Details
From A Legendary Issue With Few Survivors

- 6829** 1866-S No Motto — Harshly Cleaned — NGC Details. XF. The extremely low survival rate of the 1866-S No Motto double eagle is a mystery among numismatists, but the population data from the two major grading services shows that only a tiny fraction of the estimated mintage of 120,000 coins still exist. Garrett and Guth speculate that fewer than 200 examples survive, most in low grades. This example has been improperly cleaned but still retains a fair degree of detail on the devices. Both sides of the piece show an even layer of deep champagne-tan coloration, with relatively few marks.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

1866-S No Motto Double Eagle, AU Details
Noted Rarity in the Series

- 6830** 1866-S No Motto — Harshly Cleaned — NGC Details. AU. In 1866, some of the double eagles minted in San Francisco had the newly-authorized motto IN GOD WE TRUST engraved above the eagle's head on the reverse, while most did not. Those without the motto were outnumbered 7 to 1 by those with the motto, and the No Motto coins are obviously much scarcer than their counterparts. In addition, the number of No Motto survivors is much lower-than-expected, based upon the mintage of 120,000 coins, causing this issue to be a legendary rarity among Liberty Head double eagles. This harshly cleaned example displays a good amount of remaining design detail, for an AU coin, and the surfaces only show a handful of noticeable abrasions, located on the lower right quadrant of the obverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 269W, PCGS# 8945

1866 Double Eagle, AU58
First-Year, Type Two Twenty

- 6831** 1866 AU58 NGC. The Philadelphia Mint ramped up production of double eagles in 1866, the first year for the With Motto design. Hub dies were not available with the Motto, so the letters were hand-punched into the dies resulting in rather interesting variations of alignment and Motto lettering. Nearly 700,000 business strikes were produced, but most went for export or were stored and then melted, with few saved by collectors. Uncirculated representatives of the date are rare, and near-Mint examples such as this coin are eagerly sought. Although lightly bagmarked and abraded, this twenty displays plentiful rich, golden luster and a bold strike. An attractive and above-average example. NGC ID# 269X, PCGS# 8949
- 6832** 1867-S XF40 PCGS. Small Squat S. A nicely defined double eagle with substantial luster in design crevices. The wheat-gold surfaces are bright and display no more than the expected number of small abrasions. NGC ID# 26A2, PCGS# 8952
- 6833** 1867-S XF45 NGC. Small squat S. The '67-S was struck after the S.S. *Brother Jonathan* and S.S. *Republic* shipwrecks, and as a result is nearly uncollectible in Mint State. Circulated pieces are available, however, and the present partly lustrous piece will satisfy the date and mint collector. Struck somewhat soft along the right borders, and Liberty's neck has a moderate mark.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 2023. NGC ID# 26A2, PCGS# 8952

6834 1867-S XF45 PCGS Secure. Small Squat S. A blended apple-green and butter-gold double eagle with good eye appeal due to its original color and unblemished surfaces. The curls exhibit light wear but luster dominates protected areas. NGC ID# 26A2, PCGS# 8952

6835 1867-S AU53 NGC. Warm orange-gold covers both sides of this early Type Two Liberty Head double eagle, with tinges of lustrous rose-gold in the protected areas. Good detail for the grade remains, delivering a pleasing level of eye appeal. Some circulation abrasions are present, but are not overly detracting. NGC ID# 26A2, PCGS# 8952

6836 1867-S AU53 NGC. Small Squat S. Lustrous rich yellow-gold color provides this lightly circulated example with a lovely degree of eye appeal. Although almost 1 million double eagles were minted in San Francisco in 1867 during the second year of production for the Type Two design, few have survived in Mint State grades, adding to the appeal of lightly circulated examples. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26A2, PCGS# 8952

1868-S Double Eagle, AU55 Attractive, Scarce Example

6837 1868-S AU55 NGC. Examples of this San Francisco issue are usually found in grades of VF or XF. AU coins are elusive, and Uncirculated pieces are rare. This Choice AU coin is softly struck on most of the obverse stars, and some of Liberty's hair curls are weak. The light, even coloration and glints of original mint luster provide pleasing eye appeal. NGC ID# 26A4, PCGS# 8954

1869-S Twenty Dollar, AU55 Conditionally Challenging Issue

6838 1869-S AU55 NGC. Although numerous examples of this San Francisco issue are available in Very Fine and Extremely Fine condition, Uncirculated coins are rare, making this AU55 grade a collectible choice for the collector seeking the best quality without spending a small fortune. The design motifs are softly struck, and small marks are found on both sides. Vibrant peach accents complement the light khaki-green coloration. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26A6, PCGS# 8956

6839 1870-S AU55 NGC. A trace of wear appears on the high points of this wheat-gold twenty, with minor handling marks on each side. The surfaces are reflective with traces of rose toning in the protected areas. NGC ID# 26A9, PCGS# 8959

6840 1870-S AU55 ANACS. Nearly full luster appears on both sides of this splendid light yellow-gold example, with scattered marks that are expected for the grade. A high mintage of nearly 1 million coins was adequate for commerce, but insufficient to yield high-grade survivors today.

Ex: Pre-ANA Elite Auction (Superior, 7/2008), lot 523. NGC ID# 26A9, PCGS# 8959

1872-CC Double Eagle, VF35 Well-Defined for Grade

6841 1872-CC VF35 NGC. Variety 1-B. Wide mintmark, attributed by the first C far left over the upper diagonal of the N in TWENTY. Both sides of this Choice VF twenty dollar CC-mint specimen display good definition despite high-point wear. The most notable contact mark occurs between star 5 and Liberty's forehead. That said, this piece is relatively clean for a moderately circulated coin. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AE, PCGS# 8964

1872-CC Double Eagle, Minimally Abraded XF40

6842 1872-CC XF40 NGC. Variety 1-A. Attributed by the 2 in the date close to the denticles and the narrow CC mintmark. The 1872-CC twenty dollar is available through Extremely Fine. It becomes scarce in About Uncirculated and is very rare in Uncirculated. Reddish-gold hues embrace this XF example and the design elements are appropriately defined. The light marks seen are fewer than expected for a large gold coin that has seen some circulation, and are nowhere as numerous and deep that are typically encountered on this date. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AE, PCGS# 8964

1872-CC Double Eagle, AU Details

- 6843** 1872-CC — Polished, Rim Filing — NGC Details. AU. From a mintage of 26,900 pieces, the 1872-CC double eagle is scarce but available. Mint State examples are rare, but pieces grading between XF and AU are relatively numerous. This example is well-struck, and plenty of the original detail remains evident on both sides. Unfortunately the coin has been polished and the rims lightly filed, but this should not prevent it from finding a satisfied buyer. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

1872-CC Twenty Dollar, AU50 Low-Mintage, Third-Year Carson City Issue

- 6844** 1872-CC AU50 NGC. Variety 1-A. Narrow CC, the usually seen mintmark variant. This low-mintage issue from the third year of the celebrated Carson City Mint, was struck to the extent of a meager 26,900 pieces. Most examples are well-circulated. This piece is a bit above the norm, still showing much luster remaining despite 10 points of wear on yellow-gold surfaces. Scattered, extensive marks that appear under a loupe are nonetheless undistracting, and much eye appeal is present. NGC ID# 26AE, PCGS# 8964

1872-CC Double Eagle, AU Details Sought-After Carson City Issue

- 6845** 1872-CC — Improperly Cleaned — NCS. AU Details. Variety 1-B. The scarce Wide CC variety. As a date, the 1872-CC double eagle is a respected rarity in Mint State, and scarcely seen About Uncirculated examples are actively sought. This example displays nearly complete detail and a lack of noticeable surface abrasions. NCS notes old cleaning, though the overall appearance remains pleasing. *Ex: Long Beach Signature (Heritage, 6/2006), lot 3720.* NGC ID# 26AE, PCGS# 8964

- 6846** 1873 Open 3 MS61 NGC. Myriad marks on each side of this lustrous double eagle prevent a higher grade. This large gold piece is sharply detailed with brilliant lemon-yellow surfaces. NGC ID# 26AH, PCGS# 8967

1873 Liberty Head Twenty, MS63 Open 3, Seldom Available Finer

- 6847** 1873 Open 3 MS63 PCGS. The 1873 Open 3 Liberty Head double eagle was produced in large numbers, but few high-grade pieces have survived. The issue is scarce in MS63, and PCGS has certified only 10 coins in higher numeric grades (2/14). The present coin displays a little softness on the central design elements, but the peripheral devices are sharply detailed. The pleasing, rose-gold surfaces exhibit subtle frosty mint luster. *Ex: Long Beach Signature (Heritage, 2/2011), lot 4629, where it realized \$9,200.00.* NGC ID# 26AH, PCGS# 8967

1873-CC Twenty Dollar, AU Details A Pleasing Overall Example

- 6848** 1873-CC — Obverse Scratched — NGC Details. AU. This Carson City issue is of comparable rarity to its immediate counterpart from 1872, which had a similar mintage. Both issues are scarce but occasionally available, even if prohibitive in mint condition. This example has a pleasing overall appearance that is only marred by a pair of deep scratches on the lower right side of the obverse. It is boldly struck and displays small marks and modest high-point wear typical for an AU coin. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

1873-S Closed 3 Double Eagle, MS61 Rare Any Finer

- 6849** 1873-S Closed 3 MS61 PCGS. The 1873-S Closed 3 double eagle, from a combined mintage with the Open 3 exceeding 1 million pieces, is readily available in circulated grades. Mint State examples can be found through MS61 with a bit of searching, but higher-grade examples are rare. The design elements are generally well-struck and the luster flow of this MS61 coin is interrupted by scattered marks. PCGS has seen only 20 examples finer (3/14). NGC ID# 26AL, PCGS# 8969

6850 1874 MS60 NGC. The luster is particularly appealing on this reverse of this Mint State example displaying rich honey-gold color. A number of scattered abrasions are present, though none are worthy of individual mention. The right reverse reveals areas of residue. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AN, PCGS# 8970

6851 1874-CC — Improperly Cleaned — NGC Details. XF. Variety 4-A. This Carson City Type Two twenty is subdued by a relatively mild cleaning, but the marks are unimportant for the XF level. Glimpses of orange-tinged luster are particularly plentiful on the reverse. *Ex: Milwaukee Central States Signature (Heritage, 4/2010), lot 3911.* NGC ID# 26AP, PCGS# 8971

**1874-CC Double Eagle, XF40
Well-Defined for Grade**

6852 1874-CC XF40 NGC. Variety 3-A. Traces of luster reside in the protected areas of this Extremely Fine CC-mint representative, and a good amount of design definition remains despite high-point wear, though portions of the reverse shield are weak. This piece reveals fewer and less severe marks than ordinarily seen on surviving examples of this date. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AP, PCGS# 8971

**1874-CC Twenty Dollar, XF45
Nice for the Grade and Date**

6853 1874-CC XF45 NGC. Variety 3-A. Attributed by the 1 and 7 in the date centered over a dentil, the 4 between dentils, and a die chip right of Liberty's eye. The yellow-gold surfaces of this Choice XF example are clean for a large, heavy gold coin that saw light to moderate circulation. Most are heavily abraded from having circulated extensively in the channels of commerce. Nice for the grade and date. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AP, PCGS# 8971

**1874-CC Twenty, AU50
Nice Remaining Luster**

6854 1874-CC AU50 PCGS. Variety 1-A This issue was heavily circulated in the West, often with rough handling during storage and distribution. As a result, most examples are bagmarked and abraded. This moderately marked twenty shows a combination of wear and soft striking at the centers, but the abrasions are less numerous than often seen. Apricot-gold surfaces display orange-gold shading around the devices with a nice amount of retained mint luster. NGC ID# 26AP, PCGS# 8971

**1874-CC Double Eagle, AU53
Rare in Mint Condition**

6855 1874-CC AU53 NGC. Variety 2-A. The 1874-CC double eagle, coming from a relatively high mintage exceeding 115,000 pieces, has become readily available through About Uncirculated due to hoards that have surfaced in European and South American holdings over the past few decades. However, Uncirculated pieces remain very rare. All obverse star centers are strong on this AU53 example, atypical for this date in which most stars are weak. Portions of Liberty's hair are weak as usually seen. Both sides reveal fewer marks than typically seen on this issue. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AP, PCGS# 8971

**1874-CC Twenty, AU53
Outstanding Luster Remains**

6856 1874-CC AU53 PCGS. Attractive AU coins are the mainstay of many Carson City gold collectors, with Uncirculated examples quite challenging from both an availability and price perspective. This lightly abraded example is sharp with no major scrapes or bagmarks, but it is especially notable for the brilliant, marigold color and the surprising amount of vivid mint luster that remains. Somehow uncompromised by wear, this twenty is a gleaming, attractive example with outstanding visual impact. NGC ID# 26AP, PCGS# 8971

1874-CC Double Eagle, AU55
A Minimally Abraded, In-Demand Piece

- 6857 1874-CC AU55 NGC. Variety 1-A.** This variety is attributed by a die lump at the center-top of Liberty's neck near the jaw. The pumpkin-gold surfaces of this Choice AU twenty display mint luster in the protected areas. The star centrils are relatively strong, but the hair around Liberty's ear is somewhat flat as usually seen. Some light marks are scattered about, but both sides lack the numerous deep abrasions that plague this issue. Consequently, "any reasonably clean 1874-CC double eagle has a strong level of demand among collectors" (Douglas Winter, 2001).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AP, PCGS# 8971

1874-CC Double Eagle, MS60 Details
Semiprooflike Fields

- 6858 1874-CC — Cleaned — ANACS. MS60 Details. Variety 3-A.** As a date, the 1874-CC double eagle is among the more available issues from this mint, as large numbers of circulated pieces have surfaced in recent years from South American and European sources. In Mint State, however, the date remains rare and eagerly sought by specialists. This example is unworn and boldly struck, with medium orange-gold patina over both sides. ANACS notes signs of old cleaning, though close examination is needed to detect it. Semiprooflike mirroring in the fields gives this piece exceptional visual appeal. NGC ID# 26AP, PCGS# 8971

- 6859 1874-S AU58 PCGS. CAC.** Block S. Most Mint State survivors of the 1874-S double eagle are heavily bagmarked, making high-end AUs an attractive alternative. This example displays substantial mint luster beneath original orange-gold coloration. Only light friction is seen over the high points of the design, and the surfaces are free of any outwardly detracting abrasions. NGC ID# 26AR, PCGS# 8972

1874-S Twenty Dollar, Lustrous MS61

- 6860 1874-S MS61 PCGS.** The 1874-S double eagle can be located with minimal difficulty through MS61. MS62 pieces become scarce and only seven Select coins are known, none finer (3/14). Both sides of this MS61 example retain considerable luster but also reveal distributed marks. The design elements are for the most part well-impressed. NGC ID# 26AR, PCGS# 8972

1874-S Double Eagle, MS61
Rich Patina

- 6861 1874-S MS61 PCGS. CAC.** Despite a mintage in excess of 1.2 million coins, the 1874-S double eagle is scarcely encountered finer than MS61, and is prohibitively rare beyond MS62. This highly lustrous example exhibits vibrant orange-gold coloration over both sides, with well-struck design elements. Moderate surface abrasions define the grade, but they are uniform and not overly detracting. NGC ID# 26AR, PCGS# 8972

- 6862 1875 MS61 NGC.** The 1875 Type Two double eagle is the only readily collectible gold issue of the year from the Philadelphia Mint due to the extremely limited production of the other denominations. Lemon-gold surfaces and lovely luster provide this piece with nice eye appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AS, PCGS# 8973

1875 Twenty Dollar, MS62
Popular Type Issue

- 6863 1875 MS62 PCGS.** Well-struck and lustrous, the eye appeal of this example is further improved by pleasing light honey-gold, rose, and mint-green toning. Scattered surface marks on the obverse are superficial, and the reverse shows even fewer disturbances. A popular issue for type purposes, and the only Philadelphia Mint denomination from 1875 that is readily available to collectors. NGC ID# 26AS, PCGS# 8973

- 6864 1875-CC VF30 NGC. Variety 5-A.** Among the diagnostics for this variety is a die line above the E in AMERICA. Retaining lovely visual appeal, this circulated example displays pleasing yellow-gold color. None of the scattered marks is worthy of individual mention. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AT, PCGS# 8974

**1875-CC Twenty, XF40
High-End and Lustrous**

- 6865 1875-CC XF40 PCGS. CAC. Variety 3-B,** 1 close to dentil, diagonal die line just beneath left serif of 1, right edge of second C in mintmark is aligned with left edge of top-left serif of T(WENTY). This XF40 PCGS example is certified in an old green-label holder and certainly appears high-end for the assigned grade. Light field chatter rather than mentionable marks — save for a small patch near the forward bust truncation on the obverse, and another right of the shield ornament on the reverse — appear on lustrous, glowing golden surfaces. NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, Minimally Abraded XF45

- 6866 1875-CC XF45 NGC. Variety 6-B.** This variety has the right edge of the second C aligned with the left edge of the T in TWENTY, and the date is centered with the base of the 7 above the space between two dentils and the 5 distant from the dentils. The design elements are appropriately defined except for weakness in the upper part of the shield. Minimally abraded for the grade and issue, though some dark spots are visible on the lower obverse rim. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, Lightly Marked AU55

- 6867 1875-CC AU55 NGC. Variety 4-A.** Attributed by the 1 in the date centered over a dentil and the base of the 7 between dentils, and a die line from the rim to the top-middle of the E in AMERICA. The 1875-CC is readily available in circulated condition and lower Mint State, scarce in MS62 and rare any finer. This lightly marked AU55 displays luster in the protected areas and is generally well-defined. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AT, PCGS# 8974

**1875-CC Double Eagle, AU55
Excellent Carson City Type Coin**

- 6868 1875-CC AU55 NGC. Variety 2-B.** The 1875-CC is arguably the most easily obtainable With Motto double eagle from the Carson City facility, ideal for the collector seeking a single type representative from this mint. This piece displays pale green-gold color overall, with tiny rose accents in the protected regions. Only slight wear keeps this well-preserved coin from full Mint State status, while the eye appeal is pleasing. NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, Remarkably Clean AU58

- 6869 1875-CC AU58 NGC. Variety 7-A.** This variety is attributed by the 1 in the date centered between dentils and a die chip on Liberty's neck to the lower left of the second curl from the bottom. The 1875-CC is the most common issue from the Carson City Mint. It is easily located in circulated grades and can be obtained in lower Mint State with little effort. The yellow- and reddish-gold surfaces of this near-Mint State specimen exhibit ample luster and well-struck design elements. Both sides are remarkably clean for a heavy gold coin that saw some circulation and for the date that typically shows numerous abrasions. Nice technical quality and aesthetic appeal. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AT, PCGS# 8974

**1875-CC Twenty, AU58
Pleasing, Close to Mint State**

- 6870 1875-CC AU58 PCGS. Variety 1-B.** Pleasing for the AU58 grade, since mint luster is essentially complete on the reverse, and also penetrates the obverse field. A whisper of friction on Liberty's eyebrow denies an Uncirculated grade, but the eye appeal is significant, due to the absence of heavy marks. *Ex: Denver A.N.A. Signature (Heritage, 8/2006), lot 2174.* NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, AU58
A Popular Type Coin

- 6871 1875-CC AU58 PCGS. Variety 4-C.** A rare mintmark location for the issue, with about half of the second C located over the T in TWENTY. The 1875-CC double eagle is the most common Liberty Head With Motto issue from the Carson City Mint and readily available in all grades from Very Fine through lower Mint State levels. The two major grading services have certified just 52 Select pieces, with a near-Gem being the finest at each (3/14).

Variegated yellow-gold, lavender, orange-gold patina resides on both side that display traces of luster in the recessed areas. The design elements are relatively well-defined and neither side reveals more marks than would ordinarily be seen on a large, heavy gold coin that has experienced brief circulation. An excellent choice for a type collection. NGC ID# 26AT, PCGS# 8974

1875-CC Liberty Head Twenty, AU58
Nice Original Appeal

- 6872 1875-CC AU58 NGC. CAC. Variety 4-B.** A die line within the R of LIBERTY confirms the 4-B die pair. The most available of all CC twenties, this Type Three example is an upgrade for most circulated date sets and a perceptive acquisition for type, too. Lustrous, brassy-gold surfaces have a natural look consistent with a piece that saw brief circulation. A bit of high-point wear does not impair the bold strike of this near-Mint twenty. NGC ID# 26AT, PCGS# 8974

1875-CC Double Eagle, Unc Details

- 6873 1875-CC — Scratched — NGC Details. Unc. Variety 7-A.** An attractive and frosty representative of this Carson City double eagle issue, despite several noticeable scratches in the left obverse field. A sharp strike brings up the devices to essentially full status, and honey-gold and slight greenish undertones in the fields are seen on both sides.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

- 6874 1875-S MS61 PCGS.** Butter-gold color and attractive luster are among the attributes this Mint State example possesses. Though not fully struck, the level of design detail is nice. A tiny die chip appears on the bridge of Liberty's nose while a larger one is present on her forehead. Scattered marks pose limited distraction, if any. NGC ID# 26AU, PCGS# 8975

- 6875 1875-S MS61 NGC.** Splendid for the designated grade, since the mint luster is comprehensive and there are no distracting marks. A shallow strike-through is noted beside obverse star 3.
Ex: Dallas Signature (Heritage, 11/2007), lot 2324. NGC ID# 26AU, PCGS# 8975

1875-S Double Eagle, Lustrous MS62

- 6876 1875-S MS62 PCGS.** The 1875-S twenty dollar can be located in Mint State, especially MS61 and MS62. Higher-grade pieces, primarily Select and near-Gem, are extremely rare. The lustrous, apricot-gold surfaces of this MS62 example are well-impressed. Scattered marks and scuffs determine the grade. Housed in a prior generation holder. NGC ID# 26AU, PCGS# 8975

1876 Twenty Dollar, MS61
Lustrous Centennial-Date Issue

- 6877 1876 MS61 PCGS. CAC.** Save for a trio of marks on Liberty's cheek and one gash in the right reverse field to the right of the shield ornament, the remaining signs of contact are extensive but fairly light, consistent with the MS61 grade of this Centennial-date twenty. Much luster proceeds from each side. A popular date and a nice-looking coin for the grade. NGC ID# 26AV, PCGS# 8976

**1876 Liberty Head Twenty, MS62+
Reflective Surfaces, Frosted Motifs**

6878 1876 MS62+ PCGS. CAC. Heavy Motto. As the final-year mintage of the Type Two double eagles, this Philadelphia issue is generally available in lower Mint State grades but scarce in Select Uncirculated or finer condition. The present example is close to the next highest grade, with attractive, prooflike reflectivity surrounding the frosted devices and radiant mint luster across appealing, orange-gold surfaces. Boldly struck, the coin shows only light abrasions on the lustrous fields. NGC ID# 26AV, PCGS# 8976

6879 1876-CC VF25 NGC. Variety 1-A. A seldom encountered lower-grade representative of this Carson City double eagle. Green-gold coloration covers evenly distributed wear on both sides, while the smooth surfaces exhibit a refreshing lack of significant abrasions. A pleasing example for the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AW, PCGS# 8977

**1876-CC Double Eagle, XF45
Well-Detailed**

6880 1876-CC XF45 NGC. Variety 6-A. Among the more available dates from this mint, the 1876-CC double eagle is ideal for collectors seeking a single type representative from the Nevada facility. This lightly circulated example displays medium yellow-gold patina with remnants of mint luster in the recesses around the borders. Strong detail remains on the central devices, and the surfaces are free of any outwardly detracting abrasions. NGC ID# 26AW, PCGS# 8977

6881 1876-CC — Improperly Cleaned — NGC Details. AU. Variety 5-A. Very lightly cleaned, with substantial original luster remaining in the protected areas. Deep green-gold patina covers both sides, with good detail remaining on the design elements.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AW, PCGS# 8977

**1876-CC Double Eagle, AU50
High-Mintage Centennial Issue**

6882 1876-CC AU50 NGC. Variety 3-A. Green-gold and orange-peach surfaces provide this lightly circulated example with a nice appearance. This is a representative of the variety with a "worm" in Liberty's hair. Areas of minor dirt attest to the originality of this piece.
Ex: Robert Post Collection (Heritage, 9/2002), lot 8757. NGC ID# 26AW, PCGS# 8977

1876-CC Double Eagle, Minimally Abraded AU53

6883 1876-CC AU53 NGC. Variety 2-C. This variety is attributed by the CC mintmark centered over the right upright of the N in TWENTY, and a die lump in Liberty's hair over the R in LIBERTY. The 1876-CC has the highest mintage figure (138,441 pieces) of any double eagle from the Carson City Mint. It is readily available in circulated grades and can be located through MS61 with little effort. The honey-gold surfaces of this AU53 example display luster in the protected areas and relatively well-struck devices, including all star centers, elements that are often weak. The obverse shows more marks than the reverse, but these are fewer and less serious than typically seen on this heavily abraded issue.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26AW, PCGS# 8977

**1876-CC Double Eagle, AU55
Variety 5-B**

6884 1876-CC AU55 NGC. Variety 5-B. Six obverse dies and four reverse dies are identified in nine variety combinations, used to coin 138,441 double eagles in 1876. This Choice AU example has the usual beveled rims, with pleasing mustard-yellow surfaces and light marks of no consequence. NGC ID# 26AW, PCGS# 8977

1876-CC Double Eagle, AU55
Minimally Marked and Spot-Free

- 6885** 1876-CC AU55 NGC. **Variety 4-A.** A die crack travels through the NTY of TWENTY. The 1876-CC double eagle is a relatively obtainable issue due to large numbers having made their way back to America from European and South American holdings during the past few decades. This Choice AU offering exhibits better design detail than often seen, especially on the star centrils and the eagle's plumage. Both sides are only lightly marked and are free of the copper spots and dark smudges often seen on this date. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AW, PCGS# 8977

1876-CC Double Eagle, AU58
Attractive, Clean Representative

- 6886** 1876-CC AU58 NGC. **Variety 5-B.** There is much to commend this coin to astute collectors. First, the surfaces are remarkably clean for a circulated Carson City double eagle, remarkably so on this issue that is usually found heavily bagmarked. Second, the lovely, brilliant honey-gold surfaces are nearly prooflike. Third, the strike, generally well executed on this issue, leaves little to be desired. The combination of smooth surfaces and near-prooflikeness should prove appealing to advanced collectors of this popular series. *Ex: Denver A.N.A. Signature (Heritage, 8/2006), lot 2178.* NGC ID# 26AW, PCGS# 8977

1876-CC Twenty, AU58
Centennial Carson City Strike

- 6887** 1876-CC AU58 NGC. **CAC. Variety 1-A.** The Carson City Mint struck a large quantity of the 1876-CC double eagles not because it was America's Centennial year, but because it was the heyday of Nevada's Comstock Lode, bursting with gold as well as silver. Nonetheless, the dual popularity persists. Much reflective luster remains on orange-gold surfaces under light field chatter and smoke-gray haze on this attractive coin. NGC ID# 26AW, PCGS# 8977

-
- 6888** 1876-S MS61 PCGS. Scattered grade-consistent marks appear on each side of this rich orange-gold double eagle, with faint traces of peripheral blue toning. An important S-Mint type issue. NGC ID# 26AX, PCGS# 8978

1876-S Twenty, MS62
Popular Type Issue

- 6889** 1876-S MS62 NGC. This issue has a high mintage of nearly 1.6 million pieces, making it a popular item among Type Two double eagles in Mint State. This piece is softly struck on Liberty's curls, as always, but the other design elements are crisply produced. Intense satiny mint luster and lighter yellow-gold toning improve the eye appeal of this mildly marked example. NGC ID# 26AX, PCGS# 8978

1876-S Double Eagle, A Pleasing MS62

- 6890** 1876-S MS62 NGC. **CAC.** This is the last year of the Type Two double eagle. The 1876-S entered overseas trade and has been returning to America over the last few decades. Most surviving examples grade no finer than MS62. Select pieces are scarce, and examples are rare any finer. The present offering is a well-struck, lustrous coin that perhaps has fewer marks than what might be expected for the designated grade. Really a nice MS62, aptly recognized by CAC. NGC ID# 26AX, PCGS# 8978

- 6891 1877 MS61 NGC.** Flashy luster, particularly on the reverse, along with deep honey-gold color, provides this Mint State example with strong visual appeal. As expected at this grade level, a number of scattered marks are present though they are not overly distracting. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AY, PCGS# 8982

**1877-CC Double Eagle, XF45
Well-Defined for the Grade**

- 6892 1877-CC XF45 NGC. Variety 1-A.** The following attribute the variety: horizontal clashmarks from the reverse shield above Liberty's earlobe, the second C in the mintmark higher than the first C, die line from star 10 to rim, die lines after S in DOLLARS, and a die line from rim to the upper-right serif of E in AMERICA. The orange-gold surfaces of this Choice XF twenty exhibit strong definition for the grade. Scattered light marks do not detract. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AZ, PCGS# 8983

**1877-CC Twenty Dollar, XF45
Pleasing Type Three Example**

- 6893 1877-CC XF45 ANACS. Variety 3-D.** The variety is recognized by the first C in the mintmark being placed higher than the second. An attractive, evenly worn example of this Carson City double eagle issue, the first of the Type Three design with TWENTY DOLLARS spelled out on the reverse. This piece displays light coloration and relatively few abrasions for a circulated gold coin. NGC ID# 26AZ, PCGS# 8983
- 6894 1877-CC — Improperly Cleaned — NGC Details. AU. Variety 1-B.** Only slight friction is seen over the high points of the devices. The surfaces are only lightly cleaned, with a pleasing peach-green patina covering both sides. A few medium-sized abrasions are noted on Liberty's cheek and the field in front of her eyes. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AZ, PCGS# 8983

**1877-CC Double Eagle, Well-Defined AU53
First Year of the Type Three Design**

- 6895 1877-CC AU53 NGC. Variety 3-A.** The second C is higher than the first and die lines from obverse star 3 and the E in AMERICA confirm the variety. This is the first issue of the Type Three design (DOLLARS spelled out) struck at the Carson City Mint. Examples can be located through AU but become much more difficult in Mint State. Type Three coins are generally better struck than Type Two pieces, particularly on Liberty's hair detail. The present AU53 specimen reflects this, even after discounting for high-point wear. The obverse is lightly marked, but still a far cry from the heavy, deep abrasions that usually characterize this date. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26AZ, PCGS# 8983

**1877-CC Double Eagle, AU55
Pleasing, High-End Example**

- 6896 1877-CC AU55 ANACS. Variety 2-C.** This issue, the first Type Three double eagle emission from the Carson City Mint, had a low mintage of 42,565 pieces. It is widely pursued as a type coin by collectors. This coin has an unusually high degree of eye appeal for a Choice AU example, with deep orange-gold toning and smooth, lightly-marked surfaces. NGC ID# 26AZ, PCGS# 8983
- 6897 1877-S MS61 NGC.** First year of the Type Three Liberty double eagle design with the denomination spelled in full as TWENTY DOLLARS. This S-Mint twenty has the usual grade-consistent surface marks on its brilliant and lustrous yellow-gold surfaces. NGC ID# 26B2, PCGS# 8984
- 6898 1878 MS61 PCGS.** This early Type Three double eagle displays flashy, lightly frosted yellow-gold luster, with tinges of pale rose-gold in the protected regions. The strike is razor-sharp with all obverse stars fully defined. Several deeper abrasions on the obverse contribute to the grade, but still leave this piece with a pleasing appearance. NGC ID# 26B3, PCGS# 8985

**1878 Double Eagle, MS62
Early Type Three Issue**

6899 1878 MS62 PCGS. CAC. Several shades of color appear on this example, including green-gold and peach, and the reverse is particularly lustrous. Alloy spots are present, including near the eagle's head. The obverse reveals die lines at Liberty's forehead. Scattered marks held this attractive piece from a higher grade. Only 44 examples have achieved grades of MS63 or above from PCGS (3/14). NGC ID# 26B3, PCGS# 8985

6900 1878-CC — Improperly Cleaned — NGC Details. VF. Variety 2-B. Lightly cleaned long ago, this mid-grade circulated example has since acquired a pleasing honey-orange patina. Significant detail remains in the devices and the surfaces are largely smooth, with just a few non-obtrusive abrasions in the obverse fields. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B4, PCGS# 8986*

6901 1878-CC — Harshly Cleaned — NGC Details. XF. Variety 1-A. A low-mintage issue with barely more than 13,000 pieces struck. The present survivor exhibits signs of old cleaning, but has reacquired a pleasing green-gold patina. Slight wear is present over the high points, though most details are well-defined. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B4, PCGS# 8986*

**1878-CC Double Eagle, XF45
Scarce Carson City Issue**

6902 1878-CC XF45 NGC. Variety 1-A. A near-vertical die scratch on Liberty's neck near the curls and two die lumps to the right of the T in LIBERTY confirm the variety. The 1878-CC is among the scarcest Carson City double eagles, and is most often seen in Extremely Fine condition. This Choice XF specimen displays strong design detail, save for ERTY that is weakly struck on the majority of survivors. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B4, PCGS# 8986*

**1878-CC Double Eagle, AU Details
Scarcer Variety 2-B, Narrow CC**

6903 1878-CC — Tooled — PCGS Genuine. AU Details. Variety 2-B. The much scarcer Narrow CC variety. This bright yellow-gold example is sharply struck, with prooflike fields and a few minor abrasions, including one in the right obverse field below Liberty's hairbun. This Carson City issue had a low mintage of 13,180 pieces, and most of those coins were heavily circulated in the West. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B4, PCGS# 8986*

6904 1878-S MS61 NGC. Deep honey-gold color and lustrous surfaces are present on this Mint State representative. A few marks, including one on Liberty's cheek, pose minor distraction. The number of certified examples drops significantly above the MS61 level. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B5, PCGS# 8987*

6905 1878-S MS61 PCGS. Shimmering yellow-gold surfaces provide this Mint State example with a nice overall appearance. The tip of the bust reveals splashes of blue and violet toning. Although the mintage consisted of 1,739,000 coins, there are relatively few survivors in Mint State, adding to the appeal of this piece. As expected at this grade level, a number of marks and abrasions are present. NGC ID# 26B5, PCGS# 8987

**1879-CC Double Eagle, AU Details
Low-Mintage Issue**

6906 1879-CC — Tooled, Whizzed, Cleaned — ANACS. AU Details, Net VF30. Variety 1-A. With a low mintage of little more than 10,000 coins, the 1879-CC double eagle is scarce in all grades and prohibitively rare in Mint State condition. This example exhibits unnatural luster, but retains sharp overall detail. Whizzing has erased most of the surface abrasions of years past, while light cleaning gives the piece a uniform appearance. Fine tool marks are seen on the reverse, an effort to remove several abrasions in the fields. A still-pleasing example of this sought-after issue. NGC ID# 26B7, PCGS# 8989

1879-CC Double Eagle, XF40
Scarce Carson City Date

- 6907** 1879-CC XF40 NGC. *Variety 1-A*. Many of the postmint abrasions are softened by 20 points of wear on this scarce Carson City issue, resulting in lightly abraded surfaces but no individually significant marks. The low mintage of just 10,708 pieces guarantees ongoing scarcity of the issue, although occasional examples continue to surface from time to time. This apricot-gold twenty retains its appeal despite moderate wear. The margins display a bit of mint luster while the rims remain strong and unmarked. A nice example of the grade.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B7, PCGS# 8989

1879-CC Double Eagle, XF40
Full Tail Feathers

- 6908** 1879-CC XF40 PCGS. *CAC. Variety 1-A*. Struck from an early state of the dies, without any loss of detail from die lapping on the eagle's tailfeathers. An olive-gold patina with orange-gold highlights gives this moderately circulated example an original old-gold appearance, an appeal missing with so many gold coins of this era that have been dipped or cleaned at some time in their past. A pleasing bit of mint luster remains at the margins. Abrasions exist on the surfaces, but they are largely minimized by wear, giving this attractive twenty a smooth-surfaced look. Always a popular, low-mintage Carson City date, with just 10,708 pieces minted. NGC ID# 26B7, PCGS# 8989

1897-CC Twenty Dollar, AU Details
Sharpness Remains

- 6909** 1879-CC — Improperly Cleaned — NGC Details. *AU. Variety 1-A*. The expected hairlines from a past cleaning dull the surfaces of this otherwise well-detailed, scarce Carson City twenty. There are no significant abrasions other than those resulting from the cleaning. Prooflike flash remains at the margins and across the reverse. The strike is bold, and this double eagle is reasonably pleasing despite its problems.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26B7, PCGS# 8989

1879-CC Double Eagle, AU Details
Scarce Carson City Issue

- 6910** 1879-CC — Improperly Cleaned — NCS. *AU Details. Variety 1-A*. With a low mintage of only 10,708 coins, the 1879-CC double eagle is scarce in any condition, and prohibitively rare in Mint State. This piece boasts virtually complete detail and remarkably few significant abrasions. The surfaces exhibit an unnatural sheen, due to moderate cleaning, but a pleasing amount of mint luster remains in the protected areas, delivering a partial cartwheel effect when tilted under a light.
Ex: Long Beach Signature (Heritage, 2/2007), lot 4995. NGC ID# 26B7, PCGS# 8989
- 6911** 1879-S MS60 PCGS. A Mint State example, this specimen exhibits a sharp strike and hues of gold, orange, peach, and green. Though numerous scattered abrasions are present, as expected at this grade level, areas of pleasing luster remain. Despite a high mintage, this early Type Three issue has a low Mint State survival rate. NGC ID# 26B9, PCGS# 8991

**1881-S Double Eagle, MS62+
Large Mintage, Low High-Grade Survival Rate**

- 6912 1881-S MS62+ PCGS.** Despite the large reported mintage of 727,000 pieces, the 1881-S Liberty double eagle is an elusive issue in high grade. This attractive MS62+ example displays sharply detailed design elements and vibrant mint luster throughout and the pleasing yellow-gold surfaces show only minor signs of contact. PCGS has certified 18 numerically finer examples (3/14). NGC ID# 26BD, PCGS# 8995

1882-CC Double Eagle, Minimally Abraded XF45

- 6913 1882-CC XF45 NGC. Variety 1-B.** The second C of the mintmark is slightly higher, there is a die crack at the base of TWENTY DOLLARS, and a vertical spike in front of Liberty's eye all attribute this variety. Traces of luster reside in the protected areas of this Choice XF CC-mint representative, and the design elements are nicely defined despite high-point wear. The light marks seen are fewer and less severe than the heavy abrasions that usually plague this date.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BF, PCGS# 8997

**1882-CC Twenty Dollar, AU58
Sharply Defined Throughout**

- 6914 1882-CC AU58 NGC. Variety 1-B.** On this variety, the second C of the mintmark is slightly higher, there is a die crack at the base of TWENTY DOLLARS (which nearly encircles the reverse periphery, signifying a late die state), and a vertical spike is seen in front of Liberty's eye. Rich orange-gold patination runs covers both sides, each of which retains ample luster. The design elements are sharply defined, a major characteristic of this issue. A few scuffs and marks do not detract. A very pleasing AU58.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BF, PCGS# 8997

- 6915 1882-S MS61 NGC. Breen-7284.** Tall S. Cartwheel luster and rich honey-gold color provide this specimen with strong visual appeal. A few minuscule splashes of deep color appear on the reverse. A couple of marks in the left obverse field are minimally distracting if at all.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BG, PCGS# 8998

- 6916 1883-CC VF35 NGC. Variety 2-A.** A Choice VF example, this coin exhibits sun-gold color. Aside from a mark near Liberty's mouth and one to the right of the date, none of the signs of contact are worthy of mention. Housed in a prior generation holder.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

- 6917 1883-CC XF40 NGC. Variety 2-A.** An example of the more common of the two varieties, this piece displays the diagnostics of two die chips, one near star 9 and the other between stars 8 and 9, along with a spike from the dentils above the E in STATES. Antique gold color is present on this piece. Liberty's cheek exhibits a couple of reed marks.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

**1883-CC Twenty Dollar, XF45
Nice Eye Appeal**

- 6918 1883-CC XF45 NGC. Variety 2-A.** This is a nicely defined Choice XF twenty dollar, even accounting for high-point wear. Occasional traces of mint luster appear in the recessed areas of the honey-gold surfaces. Distributed light marks do not detract, a real plus for this particular coin that is part of an issue that is nearly always seen with heavy abrasions. Nice eye appeal for the designated grade and the date.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, AU50
An Excellent CC Type Coin**

- 6919 1883-CC AU50 NGC. Variety 2-A.** Two die chips between stars 8 and 9 attribute the variety. The 1883-CC is one of the more obtainable double eagles from the Carson City Mint. This factor, along with the well-defined design features, remarkably clean surfaces, and above-average eye appeal of this About Uncirculated 1883-CC twenty dollar make this an excellent choice for a type collection.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, Well-Defined AU53
Free of the Usual Heavy Abrasions**

- 6920** 1883-CC AU53 NGC. **Variety 2-A.** The second C partly over the D in DOLLAR, a spike from rim above E in STATES, and two die chips between stars 8 and 9 confirm the variety. The yellow-gold and orange surfaces of this AU53 specimen exhibit strong design detail on Liberty's hair, the star centers, the shield, and the eagle's plumage. Neither side reveals the heavy abrasions typically seen on this issue. This coin is therefore worthy of a strong premium.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, AU55
Well-Struck and Lightly Marked**

- 6921** 1883-CC AU55 NGC. **Variety 2-A.** The second C partly over the D in DOLLAR, a spike from rim above E in STATES, and two die chips between stars 8 and 9 attribute this variety. The 1883-CC double eagle can be located with little difficulty through MS61 condition. A group of about 20 to 30 low-level Uncirculated examples apparently surfaced in 2001 (Garrett and Guth, 2006). This lightly marked Choice AU piece displays luster in the recessed areas and is well-struck.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, AU55
Highly Lustrous**

- 6922** 1883-CC AU55 NGC. **Variety 2-A.** Substantial remaining mint luster illuminates rich patina on each side of this attractive Carson City double eagle. A well-struck example, with just a trace of highpoint wear and modest consequential abrasions. The 1883-CC is of median rarity among Carson City double eagle issues, but becomes genuinely scarce at the Mint State level, making this Choice AU piece particularly appealing.

Ex: Central States Signature (Heritage, 4/2006), lot 4288. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, AU58
Lustrous, Attractive Type Issue**

- 6923** 1883-CC AU58 PCGS. **CAC. Variety 2-A.** Attributable by the rightmost C in the mintmark being partially over the D in DOLLAR, also tiny die chips can be seen near star 9 and between stars 8 and 9, and there is also a diagonal spike from the dentils over the E in STATES. The 1883-CC is a frequently encountered Carson City twenty and can even be located with some regularity as a lustrous AU, such as seen here. Very little actual friction separates this coin from a technical Uncirculated one. Old-gold color and a good strike are also attributes.

Ex: Dallas A.N.A. Signature (Heritage, 10/2012), lot 6255.

From The Charles G. Wright Family Collection. NGC ID# 26BH, PCGS# 8999

**1883-CC Twenty Dollar, Sharply Struck AU58
Pleasing Eye Appeal**

- 6924** 1883-CC AU58 PCGS. **Variety 2-A.** The second C over the left side of the D in DOLLAR, the spike from the dentils above the E in STATES, and the raised die dot to the right of the 3 in the date confirm the variety. Large numbers were shipped overseas, and Garrett and Guth (2006) cite a report that a group of 20 to 30 Mint State coins surfaced in 2001, most in the low end of the scale. Current population reports show 175 examples certified in MS60 to MS62 and a mere seven in MS63, the finest known (3/14). The yellow-gold surfaces of this AU58 piece display abundant luster and sharply struck design elements. Scattered light marks are in concert with a briefly circulated gold coin. This 1883-CC twenty has the eye appeal of a Mint State example.

Ex: West Palm Beach (Summer Fun) Signature (Heritage, 7/2007), lot 2963. NGC ID# 26BH, PCGS# 8999

**1883-CC Double Eagle, MS61
Colorful, Lustrous Surfaces**

6925 1883-CC MS61 PCGS. Variety 2-A. The 1883-CC Liberty double eagle claims a mintage of 59,962 pieces, a small total by modern standards but quite substantial in the context of the series. The 1883-CC was also a well-produced issue, and the relative availability of high-quality examples makes this issue a favorite choice of mintmark type collectors. The present coin offers an above average strike for a Carson City issue, with fine detail in Liberty's hair. The vivid orange-gold surfaces radiate vibrant mint luster and show only minor signs of contact. Eye appeal is quite strong. Population: 45 in 61, 26 finer (3/14). NGC ID# 26BH, PCGS# 8999

6926 1883-S MS62 PCGS. Small Squat S. An attractive pumpkin-gold sharply struck and lustrous Type Three twenty. Small marks are scattered but are fewer in number and severity than is customary for the designated grade.
Ex: Long Beach Signature (Heritage, 9/2008), lot 4227. NGC ID# 26BJ, PCGS# 9000

**1884-CC Double Eagle, XF40
A Premium Quality Example**

6927 1884-CC XF40 PCGS. Ex: Rainy Day Collection. This is an attractive coin with sharply struck design motifs and considerable luster for an XF example. Golden highlights around the devices accent the even green-gold toning. A small, dark bluish-green fleck, perhaps a bit of struck-in grease, is noted directly below star 13.
*Ex: New York Signature (Heritage, 7/2002), lot 9571.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BK, PCGS# 9001*

6928 1884-CC — Improperly Cleaned — NGC Details. AU. Variety 1-A. Lightly cleaned, though significant mint luster survives in the protected areas. The details are sharply struck, while the surfaces are mainly free of distracting abrasions. A pleasing Carson City double eagle.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

**1884-CC Double Eagle, AU50
Variety 1-A**

6929 1884-CC AU50 NGC. Variety 1-A. The large mintage of 81,139 double eagles suggests that multiple die varieties should exist, although there is only one variety identified. This issue deserves careful study for unlisted varieties. This AU example has medium yellow-gold surfaces with minor marks and splashes of orange toning. NGC ID# 26BK, PCGS# 9001

**1884-CC Double Eagle, Well-Struck AU53
Above-Average Surfaces**

- 6930 1884-CC AU53 NGC. Variety 1-A.** A single die pair is known. The 1884-CC double eagle is among the best struck gold issue of any denomination produced at the Carson City Mint (Douglas Winter, 2001). This AU53 specimen is no exception. The star centrils are sharp, Liberty's hair strands are well-delineated, and the eagle's plumage is strong. The surfaces on both sides are devoid of heavy abrasions, copper spots, or grease stains that tend to characterize this date. Hence, this is a highly desirable example worthy of a significant bid.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BK, PCGS# 9001

**1884-CC Double Eagle, AU55
Lustrous Caramel-Gold Surfaces**

- 6931 1884-CC AU55 PCGS. CAC. Variety 1-A,** the sole dies for the 1884-CC issue used for the mintage of 81,139 circulation strikes. Despite the seemingly small mintage, it was the largest of the entire 1880s decade (five issues, 1882-CC through 1885-CC and 1889-CC). Much luster remains on this caramel-gold piece, the reverse showing a cartwheel effect, and a scattering of minor marks is as expected. An attractive coin for the date. NGC ID# 26BK, PCGS# 9001

**1884-CC Twenty, AU58
Sharp and Lustrous**

- 6932 1884-CC AU58 NGC. Variety 1-A.** Sharply struck examples are characteristic of the issue, and this coin doesn't disappoint with a full strike that remains intact despite brief circulation. Attractive, yellow-gold surfaces display orange-gold rims and margins. Radiant mint luster flashes rim-to-rim of this near-Mint State twenty. The only mentionable abrasion is a U-shaped scrape on Liberty's neck. NGC ID# 26BK, PCGS# 9001

**1884-CC Twenty, AU58
Lovely, Problem-Free Example**

- 6933 1884-CC AU58 NGC. Variety 1-A.** The 1884-CC is the second most common CC-mint double eagle after the 1890-CC, but most surviving examples now grade XF or below, many with distracting alloy spots and/or grease stains. This is a lovely, problem-free example whose surfaces have the initial look of a Mint State grade. The devices are crisply, if not fully defined, and the number of abrasions is not excessive for a gold coin of this size from the frontier era. The yellow-gold surfaces retain ample mint frost and show light wear on the highest points.
Ex: Dallas Signature (7/2006), lot 1717. NGC ID# 26BK, PCGS# 9001

**1884-CC Liberty Twenty, AU58
Type Three Branch Mint Issue**

- 6934 1884-CC AU58 PCGS Secure.** The 1884-CC Liberty double eagle is a relatively available Type Three issue, from a mintage of 81,139 pieces. This attractive near-Mint example displays lightly abraded yellow-gold surfaces that retain much of their original mint luster. The design elements are well-detailed, with just a trace of wear on the high points. An excellent example for a mintmark type collection. NGC ID# 26BK, PCGS# 9001

**1884-CC Double Eagle, AU58+
Great Eye Appeal**

- 6935 1884-CC AU58+ NGC. CAC. Variety 1-A.** The only known variety. The population reports indicate that the 1884-CC twenty dollar is readily available from Very Fine through MS61. MS62s are very scarce and higher-grade pieces are rare, with none known above MS63. The deep orange-gold surfaces of this high-end near-Mint State example display considerable luster and exhibit sharply struck design features. The few minute marks are unobtrusive. Great overall eye appeal, aptly recognized by CAC. NGC has given only three coins an AU58+ grade (3/14).
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BK, PCGS# 9001

- 6936 1884-S MS62 PCGS.** A sharply struck type representative with deep orange-gold patina over softly frosted mint luster. Scattered abrasions define the grade, though none are individually distracting.
Ex: *Long Beach Signature (Heritage, 2/2006)*, lot 3314. NGC ID# 26BL, PCGS# 9002
- 6937 1884-S MS62 PCGS.** Most surviving Mint State examples of the 1884-S double eagle are heavily bagmarked, as the date becomes increasingly elusive finer than MS62, and is prohibitively rare in Gem condition. This piece is upper-end of the grade, with no significant abrasions present on the surfaces. Vivid orange-gold patina blankets frosty mint luster on both sides, with sharp definition on the central devices. NGC ID# 26BL, PCGS# 9002
- 6938 1884-S MS62 PCGS.** A sharply struck olive-green and apricot-gold double eagle. The eye appeal is attractive for the grade despite abrasions on the lower right obverse field.
Ex: *Atlanta ANA Signature (Heritage, 4/2006)*, lot 2209. NGC ID# 26BL, PCGS# 9002
- 6939 1884-S MS62 PCGS.** Blended olive and peach hues accompany this lustrous and nicely struck Liberty twenty. Less abraded than usual for the grade, except for marks on the reverse rim near 11 o'clock.
Ex: *Atlanta ANA Signature (Heritage, 4/2006)*, lot 2207. NGC ID# 26BL, PCGS# 9002

1885-CC Double Eagle, AU Details Low-Mintage Issue

- 6940 1885-CC — Improperly Cleaned — NGC Details. AU. Variety 1-A.** This low-mintage Carson City issue circulated extensively in the West, and it was also used in the export trade. Survivors are scarce in all grades and always in demand. The present example is still lustrous, although lightly hairlined from cleaning on the obverse (but not excessively so). The surfaces are bright and somewhat reflective. Despite the cleaning, the coin would not be out of place in a nice, circulated set of XF-to-AU double eagles.
From *The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation*. NGC ID# 26BN, PCGS# 9004

- 6941 1885-S MS62 PCGS.** A lustrous and nicely struck orange-gold representative. The reverse is relatively unabraded, though we note scattered obverse abrasions including a minor rim ding at 2:30. Housed in a green label holder. NGC ID# 26BP, PCGS# 9005
- 6942 1887-S MS61 NGC.** Fortunately for collectors, although large numbers of the 1887-S twenty dollar were shipped overseas for trade purposes, many have returned to the collecting market in the United States after spending decades in foreign vaults. Deep honey-gold color overall and cartwheel luster are among the attributes this Mint State example possesses. Closer examination reveals areas of khaki-gold color as well.
From *The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation*. NGC ID# 26BS, PCGS# 9007
- 6943 1888 MS61 NGC.** Peach, gold, and green hues are present on this Mint State representative retaining a pleasing degree of luster. The strike is sharp overall, with the reverse displaying minor incompleteness. None of the marks present is worthy of individual mention. A few tiny areas of as-made struck-in grease appear near the mouth. NGC ID# 26BT, PCGS# 9008

- 6944 1888-S MS62 NGC.** Several vibrant shades of yellow-gold along with areas of peach provide this Mint State example with a lovely appearance. Flashy luster is an additional attribute. Scattered marks, including a few in Liberty's hair, pose minimal distraction. A few faint areas of as-made struck-in grease appear on the obverse. NGC ID# 26BU, PCGS# 9009

- 6945 1888-S MS62 PCGS. CAC.** Orange, green, gold, and peach hues are present on this MS62 representative. The coin exhibits a sharp strike, adding to the appeal. Scattered marks, including at the tip of Liberty's nose, contributed to the grade of this piece. The certified population drops significantly at the Select level. NGC ID# 26BU, PCGS# 9009

- 6946 1889 MS61 NGC.** An MS61 survivor, this piece displays shades of gold, green, and peach. The reverse reveals clash marks. Scattered marks are present as expected at this grade level, but none of them poses a serious distraction. NGC ID# 2695, PCGS# 9010

1889 Double Eagle, Sharply Struck MS62 Very Rare Any Finer

- 6947 1889 MS62 PCGS.** The 1889 double eagle shows a small mintage of 44,000 pieces and is available from high-end AU to MS62. Select coins are very rare and are the finest known. The peach-gold surfaces of this MS62 example display considerable luster and are sharply struck. Several scuffs, mostly on the obverse, barely preclude MS63 status. NGC ID# 2695, PCGS# 9010

1889 Double Eagle, MS62 An Impressive Example

- 6948 1889 MS62 PCGS.** An impressive example for the grade, with exceptional yellow surfaces and frosty gold luster. The 1889 double eagle is one of the unrecognized rarities in the series, with a mintage of only 44,000 coins. This coin has few certified peers, and just 26 finer specimens certified by PCGS (3/14).
Ex: *Long Beach Signature (Heritage, 9/2008)*, lot 4255. NGC ID# 2695, PCGS# 9010
- 6949 1889-CC PCGS Genuine. Variety 1-A.** The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an AU specimen that has struck-in grease on the upper right reverse. Three short parallel scratches are noted near the upper right shield corner. NGC ID# 26BV, PCGS# 9011

1889-CC Double Eagle, XF40
An Attractive Example for the Grade

- 6950 1889-CC XF40 NGC. Variety 1-A.** This XF example is about as nice a coin as you will find from this late Carson City issue, for the grade. Light khaki-gold toning is complemented by subtle champagne accents. Glints of original mint luster still cling to many of the devices. This example would make a fine choice for type purposes, and an affordable one as well.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BV, PCGS# 9011

1889-CC Liberty Twenty, AU50
Nice Design Detail

- 6951 1889-CC AU50 NGC. Variety 1-A.** A single die variety is known. This is the first year of production of double eagles from Carson City after production was suspended in 1885. The date has become more available since the release of significant hoards in the 1990s. This well-defined AU offering displays traces of luster in its protected areas, and the few scattered minute marks are insignificant.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BV, PCGS# 9011
- 6952 1889-CC — Reverse Spot Removed — NGC Details. AU. Variety 1-A.** Substantial mint luster radiates from the protected areas of this sharply detailed Carson City gold piece, with medium green-gold patina overall. A removed spot near the central reverse hardly detracts from the visual appeal.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.

1889-CC Double Eagle, AU53
Reflective and Appealing

- 6953 1889-CC AU53 PCGS. Variety 1-A.** The last Carson City double eagle from the 1880s, the 1889-CC saw a moderate production of 30,945 coins, most of which circulated about to the level of the present piece. Mostly light field chatter combines with a few larger marks on surfaces that retain considerable prooflike reflectivity and eye appeal. NGC ID# 26BV, PCGS# 9011

1889-CC Twenty Dollar, AU58
Attractive and High-End For the Grade

- 6954 1889-CC AU58 NGC.** This issue is very popular, and numerous auction appearances have been recorded in recent years. Considerable remnants of original mint frost give this example a vibrant appearance usually reserved for Mint State coins. A well-struck piece with only superficial marks noted on each side.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BV, PCGS# 9011

1889-S Liberty Twenty, MS63
Conditionally Rare in Higher Grades

- 6955 1889-S MS63 NGC.** The 1889-S Liberty double eagle is a plentiful issue in circulated grades, but Select Mint State examples are scarce, and the issue is a condition rarity any finer. This attractive specimen exhibits sharply detailed design elements and vivid orange-gold surfaces with a scattering of minor contact marks and traces of prooflike reflectivity in sheltered areas. NGC has graded seven numerically finer examples (3/14). NGC ID# 26BW, PCGS# 9012
- 6956 1890-CC XF45 NGC. Variety 1-A.** The light khaki-gold surfaces reveal evenly worn devices and relatively smooth surfaces with few noticeable marks. A small area of discoloration is noted on Liberty's cheek, of uncertain origin, but it does not significantly detract from the overall pleasing appearance of this Choice XF example.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BY, PCGS# 9014
- 6957 1890-CC — Improperly Cleaned — NGC Details. AU. Variety 1-A.** Lightly cleaned in the past, this Type Three double eagle has since retoned a medium orange-gold patina. The design elements are sharply detailed, and the surfaces exhibit only minor scuffs.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.
- 6958 1890-CC — Questionable Color — Genuine PCGS. AU Details.** A fully struck coin with blemish-free surfaces and rich, gleaming mint frost. The deep apricot-orange coloration is deemed to be "Questionable" by PCGS. NGC ID# 26BY, PCGS# 9014

1890-CC Twenty Dollar, AU50
Well-Defined and Minimally Abraded
A Late Die State

- 6959 1890-CC AU50 NGC. Variety 1-A.** The second C in the mintmark is left of the D in DOLLARS, confirming the variety. The reverse is a late die state, evidenced by the right-side tail feathers being lapped. The 1890-CC is available through About Uncirculated grades, and is scarce in MS60 through MS62. MS63s are extremely rare and finer pieces are unknown. The present AU coin is nicely defined and displays traces of luster in the protected areas. There are fewer and less severe marks than ordinarily encountered on this date, and the often-seen copper spots are also lacking. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BY, PCGS# 9014*

1890-CC Double Eagle, AU55

- 6960 1890-CC AU55 NGC. Variety 1-A.** Light rose-red toning visits protected areas of this otherwise sun-gold example. The curls display minor rub, but luster is plentiful on the reverse and illuminates the stars and portrait. Distributed small marks correspond to the grade. The early die state with complete, unlapped tail feathers. The PLU in PLURIBUS is lightly die doubled, usual for this popular Carson City issue. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26BY, PCGS# 9014*

1890-CC Liberty Twenty, AU55
Original Patina

- 6961 1890-CC AU55 NGC. Variety 2-B.** The scarce Variety 2-B, with the mintmark position slightly to the right. As a date, the 1890-CC is among the more available double eagles from the Carson City facility, providing the branch mint specialist with an ideal type representative. Deep orange-gold color blankets both sides of this Choice AU example, with significant mint luster in the recesses. Only a brush of wear is seen of the devices, though some minor softness of strike is noted on the right obverse stars. NGC ID# 26BY, PCGS# 9014

1890-CC Double Eagle, AU55
Semiprooflike Luster

- 6962 1890-CC AU55 NGC. Variety 1-A.** A late die state, with minor lapping visible on the eagle's tail feathers. Semiprooflike mirroring illuminates the fields of this highly lustrous Carson City double eagle, delivering exceptional eye appeal when turned in-hand. Close examination reveals just a trace of friction over the high points of the devices, while the surfaces are free of any significant abrasions. A truly incredible coin for the grade, housed in a prior generation holder. NGC ID# 26BY, PCGS# 9014

1890-CC Double Eagle, Appealing AU58

- 6963 1890-CC AU58 PCGS. Variety 1-A.** The CC mintmark is essentially centered between the Y in TWENTY and the D in DOLLARS, confirming the variety. The right side of the tailfeathers are lapped, indicating a late die state. The 1890-CC, from a mintage of 91,209 pieces, is one of the most common, as well as most popular, twenties from the Carson City Mint. Circulated coins are readily available and MS60 to MS62 examples can be located with minimal difficulty. Only nine Select specimens have been certified and none finer (3/14).

The present near-Mint condition coin is an excellent alternative to a lower-level Mint State piece that will tend to be heavily abraded and/or possess copper spots and grease stains (per Douglas Winter, 2001). Its honey-gold surfaces retain considerable luster and are devoid of significant marks and other surface impairments plaguing this date. Additionally, the design elements are sharply struck, lending nice eye appeal to both sides. NGC ID# 26BY, PCGS# 9014

**1890-CC Twenty Dollar, AU58
High-End Example of the Issue**

- 6964** 1890-CC AU58 PCGS. **Variety 1-A**, the second C in the mintmark is marginally higher than the first, considerably left of the upright of the D in DOLLARS below, and both C's are frosted in their interiors. Die lapping has effaced much of the detail on the right half of the eagle's tail feathers and the fletchings above, a phenomenon not seen on the Variety 2-B reverse. This piece boasts minimal contact for the grade level and rich cartwheel luster on amber-gold surfaces, a beautiful coin. NGC ID# 26BY, PCGS# 9014

**1892 Twenty Dollar, XF45
Low-Mintage Issue, Nice for the Grade**

- 6965** 1892 XF45 NGC. This low-mintage issue was struck to the extent of a meager 4,400 pieces, likely the result of the chilly economic climate that would soon lead to the financial panic of 1893. This Choice XF example boasts medium yellow-gold surfaces covered with light abrasions, but much reflective luster remains in the protected areas about the peripheries. Nice for the grade. NGC ID# 26C5, PCGS# 9019
- 6966** 1892-CC — **Improperly Cleaned** — NGC Details. XF. **Variety 1-A**. Ample luster illuminates the legends, rays, and other design elements of this glossy wheat-gold better date Carson City twenty. The surfaces exhibit several minute lumps, such as beneath the 9 in the date and within the C in AMERICA, which suggest the coin may have been exposed to heat. NGC ID# 26C6, PCGS# 9020
- 6967** 1892-CC — **Mount Removed** — NGC Details. AU. **Variety 1-A**. Significant mint luster remains in the protected regions of this sharply detailed Carson City double eagle. Original green-gold color with pale orange-gold overtones blanket both sides. NGC notes mount removal, though no faults are readily noticeable. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

**1892-CC Twenty Dollar, AU53
Reflective and Well-Preserved**

- 6968** 1892-CC AU53 NGC. **Variety 1-A**. This AU53 NGC example is about in a typical grade for this late Carson City low-mintage issue. Light field chatter but no mentionable marks appear on the golden-yellow surfaces, with generous remnants of prooflike reflectivity gleaming just underneath. The strike is a bit soft on the hair below the coronet, but this is quite an attractive coin for the grade and issue. NGC ID# 26C6, PCGS# 9020

1892-CC Double Eagle, Sharply Defined AU53

- 6969** 1892-CC AU53 NGC. **Variety 1-A**. The only known die pair. The 1892-CC double eagle was once considered a prime rarity. In the last decade or so, many pieces residing in overseas holdings have found their way back to the States. The issue can now be located through about MS61 with little difficulty. MS62s are scarce and higher-grade coins are rare. The yellow-gold and orange surfaces of this AU53 example show luster in the recesses. Sharp design detail is noted throughout, and scattered marks are unobtrusive. Both sides are devoid of copper spots that are often seen on surviving specimens. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.* NGC ID# 26C6, PCGS# 9020
- 6970** 1892-S MS62 PCGS. CAC. The surfaces of this Mint State piece reveal lovely yellow-gold color with hints of peach. Aside from the eagle's claws, the strike is sharp overall. The 1892 San Francisco double eagle production consisted of 930,150 coins. Large quantities of the pieces were used for foreign trade, but eventually returned to the United States and entered numismatic collections. NGC ID# 26C7, PCGS# 9021
- 6971** 1893 MS63 PCGS. The surfaces of this Select example reveal shades of gold, orange, peach, and green. Strong luster further adds to the eye appeal. The strike is sharp overall, with only minor incompleteness present. A tiny spot of as-made struck-in grease appears at the lower portion of the shield. The number of certified examples drops dramatically above the MS63 level, with PCGS having awarded higher numeric grades to only 69 examples (3/14). NGC ID# 26C8, PCGS# 9022
- 6972** 1893-CC — **Reverse Damage** — NGC Details. AU. **Variety 1-A**. Significant mint luster remains in the protected regions of this slightly circulated example. Medium green-gold patina blankets both sides, with orange-gold accents intermixed in the recesses. A single cut is noted on the reverse, but is well-hidden in eagle's right wing. *From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation.*

**1893-CC Double Eagle, AU53
Low-Mintage Final-Year Issue**

- 6973 1893-CC AU53 NGC.** Nicely detailed and showing impressive remnants of original mint luster, this attractive example displays light green-gold toning and a few faint red-orange areas on the reverse, mainly near the borders. A faint pinscratch on the lower right reverse field extends through the left side of the eagle's shield, and a shallower mark is noted in the upper left obverse field. A meager mintage of 18,402 coins was struck in the final year of Carson City coin production.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26C9, PCGS# 9023

**1893-CC Liberty Twenty, AU58
Lustrous and Appealing**

- 6974 1893-CC AU58 NGC. Variety 1-A.** A strong degree of luster remains on this near-Mint example, particularly on the reverse. The coin exhibits rich butter-gold color and a strong degree of design definition. As is usually the case with this variety, die cracks appear at the middle portion of STATES as well as beneath the date and to the left. Scattered marks and grazes are present, consistent with the grade. NGC ID# 26C9, PCGS# 9023
- 6975 1894-S MS63 PCGS.** Flashy yellow-gold surfaces provide this Select example with lovely visual appeal. Scattered marks are present, as expected at this grade level, but none poses a significant distraction. The certified population drops sharply in higher grades, adding to the desirability of MS63 pieces. NGC ID# 26CC, PCGS# 9026

**1895 Liberty Twenty, MS64
Rare Any Finer**

- 6976 1895 MS64 NGC.** Common in lesser grades, this near-Gem double eagle is conditionally scarce and a full-fledged rarity any finer. Thick mint frost covers the surfaces of this Choice example in an olive-green blanket. Brilliant luster remains beneath the frost. Sharp details flatter the devices, while only a few random abrasions visit the surfaces. Just 11 examples are certified numerically finer by PCGS and NGC combined (2/14). NGC ID# 26CD, PCGS# 9027

**1895 Twenty, MS64
Lustrous, Well-Struck Example**

- 6977 1895 MS64 PCGS.** Many 1895 double eagles were shipped overseas, and today they are found in abundant numbers, especially through the Select level of preservation. Near-Gems are more difficult to locate, and higher-grade pieces are rare. Vibrant luster exudes from the tan-gold surfaces of this MS64 piece, and the strike is sharp throughout. A scattering of light grazes precludes Gem status. PCGS has seen a mere two coins numerically finer (3/14). NGC ID# 26CD, PCGS# 9027

- 6978 1895-S MS63 PCGS.** Sun-gold color and pleasing luster combine to provide this Select specimen with nice eye appeal. Closer examination reveals intermingled shades of gold, orange, and ice-lavender. A slightly dusky patina appears on portions of the obverse. MS63 is the highest grade these coins are readily obtained in. NGC ID# 26CE, PCGS# 9028

- 6979 1895-SMS63 PCGS.** Lemon-gold and lime-green adorn this lustrous and crisply struck double eagle. The fields are uncommonly clean for the MS63 level, although the cheek displays minor marks.
Ex: Internet Auction (Heritage, 7/2008), lot 64492. NGC ID# 26CE, PCGS# 9028

**1896 Repunched Date Double Eagle, FS-301
MS64, The Finest Seen at PCGS**

- 6980 1896 Repunched Date MS64 PCGS. FS-301.** Repunching north is evident on all four digits. PCGS has graded 27 Mint State 1896 double eagle Repunched Date examples: one in MS60, four in MS61, 12 in MS62, nine in MS63, and 1 in MS64 (3/14). The lustrous peach-gold surfaces of this near-Gem exhibit razor-sharp detail. Some light scuffs prevent Gem status. PCGS# 145739

- 6981 1896-S MS63 NGC.** The number of certified examples drops substantially above the Select grade level. A gorgeous specimen, this coin exhibits deep lemon-gold color and considerable luster. A mark to the right of TRUST is the only mark possibly worthy of mention on this appealing piece.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26CG, PCGS# 9030

- 6982 1898-S MS64 PCGS.** Pumpkin-gold color and a pleasing degree of luster combine to provide this near-Gem with a lovely appearance. Relatively few marks and grazes are present. The certified population drops dramatically at the MS65 level, leaving near-Gem examples such as this a desirable and more affordable option. NGC ID# 26CL, PCGS# 9034

6983 1898-S MS64 NGC. A wonderful near-Gem representative, this piece displays rich honey-gold color and appealing luster, providing a pleasing degree of visual appeal. The strike is strong overall, with only minor areas of incompleteness present. An as-made lint mark appears between the ME in AMERICA. NGC ID# 26CL, PCGS# 9034

6984 1898-S MS64 PCGS. CAC. Large numbers of this high-mintage issue have been found overseas in recent decades and returned to the United States, making it an excellent choice for a high-grade type set. This is a highly lustrous near-Gem with appealing apricot-gold and lime-gold toning and nicely preserved surfaces. NGC ID# 26CL, PCGS# 9034

6985 1899 MS64 NGC. Richly lustrous, this near-Gem displays lovely butter-gold color. Closer examination reveals green-gold tones as well. The fields are minimally marked, with Liberty's cheek exhibiting minuscule abrasions. This piece has a wonderful appearance for the grade. The number of coins achieving the Gem level or finer from NGC stands at only 76 pieces (3/14). NGC ID# 26CM, PCGS# 9035

6986 1899-S MS63 PCGS. Brilliant rich yellow-gold surfaces are among the attributes this Select example possesses. An alloy spot appears on the reverse near 8 o'clock. The certified population drops significantly at the MS64 level. This is a lovely representative from the last San Francisco Mint double eagle issue from the 19th century. NGC ID# 26CN, PCGS# 9036

**1899-S Twenty Dollar, MS64
Radiant Cartwheel Luster**

6987 1899-S MS64 PCGS. Radiant cartwheel luster emanates from each side of this near-Gem S-mint Type Three twenty, struck in the large amount of more than 2 million coins but seldom seen so fine. Greenish-gold coloration and the paucity of mentionable marks (save for one in the center of Liberty's cheek) make this a high-end and attractive survivor. PCGS has seen only four numerically finer (3/14). NGC ID# 26CN, PCGS# 9036

6988 1900 MS64 PCGS. A boldly struck and well preserved near-Gem of this collectible Liberty type issue. Subtle apple-green and canary-gold toning ensures the originality. Old Reverse subtype. NGC ID# 26CP, PCGS# 9037

6989 1900 MS64+ NGC. Dusky patina appears on the high points of this splendid near-Gem double eagle, with orange-gold luster and delicate green and rose overtones on each side. Clearly finer than usual for this issue that has an average certified grade of just 62. NGC ID# 26CP, PCGS# 9037

**1900 Double Eagle, MS65
Delightful, Lustrous Example**

6990 1900 MS65 NGC. The 1900 double eagle is especially popular with type collectors because of its relative availability. Nonetheless, it becomes scarcer in the upper reaches of Uncirculated, and NGC has certified just three pieces finer than MS65 (3/14). Delightful orange-gold patina covers both sides of this sharply struck Gem. A few bagmarks barely affect the splendid cartwheel luster. *Ex: Baltimore ANA Signature (Heritage, July-August/2008), lot 3363.* NGC ID# 26CP, PCGS# 9037

6991 1900-S MS63 PCGS. An orange and honey-gold type representative that presents vibrant luster, a good strike, and fewer than expected abrasions. Old Reverse subtype. *Ex: Internet Auction (Heritage, 7/2008), lot 25413.* NGC ID# 26CR, PCGS# 9038

6992 1901 MS64 PCGS. The lower mintage 1901 is a good candidate for the type collector who seeks a scarcer issue than the prevalent 1904. This is a lustrous and lovely near-Gem with jade-green margins and peach centers. The date is lightly repunched, visible beneath the base of the first 1. *Ex: Internet Auction (Heritage, 7/2008), lot 63710, which realized \$1,955.* NGC ID# 26CS, PCGS# 9039

**1901 Double Eagle, MS65
Only Four Numerically Finer Examples**

6993 1901 MS65 PCGS. Rich pumpkin-gold color and strong luster combine to provide this Gem with strong visual appeal. Closer examination reveals scattered hints of lavender as well as several tiny alloy spots. Housed in a green label holder. PCGS has awarded higher numeric grades to only 4 examples, while NGC has yet to assign a grade of MS66 or higher (3/14). NGC ID# 26CS, PCGS# 9039

1901 Double Eagle, MS65
Top-Notch Survivor of This Low Mintage

- 6994 1901 MS65 NGC.** This small-mintage P-mint saw only 111,400 pieces struck for circulation, and Gems are seldom seen. The bold strike, lovely orange-peach surfaces, and thoroughgoing cartwheel luster combine to separate this piece from the vast majority of survivors. This piece is tied for numeric finest at NGC (3/14). From *The Northern Lights Collection*. NGC ID# 26CS, PCGS# 9039

1901 Type Three Twenty, MS65
Excellent for High-Grade Type

- 6995 1901 MS65 NGC.** Attractive, two-tone coloration greets the eye, with a yellow-gold portrait set on rich, orange-gold fields. Cartwheel luster swirls around fully struck central devices. Tiny ticks and insignificant, small abrasions can be counted on one hand and do not disturb the radiant surfaces to any meaningful extent. It will be a long wait to find one finer, since PCGS and NGC combined have certified just four examples numerically finer (3/14). NGC ID# 26CS, PCGS# 9039

1901 Twenty Dollar, MS65
Popular Type Issue

- 6996 1901 MS65 PCGS.** A Philadelphia Mint issue that is surprisingly available, and popular for type purposes, despite its low mintage of 111,400 pieces. This Gem example is sharply struck and highly lustrous with well-preserved surfaces. Several red-orange alloy spots are observed on each side, along with unusually deep orange toning and a few areas of pale lilac-gray coloration on the reverse. PCGS has only graded four coins finer (3/14). NGC ID# 26CS, PCGS# 9039

- 6997 1903 MS65 PCGS.** A lustrous peach-gold Gem that possesses a precise strike and a well preserved reverse. Occasional small obverse marks are all that limit the grade. Nearly unobtainable above the MS65 level.
Ex: Kutasi Collection (Heritage, 1/2007), lot 3247, which realized \$4,312.50. NGC ID# 26CW, PCGS# 9043

- 6998 1903-S MS63 PCGS.** Peach patina dominates this lustrous and boldly struck double eagle, although the margins offer sea-green toning. Marks are relatively few for the MS63 level. NGC ID# 26CX, PCGS# 9044

1903-S Twenty Dollar, MS64
Sharply Struck and Highly Lustrous

- 6999 1903-S MS64 PCGS.** Despite a mintage approaching one million pieces, the 1903-S double eagle is scarce in near-Gem condition and rare in even finer grades of Mint State. This example is intensely lustrous and shows lovely even honey-gold toning. The design motifs are sharply detailed, with particularly fine definition noted on Liberty's hair curls. NGC ID# 26CX, PCGS# 9044

1903-S Double Eagle, MS64
Boldly Defined, Intensely Lustrous

- 7000 1903-S MS64 PCGS.** Like many Liberty double eagles, the 1903-S is a condition rarity, although it is relatively available in near-Gem quality. However, PCGS has graded just 13 finer examples of the issue (3/14). This piece is boldly defined with intensive satin luster and faint pink patina. The surfaces have the usual quota of small, insignificant marks.
Ex: Dallas Signature (Heritage, 10/2008), lot 2400. NGC ID# 26CX, PCGS# 9044

- 7001 1904 MS64 PCGS.** Though scattered marks and abrasions held this near-Gem from a higher grade, none of the marks is worthy of individual mention. A pleasing degree of luster and attractive yellow-gold color add to the appeal of this representative. A tiny edge nick appears near 11 o'clock on the obverse. NGC ID# 26CY, PCGS# 9045

- 7002 1904 MS64+ PCGS. CAC.** A coin with strong eye appeal, this high-end near-Gem displays butter-gold color and lustrous surfaces. Minor marks and grazes contributed to the grade, but are not distracting on this attractive specimen. A strong strike is an additional attribute of this wonderful piece. NGC ID# 26CY, PCGS# 9045

7003 1904 MS65 NGC. One of the most generously available double eagle issues of the entire series, the mintage of 6.25 million coins was well produced and many pieces survived in mint condition. This is a beautiful Gem with vibrant luster and lovely deep orange-gold toning. NGC ID# 26CY, PCGS# 9045

7004 1904 MS65+ PCGS. Displaying attractive pumpkin-gold color, this high-end Gem also displays a pleasing degree of luster, providing this specimen with exceptional eye appeal. The design elements reveal nice detail. A few as-made struck-in threads are visible on the obverse, with the surfaces revealing no mentionable signs of contact. NGC ID# 26CY, PCGS# 9045

7005 1904 MS65+ NGC. As the Plus designation indicates, this high-end Gem exhibits strong eye appeal. Lustrous yellow and green-gold surfaces and minimal abrasions are among the wonderful characteristics this piece possesses. The certified population drops sharply above the Gem level, further adding to the desirability of high-end specimens. NGC ID# 26CY, PCGS# 9045

**1904 Double Eagle, MS65
Lustrous Type Representative**

7006 1904 MS65 PCGS. CAC. A beautifully preserved Gem type representative. Soft orange-gold hues accent rich green-gold luster over each side, while boldly struck motifs add to the visual appeal. Only a few faint grazes disturb the frosty surfaces when tilted under a light, but hardly impair the fresh appearance of this high-end example, housed in an old green label holder.
Ex: Long Beach Signature (Heritage, 2/2006), lot 3460. NGC ID# 26CY, PCGS# 9045

**1904 Liberty Head Twenty Dollar, MS66
Highly Lustrous**

7007 1904 MS66 PCGS. Strong luster and deep yellow-gold color provide this Premium Gem specimen with nice eye appeal. The strike is sharp overall, with only minor incompleteness present. Areas of as-made struck-in grease appear at Liberty's profile. A mere 2 examples have numerically surpassed the grade of this lovely piece at PCGS (3/14). NGC ID# 26CY, PCGS# 9045

**1904 Double Eagle, MS66+
Only One Finer Coin at NGC**

7008 1904 MS66+ NGC. The 1904 Liberty double eagle claims an enormous mintage of more than 6.2 million pieces, making it an available date in high grade and a favorite choice of type collectors. This high-end Premium Gem exhibits razor-sharp definition on all design elements and the well-preserved peach-gold surfaces radiate vibrant mint luster. Eye appeal is terrific. NGC has graded only one numerically finer example (3/14). NGC ID# 26CY, PCGS# 9045

7009 1904-S MS64 NGC. Medium green-gold luster covers both sides of this near-Gem. The surfaces show no major abrasions, with an overall attractive appearance. A sharply struck and flashy San Francisco representative. NGC ID# 26CZ, PCGS# 9046

**1904-S Twenty Dollar, MS65
Radiant Cartwheel Luster**

7010 1904-S MS65 PCGS. Gem examples of this high-mintage issue are available for a price, but anything in higher grades is extremely elusive. This Gem PCGS example boasts radiant cartwheel luster over apricot-gold surfaces that are sharply struck and free of any mentionable contact marks. PCGS has seen only five submissions numerically finer (3/14). NGC ID# 26CZ, PCGS# 9046

**1905 Double Eagle, MS62
Scarce, Low-Mintage Issue**

- 7011 1905 MS62 PCGS.** This low-mintage issue of 58,900 coins followed directly on the heels of the enormous 1904 production in excess of 6.25 million pieces. This date is scarce and keenly pursued by collectors, who find it challenging to locate an example graded any finer than this one. A lustrous, boldly struck piece with even, light toning and only minor scuffiness on the obverse that limits the grade. NGC ID# 26D2, PCGS# 9047

**1905-S Liberty Head Twenty, MS63
Brilliant and Lustrous**

- 7012 1905-S MS63 PCGS.** A single scrape on the neck defines the Select grade of this brilliant and lustrous twenty. Other abrasions are present but they are minor and infrequent, giving the coin exceptionally clean fields for the grade and a top-shelf appearance. Wonderful honey-gold surfaces display flashy cartwheel luster. This San Francisco issue is almost always boldly struck, and this sharp example fits the mold with strongly detailed motifs — a slightly better date, significantly high-end for the Select Uncirculated level. NGC ID# 26D3, PCGS# 9048

**1905-S Double Eagle, MS64
Lustrous and Well Preserved**

- 7013 1905-S MS64 PCGS.** This San Francisco issue was heavily exported, and survivors are scarce in high grades. In fact, only 20 coins have been rated finer than MS65 at PCGS and NGC combined (3/14). This near-Gem specimen displays remarkably clean and vibrantly lustrous surfaces. Surface marks are minimal. NGC ID# 26D3, PCGS# 9048

- 7014 1907 MS64 PCGS.** A frosty final-year near-Gem, perfect for type purposes. Warm orange-gold hues accent mainly green-gold luster, with sharply detailed design elements overall. The surfaces are free of any significant abrasions, with the reverse nearly perfect. PCGS has graded only 16 numerically finer examples (2/14). NGC ID# 26D7, PCGS# 9052

- 7015 1907 MS64+ PCGS. CAC.** A Choice Mint State representative of the transitional 1907 double eagle. The Liberty design ended during the year, as the Saint-Gaudens twenties first appeared. This impressive piece has fully lustrous yellow-gold surfaces with hints of bluish toning on the high points. PCGS has only certified 16 finer pieces (3/14). NGC ID# 26D7, PCGS# 9052

**1907-D Twenty Dollar, MS64+
Second of Only Two Denver Liberty \$20 Issues**

- 7016 1907-D MS64+ PCGS.** It is likely that the double eagles from this Denver issue as well as those from the prior year were struck using gold from Cripple Creek. Rich honey-gold color and cartwheel luster combine to provide this high-end near-Gem with exceptional eye appeal. Both sides reveal a few tiny alloy spots and as-made strike-throughs. None of the few scattered marks poses a distraction. NGC ID# 26D8, PCGS# 9053

**1907-D Double Eagle, MS65
Beautiful, Lustrous Example**

- 7017 1907-D MS65 PCGS.** Solid strike definition uniformly brings up the design motifs, save for only a tiny bit of weakness on the eagle's head and some of Liberty's hair curls. An impressive frosty sheen enlivens the lovely pastel honey-gold and mint-green surfaces. A couple of small marks on Liberty's cheek, near the mouth, keep it from an even finer grade assessment. NGC ID# 26D8, PCGS# 9053

1907-D Double Eagle, MS65
Well-Preserved and Attractive

- 7018** 1907-D MS65 PCGS. The 1907-D is a somewhat more available issue in finer grades, perhaps saved as the final year of the type, but it is still a scarce coin in grades above MS65. This is a glistening Gem with pleasing honey-gold toning and well-preserved surfaces. The strike definition is uniformly sharp on both sides. NGC ID# 26D8, PCGS# 9053

1907-D Double Eagle, MS65
Green Label Holder

- 7019** 1907-D MS65 PCGS. CAC. A lemon-gold Gem with booming luster and a sharp strike. The borders display subtle olive patina. The reverse is magnificently preserved and the left obverse displays only wispy marks. The second of only two Denver issues, the 1907-D is available in AU58 through MS64 but Gems are scarce. Housed in a green label holder. NGC ID# 26D8, PCGS# 9053

1907-S Double Eagle, MS64+
Conditionally Rare, Scarce Any Finer

- 7020** 1907-S MS64+ PCGS. Rich yellow-gold color and appealing luster provide this high-end near-Gem representative with strong eye appeal. The strike is strong overall and none of the minor signs of contact present poses a distraction. Although the San Francisco mintage of 1907 double eagles was large, the number of surviving examples certified beyond the near-Gem level is extremely small, adding to the desirability of MS64+ specimens. Population: 39 in 64+, 8 finer (3/14). NGC ID# 26D9, PCGS# 9054

HIGH RELIEF DOUBLE EAGLES

MCMVII High Relief, Unc. Details
Boldly Struck

- 7021** 1907 High Relief, Wire Rim — Ex-Jewelry, Cleaned — ANACS. Unc. Details, Net AU50. Exhibiting the sculptural relief of early Greek coinage, the High Relief 1907 Saint-Gaudens double eagle is among the most sought-after and beautiful coins in American numismatics. Multiple impressions from the dies were needed to bring up the designs, which drastically slowed production, therefore Charles Barber lowered the relief partway through 1907, after only 11,250 High Relief specimens were struck.

The present example exhibits complete, sharply impressed detail and no detracting surface abrasions. ANACS notes old cleaning and removal from jewelry, though no damage is readily apparent, and the surfaces retain a pleasing yellow-gold patina. A few dark alloy spots or other discoloration are seen on the obverse, primarily in the field below Liberty's outstretched arm. The high relief of the design elements will make this an attractive piece in many United States gold coin collections.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26F2, PCGS# 9135

1907 High Relief Twenty, AU58 Details

- 7022** 1907 High Relief, Flat Rim — Cleaned — ANACS. AU58 Details. We are calling this a Flat Rim, but one could just as well make an argument for it being a Wire Rim. The existing wire rim is not noticeable and only slightly extruded above the rims on each side. In spite of the "Cleaned" designation this is a remarkably attractive coin, one that will certainly be appreciated by some lucky collector. The surfaces are just a bit overbright and there is just a whisper of friction over the high points of the design. Otherwise, the surfaces are remarkably free from contact marks. PCGS# 9136

PROOF HIGH RELIEF DOUBLE EAGLE

1907 High Relief Twenty, Proof Details

- 7023 1907 High Relief — Obverse Scratched — NGC Details. Proof.** Attributable as a proof striking by the swirling die polishing marks in the fields, the uncommonly strong strike in all areas, including the pillars on the Capitol building and full separation from the lettering and reverse rim. The surfaces are bright and satiny, as one would expect from a High Relief. The right obverse field is marred by a couple of parallel, slightly curved scratches — they are shallow but do catch the light. Still, an affordable and impressive example of a proof High Relief. PCGS# 9132

SAINT-GAUDENS DOUBLE EAGLES

- 7024 1907 Arabic Numerals MS64 PCGS.** Short Rays obverse. The first of an important two-year type without the motto IN GOD WE TRUST on the reverse. This issue was created when Charles Barber modified the Saint-Gaudens design. A lovely near-Gem with trivial marks to prevent a higher grade. Lustrous yellow-gold surfaces. NGC ID# 26F5, PCGS# 9141
- 7025 1907 Arabic Numerals MS64+ PCGS. CAC.** A lovely orange-gold double eagle, this piece features wispy blue overtones on its brilliant and lustrous surfaces. The Plus designation and CAC approval indicate the exceptional eye appeal of this near-Gem. NGC ID# 26F5, PCGS# 9141

1907 Saint-Gaudens Twenty, MS65 Arabic Numerals

- 7026 1907 Arabic Numerals MS65 PCGS.** The rare and coveted Roman Numerals issue was succeeded by the lower relief and more affordable Arabic Numerals type, which continued until mid-1908. The present Gem is coruscating and crisply struck. Dashes of peach toning overlie butter-gold surfaces. A lens reveals only minor marks. Certified in a green label holder. NGC ID# 26F5, PCGS# 9141

1907 Arabic Numerals Twenty, MS65 Lustrous and Attractive

- 7027 1907 Arabic Numerals MS65 PCGS.** Chief Engraver Charles Barber convinced his superiors to allow him to modify Saint-Gaudens' High Relief design for the new double eagles, and this was the first issue that resulted. Many were saved and examples are not uncommon in any collectible grades. This Gem is lustrous and well-struck, with pleasing light coloration and minimal surface marks. From *The Northern Lights Collection*. NGC ID# 26F5, PCGS# 9141

- 7028 1908 No Motto MS65 NGC.** Short Rays obverse. A lustrous sun-gold Gem type coin. Dynamic luster invigorates well preserved surfaces. The strike is bold except for minor blending on the breast feathers and other high points. NGC ID# 26F6, PCGS# 9142

- 7029 1908 No Motto MS65 PCGS.** Short Rays obverse. A lovely example with soft, frosty yellow-gold luster, exhibiting delicate rose and blue toning highlights on each side. A nice strike adds to the eye appeal. NGC ID# 26F6, PCGS# 9142

- 7030 1908 No Motto MS65 PCGS.** Long Rays obverse. A frosty and highly lustrous example of the two-year No Motto type with brilliant yellow-gold surfaces and excellent eye appeal. Faint traces of delicate blue toning appear on the reverse. NGC ID# 26F6, PCGS# 9142

- 7031 1908 No Motto MS65 PCGS.** Short Rays obverse. A typical strike shows excellent detail, save for slight facial weakness on the obverse. The surfaces of this yellow-gold Gem display vivid green and delicate rose overtones on each side. NGC ID# 26F6, PCGS# 9142

- 7032 1908 No Motto MS65 PCGS.** Long Rays obverse. A green-gold Gem with dynamic luster and a sharp strike. A loupe locates minor marks, but none challenge the third party grade. A two-year type coin. NGC ID# 26F6, PCGS# 9142

- 7033 1908 No Motto MS65 PCGS.** Long Rays obverse. Apple-green and orange-red compete for territory across this lustrous and boldly struck type coin. Moderate grazes are distributed but no marks merit individual mention. NGC ID# 26F6, PCGS# 9142

- 7034 1908 No Motto, Wells Fargo Nevada MS66 PCGS. Ex: Wells Fargo Nevada Gold.** Discovered in the 1990s, examples from the Wells Fargo hoard are among the most eye-appealing and well-preserved No Motto Saint-Gaudens double eagles. The present Premium Gem representative displays both a sharp strike and strong, lightly frosted luster. Housed in an old green label holder. NGC ID# 26F6, PCGS# 9142

- 7035 1908 No Motto MS66+ PCGS.** Long Rays obverse. An incredible 1908 No Motto double eagle, and rarely seen finer, as PCGS has only certified 73 better pieces (3/14). This frosty example has a bold strike and pristine surfaces with brilliant yellow luster and exceptional eye appeal. NGC ID# 26F6, PCGS# 9142

- 7036 1908 No Motto MS66+ PCGS.** One of the most available and visually appealing issues in the entire series, ideal for No Motto type representation. The present Plus-graded example displays deep orange and vibrant yellow-gold luster, with highly frosted surfaces. Bold definition in the devices adds to the eye appeal of this beautifully preserved Premium Gem. NGC ID# 26F6, PCGS# 9142

7037 1908 No Motto, Wells Fargo Nevada MS66 NGC. Ex: Wells Fargo Nevada Gold. The Wells Fargo hoard brought to the market thousands of nearly pristine 1908 No Motto double eagles, much to the delight of collectors. This Premium Gem representative displays glowing orange-gold luster and excellent preservation. Some lightness of strike is noted on the figure of Liberty. PCGS# 99142

7038 1908 No Motto, Wells Fargo Nevada MS66 NGC. Ex: Wells Fargo Nevada Gold. Softly lustrous, medium orange-gold surfaces reveal only a handful of faint, inconsequential grazes on this Premium Gem. Well-struck with generous eye appeal. PCGS# 99142

7039 1908 No Motto, Wells Fargo Nevada MS66 NGC. Ex: Wells Fargo Nevada Gold. The Premium Gem level for the Wells Fargo Hoard coins is the "Goldilocks" grade for many collectors, "just right" in showing the top-notch typical eye appeal of the hoard without being overly costly. This example offers great orange-gold color, bold luster, and minimal marks consistent with the grade. PCGS# 99142

7040 1908 No Motto, Wells Fargo Nevada MS66 PCGS. Short Rays Obverse. Apricot-gold and olive-green hues embrace this lustrous high grade type coin. Minor marks near the right (facing) arm are all that limit the grade. From the famous Wells Fargo hoard, dispersed during the 1990s. Certified in a green label holder. PCGS# 99142

7041 1908 No Motto, Wells Fargo Nevada MS66 PCGS. Short Rays Obverse. This lustrous Premium Gem specimen hails from the famous "Wells Fargo" hoard, the source of many high-grade No Motto type coins. Rich pumpkin-gold color, along with a few rose highlights on the central reverse, provides this sharply struck piece with lovely eye appeal. PCGS# 99142

7042 1908-D No Motto MS64 PCGS. A well-struck, satiny example of this No Motto type, with medium green-gold patina over both sides. Only a few minor surface abrasions preclude full Gem status. NGC ID# 26F7, PCGS# 9143

**1908-D No Motto Twenty, MS65
Beautiful Peach-Gold Example**

7043 1908-D No Motto MS65 PCGS. Long Rays Obverse. The 1908-D No Motto twenty appears occasionally in Gem condition, but any example graded finer is a noteworthy rarity: The Dr. and Mrs. Stephen Duckor Collection example was an MS66 PCGS-CAC example that brought \$25,300 in our FUN Signature (Heritage, 1/2012), lot 4604. This Gem offers much of the charm of that example at a more favorable price (we expect), beautiful peach-gold surfaces beaming with luster, boldly struck, and with few marks of any import. PCGS has seen only 10 submissions numerically finer (3/14).
From The Northern Lights Collection. NGC ID# 26F7, PCGS# 9143

7044 1908 Motto MS63 PCGS. Lightly frosted luster coats both sides of this well-detailed Saint-Gaudens double eagle. The reverse is primarily yellow-gold, while the obverse exhibits deep orange-gold overall. Some scattered abrasions are present, but none are particularly notable. NGC ID# 26F8, PCGS# 9147

**1908 Saint-Gaudens Twenty, MS65
Conditionally Rare, Scarce Any Finer**

7045 1908 Motto MS65 PCGS. Deep golden-orange color and rich luster provide this Gem with exceptional eye appeal. Closer examination reveals hues of peach and red as well. A sharp strike is an additional attribute this piece possesses. The 1908 Motto double eagle issue consisted of a rather low mintage of 156,258 coins, with few survivors found in the higher levels of Mint State. Population: 62 in 65, 12 finer (2/14).
From The Northern Lights Collection. NGC ID# 26F8, PCGS# 9147

7046 1908-D Motto MS64 PCGS. This early Denver-issued double eagle displays vibrant orange-gold color intermixed with lightly frosted yellow-gold mint luster on both sides. The well-preserved surfaces exhibit a sharp strike, with the most intricate details brought up. A pleasing near-Gem example. NGC ID# 26F9, PCGS# 9148

**1908-D Motto Double Eagle, MS65
Pleasing Denver Mint Example**

7047 1908-D Motto MS65 PCGS. Potent luster and consistent straw-gold iridescence ensures the originality of this pleasing Denver Mint Gem. The obverse has surprisingly minimal contact, and reverse marks are moderate and concealed within the plumage. Boldly struck, and very difficult to acquire any finer.
Ex: Baltimore ANA Signature (Heritage, July-August/2008), lot 3396. NGC ID# 26F9, PCGS# 9148

**1908-S Double Eagle, XF40
In-Demand Low-Mintage Issue**

7048 1908-S XF40 NGC. The memorably small mintage of 22,000 pieces puts the 1908-S puts it as the absolute lowest-mintage of the regular issues, and it is hotly pursued in all grades. This yellow-gold example shows some luster remaining on surfaces with the expected amount of wear, but there are no singular marks to detract from the considerable eye appeal. NGC ID# 26FA, PCGS# 9149

- 7049 1908-S — Improperly Cleaned — NGC Details. AU.** A low-mintage issue, only 22,000 coins produced. This example exhibits signs of very light cleaning, with ample mint luster remaining overall. Sharply struck, with only slight friction evident over the high points, and few noticeable surface abrasions.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26FA, PCGS# 9149

Choice AU 1908-S Saint-Gaudens

- 7050 1908-S AU55 NGC.** The 1908-S has the lowest mintage of the Arabic Numerals type, despite the then traditional status of the San Francisco Mint as a high volume producer of double eagles. Only 22,000 pieces were struck, and most went into circulation, since the typical example shows light wear on Liberty's chest and raised knee, as does the present coin. Satiny and attractive with minor contact on the eagle. NGC ID# 26FA, PCGS# 9149

- 7051 1909 MS63 PCGS.** The 1909/8 overdate and its nonoverdate 1909 counterpart are just about equally rare, but the 1909 is underrated in higher grades. This Select example offers golden-orange and lemon-yellow lustrous surfaces with a scattering of light marks. NGC ID# 26FB, PCGS# 9150

- 7052 1909 MS63 PCGS. CAC.** A peach-gold representative with exemplary color and surfaces for the MS63 level. The strike is sharp throughout. A low mintage date, especially given that nearly half of the issue is the 1909/8 overdate. Housed in a green label holder. NGC ID# 26FB, PCGS# 9150

1909 Double Eagle, A Great MS64+

- 7053 1909 MS64+ PCGS.** The 1909 is one of the most underrated issues in the Saint-Gaudens double eagle series at or above the near-Gem level. Indeed, one might cast some suspicion at the PCGS data having 235 pieces certified in this level of preservation; a number of these are likely resubmitted coins hoping for Gem classification (3/14). Nevertheless, MS64 is the highest grade that most collectors can hope to acquire as finer specimens are very rare.

The outstanding attribute of this high-end near Gem is the strike. Liberty's facial features, fingers, and gown lines are bold, as are the panes of the Capitol building and the eagle's plumage. Additionally, the mint luster is highly attractive and the yellow-gold surfaces reveal just a few minuscule marks that barely prevent Gem classification. This is a great coin in all respects. NGC ID# 26FB, PCGS# 9150

- 7054 1909/8 AU53 PCGS. FS-301.** The high points are olive-green but orange-tinged luster resides in design recesses. No marks are remotely consequential. A collector example of this scarce and obvious overdate, the most prominent of the double eagle denomination. NGC ID# 26FC, PCGS# 9151

- 7055 1909-S MS64 PCGS.** A satiny near-Gem, this S-Mint double eagle exhibits brilliant orange toning on its lustrous yellow-gold surfaces, with faint bluish overtones. A splendid specimen. NGC ID# 26FE, PCGS# 9153

- 7056 1909-S MS64+ PCGS.** A sharply struck specimen, this high-end near-Gem also displays attractive yellow-gold color and a pleasing degree of luster. Although double eagles were struck at all three U.S. Mint locations in 1909, the mintages were low in Philadelphia and Denver, leaving the San Francisco pieces as the more readily collectible examples. NGC ID# 26FE, PCGS# 9153

- 7057 1909-S MS64 NGC. CAC.** A lovely Choice Mint State piece with bold design motifs, this example has frosty yellow-gold surfaces and brilliant luster, with minimal marks as the grade suggests. NGC ID# 26FE, PCGS# 9153

- 7058 1909-S MS64+ PCGS. CAC.** This CAC-approved Saint-Gaudens double eagle displays warm yellow-gold mint luster overall, yielding pleasing eye appeal. The strike is sharp, with good definition in the eagle's feathers, stars, and Liberty's gown folds. No significant abrasions are present on this Plus-graded near-Gem. NGC ID# 26FE, PCGS# 9153

- 7059 1910 MS64+ PCGS. CAC.** Apricot-gold color and appealing luster provide this high-end near-Gem with strong eye appeal. The strike is sharp overall, with minor incompleteness of the Capitol building. A few tiny alloy spots are present. The number of certified examples drops drastically at the Gem level, adding to the appeal of MS64+ specimens. NGC ID# 26FF, PCGS# 9154

1910 Saint-Gaudens Twenty, MS65 Rare Any Finer

- 7060 1910 MS65 PCGS.** Flowing cartwheel luster worthy of any Morgan dollar is the hallmark of this 1910 twenty, an issue that is a condition rarity in any finer grade. This piece is sharply struck with frosty wheat-gold surfaces and top-notch eye appeal. PCGS has seen only four in MS66, including the ex: Duckor MS66+ example (3/14).
From The Northern Lights Collection. NGC ID# 26FF, PCGS# 9154

1910 Twenty Dollar, MS65 Glorious Cartwheel Luster

- 7061 1910 MS65 PCGS.** The 1910 Philadelphia double eagle is the most available of the Saint-Gaudens P-mints from 1908-1915, common in MS64 and only slightly elusive in the Gem condition of the present piece. Anything finer, however — in MS66, or even MS65+ for that matter — is a notable rarity. This MS65 PCGS example displays glorious cartwheel luster over reddish-gold surfaces with greenish-gold tinges and bold eye appeal. An extremely nice coin. Population: 2 in 65+, 4 finer (3/14). NGC ID# 26FF, PCGS# 9154

**1910-D Double Eagle, MS65+
Scarce Issue in Higher Grades**

- 7062 1910-D MS65+ NGC.** The 1910-D Saint-Gaudens double eagle claims a nominal mintage of 429,000 pieces and the issue is not too difficult to locate in Gem condition. It does become scarce in higher grades, however, making this high-end Gem a good balance of quality and value. This piece is sharply detailed and lustrous, with well-preserved yellow-gold surfaces. NGC ID# 26FG, PCGS# 9155

**1910-D Double Eagle, MS65
Vibrant Mint Luster**

- 7063 1910-D MS65 PCGS. CAC.** A halo of rich orange-gold surrounds vibrant yellow-gold centers on this Gem D-mint double eagle. Only a few insignificant grazes disturb thick, frosty luster over both sides. The design elements are sharply detailed and the overall visual appeal is excellent. Scarcely seen finer and a great opportunity for the prudent type specialist. NGC ID# 26FG, PCGS# 9155

**1910-D Saint-Gaudens Twenty, MS65+
Strong Strike, High-End Appeal**

- 7064 1910-D MS65+ NGC. CAC.** Lustrous honey-gold surfaces are among the attributes this coin possesses. A high-end Gem, this piece also exhibits a strong strike, including the Capitol building, and minimal abrasions. The certified population drops considerably at the Premium Gem level, adding to the appeal of MS65+ examples. Census: 5 in 65+, 50 finer (3/14). NGC ID# 26FG, PCGS# 9155

- 7065 1910-S MS64 NGC.** Satiny, pale rose-gold luster blankets both sides of this near-Gem representative, delivering a high degree of eye appeal. Sharply defined details complement surfaces that are virtually free of any significant abrasions. NGC ID# 26FH, PCGS# 9156

**1910-S Double Eagle, Frosty MS65
Seldom Seen Finer**

- 7066 1910-S MS65 PCGS.** The 1910-S is a well-produced early mintmarked Saint-Gaudens issue, but one seldom found above the Gem grade of the current PCGS example. Frosty greenish-gold surfaces emit full cartwheel luster and show top-notch eye appeal. PCGS has seen only nine submissions in numerically finer grades (3/14).
From The Northern Lights Collection. NGC ID# 26FH, PCGS# 9156

- 7067 1911 MS63 PCGS.** An exceptional Select Mint State example of the low-mintage 1911 Philadelphia issue, this piece has frosty yellow luster with faint pinkish color on the eagle. NGC ID# 26FJ, PCGS# 9157

- 7068 1911-D MS65 NGC.** An impressive Gem, this Denver Mint double eagle is a nice representative of the Saint-Gaudens design. Both sides have bold design motifs with frosty lemon-yellow luster. NGC ID# 26FK, PCGS# 9158

- 7069 1911-D MS65 PCGS.** This sharply defined Gem has a few trivial marks of no consequence on its honey-gold surfaces. Both sides are highly lustrous with excellent eye appeal. NGC ID# 26FK, PCGS# 9158

- 7070 1911-D MS65 NGC.** Pristine surfaces exhibit trivial marks on this frosty yellow double eagle. Brilliant luster and bold details enhance the eye appeal. NGC ID# 26FK, PCGS# 9158

- 7071 1911-D MS65 PCGS.** This lustrous straw-gold Saint-Gaudens twenty has hints of light green at the borders. The strike is bold and marks are minimal. An exceptional example. NGC ID# 26FK, PCGS# 9158

- 7072 1911-D MS65+ NGC.** This Plus-designated Gem has a bold strike with a few scattered marks that prevent a higher numeric assessment. This piece has frosty yellow-gold luster with excellent eye appeal. NGC ID# 26FK, PCGS# 9158

- 7073 1911-D MS66 NGC.** Near-pristine surfaces display copious luster over orange-gold centers bounded by jade accents near the rims. Excellent eye appeal for the grade, and seldom seen finer. NGC ID# 26FK, PCGS# 9158

**1911-D Double Eagle, MS66+
Stunning Eye Appeal**

7074 1911-D MS66+ PCGS. A stunning Premium Gem that borders on the Superb, this example has frosty yellow-gold luster with delicate rose and blue overtones. Both sides exhibit full design definition with incredible eye appeal. This is one of only eight MS66 examples awarded the PCGS Plus designation, with only seven finer pieces (3/14). NGC ID# 26FK, PCGS# 9158

7075 1911-D MS66 NGC. CAC. An outstanding Premium Gem, with only 35 finer examples residing in NGC holders, and just seven finer PCGS examples (3/14). This frosty and brilliant example has rich orange-gold luster with bold design definition. NGC ID# 26FK, PCGS# 9158

**1911-D/D Double Eagle RPM, FS-501, MS66
Lustrous and Sharply Struck**

7076 1911-D/D MS66 NGC. FS-501. A secondary D mintmark is evident east of the primary D. Vibrant luster radiates from the peach-gold surfaces of this Premium Gem. The design elements are sharply struck, including Liberty's fingers, the panes on the Capitol building, and the eagle's plumage. Nicely preserved throughout. Census: 37 in 66 (1 in 66+, 1 in 66 ★), 2 finer (3/14). PCGS# 145010

**1911-D/D RPM FS-501, MS66
Impressive High-Grade Example**

7077 1911-D/D MS66 PCGS. CAC. FS-501. The mintmark is dramatically repunched to the east, and discernible as such with the unaided eye. An impressive Premium Gem example with well-struck design elements and lovely, softly frosted mint luster. Under low magnification, the surfaces display mattelike fields and are nearly mark-free on both sides of the coin. Population: 37 in 66 (1 in 66+), 0 finer (3/14). PCGS# 145010

7078 1911-S MS64 NGC. A fully struck near-Gem example of this early S-mint Saint-Gaudens double eagle. Deep yellow-gold frost covers both sides, with deeper orange-gold overtones on the obverse. The surfaces show minimal abrasions, with largely uninterrupted luster. NGC ID# 26FL, PCGS# 9159

**1911-S Double Eagle, MS65
Rare Above the Gem Grade**

7079 1911-S MS65 PCGS. A strong strike, frosty luster, and caramel-gold color contribute to the attractiveness of this Gem. Very few marks and grazes are present. The certified population drops drastically above the MS65 level, with PCGS having awarded higher numeric grades to only 30 examples (3/14). *From The Northern Lights Collection.* NGC ID# 26FL, PCGS# 9159

**1911-S Saint-Gaudens Twenty, MS65
Sharply Detailed and Lustrous**

7080 1911-S MS65 PCGS. CAC. The 1911-S Saint-Gaudens double eagle is relatively available in Mint State, due to its presence in a hoard found in El Salvador in 1983. This impressive Gem exhibits sharply detailed design elements and vibrant mint luster, with light orange-gold surfaces that show no mentionable distractions. PCGS has graded 30 numerically finer examples (3/14). NGC ID# 26FL, PCGS# 9159

1911-S Twenty Dollar, MS65
Attractive, Orange-Gold Brilliance

- 7081 1911-S MS65 PCGS. CAC.** Highly attractive with brilliant, orange-gold luster and frosty surfaces. A few tiny bagmarks are present on each side, but they are of little significance. This is a relatively plentiful issue for a mintmarked Saint, even in sharply struck Gem MS65 grade. David Akers mentioned a 1983 Central America hoard that included several Gem-quality examples of this San Francisco date.

Ex: Dallas Signature (Heritage, 7/2006), lot 1988. NGC ID# 26FL, PCGS# 9159

- 7082 1913-D MS64 PCGS.** Rich color, in hues of gold, orange, apricot, and ice-lavender, provides this near-Gem representative with a nice appearance. Though not fully struck, the design elements reveal a pleasing degree of design detail. NGC ID# 26FP, PCGS# 9162

1913-S Twenty Dollar, MS62
Well Struck and Lustrous

- 7083 1913-S MS62 NGC.** This is not a rare issue, despite the tiny mintage of 34,000 coins. Mint bags may have been returned to the U.S. from Europe or South America, after the great gold meltings of Franklin D. Roosevelt. A lustrous yellow-gold example with excellent strike definition on Liberty's hands and hair tresses, and on the Capitol building. The reverse only displays a couple of trivial abrasions, while chatter marks are peppered across the upper half of the obverse.

From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26FR, PCGS# 9163

1913-S Double Eagle, MS64
Low-Mintage S-Mint Issue

- 7084 1913-S MS64 PCGS.** With a production of only 34,000 pieces, the 1913-S double eagle is rarely encountered at the Gem grade level, with just 24 coins so-graded at PCGS (3/14), some of which are likely resubmissions. This near-Gem example delivers excellent visual appeal with deep orange-gold mint frost over most of each side. Only light surface grazes limit the grade, and the design elements are sharply struck.

Ex: FUN Signature (Heritage, 7/2007), lot 3212. NGC ID# 26FR, PCGS# 9163

1913-S Saint-Gaudens Double Eagle, MS64
Pleasing Example of this Low-Mintage Issue

- 7085 1913-S MS64 PCGS.** Despite its tiny mintage of 34,000 coins, this issue is relatively available up to and including the current MS64 grade level. This is a lovely yellow-gold example with bold strike definition and radiant mint luster. Two or three grade-limiting marks are noted on the reverse, where they are well hidden within the eagle's wing feathers. NGC ID# 26FR, PCGS# 9163

1913-S Double Eagle, MS64
Impressive and Lustrous Example

- 7086 1913-S MS64 PCGS.** The 1913-S Saint-Gaudens double eagle is always popular because of its low reported mintage of just 34,000 pieces. This impressive Choice example exhibits well-detailed design elements, with a touch of the often-seen softness on the lower left obverse. The well-preserved orange-gold surfaces are brightly lustrous. PCGS has graded 24 numerically finer examples (12/13). NGC ID# 26FR, PCGS# 9163

Attractive 1913-S Double Eagle, MS64

7087 1913-S MS64 NGC. Choice Mint State examples of this date represent the finest quality that remains at affordable levels, as Gem specimens are great condition rarities; NGC and PCGS have graded just 32 such coins between them (3/14). This shining yellow-gold piece is well struck and minimally marked with occasional orange accents near the margins. NGC ID# 26FR, PCGS# 9163

7088 1914 MS62 NGC. An important issue from a sub-100,000 coin mintage, this Select Mint State piece has lustrous honey-gold surfaces with scattered grade-consistent marks. NGC ID# 26FS, PCGS# 9164

7089 1914 MS62 PCGS. CAC. Sea-green and peach toning alternates across lustrous and nicely struck surfaces. Tiny marks are prevalent but none singularly distract. A lower mintage Philadelphia issue, yet collectible in Uncirculated quality. Housed in a green label holder. NGC ID# 26FS, PCGS# 9164

**1914 Twenty Dollar, MS64+
Elusive Any Finer**

7090 1914 MS64+ PCGS. With a small production of 95,200 pieces — the lowest of the series for any Philadelphia Mint issue — the 1914 double eagle mintage generally avoided wholesale melting and export. As a result, examples are available through MS64, but few are found any finer. This borderline Gem example is at the top of its grade range, as indicated by the PCGS Plus designation. The apricot-gold surfaces are brightly lustrous with olive-gold overtones and a bold (but not full) strike. A handful of small abrasions are the grade-limiting factors, but the eye appeal is excellent. NGC ID# 26FS, PCGS# 9164

**1914-D Saint-Gaudens Twenty, MS65+
Sharp Strike, Appealing Surfaces**

7091 1914-D MS65+ PCGS. CAC. A typically well-produced double eagle from the Denver Mint, this gleaming twenty is particularly appealing with virtually no obverse abrasions (and very few on the reverse) to spoil the bold strike and yellow-gold patina. Swirling luster displays lime-green and rose-gold accents. This is one of the best choices for type in the Saint-Gaudens series given its frequent availability in Gem or finer grades. This exact coin is an exceptional candidate, having earned the Plus designation from PCGS for high-end quality and CAC-Approval as well. NGC ID# 26FT, PCGS# 9165

7092 1914-S MS65 NGC. This boldly defined Gem exhibits brilliant orange-gold luster with minimal surface marks. A highly appealing example of the plentiful issue. NGC ID# 26FU, PCGS# 9166

7093 1914-S MS65 PCGS. Although this is a common issue in Mint State, the population drops dramatically above the MS65 level. This Gem displays a strong level of design detail. Hues of yellow-gold, peach, and rose are present. The coin exhibits a pleasing degree of luster, adding to the appeal. NGC ID# 26FU, PCGS# 9166

7094 1914-S MS65 PCGS. This highly lustrous Gem exhibits exceptional eye appeal. Both sides have brilliant yellow luster with frosty surfaces and minuscule marks. NGC ID# 26FU, PCGS# 9166

7095 1914-S MS65+ NGC. The surfaces combine shades of gold, with both sides displaying honey-gold and light yellow-gold. Both sides have a strong strike and trivial marks on the brilliant surfaces. NGC ID# 26FU, PCGS# 9166

**1914-S Twenty Dollar, MS66
Sharp Strike, Superior Luster**

7096 1914-S MS66 PCGS. A single, tiny copper spot nestled among the rays beneath the eagle's head is the only mentionable mark on this vibrantly beautiful Saint-Gaudens twenty. Vivid luster prevails over smooth, unmarked surfaces. The bold devices show only inconsequential blending where mint frost is strongest, and the orange patina displays red-gold accents among olive highlights. Just one example is graded numerically higher than the Premium Gem level by either service, meaning this MS66 is among the finest available for type or date collectors (2/14). NGC ID# 26FU, PCGS# 9166

1914-S Twenty Dollar, MS66
Rich, Frosty Luster and Minimal Marks

7097 1914-S MS66 NGC. The 1914-S and 1915-S double eagles have reputations for excellent luster but frequent bagmarks. This Premium Gem 1914-S earns a superlative rating on both counts, deep, rich cartwheel luster on reddish-orange surfaces with thick mint frost and no distracting contact marks. A great-looking coin. NGC ID# 26FU, PCGS# 9166

7098 1915 MS62 NGC. This lower mintage Philadelphia double eagle has vibrant luster and the expected number of obverse field grazes. The yellow-gold surfaces display a few marks on the reverse rays. Ex: *Long Beach Signature* (Heritage, 9/2006), lot 4621. NGC ID# 26FV, PCGS# 9167

7099 1915-S MS65 NGC. An impressive Gem, this 1915-S has the typical stippled fields that are seen on nearly all survivors. Both sides have rich and brilliant yellow luster with delicate orange overtones. NGC ID# 26FW, PCGS# 9168

1915-S Double Eagle, MS66
Exceptional for Type

7100 1915-S MS66 PCGS. While surprisingly easy to find in Gem and finer conditions, this issue screeches to a halt on the grading ladder with just one numerically finer example certified finer than MS66 by either service (2/14). This brightly lustrous Premium Gem must rank high among its elite companions — not only for its eye appeal, but for technical quality as well. A bold strike complements nearly unmarked surfaces and enhances a sumptuous, orange-gold sheen. NGC ID# 26FW, PCGS# 9168

7101 1916-S MS64 PCGS. The sun-gold surfaces of this near-Gem reveal the subdued luster this issue is known for. Splashes of peach appear on this well-struck coin exhibiting only minor incompleteness. Scattered marks and grazes held this lovely example from a higher grade. NGC ID# 26FX, PCGS# 9169

1916-S Saint-Gaudens Twenty, MS65
Attractive, Pleasingly Toned Example

7102 1916-S MS65 PCGS. The 1915-S and 1916-S are two midseries issues that — a serendipity for collectors — can occasionally be found in MS65 and even finer grades. This Gem 1916-S offers bold cartwheel luster with attractive yellow-gold surfaces turning orange-gold on the lower obverse. Daubs of mint-green appear on the reverse, and the high-point abrasions are mostly trivial, except for some on Liberty's legs. Ex: *Milwaukee Central States* (Heritage, April-May 2010), lot 4034; *Long Beach Signature* (Heritage, 9/2010), lot 5763. NGC ID# 26FX, PCGS# 9169

1920 Double Eagle, MS64
Akers: 'Condition-Dependent Rarity'

7103 1920 MS64 PCGS. This lovely yellow-orange representative displays a single cherry-red copper spot below the eagle's neck. This well-struck piece displays a handful of grade-defining abrasions on the lustrous obverse, including one at the knee. The 1920 has a reputation as a noted rarity in Gem condition, and this near-Gem reinforces the point. PCGS has seen but a single example numerically finer (3/14), the ex: Duckor Collection example, of which David Akers wrote, "The 1920 is the ultimate standard by which we judge a coin to be a 'condition rarity,' at least among the issues of the Saint-Gaudens double eagle series." Population: 29 in 64+, 1 finer (3/14). NGC ID# 26FY, PCGS# 9170

1920 Saint-Gaudens Twenty, MS64
Remarkably Attractive

7104 1920 MS64 PCGS. The conditional scarcity of this Philadelphia Mint issue is not remarkable at the current MS64 level; Gems, however, are exceedingly rare and virtually unobtainable. This near-Gem is remarkably attractive, showing lustrous wheat-gold surfaces that only have a few scattered marks. PCGS has graded exactly one Gem example higher than MS64 (3/14). NGC ID# 26FY, PCGS# 9170

7105 1922 MS64+ NGC. CAC. A high-end near-Gem representative, this piece exhibits a pleasing degree of design detail. The coin displays rich gold color along with hints of green-gold. Adding to the appeal, the few marks present are minuscule. NGC ID# 26G3, PCGS# 9173

1922 Saint-Gaudens Twenty, MS65
Conditionally Rare Any Finer

7106 1922 MS65 NGC. Vibrant pumpkin-gold color and rich luster provide this Gem with exceptional visual appeal. The strike is sharp overall, with areas of minor incompleteness present. The upper reverse reveals a die break. NGC and PCGS have each only awarded higher numeric grades to 8 examples (3/14). NGC ID# 26G3, PCGS# 9173

Gem 1922 Double Eagle
Rarely Encountered Finer

7107 1922 MS65 PCGS. Easily obtainable in lower grades, availability of the 1922 double eagle drops off sharply at the Gem grade level, and the date becomes truly rare numerically finer. Intermingled hues of green and orange-gold accent frosty mint luster over both sides of this piece. The strike is shallow, as is usually seen on this issue, though the surfaces are largely free of detracting faults and the visual appeal is excellent. PCGS has certified only eight numerically finer examples (3/14). NGC ID# 26G3, PCGS# 9173

1922 Twenty Dollar, MS65
Lovely, Impressive Representative

7108 1922 MS65 NGC. The outstanding eye appeal of this Philadelphia Mint Gem is ensured by the smooth, well-preserved surfaces and the solid, full strike definition over both sides. Satiny and impressive, with light orange-gold and rose toning, this piece would make a great representative for Gem type purposes. Premium Gems are rare and costly. NGC ID# 26G3, PCGS# 9173

1922 Saint-Gaudens Twenty, MS65
An Attractive Example for the Type Collector

7109 1922 MS65 PCGS. This high-mintage issue of 1.37 million pieces was well-produced, and surviving examples are relatively available at grades up to and including the current MS65 level. MS66 coins are rare, and well out of reach for the average collector. This Gem is boldly struck with shimmering luster and lovely light yellow-gold and rose coloration. NGC ID# 26G3, PCGS# 9173

Gem 1922 Twenty
Splendid Type Coin

7110 1922 MS65 NGC. Beaming luster runs over frosty peach-gold surfaces on this splendid Gem 1922 double eagle. The date is among the prototypical issues in the series for type purposes, and this sharply struck, virtually mark-free coin helps explain the reason for that status within the series. NGC has seen only eight submissions numerically finer, the same number as at PCGS (3/14). NGC ID# 26G3, PCGS# 9173

1922 Double Eagle, Sharply Struck MS65+

7111 1922 MS65+ PCGS. CAC. Enough of the coinage of 1922 double eagles exceeding 1.3 million pieces have survived in various hoards to make this issue one of the most plentiful in the Saint-Gaudens twenty dollar series. Several thousand pieces have been certified through MS65, after which the population drops precipitously. The two major grading services have seen just 16 examples finer (3/14). It is instructive to note that the present high-end Gem is one of just five specimens given the MS65+ designation by PCGS. Its lustrous surfaces exhibit sharply struck design features, including the panes and pillars of the Capitol building, the fingers on Liberty's hands, and the eagle's feather detail. Just a few marks shy of full Premium Gem. NGC ID# 26G3, PCGS# 9173

**1922-S Double Eagle, MS63
Lustrous, Beautifully Toned**

- 7112 1922-S MS63 PCGS.** Over the past few decades the discovery of several sizeable European hoards have transformed the '22-S into one of the more available mintmarked Saint-Gaudens double eagles from the 1920s. The striking details on this piece are fully brought up in all areas, and the bright yellow-gold surfaces show no objectionable marks on either side.
Ex: Dallas Signature (Heritage, 11/2007), lot 2546. NGC ID# 26G4, PCGS# 9174

**1922-S Saint-Gaudens Twenty, MS63
Popular Erstwhile Rarity**

- 7113 1922-S MS63 PCGS. CAC.** The 1922-S Saint-Gaudens double eagle was once a great rarity in the series, but some European and Central American hoards have increased the supply considerably over the years. This attractive yellow and rose-gold example offers pleasing lustrous surfaces, with a few minor contact marks on both sides, and well-detailed design elements with considerable eye appeal. NGC ID# 26G4, PCGS# 9174

**1923 Saint-Gaudens Twenty, MS65
Satiny, Nicely Preserved Example**

- 7114 1923 MS65 PCGS.** A satiny and undisturbed example, mostly light pumpkin-gold in color although an area of lime-green toning (from the copper alloy) is seen on the upper right obverse. Well-struck throughout except for minor softness on the initial left side stars. The Philadelphia Mint run between 1922 and 1928 is considered common, but the scarcity of the 1923 in Gem is underestimated by the non-specialist. Only three examples of this issue are graded finer than MS65, by PCGS (3/14).
Ex: Dallas Signature (Heritage, 12/2005), lot 2005; Denver Signature (Heritage, 8/2006), lot 2435. NGC ID# 26G5, PCGS# 9175

- 7115 1923-D MS65 PCGS.** Among the most eye-appealing issues in the series and ideal for type purposes. This Gem representative showcases beautifully preserved rose-gold surfaces and heavily frosted mint luster. The strike is razor-sharp, with even the most minuscule details well-defined. NGC ID# 26G6, PCGS# 9176

- 7116 1923-D MS65+ NGC.** A high-end Gem specimen, this piece exhibits appealing pumpkin-gold color and lovely luster. The design elements display a strong level of detail on this desirable piece. A die crack bisects the sun on the lower reverse.
From The Collection of Donald E. Bently, sold for the benefit of the Bently Foundation. NGC ID# 26G6, PCGS# 9176

- 7117 1923-D MS66 PCGS.** This coin exemplifies the general description of this issue as expressed by Jeff Garrett and Ron Guth, in their *Encyclopedia of U.S. Gold Coins*: "As most examples are boldly struck and show radiant luster, this date is often chosen to represent the type if just a single coin is desired."

This is a lovely piece with sharp design motifs and the bright luster mentioned by the authors. Apricot-gold coloration is complemented by faint lilac-gray accents near the centers, on each side. NGC ID# 26G6, PCGS# 9176

- 7118 1923-D MS66 PCGS.** Shimmering sun-gold surfaces with splashes of deep, vibrant yellow-gold provide this representative with a tremendous degree of visual allure. A thin diagonal toning streak crosses Liberty on the central obverse of this minimally marked coin. A few tiny flecks appear on each side, with the reverse revealing a translucent spot near the U in UNITED. NGC ID# 26G6, PCGS# 9176

- 7119 1923-D MS66 PCGS.** Flashy luster along with rich shades of yellow-gold and orange combine to provide this sharply struck Premium Gem specimen with outstanding eye appeal. A tiny as-made strike-through is present within the rays at right on the obverse. A few tiny spots appear on the reverse. PCGS has awarded higher numeric grades to only 66 examples (3/14). NGC ID# 26G6, PCGS# 9176

- 7120 1923-D MS66 PCGS.** Intermingled hues of gold and a pleasing degree of luster add to the eye appeal of this well-struck Premium Gem representative. The few scattered marks present are inconsequential. Only 66 examples have surpassed the MS66 level at PCGS (2/14). NGC ID# 26G6, PCGS# 9176

- 7121 1923-D MS66 PCGS.** Matte luster is present on this Premium Gem example displaying orange-gold color. A few thin wispy die cracks appear on the upper obverse, while a thicker crack is present on the lower reverse, bisecting the sun. A few scattered marks on the reverse pose little distraction, if any. NGC ID# 26G6, PCGS# 9176

- 7122 1923-D MS66 NGC.** Almond-gold color, frosty luster, and a pleasing degree of design definition are among the attributes this Premium Gem possesses. Areas of green-gold also appear. Very few marks and grazes are present, adding to the attractiveness. NGC ID# 26G6, PCGS# 9176

- 7123 1923-D MS66+ PCGS.** The population figures for this common date issue are impressively high at the MS66 grade level, at both services. This is a reflection of the high production quality of the date, which is popular for type purposes partly for that reason. At the more advanced level of "MS66+", however, the numbers drop drastically at PCGS, where a mere 31 pieces are currently represented, and just 66 coins are even finer at MS67 (3/14). This is a gorgeous example with splendid luster and pleasingly blended apricot-gold and silvery-lilac hues on each side. NGC ID# 26G6, PCGS# 9176

**1923-D Double Eagle, MS66
Top-Notch Mintmark Type Coin**

- 7124 1923-D MS66 PCGS. CAC.** The 1923-D double eagle has a well-earned reputation to be among the best-produced mintmarked entries in the entire Saint-Gaudens double eagle series. This peach-gold example in MS66 confirms the impression, well-struck with beaming luster, few marks of any consequence, and top-notch eye appeal.
From The Northern Lights Collection. NGC ID# 26G6, PCGS# 9176

**1923-D Twenty Dollar, MS66
Tremendous Eye Appeal**

- 7125 1923-D MS66 PCGS. CAC.** The 1923-D is one of the most common issues in the Saint-Gaudens double eagle series. PCGS and NGC have graded more than 14,000 examples, this large number resulting from overseas hoards, as well as a 1981-1982 hoard containing more than 1,000 pieces rumored to have come from the Virgil Brand estate. The 1923-D can be obtained with little difficulty through Premium Gem, after which the certified population declines significantly to a little over 100 pieces. Radiant luster emanates from the honey-gold surfaces of this MS66 specimen that exhibit sharply struck design features. This coin is just a few marks short of Superb Gem. Nevertheless, it yields tremendous eye appeal appropriately recognized by CAC. NGC ID# 26G6, PCGS# 9176

- 7126 1924 MS65 PCGS.** Strongly detailed, this Gem displays caramel-gold color with subtle hints of peach and orange present. Frosty luster and minimally abraded surfaces add to the desirability of this coin. A couple of tiny alloy spots appear above the eagle's head. NGC ID# 26G7, PCGS# 9177

- 7127 1924 MS65 PCGS.** Strong luster and splendid yellow-gold color combine to provide this Gem with wonderful eye appeal. The coin exhibits a sharp strike overall, with the Capital building exhibiting nice detail. A tiny alloy spot is present near the lower portion of Liberty's gown. NGC ID# 26G7, PCGS# 9177

- 7128 1924 MS65 PCGS.** Hues of gold, green, and peach are present on this Gem representative, with frosty luster adding to the attractiveness. The design elements exhibit a pleasing degree of detail. A few tiny flecks of as-made struck-in grease are present on the reverse. This would make a wonderful addition to a type set. NGC ID# 26G7, PCGS# 9177

- 7129 1924 MS66 PCGS.** This beautiful two-color coin features beaming luster over reddish-orange surfaces with greenish-gold field accents, a top-notch type coin with no mentionable distractions. The next grade level higher is quite elusive.
From The Northern Lights Collection. NGC ID# 26G7, PCGS# 9177

- 7130 1924 MS66 PCGS.** Several hues of yellow-gold and orange provide this piece with a nice appearance. Surviving examples of the 1924 twenty are plentiful, the most common date in the series, and are therefore an ideal type issue. NGC ID# 26G7, PCGS# 9177

- 7131 1924-D — Improperly Cleaned — NGC Details. AU.** Like several other branch mint issues from the 1920s, the 1924-D has a high mintage but is nonetheless scarce. Most of the 3,049,500 pieces never left Treasury vaults and were eventually melted. The present straw-gold example displays cartwheel luster and has minimal if any high point wear. Careful rotation reveals minor hairlines. NGC ID# 26G8, PCGS# 9178

- 7132 1924-D — Cleaned — ANACS. MS60 Details.** A victim of the 1930s gold recall, the 1924-D double eagle is not nearly as available as its mintage of more than 3 million coins suggests, especially in Mint State condition. This carefully cleaned, sharply struck representative retains substantial original mint luster and exhibits only a few insignificant surface abrasions. NGC ID# 26G8, PCGS# 9178

**1924-D Double Eagle, MS61
Popular and Scarce D-Mint Issue**

- 7133 1924-D MS61 NGC.** Though a number of scattered abrasions are present, as expected at this grade level, the attractive luster and strong yellow-gold color provide this example with lovely eye appeal. Portions of the designs reveal an incompleteness of strike, including the Capitol building. NGC ID# 26G8, PCGS# 9178

**1924-D Double Eagle, MS62+
Important Series Semikey**

- 7134 1924-D MS62+ PCGS.** The 1924-D is not as rare as was thought decades ago due to repatriations of various hordes, but it remains an important semikey in the series. This example shows beaming cartwheel luster on greenish-gold, well-struck surfaces that show a scattering of the expected marks, none overly severe. NGC ID# 26G8, PCGS# 9178

- 7135 1924-S—Rims Filed—ANACS. Unc. Details, Net MS60.** Nearly three million double eagles were struck at San Francisco in 1924, but only a minuscule portion of the mintage survived the Treasury melts of the 1930s. The reverse rim of this sharply detailed piece is lightly filed, most noticeably above UNITED, though the visual appeal is easily balanced by clean fields and vibrant mint luster. *Ex: Denver Signature (Heritage, 8/2006), lot 2459. NGC ID# 26G9, PCGS# 9179*

**1925-D Double Eagle, MS63
Notable Late-Series Entry**

- 7136 1925-D MS63 PCGS.** Not as rare as formerly (due to reimportations from overseas), the 1925-D remains an important entry in the series in the Select grade of the present coin. The eye appeal is grand on this reddish-orange PCGS-certified example, showing bounteous cartwheel luster with scattered contact marks and accents of greenish-gold. A few marks on Liberty's midsection and torso account for the grade. *NGC ID# 26GB, PCGS# 9181*

1925-S Saint-Gaudens Twenty, MS62

- 7137 1925-S MS62 NGC.** Although struck in formidable quantity, the 1925-S had the same fate as all other San Francisco issues from the Roaring Twenties. The coins were mostly held back by the Treasury and eventually melted after Roosevelt's 1933 gold recall. The 1925-S is more available in circulated grades than in Mint State, presumably due to a small local release. But the present lustrous yellow-gold example is unworn and surprisingly void of consequential marks. *NGC ID# 26GC, PCGS# 9182*

- 7138 1926 MS66 PCGS.** Vibrant orange-gold luster surrounds frosty yellow-gold centers on this Premium Gem type coin. The design elements are fully struck, with the most minuscule details well-defined. Well-preserved, with no detracting abrasions present. PCGS has graded just four numerically finer examples (2/14). *NGC ID# 26GD, PCGS# 9183*

**1926-S Double Eagle, MS60
Upper-End for the Grade**

- 7139 1926-S MS60 ANACS.** This 1926-S double eagle displays bright, softly frosted surfaces, with apricot-gold patina overall. The design elements are generally well-defined, though Liberty's toes and the Capitol building are somewhat soft. Several light contact marks are visible on the obverse, though the surfaces remain remarkably clean for the grade. A pleasing example of this San Francisco issue. *Ex: Long Beach Signature (Heritage, 6/2006), lot 4173. NGC ID# 26GF, PCGS# 9185*

- 7140 1927 MS65 PCGS.** A beautifully preserved Gem type coin. Lightly frosted green-gold luster blankets both sides of this sharply struck representative. Close examination reveals only a few minuscule surface imperfections, with overall outstanding eye appeal. *NGC ID# 26GG, PCGS# 9186*

- 7141 1927 MS65 NGC.** An easily obtainable and eye-appealing issue, popular among type collectors. The present representative is beautifully preserved with only a few minuscule abrasions detectable under magnification. Warm orange-gold luster covers both sides, with lightly frosted surfaces. A fully struck Gem example. *NGC ID# 26GG, PCGS# 9186*

- 7142 1927 MS65 NGC.** Lime-green highlights appear when the coin is rotated under light, the result of vibrant mint luster that emanates from the smooth, frosted surfaces of this Gem double eagle. Boldly struck and attractive, this radiant, medium-gold example offers outstanding eye appeal, making the coin a perfect type selection. *NGC ID# 26GG, PCGS# 9186*

- 7143 1927 MS65 NGC.** From one of the most available dates in the series, this Gem example would make a superb choice for a type collection. Lustrous and sharply struck on Liberty's head and fingers, as well as on the feathers of the eagle's belly. A lovely and impressive Saint-Gaudens double eagle. *NGC ID# 26GG, PCGS# 9186*

- 7144 1927 MS65+ NGC.** Cartwheel patina and frosty luster over the well-preserved and well-struck surfaces make this orange-gold MS65+ 1927 double eagle an extremely desirable example of this type coin issue. *From The Northern Lights Collection. NGC ID# 26GG, PCGS# 9186*

- 7145 1927 MS66 PCGS.** Heavily frosted green-gold luster adorns both sides of this high-end Premium Gem. Close examination reveals only a few faint, unobtrusive grazes, while the strike is outstanding. PCGS has certified just 14 numerically finer examples (3/14). *NGC ID# 26GG, PCGS# 9186*

- 7146 1927 MS66 PCGS.** No marks of any consequence appear on either side of this frosty, well-struck Premium Gem, showing predominantly reddish-orange coloration with a slight accent of greenish-gold in the upper-left obverse field. *From The Northern Lights Collection. NGC ID# 26GG, PCGS# 9186*

- 7147 1927 MS66 NGC.** Among the most well-made and attractive issues in the series, ideal for type purposes. This Premium Gem representative showcases vibrant orange-gold luster with pale rose-gold accents. The design elements are fully struck in every respect, with well-preserved, frosty surfaces adding to this coin's visual appeal. *NGC ID# 26GG, PCGS# 9186*

- 7148 1927 MS66 PCGS.** Shimmering rich yellow-gold surfaces provide this Premium Gem specimen with tremendous visual appeal. Minimally marked surfaces are among the additional attributes this coin possesses. Only 14 examples have achieved higher numeric grades from PCGS (2/14). NGC ID# 26GG, PCGS# 9186
- 7149 1927 MS66 PCGS.** Displaying a pleasing degree of design detail, this attractive specimen exhibits cartwheel luster and lovely yellow-gold color along with a few peach highlights. The obverse reveals two light orange alloy spots. Surviving examples are very scarce above the Premium Gem level. NGC ID# 26GG, PCGS# 9186
- 7150 1927 MS66 PCGS.** An attractive example with unusually clean surfaces and lovely, light coloration. Highly lustrous with great eye appeal. NGC ID# 26GG, PCGS# 9186
- 7151 1927 MS66 PCGS.** Intense mint luster and lovely light orange-gold coloration are attributes of this Premium Gem double eagle. From one of the most-favored issues for type purposes; this coin would make a fine choice. NGC ID# 26GG, PCGS# 9186
- 7152 1927 MS66 PCGS.** Gleaming mint luster and gorgeous deeper toning in shades of orange-gold and rose enhance the visual appeal of this carefully preserved example. Boldly struck and free of distractions. NGC ID# 26GG, PCGS# 9186
- 7153 1927 MS66 PCGS.** A stellar example of this readily available issue, one of the favorites for type specialists. Thick mint frost and beautiful yellow-gold toning appear on both sides. This coin features an unusual striking feature, with the reverse dies rotated clockwise by approximately thirty percent in relation to the obverse. NGC ID# 26GG, PCGS# 9186
- 7154 1927 MS66 PCGS.** A beautiful Premium Gem example of this popular type issue; one of the most easily available of the entire series. The clean surfaces are highly lustrous and minimally marked on both sides, and the strike definition is decent if not outstanding. NGC ID# 26GG, PCGS# 9186
- 7155 1927 MS66+ PCGS.** Vibrant mint bloom and virtually undisturbed surfaces deliver incredible visual appeal when tilted under a light. The frosty, yellow-gold luster highlights razor-sharp definition on the design elements, making this Plus-graded Premium Gem perfect for high-end type representation. PCGS has graded just 14 numerically finer specimens (3/14). NGC ID# 26GG, PCGS# 9186

**1927 Saint-Gaudens Twenty, MS66+
Beautiful High-Grade Type Representative**

- 7156 1927 MS66+ PCGS Secure. CAC.** A more attractive type representative than this coin might be difficult to find. Well-struck with resplendent luster and beautiful yellow-gold toning, imbued with lovely faint accents of rose. The surfaces are impressively preserved, with barely a mark to be found on either side. The high grade of this example is doubly confirmed by a "Secure" PCGS designation and CAC approval. NGC ID# 26GG, PCGS# 9186

**1927-S Double Eagle, AU Details
Rare San Francisco Date**

- 7157 1927-S — Altered Surfaces — PCGS Genuine. AU Details.** Some areas of high-point rub exist on this lustrous double eagle, as well as evidence of smoothing and surface enhancement on the obverse by Liberty's outstretched arm and elsewhere over the lustrous fields. At arm's length, the coin looks untroubled with luster remaining and pleasing, medium-gold color mingling with lime-green accents.

Areas of die deterioration appear near the rims on the reverse, as well as a few small radial die cracks near the eagle's wing tips. Formerly a notable rarity of the series until foreign holdings returned to the U.S., this is still a much better issue, always highly-sought — even in this hard-to-see impaired condition. NGC ID# 26GJ, PCGS# 9188

- 7158 1928 MS66 PCGS.** An incredible type representative, this Premium Gem double eagle showcases virtually undisturbed, heavily frosted mint bloom. Boldly struck design elements only add to the visual appeal of this beautiful coin. NGC ID# 26GK, PCGS# 9189
- 7159 1928 MS66 PCGS.** A coin with lovely visual appeal, this Premium Gem features lustrous butter-gold surfaces, with areas of orange at portions of the right side of the obverse. Though not fully struck, the level of design detail is pleasing on this attractive specimen. NGC ID# 26GK, PCGS# 9189
- 7160 1928 MS66 PCGS.** A Premium Gem representative from the highest-mintage double eagle issue in U.S. history, this coin reveals intermingled shades of light gold, peach, and orange. A few minor marks pose little distraction, if any. NGC ID# 26GK, PCGS# 9189

7161 1928 MS66 PCGS. This date had the highest mintage of any regular-issue gold coin, yet it is only the third or fourth most-common issue in the series. This example is well-struck with intense, radiant mint frost and beautiful yellow-gold toning. NGC ID# 26GK, PCGS# 9189

7162 1928 MS66 NGC. This is a Premium Gem of breathtaking beauty, produced by a combination of bold design details, intense shimmering luster, and variegated orange-gold, peach, and mint-green toning. Some tiny marks on the lower reverse field and a couple of minor abrasions just above Liberty's left (facing) knee preclude an even loftier grade designation. NGC ID# 26GK, PCGS# 9189

**1928 Twenty, MS66+
High-End Gold Type**

7163 1928 MS66+ PCGS. CAC. Less than 3% of the 1928 Premium Gem Saints seen by PCGS have qualified for the Plus designation, symbolic of high-end quality exceptional eye appeal. This example earned its Plus with clean, smooth surfaces, a bold strike, and wonderful orange-gold patination with lime-green and brilliant yellow highlights. An exceptional selection for type, and the last easily collectible late-date Saint. NGC ID# 26GK, PCGS# 9189

**1928 Saint-Gaudens Double Eagle, MS67
Beautiful, Impressive High-Grade Example**

7164 1928 MS67 PCGS. Many high-grade examples exist from this well-produced issue, although perhaps not as many as the massive mintage of 8.8 million coins might suggest. At the current Superb Gem level, however, even this common date becomes scarce and to date none have been rated any higher than MS67 by either of the major services.

This exceptional example combines splendid technical merit with outstanding visual appeal to leave no doubt that it is, indeed, a Superb specimen. A bold strike impression leaves clear details on each side, and sumptuous mint luster illuminates clean, well-preserved surfaces adorned by a beautiful mixture of mint-green and peach coloration. As implied by the grade, surface marks or flaws of any kind are absolutely minimal. Population: 77 in 67 (1 in 67+), 0 finer (3/14). NGC ID# 26GK, PCGS# 9189

TERRITORIAL GOLD

C. Bechtler Gold Dollar, AU50
Retrograde N, K-4, 28 G.

- 7165** (1837-42) C. Bechtler Dollar, N Reversed AU50 NGC. K-4, R.4. This apricot-gold Bechtler dollar is devoid of noticeable abrasions. Traces of luster linger within the letters. The strike is generally good, although the two stars are lightly brought up. Among the more available Bechtler varieties, famous for its inverted N in ONE. Listed on page 377 of the 2014 *Guide Book*. PCGS# 10055

(1837-42) C. Bechtler Gold Dollar, AU50
N Reversed, K-4 Variety

- 7166** (1837-42) C. Bechtler Dollar, N Reversed AU50 PCGS Secure. N Reversed, K-4, R.4. This lightly circulated Bechtler dollar shows the Reversed N in the denomination, identifying the scarce K-4 variety. The pleasing peach-gold surfaces show traces of prooflike reflectivity in sheltered areas. Listed on page 377 of the 2014 *Guide Book*. Population: 15 in 50, 58 finer (3/14). PCGS# 10055

C. Bechtler Gold Dollar, Choice AU
K-4, N Reversed, 28 G.

- 7167** (1837-42) C. Bechtler Dollar, N Reversed AU55 PCGS. K-4, R.4. A butter-gold Choice AU example of this popular Bechtler variety. The blundered N in ONE immediately attributes K-4. No marks are consequential and luster fills the legends. Outstanding quality for the designated grade. Listed on page 377 of the 2014 *Guide Book*. PCGS# 10055

- 7168** (1842-52) A. Bechtler Dollar, 27G. 21C., Plain Edge — Bent — PCGS Genuine. AU Details. This green-gold Bechtler type coin has minimal wear and exhibits substantial luster. The surfaces are original and display only moderate abrasions, but they are also somewhat wavy. Listed on page 378 of the 2014 *Guide Book*. PCGS# 10040

1853 Assay Office Twenty, AU53
K-18; Collectible, Semi-Official California Gold

- 7169** 1853 Assay Office Twenty Dollar, 900 Thous. AU55 NGC. K-18, R.2. Listed on page 384 of the 2014 *Guide Book*, the fineness is really 900/880 on the hub die with the underdigits clearly visible on this example. Manufactured on high-speed coinage presses comparable to those at the Philadelphia Mint, more than 2.5 million of the Assay Office twenties were produced. This About Uncirculated example is a boldly struck, olive-gold representative of the important, stop-gap twenty that helped bridge the months until the official San Francisco Mint opened and started production. PCGS# 10013

1854 Kellogg & Co., Twenty Dollar, AU50
Long Arrows, Kagin-2
Pleasing Olive-Gold Color

- 7170** 1854 Kellogg & Co. Twenty Dollar AU50 NGC. K-2, R.4. Operating contemporaneously with the newly-opened San Francisco Mint in 1854 and 1855, the twenty-dollar pieces from Kellogg & Co. often outnumbered double eagles produced by the Mint on a month-to-month basis. The private gold alleviated much of the financial turmoil caused by start-up at the new facility. This example is a boldly struck, long-arrows variety, with olive-green surfaces and reddish-gold accents providing a pleasing look of antique gold. A few small cuts on the obverse rim are possibly test cuts for fineness acquired during circulation. PCGS# 10222

S.S.C.A. RELIC GOLD MEDAL

- 7171** 1855 SSCA Relic Gold Medal "1855 Kellogg & Co. Fifty" Gem Proof PCGS. Struck on September 12, 2001, with a proof mintage for that date of 587 pieces. This 2.5-ounce round restrike from 2001 contains gold taken from ingots lost and later recovered from the wreck of the S.S. *Central America*. Bright yellow-gold surfaces. PCGS# 10358

CALIFORNIA FRACTIONAL GOLD

7172 1853 Liberty Round Fifty Cents, MS65 NGC. BG-430, R.3. Scarce. A Gem example of the third variety, round 1853 Liberty Head no initials gold half dollar by A. L. Nouizillet. Well-preserved and lustrous with deep orange-gold hues beneath reddish-gold tints on the obverse. Some minor weakness is noted at the central reverse. One of just two examples graded MS65 at NGC, with none finer (2/14). PCGS# 10466

7173 1854 Liberty Octagonal 1 Dollar, BG-510, Low R.5, MS62 PCGS. A very scarce Period One variety that circulated in Gold Rush commerce, since about two-thirds of the coins certified by PCGS are in grades below MS60. The present unblemished canary-gold example has pleasing field reflectivity and an even strike. Population: 9 in 62, 5 finer (3/14). PCGS# 10487

1855 Octagonal Gold Dollar Select Uncirculated BG-533

7174 1855 Liberty Octagonal 1 Dollar, BG-533, Low R.4, MS63 NGC. The initials N. R. appear on the reverse of this octagonal dollar, confirming it is the product of Antoine Louis Nouizillet and Isadore Routhier, early California jewelers and minters of small California gold. Most examples are found in VF to AU condition, suggesting many of the issue were used as currency at one time. This high-grade, Uncirculated representative displays bold devices on slightly reflective, yellow-gold surfaces. A few wispy lines on the reverse are the only marks of any significance, and they are visible only with a loupe. This Select Uncirculated example is the only one certified by NGC with none finer (3/14). PCGS# 10510

1864 Liberty Octagonal Quarter, BG-707, MS64 Extremely Rare, Tied for Finest Certified

7175 1864 Liberty Octagonal 25 Cents, BG-707, High R.7, MS64 NGC. This MS64 piece is the sole finest certified BG-707 at NGC (there is one other in MS62), and PCGS shows three submissions (perhaps not all separate examples) in the MS64 grade, also with none finer (3/14). It is difficult to place a valuation on this piece, as most of the auction appearances of this variety either date back a couple of decades or were for lower-graded pieces. Given the High R.7 rarity ranking, however, what is certain is that opportunities to acquire an example so fine do not occur often. The surfaces are yellow-gold with a light, hazy overlay. Bold clash marks appear on the reverse, but there are few post-strike distractions. Top quality and rare. PCGS# 10534

7176 1873/2 Indian Octagonal 25 Cents, BG-792, Low R.7, MS64 PCGS. Cuds at 3 o'clock and beneath the 73 in the date explain the rarity of BG-792. The obverse die is also failing near the first four stars. A boldly struck and unabraded peach-gold and lime-green near-Gem. PCGS# 10619

7177 1874 Indian Octagonal 25 Cents, BG-795, R.3, MS66 PCGS. A pristine representative of this collectible Period Three octagonal Indian variety. Radiant yellow-gold fields provide moderate contrast with the portrait and wreath. Minor plating imperfections, as made, are evident beneath a glass. Population: 3 in 66, none finer (3/14). PCGS# 10622

1874 BG-799Q Quarter, MS66 Prooflike Octagonal, Indian

7178 1874 Indian Octagonal 25 Cents, BG-799Q, High R.5, MS66 Prooflike NGC. Splendid field reflectivity and a bold strike confirm the quality of this undisturbed sun-gold Premium Gem. Minute strike-throughs below DOLLAR are as coined. A better Indian Head die variety. Census: 2 in 66 Prooflike, 1 finer as 67 Prooflike, 1 finer as 67 Deep Prooflike (3/14). PCGS# 710643

7179 1873 Liberty Round Twenty-Five Cents, MS66 NGC. BG-817, R.3. A rarely encountered Premium Gem example of the round 1873 Liberty Head gold quarter dollar by Frontier & Bellemere. Beautifully preserved with original, semiprooflike luster. The borders and stars are sharply detailed, with some typical weakness present at the central reverse. Census: 6 in 66, 0 finer (2/14). PCGS# 10678

7180 1873 Liberty Round 25 Cents, BG-817, R.3, MS66 PCGS. Peach-gold patina aids the eye appeal of this moderately reflective and pristine representative. The centers are softly impressed, usual for the die variety. Population: 4 in 66, 0 finer (3/14). PCGS# 10678

7181 1873 Liberty Round 25 Cents, BG-817, R.3, MS66 Prooflike NGC. Well struck for the die variety, since all reverse legends are clear. A flashy and magnificent butter-gold representative. A loupe reveals only trivial imperfections. Census: 2 in 66 Prooflike, none finer (3/14). PCGS# 710678

1876 BG-850 Indian Round Quarter MS65 Prooflike, Highest Certified

7182 1876 Indian Round 25 Cents, BG-850, Low R.6, MS65 Prooflike NGC. The single highest graded example (3/14), by either NGC or PCGS, of this rare round Indian variety. The canary-gold fields are reflective, and the strike is good except on the letters opposite the relatively high relief portrait. A lens reveals a few minuscule strike-throughs, as issued. PCGS# 710711

**1872/1 Quarter, MS66 Prooflike
Round, Indian, BG-868**

- 7183** 1872/1 Indian Round 25 Cents, BG-868, High R.4, MS66 Prooflike NGC. Glassy fields contrast with frosty motifs. The strike is bold aside from minor incompleteness on the central reverse. Technically pristine, though a retained lamination is noted near the profile and the R in DOLLAR. Among the finest representatives of this scarce Breen-Gillio pairing. Census: 3 in 66 Prooflike, none finer (3/14). PCGS# 710729

**1876 Indian Round Quarter, BG-881, MS66
Reflective Yellow-Gold Piece**

- 7184** 1876 Indian Round 25 Cents, BG-881, R.5, MS66 PCGS. This Period Two round Indian Head quarter shows the Reverse G with high fraction and berries on each side of the 1 therein. The reverse is rotated nearly 90 degrees counterclockwise with respect to the obverse on this reflective yellow-gold piece, which shows no mentionable marks. PCGS# 10742

**1859 Round Liberty Half, MS67 Prooflike
Tied for Finest Certified**

- 7185** 1859 Liberty Round 50 Cents, BG-1002, High R.4, MS67 Prooflike NGC. A sharply detailed round Liberty half dollar, the 11 stars obverse variety, with the edge reeded after striking, BG-1002. This spectacular Superb Gem offers deeply reflective prooflike yellow-gold surfaces with no mentionable distractions. Census: 2 in 67 Prooflike, 0 finer (3/14). PCGS# 710831

- 7186** 1871 Liberty Octagonal 1 Dollar, BG-1104, High R.4, MS63 NGC. A green-gold Select representative with good field reflectivity and an even strike. No detractions emerge beneath a loupe. Octagonal dollars are scarcer than their half dollar and quarter counterparts. Census: 4 in 63, 1 finer as 64 Deep Prooflike (3/14). PCGS# 10915

- 7187** 1875 Indian Octagonal One Dollar, MS62 PCGS. BG-1126, R.5. Produced by C.F. Mohrig with yellow-gold plating over a baser core. Smaller letters are punched into the reverse than on earlier issues. Bright, prooflike fields frame well-struck central devices. Multiple reverse die cracks are present, caused by a shattered die. The central reverse field retains the rough planchet texture. Certified in an old green label holder. Population: 8 in 62, 9 finer (2/14). PCGS# 10937

**1876/5 BG-1128 Octagonal Indian Dollar
MS65 Prooflike**

- 7188** 1876/5 Indian Octagonal 1 Dollar, BG-1128, R.5, MS65 Prooflike NGC. This honey-gold Gem has mirrored fields and exemplary preservation. The strike is precise, including the central reverse legends opposite the portrait. Flan imperfections are minor and mostly relegated to the field near the O in CALIFORNIA. Type Two gold dollars are scarcer and more coveted than their fractional counterparts. Census: 2 in 65 Prooflike, 1 finer (3/14). PCGS# 710939

- 7189** 1876/5 Indian Octagonal One Dollar, MS63 NGC. BG-1129, R.4. Very scarce. A pleasing example of the second 1876/5 modified date octagonal Indian Head dollar produced by San Francisco manufacturing jeweler, C. F. Mohrig. Yellow-gold plating over a lesser-fineness core. All design elements are clear, with prooflike fields and no notable abrasions. Census: 2 in 63, 1 finer (2/14). PCGS# 10940

- 7190** 1870 "Goofy" Head Round One Dollar, AU55 PCGS. BG-1205, High R.4. Unknown maker. Gold plating over silver core. The design elements are sharply impressed, though some typical weakness is noted around the reverse border. Bright yellow-gold patina with rose-gold overtones provides strong visual appeal on this Choice AU representative. Population: 7 in 55, 21 finer (3/14). PCGS# 10950

**1870 'Goofy Head' Round Dollar, MS61
BG-1205, Distinctly Prooflike**

- 7191** 1870 Goofy Head Round 1 Dollar, BG-1205, High R.4, MS61 NGC. A high-grade example of this popular round dollar, the product of "Unknown Maker C" as listed by Walter Breen and Ronald Gillio. This Maverick issuer of round and octagonal quarters, halves, and dollars was almost certainly located in San Francisco. The present example is an attractive, prooflike dollar — one of the "Goofy Heads" from this manufacturer — made of gold-plated silver. Bold details reside on highly reflective, lightly hairlined gilt fields. A prize for the California fractional gold collector. Census: 4 in 61, 1 finer (2/14). PCGS# 10950

SESSION EIGHT

SPECIAL INTERNET BIDDING FEATURE

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. After proxy bidding closes, live bidding will take place through HERITAGE Live!®, that lets you bid live during the actual auction. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bids will not be recognized, so we advise placing your proxy bids in advance.)

COLONIALS

- 8001** 1760 Hibernia-Voce Populi Halfpenny, VOOE POPULI — Improperly Cleaned — NGC Details. VF. N. 3, Z. 7-E, W-13930, R.3. An example of the popular variety with VOCE appearing as VOOE, this piece exhibits VF details. The VOOE variety is the result of a die crack connecting the top and bottom portions of the C, providing the appearance of an O. Both sides display nice centering, with all of the legends present. Though cleaning affected the color of this piece, it retains lovely eye appeal. Listed on page 49 of the 2014 *Guide Book*.
From The Old New England Collection.
- 8002** 1782 Ireland Halfpenny — Environmental Damage — NGC Details. VF. KM# 140. Displaying the Type 3 obverse with long hair, used on the Irish halfpenny issues dated between 1775 and 1782, this 1782 piece retains a good degree of design detail and overall chocolate-brown color. The surfaces reveal planchet flaws, and areas of corrosion are present on the reverse. Though not listed in the *Guide Book*, these coins are often incorporated into many colonial collections because examples circulated in North America.
From The Old New England Collection.
- 8003** 1773 Virginia Halfpenny, No Period VG10 NGC. N. 9-B, W-1420, R.4. Though well-circulated, this piece exhibits a lovely appearance, due in part to consistent deep brown color across both sides. Adding to the desirability of this example, there are no marks or flaws worthy of mention. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 243
- 8004** 1773 Virginia Halfpenny, No Period VF20 NGC. N. 5-B, W-1410, R.6. The examples without a period after GEORGIVS are less common than pieces with a period, adding to the appeal of this coin. This piece shows six harp strings within the coat of arms on the reverse. Slightly glossy chocolate-brown surfaces provide this coin with lovely eye appeal. Scattered long, thin marks appear on both sides, but are minimally distracting. Listed on page 45 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 243
- 8005** 1787 Massachusetts Cent, Arrows in Left Talon Fine 12 NGC. Ryder 3-G, W-6090, R.3.
Well centered on both sides, this specimen exhibits chocolate-brown and mahogany hues. Though this piece spent considerable time in circulation, a good degree of design detail remains, adding to the desirability of this example. The contact marks present are minor and do not detract from the eye appeal of this coin. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 302
- 8006** 1788 Massachusetts Cent, Period Fine 12 NGC. Ryder 9-M, W-6270, R.7. Surviving examples of this variety are rarely encountered above Fine. This circulated example displays well-centered devices and lightly glossy chocolate-brown surfaces. There are no distractions worthy of mention on this lovely piece. Listed on page 59 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 311
- 8007** 1785 Connecticut Copper, Bust Right VG8 NGC. M. 4.4-C, W-2375, R.3. The designs reveal attractive tan color with hints of rose against the dark brown fields on this piece revealing a slight counterclockwise rotation on the reverse. Several planchet flaws are present, including one near the eye on the portrait. The surfaces exhibit moderate granularity and scattered hair-thin marks. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 316
- 8008** 1787 Connecticut Copper, Muttonhead Fine 15 NGC. M. 1.2-C, W-2720, R.3. The Muttonhead obverse paired with the Topless Liberty reverse, known as Miller 1.2-C, is believed to be a contemporary counterfeit. The obverse strike is toward 10 o'clock on this deep chocolate-brown example, while the reverse strike is low. The reverse reveals a few edge bumps, including one near 11 o'clock. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 343
- 8009** 1787 Connecticut Copper, Horned Bust — Tooled — NGC Details. VF. M. 4-L, W-2810, R.1. The "Horned Bust" nickname was aptly chosen by Crosby in 1875 for this variety. A mahogany brown example, this specimen exhibits nice centering on both sides. Scattered thin marks are present, primarily in the fields. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.
- 8010** 1787 Connecticut Copper, Horned Bust VF20 NGC. Miller 4-L, W-2180, R.1. The "Horned Bust" moniker is the result of a later die state, when a break occurred in the left obverse field which then expanded, providing the appearance of a horn extending from the bust, as clearly evidenced on this example. Rich chocolate-brown color adds to the appeal of this piece that exhibits strong centering on both sides. This is a late die state example of the break, with a wedge present at the top of the horn. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 364
- 8011** 1787 Connecticut Copper, Mailed Bust Left VG8 NGC. M. 11.2-K, W-2875, R.3. Slightly glossy, rich chocolate-brown surfaces add to the eye appeal of this evenly circulated example. The obverse is nicely centered, with the reverse exhibiting a strike slightly to the left. A few vertical hair-thin marks extend through the portrait. Listed on page 61 of the *Guide Book*.
From The Old New England Collection.
PCGS# 349
- 8012** 1787 Connecticut Copper, Mailed Bust Left VG10 NGC. M. 11.2-K, W-2875, R.3. The obverse die appears only in this marriage, while the reverse die also appears with obverse 11.3. The obverse of this specimen displays a slightly high strike on the planchet, while the opposite is true for the reverse. The surfaces are primarily brown, with areas of orange-red present, most notably on the reverse. Both sides exhibit planchet flaws and die breaks. Listed on page 61 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 349

- 8013 1787 Connecticut Copper, Draped Bust Left VG8 NGC. M. 37.12-TT, W-4180, R.6.** A well-circulated example of a slightly scarcer variety, this coin displays light chocolate-brown color overall, with areas of pale gold highlights appearing, primarily on the lower reverse. The reverse exhibits strong centering, while the obverse is a few degrees off center toward 4 o'clock. Minor planchet flaws are present on the obverse. A characteristic of this variety is that the first three cinquefoils on the reverse were altered from crosses. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8014 1787 Connecticut Copper, Draped Bust Left VG10 NGC. M. 19-g.4, W-3050, R.3.** Well centered, this coin displays a pleasing blend of steel-blue and cinnamon tones. The scattered planchet flaws are minuscule and do not pose a distraction. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8015 1787 Connecticut Copper, Draped Bust Left Fine 12 NGC. M. 32.4-Z.3, W-3250, R.5.** A perusal of our archives indicates this is the first example of this variety we have offered. This piece displays attractive medium brown color overall, with closer examination revealing scattered, intermingled hues of rose, pale yellow, and orange. The reverse exhibits a 90 degree counterclockwise rotation. The obverse exhibits strong centering, and the few planchet imperfections are minuscule. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8016 1787 Connecticut Copper, Draped Bust Left Fine 12 NGC. M. 32.1-X.3, W-3215, R.3.** A prior collector placed the attribution in the left obverse field of this example, with 32 appearing to the left of the mouth, and an X below. Areas of darker color appear along portions of the outer edges of this chocolate-brown piece. A few minor planchet flaws and hair-thin marks are present, but are not distracting. A tiny rim bump appears near 12 o'clock on the reverse. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8017 1787 Connecticut Copper, Draped Bust Left Fine 12 NGC. M. 32.1-X.3, W-3215, R.3.** A well-centered example, this specimen exhibits attractive medium brown color, with a few hints of steel on the central reverse. Though well circulated, the degree of remaining design detail is pleasing. Liberty's upper torso reveals a planchet flaw. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8018 1787 Connecticut Copper, Draped Bust Left VF25 NGC. M. 33.11-Z.18, W-3515, R.5.** Nicely centered overall, though the lower portion of the date is not present. This coin displays pleasing light mahogany-brown color. The only mark of note on this lovely specimen is a small horizontal mark below the I in INDE. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8019 1787 Connecticut Copper, Draped Bust Left VF30 NGC. M. 36-1.1, W-4070, High R.5.** Nicely centered overall, this specimen displays glossy surfaces revealing hues of medium brown, red-orange, green-gray, and faint gold. A planchet flaw is present at right on the obverse, affecting the NEC of CONNEC. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8020 1787 Connecticut Copper, Draped Bust Left VF30 NGC. M. 37.4-k.1, W-4115, R.3.** Medium brown color with highlights of pale gold provides this example with lovely eye appeal. The strike on the obverse is slightly off center toward 5 o'clock, with the legends present. The reverse exhibits a strike toward 1 o'clock, with only portions of ET LI appearing though the full B is visible. Minor planchet flaws are visible on the edge. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8021 1787 Connecticut Copper, Draped Bust Left VF35 NGC. M. 33.9-s.2, W-3490, R.2.** Examples of this variety typically display extensive die cracks, as is the case with this Choice VF example showing glossy medium brown surfaces. Both sides are nicely centered overall, with the complete date being visible although the appearance of the 78 in the date was affected by the issues with the obverse die. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 370
- 8022 1787 Connecticut Copper, AUCTOBI VG10 NGC. M. 39.2-ee, W-4220, R.5.** A well-circulated example of the variety with the very rare AUCTOBI obverse die, this piece exhibits the attribution on the obverse, added by a previous custodian. Though the obverse strike is off-center toward 7 o'clock and portions of the legends at left are missing as a result, the B of AUCTOBI is clearly visible. A few minor planchet flaws are present on this specimen displaying attractive light and medium brown shades. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 379
- 8023 1787 Connecticut Copper, ETLIR VG10 NGC. M. 37.11-ff.2, W-4170, R.5.** Highlights of soft gold grace areas of medium brown surfaces on this specimen. The obverse is only slightly off-center, with all of the legends present though worn, while the reverse exhibits strong centering. Scattered planchet flaws appear, with the most noticeable area near 2 o'clock on the obverse. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 391
- 8024 1787 Connecticut Copper, ETLIR Fine 12 NGC. M. 34-ff.1, W-4060, R.5.** Displaying medium golden-brown color, this piece is well-centered on both sides, with all of the legends remaining visible. Minor planchet flaws, primarily on the reverse, do not pose a distraction on this lovely example. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 391
- 8025 1788 Connecticut Copper, Mailed Bust Right — Obverse Spot Removed — NGC Details. Fine. M. 5-B.2, W-4440, Low R.5.** Displaying pleasing chocolate-brown color overall, this piece exhibits nice centering on both sides, with the obverse only slightly high. As NGC indicates, a spot on the obverse was removed. The mark appears in the field near the neck. A minor planchet flaw is present at the obverse rim near 3 o'clock. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
- 8026 1788 Connecticut Copper, Draped Bust Left Good 6 NGC. 16.3-N, W-4610, R.2.** Deep chocolate-brown color appears on both sides of this specimen. Adding to the appeal, the coin is devoid of planchet imperfections. Both sides are struck toward 3 o'clock. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 409
- 8027 1788 Connecticut Copper, Draped Bust Left Fine 15 NGC. M. 16.5-H, W-4625, Low R.5.** Deep olive and steel hues appear on this specimen that exhibits moderate granularity. The reverse in particular displays nice centering, with the obverse struck slightly toward 9 o'clock. A planchet clip, present near 1 o'clock on the obverse, is visible on both sides and a couple of die cracks appear in the left reverse field. Listed on page 62 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 409

- 8028** 1786 New Jersey Copper, Narrow Shield, Curved Beam Fine 15 NGC. Maris 23-P, W-4940, R.4. Intermingled shades of gold, orange, pink, pale green, and ice-blue appear on this specimen, particularly on the obverse. The devices are well-centered on both sides. The minor planchet flaws and die breaks present are not distracting. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 45424

- 8029** 1786 New Jersey Copper, Wide Shield — Environmental Damage — NGC Details. VF. Maris 21-N, W-4910, R.3. Glossy brown surfaces and well-centered devices provide this surviving example with a lovely appearance for the grade. The obverse employed on this piece was paired with four reverses, including two with Wide Shields. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection.
- 8030** 1786 New Jersey Copper, Wide Shield — Obverse Damage — NGC Details. VF. Maris 21-N, W-4910, R.3. Although this specimen received a Details grade due to damage on the obverse, the marks, consisting of a few tiny spots in the field between the horse's head and the plow, pose a minor distraction at most. The fields are largely dark brown, providing attractive contrast against the lighter devices. This pleasing coin is well-centered on both sides. Listed on page 69 of the 2014 *Guide Book*.
From The Old New England Collection.
- 8031** 1787 New Jersey Copper, No Sprig Above Plow, VG10 NGC. Maris 53-j, W-5290, R.4. The 8 in the date is small on this variety, and there is a period after CAESAREA. This example displays a slightly off-center strike on both sides. The chestnut-brown surfaces add to the attractiveness of this specimen. The shield reveals a few hair-thin marks. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8032** 1787 New Jersey Copper, Hidden WM in Sprig, VG10 NGC. Maris 62-q, W-5350, R.3. Even chocolate-brown color on both sides provides this piece with a lovely appearance. The outer design elements retain a pleasing level of definition, while the centers display more significant wear, as expected at this grade level. The WM initials are no longer visible on this piece as visibility is limited to high-grade examples struck from early-state dies. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8033** 1787 New Jersey Copper, No Sprig Above Plow — Scratched — NGC Details. Fine. Maris 64-t, W-5380, R.1. The dark brown fields serve as a contrast to the lighter devices, adding to the eye appeal of this piece. The obverse is only slightly off center, while the reverse exhibits a somewhat larger shift toward 4 o'clock. Faint scratches appear on both sides and small areas of corrosion are present near the right reverse margin. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

- 8034** 1787 New Jersey Copper, No Sprig Above Plow Fine 12 NGC. Maris 46-e, W-5245, R.1. Only small portions of the date remain visible on this example, due to the use of a late state die in tandem with the wear this piece experienced. This variety is known for a Roman numeral I as the first digit in the date along with the curves at the bottom of the upright portions of the 7's. The chocolate-brown surfaces exhibit areas of golden overtones. The only mentionable mark appears at the bottom portion of the shield. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8035** 1787 New Jersey Copper, Hidden WM in Sprig, Fine 15 NGC. Maris 62-q, W-5350, R.3. Both sides of this Choice Fine example display strong centering, with the reverse exhibiting a slight variance toward 5 o'clock. Intermingled shades of brown, pale gold, and pale pastel green are present. Tiny, scattered areas of corrosion appear on both sides. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8036** 1787 New Jersey Copper, No Sprig Above Plow, VF20 NGC. Maris 48-g, W-5275, R.1. The shades of brown and tan on this piece provide a pleasing degree of eye appeal. A few hair-thin marks on the upper portion of the shield serve as a minor distraction, if at all. The surfaces exhibit an even degree of granularity. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8037** 1787 New Jersey Copper, No Sprig Above Plow — Damaged — NGC Details. VG. Maris 33-U, W-5110, R.4. An indentation on the reverse led to a slight rising of a portion of the obverse on this specimen with several hues of brown coloration. The obverse strike is a few degrees off-center toward 10 o'clock. Areas of corrosion are present, along with aqua verdigris, with the latter primarily appearing on the upper reverse. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

- 8038** 1787 New Jersey Copper, No Sprig Above Plow — Corroded — NGC Details. VF. Maris 64-t, W-5380, R.1. Displaying copper-brown color, the majority of the design elements remain visible on this piece. Corrosion is present on both sides, with the reverse displaying greater effects. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

- 8039** 1787 New Jersey Copper, No Sprig Above Plow, VF35 NGC. Maris 48-g, W-5275, R.1. This is a Choice VF example of the reverse die exhibiting the most pronounced shield outline of the dies known for bold outlines. An attractive piece, this coin displays golden-biscuit color. The centering is pleasing on both sides, further adding to the appeal. The lower reverse reveals minor planchet striations. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.
PCGS# 506

- 8040** 1787 New Jersey Copper, Sprig Above Plow — Environmental Damage — NGC Details. VG. Maris 63-s, W-5375, R.2. The degree of design detail remaining on the obverse of this well-circulated specimen is pleasing. The dappled surfaces reveal a variety of colors, including shades of brown and copper-gold. Areas of verdigris and corrosion are present on both sides along with a number of hair-thin marks. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

- 8041** 1787 New Jersey Copper, Sprig Above Plow — Environmental Damage — NGC Details. Fine. Maris 63-q, W-5365, R.3. A well-centered specimen, this piece exhibits several different hues, among them chocolate-brown, rose-brown, pale yellow, and pastel green. Environmental damage is evident from moderate pitting over each side. A few hair-thin marks appear on the reverse. Listed on page 70 of the 2014 *Guide Book*.
From The Old New England Collection.

8042 1787 New Jersey, Second U Over S in PLURIBUS — Burnished — NGC Details. Fine. Maris 55-m, W-5305, R.4. Several hues of brown are present on this piece. This variety exhibits knob handles on the plow along with the misspelling of PLURIBUS having been corrected to read PLURIBUS. As mentioned on the holder, this example is burnished. Listed on page 69 of the 2014 *Guide Book*.

From The Old New England Collection.

8043 1787 New Jersey Copper, Camel Head — Scratches — NGC Details. Fine. Maris 56-n, W-5310, R.1. This piece was struck over an evasion British half penny dated 1778, with the date clearly visible along the obverse margin near 9 o'clock. Portions of the design from that undertype remain visible on both sides. Intermingled shades of brown, pale yellow-gold, and copper appear on this example of the popular Camel Head variety. Listed on page 70 of the 2014 *Guide Book*.

From The Old New England Collection.

8044 1786 Vermont Copper, Baby Head — Environmental Damage — NGC Details. Good. RR-9, Bressett 7-F, W-2040, R.3. The degree of detail remaining on this piece makes the coin readily identifiable. The reverse exhibits a 90-degree counterclockwise rotation on this surviving example of a desirable variety. The damage includes corrosion and a few small areas of verdigris. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection.

8045 1787 Vermont Copper, Bust Right Fine 12 NGC. RR-12, Bressett 11-K, W-2110, R.3. Close examination reveals intermingled shades of gold and faint steel-blue, with the blue largely appearing on the reverse. This example exhibits a number of planchet flaws, along with die breaks. However, they are not distracting and this coin displays a nice overall appearance. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 560

8046 1788 Vermont Copper, Bust Right — Tooled — NGC Details. VG. RR-25, Bressett 16-U, W-2195, R.3. Aside from the branch hand exhibiting distinct fingers, due to the degree of wear, the diagnostics for this variety are all present. The obverse displays a slightly off-center strike toward 5 o'clock. A number of long thin marks cross the centers on both sides, but they are faint and are not overtly distracting. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection.

8047 1788 Vermont Copper, Bust Right — Reverse Scratched — NGC Details. VG. RR-23, Bressett 10-O, W-2175, R.4. Glossy deep chocolate brown surfaces provide the obverse of this circulated example with lovely eye appeal, with the devices on the reverse exhibiting slightly lighter shades. The obverse is free from distractions, while the reverse exhibits a significant scratch extending from 11 o'clock through Liberty's upper torso. A planchet flaw impacts the last two digits of the date. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection.

8048 1788 Vermont Copper, Bust Right VG8 NGC. RR-21, Bressett 10-R, W-2155, R.5. Shades of dark brown and tan are present on this piece, with the fields largely displaying the darker color, providing a pleasing degree of contrast against the lighter devices. Despite the level of wear, this example clearly demonstrates the reverse diagnostics for this variety. That side exhibits a lamination extending from 10 o'clock to 4 o'clock. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection. PCGS# 563

8049 1788 Vermont Copper, Bust Right — Environmental Damage — NGC Details. Fine. RR-25, Bressett 16-U, W-2195, R.3. The fingers on the branch hand remain largely distinct on this example. Several intermingled colors are present, with red, brown, and green among them. A number of faint long marks appear, primarily on the obverse. Listed on page 72 of the 2014 *Guide Book*.

From The Old New England Collection.

8050 1781 North American Token — Damaged — NGC Details. VG. Breen-1144, W-13980, R.2. These pieces are believed to have been struck circa 1810 to 1820 in Ireland, perhaps in Dublin by William Mossop, Jr., as suggested by Walter Breen. This well-circulated example is well-centered on both sides and reveals hues of steel, brown, and red-orange. The left obverse field exhibits a number of pits. Listed on page 73 of the 2014 *Guide Book*.

End of Session Eight

SESSION NINE

SPECIAL INTERNET BIDDING FEATURE

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. After proxy bidding closes, live bidding will take place through HERITAGE Live!®, that lets you bid live during the actual auction. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bids will not be recognized, so we advise placing your proxy bids in advance.)

BETTS MEDAL

- 12129** 1739 Admiral Vernon Medal, Porto Bello, Vernon Alone AU55 NGC. Betts-198, Adams-Chao PBv-42-RR, R.5.

WASHINGTONIA

- 12130** Smith's Washington/Mount Vernon Medal, Baker-111, PR63 Uncertified. Second Obverse. White Metal. Distinguished by F.B. Smith & Hartmann N.Y. on the lower portion of the truncation of the bust. Struck around 1860. This magnificent medal has deeply reflective fields and frosted devices that give a pronounced two-toned effect on each side. Just a bit of even, gray patina is present overall. Ex: Coin Galleries (11/1992), lot 2349; Long Beach Signature (Heritage, 9/2006), lot 6412.
- 12131** Undated Honor is the Reward MS64 Prooflike NGC. Baker-A270. 31.5 mm.

- 12132** 1861 Mint Allegiance Medal PR63 NGC. Baker-279, R.7. Julian-CM2. Silver. 30 mm. The Civil War inspired this allegiance medal, which bears a portrait of Washington engraved by Paquet. Golden-brown, ice-blue, and plum patina. The reverse edge is unusually high, and both sides exhibit a wire rim. Julian notes that this issuance of this medal appears to be a ploy by Director James Pollock to cash in to the enormous popularity of Washington medals during the first years of the Civil War. Only 259 were struck in silver. Ex: Troy Wiseman Collection (Heritage, 9/2006), lot 6106.
- 12133** 1876 Washington Magna Est Veritas Medal, Baker-292C, PR64 Uncertified. Brass. Designed by Rudolph Laubheimer for the 1876 Centennial, this Masonic medal is popular for its reverse that shows a young Washington next to a chopped-down cherry tree with the words "I Can Not Tell A Lie" below. This large medal shows a bright, undimmed surface with a slight iridescent overlay of patina. Ex: Phillip Flannagan Collection (Bowers and Merena, 11/2001), lot 5382; Early American History Auctions, 4/2003, lot 364; Long Beach Signature (Heritage, 9/2006), lot 6429.
- 12134** 1885 George Washington, Monument Dedication MS62 NGC. Baker-N-322. 45 mm.
- 12135** (1876) Anthony C. Paquet, Second Obverse, Second Reverse MS61 NGC. Baker-403. 18 mm.
- 12136** 1876 Washington/Centennial Medal, Baker-422, R.5, PR64 Uncertified. White Metal. F.B. Smith's "Memory of Washington" Centennial medal combines the undraped bust of Washington, as used on Baker-111, with a new reverse for the Centennial Exhibition. This beautiful, undimmed example shows superior workmanship. In a white Capital holder. Ex: Coin Galleries (7/1993), lot 1431; Long Beach Signature (Heritage, 9/2006), lot 6428.
- 12137** 1876 Smith's Tomb Medal PR65. Baker-423M / Baker-119B. White Metal. A muling of two reverses. The reverse of Baker-119 is paired with the reverse of Baker-422. The dies were cut by Frederick B. Smith of New York, and struck by Smith & Horst. A Centennial memento as indicated by the reverse inscription which reads in part: STRUCK TO PERPETUATE THE MEMORY OF WASHINGTON. Bright surfaces and deeply mirrored in the fields. Ex: Early American History Auctions (Heritage, 2/2003), lot 312; Long Beach Signature (Heritage, 9/2006), lot 6428.
- 12138** 1876 Centennial Exhibition, Danish Medal — Edge Damaged — NGC Details. Unc. Baker-426B. White metal, 53 mm.

- 12139** 1881 Surrender at Yorktown MS61 NGC. Baker-452C. White metal, 51 mm.

- 12140** 1932 Masonic National Memorial Bicentennial of Birth MS66 NGC. Baker-B909. 32 mm.
- 12141** 1940 New York World's Fair, Peace and Freedom MS63 NGC. Baker-3004A. Gilt bronze, 32 mm.

U.S. PRESIDENTS & STATESMEN

- 12146** (1844) George M. Dallas Campaign Medal MS62 NGC. DeWitt-GD-1844-1. White metal, 41 mm.
- 12147** 1860 Stephen A. Douglas Campaign Medal MS61 NGC. DeWitt-SD-1860-1. White metal, 40 mm.
- 12148** 1860 Stephen A. Douglas Campaign Medal Uncertified. DeWitt-SD-1860-37. Brass, 24.5 mm.
- 12149** (1856) John C. Fremont Campaign Medal MS63 NGC. DeWitt-JF-1856-4. White metal, 34 mm.

- 12150** 1869 General U.S. Grant Campaign Medal MS61 NGC. DeWitt-USG-1868-3. White metal, 51 mm.
- 12151** 1868 General U.S. Grant Campaign Medal MS66 Prooflike NGC. DeWitt-USG-1868-12. White metal, 31 mm.
- 12152** 1868 General U.S. Grant Campaign Medal MS64 NGC. DeWitt-USG-1868-39. White metal, 18 mm.
- 12153** (1872) Horace Greeley Campaign Medal MS64 NGC. DeWitt-HG-1872-2. White metal, 31 mm.
- 12154** 1880 Major General W.S. Hancock Campaign Medal — Scratched — NGC Details. AU. DeWitt-WSH-1880-5. White metal, 26 mm.
- 12155** (1888) Benjamin Harrison Campaign Medal AU55 NGC. DeWitt-BH-1888-21. Copper, 26 mm.
- 12156** (1888) Benjamin Harrison Campaign Medal MS65 NGC. DeWitt-BH-1888-23. Brass, 25 mm. The original hanger and ribbon accompanies the lot.
- 12157** 1841 William Henry Harrison Campaign Medal AU58 NGC. DeWitt-WHH-1840-56. Brass, 24 mm.
- 12158** Thomas Jefferson Presidential Residences MS63 Prooflike NGC. White metal, 33 mm.
- 12159** (1866) Andrew Johnson Campaign Medal MS62 Prooflike NGC. DeWitt-AJOHN-1866-5. White metal, 20 mm.
- 12160** 1860 Lincoln Campaign Medal MS62 NGC. DeWitt-AL-1860-41. Brass. 28 mm. This medal honors Lincoln as “the rail splitter of the west,” and soon the nation would be split as well. Lime-green and orange toning graces this gently shimmering and unholed example. The reverse has a scattering of tiny carbon flecks.
Ex: Troy Wiseman Collection (Heritage, 9/2006), lot 6110.
- 12161** (1860) Abraham Lincoln Campaign Medal MS63 NGC. DeWitt-AL-1860-74. Silver, 19 mm. Obverse: beardless head and shoulders bust right. Reverse: shield within wreath. Richly toned in aquamarine, golden-brown, and cobalt-blue shades. Minor verdigris is noted on THE WEST, and the obverse field is faintly abraded.
Ex: Troy Wiseman Collection (Heritage, 9/2006), lot 6111.
- 12162** Undated Abraham Lincoln Centennial MS63 NGC. King-335. Copper, 31.5 mm.
- 12163** (1864) G.B. McClellan Campaign Medal MS63 NGC. DeWitt-GMCC-1864-4. White metal, 34 mm.

- 12164** (1864) G.B. McClellan Campaign Medal MS63 NGC. DeWitt-GMCC-1864-8. White metal, 34 mm.
- 12165** 1868 Horatio Seymour Campaign Medal MS65 Red and Brown NGC. DeWitt-HS-1868-7. Copper, 28 mm.
- 12166** (1848) Major General Zachary Taylor Campaign Medal MS61 NGC. DeWitt-ZT-1848-4. White metal, 41 mm.
- 12167** 1862-Dated Martin Van Buren, Birth and Death MS64 Brown NGC. Copper, 34 mm.

U.S. MINT MEDALS

- 12168** (1876) Centennial Award MS65 NGC. Julian-AM-10. Bronze, 76 mm.
- 12169** 1887 Worchester Electric Exhibition MS64 Brown NGC. Julian-AM-85. Bronze, 41 mm.
- 12170** 1871 Emancipation Proclamation AU55 NGC. Julian-CM-16. Bronze, 45 mm.
- 12171** “1817” James Monroe Presidential Medal, First Reverse MS62 Brown NGC. Julian-IP-8. Bronze, 76 mm.
- 12172** 1815 Andrew Jackson Battle of New Orleans Medal MS63 Uncertified. Julian-MI-15. Bronzed copper. 65mm. Dies by Moritz Furst. A well struck and handsomely designed medal that commemorated Jackson's success in the famous battle, which allowed a positive American conclusion to the War of 1812. Brick-red and light mahogany toning. A few old, faint hairlines are detected beneath a lens.
Ex: Troy Wiseman Collection (Heritage, 9/2006), lot 6107.

CIVIL WAR TOKEN

- 12469 1861-Dated "Civil War ID Tag" AU55 NGC. Brass, 27.5 mm.

CONFEDERATE STATES OF AMERICA

- 12470 (1947) C. Smith, Robert E. Lee So-Called Half Dollar MS63 NGC.
- 12471 (1947) C. Smith Confederate Seal So-Called Half Dollar MS66 NGC.
- 12472 (1961) Copper "1861" Confederate Cent, Bashlow Restrike, Defaced Dies MS68 Red NGC. Breen-8013.
- 12473 (1961) Copper "1861" Confederate Cent, Bashlow Restrike, Defaced Dies MS68 Red NGC. Breen-8013.

U.S. TRADE TOKENS (1866-1889)

12474 1888 Corn Palace, Sioux City, Iowa MS62 NGC. Rulau-IA-SC-13.

12475 1885 Industrial & Cotton Exposition, New Orleans, Louisiana MS62 NGC. Rulau-LA-NO-52A.

12476 1871 Henry Probasco, Cincinnati, Ohio MS65 NGC. Rulau-OH-CI-138; and an 1883 Brooklyn Bridge, New York Token MS60 Holed Uncertified. (Total: 2 tokens)

12477 1880 Deadwood, South Dakota, Dakota Commandery of the Knights Templar No.1. Listed on page 820 of the fourth edition of Rulau. The nearest catalog number is SD-Dd 5, but this piece should be SD-Dd 6, as this is unlisted. The name J.R. Blewitt, Lead, S.D. appears at the bottom. The token was struck in Tin and measures approximately 31mm. A high-grade example that will bring plenty of attention from collectors of South Dakota and Wild West material.
Ex: Long Beach Signature (Heritage, 9/2006), lot 6379.

U.S. TRADE TOKENS (1890-1900)

12478 Schultz, Arizona Territory, D.C. Cage, Good For 1 Drink, Uncirculated Uncertified. Rulau-AZ-Sch-1. German silver, 25 mm. Rare.
Ex: Long Beach Signature (Heritage, 9/2006), lot 6396.

12479 (1893-94) San Antonio, Texas, Jose M. Hermann's Saloon, TX-San 52, AU. 'Good For One Beer.' Listed on page 1085 of Rulau, fourth edition. The lustrous surfaces retain much of their original appearance, with traces of wear on the devices.
Ex: Long Beach Signature (Heritage, 9/2006), lot 6402.

ALASKA TOKENS

12480 (1935) Alaska 10 Cent "Bingle", Round AU50 NGC. Gould-Bressett 9. Rural Rehabilitation Corp.

12481 (1935) Alaska 10 Cent "Bingle", Round AU50 NGC. Gould-Bressett 9. Rural Rehabilitation Corp.

12482 (1935) Alaska 10 Cent "Bingle", Round AU58 NGC. Gould-Bressett 9. Rural Rehabilitation Corp.

12483 (1935) Alaska 10 Cent "Bingle", Round MS61 NGC. Gould-Bressett 9. Rural Rehabilitation Corp.

12484 (1935) Alaska 10 Cent "Bingle", Round MS62 NGC. Gould-Bressett 9. Rural Rehabilitation Corp.

12485 Valdez, Alaska, Copper Block Buffet. Gould-Bressett 46. Struck in German silver, the size of a silver dollar (approx 36 mm). A small gold nugget is mounted in the center. Around the edge reads Native Gold Valdez Alaska Copper Block Buffet, on the reverse Good For \$1.00 in Merchandise. The token has been altered with a slit at the top to be used as a watch fob. This rare, seldom-seen token should draw plenty of attention from collectors.
Ex: Long Beach Signature (Heritage, 9/2006), lot 6794.

12486 "1897" Alaska Gold One, Indian, Wreath With Sun AU58 NGC. Variant of Gould-Bressett 108. 1.53 gm. M.E. Hart issue.

12487 1862 (Circa 1910) Alaska 2 TooWah, Original, Gold, 7 Stars, MS62 NGC. Variant of Gould-Bressett 108. 1.34gm.

12488 "1897" Alaska Gold One Pinch, Head Right, Round, Reeded AU58 NGC. Variant of Gould-Bressett 110. Hart's Coins of the West.

GOLD CHARMS

12489 1912 British Columbia Gold Half Dollar MS64 NGC.

End of Auction

Terms and Conditions of Auction

Auctioneer and Auction:

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

Buyer's Premium:

2. All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:
- Seventeen and one-half percent (17.5%) on Currency, US Coin, and World & Ancient Coin Auction lots, except for Gallery Auction lots as noted below;
- Nineteen and one-half percent (19.5%) on Comic, Movie Poster, Sports Collectibles, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- Twenty-two percent (22%) on Wine Auction lots;
- For lots in all other categories not listed above, the Buyer's Premium per lot is twenty-five percent (25%) on the first \$100,000 (minimum \$14), plus twenty percent (20%) of any amount between \$100,000 and \$1,000,000, plus twelve percent (12%) of any amount over \$1,000,000..

Auction Venues:

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real-time telephone bidding are available to registered clients during these auctions.

Bidders:

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

Credit:

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory credit information (including two collectibles-related business references) or supply valid credit card information along with a social security number, well in advance of the Auction. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders. Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

Bidding Options:

8. Bids in Signature, Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at HA.com/common/howtobid.php.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-443-8425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only \$1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

The following chart governs current bidding increments for Signature auctions; Internet-only auction bidding increments are approximately half of these amounts (see HA.com/c/ref/web-tips.zx#guidelines-increments).

Current Bid	Bid Increment
< - \$10	\$1
\$10 - \$29	\$2
\$30 - \$49	\$3
\$50 - \$99	\$5
\$100 - \$199	\$10
\$200 - \$299	\$20
\$300 - \$499	\$25
\$500 - \$999	\$50
\$1,000 - \$1,999	\$100
\$2,000 - \$2,999	\$200
\$3,000 - \$4,999	\$250
\$5,000 - \$9,999	\$500

Current Bid	Bid Increment
\$10,000 - \$19,999	\$1,000
\$20,000 - \$29,999	\$2,000
\$30,000 - \$49,999	\$2,500
\$50,000 - \$99,999	\$5,000
\$100,000 - \$199,999	\$10,000
\$200,000 - \$299,999	\$20,000
\$300,000 - \$499,999	\$25,000
\$500,000 - \$999,999	\$50,000
\$1,000,000 - \$4,999,999	\$100,000
\$5,000,000 - \$9,999,999	\$250,000
>\$10,000,000	\$500,000

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

Conducting the Auction:

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is

an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.

14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher. Auctioneer reserves the right after the hammer fall to accept bids and reopen bidding for bids placed through the Internet or otherwise.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40-60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 877-HERITAGE (437-4824).
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

Payment:

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under \$1500 and there is no sales tax on coins in Texas) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes..
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount or three percent (3%) of any installment that is past due. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 10% seller's commission, if assigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 10% seller's commissions, if sold at an Auctioneer's auction.
29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.
30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor

Terms and Conditions of Auction

- under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale. In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession.
31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

Delivery; Shipping; and Handling Charges:

32. Buyer is liable for shipping and handling. Please refer to Auctioneer's website www.HA.com/common/shipping.php for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs. Buyer agrees that Service and Handling charges related to shipping items which are not pre-paid may be charged to the credit card on file with Auctioneer.
33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.
34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.
35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a \$100 administration fee plus \$10 daily storage for larger items and \$5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.
- 36A. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.
- 36B. Auctioneer shall not be liable for any loss caused by or resulting from:
- a. Seizure or destruction under quarantine or Customs regulation, or confiscation by order of any Government or public authority, or risks of contraband or illegal transportation of trade, or
 - b. Breakage of statuary, marble, glassware, bric-a-brac, porcelains, jewelry, and similar fragile articles
37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

Cataloging, Warranties and Disclaimers:

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .
39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.
40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.
41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.
42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

Release:

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opinions, from any and all claims, cause of action, chose of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.
44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or consequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

Dispute Resolution and Arbitration Provision:

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.

46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.
47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.
48. Exclusive Dispute Resolution Process: All claims, disputes, or controversies in connection with, relating to and /or arising out of your Participation in the Auction or purchase of any lot, any interpretation of the Terms and Conditions of Sale or any amendments thereto, any description of any lot or condition report, any damage to any lot, any alleged verbal modification of any term of sale or condition report or description and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation or any claim made by you of a lot or your Participation in the auction involving the auction or a specific lot involving a warranty or representation of a consignor or other person or entity including Auctioneer { which claim you consent to be made a party} (collectively, "Claim") shall be exclusively heard by, and the claimant (or respondent as the case may be) and Heritage each consent to the Claim being presented in a confidential binding arbitration before a single arbitrator administrated by and conducted under the rules of, the American Arbitration Association. The locale for all such arbitrations shall be Dallas, Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. If a Claim involves a consumer, exclusive subject matter jurisdiction for the Claim is in the State District Courts of Dallas County, Texas and the consumer consents to subject matter and in personam jurisdiction; further CONSUMER EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY. A consumer may elect arbitration as specified above. Any claim involving the purchase or sale of numismatic or related items may be submitted through binding PNG arbitration. Any Claim must be brought within two (2) years of the alleged breach, default or misrepresentation or the Claim is waived. Exemplary or punitive damages are not permitted and are waived. A Claim is not subject to class certification. Nothing herein shall be construed to extend the time of return or conditions and restrictions for return. This Agreement and any Claim shall be determined and construed under Texas law. The prevailing party (a party that is awarded substantial and material relief on its damage claim based on damages sought vs. awarded or the successful defense of a Claim based on damages sought vs. awarded) may be awarded its reasonable attorneys' fees and costs.
49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.
50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.
51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

Miscellaneous:

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.
53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.
54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

State Notices:

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

Terms and Conditions of Auction

Additional Terms & Conditions: COINS & CURRENCY

COINS and CURRENCY TERM A: Signature. Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-8726467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (877-HERITAGE (437-4824)) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price (\$10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230, <http://www.ngccoin.com/services/writtenguarantee.asp>; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658, <http://www.pcg.com/guarantee.html>; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Bellevue Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold

"as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reclassified to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM M: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM N: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.

For wiring instructions call the Credit department at 877-HERITAGE (437-4824) or e-mail: CreditDept@HA.com

New York State Auctions Only

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, Michael J. Sadler, # 1304630, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders. Rev 11-19-12

HOW TO COLLECT ANIMATION ART

On June 28th, 1989, Sotheby's hosted its first major auction of animation art—approximately 560 lots, all from the top-grossing film of 1988, *Who Framed Roger Rabbit*. Every single piece sold, with many pieces going far above their estimates—and it was the beginning of the emergence of animation art, which had been a niche collectible for more than thirty years, as a coveted treasure.

"That auction appeared to have stimulated the market, as prices for all animation art subsequently spiked," says Jim Lentz, Director Animation Art at Heritage Auctions. "All of a sudden a massive number of people understood for the first time that they could own art from a cartoon."

Animation art has been on a tear ever since, gaining new collectors every year. With digital cartoons taking over the industry, the hand-drawn elegance of original animation art resonates more than ever. As Lentz puts it, "Animators are really actors; they just act with their pencils. Being an animator is not about being able to draw Mickey Mouse. It's about anatomy and bone structure and the illusion of life." Most collectors specialize: some want nothing but animation cels featuring the seven dwarves, and others collect only villains. Even contemporary characters like Sponge Bob Square Pants enjoy a strong core of collectors.

But the most demand and highest prices will always be for Disney.

"My generation grew up with Hannah Barbara and laughed at Warner Bros., and we all love Disney. Disney leads the way because Disney characters have a lot of heart," says Lentz.

Lentz says that he values all animation art based on five criteria—in order of importance:

1. Popularity of character. Many collectors think that any early animation art will have significant value; in reality, even beautiful pieces from as early as the 1920s are worth very little if they depict characters who no longer have a strong following.
2. Scarcity. Cels from some films are more rare than cels from others—so even if a film seems like it would be more in demand, it might be worth less if a large number of pieces from it remain on the market.
3. "The pose drives the price." What is the scene? Are the eyes open? "Lady alone is not worth as much as Lady and the Tramp," says Lentz—in Heritage's most recent Animation Art auction, Lady and the Tramp eating spaghetti was the top lot, bringing \$33,460.
4. Condition. This is true of any category, but Lentz is often reminding collectors that animation cels were not created to be art—they served a practical purpose. Unobtrusive scratches and dings—when they don't compromise aesthetic value—can add character to a piece.
5. Variable. Provenance, signature, etc.

Lentz says the greatest values in animation art right now may be in the drawings; they lack the color of the cels, but still have important historical and display value: An Original production drawing of fire chief Mickey Mouse, produced in 1935, recently sold for just \$167.

Lady and the Tramp
Three-cel set-up with Disney oil-painted
art props background (Walt Disney, 1955)
Sold for \$33,460

Collecting can be a rewarding experience. But if you ever decide to sell,

Heritage Auctions, the world's third largest auction house, can help you do that.

Our record-breaking successes over the past year illustrate what our 850,000 online bidder-members can do for our clients. Visit our website at [HA.com/Animation](https://www.ha.com/Animation) to see the great prices we've realized for our Animation Art consignors.

PRIVATE RARE BOOK COLLECTION

INCLUDES EDITIONS BY IAN FLEMING, AMELIA EARHART, EDGAR RICE BURROUGHS AND WINSTON CHURCHILL

A PRIVATE RARE BOOK AND AUTOGRAPH COLLECTION FROM NORTH CAROLINA INCLUDES SUBSTANTIAL GROUPS IN LITERATURE, MILITARIA, HISTORY AND AVIATION.

"This collection has been lovingly assembled over many years," says James Gannon, director of Rare Books at Heritage Auctions. "It includes presidential books that are either signed or accompanied by a signature. In fact, many of the books in the collection are signed by their authors."

Included are runs of Ian Fleming (1908-1964), Zane Grey (1872-1939) and Edgar Rice Burroughs (1875-1950). Works by Winston Churchill (1874-1965) include his collected writings in the vellum binding. A 1928 first edition of Amelia Earhart's "20 Hrs. 40 Min." includes her autograph and one of the flags taken by Earhart in her voyage across the Atlantic. The example in this collection is one of only 10 presentation copies signed.

Fleming's *Casino Royale* was the British writer's first James Bond novel. Since its publication 61 years ago, *Casino Royale* has been adapted for the screen three times, with the latest released in 2006. "James Bond is among the greatest literary figures in pop culture," Gannon says. "A first edition *Casino Royale*, especially this excellent copy, is a rare find.

"Anyone who reviews these lots will be impressed by the quality of this collection and the obvious commitment to excellence by its current owner," Gannon says.

1.) Ian Fleming (1908-1964). *Casino Royale*. London: Jonathan Cape [1953].

First edition of the first James Bond novel, publisher's black paper binding, first-issue dust jacket.

2.) Amelia Earhart (1897-1937) *20 Hrs. 40 Min. Our Flight in the Friendship. The American Girl, First Across the Atlantic by Air, Tells Her Story*. New York: G.P. Putnam's Sons, 1928. First edition, "Author's Autograph Edition"

Limited to 150 numbered copies, plus 10 lettered presentation copies, of which this is letter C, signed by Earhart. Includes small U.S. flag with caption "This is one of the flags taken by Miss Earhart across the Atlantic in the Friendship."

3.) Orville Wright (1871-1948). Frank Lemon (1867-?), illustrator. *Flights. Unforgettable Exploits of the Air*. Wright Aeronautical Corp., Christmas 1928. Signed limited edition, number 427 of 500 copies, each color print signed by the artist and the featured aviator, including Charles Lindbergh, Orville Wright and R.E. Byrd. Seven large folio color prints plus portfolio, all framed.

EVENT

RARE BOOKS SIGNATURE® AUCTION is scheduled for April 2, 2014, in New York.

For details, contact James Gannon at 214-409-1609 or JamesG@HA.com.
